# Preface to the Second Edition

*No man reads a book of science from pure inclination.*

Samuel Johnson  
*The Life of Samuel Johnson*, 1791 (p. 399)

Recently, in a library, I took a book from a shelf which, not to my surprise, I found had been opened only a few times. My wife remarked that it was a shame that this book, which had been at the library since 2002, had been so rarely used and how unfortunate it is that so many of the students of today do not take the time to read the wealth of wisdom available in libraries.

It is now three years since *Gaither's Dictionary of Scientific Quotations* was first published. The 18,000 quotations in the first edition may seem like an embarrassment of riches, but we were amazed at the wealth of language and insight still to be uncovered. This second edition has been updated with the addition of 9,000 new quotations, which increases the depth and breadth of the various thematic categories. Additionally, we have restructured and expanded the thematic categories, helping readers to find a quotation of interest more quickly.

Among the new quotations are a number that have been culled from early, difficult-to-find books and journals. Also included are a selection of quotations that are documented as "author undetermined." These and all of the other new quotations add material to the quality and depth of the collection.

Since the publication of the first edition, we received many comments asking us why a quotation was entered under a specific theme. Our answer is that all classifications are imperfect, and another subject area may have been as good a choice as ours. If the quotation is not placed where you would have placed it, we are not implying that it could not have gone elsewhere. Additionally, the themes are labeled because we thought that each label provided the best example of what type of quotations would be found there. Fortunately, there is also an author index and, in the e-book version, a more direct means of searching for a relevant quotation. We hope that you will find the perfect quotation to connect your class lecture, paper presentation, or essay to a larger context. Just browsing the entries makes for a fascinating journey through science and culture.

# Preface to the First Edition

In putting before you, the reader, this collection of 18,000 quotations seems fitting to discuss how a book such as this came about. In 1995, I told a librarian friend that I was deeply frustrated in my attempts to find quotations on statistics. I told her that although there were a few books with some quotations available, it was quite clear that each author had very different opinions of how to approach the subject. For example, both Alan Mackay and Isaac Asimov wrote books of science quotations that were organized thematically, but in them the quotations were often misstated and the documentation was sparse or nonexistent. The books were, however, the state-of-the-art for that time. Another example, Maurice B. Strauss's book *Familiar Medical Quotations*, provided good documentation but, understandably, the quantity of quotations pertaining to science as compared to medicine was limited. As I explained the failings of the extant literature, my friend looked up from her desk and quietly asked, "Well, why don't you compile one?"

I took this idea to my wife, who agreed to work with me on this task. Over a 10-year period, we wrote a series of books that contained quotations from several fields of science. These books came to be known as the Speaking Series (Institute of Physics Publishing, Bristol, UK) and were written, like the current revised and greatly expanded compendium, for a broad audience of scientists as well as lay people like ourselves who do not claim expertise in the many scientific fields.

Science is a dynamic force in virtually every sphere of life. At the beginning of the twenty-first century, few readers will need to be convinced of the enormous impact of science on art, politics, literature, commerce, education, communications, entertainment, judiciary matters, and—often intensely—on religion, and ethics. It is our opinion that the average reader of this book—whether engineer or technician, architect or artist, doctor or nurse, physicist or astronomer, poet or novelist, mathematician or statistician, teacher or student, atheist or believer—should find a great number of quotations pertaining to his or her individual interest. Furthermore, the juxtaposition of the many views may be thought provoking.

A dictionary normally consists of an alphabetical arrangement of words and their meanings. In this dictionary, instead of words we have given an alphabetical arrangement of over 2,000 *thematically* organized categories pertaining to science. Feedback from our previous books indicated that this format was preferred over an author-arranged selection of quotations. The presentation order of the quotations within each subject theme is arranged alphabetically by author. Other quotations of a particular author can be found in an author index.

Our quotation choices were largely influenced by the availability of books, magazines, journals, and newspapers; in turn, to make it as simple as possible for the reader to obtain our sources we provide our bibliographic references from what we hope are readily accessible sources. Also, for journal articles we strive to provide the actual page number where the quotation may be found, rather than just the first page of the article in which the quotation appears. Brief biographical information (birth/death date and occupation)

is given when at all possible. We were able to provide this contextual information because we were fortunate to have a publisher who did not deem the cost of including this information excessive.

The reader who needs to research a quotation in greater detail can use bibliographical information to find (1) other relevant data; (2) a fuller quote containing other interesting ideas; and (3) the context in which the quotation was used. Where we could not determine where a quotation was originally written we were obliged to use the quotation from a secondary source, and we list the reference where that has been done. Unfortunately, some very good quotations were bypassed and not included because we could not determine where they originated. As it is, about 100 of such quotations are included and have been credited, regrettably but by necessity, as “Author undetermined,” “Source undetermined,” or both. Despite unavoidable omissions, we hope that this book will provide a rich resource that allows you, the reader, to find relevant quotations or citations quickly, and will serve to inspire your search of the literature.

This dictionary, founded on the quotations from our nine previous books, contains over 7,000 additional quotations and provides by far the greatest number of scientific quotations that has appeared in any single published form to date. In addition, supporting information, such as source of the quotation and biographical information, are greatly expanded beyond any previously published effort.

Our three objectives in compiling this book were as follows: first, to show the diversity and the richness of the various sciences from a variety of literary genres; second, to demonstrate that people from virtually every settled land and continent have given science a great deal of thought from 2000 BCE and earlier to the present time; and third, to provide a resource of thought-provoking ideas useful to anyone involved in just about any aspect of science or in any of the areas noted above, which are greatly influenced by the sciences.

In our attempt to fulfill these objectives, we acted merely as collectors of quotations from many sources and from many areas of science. Here in this vast collection of quotations are the words of great philosophers and thought influencers of science, past and present. Included are better known and lesser known thinkers of the classic Greek and Roman times, religious leaders, and philosophers from the Renaissance to the present. Many times an individual has spoken or written a statement pertaining to some aspects of science that was destined to live on and have meaning beyond the immediate context in which it was made. We hope you enjoy a pleasant and stimulating journey through the forest of ideas of scientists, laymen, politicians, novelists, playwrights, and poets about the human search for and attainment of scientific knowledge.

Max Delbrück, a physicist turned biologist, said in his Noble lecture “A Physicist’s Renewed Look at Biology: Twenty Years Later” that “the books of the great scientists are gathering dust on the shelves of learned libraries.” Somewhere else we read: “...often we rake in the litter of the printing press whilst a crown of gold and rubies is offered us in vain.” Unfortunately, these “gems”—these ideas—are often lost to us before they have time to become established in the collective memory of readers. It has been our concern that much of this wit and wisdom is read once and returned to the library shelf to be heard of no more. It seemed that these ideas, hidden within obscure chapters of books, both fiction and nonfiction, or on pages between covers of long forgotten articles in journals, should once again see the light of day. Apart from the practical day-to-day use of doing so, it is valuable that a new generation see lost or forgotten quotable maxims, proverbs, aphorisms, epigrams, jokes, poetry, songs, and quotations so the young may appreciate their charm and interest.

We extend our thanks to the many publishers and authors for their kind permission to use copyrighted material from their works. For any inadvertent violation of copyright we beg forgiveness.

We would especially like to thank David Packer of Springer for his editorial guidance, and Kathleen McKenzie for her copyediting and her many valuable comments and suggestions, and for her help with fact checking.

We also wish to thank the following libraries for allowing us to use their collections:

The Perry–Castañeda Library of the University of Texas, Austin, Texas.  
The Physics-Math-Astronomy Library of the University of Texas, Austin, Texas.  
The Life Science Library of the University of Texas, Austin, Texas.  
The Engineering Library of the University of Texas, Austin, Texas.  
The Geology Library of the University of Texas, Austin, Texas.  
The Baylor University Library, Waco, Texas.  
The Mary Hardin-Baylor Library, Belton, Texas.  
The Central Texas College Library, Killeen, Texas.  
The University of South West Texas Library, Georgetown, Texas.  
The McNeese State University Library, Lake Charles, Louisiana.  
The University of Richmond Library, Richmond, Virginia.  
The Killeen Public Library, Killeen, Texas.

No claim for completeness is made, for completeness is impossible in a book of this type; nor has any attempt been made to provide balance in the quotations between the needs of the general reader and the specialist. It would have been impossible for us to document each person’s favorite scientific quotation, and thus we know that this book will suffer the fate of other literary, artistic, or musical work that attempts a broad overview: Stern critics will find fault with the omission of what they perceive as an important quotation from their respective fields. We must ask these critics to remember that our aim in compiling this book has been to save both great and not-so-great words pertaining to science and to add unmistakable value to that, which can be retrieved from the Internet, regardless of the time and effort expended by any who searches there. Within these works we found surprising and often incredible quotations pertaining to science. Just as certain views about science represented in quotes of years long past are not necessarily those of the authors, certain opinions that are stated therein concerning women, and persons of various nationalities, creeds, and races, are clearly not reasonable in an age when belief in the equality of all people—including a person’s inherent capacity to contribute to scientific thought—is a shared ideal.

Steven Skiena stated in his book, *The Algorithm Design Manual*, “It is traditional for the author to magnanimously accept the blame for whatever deficiencies remain. I don’t. Any errors, deficiencies, or problems in this book are somebody else’s fault, but I would appreciate knowing about them so as to determine who is to blame.” While we are in sympathy with this, we still believe that any errors are our responsibility and we would appreciate they be called to our attention. For our critics we are sure you will be able to suggest improvements.

## A

### A PRIORI

**Boyle, Robert** 1627–91

English natural philosopher and theological writer

It is much more high and philosophical to discover things *a priori* than *a posteriori*. And therefore the Peripatetics have not been very solicitous to gather experiments to prove their doctrines, contenting themselves with a few only, to satisfy those that are not capable of a nobler conviction. And indeed they employ experiments rather to illustrate than to demonstrate their doctrines.

*The Sceptical Chymist*

Introductory Preface (p. 20)

J.M. Dent & Sons. London, England. 1911

**Hertz, Heinrich** 1857–94

German physicist

...we cannot *a priori* demand from nature simplicity, nor can we judge what in her opinion is simple.

Translated by Daniel Evan Jones and John Thomas Walley

*The Principles of Mechanics Presented in a New Form*

Introduction (p. 23)

Macmillan & Company Ltd. London, England. 1899

**Huxley, Thomas Henry** 1825–95

English biologist

No man who has to deal daily and hourly with nature can trouble himself about *a priori* difficulties. Give me such evidence as would justify me in believing anything else, and I will believe that. Why should I not? It is not half so wonderful as the conservation of force, or the indestructibility of matter. Whoso clearly appreciates all that is implied in the falling of a stone can have no difficulty about any doctrine simply on account of its marvellousness.

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley* (Volume 1)

Chapter XVI (p. 234)

D. Appleton & Co. New York, New York, USA. 1916

**Tait, Peter Guthrie** 1831–1901

Scottish physicist and mathematician

There is nothing physical to be learned *a priori*. We have no right whatever to ascertain a single physical truth without seeking for it physically, unless it be a necessary consequence of other truths already acquired by experiment, in which case mathematical reasoning is alone requisite.

*Lectures on Some Recent Advances in Physical Science, With a Special Lecture on Force*, (3rd edition)

Lecture I (p. 6)

Macmillan & Co Ltd. London, England. 1885

**Taylor, Bert Leston** 1866–1921

American Poet

Behold the mighty Dinosaur,  
Famous in prehistoric lore,  
Not only for his weight and strength  
But for his intellectual length.

You will observe by these remains

The creature had two sets of brains—

One in his head (the usual place),

The other at his spinal base.

Thus he could reason *a priori*

As well as a posteriori.

*A Line-o'-verse Or Two*

The Dinosaur (p. 75)

The Reilly & Britton Co. Chicago, Illinois, USA. 1911

### ABACUS

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

“Oh, now, don’t underestimate the abacus,” said Reg. “In skilled hands it’s a very sophisticated calculating device. Furthermore it requires no power, can be made with any materials you have at hand, and never goes bing in the middle of an important piece of work.”

*Dirk Gently’s Holistic Detective Agency*, (pp. 24–25)

Simon & Schuster. New York, New York, USA. 1987

### ABERRATION

**Herschel, Friedrich Wilhelm**

(Sir William)

1738–1822

English astronomer

Aberration would forever have remained a secret to us if it had not been found out by other methods than that of time-keepers.

*Astronomical Observations on the Rotation of the Planets Round Their Axes*

*Philosophical Transactions of the Royal Society of London*,

Volume 71, 1781 (p. 116)

### ABILITY

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

...natural abilities are like natural plants, [they] need pruning by study ...

*Bacon’s Essays*

Of Studies (p. 472)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1875

### ABIOGENESIS

**Loeb, Jacques** 1859–1924

German-born American physiologist and biologist

Will it be possible to solve these problems? It is certain that nobody has thus far observed the transformation of

dead into living matter, and for this reason we cannot form a definite plan for the solution of this problem of transformation. But we see that plants and animals during their growth continually transform dead into living matter, and that the chemical processes in living matter do not differ in principle from those in dead matter. There is, therefore, no reason to predict that abiogenesis is impossible, and I believe that it can only help science if the younger investigators realize that experimental abiogenesis is the goal of biology.

*The Dynamics of Living Matter*

Lecture XII (p. 223)

The Columbia University Press. New York, New York, USA. 1906

## ABJURATION OF GALILEO

**Galilei, Galileo** 1564–1642

Italian physicist and astronomer

I Galileo Galilei, son of the late Vincenzo Galilei, of Florence, aged seventy years, being brought personally to judgment, and kneeling before you, Most Eminent and Most Reverend Lords Cardinals, General Inquisitors of the universal Christian republic against heretical depravity, having before my eyes the Holy Gospels, which I touch with my own hands, swear, that I have always believed, and now believe, and with the help of God will in future believe, every article which the Holy Catholic and Apostolic Church of Rome holds, teaches, and preaches. But because I had been enjoined by this Holy Office altogether to abandon the false opinion which maintains that the sun is the centre and immovable, and forbidden to hold, defend, or teach, the said false doctrine in any manner, and after it had been signified to me that the said doctrine is repugnant with the Holy Scripture, I have written and printed a book, in which I treat of the same doctrine now condemned, and adduce reasons with great force in support of the same, without giving any solution, and therefore have been judged grievously suspected of heresy; that is to say, that I held and believed that the sun is the centre of the world and immovable, and that the earth is not the centre and moveable, Willing, therefore, to remove from the minds of Your Eminences, and of every Catholic Christian, this vehement suspicion rightfully entertained towards me, with a sincere heart and unfeigned faith, I abjure, curse, and detest, the said errors and heresies, and generally every other error and sect contrary to the said Holy Church...

*Life of Galileo Galilei: With Illustrations of the Advancement of Experimental Philosophy*

Chapter XIII (pp. 188–189)

William Hyde & Co. Boston, Massachusetts, USA. 1832

## ABORTION

### Author undetermined

Why not outlaw heterosexuality instead of abortion?  
Strike at the source!

Source undetermined

**Given, William P.**

Physician

After it became legal, I tried performing them for a while. But when I'd get home I'd feel rotten. And yet I absolutely feel it's a woman's right. So now if a patient wants one I refer her to someone else, someone I know is skilled and reasonably priced. Does that make me a hypocrite?

In Louise Kapp Howe

*Moments on Maple Street*

Chapter Three (p. 21)

Macmillan & Co. New York, New York, USA. 1984

**Hachamovitch, Moshe**

American physician

By and large, legal or not, the procedure is still a pariah of our specialty.

In Louise Kapp Howe

*Moments on Maple Street*

Chapter Three (p. 21)

The Macmillan Company. New York, New York, USA. 1984

**Hippocrates** 460 BCE–377 BCE

Greek physician

...I will not give to a woman a pessary to produce abortion.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

The Oath (p. xiii)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Kennedy, Florynce** 1916–2000

American black activist and lawyer

If men could get pregnant, abortion would be a sacrament.

The Verbal Karate of Florynce Kennedy

*Ms.*, March, 1973 (p. 2)

**Nolan, James Joseph**

No biographical data available

Physicians roasted on the spit;

Is learning the name of it?

For complications, spare no precaution;

To save a life think abortion.

On Renewed Maternal Mortality Reports

*The New England Journal of Medicine*, Volume 286, Number 17, April 27, 1972 (p. 952)

**Pope Pius XI** 1857–1939  
Bishop of Rome and Italian scholar

However we may pity the mother whose health and even life is imperiled by the performance of her natural duty, there yet remains no sufficient reason for condoning the direct murder of the innocent.

*Casti connubii*

December 31, 1930

**Reagan, Ronald W.** 1911–2004  
40th president of the USA

I've noticed that everybody that is for abortion has already been born.

Presidential campaign debate, Baltimore, Maryland, 21 September, 1980

**Tertullian** ca. 162–224  
North African theologian

It's a committing murder before hand, to destroy that which is to be born.

*Apologeticus*

IX, 197

Printed by Thomas Harper. London, England. 1655

## ABSOLUTE ZERO

**Kimball, Arthur Lalanne** 1856–1922  
American physicist

The absolute zero of temperature has to the physicist all the fascination that the North Pole has to Arctic explorers, and is probably even more difficult to attain.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*  
(Volume 4)

The Relations of the Science of Physics of Matter to Other Branches of Learning (p. 82)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1906

## ABSORPTION LINE

**Bunsen, Robert Wilhelm Eberhard** 1811–99  
German chemist

At the moment I am occupied by an investigation with Kirchhoff which does not allow us to sleep. Kirchhoff has made a totally unexpected discovery, inasmuch as he has found out the cause for the dark lines in the solar spectrum and can produce these lines artificially intensified both in the solar spectrum and in the continuous spectrum of a flame, their position being identical with that of Fraunhofer's lines. Hence the path is opened for the determination of the chemical composition of the Sun and the fixed stars.

*The Life and Experiences of Sir Henry Enfield Roscoe*

Letter from Robert Bunsen to H.E. Roscoe, November, 1859 (p. 71)

London, England. 1906

## ABSTRACTNESS

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Abstractness, sometimes hurled as a reproach at mathematics, is its chief glory and its surest title to practical usefulness.

*Mathematics* (p. 19)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

The root of these troubles seems to be the unimaginative lack of a clearly recognized objective. If the aim is merely to create new theories which many find intensely interesting and even beautiful, then the abstract method keeps on reaching its goal.

*The Development of Mathematics* (p. 248)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

'If it is not abstract it is not mathematics' might be taken as a touchstone for discriminating between mathematics and other departments of precise investigation.

*The Handmaiden of the Sciences*

Chapter 1 (p. 5)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Dickens, Charles** 1812–70  
English novelist

Men talk of nature as an abstract thing, and lose sight of what is natural while they do so.

*Nicholas Nickleby*

Chapter XLVI (p. 458)

John Sherratt & Son. Altrincham, England. 1948

**Einstein, Albert** 1879–1955  
German-born physicist

Anyone who has ever tried to present a rather abstract scientific subject in a popular manner knows the great difficulties of such an attempt.

In Lincoln Barnett

*The Universe and Dr. Einstein*

Forward (p. 1)

William Sloane Associates. New York, New York, USA. 1948

**Gell-Mann, Murray** 1929–  
American physicist

In our work we are always between Scylla and Charybdis; we may fail to abstract enough, and miss important physics, or we may abstract too much and end up with fictitious objects in our models turning into real monsters to devour us.

Quarks

*Acta Physica Austriaca*, Supplement 9, 1972 (p. 760)

**Gould, Stephen Jay** 1941–2002  
American paleontologist and evolutionary biologist

The test of any organizing principle is its success in rendering specifics, not its status as abstract generality.

*Time's Arrow, Time's Cycle: Myth and Metaphor In The Discovery of Geological Time*  
Chapter 1 (p. 15)  
Harvard University Press. Cambridge, Massachusetts, USA. 1987

**Joubert, Joseph** 1754–1824  
French moralist

How many people become abstract in order to appear profound! Most abstract terms are shadows that conceal a void.

Translated by H.P. Collins  
*Pensées and Letters of Joseph Joubert*  
Chapter XI (p. 88)  
Books for Libraries. Freeport, New York, USA. 1972

**Kemeny, John** 1926–92  
Hungarian-born mathematician

If you have a large number of unrelated ideas, you have to get quite a distance away from them to get a view of all of them, and this is the role of abstraction. If you look at each too closely you see too many details. If you get far away things may appear simpler because you can only see the large, broad outlines; you do not get lost in petty details.

In Douglas M. Campbell and John C. Higgins (eds.)  
*Mathematics: People, Problems, Results* (Volume 3)  
Rigor Versus Intuition in Mathematics (pp. 226–227)  
Wadsworth, Inc. Belmont, California, USA. 1984

## ABSTRACTION

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Although there is a most intimate connection, and almost an identity between the ways of human power and human knowledge, yet, on account of the pernicious and inveterate habit of dwelling upon abstractions, it is by far the safest method to commence and build up the sciences from those foundations which bear a relation to the practical division, and to let them mark out and limit the theoretical.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
Second Book, Section 4 (p. 137)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bagehot, Walter** 1826–77  
English journalist

Nature does not wear her most useful lessons on her sleeve; she only yields her most productive secrets, those which yield the most wealth and the most “fruit,” to those who have gone through a long process of preliminary abstraction.

*Physics and Politics*  
Chapter 6 (p. 196)  
Ivan R. Dee, Publisher. Chicago, Illinois, USA. 1999

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Sooner or later the cold plunge into pure abstraction must be taken if one is to learn to swim in mathematics and to reason as rational, thinking human beings do.

*The Handmaiden of the Sciences*  
Chapter 1 (p. 7)  
Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Bohm, David** 1917–92  
American physicist

All is process. That is to say “there is ‘nothing’ in the universe.” Things, objects, entities, are abstractions of what is relatively constant from a process of movement and transformation. They are like the shapes that children like to see in the clouds.

In C.H. Waddington (ed.)  
*Towards a Theoretical Biology: An IUBS Symposium* (Volume 2)  
Further Remarks on Order (p. 42)  
Aldine Publishing Company. Chicago, Illinois, USA. 1968

**Boole, George** 1815–64  
English mathematician

Of the many forms of false culture, a premature converse with abstractions is perhaps the most likely to prove fatal to the growth of a masculine vigor of intellect.

*A Treatise on Differential Equations*  
Preface (p. vi)  
Chelsea Publishing Company. New York, New York, USA. 1959

**Cole, K. C.**  
Science writer

Abstractions are a way to distill the essence from an otherwise unfathomable situation.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*  
Part I, Chapter I (p. 26)  
Harcourt Brace & Co. Orlando, Florida, USA. 1999

The abstractions of science are stereotypes, as two-dimensional and as potentially misleading as everyday stereotypes. And yet they are as necessary to the process of understanding as filtering is to the process of perception.

*First You Build a Cloud and Other Reflections on Physics as a Way of Life*  
Part I, Chapter I (p. 26)  
Harcourt Brace & Co. Orlando, Florida, USA. 1999

**Devlin, Keith** 1947–  
English mathematician and writer

The increased abstraction in mathematics that took place during the early part of this century was paralleled by a similar trend in the arts. In both cases, the increased level of abstraction demands greater effort on the part of anyone who wants to understand the work.

*Mathematics: The Science of Patterns*  
Chapter 2 (p. 55)  
Scientific American Library. New York, New York, USA. 1994

**Dingle, Herbert** 1890–1978  
English astrophysicist

Abstraction is the detection of a common quality in the characteristics of a number of diverse observations: it is the method supremely exemplified in the work of Newton and Einstein... A hypothesis serves the same purpose, but in a different way. It relates apparently diverse experiences, not by directly detecting a common quality in the experiences themselves, but by inventing a fictitious substance or process or idea, in terms of which the experience can be expressed. A hypothesis, in brief, correlates observations by adding something to them, while abstraction achieves the same end by subtracting something.

*Science and Human Experience* (pp. 222–223)  
Williams & Norgate Ltd. London, England. 1931

**Einstein, Albert** 1879–1955  
German-born physicist

The theoretical scientist is compelled in an increasing degree to be guided by purely mathematical, formal considerations in his search for a theory, because the physical experience of the experimenter cannot lift him into the regions of highest abstraction.

Translated by Alan Harris  
*Essays in Science*

The Problem of Space (p. 69)  
Philosophical Library. New York, New York, USA. 1934

**Haber, Fritz** 1868–1934  
German physical chemist

The field of scientific abstraction encompasses independent kingdoms of ideas and of experiments and within these, rulers whose fame outlasts the centuries.

In Richard Willstätter  
*From My Life: The Memoirs of Richard Willstätter*  
Chapter 8 (p. 174)  
W.A. Benjamin. New York, New York, USA. 1965

**Huxley, Aldous** 1894–1963  
English writer and critic

Knowledge is power and, by a seeming paradox, it is through their knowledge of what happens in this unexperienced world of abstractions and inferences that scientists and technologists have acquired their enormous and growing power to control, direct and modify the world of manifold appearances in which human beings are privileged and condemned to live.

*Literature and Science*  
Chapter 3 (p. 9)  
Harper & Row, Publishers. New York, New York, USA. 1963

**MacLeish, Archibald** 1892–1982  
American poet and Librarian of Congress

Abstractions are wonderfully clever tools for taking things apart and for arranging things in patterns but they

are very little use in putting things together and no use at all when it comes to determining what things are *for*.

Why Do We Teach Poetry?  
*The Atlantic Monthly*, Volume 197, Number 3, March, 1956 (p. 51)

...abstractions have a limiting, a dehumanizing, a dehydrating effect on the relation to things of the man who must live with them. The result is that we are more and more left, in our scientific society, without the means of knowledge of ourselves as we truly are or of our experience as it actually is.

Why Do We Teach Poetry?  
*The Atlantic Monthly*, Volume 197, Number 3, March, 1956 (p. 51)

**Smithson, Robert**

Abstraction is everybody's zero but nobody's nought.

In Nancy Holt  
*The Writing of Robert Smithson*  
Some Void Thoughts on Museums (p. 58)  
New York University Press. New York, New York, USA. 1979

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

The power of using abstractions is the essence of intellect, and with every increase in abstraction the intellectual triumphs of science are enhanced.

*The Scientific Outlook*  
Chapter III (p. 87)  
George Allen & Unwin Ltd. London, England. 1931

**Sullivan, John William Navin** 1886–1937  
Irish mathematician

Science, indeed, tells us a very great deal less about the universe than we have been accustomed to suppose, and there is no reason to believe that all we can ever know must be couched in terms of its thin and largely arbitrary abstractions.

*Beethoven, His Spiritual Development*  
Art and Reality (pp. 21–22)  
Alfred A. Knopf. New York, New York, USA. 1964

**von Raumer, Friedrich** 1781–1873  
German historian

Abstractions are like clouds, which assume a hundred different forms, and which men may run after forever without catching anything real.

Translated by Sarah Austin and H.E. Lloyd  
*England in 1835*  
Letter V (p. 35)  
Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1836

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

You know of course that a mathematical line, a line of thickness nil, has no real existence. They taught you that? Neither has a mathematical plane. These things are mere abstractions.

In Robert M. Hutchins and Mortimer J. Adler (eds.)  
*The Great Ideas Today* 1971  
*The Time Machine*, Chapter One (p. 449)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

**Whitehead, Alfred North** 1861–1947  
 English mathematician and philosopher

It is this union of passionate interest in the detailed facts with equal devotion to abstract generalisation which forms the novelty in our present society. . . . This balance of mind has now become part of the tradition which infects cultivated thought. It is the salt which keeps life sweet.

*Science and the Modern World*  
 Chapter I (p. 4)  
 The Macmillan Company. New York, New York, USA. 1929

...the utmost abstractions are the true weapons with which to control our thought of concrete fact.

*Science and the Modern World*  
 Chapter II (p. 32)  
 The Macmillan Company. New York, New York, USA. 1929

...to be an abstraction does not mean that an entity is nothing. It merely means that its existence is only one factor of a more concrete element of nature.

*The Concept of Nature*  
 Chapter VIII (p. 171)  
 At the University Press. Cambridge, England. 1920

**Wilder, Raymond L.** 1896–1982  
 American mathematician

There is nothing mysterious, as some have tried to maintain, about the applicability of mathematics. What we get by abstraction from something can be returned!

*Introduction to the Foundations of Mathematics*  
 Chapter XII (p. 275)  
 John Wiley & Sons, Inc. New York, New York, USA. 1952

**Young, John Zachary** 1907–97  
 English zoologist

It is of our very nature to see the universe as a place that we can talk about. In particular, you will remember, the brain tends to compute by organizing all of its input into certain general patterns. It is natural for us, therefore, to try to make these grand abstractions, to seek for one formula, one model, one God, around which we can organize all our communication and the whole business of living.

*Doubt and Certainty in Science: A Biologist's Reflections on the Brain*  
 Eighth Lecture (p. 163)  
 Oxford University Press, Inc. Oxford, England. 1960

## ABSTRUSE

**Bailey, Liberty Hyde** 1858–1954  
 American horticulturist and botanist

Every person is interested in the evident things, few in the abstruse and recondite.

*Botany: An Elementary Text for Schools*, (4th edition)  
 Paragraphs for the Teacher (p. vi)  
 The Macmillan Co. New York, New York, USA. 1901

**Mackenzie, Henry** 1745–1831  
 Scottish novelist

...in knowledge and philosophy be careful to distinguish that the purpose of research should ever be fixed on making simple what is abstruse, not abstruse what is simple ...

*The Man of the World*  
 Chapter I (pp. 31–32)  
 Printed by Robert Tullis. London, England. 1802

## ABSURD

**Gogol, Nikolai** 1809–52  
 Ukrainian-born Russian humorist, dramatist, and novelist

What is utterly absurd happens in the world.

In Leonard J. Kent (ed.)  
 Translated by Constance Garnett  
*The Collected Tales and Plays of Nikolai Gogol*  
*The Nose*  
 Chapter III (p. 495)  
 Octagon Books. New York, New York, USA. 1978

**Iyer, S. Sandaram**  
 No biographical data available

A thing may appear *absurd* and be true when it is above common sense but a thing contrary to the laws of mathematics is really and absolutely absurd, and whoso believes in such an absurdity is a fool.

*Thoughts on the Metaphysics of Theosophy*  
 Synthetic Recapulation (p. 92)  
 The Calcutta Central Press. Calcutta, India. 1883

## ABYSS

**Nietzsche, Friedrich Wilhelm** 1844–1900  
 German philosopher

If you gaze long into an abyss, the abyss will gaze back into you.

*Beyond Good and Evil*  
 Aphorism 146  
 The Modern Library. New York, New York, USA. 1917

## ACADEMIC MIND

**Fisher, Sir Ronald Aylmer** 1890–1962  
 English statistician and geneticist

The academic mind, as we know, is sometimes capable of assuming an aggressive attitude. The official mind, on the contrary, is and has to be, expert in the art of self-defense.

Presidential address, First Indian Statistical Congress, 1938

## ACADEMIC POLITICIAN

**Cornford, Francis M.** 1874–1943

English academic

My heart is full of pity for you, O young academic politician. If you *will* be a politician you have a painful path to follow, even though it be a short one, before you nestle down into a modest incompetence.

*Microcosmographia Academica*

Warning

Bowes &amp; Bowes, Publishers. Cambridge, England. 1908

I like you the better for your illusions; but it cannot be denied that they prevent you from being effective, and if you do not become effective before you cease to want anything to be done—why, what will be the good of you?

*Microcosmographia Academica*

Warning

Bowes &amp; Bowes, Publishers. Cambridge, England. 1908

The *Young Man in a Hurry* is a narrow-minded and ridiculously youthful prig, who is inexperienced enough to imagine that something might be done before very long, and even to suggest definite things. His most dangerous defect being want of experience, everything should be done to prevent him from taking any part in affairs. He may be known by his propensity to organise societies for the purpose of making silk purses out of sows' ears. This tendency is not so dangerous as it might seem; for it may be observed that the sows, after taking their washing with a grunt or two, trundle back unharmed to the wallow; and the purse-market is quoted as firm. The Young Man in a Hurry is afflicted with a conscience, which is apt to break out, like measles, in patches. To listen to him, you would think that he united the virtues of a Brutus to the passion for lost causes of a Cato; he has not learnt that most of his causes are lost by letting the Cato out of the bag, instead of tying him up firmly and sitting on him, as experienced people do.

*Microcosmographia Academica*

Parties

Bowes &amp; Bowes, Publishers. Cambridge, England. 1908

## ACCELERATOR

**Kaku, Michio** 1947–

Japanese-American theoretical physicist

There are 60 sub-atomic particles they've discovered that can explain the thousands of other sub-atomic particles, and the model is too ugly. This is my analogy: it's like taking Scotch tape and taping a giraffe to a mule to a whale to a tiger and saying this is the ultimate theory of particles.... We have so many particles that Oppenheimer once said you could give a Nobel Prize to the physicist that did not discover a particle that year. We were drowning in sub-atomic particles.

Now we realize that this whole zoo of sub-atomic particles, thousands of them coming out of our accelerators, can be explained by little vibrating strings.

In Nina L. Diamond

*Voices of Truth*

Part Three, Chapter Eleven (p. 334)

Lotus Press. Twin Lakes, Wisconsin, USA. 2000

**Lederman, Leon** 1922–

American high-energy physicist

The accelerator laboratory became a service center with a variety of products. By the late 1980s, Fermilab's sales force advertised to potential customers that the following hot and cold running beams were available: protons, neutrons, pions, kaons, muons, neutrinos, antiprotons, hyperons, polarized protons (all spinning in the same direction), tagged photons (we know their energy), and if you don't see it, ask!

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 6 (p. 251)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

## ACCIDENT

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

ACCIDENT, *n.* An inevitable occurrence due to the action of immutable natural laws.

*The Collected Works of Ambrose Bierce*

The Devil's Dictionary (p. 17)

The Neale Publishing Co. New York, New York, USA. 1911

**Davy, Sir Humphry** 1778–1829

English chemist

...it requires a certain degree of knowledge and scientific combination to understand and seize upon the facts which have originated in accident.

*Consolations in Travel, or the Last Days of a Philosopher*

Dialogue V (pp. 233–234)

J. Murray. London, England. 1830

**Gore, George** 1826–1909

English electrochemist

We are too apt to attribute to accident or occult influence that which we cannot understand.

*The Art of Scientific Discovery*

Part II, Chapter XXVI (p. 223)

Longmans, Green &amp; Co. London, England. 1878

**Gregg, Alan** 1890–1957

American medical educator and philosopher

One wonders whether the rare ability to be completely attentive to, and to profit by, nature's slightest deviation from the conduct expected of her is not the secret of the best research minds and one that explains why some men turn to most remarkably good advantage seemingly

trivial accidents. Behind such attention lies an unremitting sensitivity...

*The Furtherance of Medical Research*

Chapter III (p. 98)

Yale University Press. New Haven, Connecticut, USA. 1941

**Gribbin, John** 1946–

English science writer and astronomer

Our form of life depends, in delicate and subtle ways, on several apparent “coincidences” in the fundamental laws of nature which make the Universe tick. Without those coincidences, we would not be here to puzzle over the problem of their existence.... What does this mean? One possibility is that the Universe we know is a highly improbable accident, “just one of those things”.

*Genesis: The Origins of Man and the Universe*

Chapter 9 (p. 307)

Delacorte Press. New York, New York, USA. 1981

**Lessing, Gotthold Ephraim** 1729–81

German philosopher, dramatist, and critic

Nothing under the sun is coincidence.

*Emilia Galotti*

Act V, Scene 3

Frederick Ungar Publications Company. New York, New York, USA.

1962

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

What hope is there then of human improvement? According to the Neo-Darwinists, to the Mechanists, no hope whatever, because improvement can come only through some senseless accident which must, on the statistical average of accidents, be presently wiped out by some other equally senseless accident.

*Back to Methuselah*

Preface (p. xvi)

Constable & Company Ltd. London, England. 1921

**Whewell, William** 1794–1866

English philosopher and historian

The common love of the marvelous, and the vulgar desire to bring down the greatest achievements of genius to our own level, may lead men to ascribe such results to any casual circumstances which accompany them; but no one who fairly considers the real nature of great discoveries, and the intellectual processes which they involve, can seriously hold the opinion of their being the effect of accident.

*The Philosophy of the Inductive Sciences: Founded Upon Their History* (Volume 2)

Book XI, Chapter II (p. 24)

John W. Parker. London, England. 1847

## ACCOMPLISHMENT

**Berthelot, Marcellin (or Marcelin)**

**Pierre Eugène** 1827–1907

French chemist and politician

What we are is due but in small measure to our own labor and to our personal individuality, for we owe it almost entirely to our ancestors – ancestors by blood and ancestors of our character. If any of us add anything to the common good in the realm of science, of art, or of morality, it is because a long line of generations has lived, toiled, thought, and suffered before us.

In Camille Matignon

*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*

Marcellin Berthelot (p. 684)

Government Printing Office. Washington, D.C. 1908

**Einstein, Albert** 1879–1955

German-born physicist

I refuse...to make money out of my science. My laurel is not for sale like so many bales of cotton.

What Life Means to Einstein: An Interview by George Sylvester Viereck

*The Saturday Evening Post*, October 26, 1929 (p. 17)

## ACCURACY

### Author undetermined

Accuracy and knowledge of detail are the great aims of modern scientific men. There may be much that is indefinite, but, when accuracy comes, every opposing speculation and supposed law or fact falls as hopelessly before it as that celebrated road to the skies which was felled to the earth by a well-aimed blow from Jack’s hatchet.

Accuracy

*The Chemical News and Industrial News*, Volume XIX, Number 474,

January 1, 1869 (p. 3)

**Babbage, Charles** 1792–1871

English mathematician

No person will deny that the highest degree of attainable accuracy is an object to be desired, and it is generally found that the last advances towards precision require a greater devotion of time, labour, and expense, than those which precede them.

*Reflections on the Decline of Science in England, And on Some of Its Causes*

Chapter V (p. 167)

Printed for B. Fellowes. London, England. 1830

The extreme accuracy required in some of our modern inquiries has, in some respects, had an unfortunate influence, by favouring the opinion, that no experiments are valuable, unless the measures are most minute, and the accordance amongst them most perfect.

*Reflections on the Decline of Science in England, And on Some of Its Causes*

Chapter V (pp. 167–168)

Printed for B. Fellowes. London, England. 1830

**Bogart, Humphrey** 1899–1957

American film actor

Fred C. Dobbs don't say nothin' he don't mean.

*The Treasure of the Sierra Madre*

Film (1948)

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“How is bread made?”

“I know *that!*” Alice cried eagerly. “You take some flour—”

“Where do you pick the flour?” the White Queen asked.

“In a garden or in the hedges?”

“Well, it isn't *picked* at all,” Alice explained: “it's ground—”

“How many acres of ground?” said the White Queen.

“You mustn't leave out so many things.”

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*, Chapter IX (p. 254)

The Modern Library. New York, New York, USA. 1936

**Darwin, Charles Robert** 1809–82

English naturalist

...I value praise for accurate observation far higher than for any other quality...

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Darwin to Hooker, December 11, 1860 (p. 148)

D. Appleton & Company. New York, New York, USA. 1896

...good heavens, how difficult accuracy is!

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Darwin to Gray, June 3, 1874 (p. 457)

D. Appleton & Company. New York, New York, USA. 1896

Accuracy is the soul of Natural History. It is hard to become accurate; he who modifies a hair's breadth will never be accurate.... Absolute accuracy is the hardest merit to attain, and the highest merit.

In Francis Darwin (ed.)

*More Letters of Charles Darwin* (Volume 2)

Darwin to Scott, July 2, 1863? (p. 323)

D. Appleton & Company. New York, New York, USA. 1903

## Editor

Accuracy and knowledge of detail are the great aims of modern scientific men. There may be much that is indefinite, but, when accuracy comes, every opposing speculation and supposed law or fact falls as hopelessly before it as that celebrated road to the skies which was felled to the earth by a well-aimed blow from Jack's hatchet.

Accuracy

*Chemical News and Journal of Industrial Science*, Volume XIX, Number 574, January 1, 1869 (p. 1)

**Fresenius, C. R.** 1818–97

German chemist

Knowledge and ability must be combined with ambition as well as with a sense of honesty and a severe conscience. Every analyst occasionally has doubts about the accuracy of his results, and also there are times when he knows his results to be incorrect. Sometimes a few drops of the solution were spilt, or some other slight mistake made. In those cases it requires a strong conscience to repeat the analysis and not to make a rough estimate of the loss or apply a correction. Anyone not having sufficient will-power to do this is unsuited to analysis no matter how great his technical ability or knowledge. A chemist who would not take an oath guaranteeing the authenticity, as well as the accuracy of his work, should never publish his results, for if he were to do so then the result would be detrimental, not only to himself, but to the whole of science.

In Ferenc Szabadváry

*History of Analytical Chemistry*

Chapter VII (p. 176)

Gordon & Breach Science. Langhorne, Pennsylvania, USA. 1992

**Gombrich, Ernst Hans** 1909–2001

English art historian and scholar

Everyone is acquainted with dogs and horses, since they are seen daily. To reproduce their likeness is very difficult. On the other hand, since demons and spiritual beings have no definite form, and no one has ever seen them, they are easy to execute.

*Art and Illusion*

Part II, Chapter VIII (p. 269)

Pantheon Books. New York, New York, USA. 1960

**Helps, Arthur** 1813–75

English writer

I do not know that there is anything, except it be humility, which is so valuable as an incident of education as accuracy. And accuracy can be taught. Direct lies told to the world are as dust in the balance when weighed against the falsehoods of inaccuracy.

*Brevia: Short Essays and Aphorisms*

Short Essays and Aphorisms (p. 105)

Robert Brothers. Boston, Massachusetts, USA. 1871

**Hume, David** 1711–76

Scottish philosopher and historian

Accuracy is, in every case, advantageous to beauty, and just reasoning to delicate sentiment. In vain would we exalt one by depreciating the other.

In *Great Books of the Western World* (Volume 35)

*An Enquiry Concerning Human Understanding*

Section I (p. 453)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Huxley, Thomas Henry** 1825–95  
English biologist

Accuracy is the foundation of everything else...

*Collected Essays* (Volume 3)

*Science and Education*

Section I, Address on Behalf of the National Association for the Promotion of Technical Education (p. 432)

Macmillan & Company Ltd. London, England. 1904

**Jevons, William Stanley** 1835–82

English economist and logician

Numerical precision is the soul of science....

*The Principles of Science: A Treatise on Logic and Scientific Method*

Book III, Chapter XIII (p. 273)

Macmillan & Company. London, England. 1887

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

He who has not made the experiment, or who is not accustomed to require rigorous accuracy from himself, will scarcely believe how much a few hours take from certainty of knowledge, and distinctness of imagery; how the succession of objects will be broken, how separate parts will be confused, and how many particular features and discriminations will be compressed and conglobated into one gross and general idea.

*A Journey to the Western Islands of Scotland* (pp. 239–240)

Printed by Thomas Walker. Dublin, Ireland. 1775

**Kolthoff, I. M.** 1894–1993

American chemist

**Sandell, E. B.**

American chemist

Anyone who has acquired sufficient skill to make an exact analysis satisfactorily can adapt himself to the performance of a less accurate one – but the reverse is not true.

*Textbook of Quantitative Inorganic Analysis* (3rd edition)

Introduction (p. 4)

The Macmillan Company. New York, New York, USA. 1952

**Miller, George Abram** 1863–1951

American mathematician

Mathematical accuracy should not be confused with mathematical minutiae.

*Historical Introduction to Mathematical Literature*

Preface (p. v)

The Macmillan Co. New York, New York, USA. 1916

**Mitchell, Maria** 1818–89

American astronomer and educator

The training of a girl fits her for delicate work. The touch of her fingers upon the delicate screws of an astronomical instrument might become wonderfully accurate in results; a woman's eyes are trained to nicety of color.

The eye that directs a needle in the delicate meshes of embroidery will equally well bisect a star with the spider web of the micrometer. Routine observations, too, dull as they are, are less dull than the endless repetition of the same pattern in crochet-work.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter XI (pp. 237–238)

Lee & Shepard. Boston, Massachusetts, USA. 1896

## ACCURATELY

**Ritchie, Arthur David** 1891–1967

Scottish philosopher and science history writer

It is really just as bad technique to make a measurement more accurately than is necessary as it is to make it not accurately enough.

*Scientific Method: An Inquiry into the Character and Validity of Natural Law*

Chapter V (p. 113)

Kegan Paul, Trench, Trubner & Co., Ltd. London, England. 1923

## ACHIEVEMENT

**Hardy, G. H. (Godfrey Harold)** 1877–1947

English pure mathematician

In these days of conflict between ancient and modern studies, there must surely be something to be said for a study which did not begin with Pythagoras, and will not end with Einstein, but is the oldest and the youngest of all.

*A Mathematician's Apology*

Section 6 (p. 76)

Cambridge University Press. Cambridge, England. 1967

## ACID

### Author undetermined

Add acid to watum

Just as you oughta.

Source undetermined

**Huheey, James E.**

American chemist

In a very real sense, we can make an acid be anything we wish – the differences between the various acid-base concepts are not concerned with which is 'right' but which is most convenient to use in a particular situation.

*Inorganic Chemistry: Principles of Structure and Reactivity*

Chapter 6 (p. 207)

Harper & Row, Publishers. New York, New York, USA. 1972

**Lavoisier, Antoine Laurent** 1743–94

French chemist

The acids, for example, are compounded of two substances, of the order of those which we consider as

simple; the one constitutes acidity, and is common to all acids, and, from this substance, the name of the class or the genus ought to be taken; the other is peculiar to each acid, and distinguishes it from the rest, and from this substance is to be taken the name of the species. But, in the greatest number of acids, the two constituent elements, the acidifying principle, and that which it acidifies, may exist in different proportions, constituting all the possible points of equilibrium or of saturation. This is the case in the sulphuric and the sulphurous acids; and these two states of the same acid we have marked by varying the termination of the specific name.

Translated by Robert Kerr

*Elements of Chemistry* (Volume 1) (5th edition)

Preface (p. xxxi)

Printed for W. Creech. Edinburgh, Scotland. 1802

## ACETIC

**Laurent, Auguste** 1807–53

French chemist

From this time everything was copulated. Acetic, formic, butyric, margaric, &c., acids, alkaloids, ethers, amides, anilides, all became copulated bodies. So that to make acetanilide, for example, they no longer employed acetic acid and aniline, but they re-copulated a copulated oxalic acid with a copulated ammonia. I am inventing nothing – altering nothing. Is it my fault if, when writing history, I appear to be composing a romance?

Translated by William Odling

*Chemical Method, Notation, Classification, & Nomenclature*

Metamorphoses (p. 204)

Printed for the Cavendish Society. 1855

## AMINO

**Cloud, Preston Ercelle** 1912–91

American biogeologist, paleontologist, and humanist

One amino acid does not a protein make – let alone a being.

Chapter Ten (p. 231)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

## CARBOLIC

**Lister, Joseph** 1827–1912

English surgeon

Bearing in mind that it is from the vitality of the atmospheric particles that all the mischief arises, it appears that all that is requisite is to dress the wound with some material capable of killing these septic germs, provided that any substance can be found reliable for this purpose, yet not too potent as a caustic.

‘On a New Method of Treating Compound Fracture, Abscesses, etc: With Observations on the Conditions of Suppuration’, Part 1  
*The Lancet*, March 16, 1867 (p. 327)

In the course of the year 1864 I was much struck with an account of the remarkable effects produced by carbolic acid upon the sewage of the town of Carlisle, the admixture of a very small proportion not only preventing all odour from the lands irrigated with the refuse material, but, as it was stated, destroying the entozoa which usually infest cattle fed upon such pastures.

‘On a New Method of Treating Compound Fracture, Abscesses, etc: With Observations on the Conditions of Suppuration’, Part 1  
*The Lancet*, March 16, 1867 (p. 327)

## FORMIC

### Coroner Putnam (Fictional character)

Well, Old Man Johnson could’ve died in anyone of five ways. His neck and back were broken, his chest was crushed, his skull was fractured...and here’s one for Sherlock Holmes. There was enough formic acid in him to kill twenty men.

*Them*

Film (1954)

## HYDROCHLORIC

**Webster, Jean** 1876–1916

American writer

I must go to the laboratory and look into a little matter of acids and salts and alkalis. I’ve burned a hole as big as a plate in the front of my chemistry apron, with hydrochloric acid. If the theory worked, I ought to be able to neutralize that hole with good strong ammonia, oughtn’t I?

*Daddy-Long-Legs*

February 4th (p. 130)

The Century Co. New York, New York, USA. 1913

## MURIATIC

**Marcet, Mrs. (Jane Haldimand)** 1769–1858

English expository author in chemistry, botany, religion, and economics

MRS. B: ... There is... a beautiful green salt too curious to be omitted; it is produced by the combination of cobalt with muriatic acid, which has the singular property of forming what is called sympathetic ink. Characters written with this solution are invisible when cold, but when a gentle heat is applied, they assume a fine bluish green colour.

*Conversations on Chemistry In Which the Elements of that Science Are Familiarly Explained and Illustrated by Experiments* (Volume 1)

Conversation X (p. 159)

Oliver D. Cooke

Hartford, Connecticut, USA. 1822

## SULPHURIC

**von Liebig, Justus** 1803–73  
German organic chemist

It is no exaggeration to say, we may judge, with great accuracy, of the chemical prosperity of a country from the amount of sulphuric acid it consumes. In this point of view there is no manufacture worthy of greater attention on the part of the government.

*Familiar Letters on Chemistry and Its Relation to Commerce, Physiology, and Agriculture*  
Letter III (p. 30)  
Taylor & Walton. London, England. 1843

**Willans, Geoffrey** 1911–58  
English author and journalist

**Searle, Ronald** 1920–  
English artist and cartoonist

A good way in a science lesson is to wait until some old fashioned poison like sulphuric acid, etc. turns up. As per usual science master, who not forward-looking, sa: No boy is to touch the contents of the tube.

Make up tube which look the same and place alongside acid. Master begins lesson drone drone drone. Suddenly you spring to feet with grate cry: ‘Sir Sir I can’t stand it any longer!’

Drink coloured water and collapse to be carried out as if dead. n.b.. if you make a mistake with this one you are still carried out as if dead and you *are*.

*Down With Skool!*  
How to Avoid Science (p. 62)  
Vanguard Press. New York, New York, USA. 1954

## URIC

**Wöhler, Friedrich** 1800–82  
German chemist

No other substance in organic chemistry attracts the attention of the physiologist and chemist to a higher degree than uric acid.

In Rolf Huisgen  
Adolf von Baeyer’s Scientific Achievements – A Legacy  
*Angewandte Chemie International Edition in English*, Volume 25,  
Number 4, April, 1986 (p. 302)

## ACKNOWLEDGEMENT

**Forsyth, Richard**  
No biographical data available

Many people, other than the authors, contribute to the making of a book, from the first person who had the bright idea of alphabetic writing through the inventor of movable type to the lumberjacks who felled the trees that were

pulped for its printing. It is not customary to acknowledge the trees themselves, though their commitment is total.

*Machine Learning*

## ACTION AT A DISTANCE

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

It is inconceivable that inanimate brute matter should, without the mediation of something else, which is not material, operate upon and affect other matter without mutual contact; as it must do, if gravitation, in the sense of Epicurus be essential or inherent in it. That gravity should be innate, inherent, and essential to matter, so that one body may act on another, at a distance, through a vacuum, without the mediation of anything else, by and through which their action and force may be conveyed from one to another, is, to me, so great an absurdity, that I believe no man who, in philosophical matters, has a competent faculty of thinking can ever fall into it.

In John Playfair  
*The Works of John Playfair* (Volume 2)  
Section IV (p. 431)  
Printed for Archibald Constable & Co. Edinburgh, Scotland. 1822

## ACTIVITY

**Pauli, Wolfgang** 1900–58  
Austrian-born physicist

Contrary to the strict division of the activity of the human spirit into separate departments – a division prevailing since the nineteenth century – I consider the ambition of overcoming opposites, including also a synthesis embracing both rational understanding and the mystical experience of unity, to be the mythos, spoken and unspoken, of our present day and age.

*Quantum Questions* (p. 175)  
Shambhala Publications, Inc. Boston, Massachusetts, USA. 2001

**ACTUARY****Author undetermined**

An insurance company is like an automobile going down the road at high speed. The managing director has his hands on the wheel, the marketing director has his foot on the accelerator. The finance director is heaving with all his might on the hand-brake and the actuary is in the back screaming directions from a map he has just made by looking out the rear window.

Source undetermined

Actuaries are funny people. Even when they are wrong, they are right. I told an actuary to go to the back of the queue. He immediately came back and said that he couldn't – there was already someone there.

Source undetermined

Someone once asked an accountant, a mathematician, an engineer, a statistician and an actuary how much 2 plus 2 was. The accountant said '4'. The mathematician said 'It all depends on your number base.' The engineer took out his slide-rule and said 'approximately 3.99'. The statistician consulted his tables and said, 'I am 95% confident that it lies between 3.95 and 4.05.' The actuary said, 'What do you want it to add up to?'

Source undetermined

**Karpinski, Lewis Charles**

Mathematician

Analytical and graphical treatment of statistics is employed by the economist, the philanthropist, the business expert, the actuary, and even the physician, with the most surprising valuable results...

Chapter 6 (p. 134)

Charles Scribner's Sons. New York, New York USA. 1912

**ADAPTABILITY****Dubos, René Jules** 1901–82

French-born American microbiologist and environmentalist

Adaptability is an asset for biological survival, but paradoxically, the greatest threat to the quality of human life is that the human species is so immensely adaptable that it can survive even under the most objectionable conditions.

*Reason Awake*

Chapter 5 (pp. 167–168)

Columbia University Press. New York, New York, USA. 1970

Almost universally, man tries to eliminate the unpleasant effects of environmental forces instead of making the greater effort required to cope with them through his own adaptive physiological resources.

*Man, Medicine, and Environment* (p. 85)

Frederick A. Praeger. New York, New York, USA. 1968

One of the unique characteristics of man is that he does not live only in the present; at his best, he has a deep sense of continuity with the past and is concerned with the future... . Adaptability must incorporate the needs of day-to-day existence subject to limitations and requirements created by the desire to preserve the past and modified by anticipations for the future.

*Man, Medicine, and Environment* (pp. 87–88)

Frederick A. Praeger. New York, New York, USA. 1968

**ADAPTATION****Geddes, Patrick** 1854–1932

Scottish biologist and botanist

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Every creature is a bundle of adaptations. Indeed, as Weismann says of the whale, "When we take away the adaptations, what have we left?"

*Evolution*

Chapter III (p. 97)

Henry Holt & Co. New York, New York, USA. 1911

**ADDRESS****Brinton, William**

English physician

There are many here before whom I would far rather be listening than speaking; many whose presence dignifies our inaugural meeting, but whose knowledge is not likely to be increased by anything I can say.

Introductory Lecture

*The London Lancet*, Volume 2, Number 6, December, 1857 (p. 433)

**Cayley, Arthur** 1821–95

English mathematician

...I think it is more respectful to you that I should speak to you upon and do my best to interest you in the subject which has occupied me, and in which I am myself most interested. And in another point of view, I think it is right that the Address of a President should be on his own subject, and that different subjects should be thus brought in turn before the meetings. So much the worse, it may be, for a particular meeting; but the meeting is the individual, which on evolution principles must be sacrificed for the development of the race.

*The Collected Mathematical Papers of Arthur Cayley* (Volume 11)

Presidential Address to the British Association, Southport, September, 1883 (p. 430)

At the University Press. Cambridge, England. 1896

**Faraday, Michael** 1791–1867

English physicist and chemist

...I shall here claim, as I always have done on these occasions, the right of addressing myself to the younger

members of the audience, – and for this purpose, therefore, unfitted as it may seem for an elderly infirm man to do so, I will return to second childhood and become, as it were, young again amongst the young.

Lecture 1 (p. 2)

Richard Griffin & Co. London, England. 1860

**Haldane, J. S. (John Scott)** 1860–1936

Scottish physiologist

In deciding to address you on the relation of physiology to physics and chemistry, I am aware that I have selected a subject which has already been treated from this Chair by more than one distinguished predecessor. My excuse for returning to it again is that not only does it possess deep scientific interest for us all, but a great deal remains to be said about it.

*The New Physiology and Other Addresses*

Chapter I (p. 1)

Chas. Griffin & Co., Ltd. London, England. 1919

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

I must not and do not doubt, that many...of those whom I now address, have, from time to time, been stirred by such visitations, and been conscious of such aspirings; and that you need not me to inform you, that astronomy, though a science, and an eminent one, is yet more than a science – that it is a chain woven of feeling as well as thought – an influence pervading not the mind only, but the soul of man.

*Life of Sir William Rowan Hamilton*

Introductory Lecture on astronomy (p. 641)

Hodges, Figgis & Co. Dublin, Ireland. 1882

**Hawkins, J. C.**

No biographical data available

It is taken quite as a matter of course that the yearly crop of flowers and fruit will reflect the condition, favorable or unfavorable, of the season. If the crop be poor quality only, we can sort out and save the best, but if it be also very scanty in quantity it may be a real misfortune. If the president's address is of poor quality, we never complain of its shortness. The less in quantity, the better we are pleased.

President's Annual Address

*The Minnesota Horticulturist*, Volume 27, Number 8, August, 1899 (p. 281)

**Hobson, Ernest William** 1856–1933

English mathematician

I propose to address to you a few remarks, necessarily fragmentary and incomplete, upon the scope and tendencies of modern mathematics.

Address of the President

*Science*, Volume 23, Number 821, September 23, 1910 (p. 386)

**Maschke, Heinrich**

German mathematician

The different branches of algebra and analysis which have been investigated are so numerous that it would be quite impossible to give an approximately exhaustive representation even only of the most important problems, within the limits of the time allowed to me. I, therefore, have confined myself to the minimum admissible number, namely *one*.

*Congress of Arts and Science: Universal Exposition, St. Louis, 1904*

On Present Problems of Algebra and Analysis (p. 518)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1905

**Maxwell, James Clerk** 1831–79

Scottish physicist

It is not the special but the universal interest of molecular science which encourages me to address you. It is not because we happen to be chemists or physicists or specialists of kind that we are attracted toward this centre of all material existence, but because we all belong to a race endowed with faculties which urge us on to search deep and ever deeper into the nature of things.

The Theory of Molecules

*The Popular Science Monthly*, Volume 4, January, 1874 (p. 278)

**Phillips, John** 1800–1874

English Geologist

English Geologist...when, on other occasions, we meet in quiet colleges and academic halls, how gladly welcome is the union of fresh discoveries and new inventions with the solid and venerable truths which are there treasured and taught. Long may such union last; the fair alliance of cultivated thought and practical skill; for by it labour is dignified and science fertilised, and the condition of human, society exalted!

Presidential Address, Delivered September 6, 1865

*The Chemical News and Journal of Physical Science*, Volume 11 (p. 115)

**Oppenheimer, James Robert** 1904–67

American theoretical physicist

There is something inherently comforting about a panel of experts. One knows that the partial and inadequate and slanted and personal views that he expresses will be corrected by the less partial, less personal views of everyone else on the panel; it is not unlike the experience of the professor who always is glad that he has to meet his class again because he can correct the mistakes that he made the last time.

*The Open Mind*

The Scientist in Society (p. 119)

Simon & Schuster. New York, New York, USA. 1955

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

To many the frost of custom has made even these imposing annual ceremonies cold and lifeless. To you, at least of

those present, they should have the solemnity of an ordinance – called as you are this day to a high dignity and to so weighty an office and charge. You have chosen your Genius, have passed beneath the Throne of Necessity, and with the voices of the fatal sisters still in your ears, will soon enter the plain of Forgetfulness and drink of the waters of its river. Ere you are driven all manner of ways, like the souls in the tale of Er the Pamphylian, it is my duty to say a few words of encouragement and to bid you, in the name of the Faculty, God-speed on your journey.

*Aequanimitas* (p. 3)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1904

### **Remsen, Ira** 1846–1927

American chemist and university president

At the weekly services of many of our churches it is customary to begin with the reading of a verse or two from the Scriptures for the purpose, I suppose, of putting the congregations in the proper state of mind for the exercises which are to follow. It seems to me we may profit by this example, and accordingly I ask your attention to Article I. of the Constitution of the American Association for the Advancement of Science, which reads thus: “The objects of the association are, by periodical and migratory meetings, to promote intercourse between those who are cultivating science in different parts of America, to give stronger and more general impulse and more systematic direction to scientific research, and to procure for the labors of scientific men increased facilities and a wider use.”

Scientific Investigation and Progress

*Science*, N.S. Volume 19, Number 4, January 1, 1904, (p. 1)

### **Stokes, Sir George** 1819–1903

English mathematician and physicist

In the address with which the business of the meeting is opened, it is usual for your President to give some account of the most recent progress of science. The task is by no means an easy one. Few, indeed, are familiar with science in all its branches; and even to one who was, the selection of topics and the mode of treating them would still present difficulties. I shall not attempt to give an account of the recent progress of science in general, but shall select from those branches with which I am more familiar some examples of recent progress which may, I hope, prove to be of pretty general interest. And even in this I feel that I shall have to crave your indulgence, for it is hard to be intelligible to some without being wearisome to others.

British Association, Meeting at Exeter

*Journal of Botany, British and Foreign*, Volume 7, 1869 (p. 284)

### **Sylvester, James Joseph** 1814–97

English mathematician

It is not without a feeling of surprise and trepidation at my own temerity that I find myself in the position of

one about to address this numerous and distinguished assembly.

Mathematics and Physics (p. 1)

John Murray. London, England. 1870

## ADHESIVE

### **Armour, Richard** 1906–89

American poet

Removing adhesive is hazardous work:

Little by little?

Or one sudden jerk?

Whichever it is, you may doubt you will win—

Removing adhesive, but leaving the skin.

*The Medical Muse*

Stuck with It

McGraw-Hill Book Company, Inc. New York, New York, USA. 1963

## ADSORPTION

### **Matthews, Albert**

No biographical data available

Adsorption...is a physico-chemical term meaning the concentration of substances at phase-boundaries in heterogeneous systems. Dressing can be called a process of adsorption. Every morning when we dress, clothing which has been distributed throughout our environment – dispersed in the surrounding phase – concentrates itself at the surface of our bodies. At night the process is reversed. We might go on to express these events by a curve or isotherm, showing how the quantity adsorbed is a function of the amount in the room, how it usually proceeds to an equilibrium, how it is greater at low than at high temperatures, that it is reversible and not accompanied by chemical change in the clothes, that it is specific in that certain clothes are adsorbed with greater avidity than others, that certain adsorbents (people) adsorb with greater avidity than others, or more so, and finally we could prove that the clothing moved into the surface film in virtue of the second law of thermodynamics and in consonance with the principle of Willard Gibbs.

Schenkman Publishing Co. Cambridge, Massachusetts, USA. 1967

## AESTHETIC

**Bernstein, Jeremy** 1929–

American physicist, educator, and writer

In science as in the arts, sound aesthetic judgments are usually arrived at only in retrospect. A really new art form or scientific idea is almost certain at first to appear ugly. The obviously beautiful, in both science and the arts, is more often than not an extension of the familiar. It is sometimes only with the passage of time that a really new idea begins to seem beautiful.

In Jeremy Bernstein

*Experiencing Science*

Part 1, Two Faces of Physics, Chapter I, Kepler: Harmony of the World (p. 3)

Basic Books, Inc., Publishers. New York, New York, USA. 1978

**Bragg, Sir William Lawrence** 1890–1971

Australian-born English physicist

When one has sought long for the clue to a secret of nature, and is rewarded by grasping some part of the answer, it comes as a blinding flash of revelation: it comes as something new, more simple and at the same time more aesthetically satisfying than anything one would have created in one's own mind. This conviction is of something revealed, and not something imagined.

In C.A. Coulson

*Science and Christian Belief*

Christian Belief (p. 99)

The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1955

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

...aesthetics never do anything but what they are told.

*Lunacy and Letters*

The Love of Lead (p. 160)

Sneed & Ward, Inc. New York, New York, USA. 1958

**Dewey, John** 1859–1952

American philosopher and educator

For only when an organism shares in the ordered relations of its environment does it secure the stability essential to

living. And when the participation comes after a phase of disruption and conflict, it bears within itself the germs of a consummation akin to the aesthetic.

*Art as Experience*

Chapter I (p. 15)

Milton, Balch & Company. New York, New York, USA. 1934

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

Whenever there is no objective confirmation, our attitude toward certain theories depends, in the last resort, on aesthetic considerations, disturbing as this may seem.

*The Road to Reason*

Chapter I (fn 4, p. 30)

Longmans, Green & Company. New York, New York, USA. 1949

**Flannery, Maura C.** 1947–

Biologist

...although to the non-scientist the aesthetic of biology would mean simply the beauties of nature, to the biologist it means much more. For example, the surface beauty of a leaf is nothing compared to the beauty of its cellular structure and of the process of photosynthesis. Learning about these things just increases appreciation. This is contrary to the idea held by many non-scientists that analysis destroys beauty. This latter view is based on a lack of understanding and knowledge of the processes of science. This is why many of the biologist's beauties are not appreciated by most non-scientists.

*Biology Is Beautiful*

*Perspectives in Biology and Medicine*, Volume 35, Number 3, Spring, 1992 (p. 430)

The aesthetic is intrinsic to biology. Biologists are drawn to the field by its aesthetic qualities and continually nurtured by them. This is true in all the sciences, but the aesthetics of biology is a little richer, or at least slightly different.

*Biology Is Beautiful*

*Perspectives in Biology and Medicine*, Volume 35, Number 3, Spring, 1992 (p. 433)

**King, Jerry P.**

American mathematician

...one's intellectual and aesthetic life cannot be complete unless it includes an appreciation of the power and the beauty of mathematics. Simply put, aesthetic and intellectual fulfillment requires that you know about mathematics.

*The Art of Mathematics*

Introduction (p. 3)

Plenum Press. New York, New York, USA. 1992

**Kline, Morris** 1908–92

American mathematics professor and writer

Much research for new proofs of theorems already correctly established is undertaken simply because

the existing proofs have no aesthetic appeal. There are mathematical demonstrations that are merely convincing; to use a phrase of the famous mathematical physicist, Lord Rayleigh, they ‘command assent’. There are other proofs which woo and charm the intellect. They evoke delight and an overpowering desire to say, “Amen, Amen.” An elegantly executed proof is a poem in all but the form in which it is written.

*Mathematics in Western Culture*

Chapter XXVIII (p. 470)

Oxford University Press, Inc. New York, New York, USA. 1953

**Kuhn, Thomas S.** 1922–96

American historian of science

...the importance of aesthetic considerations can sometimes be decisive. Though they often attract only a few scientists to a new theory, it is upon those few that its ultimate triumph may depend. If they had not quickly taken it up for highly individual reasons, the new candidate for paradigm might never have been sufficiently developed to attract the allegiance of the scientific community as a whole.

*The Structure of Scientific Revolutions*

Chapter XII (p. 156)

The University of Chicago Press. Chicago, Illinois, USA. 1970

**Penrose, Roger** 1931–

English mathematical physicist

Aesthetic qualities are important in science, and necessary, I think, for great science.

In John Hogan

Quantum Consciousness

*Scientific American*, Volume 261, Number 5, November, 1989 (p. 32)

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

And it is because simplicity, because grandeur, is beautiful, that we preferably seek simple facts, sublime facts, that we delight now to follow the majestic course of the stars, not to examine with the microscope that prodigious littleness which is also a grandeur, now to seek in geologic time the traces of a past which attracts because it is far away.

*The Foundations of Science*

*Science and Method*, Book I

Chapter I (p. 367)

The Science Press. New York, New York, USA. 1913

**Steen, Lynn Arthur**

American mathematician

...despite an objectivity about mathematical results that has no parallel in the world of art, the motivation and standards of creative mathematics are more like those of art than of science. Aesthetic judgments transcend both logic and applicability in the ranking of mathematical theorems: beauty and elegance have more to do with the

value of a mathematical idea than does either strict truth or possible utility.

*Mathematics Today: Twelve Informal Essays*

Mathematics Today (p. 10)

Springer-Verlag. New York, New York, USA. 1978

**Sullivan, John William Navin** 1886–1937

Irish mathematician

Since the primary object of the scientific theory is to express the harmonies which are found to exist in nature, we see at once that these theories must have an aesthetic value. The measure of the success of a scientific theory is, in fact, a measure of its aesthetic value, since it is a measure of the extent to which it has introduced harmony in what was before chaos.

The Justification of the Scientific Method

*The Athenaeum*, Number 4644, 2 May, 1919 (p. 275)

**Thomson, Sir George Paget** 1892–1975

English physicist

One can always make a theory, many theories, to account for known facts, occasionally even to predict new ones.

The test is aesthetic.

*The Inspiration of Science*

Chapter II (p. 17)

Oxford University Press, Inc. London, England. 1961

**AFFINITY**

**Brewster, David** 1781–1868

Scottish scientist, inventor, and writer

It is often some hidden relation, some deep-seated affinity, which is required to complete, or rather to constitute, a great discovery; and this relation is often discovered among the wildest conceptions and fancies after they have been sobered down by the application of experiment and observation.

In Margaret Maria Gordon

*The Home Life of Sir David Brewster* (3rd edition)

Chapter VIII (p. 72)

David Douglas. Edinburgh, Scotland 1881

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

How great has been the progress of natural science since serious attention began to be given to affinities, and especially since their true underlying principles have been determined!

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter II (p. 29)

The University of Chicago Press. Chicago, Illinois, USA. 1984

We must then be guided everywhere by natural affinities in composing the groups which result by dividing each kingdom into classes, each class into orders, each

order into sections or families, each family into genera, and each genus into different species if there is occasion for it.

Translated by Hugh Elliot

*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*

Chapter II (p. 33)

The University of Chicago Press. Chicago, Illinois, USA. 1984

**Whewell, William** 1794–1866

English philosopher and historian

Attractions take place between bodies, Affinities between the particles of a body. The former may be compared to the alliances of states, the latter to the ties of family.

*The Philosophy of the Inductive Sciences Founded upon Their History*

(Volume 2)

Aphorisms

Aphorisms Concerning Ideas, LXXV (p. 458)

John W. Parker. London, England. 1847

**AGE**

**Curtis, George William** 1824–92

American writer

...age... is a matter of feeling, not of years.

*Prue & I.*

Titbottom's Spectacles (p. 143)

Harper & Brothers Publishers. New York, New York, USA. 1894

**Davy, Sir Humphry** 1778–1829

English chemist

Ah! Could I recover anything like that freshness of mind, which I possessed at twenty-five, and which, like the dew of the dawning morning, covered all objects and nourished all things that grew, and in which they were more beautiful ever than in mid-day sunshine – what would I not give! – All that I have gained in an active and not unprofitable life. How well I remember that delightful season, when, full of power, I sought for power in others; and power was sympathy, and sympathy power – when the dead and the unknown, the great of other ages and distant places, were made, by the force of the imagination, my love; when every flower had the bloom and odor of the rose; and every spray or plant seemed either the poet's laurel, or the civic oak – which appeared to offer themselves as wreaths to adorn my throbbing brow.

*Memoirs in the Life of Sir Humphry Davy* (Volume 2)

Chapter VI (p. 304)

In John Davy

Longman, Rees, Orme, Brown, Green & Longman.. London, England. 1836

**Dirac, Paul Adrien Maurice** 1902–84

English theoretical physicist

Age is, of course, a fever chill

That every physicist must fear.

He's better dead than living still

When once he's past his thirtieth year.

In Leon Lederman

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 5 (p. 168)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Einstein, Albert** 1879–1955

German-born physicist

A person who has not made his great contribution to science before the age of thirty will never do so.

In S. Brodetsky

Newton: Scientist and Man

*Nature*, Volume 150, Number 3816, December 19, 1942 (p. 699)

**AGING**

**Albutt, Thomas Clifford** 1836–1935

English physician

The stealthy foot of time carries us from youth to age so imperceptibly that we are hardly aware of the change; insensibly we shorten our arms, husband our strength, and are willing to think our prowess undiminished.

Sir William Osler

*British Medical Journal*, Volume 1, 1920 (p. 64)

**Amiel, Henri-Frédéric** 1821–81

Swiss philosopher, poet, and critic

To know how to grow old is the master-work of wisdom, and one of the most difficult chapters in the great art of living.

Translated by Mrs. Humphrey Ward

*Amiel's Journal*

September 21, 1874 (p. 279)

A.L. Burt Company, Publishers. New York, New York, USA. 189?

**Berthelot, Marcellin (or Marcelin) Pierre**

**Eugène** 1827–1907

French chemist and politician

To my age first of all. Your sympathy makes it shine like the last burst of light from a lamp on the point of being extinguished in eternal night! The respect that humanity pays to the aged is the expression of the binding force that unites the present generations with those that have preceded us, and with those that are to follow.

In Camille Matignon

*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*

Marcellin Berthelot (p. 684)

Government Printing Office. Washington, D.C. 1908

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

About the best thing that extreme old age kan do for us iz tew make death a relief.

*Everybody's Friend: or Josh Billing's Encyclopedia and Proverbial Philosophy of Wit and Humor* (p. 242)

American Publishing Company. Hartford, Connecticut, USA. 1874

**Brody, Elaine M.**

Social worker, researcher, and gerontologist

The aging person's functioning, impaired though it may be, cannot be preserved or improved if he is assigned the role of full-time professional patient. His person and dress, the room in which he lives, the opportunity for privacy, the rhythm of his daily life...should convey the fact that the institution is his home, and should permit expression of his personal life style.

Long-term care for the Elderly: Optimisms, Options, and Opportunities  
*Journal of the American Geriatric Society*, Volume 19, 1971

**Bush, Vannevar** 1890–1974

American electrical engineer and physicist

We all know the troubles of old age. The bones creak; the eyes get dim, one forgets names.... The spark does not ignite; adrenalin has lost its potency. But there is something to be said on the other side. It is pleasant to rise in the morning, look out at the snow, and remark "I'm not going to the office today...." The beauty of nature has lost none of its charm; the beauty of women none of its benediction. There is...a possibility of growing old gracefully, and with content in one's heart.

Letter

*Bulletin New York Academy of Medicine*, Volume 47, 1971 (pp. 1274–1275)

**Davy, Sir Humphry** 1778–1829

English chemist

The advance in years bring indifference, and at the same time strength and steadiness. The young sapling is moved by every breeze; shoots forth its leaves vigorously when favoured by dew and sunshine; but is often severely injured, if not destroyed, by frost. In the mature tree, as the heartwood is covered by many coatings of sapwood, it becomes compressed and harder; but though it loses its vitality, it contributes to the strength of the vegetable.

*The Collected Works of Sir Humphry Davy* (Volume 1)

Memories of the Life of Sir Humphry Davy

Chapter IV (p. 214)

Smith, Elder & Company. London, England. 1839–1849

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

The young ones have always a claim to the old to help them forward.

*Middlemarch*

Book VI, Chapter LVI (p. 549)

Clarendon Press. Oxford, England. 1986

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Men born in the same year watch each other, especially as the sands of life begin to run low, as we imagine so many damaged hour-glasses to keep an eye on each

other. Women, of course, never know who are their contemporaries.

*Our Hundred Days in Europe*

Chapter II (p. 44)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

Habits are the crutches of old age; by the aid of these we manage to hobble along after the mental joints are stiff and the muscles rheumatic...when every act of self-determination costs an effort and a pang.

*Over the Teacups*

Chapter II (pp. 37–38)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

Women find it easier than men to grow old in a becoming way.... With old men it is too often different. They do not belong so much indoors as women do. They have no pretty little manual occupations.... [He] smokes his pipe, but does not know what to do with his fingers.

*Over the Teacups*

Chapter XII (p. 293)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

**Isaacs, Bernard**

English geriatric physician

The 'Geriatric Giants' – immobility, incontinence, instability and intellectual deterioration.

*The Challenge of Geriatric Medicine* (p. 1)

Oxford University Press, Inc. New York, New York, USA. 1992

**Priestley, Joseph** 1733–1804

English theologian and scientist

It may be my fate to be a kind of comet, or flaming meteor in science, in the regions of which (like enough to a meteor) I made my appearance very lately, and very unexpectedly; and therefore, like a meteor, it may be my destiny to move very swiftly, burn away with great heat and violence and become as suddenly extinct.

*Philosophical Empiricism*

Section V (p. 67)

Printed for J. Johnson. London, England. 1775

**Ramsay, Sir William** 1852–1916

English chemist

The minds of most men, like their bodies, grow stiff with age and unreceptive of new impressions...

*Essays Biographical and Chemical*

The Great London Chemists

Lord Kelvin (p. 100)

Archibald Constable & Company Ltd. London, England. 1908

**Yudowitch, K. L.**

No biographical data available

The knowledge that so many important discoveries in physics have been made by young men comes as a surprise to most students – and a pleasant surprise. Students never fail to look with new interest upon work done by a man at very nearly their own age. Physics is revitalized

in the minds of the students by the knowledge that it is a field for young men – men like themselves.

Young Men in Physics

*American Journal of Physics*, Volume 15, Number 2, March–April, 1947 (p. 191)

## AGNOSTICISM

### Wainwright, Samuel

No biographical data available

“God created man”? No such thing! The monads developed him. “The heavens declare the glory of God”? Far from it: “they declare only the glory of the astronomer!” “We have now no need of the hypothesis of God.”

These utterances, and such as these, startling alike to reverence and to faith, are the merest common places of modern agnosticism.

*Scientific Sophisms: A Review of Current Theories Concerning Atoms, Apes and Men*

Chapter I (p. 25)

Funk & Wagnalls. New York, New York, USA. 1883

Agnosticism made candid confession of its ignorance. Gnosticism parades its pretensions to knowledge. The former did not know: the latter is quite sure.

*Scientific Sophisms: A Review of Current Theories Concerning Atoms, Apes and Men*

Chapter I (p. 26)

Funk & Wagnalls. New York, New York, USA. 1883

## AGRICULTURE

### Taylor, Sir Edward

The rudest savage, skilled as he is in the habits of the food-plants he gathers, must know well enough that if seeds or roots are put in a proper place in the ground they will grow.

*Anthropology*

Chapter IX (p. 214)

Macmillan & Co. London, England. 1881

### von Liebig, Justus 1803–73

German organic chemist

Chemistry...is the foundation of agriculture, and we cannot hope to give a scientific form and basis to this important art without a knowledge of the constituents of the soil, and of the substances which constitute the food of plants.

In John Blyth (ed.)

*Familiar Letters on Chemistry*

Letter I (p. 21)

Walton & Maberly. London, England. 1859

### Warner, Charles Dudley 1829–1900

American editor and author

To own a bit of ground, to scratch it with a hoe, to plant seeds, and watch their renewal of life – this is the

commonest delight of the race, the most satisfactory thing a man can do.

*My Summer in a Garden*

Preliminary (p. 13)

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1897

## AILMENT

### Author undetermined

An imaginary ailment is worse than a disease.

Source undetermined

### Heller, Joseph 1923–99

American writer

Yossarian had so many ailments to be afraid of that he was sometimes tempted to turn himself in to the hospital for good and spend the rest of his life stretched out there inside an oxygen tent with a battery of specialists and nurses seated at one side of his bed twenty-four hours a day waiting for something to go wrong....

*Catch-22*

Chapter Seventeen (pp. 177–178)

Dell Publishing Company, Inc. New York, New York, USA. 1985

## AIR

### Adams, George 1750–95

English instrument maker

Air is a fluid into which you are plunged the moment you are born, and without which you would in a moment be deprived of life.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture I (p. 7)

Printed by R. Hindmarsh. London, England. 1794

### Boyle, Robert 1627–91

English natural philosopher and theological writer

The generality of men are so accustomed to judge of things by their senses that, because the air is invisible, they ascribe but little to it, and think it but one remove from nothing.

In Sir W. Ramsay

*The Gases of the Atmosphere*

Chapter I (p. 10)

Macmillan & Company Ltd. London, England. 1905

### Cohen, J. B.

No biographical data available

As regards the air we breathe, we stand much in the same relation as Mohammed to the mountain. As we cannot bring pure air to the town, we go and seek it in the country or by the sea; that is, those of us who can afford it.

*Annual Report of the Board of Regents of the Smithsonian Institution*

The Air of Towns, Lecture 1 (p. 350)

U.S. Government Printing Office. Washington, D.C. 1896

**Muir, John** 1838–1914  
American naturalist

The air was perfectly delicious, sweet enough for the breath of angels. Every draught of it gave a separate and distinct piece of pleasure. I do not believe that Adam and Eve tasted better in their balmiest nook.

*Letters to a Friend* (p. 38)

Houghton Mifflin Company, Boston, Massachusetts, USA. 1915

**Neruda, Pablo (Nefalí Ricardo Reyes**

**Basoalto)** 1904–73  
Chilean writer and politician

There is something from every living being in the atmosphere: close inspection of the air would disclose beggars, lawyers bandits, mailmen, seamstresses and a little of each occupation, a humbled remnant wants to perform its own work within us.

*Selected poems*

Nocturnal Collections

Houghton Mifflin Co. Boston, Massachusetts, USA. 1990

**Ramsay, Sir William** 1852–1916

English chemist

To tell the story of the development of men's ideas regarding the nature of atmospheric air is in great part to write a history of chemistry and physics.

*The Gases of the Atmosphere*

Chapter I (p. 1)

Macmillan & Company Ltd. London, England. 1905

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

...this most excellent canopy, the air, look you, this brave o'erhanging firmament, this majestical roof fretted with golden fire ...

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Hamlet, Prince of Denmark*

Act II, Scene ii, l. 301–303

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Sherman, Joe**

No biographical data available

Once air was simply marvelous, filled with demons who lurked in shadows, with sylphs who lived in thunderstorms and caressed the back of your neck as warm summer breezes, with angels speaking Enochian, with particles from distant planets trying to invade your body – all watched over by celestial ether, the big air made splendid by the light of God.

*GASP!*

Chapter 4 (p. 99)

Shoemaker & Hoard. Washington, D.C. 2004

## ALCHEMY

**Boltzmann, Ludwig Edward** 1844–1906

Austrian physicist

As long as the alchemist merely sought [the] philosopher's stone and aimed at finding the art of making gold, all [his] endeavors were fruitless; it was only when people restricted themselves to seemingly less valuable questions that they created chemistry. Thus natural science appears completely to lose from sight the large and general questions; but all the more splendid is the success when, groping in the thicket of special questions, we suddenly find a small opening that allows a hitherto undreamt of outlook on the whole.

In Brian McGuinness (ed.)

Translated by Paul Foulkes

*Theoretical Physics and Philosophical Problems. Selected Writings*

The Second Law of Thermodynamics (pp. 13–14)

Reidel Publishing Company, Boston, Massachusetts, USA. 1974

**Gibbon, Edward** 1737–94

English historian

Philosophy, with the aid of experience, has at length banished the study of alchemy; and the present age, however desirous of riches, is content to seek them by the humbler means of commerce and industry.

*The History of the Decline and Fall of the Roman Empire* (Volume 1)

Chapter XIII (p. 375)

John Murray. London, England.. 1846

**Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

“...I have not crawled so long on my belly with my nails dug in the earth through all the innumerable windings of that dark mine, without perceiving in the far distance – at the end of the dim passage – a light, a flame, a something; the reflection, no doubt, from that dazzling central laboratory in which the patient and the wise have come upon God.”

“And finally,” interrupted Tourangeau, “what do you hold for true and certain?”

Translated by Jessie Haynes

*Notre Dame de Paris*

Book V, Chapter I (pp. 168–169)

P.F. Collier & Son. New York, New York, USA. 1902

**Kircher, Athanasius** 1602–80

German Jesuit archaeologist

...alchemy is a science, not yet known but which may become known.

In Bernard Jaffe

*Crucibles: The Story of Chemistry*

Chapter XVI (p. 331)

Dover Publications. New York, New York, USA. 1976

**Luciano, Giano**

No biographical data available

[Alchemy]...the key to all good things, the Art of Arts, the science of sciences.

*The New Pearl of Great Price...*

The Third Distinction (pp. 138–139)

Arno Press. New York, New York, USA. 1974

**Luther, Martin** 1483–1546

Leader of the Protestant Reformation

The science of alchymy I like very well, and indeed, 'tis the philosophy of the ancients. I like it not only for the profits it brings in melting metals, in decocting, preparing, extracting and distilling herbs, roots; I like it also for the sake of the allegory and secret signification, which is exceedingly fine, touching the resurrection of the dead at the last day.

Translated by William Hazlitt

*The Table-Talk of Martin Luther*

DCCCV (p. 326)

David Bogue. London, England. 1898

**Mersenne, Marin** 1588–1648

French theologian and mathematician

We can take pride in the fact that there is no science as certain as ours [alchemy] because it teaches by experience which is the mother, the source and the universal cause of all knowledge: and it is for the lack of this that Aristotle and the other philosophers have wondrously failed in their philosophy...

In Allen G. Debus

*The French Paracelsians*

Chapter 3 (p. 72)

Cambridge University Press. Cambridge, England. 1991

**Milton, John** 1608–74

English poet

...if by fire

Of sooty coal th' empiric alchymist

Can turn, or holds it possible to turn,

Metals of drossiest ore to perfect gold.

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book V, l. 439

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Norton, Thomas** 1532–84

English alchemist

Maistryefull merveyulous and Archimastrye

Is the tincture of holy Alkimy;

A wonderful Science, secrete Philosophie,

A singular grace and gifte of th' Almightye:

Which never was found by labour of Mann,

But it by Teaching, or by Revalacion begann.

*The Ordinall of Alchemy*

Capitulum I, l. 181–186

Oxford University Press, Inc., London, England. 1975

**Paracelsus (Theophrastus Phillippus Aureolus Bombastus von Hohenheim)** 1493–1541

Swiss alchemist and mystic

The great virtues that lie hidden in nature would never have been revealed if alchemy had not uncovered them and made them visible. Take a tree, for example; a man sees it in the winter, but he does not know what it is, he does not know what it conceals within itself, until summer comes and discloses the buds, the flowers, the fruit.... Similarly the virtues in things remain concealed to man, unless the alchemist disclose them, as the summer reveals the nature of the tree.

In Jolande Jacobi (ed.)

*Paracelsus: Selected Writings*

Chapter III (p. 218)

Pantheon Books. New York, New York, USA. 1951

**Pratchett, Terry** 1948–

English author

The Explosion removed the windows, the door and most of the chimney.

It was the sort of thing you expected in the Street of Alchemists. The neighbors preferred explosions, which were at least identifiable and soon over. They were better than the smells, which crept up upon you.

*Moving Pictures* (p. 15)

Corgi Books. London, England. 1991

Most alchemists were nervous, in any case; it came from not knowing what the crucible of bubbling stuff they were experimenting with was going to do next.

*Moving Pictures* (p. 20)

Corgi Books. London, England. 1991

**Proverb, Spanish**

It is approved alchemy to have an income and spend nothing.

In Robert Christy

*Proverbs, Maxims and Phrases of All Ages* (p. 21)

G.P. Putnam's Sons. New York, New York, USA. 1888

**Sagan, Carl** 1934–96

American astronomer and author

The ash of stellar alchemy was now emerging into consciousness. At an ever-accelerating pace, it invented writing, cities, art and science, and sent spaceships to the planets and the stars. These are some of the things that hydrogen atoms do, given fifteen billion years of cosmic evolution.

*Cosmos*

Chapter XII (p. 338)

Random House, Inc. New York, New York, USA. 1980

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

You are an alchemist; make gold of that.

In *Great Books of the Western World* (Volume 27)

 Timon of Athens  
 Act V, Scene i, l. 117  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Smith, Horace

No biographical data available

Agriculture is the noblest of all alchemy, for it turns earth, and even manure, into gold ...

*The Tin Trumpet; Or Heads and Tales, for the Wise and Waggish Alchymist* (p. 28)

### Temple, Sir William 1628–99

English statesman and essayist

I have always looked upon alchemy in natural philosophy, to be like enthusiasm in divinity and to have troubled the world much to the same purpose.

*The Works of Sir William Temple Bart* (Volume 3) (p. 357)  
 Printed for J. Clarke. London, England. 1757

## ALGEBRA

### Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

You also get dramatic advances when you spot that you can leave out part of the problem. Algebra, for instance (and hence the whole of computer programming), derives from the realisation that you can leave out all the messy, intractable numbers.

*The Salmon of Doubt*  
 The Universe (p. 116)  
 Harmony Books. New York, New York, USA. 2002

### Arbuthnot, John 1667–1735

Scottish mathematician and physician

To understand the theory of chance thoroughly, requires a great knowledge of numbers, and a pretty competent one of Algebra.

*An Essay on the Usefulness of Mathematical Learning*  
 25 November, 1700

### Author undetermined

The human mind has never invented a labor-saving machine equal to algebra.

Two Works of Algebra  
*The Nation*, Volume 33, Number 847, September 22, 1881 (p. 237)

Does it lie 'mid Algebra's stern array,  
 Where the Law of Symmetry points the way,  
 And the path leads up through ascending powers  
 To the hilltop won after weary hours.

The Happy Land  
*The Mathematical Gazette*, Volume VIII, Number 117, May, 1915 (p. 99)

Algebra begins with the unknown and ends with the unknowable.

Source unknown

When you long for the good old days of your youth, just think of algebra.

Source undetermined

A young man, to impress his girl friend: "I'm taking four courses at the university – German, French, Russian and Algebra."

His girl friend replied: "Gee, you're a genius! Now, darling, do tell me 'I love you' in Algebra."

Source unknown

### Barrie, Sir James M. 1860–1937

Scottish journalist, writer, and dramatist

PHOEBE: Algebra! It – it is not a very ladylike study Isabella.

*The Plays of J.M. Barrie*  
 Quality Street, Act II (p. 113)  
 Charles Scribner's Sons. New York, New York, USA. 1948

MISS SUSAN: What is algebra exactly; is it those three-cornered things?

PHOEBE: It is  $x$  minus  $y$  equals  $z$  plus  $y$  and things like that. And all the time you are saying they are equal, you feel in your heart, why should they be?

*The Plays of J.M. Barrie*  
 Quality Street, Act II (p. 115)  
 Charles Scribner's Sons. New York, New York, USA. 1948

### Birkhoff, Garrett 1911–96

American mathematician

### MacLane, Saunders 1909–2005

American mathematician

Modern algebra has exposed for the first time the full variety and richness of possible mathematical systems.

*A Survey of Modern Algebra*  
 Chapter I (p. 1)  
 The Macmillan Co. New York, New York, USA. 1965

### Birkhoff, George David 1884–1944

American mathematician

Algebra tends to the study of the explicit structure of postulationally defined systems closed with respect to one or more rational operations.

Some Recent Advances in Algebra  
*The American Mathematical Monthly*, Volume 46, January, 1939 (p. 18)

### Black, Max 1908–88

Anglo-American philosopher

...perhaps every science must start with metaphor and end with algebra; and perhaps without the metaphor there would be no algebra.

*Models and Metaphors: Studies in Language and Philosophy* (p. 242)  
 Cornell University Press. Ithaca, New York, USA. 1962

### Boole, Mary Everest 1832–1916

English mathematical psychologist

The method of solving problems by honest confession of one's ignorance is called Algebra.

*Philosophy & Fun of Algebra*  
Chapter 1 (p. 14)  
C.W. Daniel Ltd. London, England.

**Boyle, Robert** 1627–91  
English natural philosopher and theological writer

The operations of symbolic arithmetic seem to me to afford men one of the clearest exercises of reason that I ever yet met with, nothing being there to be performed without strict and watchful ratiocination, and the whole method and progress of that appearing at once upon the paper, when the operation is finished, and affording the analyst a lasting and, as it were, visible ratiocination.

*The Works of the Honourable Robert Boyle* (Volume 3) (p. 426)  
Printed for J. & F. Rivington. London, England. 1772

**Brahmagupta** 598–670  
Indian mathematician

As the sun eclipses the stars by his brilliancy, so the man of knowledge will eclipse the fame of others in assemblies of the people if he proposes algebraic problems, and still more if he solves them.

In Florian Cajori  
*A History of Elementary Mathematics*  
The Hindus (p. 100)  
The Macmillan Company. New York, New York, USA. 1924

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

In mathematics he was greater  
Than Tycho Brahe or Erra Pater;  
For he, by geometric scale,  
Could take the size of pots of ale;  
Resolve by sines and tangents straight  
If bread or butter wanted weight;  
And wisely tell you what hour o' th' day  
The clock does strike, by algebra.

*The Poetical Works of Samuel Butler* (Volume 1)

To Algebra God is inclined –  
The world is a thought in His Mind.

It seems so erratic,  
Because it's quadratic,  
And the roots are not easy to find.

In E.O. Parrott (ed.)  
*The Penguin Book of Limericks*  
Theory and Practice  
Penguin Books, Ltd. London, England. 1983

**de Fontenelle, Bernard le Bovier** 1657–1757  
French author

Nothing proves more clearly that the mind seeks truth, and nothing reflects more glory upon it, than the delight

it takes, sometimes in spite of itself, in the driest and thorniest researches of algebra.

*Histoire du renouvellement de l'Academie des Sciences*

Preface

Chez Pierre de Coup. Amsterdam. 1720

**de Morgan, Augustus** 1806–71

English mathematician and logician

The first thing to be attended to in reading any algebraical treatise, is the gaining a perfect understanding of the different processes there exhibited, and of their connection with one another. This cannot be attained by a mere reading of the book, however great the attention which may be given. It is impossible, in a mathematical work, to fill up every process in the manner in which it must be filled up in the mind of the student before he can be said to have completely mastered it. Many results must be given of which the details are suppressed, such are the additions, multiplications, extractions of the square root, etc., with which the investigations abound. These must not be taken on trust by the student, but must be worked by his own pen, which must never be out of his hand, while engaged in any algebraical process.

*On the Study and Difficulties of Mathematics*

Chapter XII (pp. 175–176)

The Open Court Publishing Company. La Salle, Illinois, USA. 1943

The science of algebra, independently of any of its uses, has all the advantages which belong to mathematics in general as an object of study, and which it is not necessary to enumerate. Viewed either as a science of quantity, or as a language of symbols, it may be made of the greatest service to those who are sufficiently acquainted with arithmetic, and who have sufficient power of comprehension to enter fairly upon its difficulties.

*Elements of Algebra*

Preface

Taylor & Walton. London, England. 1837

Algebra, as an art, can be of no use to anyone in the business of life; certainly not as taught in the schools. I appeal to every man who has been through the school routine whether this be not the case. Taught as an art it is of little use in the higher mathematics, as those are made to feel who attempt to study the differential calculus without knowing more of the principles than is contained in books of rules.

*Elements of Algebra*

Preface

Taylor & Walton. London, England. 1837

Imagine a person with a gift of ridicule, and knowledge enough, trying his hand on the junction of the assertions which he will find in various books of algebra. First, that a negative quantity has no logarithm; secondly, that a negative quantity has no square root; thirdly, that the first non-existent is to the second as the circumference of a circle to its diameter.

In David Eugene Smith (ed.)

*A Budget of Paradoxes* (Volume 1) (2nd edition)

On Theological Paradoxers (pp. 319–320)

The Open Court Publishing Co. Chicago, Illinois, USA. 1915

I think the time may come when double algebra will be the beginner's tool; and quaternions will be where double algebra is no. The Lord only knows what will come above the quaternions.

*Graves' Life of Hamilton* (Volume 3) (p. 493)

The World Publishing Company. New York, New York, USA. 1971

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

Of algebra I had no knowledge whatever. I had heard the name; and the syllables represented to my poor brain the whole whirling legion of the abstruse.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XII (p. 278)

Dodd, Mead & Co. New York, New York, USA. 1915

An heroic method of learning to swim is to leap boldly into the sea. Let us hurl ourselves head first into the algebraical gulf; and perhaps the imminent danger of drowning will call forth efforts capable of bringing me to land. I know nothing of what he wants. It makes no difference: let's go ahead and plunge into the mystery. I shall learn by teaching.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XII (p. 279)

Dodd, Mead & Co. New York, New York, USA. 1915

Algebra, the poem of order, has magnificent flights. I look upon its formulae, its strophes as superb, without feeling at all astonished when others do not agree.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XIII (p. 302)

Dodd, Mead & Co. New York, New York, USA. 1915

**Fitzhugh, Percy Keese** 1876–1950

American writer

I hate algebra, too. My father says it's good to know algebra, even if you don't want to be especially good friends with it. I'll let it alone if it'll let me alone – that's what I told him.

*Roy Blakeley's Silver Fox Patrol*

Chapter XXXII (p. 179)

Gossett & Dunlap. New York, New York, USA. 1920

**Hamilton, Sir William Rowan** 1805–65  
Irish mathematician

The Study of Algebra may be pursued in three very different schools, the Practical, the Philological, or the Theoretical, according as Algebra itself is accounted an Instrument, or a Language, or a Contemplation; according as ease of operation, or symmetry of expression, or clearness of thought, (the *agere*, the *fari*, or the *sapere*,) is eminently prized and sought for.... The felt imperfections of Algebra are of three answering kinds... The Philological Algebraist complains of imperfection, when his Language presents him with an Anomaly; when he finds an Exception disturb the simplicity of his Notation, or the symmetrical structure of his Syntax; when a Formula must be written with precaution, and a Symbolism is not universal.

Theory of Conjugate Functions, or Algebraic Couples; with a Preliminary and Elementary Essay on Algebra as the Science of Pure Time  
*The Transactions of the Royal Irish Academy*, Volume XVII, 1837 (p. 293)

...the subject matter of algebraic science is the abstract notion of time; divested of, or not yet clothed with, any actual knowledge which we may possess of the real Events of History, or any conception which we may frame of Cause and Effect in Nature; but involving, what indeed it cannot be divested of, the thought of possible Succession, or of pure, ideal Progression.

In Robert Perceval Graves

*Life of Sir William Rowan Hamilton* (Volume 3) (p. 633)  
Hodges, Figgis & Company. Dublin, Ireland 1882–1889

...instead of seeking to attain consistency and uniformity of system, as some modern writers have attempted, by banishing this thought of time from the higher Algebra, I seek to attain the same object, by systematically introducing it into the lower or earlier parts of the science.

In Robert Perceval Graves

*Life of Sir William Rowan Hamilton* (Volume 3) (p. 634)  
Hodges, Figgis & Company. Dublin, Ireland 1882–1889

### **Herstein, I. N.**

No biographical data available

In mathematics itself abstract algebra plays a dual role: that of a unifying link between disparate parts of mathematics and that of a research subject with a highly active life of its own.... A subject that was once regarded as esoteric has become considered as fairly down-to-earth for a large cross section of scholars.

Anecdotes (p. 301)

At the Clarendon Press. Oxford, England. 1847

**Khayyam, Omar** 1048–1122  
Persian mathematician, astronomer, and poet

Whoever thinks algebra is a trick in obtaining unknowns has thought it in vain. No attention should be paid to the fact that algebra and geometry are different in appearance. Algebras are geometric facts which are proved.

Quoted by J.J. Winter and W. Arafat

The Algebra of "Umar Khayyam,"

*Journal of the Royal Asiatic Society of Bengal*, Volume 41, 1950

By the help of God and with His precious assistance I say that algebra is a scientific art. The objects with which it deals are absolute numbers and (geometrical) magnitudes which, though themselves unknown, are related to things which are known, whereby the determination of the unknown quantities is possible. Such a thing is either a quantity or a unique relation, which is only determined by careful examination.... What one searches for in the algebraic art are the relations which lead from the known to the unknown, to discover which is the object of algebra as stated above.

In Daoud Suleiman Kasir

*The Algebra of Omar Khayyam* (p. 47)

Teachers College, Columbia University. New York, New York, USA. 1931

**Lagrange, Joseph Louis** 1736–1813  
Italian/French mathematician and astronomer

As long as algebra and geometry traveled separate paths their advance was slow and their applications limited. But when these two sciences joined company, they drew from each other fresh vitality, and thenceforward marched on at a rapid pace toward perfection. It is to Descartes that we owe the application of algebra to geometry – an application which has furnished the key to the greatest discoveries in all branches of mathematics.

Quoted in William Betz

Random House, Inc. New York, New York, USA. 1981

**Lipsky, Eleazar** 1911–1993

American lawyer, novelist, and playwright

Liberty and Justice for All. This principle can be represented as follows:

$$L + J = 1$$

Where L = Liberty; J = Justice; and 1 = All.

It is evident that as J increases in value, L will decrease. In simple terms, the more Justice, the less Liberty. This is almost a truism... The formula was modified to

$$J/L = 1$$

or:

$$J = 1(L)$$

From which it follows, the more Justice, the more Liberty.

Snitkin's Law

*The Magazine of Fantasy and Science Fiction*, February, 1959 (p. 61)

**Locke, John** 1632–1704

English philosopher and political theorist

They that are ignorant of Algebra cannot imagine the wonders in [relations between abstract ideas] this kind are to be done by it: and what further improvements and helps advantageous to other parts of knowledge the sagacious mind of man may yet find out, it is not easy to determine. This at least I believe, that the *ideas of quantity* are not those alone that are capable of demonstration and knowledge; and that other, and perhaps more useful, parts of contemplation, would afford us certainty, if vices, passions, and domineering interest did not oppose and menace such endeavors.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book IV, Chapter III, Section 18 (p. 317)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Algebra is a way to bring us to certainty in mathematics; but must it be presently condemned as an ill way, because there are some questions in mathematics, which a man cannot come to certainty in by the way of Algebra?

*The Works of John Locke*

A Letter to the Right Rev. Edward Lord Bishop of Worcester (p. 40)

**Poe, Edgar Allan** 1809–49  
American short story writer

To speak algebraically – Mr. M. is execrable, but Mr. C. is x plus 1-ecrable.

*The Works of the Late Edgar Allan Poe* (Volume 3)  
*James Russell Lowell* (p. 279)  
Redfield. New York, New York, USA. 1857

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

In the beginning of algebra, even the most intelligent child finds, as a rule, very great difficulty. The use of letters is a mystery, which seems to have no purpose except mystification. It is almost impossible, at first, not to think that every letter stands for some particular number, if only the teacher would reveal what number it stands for.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 63)

Longmans, Green & Co. London, England. 1919

...how little, as a rule, is the teacher of algebra able to explain the chasm which divides it from arithmetic, and how little is the learner assisted in his groping efforts at comprehension!

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 63)

Longmans, Green & Co. London, England. 1919

...in algebra the mind is first taught to consider general truths, truths which are not asserted to hold only of this or that particular thing, but of anyone of a whole group of things. It is in the power of understanding and discovering such truths that the mastery of the intellect over the whole world of things actual and possible resides; and ability to deal with the general as such is one of the gifts that a mathematical education should bestow.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 63)

Longmans, Green & Co. London, England. 1919

**Smullyan, Raymond** 1919–  
American mathematician and logician

I am a firm believer that in studying mathematics one should never forget one's common sense. Many years ago, I was teaching an elementary algebra course. On one exam, I had a standard-type question that involved finding the ages of the mother, father, and child. After the students read the question, I said, "On this problem, I'll give you one hint." All eyes eagerly turned to me. I continued, "If the child should turn out to be older than either of the parents, then you've done something wrong."

**Weyl, Hermann** 1885–1995

German mathematician

Important though the general concepts and propositions may be with which the modern industrious passion for axiomatizing and generalizing has presented us, in algebra perhaps more than anywhere else, nevertheless I am convinced that the special problems in all their complexity constitute the stock and core of mathematics, and that to master their difficulties requires on the whole the harder labor.

*The Classical Groups: Their Invariants and Representations*

Preface to the First Edition (p. vii)

Princeton University Press. Princeton, New Jersey, USA. 1997

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

...the laws of algebra, though suggested by arithmetic, do not depend on it. They depend entirely on the conventions by which it is stated that certain modes of grouping the symbols are to be considered as identical. This assigns certain properties to the marks which form the symbols of algebra. The laws regulating the manipulation of algebraic symbols are identical with those of arithmetic. It follows that no algebraic theorem can ever contradict any results which would be arrived at by arithmetic; for the reasoning in both cases merely applies the same general laws to different classes of things. If an algebraic theorem can be interpreted in arithmetic, the corresponding arithmetical theorem is therefore true.

*A Treatise on Universal Algebra*

Book I, Chapter I (p. 11)

At the University Press. Cambridge, England. 1898

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

## ALGEBRA BOOK

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

...O mysterious tome, whose Arab name breathes a strange mustiness of occult lore and claims kindred with

the sciences of almagest and alchemy. What will you show me? Let us turn the leaves at random. Before fixing one's eyes on a definite point in the landscape, it is well to take a summary view of the whole. Page follows swiftly upon page, telling me nothing.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XII (pp. 282–283)

Dodd, Mead & Co. New York, New York, USA. 1915

## ALGEBRA PRAYER

### Author undetermined

Our Professor,  
which doth have tenure,  
Feared be thy name.  
Thy sets partition,  
Thy maps commute,  
In groups as in vector spaces.  
Give us this day our daily notation,  
And forgive us our obtuseness,  
As we forgive tutors who cannot help us.  
Lead us not into Lye rings,  
But deliver us from eigenvalues,  
For thine is the logic, the notation, and the accent,  
That confuses us forever.

Amen

Source undetermined

Algebra Prayer

## ALGEBRAIC TOPOLOGY

**Lefschetz, Solomon** 1884–1972

American mathematician

...it was my lot to plant the harpoon of algebraic topology into the body of the whale of algebraic geometry.

*A Page of Mathematical Autobiography*

*Bulletin of the American Mathematical Society*, Volume 74, Number 5, 1968 (p. 854)

## ALGEBRAIST

**Sylvester, James Joseph** 1814–97

English mathematician

...Algebraists (who are wont to regard each other as the flower and salt of the earth) are a set of mere calculating-machines endowed with organs of locomotion, or, at best, a sort of poor visionary dumb creatures only capable of communicating by signs and symbols with the outer world ...

*The Laws of Verse*

Inaugural Presidential Address (p. 104)

Longmans, Green & Co. London, England. 1870

## ALGORITHM

**Banks, Iain M.** 1954–  
Scottish writer

Elegance is an algorithm.

*The Algebraist*

Orbit. London, England. 2004

**Joseph, George Gheverghese**

Indian-born historian of mathematics

A “good” algorithm should have three properties:

- (a) it should be clear and simple, laying out step by step the procedures to be followed,
- (b) it should emphasize the general character of its applications by pointing out its appropriateness, not to a single problem but to a group of similar problems, and
- (c) it should show clearly the answer obtained after the prescribed set of operations is completed.

*The Crest of the Peacock: Non-European Roots of Mathematics*

Chapter 5 (p. 127)

Penguin. London, England. 1991

**Kauffman, Stuart A.** 1939–

American theoretical biologist

Algorithms are a set of procedures to generate the answer to a problem. An example is the algorithm to find the solution to a quadratic equation, which most of us were taught while learning algebra. Not only was I taught the algorithm, but our entire class was invited to tattoo it on our stomachs so that we could solve quadratic equations by rote.

*At Home in the Universe: The Search for Laws of Complexity*

Chapter 1 (p. 21)

Oxford University Press, Inc. New York, New York, USA. 1995

**Stoppard, Tom** 1937–

Czech-born English playwright

Nature manipulates the  $x$  and turns it into  $y$ . Then  $y$  goldfish is your starting population for the following year.... Your value for  $y$  becomes your next value for  $x$ . The question is what is being done to  $x$ ? What is the manipulation? Whatever it is, it can be written down as mathematics. It’s called an algorithm.

Part I, Man among the Stars, Invasion from Mars (p. 9)

Simon & Schuster. New York, New York, USA. 1959

## Scottie (Fictional character)

I bring you a warning...Tell the world ...tell this to everyone, wherever they are ...watch the skies ...watch everywhere ...keep looking ...watch the skies!

*The Thing*

Film (1951)

**Taylor, Rod** 1930–

Australian-born actor

You know, if this is Venus, or some other strange planet, we’re liable to run into some high-domed characters with green blood in their veins who’ll blast at us with their atomic death ray guns, and there we’ll be with these – these poor old-fashioned shootin’ irons.

*World Without End*

Film (1956)

## ALTERNATIVE

**Hoyle, Fred** 1915–2001

English astronomer

Here is an example of what seems to be general practice in astronomy: when two alternatives are available, choose the more trivial. It was so with the discovery of pulsars – white dwarfs, everybody said they were, until confrontations with fact showed otherwise. And it is so today throughout cosmology. Astronomers seem to live in terror that someday they will discover something important.

*Home is Where the Wind Blows: Chapters from a Cosmologist’s Life*

Chapter 19 (p. 269)

University Science Books. Mill Valley, California, USA. 1994

**ALTERNATIVE LIFE**

**Jeffers, Robinson** 1887–1962  
American poet

They are animals, as we are. There are many other chemistries of animal life

Besides the slow oxidation of carbohydrates and amino-acids.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

Animals (p. 364)

Stanford University Press. Stanford, California, USA. 1988

**AMATEUR**

**Sharp, Katharine Dooris** 1846–1935  
Irish botanist

There is this advantage in being an amateur: one may break into verse if so inclined. A technologist or professor is not supposed to have any such inclinations.

*Summer in a Bog*

The Woman Botanist (p. 91)

Stewart & Kidd Co. Cincinnati, Ohio, USA 1913

**AMBITION**

**Gay-Lussac, Joseph Louis** 1778–1850  
French chemist and physicist

I have not chosen a career which will lead me to a great fortune, but that is not my principal ambition.

In Maurice Crosland

*Gay-Lussac: Scientist and Bourgeois*

Chapter I (p. 1)

Cambridge University Press. Cambridge, England. 1978

**AMNION**

**Cowen, Richard** 1940–  
American paleontologist

...the most fundamental innovation is the evolution of another internal fluid-filled sac, the amnion, in which the embryo floats. Amniotic fluid has roughly the same composition as seawater, so that in a very real sense, the amnion is the continuation of the original fish or amphibian eggs together with its microenvironment, just as a space suit contains an astronaut and a fluid that mimics the Earth's atmosphere. All of the rest of the amniote egg is add-on technology that is also required for life in an alien environment, and in that sense it corresponds to the rest of the space station with its food storage, fuel supply, gas exchangers, and sanitary disposal systems.

*History of Life*

Chapter Eight (p. 166)

Blackwell Scientific Publications. Boston, Massachusetts, USA. 1990

**AMPUTATION**

**Middleton, Thomas** 1580–1627  
English Jacobean playwright

I'll imitate the pities of old Surgeons  
To this lost limb, who, ere they show their art,  
Cast one asleep, then cut the disease'd part.

*Women Beware Women*

Act IV, Scene I (p. 128)

Manchester University Press. Manchester, England. 1975

**Webster, John** 1580?–1625?  
English playwright

I had a limb corrupted to an ulcer,  
But I have cut it off; and now I'll go  
Weeping to heaven on crutches.

*The White Devil*

Act IV, Scene II, l. 117–119

A. & C. Black. London, England; 1996

**ANALOGY**

**Anderson, Christopher**

No biographical data available

...analogy has much in store for man; because, though it is not infallible, it is that powerful engine or telescope of the mind, by which it is marvelously assisted in the discovery of both physical and moral truth. The great expectations which are entertained, they would found upon the extraordinary discoveries which have been made in physics, under the guidance of analogy: that powerful engine, they say, in the mind of a Newton, having discovered to us the laws of other worlds; and in that of Columbus, having put us in full possession of our own.

*Book for Parents*

Preface (p. vii)

Perkins, Marvin & Co. Boston, Massachusetts, USA. 1834

**Arendt, Hannah** 1906–75  
German-Jewish political theorist

Analogies, metaphors, and emblems are the threads by which the mind holds on to the world even when, absent-mindedly, it has lost direct contact with it, and they guarantee the unity of human experience. Moreover, in the thinking process itself they serve as models to give us our bearings lest we stagger blindly among experiences that our bodily senses with their relative certainty of knowledge cannot guide us through. The simple fact that our mind is able to find such analogies, that the world of appearances reminds us of things non-apparent, may be seen as a kind of 'proof' that mind and body, thinking and sense experience, the invisible and the visible, belong together, are 'made' for each other, as it were.

*The Life of the Mind: Thinking*

Chapter II (p. 109)

Harcourt Brace Jovanovich. New York, New York, USA. 1981

**Banach, Stefan** 1892–1945  
Polish mathematician

Good mathematicians see analogies between theorems or theories, the very best ones see analogies between analogies.

In S.M. Ulam

*Adventures of a Mathematician*

Chapter 10 (p. 203)

Charles Scribner's Sons. New York, New York, USA. 1976

**Bernstein, Jeremy** 1929–  
American physicist, educator, and writer

It is probably no exaggeration to say that all of theoretical physics proceeds by analogy.

*Elementary Particles and Their Currents*

Philosophical Preface (p. vii)

W. H. Freeman. San Francisco, California, USA. 1968

**Binford, Lewis R.** 1930–  
American archaeologist

Analogy serves to provoke certain types of questions which can, on investigation, lead to the recognition of more comprehensive ranges of order in the archaeological data.

Smudge Pits and Hide Smoking: The Use of Analogy in Archaeological Reasoning

*American Antiquity*, Volume 32, Number 1, January, 1967 (p. 10)

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

The question about the role of analogy in scientific research is clearly an essential feature of any work in natural science, even if it is not always obvious. It is often possible to employ a mathematical or geometrical model which handles the problems in question in such a way that the account acquires almost a purely logical character. In general, however, and particularly in some new fields of investigation, one must remember the obvious or likely inadequacy of pictures: as long as the analogies show through strongly one can be content if their usefulness-or rather fruitfulness-in the area in which they are being used is beyond doubt. Such a state of affairs holds not least from the standpoint of the present atomic theory. Here we find ourselves in the peculiar situation that we have obtained certain information about the structure of the atom which may surely be regarded as just as certain as anyone of the facts in natural science. On the other hand, we meet with problems of such a profound kind that they seem to defy solution: it is my personal opinion that these difficulties are of such a nature that they hardly allow us to hope that we shall be able, within the world of the atom, to carry through a description in space and time that corresponds to our ordinary sensory images.

In Niels Bohr Scientific Correspondence

Letter to Hoffding, 22 September, 1922 Microfiche 3

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

...how awkward is the human mind in divining the nature of things, when forsaken by the analogy of what we see and touch directly?

Certain Questions of the Theory of Gasses

*Nature*, Volume 51, Number 1322, February 28, 1895 (p. 414)

**Butler, Joseph** 1692–1752  
English bishop and exponent of natural theology

It is then but an exceeding little way, and in but a very few respects, that we can trace up the natural course of things before us, to general laws. And it is only from analogy, that we conclude the whole of it to be capable of being reduced into them: only from our seeing, that part is so. It is from our finding, that the course of nature, in some respects and so far, goes on by general laws, that we conclude this of the rest.

*The Analogy of Religion*

Part II, Chapter IV (p. 224)

Printed for C. & J. Rivington. London, England. 1824

**Campbell, Norman R.** 1880–1949  
English physicist and philosopher

...analogies are not "aids" to the establishment of theories; they are an utterly essential part of theories, without which theories would be completely valueless and unworthy of the name. It is often suggested that the analogy leads to the formulation of the theory, but that once the theory is formulated the analogy has served its purpose and may be removed or forgotten. Such a suggestion is absolutely false and perniciously misleading.

*Physics: The Elements*

Chapter VI (p. 129)

At the University Press. Cambridge, England. 1920

To regard analogy as an aid to the invention of theories is as absurd as to regard melody as an aid to the composition of sonatas.

*Physics: The Elements*

Chapter VI (p. 130)

At the University Press. Cambridge, England. 1920

**Chang, Kwang-Chih**  
Chinese-born anthropologist and archaeologist

As to analogy, archaeology as a whole is analogy, for to claim any knowledge other than the objects themselves is to assume knowledge of patterns in culture and history and to apply these patterns to the facts.

*Rethinking Archaeology*

Chapter 6 (p. 109)

Random House, Inc. New York, New York, USA. 1967

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

When a science approaches the frontiers of its knowledge, it seeks refuge in allegory or in analogy.

*Essays on Nucleic Acids*

Chapter 8 (p. 119)

Elsevier Publishing Company. Amsterdam. 1963

**Cohen, Morris Raphael** 1880–1947

American philosopher

...the number of available analogies is a determining factor in the growth and progress of science.

*The Meaning of Human History*

Chapter 8 (p. 249)

The Open Court Publishing Company. LaSalle, Illinois, USA. 1947

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

Analogy although it is not infallible, is yet that telescope of the mind by which it is marvelously assisted in the discovery of both physical and moral truth.

English artist and art critic

It is always a mistake to push analogies too far ...

*Landscape*

Chapter XVIII (p. 160)

Roberts Brothers. Boston, Massachusetts, USA. 1885

**Hartley, David** 1705–57

English physician and psychologist

Animals are also analogous to Vegetables in many things, and Vegetables to Minerals: So that there seems to be a perpetual Thread of Analogy continued from the most perfect Animal to the most imperfect Mineral, even till we come to elementary Bodies themselves.

*Observations on Man* (Volume 1)

Chapter III, Section 1, Proposition 82 (p. 294)

Woodstock Books. Poole, England. 1998

**Heinlein, Robert A.** 1907–88

American science fiction writer

Analogy is even slipperier than logic.

*Stranger in a Strange Land*

Part III, Chapter XXIV (p. 318)

G.P. Putnam's Sons. New York, New York, USA. 1961

**Hesse, Mary B.** 1924–

English science historian

...one of the main functions of an analogy or model is to suggest extensions of the theory by considering extensions of the analogy, since more is known about the analogy than is known about the subject matter of the theory itself.... A collection of observable concepts in a purely formal hypothesis suggesting no analogy with anything would consequently not suggest either any directions for its own development.

Operational Definition and Analogy in Physical Theories

*British Journal for the Philosophy of Science*, Volume II, Number 8, February, 1952 (p. 291)

**Hodnett, Edward** 1901–84

English illustration historian

Analogy suggests rather than proves.

*The Art of Problem Solving*

Part III, Chapter 18 (p. 143)

Harper & Brothers. New York, New York, USA. 1955

**Huxley, Thomas Henry** 1825–95  
English biologist

...if evidence that a thing may be, were equivalent to proof that it is, analogy might justify the construction of a naturalistic theology and demonology not less wonderful than the current supernatural; just as it might justify the peopling of Mars, or of Jupiter, with living forms to which terrestrial biology offers no parallel.

*Collected Essays*

Prologue (p. 40)

D. Appleton & Co. New York, New York, USA. 1900

**Johnson-Laird, P. N.** 1936–  
English-born psychologist

A scientific problem can be illuminated by the discovery of a profound analogy, and a mundane problem can be solved in a similar way.

*The Computer and the Mind*

Chapter 14 (p. 266)

Harvard University Press. Cambridge, Massachusetts, USA. 1988

**Latham, Peter Mere** 1789–1875  
English physician

It is safest and best to fill up the gaps of our knowledge from analogy.

In William B. Bean

*Aphorisms from Latham* (p. 37)

Prairie Press. Iowa City, Iowa, USA. 1962

**Lichtenberg, Georg Christoph** 1742–99  
German physicist and satirical writer

The way to determine the secret workings of Nature is from analogous cases where one has caught her in act.

In J.P. Stern

*Lichtenberg: A Doctrine of Scattered Occasions*

Further Excerpts from Lichtenberg's Notebooks (p. 293)

Indiana University Press. Bloomington, Indiana, USA. 1959

**Maxwell, James Clerk** 1831–79  
Scottish physicist

In order to obtain physical ideas without adopting a physical theory we must make ourselves familiar with the existence of physical analogies. By a physical analogy I mean that partial similarity between the laws of one science and those of another which makes each of them illustrate the other. Thus all the mathematical sciences are founded on relations between physical laws and laws of numbers, so that the aim of exact science is to reduce the problems of nature to the determination of quantities by operations with numbers.

*Transactions of the Cambridge Philosophical Society* (Volume 10)

On Faraday's Lines of Force (p. 28)

At the University Press. Cambridge, England. 1864

**Melville, Herman** 1819–91  
American novelist, essayist, and poet

O Nature, and O soul of man! how far beyond all utterance are your linked analogies! not the smallest atom stirs or lives on matter, but has its cunning duplicate in mind.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 70 (p. 231)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

Analogy is not identity.

*Geology Versus Astronomy: Or 'the Conditions and the Periods;' being a View of the Modifying Effects of Geologic Discovery on the Old Astronomic Inferences respecting the Plurality of Inhabited Worlds*

Chapter I (p. 8)

Glasgow, Scotland. 1857

**Newman, Francis William** 1805–97  
English scholar

...analogy is like a hound, always on the scent, and on the alert for every indication of game.

*Lectures on Logic*

Section IV (p. 93)

J.H. Parker. Oxford, England. 1838

It is frequently analogy which guides the experienced to what are called *good guesses*.

*Lectures on Logic*

Section IV (p. 93)

J.H. Parker. Oxford, England. 1838

On the whole, Analogy is to be regarded as a step towards satisfactory proof, much in advance of first presumptions, if skillfully applied; though if the excessive vagueness of the word like be not checked, arguments from analogy may be of the wildest and silliest kind.

*Lectures on Logic*

Section IV (p. 96)

J.H. Parker. Oxford, England. 1838

**Olson, Harry F.** 1901–82  
American acoustical engineer

Analogies are useful for analysis in unexplored fields. By means of analogies an unfamiliar system may be compared with one that is better known. The relations and actions are more easily visualized, the mathematics more readily applied, and the analytical solutions more readily obtained in the familiar system.

In John N. Shive and Robert L. Weber

*Similarities in Physics*

Chapter 3 (p. 24)

John Wiley & Sons, Inc. New York, New York, USA. 1982

**Parsons, James**

No biographical data available

The Chain of my Arguments, thro' this little Work, shall be carried on Link by Link, in Search of the Mystery of Propagation by *Analogy*.

*Philosophical Observations on the Analogy Between the Propagation of Animals*

Chapter II (pp. 67–68)

Printed for C. Davis. London, England. 1752

**Pasteur, Louis** 1822–95

French chemist

The arguments...by which you support my theories, are most ingenious, but not founded on demonstrated facts; analogy is no proof.

In R. Vallery-Radot

*Life of Pasteur*

Chapter VIII (p. 223)

Garden City Publishing Company. Garden City, New York, USA. 1926

**Pepper, Stephen** 1891–1972

American philosopher

A man desiring to understand the world looks about for a clue to its comprehension. He pitches upon some area of commonsense fact and tries to understand other areas in terms of this one. The original area becomes his basic analogy or root metaphor.

*World Hypotheses: A Study in Evidence*

Chapter V (p. 91)

University of California Press. Berkeley, California, USA. 1948

**Rice, Harvey** 1800–91

American lawyer and newspaper publisher

Analogy may aid, but cannot assure us.

*Nature and Culture*

Chapter 1 (p. 7)

Lee & Shepard. Boston, Massachusetts, USA. 1875

**Silver, Brian L.**

Israeli professor of physical chemistry

Professors have a weakness for analogies. So here's one: A gas, any gas, is similar to a crowd of flies. The analogy is dangerous, but we can learn from the dangers. First of all, flies can see; they don't normally bump into each other. Molecules are 'blind'; in a gas they are continually blundering into each other. Every collision changes the speed and direction of both molecules involved, so that a molecule in a gas resembles a flying dodgem car, continually getting jolted. Another difference between flies and molecules is that the molecules in our box are presumed to fly in straight lines unless they hit something. Flies practice their aeronautical skills. An improved fly analogy is a crowd of straight-flying, blind, deaf flies, but this is still misleading. Flies get tired. They often relax, and in the end they die and lie on the floor with their legs up. Molecules don't do this; the molecules in an oxygen cylinder never stop moving – until the end of

time, as they say at MGM. Again improving our analogy, we liken the molecules in a gas to a collection of straight-flying, blind, deaf, radarless, tireless, immortal flies. We're getting there, but the problem, as we will soon see, is that flies have a sense of smell and molecules don't. First, however, let's look at the speeds of molecules.

*The Ascent of Science*

Part I, Chapter I (p. 6)

Solomon Press Book. New York, New York, USA. 1998

**Simmons, Charles** 1798–1856

American clergy and litterateur

Those who reason forever by analogies, reason never by logic, and are slaves to imagination.

*A Laconic Manual and Brief Remarker* (p. 36)

Charles Simmons. North Wrentham, Massachusetts, USA. 1852

Analogies, like two balls, often touch in but one place.

*A Laconic Manual and Brief Remarker* (p. 36)

Charles Simmons. North Wrentham, Massachusetts, USA. 1852

**Strindberg, August** 1849–1912

Swedish dramatist and novelist

Two times two – is two!, Yes! I shall prove it by means of analogy, the highest form of proof. Follow carefully. One times one is one, therefore two times two is two. What applies to one applies to the other.

Translated by Evert Sprinchorn

*Selected Plays*

A Dream Play (p. 696)

University of Minnesota Press. Minneapolis, Minnesota, USA. 1986

**Sylvester, James Joseph** 1814–97

English mathematician

Induction and analogy are the special characteristics of modern mathematics, in which theorems have given place to theories and no truth is regarded otherwise than as a link in an infinite chain. "*Omne exit in infinitum*" is their favorite motto and accepted axiom.

A Plea for the Mathematician

*Nature*, Volume 1, Thursday, January 6, 1870 (p. 261, fn)

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

All perception of truth is the detection of an analogy...

*The Journal of Henry D. Thoreau* (Volume 2)

September 5, 1851 (p. 463)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1949

**von Goethe, Johann Wolfgang** 1749–1832

German poet, novelist, playwright, and natural philosopher

To communicate knowledge by means of analogy appears to me a process equally useful and pleasant. The analogous case is not there to force itself on the attention or prove anything; it offers a comparison with some other cases, but it is not in union with it.

Translated by Thomas Bailey Saunders

*The Maxims and Reflections of Goethe*

523 (p. 185)

The Macmillan Co. New York, New York, USA. 1906

Analogy has two errors to fear – the one when it contents itself with being serviceable to wit, in which case it floats away in futile sport; the other, when it shrouds itself in tropes and similes: this last is the less dangerous of the two.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 158)

William Blackwood & Sons. Edinburgh, Scotland. 1883

**Westbroek, Peter** 1937–

Geologist

We have known since the days of Kant that scientific arguments must never be founded on analogies, but the authors are dead serious about these poetic digressions.

The Oceans Inside Us

*The London Times Higher Education Supplement*, November 3, 1995

## ANALYSIS

**Allen, Roy George Douglas** 1906–83

English economist and mathematician

Not even the most subtle and skilled analysis can overcome completely the unreliability of basic data.

*Statistics for Economists*

Chapter I (p. 14)

Hutchinson's University Library. London, England. 1951

## Author undetermined

Finally, the sublime Quadrature himself and all his engineers and hosts, went forth and enveloped the equation with some sort of powerful analysis; but a chemist might as well try to decompose a bank-safe with buttermilk; they were all glad to get back to day-light again considerably shattered.

The Symbol of Darkness

*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 217)

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

The technical analysis of any large collection of data is a task for a highly trained and expensive man who knows the mathematical theory of statistics inside and out. Otherwise the outcome is likely to be a collection of drawings – quartered pies, cute little battleships, and tapering rows of sturdy soldiers in diversified uniforms – interesting enough in the colored Sunday supplement, but hardly the sort of thing from which to draw reliable inferences.

*Mathematics: Queen and Servant of Science*

Choice and Chance (p. 383)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Boehm, George A. W.** 1922–93

American editor and mathematician

The backbone of mathematics, pure as well as applied, is a conglomeration of techniques known as “analysis.”

*Annual Report of the Board of Regents of the Smithsonian Institution, 1959*

New Uses of the Abstract (p. 317)

Government Printing Office. Washington, D.C. 1960

**Bohr, Niels Henrik David** 1886–1962

Danish physicist

Our only way of avoiding the extremes of materialism and mysticism is the never ending endeavor to balance analysis and synthesis.

In Loyd S. Swenson, Jr.

*Genesis of Relativity: Einstein in Context*

Preface (p. xvi)

Burt Franklin & Company, Inc. New York, New York, USA. 1979

**Bridgman, Percy Williams** 1882–1961

American physicist

The act of understanding is at the heart of all scientific activity; without it any ostensibly scientific activity is as sterile as that of a high school student substituting numbers into a formula. For this reason, science, when I push the analysis back as far as I can, must be private.

*Reflections of a Physicist*

Chapter 4 (p. 72)

Philosophical Library. New York, New York, USA. 1955

**Brown, Alexander Crum** 1838–1922

Scottish organic chemist

Analysis is to the chemist what astronomical methods for determining longitudes and latitudes are to the geographical explorer. Without it many interesting and useful discoveries may be made, but it is only when complete and accurate analyses are made of all the new substances produced in the course of a research that the research becomes fully available to other explorers. If Liebig had contributed nothing to organic chemistry but his method of analysis, he would still have been in a perfectly true sense the founder of modern organic chemistry.

*The Encyclopaedia Britannica*

Liebig, Justus (p. 566)

1888

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

He was in Logick, a great Critick,

Profoundly skill'd in Analytick;

He could distinguish and divide

A hair 'twixt south and south-west side.

*The Poetical Works of Samuel Butler* (Volume 1)

Hudibras, Part I, Canto I, l. 65

Bell & Daldy. London, England. 1835

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

I have seen too much not to know that the impression of a woman may be more valuable than the conclusion of an analytical reasoner...

*The Complete Sherlock Holmes*  
*The Man with the Twisted Lip*

Doubleday & Company, Inc. Garden City, New York, USA. 1930

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The simplicity of nature is not that which may easily be read, but is inexhaustible. The last analysis can no wise be made.

*Essays*

Essay IV (p. 112)

James Munroe & Co. Boston, Massachusetts, USA. 1841

**Fischer, Emil Hermann** 1852–1919  
German chemist

You are urgently warned against allowing yourself to be influenced in any way by theories or by other preconceived notions in the observation of phenomena, the performance of analyses and other determinations.

Quoted in Joseph Stewart Fruton

*Contrasts in Scientific Style*

Chapter V (p. 172)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1990

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

The analysis of phenomena, philosophically speaking, is principally useful, as it enables us to recognize, and mark for special investigation, those which appear to us simple; to set methodically about determining their laws, and thus to facilitate the work of raising up general axioms, or forms of words, which shall include the whole of them, which shall, as it were, transplant them out of the eternal into the intellectual world, render them creatures of pure thought, and enable us to reason them out a priori.

*A Preliminary Discourse on the Study of Natural Philosophy*

Part II, Chapter II, Section 88 (p. 97)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

**Keynes, John Maynard** 1883–1946  
British economist

But to argue, without analysis of the instances, from the mere fact that a given event has a frequency of 10 percent in the thousand instances under observation, or even in a million instances, that...it is likely to have a frequency near to 1/10 in a further set of observations, is...hardly an argument at all.

*Treatise on Probability*

Chapter XXXIII (p. 407)

Macmillan & Company Ltd. London, England. 1921

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

An intelligence that, at a given instant, could comprehend all the forces by which nature is animated and the respective situation of the beings that make it up, if moreover it were vast enough to submit these data to analysis, would encompass in the same formula the movements of the greatest bodies of the universe and those of the lightest atoms. For such an intelligence nothing would be uncertain, and the future, like the past, would be open to its eyes.

*A Philosophical Essay on Probabilities* (p. 2)

Dover Publications, Inc. New York, New York, USA. 1951

But the language of analysis, most perfect of all, being in itself a powerful instrument of discoveries, its notations, especially when they are necessary and happily conceived, are so many germs of new calculi.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter V (p. 48)

John Wiley & Sons. New York, New York, USA. 1902

Analysis confirms what simple common sense teaches us, namely, the correctness of judgments is as much more probable as the judges are more numerous and more enlightened.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter XIII (p. 132)

John Wiley & Sons. New York, New York, USA. 1902

**Marlowe, Christopher** 1564–93  
English poet

Sweet Analytics, 'tis thou has ravish'd me...

*Christopher Marlowe's Doctor Faustus*

Act I, Scene i

Broadview Press. Peterborough, Ontario, Canada. 1991

**Maurice, F.**  
Swiss mathematician

I regard as quite useless the reading of large treatises of pure analysis: too large a number of methods pass at once before the eyes. It is in the works of applications that one must study them; one judges their ability there and one appraises the manner of making use of them.

In I. Grattan-Guinness

*Convolutions in French Mathematics, 1800–1840*

Chapter 3 (p. 126)

Birkhäuser Verla. Boston, Massachusetts, USA. 1990

**Mill, John Stuart** 1806–73  
English political philosopher and economist

...the habit of analysis has a tendency to wear away the feelings.

*Autobiography*

V (p. 116)

Oxford University Press, Inc. London, England. 1969

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932  
Latvian-born German chemist

I myself have no cause for complaint whatsoever about lack of recognition of the scientific work which I have been so happy to perform in the field of general chemistry; yet the purely intellectual achievement of conceiving catalytic phenomena as accelerations of possible processes which are in progress, whereby the whole vast field of catalysis was first opened to exact study, lay at the time so far outside general scientific thought that where the broader masses of scientists are concerned it is today still at the incubation stage, notwithstanding the passing of some twenty years. I presume that subsequently this advance will become so naturally part and parcel of the overall context of scientific thought that, compared with before, the gap will cease to be apparent at all and I shall be deprived of that measure of personal glory to which I am justly entitled by virtue of this advance in theory. Yet this will not upset me any further since in the meantime I have come to regard such matters as object studies in the reactions of the collective psyche.

*Nobel Lectures, Chemistry 1901–1921*

On Catalysis

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

**Poe, Edgar Allan** 1809–49  
American short story writer

The mathematicians, I grant you, have done their best to promulgate the popular error to which you allude, and which is none the less an error for its promulgation as truth. With an art worthy a better cause, for example, they have insinuated the term ‘analysis’ into application to algebra. The French, are the originators of this particular deception; but if a term is of any importance – if words derive any value from applicability – then ‘analysis’ conveys ‘algebra’ about as much as, in Latin, ‘ambitus’ implies ‘ambition,’ ‘religio’ ‘religion,’ or ‘homines honesti’ a set of *honourable* men.

*Tales of Mystery and Imagination*

The Purloined Letter (p. 192)

Henry Frowde. London, England. 1902

The mental features discoursed of as the analytical, are, in themselves, but little capable of analysis.

A.L. Burt Co. New York, New York, USA. 1907

**Rudner, Richard** 1922–79  
American philosopher of science

The very excellence of analysis...tends to weaken and undermines whatever is the result of prejudice; that it enables us mentally to separate ideas which have only casually clung together...

In E.D. Klemke, Robert Hollinger, and A. David Kline

*Introductory Reading in the Philosophy of Science*

The Scientist Qua Scientist Makes Value Judgments (p. 234)

Prometheus Books. Buffalo, New York, USA. 1980

**Silberling, N. J.**  
Geologist

The following discussion is based largely on speculation, preconception, supposition, and other subjective thinking processes fundamental to megathinking and therefore it must be considered as a preliminary statement or working hypothesis to be tested by further field work and other lines of objective endeavor.

*The Pick and Hammer Club*, May 2, 1958 (p. 19)

**Stoppard, Tom** 1937–  
Czech-born English playwright

I can put two and two together, you know. Putting two and two together is my subject. I do not leap to hasty conclusions. I do not deal in suspicion and wild surmise. I examine the data; I look for logical inferences.

*Jumpers*

Act One (p. 17)

Grove Press, Inc. New York, New York, USA. 1972

**Tukey, John W.** 1915–2000  
American statistician

If data analysis is to be well done, much of it must be a matter of judgment, and “theory” whether statistical or non-statistical, will have to guide, not command.

*The Future of Data Analysis*

*Annals of Mathematical Statistics*, Volume 33, Number 1, March, 1962 (p. 10)

**Whitehead, Alfred North** 1861–1947  
English mathematician and philosopher

It requires a very unusual mind to undertake the analysis of the obvious.

*Science in the Modern World*

Chapter I (p. 4)

The Macmillan Company. New York, New York, USA. 1925

**Woodward, Calvin Milton** 1837–1915  
American educator

The secret of a lucid analysis is, like that of untangling a snarl of yarn, viz: to *get hold of the right end of the thread*.

*Rational and Applied Mechanics*

Preface (p. vii)

Nixon-Jones Printing Co. St. Louis, Missouri, USA. 1912

## ANALYSIS OF VARIANCE

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

There is, then, in this analysis of variance no indication of any other than innate and heritable factors at work.

*The Causes of Human Variability*

(The coining of the phrase “analysis of variance.”)

*Eugenics Review*, Volume 10, 1918

However, perhaps the main point is that you are under no obligation to analyse variance into its parts if it does not come apart easily, and its unwillingness to do so naturally indicates that one's line of approach is not very fruitful.

*Natural Selection, Heredity, and Eugenics*

Letter to L. Hogben, 25 February, 1933 (p. 218)

Clarendon Press. Oxford, England. 1983

The analysis of variance is not a mathematical theorem, but rather a convenient method of arranging the arithmetic.

Supplement, Discussion to "Statistics in Agricultural Research," by J. Wishart,

*Journal of the Royal Statistical Society*, Volume 1, 1934

## ANALYST

### Buck, R. C.

No biographical data available

The intermarriage of traditional analysis with its neighbors has not come about as a rational decision of its practitioners. At first sight, the change seemed to have been largely a matter of semantics; one adopted the terminology of algebra and topology solely as a convenience to describe briefly certain situations which arose frequently. But it soon became evident that the adoption of another viewpoint, another observation platform, gave a clearer vision; the introduction of techniques borrowed from other fields enabled the analyst to achieve both striking economies in proof, and vivid insights into classical phenomena.

*Studies in Modern Analysis* (p. 2)

Prentice-Hall. Englewood, New Jersey, USA. 1962

### Keeney, Ralph

Professor of systems management

### Raiffa, Howard

Bayesian decision theorist

...be wary of analysts that try to quantify the unquantifiable.

*Decisions with Multiple Objectives: Preferences with Value Trade-Offs* (p. 12)

John Wiley & Sons, Inc. New York, New York, USA. 1976

## ANALYTICAL ENGINE

### Babbage, Charles

1792–1871

English mathematician

We may say most aptly that the Analytical Engine weaves algebraical patterns just as the Jacquard-loom weaves flowers and leaves.

In Richard Taylor (ed.)

*Scientific Memoirs* Volume 3

Sketch of the Analytical Engine, Translator's Notes (p. 696)

Printed by Richard & John E. Taylor. London, England. 1843

## ANAPHYLAXIS

### Richet, Charles

1850–1935

French physiologist

Phylaxis, a word seldom used, stands in the Greek for protection. Anaphylaxis will thus stand for the opposite. Anaphylaxis, from its Greek etymological source, therefore means that state of an organism in which it is rendered hypersensitive, instead of being protected.

*Nobel Lectures, Physiology or Medicine 1901–1921*

Nobel lecture for award received in 1913

Anaphylaxis (p. 473)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

## ANATOMIST

### Hutchinson, Henry Neville

No biographical data available

Every bone has its meaning, and every skeleton can be made (in the hands of competent anatomists) to tell its story.

*Creatures of Other Days*

Chapter II (p. 23)

Chapman & Hall. London, England. 1894

### Richardson, Samuel

1689–1761

English novelist

And I believe that anatomists allow that women have more watery heads than men.

*The Works of Samuel Richardson* (Volume VII)

*The History of Clarissa Harlowe*, Volume IV, Letter XXVII (p. 130)

H. Sotheran. London, England. 1883–1884

## ANATOMY

### Agassiz, Jean Louis Rodolphe

1807–73

Swiss-born American naturalist, geologist, and teacher

It requires as much practical knowledge, in dealing with facts of anatomy, to trace the relations of one family with another, as it does in mathematics to deal with intricate problems.

*The Structure of Animal Life*

Lecture I (p. 8)

Sampson Low, Son & Marston. London, England. 1866

### Author undetermined

Be assured, gentlemen, there is very little left for us now to find out in descriptive anatomy. The history of anatomy is like that of a harvest-field. First come the reapers; and they have only to stretch out their hands, to gather in a glorious harvest. These are the early anatomists, such as Vesalius, Fallopius, Fabricius, Malpighi, and our own immortal Harvey. After them come the gleaners, who still find ears enough to set up a few stooks. Such were

Valsailva, Albinus, Vicq d'Azyr, the two Monros and the Hunters. And last of all come the geese, who, poor things, are glad to pick up in the stubble a grain or two here and there, with which they go home, cackling with satisfaction. Gentlemen, we are the geese.

*Monthly Journal of Medical Science*, Volume 15, July, 1852 (pp. 63–64)

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

In the inquiry which is made by anatomy, I find much deficiency: for they inquire of the parts, and their substances, figures, and collocations; but they inquire not of the diversities of the parts, the secrecies of the passages, and the seats or nestling of the humors, nor much of foot-steps and impressions of diseases.

In *Great Books of the Western World* (Volume 30)

*Advancement of Learning*

Second Book, Chapter X, Section 5 (p. 52)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bourne, Gilbert Charles** 1861–1933

British naturalist

Comparative anatomy, then, is the science which treats of the architecture of animals, and we shall see that just as there are several styles of architecture, Classical, Byzantine, Gothic, etc., each with its subdivisions, as Gothic into Pointed, Perpendicular, Decorated, etc., so there are several styles of animal architecture, and in each style there is infinite variety, though the general plan, the “motive,” is the same.

*An Introduction to the Study of the Comparative Anatomy of Animals* (Volume 1)

Introduction (p. 10)

George Bell & Sons. London, England. 1900

**Brinton, William**

English physician

To say that a physician or surgeon ignorant of Anatomy is like a man professing to mend watches without ever having opened one, or like a traveler wandering through an unknown country ...

Introductory Lecture

*The London Lancet*, Volume 2, Number 6, December, 1857 (p. 435)

**Burton, Robert** 1577–1640

English clergyman and scholar

[Diseases] crucify the soul of man, attenuate our bodies, dry them, wither them, shrivel them up like old apples, make them as so many anatomies.

*The Anatomy of Melancholy* (Volume 1)

Part I, Sect. II, Memb. III, subsec. 10 (p. 323)

AMS Press, Inc. New York, New York, USA. 1973

**Corner, George W.** 1889–1981

Anatomist

...microscopical anatomy is like mathematics in books on astronomy or physics – something to be avoided if

possible. Yet physiology without cell structure means less than Einstein without calculus.

*The Hormones in Human Reproduction*

Chapter II (p. 52)

Princeton University Press. Princeton, New Jersey, USA. 1947

**Dagi, Teodoro Forcht**

Physician

Ask any doctor off the street

To speak of his most prized feat:

No doubt he'd answer honestly,

And say “to pass anatomy.”

*Anatomy of the Brain and Spinal Medulla: A Manual for Students*

*The New England Journal of Medicine*, Volume 286, Number 18, May 4, 1972 (p. 1010)

**de Vigevano, Guido** fl. 1330s

High Medieval physician and engineer

Since it is prohibited by the Church to perform anatomies on the human body, and since it is impossible to know the medical art completely, unless one has knowledge of anatomy...I shall demonstrate patently and openly the anatomy of the human body, through properly executed illustrations.

Quoted in E.L. Wickersheimer

“Anatomie” de Guido de Vigevano, Médecin de la Reine Jeanne de Bourgogne

*Archiv für geschichte de medizin*, Volume 7, 1914

**Dickinson, Emily** 1830–86

American lyric poet

A science – so the Savants say,

“Comparative Anatomy” –

By which a single bone –

Is made a secret to unfold

Of some rare tenant of the mold,

Else perished in the stone –

*The Complete Poems of Emily Dickinson*

No. 100 (p. 49)

Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1960

**Fernel, Jean** 1497–1558

French physician

Anatomy is to physiology as geography is to history; it describes the theater of events.

*De naturali parte medicinae libri septem*

Chapter I

Apud Simonem Colinæum. 1542

**Flexner, Abraham** 1866–1959

American educator

Anatomy and physiology form but the vestibule of medical education. They teach the normal structure of the body, the normal function of the parts, fluids, organs, and the conditions under which they operate. The next step carries the student in medias res; he begins pharmacology – the experimental study of the response of the body to medication.

*Medical Education in the United States and Canada*

Chapter IV (p. 63)

The Carnegie Foundation. New York, New York, USA. 1910

**Freeman, R. Austin** 1862–1943

British physician and mystery novelist

Anatomy has its uses, even in a midnight scuffle.

*The Uttermost Farthing*

Chapter III

C.A. Pearson. London, England. 1920

**Freer, J. W.**

American physician

A physician or surgeon ignorant of anatomy, is like a man professing to mend watches without ever having opened one; or like a traveler wandering in a foreign land, ignorant of its geography, and without chart or compass; or a General at the head of an army, marching and fighting in a country he has never seen – with slender knowledge acquired through danger, clouded by suspicion, and obscured by willful falsehood.

Introductory Address

*The Chicago Medical Journal*, Volume 23, Number 11, November, 1866 (pp. 494–495)

**Galen** 130–200

Roman physician and philosopher of Greek origin

Make it rather your serious endeavor not only to acquire accurate book knowledge of each bone but also to examine assiduously with your own eyes the human bones themselves

Translated by Charles Joseph Singer

*Galen on Anatomical Procedures* (p. 3) 1956

**Halle, John** 1529–1568

English physician

But chieflye the anatomye

Ye oughte to understande:

If ye will cure well anye thinge,

That ye doe take in hande.

Chapter I (p. 3)

The University of Chicago Press. Chicago, Illinois, USA. 1922

**Lee, Sidney L.**

No biographical data available

I must no less commend the study of anatomy, which whosoever considers, I believe will never be an atheist; the frame of man's body, and coherence of his parts, being so strange and paradoxical, that I hold it to be the greatest miracle of nature.

*The Autobiography of Edward, Lord Herbert of Cherbury*

Life of Lord Herbert (p. 59)

John C. Nimo. London, England. 1886

**Maugham, W. Somerset** 1874–1965

English novelist and playwright

You will have to learn many tedious things...which you will forget the moment you have passed your final examination, but in anatomy it is better to have learned and lost than never to have learned at all.

*Of Human Bondage*

Chapter LIV (p. 239)

Doubleday & Company, Inc. Garden City, New York, USA. 1936

**Melanchthon, Philipp** 1497–1560

German reformer and designer of educational systems

It is shameful for man to rest in ignorance of the structure of his own body, especially when the knowledge of it mainly conduces to his welfare, and directs his application of his own powers.

Attributed

**Muller, Herbert Joseph** 1905–80

American historian and educator

To say...that a man is made up of certain chemical elements is a satisfactory description only for those who intend to use him as a fertilizer.

*Science and Criticism: The Humanistic Tradition in Contemporary Thought*

Chapter V (p. 107)

G. Braziller. New York, New York, USA. 1943

**Nye, Bill** 1850–96  
American journalist

The word anatomy is derived from two Greek spatters and three pollywogs, which, when translated, signify “up through” and “to cut,” so that anatomy actually, when translated from the original wappy-jawed Greek, means to cut up through. That is no doubt the reason why the medical student proceeds to cut up through the entire course.

*Remarks*

Anatomy (p. 27)

G.P. Brown Publishing Company. Chicago, Illinois, USA. 1888

Human anatomy is either general, specific, topographical or surgical. These terms do not imply the dissection and anatomy of generals, specialists, topographers and surgeons, as they might seem to imply, but really mean something else. I would explain here what they actually do mean if I had more room and knew enough to do it.

*Remarks*

Anatomy (p. 28)

G.P. Brown Publishing Company. Chicago, Illinois, USA. 1888

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

Anatomy may be likened to a harvest-field. First come the reapers, who, entering upon untrodden ground, cut down great store of corn from all sides of them. These are the early anatomists of modern Europe, such as Vesalius, Fallopius, Malpighi, and Harvey. Then come the gleaners, who gather up ears enough from the bare ridges to make a few loaves of bread. Such were the anatomists of last century – Valsalva, Cotunnus, Haller, Winslow, Vicq d’Azyr, Camper, Hunter, and the two Monroes. Last of all come the geese, who still contrive to pick up a few grains scattered here and there among the stubble, and waddle home in the evening, poor things, cackling with joy because of their success. Gentlemen, we are the geese.

Book III, Chapter I (p. 99)

Blackie & Son. London, England. 1870

**Reid, Thomas** 1710–96  
Scottish philosopher

If a thousand of the greatest wits that ever the world produced were, without any previous knowledge in anatomy, to sit down and contrive how, and by what internal organs, the various functions of the human body are carried on, how the blood is made to circulate and the limbs to move, they would not, in a thousand years, hit upon anything like the truth.

*The Works of Thomas Reid*

Essays on the Intellectual Powers of Man, Essay I, Chapter III (p. 235)

Maclachlan & Stewart. Edinburgh, Scotland. 1863

**Stapp, Paul** 1910–99  
American Air Force colonel

The human body comes in only two shapes and three colors. I don’t expect there will be any changes, so what we learn about it now will serve us for a long time to come.

*The Fastest Man on Earth*

*Time*, Volume LXVI, Number 11, September 12, 1955 (p. 88)

## ANESTHESIA

**Armour, Richard** 1906–89  
American poet

Behold the patient uncomplaining,  
Not asking whether losing, gaining,  
Not offering unsought advice,  
But really being very nice.

...

Behold the patient quite relaxed,  
With nerves, this once, not overtaxed,  
Serene, almost unrecognized,  
Not fighting back – anesthetized.

*The Medical Muse*

Behold the Patient

McGraw-Hill Book Company, Inc. New York, New York, USA. 1963

**du Bartas, Guillaume de Salluste** 1544–90  
French poet

Even as a Surgeon, minding off-to-cut  
Some cure-less Limb; before in cure he put  
His violent Engines on the vicious member,  
Bringeth his Patient in a sense-less slumber,  
And grief-less then (guided by Life and Art),  
To save the whole; saws off th’ infested part...

*Du Bartas: His Divine Weekes and Workes*

First Week, Sixth Day (p. 57)

Printed by Robert Young. London, England. 1641

**Helmuth, William Tod** 1833–1902  
American physician

For thus we read (although the analgesia  
Of Richardson was then entirely unknown)

Adam profoundly slept with anaesthesia,  
And from his thorax was removed a bone.

This was the first recorded operation,  
(No doctor here dare tell me that I fib!)

And surgery, thus early in creation,  
Can claim complete excision of a rib!

*Scratches of a Surgeon*

No biographical data available

Anesthetist's cone: Ether bonnet.

*Quote, the Weekly Digest*, October 27, 1968 (p. 337)

**Trotter, Wilfred** 1872–1939

Surgeon and sociologist

Mr. Anesthetist, if the patient can keep awake, surely you  
can.

Very Special Article

*The Lancet*, Volume 2, 1965 (p. 1340)

## ANGLE

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

After all, are you sure that it is impossible to trisect  
the angle by Euclid? I have not to lament a single hour  
thrown away on the attempt, but fancy that it is rather a  
tact, a feeling, than a proof, which makes us think that  
the thing cannot be done. No doubt we are influenced  
by the cubic form of the algebraic equation. But would  
Gauss's inscription of the regular polygon of seventeen  
sides have seemed, a century ago, much less an impos-  
sible thing, by line and circle?

In Robert Perceval Graves

**Miller, Hugh** 1802–56

Scottish geologist and theologian

The natural boundaries of the geographer are rarely  
described by right lines.

*The Old Red Sandstone*

Chapter VI (p. 95)

John B. Alden, Publisher. New York, New York, USA. 1892

Whenever these [right angles] occur, however, the geolo-  
gist may look for something remarkable.

*The Old Red Sandstone*

Chapter VI (p. 95)

John B. Alden, Publisher. New York, New York, USA. 1892

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

If you look for curves, you will see curves; if you look for  
angles, you will see angles.

*Modern Painters*

Part V, Chapter XVIII (p. 303)

John Wiley & Sons. New York, New York, USA. 1890

## ANIMAL

### Abbey, Edward 1927–89

American environmentalist and nature writer

We have never entered into an animal's mind and we cannot know what it is like, or even if it exists. The risk of attributing too much is no greater than the risk of attributing too little.

In Joseph Wood Krutch  
*The Great Chain of Life*

Prologue (p. x)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1957

In all of nature, there is no sound more pleasing than that of a hungry animal at its feed. Unless you are the food.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 9 (p. 86)

St. Martin's Press. New York, New York, USA. 1989

### Ackerman, Diane 1948–

American writer

One of the things I like best about animals in the wild is that they're always off on some errand. They have appointments to keep. It's only we humans who wonder what we're here for.

*The Moon by Whale Light, and Other Adventures among Bats and Crocodilians, Penguins and Whales*

Chapter 1 (pp. 41–2)

Random House, Inc. New York, New York, USA. 1991

### Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born U.S. naturalist, geologist, and teacher

Animals are worthy of our regard, not merely when considered as to the variety and elegance of their forms, or their adaptation to the supply of our wants; but the Animal Kingdom, as a whole, has a still higher signification. It is the exhibition of the divine thought, as carried out in one department of that grand whole which we call Nature; and considered as such, it teaches us most important lessons.

*Principles of Zoology*

Chapter First (p. 25)

Gould, Kendall & Lincoln. Boston, Massachusetts, USA. 1848

The divisions of animals according to branch, class, order, family, genus, and species, by which we express the results of our investigations into the relations of the animal kingdom, and which constitute the primary question respecting any system of Zoology, seem to me to deserve the consideration of all thoughtful minds. Are those divisions artificial or natural?

*An Essay on Classification*

Chapter I (p. 8)

Longman, Brown, Green, Longmans & Roberts. London, England. 1859

It is a fact, which seems to be entirely overlooked by those who assume an extensive influence of physical causes upon the very existence of organized beings, that the most diversified types of animals and plants are everywhere found under identical circumstances.

*An Essay on Classification*

Chapter I (p. 15)

Longman, Brown, Green, Longmans & Roberts. London, England. 1859

Is there an investigator, who having once recognized such a similarity between certain faculties of Man and those of the higher animals, can feel prepared, in the present stage of our knowledge, to trace the limit where this community of nature ceases?

*An Essay on Classification* (p. 89)

Longman, Brown, Green, Longmans & Roberts. London, England. 1859

### Allee, Warder C. 1885–1955

American zoologist

The subsocial and social life of animals shows two major tendencies: one toward aggressiveness, which is best developed in man and his fellow vertebrates; the other unconscious, and in higher animals, toward conscious cooperation. With various associates I have long experimented upon both tendencies. Of these, the drive toward cooperation... is the more elusive and the more important.

In James R. Newman (ed.)

*What Is Science? Twelve Eminent Scientists and Philosophers Explain Their Various Fields to the Layman*

Biology (p. 243)

Simon & Schuster. New York, New York, USA. 1955

### Andrews, Ted

Writer and mystic

Every animal is a gateway to the phenomenal world of the human spirit. What most fail to realize is that what they think of animals reflects the way they think of themselves.

*Animal-Speak: The Spiritual and Magical Powers of Creatures Great and Small*

Introduction (p. x)

Llewellyn Worldwide, LTD. Woodbury, Minnesota, USA. 1993

### Author undetermined

*Cet animal est tres mechant;*

*Quand on l'attaque il se defend.*

This animal is very malicious;  
when attacked it defends itself.

La Menagerie (a song)

### Beston, Henry 1888–1968

American writer

For the animal shall not be measured by man. In a world older and more complete than ours they move finished and complete, gifted with extensions of the senses we have lost or never attained, living by voices we shall never hear. They are brethren, they are not underlings; they are other nations, caught with ourselves in the net of life and time, fellow prisoners of the splendor and travail of the earth.

*The Outermost House*

Chapter II (p. 25)

Rinehart & Co. New York, New York, USA. 1928

We need another and a wiser and perhaps a more mystical concept of animals.... We patronize them for their incompleteness, for their tragic fate of having taken form so far below ourselves. And therein we err, and greatly err. For the animal shall not be measured by man. In a world older and more complete than ours they move finished and complete, gifted extensions of the senses we have lost or never attained, living by voices we shall never hear. They are not brethren, they are not underlings, they are other nations, caught with ourselves in the net of life and time, fellow prisoners of the splendor and travail of the Earth.

*The Outermost House*

Chapter II (p. 25)

Rinehart & Company, New York, New York, USA. 1928

**Borges, Jorge Luis** 1899–1986

Argentine writer

...to a certain Chinese encyclopedia entitled Celestial Emporium of Benevolent Knowledge...it is written that animals are divided into (a) those that belong to the Emperor, (b) embalmed ones, (c) those that are trained, (d) suckling pigs, (e) mermaids, (f) fabulous ones, (g) stray dogs, (h) those that are included in this classification, (i) those that tremble as if they were mad, (j) innumerable ones, (k) those drawn with a very fine camel's hair brush, (l) others, (m) those that have just broken a flower vase, (n) those that resemble flies from a distance.

*Other Inquisitions*

The Analytical Language of John Wilkins (p. 103)

University of Texas Press, Austin, Texas, USA. 1964

**Bradbury, Ray** 1920–

American writer

The animal does not question life. It lives. Its very reason for living is life; it enjoys and relishes life.

*The Martian Chronicles* (p. 91)

HarperCollins Publishers, Inc. New York, New York, USA. 1997

**Brophy, Brigid** 1929–95

English novelist and essayist

I don't hold animals superior or even equal to humans. The whole case for behaving decently to animals rests on the fact that we are the superior species. We are the species uniquely capable of imagination, rationality, and moral choice – and that is precisely why we are under an obligation to recognize and respect the rights of animals.

*Don't Never Forget: Collected Views and Reviews*

The Rights of Animals (p. 21)

Holt, Rinehart & Winston, New York, New York, USA. 1966

**Bruchac, Joseph**

Native-American writer

Let my words

be bright with animals,

images the flash of a gull's wings.

If we pretend  
that we are at the center,  
that moles and kingfishers,  
eels and coyotes  
are at the edge of grace,  
then we circle, dead moons  
almost a cold sun.

This morning I ask only  
the blessing of the crayfish,  
the beatitude of the birds;  
to wear the skin of the bear  
in my songs;  
to work like a man with my hands.

*Near the Mountains*

Prayer

White Pine Press, Fredonia, New York, USA. 1987

**Brusca, Gary** –2000

American fisheries biologist

The range of morphological diversity among crustaceans far exceeds that of even the insects. In fact, because of their diversity of form and number, it is often said that crustaceans are the “insects of the sea.” We prefer to think of insects as the “crustaceans of the land.”

*Invertebrates Evolution*

Chapter Sixteen (p. 514)

Sinauer Associates, Inc. Sunderland, Maine, USA. 2003

**Pallister, William Hales** 1877–1946

Canadian physician

With eight thousand CRUSTACEAN species, we list  
All the lobsters and crabs, many others beside;  
On the beaches and tide-strips their races subsist  
On the wreck of the sea and the wrack of the tide;  
In his jointed shell, hungry and seeking each goes,  
If one loses a claw, soon another one grows.

*Poems of Science*

Beginnings

Playford Press, New York, New York, USA. 1931

**Burroughs, John** 1837–1921

American naturalist and essayist

In summer and winter, in storm and cold, in all seasons  
and in all places, by night as by day, without organiza-  
tion, or power of reason, or supervision, or leaders, or  
defenders, or government, or schools, or churches, there  
they [animals] go, well and happy, equal to all, or nearly  
all, emergencies, and making fewer mistakes than we  
human beings do.

*Under The Apple Tree*

Dame Nature and Her Children (p. 82)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Canetti, Elias** 1905–94

Bulgarian playwright and novelist

Whenever you observe an animal closely, you feel as if a  
human being sitting inside were making fun of you.

Translated by Joachim Neugroschel

*The Human Province*

1942 (p. 7)

Seabury Press. New York, New York, USA. 1978

**Chapman, George** 1559–1634

English poet and dramatist

I will neither yield to the song of the siren nor the voice of the hyena, the tears of the crocodile nor the howling o' the Wolf.

*The Works of George Chapman*

*Eastward Ho!* (p. 482)

Chatto & Windus. London, England. 1874

**Cobbe, Frances Power** 1822–1904

Irish writer

The radical mistake in all our writing and painting of animals from very early ages has been the semi-serious effort to *see human nature* in the brute and bird, and to describe it as, in fact, a Man in fur or in feathers. The process, though at first sight similar to the true method, is in reality the very converse of it, and beginning at the wrong end, diverges wider from the truth at every step. The more elaborate the story or the picture so constructed, and the more wire-drawn the parallel, the further it inevitably departs from the veracity of nature. Not by starting with the resolution to find human character in animals, but by studying them carefully and dispassionately till we come down to the ground of common feeling where they and we are alike, and where Nature is neither Human nor bestial, can we hope to obtain a real knowledge of them.

*False Beasts and True, Essays*

Animals in Fable and Art (p. 5)

Oxford University Press. Oxford, England. 1878

**Compton-Burnett, Ivy** 1884–1969

English writer

A leopard does not change his spots, or change his feeling that spots are rather a credit.

*More Women than Men*

Chapter 4 (p. 54)

Victor Gollancz LTD. London, England. 1974

**Dickens, Charles** 1812–70

English novelist

...judiciously show a cat milk, if you wish her to thirst for it. Judiciously show a dog his natural prey, if you wish him to bring it down one day.

*A Tale of Two Cities*

Book 2, Chapter XV (p. 160)

Dodd, Mead & Company. New York, New York, USA. 1925

**Diderot, Dennis** 1713–84

French encyclopedist and philosopher of materialism

The animal is a system of different organic molecules, which, impelled by dim sensations similar to those of

obtuse and vague touch – sensations which have been imparted to them by Him who created matter in general – have combined, until each has found the position most suitable to its form and to its repose.

In Henry Fairfield Osborn

*From the Greeks to Darwin: An Outline of the Development of the Evolution Idea* (p. 116)

The Macmillan Co. New York, New York, USA. 1905

**Dillard, Annie** 1945–

American poet, essayist, novelist, and writing teacher

There is a terrible innocence in the benumbed world of the lower animals, reducing life there to a universal chomp.

*Pilgrim at Tinker Creek*

Chapter 10, I (p. 168)

Harper's Magazine Press. New York, New York, USA. 1974

**Ehrlich, Gretel** 1946–

American writer

Animals give us their constant, unjaded faces and we burden them with our bodies and civilized ordeals.

*The Solace of Open Spaces*

Friends, Foes, and Working Animals (p. 62)

Basic Books, Inc., Publishers. New York, New York, USA. 1982

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

Animals are molded by natural forces they do not comprehend. To their minds there is no past and no future. There is only the everlasting present of a single generation – its trails in the forest, its hidden pathways in the air and in the sea.

*The Star Thrower*

The Long Loneliness (p. 37)

Times Books. New York, New York, USA. 1978

**Eliot, George (Mary Ann Evans Cross)** 1819–80

English novelist

Animals are such agreeable friends – they ask no questions, they pass no criticism.

*Scenes of Clerical Life*

Mr. Gilfil's Love Story, Chapter VII (p. 116)

Oxford University Press, Inc. Oxford, England. 1985

**Elton, Charles Sutherland** 1839–1900

English lawyer and writer

It is usual to speak of an animal as living in a certain physical and chemical environment, but it should always be remembered that strictly speaking we cannot say exactly where the animal ends and the environment begins ...

*Animal Ecology*

Chapter IV (p. 34)

University of Chicago Press. Chicago, Illinois, USA. 2001

All cold-blooded animals and a large number of warm-blooded ones spend an unexpectedly large proportion of

their time doing nothing at all, or at any rate nothing in particular

*Animal Ecology*

Chapter V (pp. 55–56)

University of Chicago Press. Chicago, Illinois, USA. 2001

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

Nature is always consistent, though she feigns to contravene her own laws. She keeps her laws, and seems to transcend them. She arms and equips an animal to find its place and living in the earth, and at the same time she arms and equips another animal to destroy it.

*Essays* (Second Series)

Nature (p. 547)

The Library of America. New York, New York, USA. 1983

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

You rip up the animal and I study it alive; you turn it into an object of horror and pity, whereas I cause it to be loved; you labour in a torture-chamber and dissecting-room, I make my observations under the blue sky to the song of the Cicadas, you subject cell and protoplasm to chemical tests, I study instinct in its loftiest manifestations; you pry into death, I pry into life.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter I (p. 14)

Dodd, Mead & Co. New York, New York, USA. 1915

Making ample allowance for anatomy, a precious aid, what do we know of animals? Next to nothing. Instead of inflating cabbalistic bladders with this nothing, let us collect well-observed facts, however humble. From a sheaf of such facts a clear, calm light may shine forth one day, a light far preferable to the fireworks of theories which dazzle us for a moment only to leave us in blacker darkness.

Translated by Alexander Teixeira de Mattos

*The Life of the Weevil*

Chapter ii (p. 39)

Hodder & Stoughton. London, England. nd

**Feynman, Richard P.** 1918–88

American theoretical physicist

The universality of the deep chemistry of living things is indeed a fantastic and beautiful thing. And all the time we human beings have been too proud to even recognize our kinship with the animals.

*The Meaning of It All*

Chapter I (p. 11)

Perseus Books. Reading, Massachusetts, USA. 1998

**Gardner, John** 1933–82

American writer and scholar

Always be kind to animals,  
Morning, noon, and night;

For animals have feelings too,  
And furthermore, they bite.

*A Child's Bestiary*

Introduction

Alfred A. Knopf. New York, New York, USA. 1977

**Grahame, Kenneth** 1859–1932

English writer

Animals arrived, liked the look of the place, took up their quarters, settled down, spread, and flourished. They didn't bother themselves about the past – they never do; they're too busy.

*The Wind in the Willows* (pp. 88–89)

Charles Scribner's Sons. New York, New York, USA. 1908

**Hodgkin, Alan L.** 1914–98

English physiologist and biophysicist

...the zoologist is delighted by the differences between animals, whereas the physiologist would like all animals to work in fundamentally the same way.

Part I, Chapter 6 (p. 66)

Press Syndicate of the University of Cambridge. Cambridge, England.

1992

**Hornaday, William Temple** 1854–1937

American naturalist

He who attempts to study any small group of animal forms without first gaining a bird's-eye view of the surrounding territory, and becoming familiar with the zoological grand divisions that lie around him, loses much.

In Francis Rolt-Wheeler (ed.)

*The Science-history of the Universe*

Introduction (p. xii)

The Current Literature Publishing Co. New York, New York, USA. 1909

He who knows the wild animals of the world always travels among friends, and in every land he finds a welcome.

In Francis Rolt-Wheeler (ed.)

*The Science-history of the Universe*

Introduction (p. xv)

The Current Literature Publishing Co. New York, New York, USA. 1909

To assume that every wild beast and bird is a sacred creature, peacefully dwelling in an earthly paradise, is a mistake. They have their wisdom and their folly, their joys and their sorrows, their trials and tribulations.

*The Minds and Manners of Wild Animals: A Book of Personal Observations*

Man and the Wild Animals (p. 1)

Charles Scribner's Sons. New York, New York, USA. 1922

On one side of the heights above the River of Life stand the men of this little world, the fully developed, the underdone, and the unbaked, in one struggling, seething mass. On the other side, and on a level but one step lower down, stands the vanguard of the long procession of "Lower" Animals, led by the chimpanzee, the orang

and the gorilla. The natural bridge that almost spans the chasm lacks only the keystone of the arch.

*The Minds and Manners of Wild Animals: A Book of Personal Observations*

Part IV, Chapter XXV (p. 252)

Charles Scribner's Sons. New York, New York, USA. 1922

An Animal is a living creature belonging to the animal kingdom; but the word is commonly, though incorrectly, used to designate mammals alone.

In William H. Carr

*The Stir of Nature*

Chapter Fourteen (p. 181)

Oxford University Press, Inc. New York, New York, USA. 1930

### **Hugo, Victor** 1802–85

French author, lyric poet, and dramatist

In our conviction, if souls were viable we should distinctly see the strange fact that every individual of the human species corresponds to some one of the species of animal creation; and we might easily recognize the truth, which has as yet scarce occurred to the thinker, that from the oyster to the eagle, from the hog to the tiger, all animals are in man, and that each one of them is in a man. Sometimes even several of them at a time.

*Les Misérables*

Volume I, Book V, Chapter 5 (p. 167)

The Heritage Press. New York, New York, USA. 1938

...from the oyster to the eagle, from the swine to the tiger all animals are in man, and that each of them is in a man; sometimes even, several of them at a time. Animals are nothing but the forms of our virtues and vices, wandering before our eyes, the visible phantoms of our souls.

*Les Misérables*

Fantine, Section 5 (p. 100)

Carlton Publishers. New York, New York, USA. 1884

### **Huxley, Thomas Henry** 1825–95

English biologist

Not only does every animal live at the expense of some other animal or plant, but the very plants are at war.... The individuals of a species are like the crew of a foundered ship, and none but good swimmers have a chance of reaching the land.

*Collected Essays* (Volume 2)

*Darwiniana*

The Darwin Hypothesis (p. 18)

Macmillan & Company Ltd. London, England. 1904

...the animal world is on about the same level as a gladiator's show. The creatures are fairly well treated, and set to fight – whereby the strongest, the swiftest, and the cunningest live to fight another day. The spectator has no need to turn his thumbs down, as no quarter is given.

For Monseigneur le Dauphin  
University of Illinois Press. Champaign, Illinois, USA. 2007

**Leclerc, Georges-Louis, Comte de Buffon** 1707–88  
French naturalist

As we can judge only in proportion as we compare, and as all our knowledge turns upon the relations by which one object differs from another, if there existed no brute animals, the nature of the human beings would be still more incomprehensible.

*Natural History* Volume 5  
Chapter I (p. 1)  
Printed for H.D. Symonds. London, England. 1811

An animal has two modes of existence; that of motion, or awake, and that of rest, or asleep; and which, while life lasts, succeed each other alternately. In the former, all the springs of the machine are in action; in the latter, there is only a part of them so, and this part acts as well while the animal is asleep as while it is awake, and, is therefore, absolutely necessary since the animal cannot exist, without it.

*Natural History* Volume 5  
Chapter I (p. 3)  
Printed for H.D. Symonds. London, England. 1811

**Erskine, Thomas (First Baron Erskine)** 1750–1823  
English lawyer and politician

In the large animals, you see  
And own a wise economy –

...  
Without their aids, Man's boundless sway  
You feel would languish and decay.  
The Farmer's Vision  
*The London Literary Gazette*, Number 113, March 20, 1819

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

When we consider how much we owe to the Dog, Man's faithful friend, to the noble Horse, the patient Ox, the Cow, the Sheep, and our other domestic animals, we cannot be too grateful to them: and if we cannot, like some ancient nations, actually worship them, we have perhaps fallen into the other extreme, underrate the sacredness of animal life, and treat them too much like mere machines.

*The Beauties of Nature and the Wonders of the World We Live In*  
Chapter II (p. 41)  
Macmillan & Company Ltd. London, England. 1903

...if Man would but treat other animals with kindness, so that they might approach us without fear, and we might have the constant pleasure of watching their winning ways. Their origin and history, structure and habits, senses and intelligence, offer an endless field of interest and wonder.

*The Pleasures of Life*  
Chapter VII (p. 151)  
The Macmillan Co. New York, New York, USA. 1891

**MacNeice, Louis** 1907–63  
British and Irish poet and playwright

Many people take to animals to escape from human beings – but often, it turns out, because they find the animals so human. Others, of whom I am one, find animals a delightful change just because they are not human and never can be.

*Selected Prose of Louis MacNeice*  
Wild and Domestic (p. 49)  
Oxford University Press. Oxford, England. 1990

**Margulis, Lynn** 1938–  
American cell biologist and evolutionist

**Sagan, Dorion** 1959–  
American science writer

Human religion and mythology have always been full of fantastic combinations of creatures – the mermaids, sphinxes, centaurs, devils, vampires, werewolves, and seraphs that combine animal parts to make imaginary beings. Truth being stranger than fiction, biology has refined the intuitively pleasing idea with its discovery of the overwhelming statistical probability of the reality of combined beings.

*Microcosmos*  
Chapter 7 (p. 120)  
Summit Books. New York, New York, USA. 1986

No animal has ever really completely left the watery microcosm. The blastula and embryo still develop in the primeval wetness and buoyancy of the womb.... No matter how high and dry the mountain top, no matter how secluded and modern the retreat, we sweat and cry what is basically seawater.

*Microcosmos*  
Chapter 11 (pp. 183, 184)  
Summit Books. New York, New York, USA. 1986

**Montgomery, James** 1771–1854  
Scottish poet and journalist

The slow-worm crawl'd, the light chameleon climb'd  
And changed his colour as his place he changed;  
The nimble lizard ran from bough to bough,  
Glancing through light, in shadow disappearing;  
The scorpion, many-eyed,  
with sting of fire,

Bred there, the legion-fiend of creeping things.

*The Poetical Works of James Montgomery, With Notes, etc.*

Pelican Island (p. 199)

Frederick Warne and Co. London, England. 1893

**Muir, John** 1838–1914

American naturalist

Of the many advantages of farm life for boys one of the greatest is the gaining a real knowledge of animals as fellow-mortals, learning to respect them and love them, and even to win some of their love. Thus godlike sympathy grows and thrives and spreads far beyond the teachings of churches and schools, where too often the mean, blinding, loveless doctrine is taught that animals have neither mind nor soul, have no rights that we are bound to respect, and were made only for man, to be petted, spoiled, slaughtered or enslaved.

*My Boyhood and Youth*

Chapter III (p. 89)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1913

Most wild animals get into the world and out of it without being noticed. Nevertheless we at last sadly learn that they are all subject to the vicissitudes of fortune like ourselves.

*My Boyhood and Youth*

Chapter III (p. 109)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1913

**Oken, Lorenz** 1779–1851

German naturalist

Animal is blossom without a stem.

**Spencer, Herbert** 1829–1903

English social philosopher

...the behavior of men to the lower animals and their behavior to each other, bear a constant relationship...

*Social Statics*

Chapter XXX (p. 451)

D. Appleton & Co. New York, New York, USA. 1865

**Stoker, Bram** 1847–1912

English writer

Then a dog began to howl somewhere in a farmhouse far down the road, a long, agonized wailing, as if from fear. The sound was taken up by another dog, and then another and another, till, borne on the wind which now sighed softly through the Pass, a wild howling began, which seemed to come from all over the country, as far as the imagination could grasp it through the gloom of the night.

*Dracula*

Chapter I (p. 11)

Ameron House. Mattituck, New York, USA. nd

I have always thought that a wild animal never looks so well as when some obstacle of pronounced durability is between us. A personal experience has intensified rather than diminished that idea.

*Dracula*

Chapter XI (p. 148)

Ameron House. Mattituck, New York, USA. nd

**Twain, Mark (Samuel Langhorne Clemens)**1835–1910  
American author and humorist

Of all the animals, man is the only one that is cruel. He is the only one that inflicts pain for the pleasure of doing it.

*Collected Tales, Sketches, Speeches, and Essays 1891–1910*  
Man's Place in the Animal World (p. 210)  
The Library of America. New York, New York, USA. 1992

**Wheeler, William Morton**1865–1937  
American entomologist

Why animals and plants are as they are we shall never know; of how they came to be what they are, our knowledge will always be extremely fragmentary; but that organisms are as they are, that apart from members of our own species they are our only companions in an infinite and unsympathetic waste of electrons, planets, nebulae and stars, is a perennial joy and consolation.

In Joseph Wood Krutch  
The Thought of Turtles  
*The Nation*, Volume 166, Number 24, June 12, 1948

**Whitman, Walt**1819–92  
American poet, journalist, and essayist

I think I could turn and live with animals, they are so placid and self-contained,

I stand and look at them long and long:

They do not sweat and whine about their condition,  
They do not lie awake in the dark and weep about their sins,

They do not make me sick discussing their duty to God.

*Leaves of Grass*  
Song of Myself. 32

**Wordsworth, William**1770–1850  
English poet

The cattle are grazing,  
Their heads never raising:

There are forty feeding like one!

*The Complete Poetical Works of William Wordsworth*  
The Cock Is Crowing  
Crowell. New York, New York, USA. 1888

...scattered herds, that in the meadow graze,  
Some amid lingering shade, some touched by the sun's rays.

*Complete Poetical Works*  
Guilt and Sorrow  
Verse lx  
Troutman & Hayes. Philadelphia, Pennsylvania, USA. 1852

**von Goethe, Johann Wolfgang**1749–1832  
German poet, novelist, playwright, and natural philosopher

...every creature sundered from its natural surroundings, and brought into strange company, makes an unpleasant impression on us, which disappears only by habit

In John Stuart Blackie (ed.)  
*The Wisdom of Goethe*  
Nature – Natural History (p. 183)  
William Blackwood & Sons. Edinburgh, Scotland. 1883

**ANIMAL: AMPHIBIAN****Smith, Langdon**1858–1908  
American poet

We were amphibians, scaled and tailed  
And drab as a dead man's hand;  
We coiled at ease 'neath the dripping trees  
Or trailed through the mud and sand.  
Croaking and blind, with our three clawed feet  
Writing a language dumb,  
With never a spark in the empty dark  
To hint at a life to come.

In David L. George (ed.)  
*The Family Book of Best Loved Poems*  
Evolution  
Hanover House. Garden City, New Jersey, USA. 1952

**FROG****Author undetermined**

What a wonderful bird the frog are –  
When he stand he sit almost;  
When he hop, he fly almost.  
He ain't got no sense hardly;  
He ain't got no tail hardly either.  
When he sit, he sit on what he ain't got almost.  
Source undetermined

**Carr, Archie**1909–87  
American zoologist

I like the look of frogs, and their outlook, and especially the way they get together in wet places on warm nights and sing about sex.

*The Windward Road: Adventures of a Naturalist on Remote Caribbean Shores*  
The Paradox Frog (p. 90)  
Alfred A. Knopf. New York, New York, USA. 1956

**Holmes, Oliver Wendell**1809–94  
American physician, poet, and humorist

Nature has organized one of her creatures so admirably for the purposes of the physiologist that Mr. Bergh himself would hardly deny that there was a meaning in it. One cannot help thinking what a festival of science the Plague of Frogs must have been to the Brown-Se'guards of the time of Moses. That luckless animal, which has storks and mice and snakes and anglers and boys as its natural enemies, displays some of its nerves so beautifully and

liberally on the most superficial anatomical inspection, that it becomes in consequence of this indiscreet exposure a foredoomed and necessary victim of experiment.

*The Writings of Oliver Wendell Holmes*

*Pages from an Old Volume of Life*

Chapter VI (p. 195)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1891

**Muir, John** 1838–1914

American naturalist

Frogs abound in all the bogs, marshes, pools, and lakes, however cold and high and isolated. How did they manage to get up these high mountains? Surely not by jumping. Long and dry excursions through weary miles of boulders and brush would be trying to frogs. Most likely their stringy spawn is carried on the feet of ducks, cranes, and other water birds. Anyhow, they are most thoroughly distributed, and flourish famously. What a cheery, hearty set they are, and how bravely their krink and tronk concerts enliven the rocky wilderness!

*Our National Parks*

Chapter VI (p. 211)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Ovid** BCE–17 AD

Roman poet

Ev'n slime begets the frog's loquacious race:  
Short of their feet at first, in little space  
With arms, and legs endu'd, long leaps they take  
Rais'd on their hinder parts, and swim the lake,  
And waves repel: for Nature gives their kind,  
To that intent, a length of legs behind.

*Ovid*

*Metamorphoses*, Book the Fifteenth (p. 163)

Harper & Brothers Publishers. New York, New York, USA. 1836

**Wedl, Carl** 1815–91

Austrian pathologist

For researches of this kind [circulation of the blood], the Frog – that arch-martyr to science – affords the most convenient subject.

Translated by George Busk

*Rudiments of Pathological Histology*

Chapter II (p. 15)

Printed for the Sydenham Society. London, England. 1855

## POLLYWOG

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

The pollywogg iz created bi the sides ov the road, out ov thick water, and spends hiz infancy in pollywogging.

*Josh Billings' Wit and Humor*

The Pollywogg (p. 89)

George Routledge & Sons. London, England. 1874

## SALAMANDER

**Addison, Joseph** 1672–1719

English essayist, poet, and statesman

In short, the artist did his part to admiration, and was so encompassed with fire and smoke, that one would have thought nothing but a salamander could have been safe in such a situation.

*The Guardian*

Volume 2, Number 103, July 9, 1715 (p. 97)

John Sharpe. London, England. 1804

**Glanvill, Joseph** 1636–80

English clergyman and philosopher

According to this *Hypothesis* [that there is a sphere of fire under the concave of the moon], the whole *Lunar* world is a *Torrid Zone*; and on a better account, then *Aristotle* thought ours was, may be supposed *inhabitable*, except they are *Salamanders* which dwell in those *fiery Regions*.

*Scep sis Scientifica*

Chapter XX (p. 151)

Kegan Paul, Trench & Co. London, England. 1885

## TADPOLE

**Pallister, William Hales** 1877–1946

Canadian physician

Three large glass bowls,  
In each some half grown tadpoles,  
All hatched from the same spawn,  
Breathing with gills like fishes  
In their small transparent dishes,  
Waving their long tails,  
Important to themselves as whales,  
Some of them to be experimented on...

*Poems of Science*

The Nature of Things, Tadpoles (p. 6)

Playford Press. New York, New York, USA. 1931

## TOAD

**Fawcett, Edgar** 1847–1904

American poet

Blue dusk, that brings the dewy hours,  
Brings thee, of graceless form in smooth,  
Dark stumbler at the roots of flowers,  
Flaccid, inert, uncouth.

In John Burroughs (ed.)

*Songs of Nature*

A Toad

Doubleday, Page & Company. Garden City, New York, USA. 1912

**Marquis, Don** 1878–1937

American newspaperman, poet, and playwright

I met a toad  
the other day by the name

of warty bliggens  
 he was sitting under  
 a toadstool  
 feeling contented  
 he explained that when the cosmos  
 was created  
 that toadstool was especially  
 planned for his personal  
 shelter from the sun and rain  
 thought out and prepared  
 for him

*the lives and time of archy & mehitabel*  
 warty bliggens, the toad (p. 38)

Doubleday Doran & Co. Garden City, New York, USA. 1934

**McArthur, Peter** 1866–1924  
 Canadian poet

Probably no creature in all nature has been so villainously libeled as the toad. The greatest of poets speak of “the toad, ugly and venomous,” and in fairy lore they are regarded as poisonous. So deeply rooted are these erroneous beliefs that no amount of scientific education seems able to eradicate them. The children are taught in school that the toad is not only harmless, but useful as an insect destroyer, and yet little girls will shriek at a toad just like their mothers.

*The Best of Peter McArthur*  
 Toads (p. 177)

Vancouver, Clarke, Irwin. Toronto, Ontario, Canada. 1967

**Milne, A. A. (Alan Alexander)** 1882–1956  
 English poet, children’s writer, and playwright

(Weasels, Stoats, and Ferrets, together:) Toad! Toad!  
 Down with Toad!  
 Down with the popular, successful Toad!

*Toad of Toad Hall*  
 Act 1, Number 7 (p. 18)

Charles Scribner’s Sons. New York, New York, USA. 1929

**Montgomery, James** 1771–1854  
 Scottish poet and journalist

Loathsome, unsightly, swollen to obscene bulk,  
 Lurk’d the dark toad beneath the infected turf ...

*The Poetical Works of James Montgomery*  
 The Pelican Island

Little, Brown & Co. Boston, Massachusetts, USA. 1860

## ANIMAL: ANTHROPODA

### BARNACLE

**Duke of Argyll (George Douglas Campbell)** 1823–1900

English statesman and writer on science, religion, and politics

The little Barnacles which crust the rocks at low tide, and which to live there at all must be able to resist the surf,

have the building of their shells constructed strictly with reference to this necessity. It is a structure all hollowed and chambered on the plan which engineers have so lately discovered as an arrangement of material by which the power of resisting strain or pressure is multiplied in an extraordinary degree. That shell is as pure a bit of mechanics as the bridge, both being structures in which the same arrangement is adapted to the same end.

*The Reign of Law* (4th American edition)

Chapter 2 (pp. 99–100)

George Routledge & Sons. New York, New York, USA. 1873

### CENTIPEDE

**Blanshard, Brand** 1892–1987  
 American philosopher

The centipede was happy quite  
 Until the toad for fun  
 Said: “Pray which leg comes after which?”  
 This wrought his mind to such a pitch,  
 He lay distracted in the ditch  
 Considering how to run.

*The Nature of Thought* (Volume 1)

Chapter VI, fn 1 (p. 232)

George Allen & Unwin Ltd. London, England. 1939

**Burroughs, William S.** 1914–97  
 American novelist, essayist, and social critic

Now what sort of man or woman or monster would stroke a centipede on his underbelly? “And here is my good big centipede!” If such a man exists, I say kill him without more ado. He is a traitor to the human race.

*The Western Lands*

Chapter 4 (p. 86)

Viking Penguin. New York, New York, USA. 1987

**Marquis, Don** 1878–1937  
 American newspaperman, poet, and playwright

the centipede adown the street  
 goes braggartly with scores of feet  
 a gaudy insect but not neat

*the lives and time of archy & mehitabel*

archy at the zoo (p. 130)

Doubleday Doran & Co. Garden City, New York, USA. 1934

### CRAB

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
 American writer and humorist

Natur is fond ov a joke.

She must have felt full ov fun, when she made a soft shell crab. The strongest emotion the crab haz iz tew bite. They aint afrade tew bite a sawlog, or a black bear. They are

born in the water, but they kan live out doors on the land  
az long az they kan find ennything tew bite.

*Josh Billings' Wit and Humor*

The Crab (p. 85)

George Routledge & Sons. London, England. 1874

**James, William** 1842–1910

American philosopher and psychologist

Probably a crab would be filled with a sense of personal outrage if it could hear us class it without ado or apology as a crustacean, and thus dispose of it. “I’m no such thing,” it would say, “I am MYSELF, MYSELF.”

*The Varieties of Religious Experience*

Lecture I (p. 10)

The Modern Library. New York, New York, USA. 196?

## CRAWFISH

**Flaubert, Gustave** 1821–90

French novelist

Crayfish. Female of the lobster. Walks backward. Always call reactionaries “crayfish.”

*Dictionary of Accepted Ideas*

Animal Life (pp. 139–140)

M. Reinhardt. London, England. 1954

## LOBSTER

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

‘Tis the voice of the Lobster: I heard him declare  
“You have baked me too brown, I must sugar my hair.”

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter X (p. 111)

The Modern Library. New York, New York, USA. 1936

## MILLIPEDE

**Garstang, Walter** 1868–1949

English embryologist and amateur poet

The hatching of a Millipede brings curious things to light:

The embryo within its shell is curled up snug and tight  
Enclosed inside an inner skin with a thorn upon its neck,  
Whose task it is to pierce the shell, as chicks their prisons peck.

What is this extra covering that thus comes into view?

An heirloom from antiquity here blended with the new?

Another “Nauplius-coat” around another embryo,

The same that Peracarids on their cradled babes bestow?

*Larval Forms, and Other Zoological Verses*

The Millipede’s Egg-Tooth, Stanza 1 (p. 51)

The University of Chicago Press. Chicago, Illinois, USA. 1985

## MITE

### Author undetermined

The cheese-mites asked how the cheese got there,  
And warmly debated the matter;

The orthodox said it came from the air,

And the heretics said from the platter.

In Arnold Silcock

*Verses and Worse*

Four More Brief Beliefs (p. 60)

Faber & Faber Ltd. London, England. 1952

**Duck, Stephen** 1705–56

English poet

Dear Madam, did you never gaze

Thro’ optic glass on rotten cheese?

There, Madam, did you ne’er perceive

A crowd of dwarfish creatures live?

The little things, elate with Pride,

Strut to and fro, from side to side:

In tiny pomp and partly vein,

Lords of their pleasing orb they reign;

And fill’d with harden’d Curds and Cream,

Think the Whole Dairy made for *them*.

In T.E. Hughes

*Mites, or the Acari* (p. vii)

University of London. London, England. 1959

**Frost, Robert** 1874–1963

American poet

A speck that would have been beneath my sight

On any but a paper sheet so white

Set off across what I had written there.

And I had idly poised my pen in air

To stop it with a period of ink

When something strange about it made me think.

This was no dust speck by my breathing blown,

But unmistakably a living mite

With inclinations it could call its own.

*Complete Poems of Robert Frost*

A Considerable Speck

Henry Holt & Company. New York, New York, USA. 1949

**Hooke, Robert** 1635–1703

English physicist

The least of Reptiles I have hitherto met with, is a Mite.

*Micrographia*

Observation, LV (p. 213)

Printed by Jo. Martyn & Ja. Allestry. London, England. 1665

## SCORPION

**Belloc, Hilaire** 1870–1953

French-born poet and historian

The Scorpion is as black as soot,

He dearly loves to bite;  
He is a most unpleasant brute  
To find in bed, at night.

*Complete Verse*

The Scorpion (p. 243)

Gerald Duckworth. London, England. 1970

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

The Scorpion is an uncommunicative insect, occult in his manners and unpleasant to deal with.... He has at all times struck the popular imagination, even to the point of being numbered among the signs of the zodiac.

Fear made the gods, said Lucretius. Deified by terror, the Scorpion is glorified in the sky by a constellation and in the almanac by the symbol for the month of October. Let us try to make him speak.

Translated by Alexander Teixeira de Mattos

*The Life and Love of the Insect*

The Languedocian Scorpion (p. 223)

Adam & Charles Black. London, England. 1911

## SPIDER

**Allen, Grant** 1848–99

Canadian-born writer

In selecting a garden spider of my acquaintance...I do not desire to hold her up to the young, the gay, the giddy, and the thoughtless as a pattern for imitation. She does not point a moral with the ant. On the contrary, she must rank with Semiramis and the famous queen who dwelt in the Tour de Nesle as a shining example of abandoned and shameless wickedness.

*Flashlights on Nature*

Chapter III (pp. 47–48)

Doubleday, Page & Co. New York, New York, USA. 1905

**Bunyan, John** 1628–88

English Christian writer and preacher

SINNER: What black, what ugly, crawling thing art thou?

SPIDER: I am a spider –

*The Complete works of John Bunyan*

*The Sinner and the Spider*

Bradley, Garretson & Co. Philadelphia, Pennsylvania, USA. 1872

**Dickinson, Emily** 1830–86

American lyric poet

The spider as an artist  
Has never been employed  
Though his surpassing merit  
Is freely certified.  
By every broom and Bridget  
Throughout a Christian land.  
Neglected son of genius,  
I take thee by the hand.

*The Complete Poems of Emily Dickinson*

No. 1275 (p. 557)

Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1960

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

The Spider has a bad name: to most of us, she represents an odious, noxious animal, which everyone hastens to crush under foot. Against this summary verdict the observer sets the beast's industry, its talent as a weaver, its wiliness in the chase, its tragic nuptials and other characteristics of great interest.

Translated by Alexander Teixeira de Mattos

*The Life of the Spider*

Chapter I (p. 39)

Dodd, Mead & Company. New York, New York, USA. 1913

There are no masters nor apprentices in their [spiders] guild; all know their craft from the moment that the first thread is laid.

Translated by Alexander Teixeira de Mattos

*The Life of the Spider*

Chapter X (p. 248)

Dodd, Mead & Co. Boston, Massachusetts, USA. 1917

**Florian, Douglas** 1950–

American author and illustrator

O Daddy

Daddy O

How'd you get

Those legs to grow

So very long

And lean in size?

From spiderobic

Exercise?

*Insectlopedia: Poems and Paintings*

The Daddy Longlegs

Harcourt Brace. San Diego, California, USA. 1998

**Lugosi, Bela** 1882–1956

Hungarian film star

The spider spinning his web for the unwary fly. The blood is the life...

*Dracula*

Film (1931)

**Martin, Charles-Noël** 1923–

French physicist

Spiders act as if they had the brains of first-class mathematicians. For them, space has properties which makes its structure quite unique.

Translated by A.J. Pomerans

*The Role of Perception in Science*

Chapter 5 (p. 114)

Hutchinson of London. London, England. 1963

**Pallister, William Hales** 1877–1946

Canadian physician

Of the SPIDERS and SCORPIONS, five thousand kinds:  
These are scattered abroad, on the sea and the shore,

Quite unpleasant to think of, but still it reminds  
To be glad there are not many thousand kinds more.  
These are eight-legged beauties, with schemes of their own,  
And the safest precaution is: Leave them alone!

*Poems of Science*

Beginnings, Animal Life (p. 140)

Playford Press. New York, New York, USA. 1931

### Smith, Bertha Wilcox

No biographical data available

Throughout the night he spun a thread  
With which he wove medallioned lace  
That stretched between two milkweed pods  
Beside a dusty, traveled place;  
The pattern was a scalloped round –  
Each radius exactly drawn  
With trellised filaments between,  
And over all bright diamonds shone;  
In meshed and tenuous design  
It was a fragile, wayside sonnet –  
The maker, heedless of acclaim,  
Had left no signature upon it.

*Nature Magazine*, Volume 50, Number 5, May, 1957 (p. 234)

### Taylor, Ann 1782–1866

English poet and children's author

“O look at that great ugly Spider,” said Ann,  
And screaming, she knocked it away with her fan;  
“‘Tis a great ugly creature, as ever can be,  
I wish that it would not come crawling on me.”

*Original Poems for Infant Minds*

The Spider, Stanza I

Robert Carter. New York, New York, USA. 1856

### Topsell, Edward 1572–1625?

English divine and writer

To begin therefore to make an enumeration of their pray-  
ses, I will declare unto yo, the rich vertues and external  
goods of the body, fortune and minde. And first to begin  
with the good gifts of their bodies. If you will weigh and  
consider the matter and substance of a Spiders body, you  
shall finde it to be light, partaking much of fire and ayr,  
(being two of the most noble and effectual elements in  
operation) and having but little earthy dragginesse and  
drossy refuse.

*The History of Four-Footed Beasts*

The History of Serpents

Of the Spider (p. 778)

G. Sawbridge. London, England. 1658

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

Some of these spiders could straddle over a common  
saucer with their hairy, muscular legs, and when their  
feelings were hurt, or their dignity offended, they were

the wickedest-looking desperadoes the animal world can  
furnish. If their glass prison-houses were touched ever so  
lightly they were up and spoiling for a fight in a minute.  
Starchy? – proud? Indeed, they would take up a straw  
and pick their teeth like a member of Congress.

*Roughing It* (Volume 1)

Chapter XXI (p. 176)

Harper & Brothers Publishers. New York, New York, USA. 1899

### White, Terence Hanbury 1906–64

English author

A spider is an air worm, as it is provided with nourish-  
ment from the air, which a long thread catches down to  
its small body.

*The Book of Beasts: Being a Translation From a Latin Bestiary of the  
Twelfth Century* (p. 191)

G.P. Putnam's Sons. New York, New York, USA. 1954

## TICK

### Florian, Douglas 1950–

American author and illustrator

Not gigan-tic.

Not roman-tic.

Not artis-tic.

Not majes-tic.

Not magne-tic.

Nor aesthe-tic.

Ticks are strictly parasi-tic.

*Insectlopedia: Poems and Paintings*

The Ticks

Harcourt Brace. San Diego, California, USA. 1998

### Pliny (C. Plinius Secundus) 23–79

Roman savant and author

...ticks, the foulest and nastiest creatures that be ...

Translated by Philmon Holland and Paul Turner

*Selections from The History of the World, Commonly Called The Natu-  
ral History of C. Plinius Secundus* (p. 317)

Southern Illinois University Press. 1962

## WOODLOUSE

### Garstang, Walter 1868–1949

English embryologist and amateur poet

MacBride was in his garden settling pedigrees,  
When came a baby Woodlouse and climbed upon his  
knees,

And said: “Sir, if our six legs have such an ancient air,  
Shall we be less ancestral when we've grown our moth-  
er's pair?”

*Larval Forms, and Other Zoological Verses*

Isopod Phylogeny, Stanza 3 (p. 50)

The University of Chicago Press. Chicago, Illinois, USA. 1985

**ANIMAL: BIRD**

**Atkinson, Brooks** 1894–1984  
American drama critic

Nothing wholly admirable ever happens in this country except the migration of birds.

*Once Around the Sun*

March 23 (p. 80)

Harcourt, Brace & Company. New York, New York, USA. 1951

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

There are no such indefatigable entomologists as birds.

*Star Papers*

The Value of Birds, XIII (p. 194)

J.B. Ford & Co. New York, New York, USA. 1873

They [birds] eat what they like, wipe their mouths on a limb, return thanks in a song, and wing away to a quiet nook to doze or meditate ...

*Star Papers*

The Value of Birds, XIII (p. 195)

J.B. Ford & Co. New York, New York, USA. 1873

We charge every man with positive dishonesty who drives birds from his garden in fruit-time. The fruit is theirs as well as yours. They took care of it as much as you did. If they had not eaten egg, worm, and bug, your fruit would have been pierced and ruined. They only come for wages. No honest man will cheat a bird of his spring and summer's work.

*Star Papers*

The Value of Birds, XIII (p. 196)

J.B. Ford & Co. New York, New York, USA. 1873

**Beston, Henry** 1888–1968  
American writer

On flocks of birds flying up before him as he walks the beach: "Standing on the beach, I watch the lovely sight of the group instantly turned into a constellation of birds, into a fugitive Pleiades whose living stars keep their chance positions."

*The Outermost House*

Chapter II (p. 23)

Rinehart & Company. New York, New York, USA. 1928

**Bogart, Humphrey** 1899–1957  
American film actor

Let's talk about the black bird.

*The Maltese Falcon*

Film (1941)

**Burroughs, John** 1837–1921  
American naturalist and essayist

It might almost be said that the birds are all birds of the poets and of no one else, because it is only the poetical temperament that fully responds to them.

*Birds and Poets With Other Papers*

Birds And Poets (p. 9)

David Douglas Edinburgh, Scotland. 1884

The very idea of a bird is a symbol and a suggestion to the poet. A bird seems to be at the top of the scale, so vehement and intense is his life – large brained, large lunged, hot, ecstatic, his frame charged with buoyancy and his heart with song. The beautiful vagabonds, endowed with every grace, masters of all climes, and knowing no bounds – how many human aspirations are realised in their free, holiday-lives – and how many suggestions to the poet in their flight and song!

*Birds and Poets With Other Papers*

Birds And Poets (p. 10)

David Douglas Edinburgh, Scotland. 1884

**Chapman, Frank M.** 1864–1945  
American ornithologist

...birds will appeal most strongly to us through their songs. When your ears are attuned to the music of birds, your world will be transformed. Birds' songs are the most eloquent of Natures' voices....

*Bird-Life*

Chapter I (p. 11)

D. Appleton & Company. New York, New York, USA. 1903

**Cornwall, Barry (Bryan Waller Procter)** 1787–1874  
English author

Come, all ye feathery people of mid-air,  
Who sleep 'midst rocks, or on the mountain summits  
Lie down with the wild winds; and ye who build  
Your homes amidst green leaves by grottoes cool;  
And ye who on the flat sands hoard your eggs  
For suns to ripen, come!

*The Poetical Works of Milman, Bowles, Wilson, and Barry Cornwall*

An Invocation to Birds

A. & W. Galignani. Paris, France. 1829

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

A bird is an instrument working according to a mathematical law, which instrument it is within the capacity of man to reproduce, with all its movements.

Translated by Edward MacCurdy

*The Notebooks of Leonardo da Vinci* (Volume 1)

Flying Machine (p. 493)

George Braziller. New York, New York, USA. 1958

**Darwin, Charles Robert** 1809–82  
English naturalist

We behold the face of nature bright with gladness, we often see the superabundance of food; we do not see or we forget, that the birds which are idly singing round us mostly live on insects or seeds, and are thus constantly destroying life; or we forget how largely these songsters, or their eggs, or their nestlings, are destroyed by birds

and beasts of prey; we do not always bear in mind, that, though food may be now superabundant, it is not so at all seasons of each recurring year.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter III (p. 32)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Dewar, Douglas** 1875–1957

British civil servant

Only those who have come under the sway of the charm of birds can appreciate to what an extent the “*joie de vivre*” is enhanced by an acquaintance with them. Interest in the feathered hosts, when once aroused in a man, will never flag or wane.

*Annual Report of the Board of Regents of the Smithsonian Institution (1908)*

The Birds of India (p. 623)

Government Printing Office. Washington, D.C. 1909

### **Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The bird is not in its ounces and inches, but in its relations to Nature; and the skin or skeleton you show me, is no more a heron, than a heap of ashes or a bottle of gases into which his body has been reduced, is Dante or Washington.

*Ralph Waldo Emerson: Essays and Lectures*

English writer

I never saw a wild thing

Sorry for itself.

A small bird will drop frozen dead

From a bough

Without ever having felt sorry for itself.

*The Complete Poems of D.H. Lawrence*

Self Pity

The Viking Press. New York, New York, USA. 1973

### **Longfellow, Henry Wadsworth** 1807–82

American poet

You call them thieves and pillagers; but know,

They are the winged wardens of yours farms,

Who from the cornfields drive the insidious foe,  
And from your harvests keep a hundred harms...

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 4)

The Poet's Tale

Birds of Killingworth, Stanza 19

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**Lucas, Frederic Augustus** 1852–1929

American naturalist and zoologist

For, though so different in outward appearance, birds and reptiles are structurally quite closely allied, and the creeping snake and the bird on which it preys are relatives, although any intimate relationship between them is of the serpent's making, and is strongly objected to by the bird.

*Animals of the Past: an Account of Some of the Creatures of the Ancient World* (6th edition)

Chapter VII (p. 82)

American Museum Of Natural History New York, New York, USA. 1922

**Lynd, Robert** 1879–1949

Anglo-Irish essayist

There is nothing in which the birds differ more from man than the way in which they can build and yet leave a landscape as it was before.

*The Blue Lion*

The Nuthatch (p. 29)

Books for Libraries Press. Freeport, New York, USA. 1968

**Mansfield, Katherine** 1888–1923

English author

It is astonishing how violently a big branch shakes when a silly little bird has left it. I expect the bird knows it and feels immensely arrogant.

In J. Middleton Murry (ed.)

*Journal of Katherine Mansfield*

1917, August 21, Alors, je pars (p. 70)

Alfred A. Knopf. New York, New York, USA. 1946

**Maxwell-Lefroy, Harold** 1877–1925

English entomologist

Birds are the fluctuating check on insect life, the safety valve as it were; they congregate where they find insects, regardless of their species or habits, and constantly consume the superfluous and the superabundant insect life.

*Indian Insect Pests*

Part II, Chapter V (p. 67)

Office of the Superintendent of Government Printing. Calcutta, India. 1906

**McArthur, Peter** 1866–1924

Canadian poet

The robins, killdeere, red-winged blackbirds and grackles come back with the warm wave. This means that the great university of nature is about to open for its spring and summer terms.

*The Best of Peter McArthur*

Nature's University (pp. 169–170)

Vancouver, Clarke, Irwin. Toronto, Ontario, Canada. 1967

**Newton, Alfred** 1829–1907

English zoologist and ornithologist

Birds have no need to lurk hidden in dens, or to slink from place to place under the shelter of the inequalities of the ground or of the vegetation which clothes it, as is the case with some many animals of similar size.

In Thomas Spencer Baynes (ed.)

*The Encyclopaedia Britannica* (Volume 18) (9th edition)

Ornithology (p. 2)

Henry G. Allen & Co. New York, New York, USA. 1888

**Pallister, William Hales** 1877–1946

Canadian physician

Of the birds, thirteen thousands of species are named; This is the first life with warm blood! We could not know all

And quite truly one need not feel greatly ashamed

If some few of the rare names are hard to recall,

But the birds are so lovely, I wish that I knew

All about all of them, and I'm sure so do you.

*Poems of Science*

Beginnings, Animal Life (p. 141)

Playford Press. New York, New York, USA. 1931

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

... we have no natural history of birds written yet. It cannot be written but by a scholar and a gentleman; and no English gentleman in recent times has ever thought of birds except as flying targets, or flavoured dishes.

*Love's Meinie*

Lecture I, 3 (p. 7)

John Wiley & Son. New York, New York, USA. 1873

In general, the scientific natural history of a bird consists of four articles – first, the name and estate of the gentleman whose gamekeeper shot the last that was seen in England; secondly, two or three stories of doubtful origin, printed in every book on the subject of birds for the last fifty years; thirdly, an account of the feathers, from the comb to the rump, with enumeration of the colours which are never more to be seen on the living bird by English eyes; and, lastly, a discussion of the reasons why none of the twelve names which former naturalists have given to the bird are of any further use, and why the present author has given it a thirteenth, which is to be universally, and to the end of time, accepted.

*Love's Meinie*

Lecture I, 4 (p. 8)

John Wiley & Son. New York, New York, USA. 1873

...it [a bird] rests upon the air, subdues it, surpasses it, out races it – *is* the air, conscious of itself, conquering itself, ruling itself.

*The Queen of the Air*

Chapter II, 65 (p. 70)

George Allen. London, England. 1903

...into the throat of the bird is given the voice of the air. All that in the wind itself is weak, wild, useless in sweetness, is knit together in its song. As we may imagine the wild form of the cloud closed into the perfect form of the bird's wings, so the wild voice of the cloud into its ordered and commanded voice; unwearied, rippling through the clear heaven in its gladness, interpreting all intense passion through the soft spring nights, bursting into acclaim and rapture of choir at daybreak, or lisping and twittering among the boughs and hedges through heat of day, like little winds that only make the cowslip bells shake, and ruffle the petals of the wild rose.

*The Queen of the Air*

Chapter II, 65 (p. 70)

George Allen. London, England. 1903

It [a bird] is little more than a drift of the air brought into form by plumes ...

*The Queen of the Air*

Chapter II, 65 (p. 70)

George Allen. London, England. 1903

### Urquhart, Alexander

No biographical data available

In their natural healthy state birds are, almost without exception, dainty creatures, but daintiness does not always or often characterize their actions. Indeed, one who walks abroad in winter days, and watches the feathered people, is struck above all things by their absolute superiority to that characteristic human trait squeamishness. They have no objection to dirt, even when it is rank and smells high, and they approach putrescence with the serenity of an analytical chemist.

*Odd Hours With Nature*

The Unsqueamish Bird (p. 28)

Fisher Unwin. London, England. 1913

### Valéry, Paul 1871–1945

French poet and critic

If a bird could say exactly what he sings, why he sings it, and *what*, within himself, is singing, he would not sing.

Translated by Stuart Gilbert

*The Collected Works of Paul Valéry* (Volume 14)

*Analects*

Odds and Ends (p. 18)

Princeton University Press. Princeton, New Jersey, USA. 1979

### White, Gilbert 1720–93

English naturalist and cleric

The language of birds is very ancient, and, like other ancient modes of speech, very elliptical: little is said, but much is meant and understood.

*The Natural History of Selborne*

Letter XLIII (p. 198)

Robert M. McBride & Company. New York, New York, USA. 1925

### Whitman, Walt 1819–92

American poet, journalist, and essayist

You must not know too much, or be too precise or scientific about birds and trees and flowers and watercraft; a certain free margin, and even vagueness – perhaps ignorance, credulity – helps your enjoyment of these things.

*Specimen Days*

Birds – And a Caution (p. 112)

D.R. Godine. Boston, Massachusetts, USA. 1971

## ADJUANT

### Dewar, Douglas 1875–1957

British civil servant

If the hornbill be the clown of the forest, the adjuant is the buffoon of the open plain.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1908)

The Birds of India (p. 619)

Government Printing Office. Washington, D.C. 1909

### Kipling, Lockwood 1837–1911

English illustrator, museum curator, and father of Rudyard Kipling

For grotesque devilry of dancing the Indian adjutant beats creation. Don Quixote or Malcollo was not half so solemn or dancing, and yet there is an abandonment and lightness of step, a wild lift in each solemn prance which are almost demoniacal. If it were possible for the most angular, tall, and demure of elderly maiden ladies to take a great deal too much champagne and then to give a lesson in ballet dancing, with occasional pauses of acute sobriety, perhaps some faint idea might be conveyed of the peculiar quality of the adjutant's movements.

In Douglas Dewar

*Annual Report of the Board of Regents of the Smithsonian Institution*, 1908

The Birds of India (p. 619)

Government Printing Office. Washington, D.C. 1909

## ALBATROSS

### Coleridge, Samuel Taylor 1772–1834

English lyrical poet, critic, and philosopher

And a good south wind sprung up behind,  
The Albatross did follow,  
And every day, for food or play,  
Came to the mariner's hollo!

“God save thee, ancient Mariner!

From the fiends that plague thus thee! –

Why look'st thou so?” –

With my crossbow

I shot the Albatross.

*The Rime of the Ancient Mariner and Other Poems*

Rime of the Ancient Mariner, Part I

pt. I, Stanza 18, l. 71–74, 76–80

Little Leather Library Corporation. New York, New York, USA. 1915

**Leland, Charles G.** 1824–1903  
American writer

Great albatross! – the meanest birds  
Spring up and flit away,  
While thou must toil to gain a flight,  
And spread those pinions grey...  
*The Music-Lesson of Confucius*  
Perseverando, Stanza 3  
J.R. Osgood & Company. Boston, Massachusetts, USA. 1872

**Lysaght, Sidney Roysse** 1860–1941  
Irish writer

An albatross wheeling in circles,  
Sails with a wing to the clouds and a wing to the touch  
of the billow ...  
*Poems*  
Storm  
Macmillan & Co. London, England. 1928

## AUK

**Fowles, John** 1926–2005  
English novelist

There seemed many great auks till the last one was killed.  
*Poems*  
Protect the Word (p. 48)  
Ecco Press. New York, New York, USA. 1973

## BALD EAGLE

**Franklin, Benjamin** 1706–90  
American printer, scientist, and diplomat

I wish the Bald Eagle had not been chosen as the representative of our country. He is a bird of bad moral character; he does not get his living honestly...  
*Ornithological Biography* (Volume 1)  
White-Headed Eagle (p. 168)  
Adam Black. Edinburgh, Scotland. 1831

## BIRD OF PARADISE

**Colum, Padraic** 1881–1972  
Irish poet and writer

With sapphire for her crown,  
And with the Libyan wine  
For lustre of her eyes;  
With azure for her feet  
(It is her henna stain);  
Then iris for her vest,  
Rose, ebony, and flame,  
She lives a thing enthralled,  
In forests that are old,  
As old as is the Moon.  
*Collected Poems*  
Bird of Paradise  
Devin-Adair. New York, New York, USA. 1953

**Moore, Thomas** 1779–1852  
Irish poet

Those golden birds that, in the spice-time, drop  
About the gardens, drunk with that sweet food  
Whose scent hath lur'd them o'er the summer flood  
And those that under Araby's soft sun  
Build their high nests of budding cinnamon.  
*The Poetical Works of Thomas Moore*  
Lalla Rookh, The Veiled Prophet of Khorassan (p. 48)  
Lee & Shepard. Boston, Massachusetts, USA. 1873

**Wallace, Alfred Russel** 1823–1913  
English humanist, naturalist, and geographer

Nature seems to have taken every precaution that these, her choicest treasures, may not lose value by being too easily obtained. First we find an open, harbourless, inhospitable coast, exposed to the full swell of the Pacific Ocean; next, a rugged and mountainous country, covered with dense forests, offering in its swamps and precipices and serrated ridges an almost impassable barrier to the central regions; and lastly, a race of the most savage and ruthless character, in the very lowest stage of civilization. In such a country and among such a people are found these wonderful productions of nature. In those trackless wilds do they display that exquisite beauty and that marvelous development of plumage, calculated to excite admiration and astonishment among the most civilized and most intellectual races of man...  
*Proceedings of the Zoological Society of London 1862* (p. 160)

## BLACKBIRD

**Moir, David Macbeth** 1798–1851  
Scottish physician and writer

The birds have ceased their songs,  
All save the blackbird, that from yon tall ash,  
'Mid Pinkie's greenery, from his mellow throat,  
In adoration of the setting sun,  
Chants forth his evening hymn.  
*The Poetical Works of David Macbeth Moir*  
An Evening Sketch  
W. Blackwood & Sons. Edinburgh, Scotland. 1860

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

The blackbird is a perfect gentleman, in deportment and attire, and is not noisy, I believe, except when holding religious services and political conventions in a tree...  
*Following the Equator* (Volume 2)  
Chapter II (p. 32)  
Harper & Brothers Publishers. New York, New York, USA. 1899

**BLUE JAY**

**Audubon, John James** 1785–1851  
West Indian-born American ornithologist and artist

Reader, look at the plate in which are represented three individuals of this beautiful species – rogues though they be, and thieves, as I would call them, were it fit for me to pass judgment on their actions. See how each is enjoying the fruits of his knavery, sucking the egg which he has pilfered from the nest of some innocent dove or harmless partridge! Who could imagine that a form so graceful, arrayed by nature in a garb so resplendent, should harbour so much mischief...

*Ornithological Biography* (Volume 2)

The Blue Jay (p. 11)

Adam Black. Edinburgh, Scotland. 1834

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910  
American author and humorist

Now there is more to a bluejay than any other animal. He has got more different kinds of feeling. Whatever a bluejay feels he can put into language, and not mere commonplace language, but straight out and out book talk, and there is such a command of language. You never saw a bluejay get stuck for a word. He is a vocabularized geyser. Now you must call a jay a bird, and so he is in a measure, because he wears feathers and don't belong to any church, but otherwise he is just as human nature made him. A bluejay hasn't any more principle than an ex-congressman, and he will steal, deceive and betray four times out of five; and as for the sacredness of an obligation, you cannot scare him in the detail of principle. He talks the best grammar of all the animals. You may say a cat talks good grammar. Well, a cat does; but you let a cat get excited, you let a cat get at pulling fur with another cat on a shed nights and you will hear grammar. A bluejay is human; he has got all a man's faculties and a man's weakness. He likes especially scandal; he knows when he is an ass as well as you do.

*A Tramp Abroad*

Chapter II

Penguin Books. New York, New York, USA. 1997

**BLUEBIRD**

**Burroughs, John** 1837–1921  
American naturalist and essayist

Nature made the bluebird she wished to propitiate both the sky and the earth, so she gave him the color of the one on his back and the hue of the other on his breast, and ordained that his appearance in spring should denote that the strife and war between these two elements was at an end.

*The Writings of John Burroughs*

Chapter VII (p. 205)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1904

**Longfellow, Henry Wadsworth** 1807–82  
American poet

In the thickets and the meadows

Piped the bluebird, the Owaisa...

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 2)

*Hiawatha*, Part XXI

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

A man's interest in a single bluebird is worth more than a complete but dry list of the fauna and flora of a town.

*The Writings of Henry David Thoreau* (Volume 6)

Letter to Daniel Ricketson, November 22, 1856 (p. 341)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

**BOBOLINK**

**Cranch, Christopher Pearse** 1813–92

American Unitarian minister, poet, and author

One day in the bluest of summer weather,

Sketching under a whispering oak,

I heard five bobolinks laughing together,

Over some ornithological joke.

*Collected Poems of Christopher Pearse Cranch*

Bird Language, Stanza I

Scholars' Facsimiles & Reprints, Gainesville, Florida, USA. 1971

**BUZZARD**

**Faulkner, William** 1897–1962

American novelist, film screenwriter, and poet

[If I were reincarnated] I'd want to come back a buzzard. Nothing hates him or envies him or wants him or needs him. He is never bothered or in danger, and he can eat anything

In Joseph Blotner

*Faulkner: A Biography*

October 1955–February 1957 (p. 619)

First Vintage Books. New York, New York, USA. 1991

**CANARY**

**Mulock, Dinah Maria (Mrs. Craik)** 1826–87

English author

Sing away, ay, sing away,

Merry little bird,

Always gayest of the gay,

Though a woodland roundelay

You ne'er sung nor heard;

Though your life from youth to age  
Passes in a narrow cage.

*Miss Mulock's Poems*

The Canary in His Cage

Houghton, Osgood. Boston, Massachusetts, USA. 1880

**Nash, Ogden** 1902–71

American writer of humorous poetry

The song of canaries

Never varies,

And when they're molting

They're pretty revolting.

*Verses from 1929 On*

The Canary

Little, Brown & Company. Boston, Massachusetts, USA. 1959

## CANYON WREN

**Moore, Kathleen Dean**

American philosophy professor and writer

The song of the canyon wren is the sound of falling water. Its bright tones fall off the canyon rim from ledge to ledge a step at a time. Sliding down a pour-off bouncing off a sandstone shelf, then dropping to the next layer of stone and down again – a falling scale, eight tones, a liquid octave of birdsong in the hand, sun-cut canyon.

*Holdfast: At Home in the Natural World*

The Song of the Canyon Wren (p. 75)

The Globe Pequot Press

Guilford, Connecticut, USA. 1999

## CONDOR

**Brower, David** 1912–2000

American environmentalist

A condor is about 5 percent feathers, blood, and bone, and about 95 percent place. Place designs the condor, as it does the Arctic tern and the monarch butterfly.

*Let the Mountains Talk, Let the Rivers Run*

Chapter 18 (p. 146)

HarperCollins Publishers, Inc. New York, New York, USA. 1995

## CROW

**Baynes, Ernest Harold** 1868–1925

American naturalist and writer

Few birds are more intelligent than the Crow. That he has a language, by which he can readily communicate with his fellows, and which can be translated in English, is now well known to ornithologists.

In William H. Carr

*The Stir of Nature*

Chapter Eleven (p. 142)

Oxford University Press, Inc. New York, New York, USA. 1930

**Dewar, Douglas** 1875–1957

British civil servant

...the splendid crow – splendid in sagacity, resource, adaptiveness, boldness, cunning, and depravity – a veritable Machiavelli among birds.

*Annual Report of the Board of Regents of the Smithsonian Institution (1908)*

The Birds of India (p. 618)

Government Printing Office. Washington, D.C. 1909

**Gay, John** 1685–1732

English poet and dramatist

To shoot at crows is powder flung away.

*The Poetical Works of John Gay (Volume 1)*

Epistle to the Right Honourable Paul Methuen, Esq., l. 96

Lawrence & Bullen. London, England. 1893

**Longfellow, Henry Wadsworth** 1807–82

American poet

Even the blackest of them all, the crow,  
Renders good service as your man-at-arms,

Crushing the beetle in his coat of mail,

And crying havoc on the slug and snail.

*The Complete Writings of Henry Wadsworth Longfellow (Volume 4)*

The Poet's Tale

Birds of Killingworth, Stanza 19

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**Kipling, John Lockwood** 1837–1911

English art teacher, illustrator, and museum curator

In a land [India] where the pitris or spirits of the dead are believed to be flitting round continually, seeking rest, and inhabiting the bodies of animals and birds, it is easy to imagine the bold and familiar crow haunting houses,

*Beast and Man in India*

Chapter 2 (p. 29)

Macmillan & Co Ltd. London, England. 1904

**Seton, Ernest Thompson** 1860–1946

Scoto-Canadian (and naturalized US citizen) author

Crows know the value of organization, and are as well drilled as soldiers – very much better than some soldiers, in fact, for crows are always on duty, always at war, and always dependent on each other for life and safety.

*Wild Animals I Have Known*

The Story of A Crow (p. 29)

McClelland & Stewart. Toronto, Ontario, Canada. 1977

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

In the course of his evolutionary promotion, his sublime march toward ultimate perfection, he has been a gambler, a low comedian, a dissolute priest, a fussy woman, a blackguard, a scoffer, a liar, a thief, a spy, an informer, a trading politician, a swindler, a professional hypocrite, a patriot for cash, a reformer, a lecturer, a lawyer,

a conspirator, a rebel, a royalist, a democrat, a practicer and propagator of irreverence, a meddler, an intruder, a busybody, an infidel, and a wallower in sin for the mere love of it. The strange result, the incredible result, of this patient accumulation of all damnable traits is, that he does not know what care is, he does not know what sorrow is, he does not know what remorse is, his life is one long thundering ecstasy of happiness, and he will go to his death untroubled, knowing that he will soon turn up again as an author or something, and be even more intol-erably capable and comfortable than ever he was before.

*Following the Equator* (Volume 2)

Chapter II (p. 31)

Harper & Brothers Publishers. New York, New York, USA. 1899

## CUCKOO

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

...the cuckoo builds not for himself...

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume Two)

*Anthony and Cleopatra*

Act II, Scene vi, l. 28

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## DODO

**Cuppy, Will** 1884–1929

American humorist and critic

The Dodo never had a chance. He seems to have been invented for the sole purpose of becoming extinct and that was all he was good for.

*How to Become Extinct*

The Dodo (p. 102)

Dover Publications. New York, New York, USA. 1964

## DOVE

**Barrett-Browning, Elizabeth** 1806–61

English poet

And there my little doves did sit  
With feathers softly brown,  
And glittering eyes that showed their right  
To general Nature's deep delight.

*The Complete Poetical Works of Elizabeth Barrett Browning*

My Doves, Stanza 2

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

The dove and very blessed spirit of peace...

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume One)

*Second Part of King Henry the Fourth*

Act IV, Scene i, l. 46

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## DUCK

**Adams, Douglas** 1952–2001

English author, comic radio dramatist, and musician

...even the skeptical mind must be prepared to accept the unacceptable when there is no alternative. If it looks like a duck, and quacks like a duck, we have at least to consider the possibility that we have a small aquatic bird of the family *Anatidae* on our hands.

*Dirk Gently's Holistic Detective Agency*

Chapter 30 (p. 269)

Simon & Schuster. New York, New York, USA. 1988

**Nash, Ogden** 1902–71

American writer of humorous poetry

Behold the duck.

It does not cluck.

A cluck it lacks.

It quacks.

It is specially fond

Of a puddle or pond.

When it dines or sups,

It bottoms ups.

*Verses from 1929 On*

The Duck

Little, Brown & Company. Boston, Massachusetts, USA. 1959

## EAGLE

**Tennyson, Alfred (Lord)** 1809–92

English poet

He clasps the crag with crooked hands,

Close to the sun in lonely lands;

Ring'd with the azure world, he stands.

The wrinkled sea beneath him crawls;

He watches from his mountain walls,

And like a thunderbolt he falls.

*Alfred Tennyson's Poetical Works*

The Eagle

Oxford University Press, Inc. London, England. 1953

## EMU

**Cuppy, Will** 1884–1929

American humorist and critic

His kick is less severe than that of the Ostrich, which easily breaks a man's leg. The Emu's kick seldom breaks more than the fibula, the smaller bone of the leg, leaving the tibia in first-class condition.

*How to Attract the Wombat*

The Emu (fn 4, p. 183)

Rinehart & Company, Inc. New York, New York, USA. 1949

**Prelutsky, Jack** 1940–

American poet

Do not approach an emu,

the bird does not esteem you.  
 It wields a quick and wicked kick  
 That's guaranteed to cream you.  
*A Pizza the Size of the Sun: Poems*  
 Do Not Approach an Emu  
 Greenwillow Books. New York, New York, USA. 1996

## FALCON

**Lowell, James Russell** 1819–91  
 American poet

I know a falcon swift and peerless  
 As e'er was cradled in the pine:  
 No bird had ever eye so fearless,  
 Or wing so strong as this of mine.  
*The Poetical Works of James Russell Lowell*  
 The Falcon  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Shakespeare, William** 1564–1616  
 English poet, playwright, and actor

My falcon now is sharp and passing empty;  
 And till she stoop, she must not be full-gorged,  
 for then she never looks upon her lure.  
 In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*The Taming of the Shrew*  
 Act IV, Scene i, l. 193–195  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## FLAMINGO

**Dinesen, Isak** 1885–1962  
 Danish writer

The Flamingos are the most delicately colored of all the  
 African birds, pink and red like a flying twig of an Ole-  
 ander bush.  
*Out of Africa and Shadows on the Grass*  
 Chapter 4 (p. 274)  
 Vintage International Edition. New York, New York, USA. 1989

**Thompson, Sir D'Arcy Wentworth** 1860–1948  
 Scottish zoologist and classical scholar

[A] flock of flamingos, wearing on rosy breast and crim-  
 son wings a garment of invisibility, fades away into the  
 sky at dawn or sunset like a cloud incarnadine.  
*On Growth and Form* (Volume 2)  
 Chapter XVI (pp. 959–960)  
 At the University Press. Cambridge, England. 1951

## GOLDFINCH

**Cowper, William** 1731–1800  
 English poet

Two goldfinches, whose sprightly song

Had been their mutual solace long,  
 Lived happy prisoners there.  
*The Poetical Works of William Cowper*  
 Faithful Bird  
 John W. Lovell Company. New York, New York, USA. No date

**Dryden, John** 1631–1700  
 English poet, dramatist, and literary critic

A goldfinch there I saw, with gawdy pride  
 Of painted plumes, that hopped from side to side,  
 Still pecking as she pass'd; and still she drew  
 The sweets from every flower, and suck'd the dew:  
 Sufficed at length, she warbled in her throat,  
 And turned her voice to many a merry note...  
*The Poetical Works of Dryden*  
 Tales from Chaucer: The Flower and the Leaf, l. 106–111  
 The Riverside Press. Cambridge, Massachusetts, USA. 1949

## GOOSE

**Nash, Ogden** 1902–71  
 American writer of humorous poetry

Be careful not to cross the gander,  
 A bird composed of beak and dander,  
 His heart is filled with prideful hate  
 Of all the world except his mate.  
 And if the neighbors do not err  
 He's overfond of beating her.  
 Is she happy? What's the use  
 Of trying to psychoanalyze a goose?  
*Verses from 1929 On*  
 The Gander  
 Little, Brown & Company. Boston, Massachusetts, USA. 1959

**Shakespeare, William** 1564–1616  
 English poet, playwright, and actor

As wild geese that the creeping fowler eye,  
 Or russet-pated choughs, many in sort,  
 Rising and cawing at the gun's report,  
 Sever themselves, and madly sweep the sky.  
 In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*A Midsummer-Night's Dream*  
 Act III, Scene ii, l. 20–23  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Young, Roland** 1887–1953  
 English actor

The plural of goose is geese,  
 But the plural of moose ain't meese,  
 And the plural of noose ain't neese,  
 But the plural of goose – is geese.  
*Not for Children*  
 The Goose  
 Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

**GRACKLE****Nash, Ogden** 1902–71

American writer of humorous poetry

The grackle's voice is less than mellow,  
 His heart is black, his eye is yellow,  
 He bullies more attractive birds  
 With hoodlum deeds and vulgar words,  
 And should a human interfere,  
 Attacks that human in the rear.  
 I cannot help but deem the grackle  
 An ornithological debacle.

*Verses from 1929 On*

The Grackle

Little, Brown &amp; Company. Boston, Massachusetts, USA. 1959

**HAWK****Shakespeare, William** 1564–1616

English poet, playwright, and actor

When I bestride him, I soar, I am a hawk...

*In Great Books of the Western World* (Volume 26)*The Plays and Sonnets of William Shakespeare* (Volume 1)*The Life of King Henry the Fifth*

Act III, Scene vii, l. 14

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Tennyson, Alfred (Lord)** 1809–92

English poet

The wild hawk stood with the down on his beak,  
 And stared with his foot on the prey.

*Alfred Tennyson's Poetical Works*

The Poet's Song, l. 11–12

Oxford University Press, Inc. London, England. 1953

**HERON****Paulsen, Gary** 1939–

American writer

Sometimes the heron isn't there even when he's there.

All tall lines and long lines, he stands in the reeds and  
 grass along the side of the bay and does not curve until  
 he looks down for a frog or minnow, he freezes and holds  
 the stillness for such a long time that even when you're  
 looking at him, looking right at him and you know he  
 is there all gray-metal-shine and beautiful he disappears  
 and isn't there even when he

*The Island*

Heron (p. 51)

Orchard Books. New York, New York, USA. 1988

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Two blue herons with their long and slender limbs  
 relieved against the sky were seen travelling high over

our heads – The lofty and silent flight of these birds  
 wending their way at evening surely not to alight in any  
 marsh on the earth's surface, but perchance on the other  
 side of our atmosphere, was a symbol for the ages to  
 study – whether impressed upon the sky –  
 or sculptured amid the hieroglyphics of Egypt.

In Robert Sattelmeyer (ed.)

*Journal 1842–1848* (Volume 2)

(p. 46)

Princeton University Press. Princeton, New Jersey, USA. 1984

**HORNBILL****Dewar, Douglas** 1875–1957

British civil servant and ornithologist

Hornbills are the clowns of the forest.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1908*

The Birds of India (p. 619)

Government Printing Office. Washington, D.C. 1909

**HUMMING BIRD****Audubon, John James** 1785–1851

West Indian-born American ornithologist and artist

Where is the person who, on seeing this lovely little  
 creature moving on humming winglets through the air,  
 suspended as if by magic in it, flitting from one flower  
 to another, with motions as graceful as they are light and  
 airy, pursuing its course over our extensive continent,  
 and yielding new delights wherever it is seen – where  
 is the person, I ask of you, kind reader, who on observ-  
 ing this glittering fragment of the rainbow, would not  
 pause, admire, and instantly turn his mind with reverence  
 toward the Almighty Creator...

*Ornithological Biography* (Volume 1)

The Ruby-Throated Humming Bird (p. 248)

Adam Black. Edinburgh, Scotland. 1831

**Guiterman, Arthur** 1871–1943

American writer

A morsel of rainbow forgot by a shower ...

*The Laughing Muse*

The Humming-bird

Harper &amp; Brothers Publishers. New York, New York, USA. 1915

**Hudson, William Henry**

Argentinean/English ornithologist, naturalist, and author

Have you ever observed a humming-bird moving about  
 in an aerial dance among the flowers – a living pris-  
 matic gem that changes its colour with every change of  
 position...

*Green Mansions: a Romance of the Tropical Forest* (p. 108)

Alfred A. Knopf. New York, New York, USA. 1916

**Pallister, William Hales** 1877–1946  
Canadian physician

A flashing, dashing, rainbow-streak,  
The whirl or wondrous wings;  
We hold our breath, we must not speak,  
Such shy, such splendid things!

*Poems of Science*

De Ipsa Natura, Humming-Birds (p. 222)  
Playford Press. New York, New York, USA. 1931

**Riley, James Whitcomb** 1849–1916  
American poet

And the humming-bird that hung  
Like a jewel up among  
The tilted honeysuckle-horns,  
They mesmerized and swung  
In the palpitating air,  
Drowsed with odors strange and rare,  
And, with whispered laughter, slipped away,  
And left him hanging there.

*The Complete Works of James Whitcomb Riley* (Volume 4)

The South Wind and the Sun, Stanza 8  
P.F. Collier & Son, Company. New York, New York, USA. 1916

**St. John de Crevecoeur, Hector**

No biographical data available

When it [the hummingbird] feeds, it appears as if immovable though continually on the wing; and sometimes, from what motives I know not, it will tear and lacerate flowers into a hundred pieces: for, strange to tell, they are the most irascible of the feathered tribe. Where do passions find room in so diminutive a body? They often fight with the fury of lions, until one of the combatants falls a sacrifice and dies.

*Letters from an American Farmer*

Letter X (p. 179)  
Thomas Davies. London, England. 1963

**Tabb, John Banister** 1845–1909  
American poet

A flash of harmless lightning,  
A mist of rainbow dyes,  
The burnished sunbeams brightening,  
From flower to flower he flies...

*The Poetry of Father Tabb*

Birds, The Humming-Bird  
Dodd, Mead. New York, New York, USA. 1928

**JAY**

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

What is the jay more precious than the lark,  
Because his feathers are more beautiful.

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Taming of the Shrew*

Act IV, Scene iii, l. 177–178

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**LARK**

**Barrett-Browning, Elizabeth** 1806–61  
English poet

The music soars within the little lark,  
And the lark soars.

*The Complete Poetical Works of Elizabeth Barrett Browning*

Aurora Leigh, Book III, l. 155–156

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Cather, Willa** 1873–1947  
American novelist

...there are only two or three human stories, and they go on repeating themselves as fiercely as if they had never happened before; like the larks in this country, that have been singing the same five notes over for thousands of years.

*O Pioneers!*

Part II, Chapter IV (p. 119)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

**Muir, John** 1838–1914  
American naturalist

The larks come in large flocks from the hills and mountains in the fall, and are slaughtered as ruthlessly as the robins. Fortunately, most of our song birds keep back in leafy hidings, and are comparatively inaccessible.

*Our National Parks*

Chapter VII (p. 238)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

A balmy day. Sunshine and lark song in glorious measure. A petition is being circulated in favor of preservation of larks from the ruthless slaughter of gunners. Larks are as characteristic of California weather as sunbeams. As well shoot the sun out of the sky.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter VIII, Section 1, February 1 (p. 336)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

**Rossetti, Christina Georgina** 1830–94  
English poet

The sunrise wakes the lark to sing.

*The Complete Poems of Christina Rossetti* (Volume 1)

Poems Added in 1875, Bird Raptures (p. 210)

Louisiana State University Press. Baton Rouge, Louisiana, USA. 1979

## LINNET

**Wordsworth, William** 1770–1850  
English poet

Hail to thee, far above the rest  
In joy of voice and pinion!  
Thou, linnet! in thy green array,  
Presiding spirit here to-day,  
Dost lead the revels of the May;  
And this is thy dominion.

*The Complete Poetical Works of William Wordsworth*  
The Green Linnet, Stanza II,  
Crowell. New York, New York, USA. 1888

## LOON

**Burroughs, John** 1837–1921  
American naturalist and essayist

Some birds represent the majesty of Nature, like the eagles ; others its ferocity, like the hawks ; others its cunning, like the crow; others its sweetness and melody, like the song-birds. The loon represents its wildness and solitariness.

*Birds and Poets With Other Papers*  
Touches of Nature (p. 83)  
David Douglas Edinburgh, Scotland. 1884

**Lawrence, Jerome** 1915–2004  
American writer and lyricist

**Lee, Robert Edwin** 1918–94  
American writer and lyricist

Henry: Anytime you hear a man called “loony,” just remember that’s a great compliment to the man and a great disrespect to the loon. A loon doesn’t wage war, his government is perfect, being nonexistent. He is the world’s best fisherman and completely in control of his senses, thank you.

*The Night Thoreau Spent in Jail*  
Act One (p. 18–19)  
Samuel French, Inc. London, England. 2000

## LOUISIANA WATER THRUSH

**Audubon, John James** 1785–1851  
West Indian-born American ornithologist and artist

Much and justly as the song of the Nightingale is admired, I am inclined, after having often listened to it, to pronounce it in no degree superior to that of the Louisiana Water Thrush. The notes of the latter bird are as powerful and mellow, and at times as varied.

*Ornithological Biography* (Volume 1)  
The Louisiana Water Thrush (p. 99)  
Adam Black. Edinburgh, Scotland. 1831

## MAGPIE

**Browning, Robert** 1812–89  
English poet

...and the pie with the long tongue  
That pricks deep into oak warts for a worm,  
And says a plain word when she finds her prize,  
But will not eat the ants...

In Horace E. Scudder (ed.)  
*The Complete Poetical Works of Browning*  
*Dramatis Personae*  
Caliban Upon Setebos (p. 392)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1895

**Hinkson, Katharine Tynan** 1861–1931  
Irish-born writer and poet

I love the sweet linnet, the lark, and the thrush,  
And the gold-throated blackbird with a song in each bush ;  
The finch and the robin, I love everyone,  
But not the pied magpie that’s walking alone.

*Cuckoo Songs*  
Magpie  
Copeland & Day. Boston, Massachusetts, USA. 1894

## MALLARD

**Audubon, John James** 1785–1851  
American ornithologist, naturalist, hunter, and painter

Look at that Mallard as he floats on the lake; see his elevated head glittering with emerald-green, his amber eyes glancing in the light! Even at this distance, he has marked you, and suspects that you bear no good will towards him, for he sees that you have a gun, and he has many a time been frightened by its report, or that of some other. The wary bird draws his feet under his body, springs upon them, opens his wings, and with loud quacks bids you farewell.

*The Birds of America* Volume 6  
Mallard (p. 237)  
J.J. Audubon  
New York, New York, USA. 1843

## MARTLET

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

...the martlet  
Builds in the weather on the outward wall,  
Even in the force and road of causality.  
In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)

*The Merchant of Venice*  
Act II, Scene ix, l. 28–30  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**MOCKING BIRD**

**Longfellow, Henry Wadsworth** 1807–82  
American poet

Then from the neighboring thicket the mocking-bird,  
wildest of singers,  
Swinging aloft on a willow spray that hung o'er the water,  
Shook from his little throat such floods of delirious  
music,  
That the whole air and the woods and the waves seemed  
silent to listen.

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 2)  
Evangeline  
Part II, Stanza II (pp. 75–76)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**MOUNTAIN QUAIL**

**Muir, John** 1838–1914  
American naturalist

...like every true mountaineer, he is quick to follow the  
spring back into the highest mountains.

*Our National Parks*  
Chapter VII (p. 220)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**NIGHTINGALE**

**Burton, Robert** 1577–1640  
English scholar

...a nightingale, dies for shame, if another bird sing bet-  
ter, he languisheth and pineth away in the anguish of his  
spirit.

In Arthur Richard Shilleto (ed.)  
*The Anatomy of Melancholy* Volume 1  
Part I, Section II, Mem. III, Subs. VII (p. 305)  
George Bell & Sons. London, England. 1896

**Sappho** 630 BCE–570 BCE  
Greek lyric poet

The nightingale is the harbinger of Spring and her voice  
is desire.

*Poems and Fragments*  
Fragment 114  
University of Michigan Press. Ann Arbor, Michigan, USA. 1965

**OSTRICH**

**Nash, Ogden** 1902–71  
American writer of humorous poetry

The ostrich roams the great Sahara.  
Its mouth is wide, its neck is narra.  
It has such long and lofty legs,  
I'm glad it sits to lay its eggs.

*Verses from 1929 On*  
The Ostrich  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**OWL**

**Borland, Hal** 1900–78  
American writer

The owl, that bird of onomatopoeic name, is a repeti-  
tious question wrapped in feathery insulation especially  
for Winter delivery.

*Sundial of the Seasons: A Selection of Outdoor Editorials from the New  
York Times*  
Questions, December 27 (p. 271)  
Lippincott. Philadelphia, Pennsylvania, USA. 1964

**Sackville-West, Victoria** 1862–1936  
English poet

...I met a baby owl in a wood, when it fell over dead,  
apparently from sheer temper, because I dared to  
approach it. It defied me first, then died. I have never for-  
gotten the horror and shame I experienced when that soft  
fluffy thing (towards which I had nothing but the most  
humanitarian motives) fell dead from rage at my feet.

*Country Notes*  
Owls (p. 124)  
Harper & Brothers Publishers. New York, New York, USA. 1940

**Shakespeare, William 1564–1616**

English poet, playwright, and actor

The clamorous owl that nightly hoots and wonders  
At our quaint spirits.

In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*A Midsummer-Night's Dream*  
Act II, Scene ii, l. 6–7  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**PARROT****Mr. Praline (Fictional character)**

'E's not pinin'! 'E's passed on! This parrot is no more!  
He has ceased to be! 'E's expired and gone to meet 'is  
maker! 'E's a stiff! Bereft of life, 'E rests in peace! If you  
hadn't nailed 'im to the perch 'e'd be pushing up the dai-  
sies! 'Is metabolic processes are now 'istory! 'E's off the  
twig! 'E's kicked the bucket, 'e's shuffled off 'is mortal  
coil, run down the curtain and joined the bleedin' choir  
invisible!! THIS IS AN EX-PARROT!!

*Monty Python's Flying Circus*  
Dead Parrot Sketch Series I, Show

**Prelutsky, Jack** 1940–  
American poet

The parrots, garbed in gaudy dress,  
with almost nothing to express,

delight in spouting empty words...  
they are extremely verbal birds.

*A Pizza the Size of the Sun: Poems*

The Parrots

Greenwillow Books. New York, New York, USA. 1996

## PARTRIDGE

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

When a brood ov yung patridges fust begin tew toddle  
about with the old bird, they look like a lot ov last year's  
chestnut burs on legs.

*Josh Billings' Wit and Humor*

The Partridge (p. 107)

George Routledge & Sons. London, England. 1874

**Spenser, Edmund** 1552–99

English poet

Like as a fearful partridge, that is fled  
From the sharpe hauke which her attacked neare,  
And falls to ground to seeke for succor theare,  
Whereas the hungry spaniells she does spye,  
With greedy jaws her ready for to teare.

*The Complete Poetical Works of Edmund Spenser*

The Faerie Queene

Book III, Canto VIII, Stanza 33

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

## PASSENGER PIGEON

**Abbott, Roy L.** 1886–1968

American professor of biology

We human beings are seemingly so indifferent to the death of one of our own kind that for us to give thought to the death of a bird appears strange indeed. Yet thousands of people took serious and melancholy notice of the death of a certain bird back in 1914 .... Its death marked the close of what was perhaps Nature's greatest dynasty of birds. Its history is one of thoughtless destruction and ruthless persecution without parallel.

The Passing of the Passenger Pigeon

*Natural History*, Volume 53, Number 2, February, 1944 (p. 86)

### Report of the Senate Select Committee

The passenger pigeon needs no protection. Wonderfully prolific, having the vast forests of the North as its breeding grounds, traveling hundreds of miles in search of food, it is here to-day and elsewhere to-morrow, and no ordinary destruction can lessen them, or be missed from the myriads that are yearly produced.

*Fifteenth Annual Report of the Ohio State Board of Agriculture* (p. 387)

Richard Nevins, State Printer. Columbus, Ohio, USA. 1861

## Wisconsin Society of Ornithology

We have erected a monument to commemorate the funeral of a species. It symbolizes our sorrow. We grieve because no living man will see again the onrushing phalanx of victorious birds, sweeping a path for spring across the March skies, chasing defeated winter from all the woods and prairies of Wisconsin.

In Aldo Leopold

*A Sand County Almanac, with Essays on Conservation from Round River*

Part II, Wisconsin (p. 116)

Sierra Club. San Francisco, California, USA. 1970

## PEACOCK

**Leland, Charles G.** 1824–1903

American author

To Paradise, the Arabs say,  
Satan could never find the way  
Until the peacock led him in.

*The Music-Lesson of Confucius*

The Peacock, Stanza 2

J.R. Osgood & Company. Boston, Massachusetts, USA. 1872

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Remember that the most beautiful things in the world are the most useless; peacocks and lilies for instance ...

*The Stones of Venice* (Volume 1)

Chapter II (p. 44)

Smith, Elder & Co. London, England. 1873

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

Why, he stalks up and down like a peacock – a stride and a stand...

In *Great Books of the Western World* (Volume 27)

## PELICAN

**Merritt, Dixon Lanier** 1879–1954

American poet and humorist

A wonderful bird is the pelican!

His bill will hold more than his belican.

He can take in his beak

Food enough for a week

But I'm darned if I see how the helican.

*The Pelican*

Apocryphal – No source found

**Montgomery, James** 1771–1854  
Scottish poet and journalist

Bird of the wilderness, what is thy name? –  
The pelican! – go, take the trump of fame,  
And if thou give the honour due to me,  
The world may talk a little more of thee.

*Poetical Works of James Montgomery* (Volume 2)

Birds

Printed for Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

## PENGUIN

**Ackerman, Diane** 1948–  
American writer

The short, potbellied, penguins, whose necks wobbled  
with baby fat, huddled together like Russian business-  
men in fur coats.

*The Moon by Whale Light* (p. 182)

First Vintage Books. New York, New York, USA. 1992

**Cherry-Garrard, Apsley** 1886–1959  
English explorer of Antarctica

They are extraordinarily like children, these little people  
of the Antarctic world, either like children, or like old  
men, full of their own importance and late for dinner, in  
their black tail-coats and white shirt-fronts – and rather  
portly withal.

*The Worst Journey in the World*

Chapter 3 (p. 64)

Carroll & Graf. New York, New York, USA. 1997

**Herford, Oliver** 1863–1935  
American writer and illustrator

The Pen-guin sits up-on the shore  
And loves the lit-tle fish to bore;  
He has one en-er-vat-ing joke  
That would a very Saint provoke:  
“The Pen-guin’s might-i-er than the Sword-fish”  
He tell this dai-ly to the bored fish,  
Un-til they are so weak, they float  
With-out re-sis-tance down his throat.

*A Child’s Primer of Natural History*

A Penguin

Charles Scribner’s Sons. New York, New York, USA. 1899

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

the patagonian  
penguin  
is a most  
peculiar  
bird  
he lives on  
pussy  
willows

and his tongue  
is always furred

*the lives and time of archy & mehitabel*

Doubleday Doran & Co. Garden City, New York, USA. 1934

## Racovitz, M.

No biographical data available

Imagine a little old man, standing erect, provided with  
two broad paddles instead of arms, with a head small  
in comparison with the plump, stout body; imagine this  
creature with his back covered with a dark coat spotted  
with blue, tapering behind to a pointed tail that drags  
on the ground, and adorned in front with a glossy white  
breastplate. Have this creature walk on his two feet, and  
give him at the same time a droll little waddle and a con-  
tinual movement of the head; you have before you some-  
thing irresistibly attractive and comical.

In L. Gain

*Annual Report of the Board of Regents of the Smithsonian Institution*  
(1912) (p. 476)

Government Printing Office. Washington, D.C. 1913

**Young, Roland** 1887–1953  
English actor

The little penguins look alike  
Even as Ike resembles Mike.  
They are so gentle and so nice  
God keeps these little birds on ice.

*Not for Children*

The Penguin

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

## PHEASANT

**Pope, Alexander** 1688–1744  
English poet

See! from the brake the whirring pheasant springs,  
And mounts exalting on triumphant wings:  
Short is his joy; he feels the fiery wound,  
Flutters in blood, and panting beats the ground.

*The Complete Poetical Works*

Windsor Forest, l. 111–114

Houghton Mifflin Company. New York, New York, USA. 1903

## PIGEON

**Willis, Nathaniel Parker** 1806–67  
American author

On the cross-beam under the Old South bell  
The nest of a pigeon is builded well.  
In summer and winter that bird is there,  
Out and in with the morning air.

*Poems of Nathaniel Parker Willis*

The Belfry Pigeon

Hurst & Company. New York, New York, USA. 1882

**PURPLE FINCH**

**Peterson, Roger Tory** 1908–96  
American naturalist

*Field Guide to the Birds*

(Eastern) Purple Finch (p. 224)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1947

**QUAIL**

**Longfellow, Henry Wadsworth** 1807–82  
American poet

The song-birds leave us at the summer's close,  
Only the empty nests are left behind,  
And pipings of the quail among the sheaves.

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 3)

The Harvest Moon

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**RAVEN**

**Poe, Edgar Allan** 1809–49  
American short story writer and poet

And the raven, never flitting, still is sitting, still is sitting  
On the pallid bust of Pallas just above my chamber door;

And his eyes have all the seeming of a demon's that is dreaming,

And the lamplight o'er him streaming throws his shadow  
on the floor;

And my soul from out that shadow that lies floating on  
the floor

Shall be lifted – nevermore!

*The Raven and Other Poems*

The Raven, Stanza 18

Columbia University Press. New York, New York, USA. 1942

**REDSTART**

**Jefferies, Richard**  
No biographical data available

A brightly coloured bird, the redstart, appears suddenly  
in spring, like a flower that has bloomed before the bud  
was noticed.

*Birds of Spring*

*Chamber's Journal of Popular Literature, Science and Arts*, Volume 1,  
Number 9, March 1, 1884 (p. 131)

**ROBIN**

**Blake, William** 1757–1827  
English poet, painter, and engraver

A Robin Red breast in a Cage  
Puts all Heaven in a Rage.

*The Complete Poetry and Prose of William Blake*

Auguries of Innocence, l. 5–6

University of California Press. Berkeley, California, USA. 1982

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

If you think of it, you will find one of the robin's very chief ingratiatory faculties is his dainty and delicate movement – his footing it feately here and there. Whatever prettiness there may be in his red breast, at his brightest he can always be outshone by a brickbat. But if he is rationally proud of anything about him, I should think a robin must be proud of his legs. Hundreds of birds have longer and more imposing ones – but for real neatness, finish, and precision of action, commend me to his fine little ankles, and fine little feet ...

*Love's Meinie*

Lecture I, 24 (p. 24)

John Wiley & Son. New York, New York, USA. 1873

**ROOK**

**Tennyson, Alfred (Lord)** 1809–92  
English poet

The building rook'll caw from the windy tall elm-tree...

*Alfred Tennyson's Poetical Works*

The May Queen, New Year's Eve, Stanza 5

Oxford University Press, Inc. London, England. 1953

**RUKH****The Arabian Nights**

And... behold the sun became concealed from us, and the day grew dark, and there came over us a cloud by which the sky was obscured. So we raised our heads to see what had intervened between us and the sun, and saw that the wings of the rukh were what veiled from us the sun's light, so that the sky was darkened.

Translated by Edward William Lane

*The Arabian Nights*

The Story of Sinbad the Sailor and Sinbad the Porter

The Fifth Voyage (p. 484)

Oxford University Press. Oxford, England. 1915

**SANDPIPER**

**Thaxter, Celia** 1835–94  
American poet

Across the narrow beach we flit,  
One little sandpiper and I;  
And fast I gather, bit by bit,  
The scattered driftwood, bleached and dry.  
The wild waves reach their hands for it,  
The wild wind raves, the tide runs high,

As up and down the beach we flit,  
One little sandpiper and I.

*The Poems of Celia Thaxter*

The Sandpiper

Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

## SEAGULL

**Bach, Richard** 1936–

American writer

They...found Jonathan gliding peacefully and alone  
through his beloved sky. The two gulls which appeared  
at his wings were pure as starlight...most lovely of all  
was the skill with which they flew, their wingtips moving  
a precise and constant inch from his own.

*Jonathan Livingston Seagull*

Part I (p. 46)

The Macmillan Co. New York, New York, USA. 1970

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

And being fed by us you used us so  
As that ungentle gull, the cuckoo's bird,  
Useth the sparrow.

Act V, Scene i, l. 59–61

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## SEA-MEW

**Barrett-Browning, Elizabeth** 1806–61

English poet

How joyously the young sea-mew  
Lay dreaming on the waters blue,  
Whereon our little bark had thrown  
A little shade, the only one,  
But shadows ever man pursue.

*The Complete Poetical Works of Elizabeth Barrett Browning*

The Sea-Mew, Stanza I

Houghton Mifflin Company. Boston, Massachusetts, USA. 1900

**Garstang, Walter** 1868–1949

English embryologist and amateur poet

Bold Sea-mew – you whose soaring flight  
Inspires my envious Muse –  
Pray, with this compliment polite  
My liberty excuse.

*Larval Forms, and Other Zoological Verses*

To a Herring Gull, Stanza 1 (p. 72)

The University of Chicago Press. Chicago, Illinois, USA. 1985

## SEDGE-BIRD

**Clare, John** 1793–1864

English poet

Fixed in a white-thorn bush, its summer guest,  
So low, e'en grass o'er-topped its tallest twig,  
A sedge-bird built its little benty nest,  
Close by the meadow pool and wooden brig.

*The Rural Muse*

Poems, The Sedge-Bird's Nest

Whittaker & Company. London, England. 1835

## SNIPE

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

The snipe haz a long bill (about the length of a doktor's)  
and git a living bi thrusting it down into the fat earth, and  
then pumping the juices out with their tounge.

*Josh Billings' Wit and Humor*

The Snipe (p. 107)

George Routledge & Sons. London, England. 1874

## SPARROW

**Longfellow, Henry Wadsworth** 1807–82

American poet

The sparrows chirped as if they still were proud  
Their race in Holy Writ should mentioned be.

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 4)

The Poet's Tale

The Birds of Killingworth, Stanza 12

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

The hedge-sparrow fed the cuckoo so long,  
That it had its head bit off by its young.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*King Lear*

Act I, Scene iv, l. 235–236

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

I once had a sparrow alight upon my shoulder for a  
moment, while I was hoeing in a village garden, and I felt  
that I was more distinguished by that circumstance than I  
should have been by any epaulet I could have worn

*Walden*

Winter Animals (p. 426)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1847

## SWALLOW

**Barrie, Sir James M.** 1860–1937

Scottish journalist, writer, and dramatist

“Do you know,” Peter asked “why swallows build in the  
eaves of houses? It is to listen to the stories.”

*Peter Pan*

Chapter 3 (pp. 40, 42)

Charles Scribner's Sons. New York, New York, USA. 1954

**Jefferies, Richard** 1848–87

English naturalist and author

The beautiful swallows, be tender to them, for they symbol  
all that is best in nature and all that is best in our hearts.

In J. Baden Jefferies (ed.)

*Field and Hedgerow*

Swallow-Time (p. 101 )

Longmans, Green &amp; Co. London, England. 1897

**Tennyson, Alfred (Lord)** 1809–92

English poet

...nature's licensed vagabond, the swallow...

*Alfred Tennyson's Poetical Works*

Queen Mary

Act V, Scene I

Oxford University Press, Inc. London, England. 1953

**Thomson, James** 1700–48

Scottish poet

The swallow is come!

The swallow is come!

O, fair are the seasons, and light

Are the days that she brings,

With her dusky wings,

And her bosom snowy white.

*The Seasons*

Spring, l. 651

Printed by W.W. Woodward. Philadelphia, Pennsylvania, USA. 1797

**SWAN****Beston, Henry** 1888–1968

American writer

...I chanced to look up a moment at the southern sky,  
and there for the first and still the only time in my life,  
I saw a flight of swans. The birds were passing along the  
coast well out to sea; they were flying almost cloud high  
and traveling very fast, and their course was as direct  
as an arrow's from a bow. Glorious white birds in the  
blue October Heights over the solemn unrest of ocean –  
their passing was more than music, and from their wings  
descended the old loveliness of earth which both affirms  
and heals.

*The Outermost House*

Chapter II (p. 37)

Rinehart &amp; Company. New York, New York, USA. 1928

**Thomson, James** 1700–48

Scottish poet

The stately-sailing swan

Gives out his snowy plumage to the gale;

And, arching proud his neck, with oary feet

Bears forward fierce, and guards his osier isle,

Protective of his young.

*The Seasons*

Spring, l. 775

Printed by W.W. Woodward. Philadelphia, Pennsylvania, USA. 1797

**THROSTLE****Wordsworth, William** 1770–1850

English poet

And hark! how blithe the throstle sings!

He, too, is not mean preacher:

Come forth into the light of things,

Let Nature be your teacher.

*The Complete Poetical Works of William Wordsworth*

The Tables Turned, Stanza IV

Crowell. New York, New York, USA. 1888

**THRUSH****Hardy, Thomas** 1840–1928

English poet and regional novelist

At once a voice arose among

The bleak twigs overhead

In a full-hearted evensong

Of joy illimited;

An aged thrush, frail, gaunt, and small,

In blast-beruffled plume,

Had chosen thus to fling his soul

Upon the growing gloom.

*Collected Poems of Thomas Hardy*

The Darkling Thrush, Verse 3 (p. 137)

The Macmillan Company. New York, New York, USA. 1964

**Tennyson, Alfred (Lord)** 1809–92

English poet

When rosy plumelets tuft the larch,

And rarely pipes the mounted thrush...

*Alfred Tennyson's Poetical Works*

In Memoriam, Verse XCI

Oxford University Press, Inc. London, England. 1953

**TIDULA****Moore, Thomas** 1779–1852

Irish poet

The puny bird that dares with teasing hum Within the  
crocodile's stretched jaws to come!

*Lalla Rookh: An Oriental Romance*

The Veiled Prophet of Khorassan (p. 53)

Oakley, Mason, &amp; Co. New York, New York, USA. 1871

**Spenser, Edmund** 1552–99

English poet

Beside the fruitful shore of muddy Nile, Upon a sunny  
bank outstretched lay In monstrous length a mighty  
crocodile, That, crammed with guiltless blood, greedy  
prey Of wretched people traveling that way, Thought all  
things less than his disdainful pride, Soon came a little  
bird called tidula, The least of thousands which on earth

abide, That forced this hideous beast to open wide The  
grisly gates of his devouring hell, And let him feed as  
nature doth provide Upon his jaws that with black venom  
swell. Why then should greatest things the least disdain,  
That so small so mighty can constrain?

*The Poetical Works of Edmund Spenser* Volume 5  
Vision of the World's Vanity  
William P. Nimmo. Edinburgh, Scotland. 1868

## TOUCAN

**Nash, Ogden** 1902–71

American writer of humorous poetry

The toucan's profile is prognathous,  
Its person is a thing of bathos.  
If even I can tell a toucan  
I'm reasonably sure that you can.

*Verses from 1929 On*  
The Toucan  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**Wood, Robert William** 1868–1955

American physicist

Very few can  
Tell the Toucan  
From the Pecan –  
Here's a new plan:  
To take the Toucan from the Tree,  
Requires im-mense a-gil-i-tee,  
While anyone can pick with ease  
The Pecans from the Pecan trees.  
It's such an easy thing to do,  
That even the Toucan he can too.

*How to Tell the Birds from the Flowers and Other Wood-Cuts*  
The Pecan. The Toucan (p. 11)  
Dover Publications, Inc. New York, New York, USA. 1959

## TURKEY

**Audubon, John James** 1785–1851

West Indian-born American ornithologist and artist

The great size and beauty of the Wild Turkey, its value as  
a delicate and highly prized article of food, and the cir-  
cumstance of its being the origin of the domestic race now  
generally dispersed over both continents, render it one of  
the most interesting of the birds indigenous to the USA.

*Ornithological Biography* (Volume 1)  
The Wild Turkey (p. 1)  
Adam Black. Edinburgh, Scotland. 1813

**Breathed, Guy Berkeley** 1957–

American cartoonist

Dear Lord, I've been asked, nay commanded, to thank Thee  
for the Christmas turkey before us... a turkey which was no  
doubt a lively, intelligent bird... a social being... capable of

actual affection... nuzzling its young with almost human-  
like compassion. Anyway, it's dead and we're gonna eat it.  
Please give our respects to its family....

*Bloom County Babylon* (p. 47)  
Little, Brown & Co. Boston, Massachusetts, USA. 1986

**Dickens, Charles** 1812–70

English novelist

It was a Turkey! He could never have stood upon his  
legs, that bird. He would have snapped 'em short off in a  
minute, like sticks of sealing-wax.

*The Works of Charles Dickens*  
*A Christmas Carol*  
A Christmas Carol (p. 73)  
P.F. Collier & Son. New York, New York, USA. 1911

**Nash, Ogden** 1902–71

American writer of humorous poetry

There is nothing more perky  
Than a masculine turkey.  
When he struts he struts  
With no ifs or buts.  
When his face is apoplectic  
His harem grows hectic,  
And when he gobbles  
Their universe wobbles.

*Verses from 1929 On*  
The Turkey  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

## VULTURE

**Belloc, Hilaire** 1870–1953

French-born poet and historian

The Vulture eats between his meals,  
And that's the reason why  
He very, very rarely feels  
As well as you and I.

*Complete Verse*  
The Vulture (p. 244)  
Gerald Duckworth. London, England. 1970

**Dewar, Douglas** 1875–1957

British civil servant

At the other extreme [of beauty] stands the superlative  
of the avian hideousness, the ugliest bird in the world –  
*Neophron ginginianus*, the scavenger vulture. The bill,  
the naked face, and the legs of this creature are a sickly  
yellow. Its plumage is dirty white, with the exception of  
the ends of the wing feathers, which are a shabby black.  
Its shape is displeasing to the eye; its gait is an ungainly  
waddle. Nevertheless, such is the magic of wings, even  
this fowl looks almost beautiful as it sails, on outstretched  
pinions, high in the heavens.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1908)  
The Birds of India (p. 618)  
Government Printing Office. Washington, D.C. 1909

**Montgomery, James** 1771–1854  
Scottish poet and journalist

Abdominal harpies, spare the dead.  
– We only clear the field which man has spread;  
On which should Heaven its hottest vengeance rain?  
You slay the living, we but strip the dead.

*Poetical Works of James Montgomery* (Volume 2)

Birds

Printed for Longman, Rees, Orme, Brown, Green & Longman. London, England. 1836

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910  
American author and humorist

A vulture on board; bald, red, queer-shaped head, featherless red places here and there on his body, intense great black eyes set in featherless rims of inflamed flesh; dissipated look; a business-like style, a selfish, conscienceless, murderous aspect – the very look of a professional assassin, and yet a bird which does no murder. What was the use of getting him up in that tragic style for so innocent a trade as his? For this one isn't the sort that wars upon the living, his diet is offal – and the more out of date it is the better he likes it. Nature should give him a suit of rusty black; then he would be all right, for he would look like an undertaker and would harmonize with his business; whereas the way he is now he is horribly out of true.

*Following the Equator* (Volume 2)

Chapter I (p. 15)

Harper & Brothers Publishers. New York, New York, USA. 1899

## WARBLER

**Halle, Louis J.** 1910–98  
American diplomat and writer

When I see men able to pass by such a shining and miraculous thing as this Cape May warbler, the very distillate of life, and then marvel at the internal-combustion engine, I think we had better make ourselves ready for another Flood.

*Spring in Washington*

Chapter II (p. 74)

William Sloane Associates, Inc.. New York, New York, USA. 1947

## WHITE-THROAT

**Clare, John** 1793–1864  
English poet

The happy white-throat on the swinging bough,  
Rocked by the impulse of the gadding wind  
That ushers in the showers of April, now  
Carols right joyously; and now reclined

Crouching, she clings close to her moving seat,  
To keep her hold.

*The Rural Muse*

Poems, The Happy Bird

Whittaker & Company. London, England. 1835

## WHOOPING CRANE

**Allen, Robert Porter** 1905–63  
American author and conservationist

When you sit crouched in a blind and watch an adult (whooping crane) stride close by you, his head high and proud, his bearing arrogant and imposing, you feel the presence of a strength and of a stubborn will to survive...

*The Whooping Crane*

Preface (p. iv)

National Audubon Society. New York, New York, USA. 1952

For the whooping crane there is no freedom but that of unbounded wilderness, no life except its own. Without meekness, without a sign of humility, it has refused to accept our idea of what the world should be like.

*The Whooping Crane*

Part I, Distribution (p. 14)

National Audubon Society. New York, New York, USA. 1952

## WOODPECKER

**Audubon, John James** 1785–1851  
West Indian-born American ornithologist and artist

I have always imagined, that in the plumage of the beautiful Ivory-Billed Woodpecker, there is something very closely allied to the style of colouring of the great Vandyke. The broad extent of its dark glossy body and tail, the large and well-defined white markings of its wings, neck, and bill, relieved by the rich carmine of the pendent crest of the male, and the brilliant yellow of its eye, have never failed to remind me of some of the boldest and noblest productions of that inimitable artist's pencil.

*Ornithological Biography* (Volume 1)

The Ivory-Billed Woodpecker (p. 341)

Adam Black. Edinburgh, Scotland. 1831

It would be difficult for me to say where I have not met with that hardy inhabitant of the forest, the Pileated Woodpecker. Even now, when several species of our birds are becoming rare, either to gratify the palate of the epicure or to adorn the cabinet of the naturalist; it is to be found everywhere in the wild woods, although scarce and shy in the peopled districts.

*Ornithological Biography* (Volume 2)

The Pileated Woodpecker (p. 74)

Adam Black. Edinburgh, Scotland. 1834

**Wyatt-Simple, Sue**

No biographical data available

Though he may be a chisler  
As someone has said  
I admire the woodpecker –  
He uses his head!

Boredom

*The Nature Magazine*, Volume 39, Number 2, February, 1946 (p. 92)

**WREN****Wordsworth, William** 1770–1850

English poet

Among the dwellings framed by birds  
In fields or forests with nice care,  
Is none that with the little wren's  
In snugness may compare.

*The Complete Poetical Works of William Wordsworth*

A Wren's Nest, Stanza I

Crowell. New York, New York, USA. 1888

**ANIMAL: CEPHALOPOD****GIANT SQUID****Bullen, Frank Thomas** 1857–1915

author and novelist

The imagination can hardly picture a more terrible object than one of these huge monsters brooding in the ocean depths, the gloom of his surroundings increased by the inky fluid (sepia) which he secretes in copious quantities, every cup-shaped disc, of the hundreds with which the restless tentacles are furnished, ready at the slightest touch to grip whatever is near, not only by suction, but by the great claws set all round within its circle. And in the centre of this net-work of living traps is the chasm-like mouth, with its enormous parrot-beak, ready to rend piecemeal whatever is held by the tentaculae. The very thought of it makes one's flesh crawl.

*The Cruise of the Cachalot*

Chapter XII (p. 101)

Penguin Books. Harmondsworth. Middlesex, England. 1945

**Melville, Herman** 1819–91

American novelist

...we now gazed at the most wondrous phenomenon which the secret seas have hitherto revealed to mankind. A vast pulpy mass, furlongs in length and breadth, of a glancing cream-colour, lay floating on the water, innumerable long arms radiating from its centre, and curling and twisting like a nest of anacondas, as if blindly to clutch at any hapless object within reach. No perceptible

face or front did it have; no conceivable token of either sensation or Instinct; but undulated there on the billows, an unearthly, formless, chance-like apparition of life.

*Moby Dick*

Chapter LIX (pp. 263–264)

L.C. Page & Co. Boston, Massachusetts, USA. 1892

**Verne, Jules** 1828–1903

French novelist

Before my eyes was a horrible monster, worthy to figure in the legends of the marvelous. It was an immense cuttle-fish, being eight yards long. It swam cross-ways in the direction of the *Nautilus* with great speed, watching us with its enormous staring green eyes. Its eight arms, or rather feet, fixed to its head, that had given the name of cephalod to these animals, were twice as long as its body, and were twisted like the Furies' hair.

*20,000 Leagues under the Sea*

Chapter XVIII (p. 314)

Butler Brothers. New York, New York, USA. 1887

**NAUTILUS****Montgomery, James** 1771–1854

Scottish poet and journalist

Light as a flake of foam upon the wind,  
Keel upward, from the deep emerged a shell, Shaped like  
the moon ere half her horn is filled. Fraught with young  
life it righted as it rose,

And moved at will along the yielding water.

The native pilot of this little bark

Put out a tier of oars on either side,

Spread to the wafting breeze a two-fold sail,

And mounted up and glided down the billow

In happy freedom, pleased to feel the air,

And wander in the luxury of light.

*The Poetical Works of James Montgomery*

The Pelican Island (p. 103)

Longman, Brown, Green & Longmans. London, England. 1850

**Wood, Robert William** 1868–1955

American physicist

The Argo-naut or Nautilus,

With habits quite adventurous,

A com-bin-a-tion of a snail,

A jelly-fish and a paper sail.

The parts of him that did not jell,

Are packed securely in his shell.

It is not strange that when I sought

To find his double, I found Naught.

*How to Tell the Birds from the Flowers and Other Wood-Cuts*

Naught. Nautilus (p. 49)

Dover Publications, Inc. New York, New York, USA. 1959

## OCTOPUS

**Cuppy, Will** 1884–1929  
American humorist and critic

Octopuses do not develop their minds. They get by and that's all they care.

*How to Attract the Wombat*

The Octopus (fn 2, p. 119)

Rinehart & Company, Inc. New York, New York, USA. 1949

**Hugo, Victor** 1802–85  
French writer, lyric poet, and dramatist

No grasp is like the sudden strain of the cephaloptera. It is with the sucking apparatus that it attacks. The victim is oppressed by a vacuum drawing at numberless points: it is not a clawing or a biting, but an indescribable scarification. A tearing of the flesh is terrible, but less terrible than a sucking of the blood. Claws are harmless compared with the horrible action of these natural air-cups. The talons of the wild beast enter into your flesh; but with the cephaloptera it is you who enters into the creature.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Fourth, Chapter II

Chapter II (p. 472)

The Heritage Press. New York, New York, USA. 1961

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

the octopus's secret wish  
is not to be a formal fish  
he dreams that some time he may grow  
another set of legs or so  
and be a Broadway music show

*the lives and time of archy & mehitabel*

archy at the zoo (p. 130)

Doubleday Doran & Co. Garden City, New York, USA. 1934

**Nash, Ogden** 1902–71  
American writer of humorous poetry

Tell me, O Octopus, I begs,  
Is those things arms, or is they legs?  
I marvel at thee, Octopus;  
If I were thou. I'd call me Us.

*Verses from 1929 On*

The Octopus

Little, Brown & Company. Boston, Massachusetts, USA. 1959

## SQUID

**Chun, Carl** 1852–1914  
German marine biologist

Among all the marvels of coloration which the animals of the deep sea exhibited to us nothing be even distantly compared with the hues of these [internal] organs [of the *Thaumatomolpus diadema*]. One would think that the

body was adorned with a diadem of brilliant gems.

Quoted in Sir Alister Hardy

*Great Waters*

Chapter 9 (p. 220)

Harper & Row Publishers. New York, New York, USA. 1967

## ANIMAL: CHORDATA

## OIKOPLEURA

**Garstang, Walter** 1868–1949  
English embryologist and amateur poet

Now although Oikopleura sits by himself  
In the midst of his house on a jelly-built shelf,  
He's firmly attached in front by his snout,  
and never lets go till his house wears out.

Oikopleura, Jelly-Builder

The University of Chicago Press. Chicago, Illinois, USA. 1985

## ANIMAL: CNIDARIA

## CORAL

**Agassiz, Jean Louis Rodolphe** 1807–83  
Swiss-born American naturalist, geologist, and teacher

Hence the extraordinary assemblage of all classes of animals upon the reef, where, besides those particular kinds of corals which contribute largely to its formation, we find upon it, or on the foundation from which it rises, a great variety of other corals, which, though too insignificant in size to take a conspicuous part in building up these extensive accumulations of organic lime-rock, add none the less their small share in the work, contributing especially to fill up the vacant spaces left by the more rapid and durable growth of the larger kinds. They are to the giants of the reef what the more slender parts are to the lords of the forest, adding the elegance and delicacy of slighter forms to the strength, power, and durability of their loftier companions.

*Annual Report of the Superintendent of the Coast Survey, Showing the Progress of that Work During the Year Ending November, 1851*

Extracts from the report of Professor Agassiz to the Superintendent of the Coast Survey, on the examination of the Florida reefs, keys, and coast (p. 151)

Printed by Robert Armstrong, Washington. 1852

**Crabbe, George** 1754–1832  
English poet

Involved in sea-wrack, here you find a race,  
Which science, doubting, knows not where to place;  
On shell or stone is dropp'd the embryo-seed,  
And quickly vegetates a vital breed.

*Poems* (Volume 1)

The Borough, Letter IX, l. 90–94

AMS Press. New York, New York, USA. 1979

**Maury, Matthew Fontaine** 1806–73

American astronomer, astrophysicist, historian, and oceanographer

The coral groves of the ocean floor are decorated like the gardens of the land, the flower-like polyps answering to our pinks, daisies, violets and lilies. They strew the bottom, which is of the whitest and purest sand; or hang like leaves and flowers, or cling like mosses and lichens to the branching coral, and lend rare enchantment to the scene. Fishes of many colors, with exquisite grace of movement, dart among the branches

*Physical Geography*

Part II, Section IV (pp. 41–42)

University Publishing Co. New York, New York, USA. 1894

**Montgomery, James** 1771–1854

Scottish poet and journalist

And nameless tribes, half-plant, half-animal,  
Rooted and slumbering through a dream of life.

In the warm isles of India's sunny sea

*The Complete Poetical Works of Thomas Moore*

Flowers, Stanza I

Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

**Nicols, Thomas** fl. 1652

Writer on gemstones

There is a bud of maritime beauty, and the delight of children, the best of nature's buds, as somewhat furthering the springtide of their growth. The coral is a plant of nature's setting in the sea, which, through being covered with the waters of the sea, it bee green and soft, yet so soon as it is elevated above the waves and discovered in the region of the aire it altereth its colour and changeth its nature: its firmness and solidnesse of a stone, beautiful and lasting; by the operation of the aire encompassing its sometimes soft and flaccid substance.

*Arcula Gemmea*

London, England. 1653

**Palmer, James Croxall** 1811–83

US naval surgeon

We wandered where the dreamy palm Murmured above  
the sleeping wave; And through the waters clear and  
calm, Looked down into the coral cave, Whose echoes  
never had been stirred, By breath of man, or song of  
bird.

*Thulia: A Tale of the Antarctic*

The Bridal Rose (p. 56)

Samuel Coleman. New York, New York, USA. 1843

**JELLYFISH****Allen, Grant** 1848–99

American naturalist

A jellyfish swam in a tropical sea,  
And he said, "This world it consists of me:  
There's nothing above and nothing below  
That a jellyfish ever can possibly know  
(Since we've got no sight, or hearing, or smell),  
Beyond what our single sense can tell."

*Poems of Evolution*

The First Idealist

Haldeman-Julius, Girard, Kansas, USA. 1924

**Kendall, May (Emma Goldworth)** 1861–1931

English writer

Her beauty, passive in despair,  
Through sand and seaweed shone,  
The fairest jelly-fish I e'er  
Had set mine eyes upon.

It would have made a stone abuse  
The callousness of fate,  
This creature of prismatic hues,  
Stranded and desolate!

*Dreams to Sell*

The Philanthropist and the Jelly-Fish

Longmans, Green Publishers. New York, New York, USA. 1887

**Schweitzer, Albert** 1875–1965

Alsatian-German theologian and philosopher

Every evening the glimmer of the sea, as the ship ploughs  
her way through it, is wonderful: the foam is phosphores-  
cent, and little jelly-fishes spring up through it like glow-  
ing balls of metal.

Translated by C.T. Campion

**ANIMAL: DINOSAUR****Alexander, R. McNeill** 1934–

Biomechanics researcher

Physics and engineering are as useful in the study of living animals and of the human body as in the study of dinosaurs and other extinct animals. Physics is the basic science of matter and energy, and engineering is physics applied to structures and machines. They and chemistry are the sciences that biologists need to explain the structure and mechanism of living things.

*Dynamics of Dinosaurs and Other Extinct Giants*

Chapter XIII (p. 164)

Columbia University Press. New York, New York, USA. 1989

**Angelou, Maya**

American poet

Hosts to species long since departed,  
Marked the mastodon,  
The dinosaur, who left dried tokens of their sojourn here  
on our planet floor,  
Any broad alarm of their hastening doom  
Is lost in the form of dust and ages.

*On the Pulse of Morning*

A Rock, a River, a Tree

Random House, Inc. New York, New York, USA. 1993

**Bakker, Robert T.** 1945–

American paleontologist

If we measure success by longevity, then dinosaurs must rank as the number one success story in the history of the land life. Not only did dinosaurs exercise an airtight monopoly as large land animals, they kept their commanding position for an extraordinary span of time – 130 million years. Our own human species is no more than a hundred thousand years old. And our own zoological class, the Mammalia, the clan of warm-blooded furry creatures, has ruled the land ecosystem for only seventy million years. True, the dinosaurs are extinct, but we ought to be careful in judging them inferior to our kind. Who can say that the human system will last another thousand years, let alone a hundred million? Who can predict that our Class Mammalia will rule for another hundred thousand millennia?

*The Dinosaur Heresies*

Part 1 The Conquering Cold-Bloods: A Conundrum.

Chapter 1 Brontosaurus in the Great Hall at Yale (p. 16)

William Morrow &amp; Company, Inc. New York, New York, USA. 1986

**Burroughs, Edgar Rice** 1875–1950

American writer

Bradley was in the lead when he came suddenly upon a grotesque creature of Titanic proportions. Crouching among the trees, which here commenced to thin out slightly, Bradley saw what appeared to be an enormous dragon.... From frightful jaws to the tip of its long tail it was fully forty feet in length. Its body was covered with plates of thick skin which bore a striking resemblance to armor-plate. The creature saw Bradley almost at the same instant that he saw it and reared up on its enormous hind legs until its head towered a full twenty-five feet above the ground. From the cavernous jaws issued a hissing sound of a volume equal to the escaping steam from the safety-valve of half a dozen locomotives, and then the creature came for the man.

*Out of Time's Abyss* (p. 20)

First World Library. Fairfield Iowa, USA. 2004

Now when we are attacked by large flying reptiles we run beneath spreading trees; when land carnivora threaten us, we climb into trees, and we have learned not to fire at any of the dinosaurs unless we can keep out of their reach for at least two minutes after hitting them in the brain or spine, or five minutes after puncturing their hearts – it takes them so long to die.

*The Land That Time Forgot*

Chapter 6 (p. 60)

Nelson Doubleday. Garden City, New York, USA. nd

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

There were, as I say, five of them, two being adults and the three young ones. In size they were enormous. Even

the babies were as big as elephants, while the two large ones were far beyond all creatures I have ever seen. They had slate-coloured skin, which was scaled like a lizard's and shimmered where the sun shone upon it. All five were sitting up, balancing themselves upon their broad, powerful tails and their huge three-toed hind-feet, while with their small five-fingered front-feet they pulled down the branches upon which they browsed. I do not know what I can bring their appearance home to you better than by saying that they looked like monstrous kangaroos, twenty feet in length, and with skins like black crocodiles.

*The Lost World*

Chapter X (p. 168)

The Colonial Press. Clinton, Massachusetts, USA. 1959

Anyone of the larger carnivorous dinosaurs would meet the case. Among them are to be found all the most terrible types of animal life that have ever cursed the earth or blessed a museum.

*The Lost World*

Chapter XI (p. 187)

The Colonial Press. Clinton, Massachusetts, USA. 1959

I passed close to the pterodactyl swamp, and as I did so, with a dry, crisp, leathery rattle of wings, one of these great creatures – it was twenty feet at least from tip to tip – rose up from somewhere near me and soared into the air. As it passed across the face of the moon the light shone clearly through the membranous wings, and it looked like a flying skeleton against the white, tropical radiance.

*The Lost World*

Chapter XII (p. 206)

The Colonial Press, Clinton, Massachusetts, USA. 1959

Chapter i (p. 16)

Hodder & Stoughton. London, England. nd

**Hornaday, William Temple** 1854–1937

American naturalist

It is quite beyond the power of words to convey adequate conceptions of the reptilian giants that formed the group of dinosaurs. The Brontosaurus, the Diplodocus, the Triceratops, the Stegosaurus and the Tyrannosaurus all must be seen in order that the wonders of them may be appreciated.

In Francis Rolt-Wheeler

*The Science-history of the Universe*

Introduction (p. xiv)

The Current Literature Publishing Co. New York, New York, USA. 1909

**Johnston, Eric**

No biographical data available

The dinosaur's eloquent lesson is that if some bigness is good, an overabundance of bigness is not necessarily better.

*Quote, the Weekly Digest*, February 23, 1958

**Kurten, Bjorn** 1924–88

Vertebrate paleontologist

Dinosaurs, more than any other creatures of the past have a popular image. Museum visitors flock to the dinosaur exhibits, whether to get factual information about them, to try to visualize what life was like when these monsters existed in the flesh, or just to wonder at their odd and outlandish shapes.

*The Age of Dinosaurs*

Chapter 1 Theories and Discoveries (p. 7)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

**Kyte, Frank** 1949–

American geologist and geochemist

You will never convince some paleontologist that an impact killed the dinosaurs unless you find a dinosaur skeleton with a crushed skull and a ring of iridium round the hole.

Quoted in Stefi Weisburd

*Extinction Wars*

*Science News*, February 1, 1986 (p. 77)

**Owen, Sir Richard** 1804–92

English zoologist and comparative anatomist

[Owen's text uses Greek letters here], fearfully great; [Greek letters are also used here], a lizard.

Report on British Fossil Reptiles, Part I

*Report of the British Association for the Advancement of Science*, April, 1842 (fn, p. 102)

The combination of such characters, some, as the sacral bones, altogether peculiar among reptiles, others borrowed, as it were, from groups now distinct from each other, and all manifested by creatures far surpassing in size the largest of existing reptiles, will, it is presumed, be deemed sufficient ground for establishing a distinct tribe or suborder of Saurian Reptiles, for which I would propose the name of Dinosauria.

Report on British Fossil Reptiles, Part II

*Report of the British Association for the Advancement of Science*, April, 1842 (fn, p. 103)

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

Why the dinosaurs died out is not known, but it is supposed to be because they had minute brains and devoted

themselves to the growth of weapons of offense in the shape of numerous horns. However that may be, it was not through their line that life developed.

*Mortals and Others* (Volume 2)  
Men versus Insects (p. 53)

**Shelley, Percy Bysshe** 1792–1822  
English poet

...the might Of earth-convulsing behemoth, which once  
Were monarch beasts, and on the slimy shores,  
And weed-overgrown continents of earth,  
Increased and multiplied like summer worms  
On an abandoned corpse, till the blue globe  
Wrapt deluge round it like a cloke, and they  
Yelled, gasped, and were abolished; or some God  
Whose throne was in a comet, past, and cried,  
Be not! And like my words they were no more.

## PTERODACTAL

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

There is a chill in the air after dark, and we had all drawn close to the blaze. The night was moonless, but there were some stars, and one could see for a little distance across the plain. Well, suddenly out of the darkness, out of the night, there swooped something with a swish like an aeroplane. The whole group of us were covered for an instant by a canopy of leathery wings, and I had a momentary vision of a long, snake-like neck, a fierce, red, greedy eye, and a great snapping beak, filled, to my amazement, with little, gleaming teeth.

*The Lost World*

Chapter IX (pp. 144–145)

The Colonial Press. Clinton, Massachusetts, USA. 1959

**Kingsley, Charles** 1819–75

English clergyman and author

People call them Pterodactyls: but that is only because they are ashamed to call them flying dragons, after denying so long that flying dragons exist.

*The Water-Babies*

Chapter II (p. 61)

Dodd, Mead & Company. New York, New York, USA. 1910

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

The less said about the pterodactyl the better. It was a spectacle, that beast! a mixture of buzzard and alligator, a sarcasm, an affront to all animated nature, a butt for the ribald jests of an unfeeling world. After some ages Nature perceived that to put feathers on a reptile does not ennoble it, does not make it a bird, but only a sham, a joke, a grotesque curiosity, a monster; also that there was no useful thing for the pterodactyl to do, and nothing likely to turn up in the future that could furnish it employment. And so she abolished it.

In John S. Tuckey (ed.)

*Mark Twain's Fables of Man*

Flies and Russians

University of California Press. Berkeley, California, USA. 1972

Now I'll bet there isn't a man here who can spell "pterodactyl," not even the prisoner at the bar. I'd like to hear him try once – but not in public, for it's too near Sunday, when all extravagant histrionic entertainments are barred. I'd like to hear him try in private, and when he got through trying to spell "pterodactyl" you wouldn't know

whether it was a fish or a beast or a bird, and whether it flew on its legs or walked with its wings. The chances are that he would give it tusks and make it lay eggs.

*Mark Twain's Speeches?*

The Alphabet and Simplified Spelling (p. 201)

Harper & Brothers Publishers. New York, New York, USA. 1910

## STEGOSAURUS

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

For a moment I wondered where I could have seen that ungainly shape, that arched back with triangular fringes along it, that strange bird-like head held close to the ground. Then it came back to me. It was the stegosaurus – the very creature which Maple White had preserved in his sketch-book, and which had been the first object which arrested the attention of Challenger! There he was – perhaps the very specimen which the American artist had encountered. The ground shook beneath his tremendous weight, and his gulplings of water resounded through the still night. For five minutes he was so close to my rock that by stretching out my hand I could have touched the hideous waving hackles upon his back. Then he lumbered away and was lost among the boulders.

*The Lost World*

Chapter XII (p. 211)

The Colonial Press, Clinton, Massachusetts, USA. 1959

## TYRANNOSAURUS REX

**Bradbury, Ray** 1922–2003

American fantasy, horror, science fiction, and mystery writer

Out of the mist, one hundred yards away, came Tyrannosaurus rex.... It came on great oiled, resilient, striding legs. It towered thirty feet above half of the trees, a great evil god, folding its delicate watchmaker's claws close to its oily reptilian chest. Each lower leg was a piston, a thousand pounds of white bone, sunk in thick ropes of muscle, sheathed over in a gleam of pebbled skin like the mail of a terrible warrior.

*Dinosaur Tales*

A Sound of Thunder (p. 68)

Bantam Books. Toronto, Ontario, Canada 1983

**Carpenter, Kenneth**

Paleontologist

Tyrannosaurus was truly the Schwarzenegger of dinosaurs.

*Times*, 3 July 1990

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

Tyrannosaurs, enormous bipedal caricatures of men, would stalk mindlessly across the sites of future cities and go their way down into the dark of geologic time.

*The Immense Journey*

How Flowers Changed the World (p. 64)

Vintage Books. New York, New York, USA. 1957

**Wise, William**

No biographical data available

What colors were the Dinosaurs?  
 The fact is, no one knows.  
 We're only sure that each had skin  
 That stretched from head to toes....  
 But one thing I am certain of –  
 I truly cannot think  
 That huge Tyrannosaurus Rex  
 Could ever have been pink!

*Dinosaurs Forever*

Dinosaur Colors

Dial Books for Young Readers. New York, New York, USA. 2000

**ANIMAL: ECHINODERMATA****Cuppy, Will** 1884–1929

American humorist and critic

For anyone who has ever considered the bizarre panoply that composes the Echinodermata, it is difficult to lose sight of the fact that echinoderms are strange. Their ontogenetic twists and turns of symmetry, absence of certain familiar organ systems, and presence of some less familiar systems might tempt one to imagine an extraterrestrial origin for the Echinodermata. The very strangeness of the Echinodermata is partly responsible for the dedication that specialists in the group feel. We revel in their weirdness.

In C.R.C. Paul and A.B. Smith (eds.)

Evolutionary Dissent: A Review of "Echinoderm Phylogeny and Evolutionary Biology

*Paleobiology*, Volume 15, 1989**ANIMAL: EUGLENA VIRIDIS****Pallister, William Hales** 1877–1946

Canadian physician

A plant when there is sunshine; an animal at night.  
 The living proof of theories, biologists' delight,  
 Created by environment and matching it so well,  
 You are both plant and animal. Which one the time can tell.

*Poems of Science*

Fish in sea like flea on dog – always present, but difficult to catch.

*Charlie Chan at the Olympics*

Film (1937)

**Cuppy, Will** 1884–1929

American humorist and critic

As a rule fish in their native element do not remain stationary for any length of time, especially when something is chasing them.

*How to Attract the Wombat*

The Squid (fn 5, p. 122)

Rinehart &amp; Company, Inc. New York, New York, USA. 1949

Fish are very easy to understand because only about thirteen thousand kinds or species have been discovered up to now.

*How to Become Extinct*

Fish and Democracy (p. 1)

Dover Publications. New York, New York, USA. 1964

**Hemingway, Ernest** 1899–1961

American novelist, short-story writer and journalist

He is a great fish and I must convince him, he thought. I must never let him learn his strength nor what he could do if he made his run...but thank God, they are not as intelligent as we who kill them; although they are more noble and more able.

*The Old Man and the Sea* (p. 61)

Charles Scribner's Sons. New York, New York, USA. 1952

**Hunt, Leigh** 1784–1859

English author, poet, and editor

You strange, astonish'd-looking, angle-faced,  
 Dreary-mouth'd, gaping wretches of the sea,  
 Gulping salt-water everlastingly,  
 Cold-blooded, though with red your blood be graced,  
 And mute, through dwellers in the roaring waste;  
 And you, all shapes beside, that fishy be –  
 Some round, some flat, some long, all devilry,  
 Legless, unloving, infamously chaste:

*The Poetical Works of Leigh Hunt*

The Fish, the Man, and the Spirit (p. 250)

Oxford University Press, Inc. London, England. 1923

**Lawrence, D. H. (David Herbert)** 1885–1930

English writer

This is beyond me, this fish,  
 His God stands outside my God.

*The Collected Poems of D.H. Lawrence*

Fish

Martin Secker. London, England. 1928

**MacLeish, Archibald** 1892–1982

American poet and Librarian of Congress

Plunge beneath the ledge of coral  
 Where the silt of sunlight drifts

Like dust that settles toward a floor –  
 As slow as that: feel the lifting  
 Surge that rustles white above  
 But here is only movement deep  
 As breathing: watch the reef fish hover  
 Dancing in their silver sleep  
 Around their stone, enchanted tree...

*The Collected Poems of Archibald MacLeish*

The Reef Fisher

Houghton Mifflin Company. Boston, Massachusetts, USA. 1952

### Maisey, John

American paleontologist

The term “fish” is of value on restaurant menus, to anglers and aquarists, to stratigraphers and in theological discussions of biblical symbolism. Many systematists use it advisedly and with caution. Fishes are gnathostomes that lack tetrapod characters; they have no unique derived characteristics. We can conceptualize fishes with relative ease because of the great evolutionary gaps between them and their closest living relatives, but that does not mean they comprise a natural group. The only way to make the fishes monophyletic would be to include tetrapods, and to regard the latter merely as a kind of fish. Even then, the term “fish” would be a redundant colloquial equivalent of “gnathostome” (or “craniate,” depending upon how far down the phylogenetic ladder one wished to go).

In D.R. Prothero and R.M. Shoch (eds.)

*Major Features of Vertebrate Evolution*

Short Courses in Paleontology 7

University of Tennessee Press. Knoxville, Tennessee, USA. 1994

### Pallister, William Hales 1877–1946

Canadian physician

Fifteen thousands of species of FISHES are known,  
 And some kinds are enormous and others minute;  
 They are widespread, wherever their tribes can be grown  
 And all seeking the foods which their habits will suit;  
 Some migrating in millions that their spawn may be sown,  
 Some in depths of the ocean, but rarely alone.

*Poems of Science*

Beginnings, Animal Life (p. 140)

Playford Press. New York, New York, USA. 1931

### Paulsen, Gary 1939–

American writer

Part of our problem is that we run around naming things without asking them if they want to be named. Then after we name them, they don't know they're named anyway. A tree doesn't know it's a tree; a fish doesn't know it's a fish; and if the fish did know, it would probably be upset by it. Who wants to be called a fish?

*The Island*

Chapter 1 (p. 5)

Orchard Books. New York, New York, USA. 1988

### Peacock, Thomas Love 1785–1866

English writer

Premising that this is a remarkably fine slice of salmon, there is much to be said about fish: but not in the way of misnomers. Their names are single and simple. Perch, sole, cod, eel, carp, char, skate, trench, trout, brills, bream, pike, and many others, plain monosyllables: salmon, dory, turbot, gudgeon, lobster, whitebait, grayling, haddock, mullet, herring, oyster, sturgeon, flounder, turtle, plain disyllables: only two trisyllables worth naming: anchovy and mackerel; unless anyone should be disposed to stand up for halibut, which, for my part, I have excommunicated.

*Gryll Grange*

Chapter 1 (p. 12)

Penguin Books. Harmondsworth, England. 1949

### Shakespeare, William 1564–1616

English poet, playwright, and actor

Third FISHERMAN: Master, I marvel how the fishes live in the sea.

First FISHERMAN: Why, as men do a-land: the great ones eat up the little ones.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

Pericles, Prince of Tyre

Act II, Scene i, l. 30–32

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Smith, John 1580–1631

English soldier, sailor, and author

Of fish we were best acquainted with sturgeon, grampus, porpoise, seals [and] stingrays whose tails are very dangerous. Brit, mullets, white salmon, trout, sole, plaice, herring, conyfish, rockfish, eels, lampreys, catfish, shad, perch of three sorts, crabs, shrimps, crayfish, oysters, cockles, and mussels. But the most strange fish is a small one, so like the picture of St. George his dragon as possibl[y] can be, except his legs and wings; and the toadfish, which will swell till it be like to burst, when it cometh into the air.

*The True Travels, Adventures and Observations of Captain John Smith* (Volume 1)

Of Such Things Which are Naturally In Virginia, And How They Use Them (p. 125)

William W. Gray. Richmond, Virginia, USA. 1819

### Swift, Jonathan 1667–1745

Irish-born English writer

They say Fish should swim thrice.... First it should swim in the Sea; (do you mind me?) then it should swim in Butter; and at last Sirrah, it should swim in good Claret.

*Polite Conversation*

Dialogue II (p. 125)

Andre Deutsch. London, England. 1963

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Who hears the fish when they cry?  
*The Writings of Henry David Thoreau* (Volume 1)  
*A Week on the Concord and Merrimack Rivers*  
Saturday (p. 45)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Walton, Izaak** 1593–1683  
English writer

If I should begin but to name the several sorts of strange fish... that run into the sea, I might beget wonder in you, or unbelief, or both; and yet I will venture to tell you....  
*The Complete Angler*  
Chapter XIX  
T.N. Foulis. London, England. 1913

## BARRACUDA

**Gardner, John** 1933–82  
American writer and scholar

Slowly, slowly, he cruises,  
And slowly, slowly, he chooses  
Which kind of fish he prefers to take this morning;  
Then without warning  
The Barracuda opens his jaws, teeth flashing,  
And with a horrible, horrible grinding and gnashing,  
Devours a hundred poor creatures and feels no remorse.  
“But,” (as he says with an evil grin) “it’s actually not my fault, you see: I’ve nothing to do with the tragedy; I open my mouth for a yawn and – ah me – They all swim in.”  
*A Child’s Bestiary*  
The Barracuda  
Alfred A. Knopf. New York, New York, USA. 1977

## CARP

**Cuppy, Will** 1884–1929  
American humorist and critic

The Carp is dull and cluggish and greenish or brownish.  
You wouldn’t want him around.  
*How to Become Extinct*  
The Carp (p. 6)  
Dover Publications. New York, New York, USA. 1964

## CODFISH

### Author undetermined

The codfish lays a thousand eggs  
The homely hen lays one. The codfish never cackles  
To tell you what she’s done.  
And so we scorn the codfish

While the humble hen we prize  
Which only goes to show you  
That it pays to advertise.  
In Mark Kurlansky  
*Cod: A Biography of the Fish that Changed the World* (p. 29)  
Walker & Company. New York, New York, USA. 1997

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

The codfish iz a child ov the oshun. This ackounts for their being so salt.  
*Josh Billings’ Wit and Humor*  
The Cat, and the Kangaroo (p. 88)  
George Routledge & Sons. London, England. 1874

I hav noticed that the codfish alwus haz a stiff upper lip, but I think this iz more owing tew the bone that iz in him than it iz tew his blood.  
*Josh Billings’ Wit and Humor*  
The Cat, and the Kangaroo (p. 89)  
George Routledge & Sons. London, England. 1874

## COELACANTH

**Smith, James Leonard Brierley** 1897–1968  
South African ichthyologist

Coelacanth – yes, God! Although I had come prepared, that first sight hit me like a white-hot blast and made me feel shaky and queer, my body tingled. I stood as if stricken to stone. Yes, there was not a shadow of doubt, scale by scale, bone by bone, fin by fin, it was a true Coelacanth. It could have been one of those creatures of 200 million years ago come alive again. I forgot everything else and just looked and looked, and then almost fearfully went close up and touched and stroked.  
*Old Fourlegs: The Story of the Coelacanth*  
Longman, Green Publishers. London, England. 1956

## FLYING FISH

**Bullen, Frank Thomas** 1857–1915  
Author and novelist

There are few prettier sights to be seen at sea than is visible when, on a fairly calm night, with the smooth water highly phosphorescent, a school of Flying-fish are disturbed. Like a galaxy of meteors they may be seen streaming along very swiftly just beneath the surface, each leaving behind it a broadening track of light, until, as if at one impulse, the whole company suddenly leave the water, the points of their multitudinous exit gleaming in tiny showers of diamond spray.  
*Denizens of the Deep*  
Chapter XVII (pp. 224–225)  
Fleming H. Revell Co. New York, New York, USA. 1904

**GOLDFISH**

**Cuppy, Will** 1884–1929  
American humorist and critic

Goldfish come of a very old family, but it seems to do them no good. They have little place to go.... They have been cultivated so long that they are now useless. Goldfish have most uninteresting habits.

*How to Become Extinct*

The Goldfish (p. 8)

Dover Publications. New York, New York, USA. 1964

**GUPPY**

**Nash, Ogden** 1902–71  
American writer of humorous poetry

Whales have calves,  
Cats have kittens,  
Bears have cubs,  
Bats have bittens.  
Swans have cygnets,  
Seals have puppies,  
But guppies just have little guppies.

*Verses from 1929 On*

The Guppy

Little, Brown & Company. Boston, Massachusetts, USA. 1959

**HERRING**

**Cuppy, Will** 1884–1929  
American humorist and critic

Some fishes become extinct, but Herrings go on forever. Herrings spawn at all times and places and nothing will induce them to change their ways. They have no fish control. Herrings congregate in schools, where they learn nothing at all. They move in vast numbers in May and October. Herrings subsist upon Copepods and Copepods subsist upon Diatoms and Diatoms just float around and reproduce. Young Herrings or Sperling or Whitebait are rather cute. They have serrated abdomens. The skull of the Common or Coney Island Herring is triangular, but he would be just the same anyway. (The nervous system of the Herring is fairly simple. When the Herring runs into something the stimulus is flashed to the forebrain, with or without results.)

*How to Become Extinct*

The Herring (p. 13)

Dover Publications. New York, New York, USA. 1964

**KIPPER**

**Nash, Ogden** 1902–71  
American writer of humorous poetry

For half a century, man and nipper,  
I've doted on a tasty kipper,  
But since I am no Jack the Ripper  
I wish the kipper had a zipper.

*Everyone but Thee and Me*

The Kipper (p. 63)

Little, Brown & Company. Boston, Massachusetts, USA. 1962

**MACKEREL**

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

The mackrel iz a game fish. They ought tew be well educated, for they are always in schools.

*Josh Billings' Wit and Humor*

The Mackerel (p. 89)

George Routledge & Sons. London, England. 1874

**PICKEREL**

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

The pickerel...the swiftest, wariest, and most ravenous of fishes.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimack Rivers*

Saturday (p. 36)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**SALMON**

**Cuppy, Will** 1884–1929  
American humorist and critic

Salmon have strange ideas. They are afraid of parsley and slices of lemon.

*How to Become Extinct*

The Salmon (p. 29)

Dover Publications. New York, New York, USA. 1964

**McGregor, James**

No biographical data available

Oh! For the thrill of a Highland stream,  
With the bending rod of a fisherman's dream,  
The screaming reel and flying line,  
Where the far-flung pearl-drops wetly shine –  
The sudden leap, then the silent strife,  
While the salmon grimly fights for life;  
As a worthy foe, or a regal dish,  
We respect this gallant fighting fish.

In Arnold Silcock

*Verses and Worse*

Ode to a Salmon (p. 21)

Faber & Faber Ltd. London, England. 1952

## SCULPIN

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

Now the Sculpin (*Cottus virginianus*) is a little water beast which pretends to consider itself a fish, and, under that pretext, hangs about the piles on which West Boston Bridge is built, swallowing the bait and hook intended for flounders. On being drawn from the water, it exposes an immense head, a diminutive bony carcass, and a surface so full of spines, ridges, ruffles and frills that the naturalist have not been able to count them without quarreling about their number.

*The Professor at the Breakfast Table*

Chapter I (p. 2)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

## SEA HORSE

**Kraus, Jack**

No biographical data available

SEA HORSE: Philly of flounder.

*Quote, the Weekly Digest*, October 23, 1966 (p. 17)

## SEA SQUIRT

**Dennett, Daniel Clement** 1942–  
American philosopher

The juvenile sea squirt wanders through the sea searching for a suitable rock or hunk of coral to cling to and make its home for life. For this task, it has a rudimentary nervous system. When it finds its spot and takes root, it doesn't need its brain anymore so it eats it! (It's rather like getting tenure.)

*Consciousness Explained*

Chapter 7 (p. 177)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

## SHARK

**Benchley, Peter** 1940–2006  
American writer

Sharks have everything a scientist dreams of. They're beautiful – God, how beautiful they are! They're like an impossibly perfect set of machinery. They're as graceful as any bird. They're as mysterious as any animal on earth.... The more I learned about them, the more I knew I didn't know...

*Jaws*

Part II, Chapter 6 (p. 121)

Doubleday & Company, Inc. Garden City New York, USA. 1974

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

"You see," he went on after a pause, "it's as well to be provided for *everything*. That's the reason the horse has anklets around his feet."

"But what are they for?" Alice asked in a tone of great curiosity.

"To guard against the bite of sharks," the Knight replied.

*Alice's Adventures in Wonderland & Through the Looking-Glass*

Chapter 8 (p. 105)

The Macmillan Company. New York, New York, USA. 1966

**Cromie, William J.** 1930–  
American journalist and writer

Sharks are infamous for their ravenous appetites and catholic diet.

*The Living World of the Sea*

Chapter 8 (p. 138)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1966

**Melville, Herman** 1819–91  
American novelist, essayist, and poet

Though amid all the smoking horror and diabolism of a sea-fight, sharks will be seen longingly gazing up to the ship's decks, like hungry dogs round a table where red meat is being carved, ready to bolt down every killed man that is tossed to them...

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 64 (p. 217)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Nash, Ogden** 1902–71  
American writer of humorous poetry

How many Scientists have written

The shark is gentle as a kitten!

Yet this I know about the shark:

His bite is worser than his bark.

*Verses from 1929 On*

The Shark

Little, Brown & Company. Boston, Massachusetts, USA. 1959

**Schweitzer, Albert** 1875–1965  
Alsatian-German theologian and philosopher

"A shark! A shark!" I rushed out of the writing room and was shown a black triangle sticking out of the water some fifty meters from the ship, and moving in our direction. It was the fin of the dread monster.

Translated by C.T. Campion

*On the Edge of the Primeval Forest*

Chapter II (pp. 17–18)

The Macmillan Company. New York, New York, USA. 1931

**Verne, Jules** 1828–1903  
French novelist

...If you were invited to hunt the bear in the mountains of Switzerland, what would you say? "Very well! tomorrow we will go and hunt the bear." If you were asked to hunt the lion in the plains of Atlas, or the tiger in the

Indian jungles, what would you sayf “ Ha ! ha I it seems we are going to hunt the tiger or the lion ! ” But when you are invited to hunt the shark in its natural element, you would perhaps reflect before accepting the invitation.

*20,000 Leagues Under the Sea*

Part II, Chapter II (p. 153)

Geo. M. Smith & Co. Boston, Massachusetts, USA. 1873

## SMELT

**Nash, Ogden** 1902–71

American writer of humorous poetry

Oh, why does man pursue the smelt?  
It has no valuable pelt,  
It boasts of no escutcheon royal,  
It yields not ivory or oil,  
Its life is dull, its death is tame,  
A fish as humble as its name.  
Yet – take this salmon somewhere else,  
And bring me half a dozen smelts.

*Verses from 1929 On*

The Smelt

Little, Brown & Company. Boston, Massachusetts, USA. 1959

## STURGEON

**Longfellow, Henry Wadsworth** 1807–82

American poet

On the white sand of the bottom  
Lay the monster Mishe-Nahma,  
Lay the sturgeon, King of Fishes;  
Through his gills he breathed the water,  
With his fins he fanned and winnowed,  
With his tail he swept the sand-floor.  
There he lay in all his armor;  
On each side a shield to guard him,  
Plates of bone upon his forehead,  
Down his sides and back and shoulders  
Plates of bone with spines projecting!

*The Complete Writings of Henry Wadsworth Longfellow* (Volume 2)

*Hiawatha*, Part VIII

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

## WHITING

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“Will you walk a little faster?” said a whiting to a snail,  
“There’s a porpoise close behind us, and he’s treading  
on my tail.”

*The Complete Works of Lewis Carroll*

*Through the Looking-Glass*

Chapter X (p. 107)

The Modern Library. New York, New York, USA. 1936

## X-RAY FISH

**Sierra, Judy** 1945–

Children’s author, poet, and folklorist

Xenia the X-ray fish  
Swims serenely in a dish.  
We like to sit and watch her dinner  
When it is already in her.  
*There’s A Zoo in Room 22*  
Xenia the X-ray Fish  
Harcourt. Orlando, Florida, USA. 2000

## ANIMAL: INSECT

### Acheta Domestica

House Cricket

Insects are by far the most numerous race of animals. Wherever air and light are, there they are to be found. Where other living beings would perish with hunger, there they survive. There is no place so barren as not to afford sustenance to them. Their name is legion.

Episodes of Insect Life

*The Living Age*, Volume 30, 1851 (p. 153)

The proboscis of the elephant fills every spectator of the well-regulated mind with wonder at the work of the Great Artificer’ but we do not design to notice the equally admirable proboscis of the fly, or that of the gnat, at once an awl and a pump, unless, indeed, we are made to feel those irritating instruments, when we crush the insect without bestowing a thought on the intricate and perfect mechanism of the apparatus which has annoyed us.

Episodes of Insect Life

*The Living Age*, Volume 30, 1851 (p. 153)

Without a knowledge of the habits of insects, vain is the attempt at deliverance from their overwhelming ravages.

Episodes of Insect Life

*The Living Age*, Volume 30, 1851 (p. 153)

**Ackerman, Diane** 1948–

American writer

Although it may be a little odd to think of it as a form of armor, smell plays many crucial roles in an insect’s life. It’s similar to a telephone wire over which different kinds of messages can flow: threat, invitation, courtship; the whereabouts of food; a call to arms; a password; a death knell; the trail home.

*The Rarest of the Rare: Vanishing Animals, Timeless Worlds*

Insect Love (p. 150)

Vintage Books. New York, New York, USA. 1997

**Allee, Warder C.** 1885–1955

American zoologist

The mortal enemies of man are not his fellows of another continent or race; they are the aspects of the physical

world which limit or challenge his control, the disease germs that attack him and his domesticated plants and animals, and the insects that carry many of these germs as well as working notable direct injury. This is not... the age of man, however great his superiority in size and intelligence; it is literally the age of insects.

*The Social Life of Insects*

Chapter 7

W.W. Norton & Company, Inc. New York, New York, USA. 1938

**Bailey, Liberty Hyde** 1858–1954

American horticulturist and botanist

What wader, be he boy or water-fowl, has not watched the water-insects? How they dart hither and thither, some skimming the surface, others sturdily rowing about in the clear shallows! The sunlight fastens, for an instant, their grotesque reflections on the smooth bottom, then away – the shadow is lost, except for the picture it left in the memory of the onlooker.

*Cornell Nature-study Leaflets*

Leaflet XI (p. 135)

J.B. Lyon Co. Albany, New York, USA. 1904

**Barbauld, Anna Laetitia** 1743–1825

English writer, essayist, and poet

What atom forms of insect life appear!  
And who can follow Nature's pencil here?  
Their wings with azure, green and purple gloss'd,  
Studded with color eyes, with gems embossed,  
Inlaid with pearl, and marked with various stains  
Of lovely crimson, through their dusky veins.

In Lucy Aikin (ed.)

*The Works of Anna Laetitia Barbauld* (Volume 1)

To Mrs. P\*\*\*\*\*

David Reed. Boston, Massachusetts, USA. 1826

**Bouvier, E. L.**

No biographical data available

Insects are creatures which seem to defy the imagination with the strangeness of their form and their extraordinary habits. In the "War of the Worlds," Wells the novelist surprises us with his belligerent Tripods which descend as conquerors upon our planet, where they terrify and exterminate poor humanity. This fiction appears bizarre, but it falls far short of what Nature herself shows us in the world of the articulates!

Translated by L.O. Howard

*The Psychic Life of Insects*

Introduction (p. xi)

The Century Co. New York, New York, USA. 1922

**Brues, Charles Thomas** 1879–1955

American entomologist

Another, and far more extensive series, of unbidden guests, is made up of numerous other animals and plants, some originally associated with the human species, and others attracted to it as the result of changes wrought by

civilization.... A quite considerable part of this motley assemblage consists of insects, which enter into our life and activities in many ways. This group of animals really vies with the mammals, and with man in particular, in its attempt to dominate the animal world.

Henry Holt &amp; Company. New York, New York, USA. 1908

**Kirby, William** 1759–1850

English entomologist

**Spence, William** 1783–1860

English entomologist

The first knowledge that we get of them [insects] is as tormentors; they are usually pointed out to us by those about us as ugly, filthy, and noxious creatures; and the whole insect world, butterflies perhaps and some few others excepted, are devoted by one universal ban to proscription and execration, as fit only to be trodden under our feet and crushed: so that often, before we can persuade ourselves to study them, we have to remove from our minds prejudices deeply rooted and of long standing.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects*

Introductory Letter (p. 3)

Printed for Longman, Hurst, Rees, Orme & Brown. London, England. 1818

...insects, unfortunate insects, are so far from attracting us, that we are accustomed to abhor them from our childhood. The first knowledge that we get of them is as tormentors; they are usually pointed out to us by those about us, as ugly, filthy, and noxious creatures; and the whole insect world, butterflies perhaps and some few other expected, are devoted by one universal to proscription and execration, as fit only to trodden under our feet and crushed...

*An Introduction to Entomology; or, Elements of the Natural History of Insects*

Introductory Letter (p. 2)

Longman, Green, Longman & Roberts. London, England. 1860

Insects, indeed, appear to have been nature's favorite productions, in which to manifest her power and skill, she has combined and concentrated almost all that is either beautiful and graceful, interesting and alluring, or curious and singular, in every other class and order of her children.

*An Introduction to Entomology; or, Elements of the Natural History of Insects*

Introductory Letter (p. 4)

Longman, Green, Longman & Roberts. London, England. 1860

In variegation, insects certainly exceed every other class of animated beings. Nature, in her sportive mood, when painting them, sometimes imitates the clouds of heaven; at others, the meandering course of the rivers of the earth, or the undulations of their waters: many are veined like beautiful marbles; others have the semblance of a robe of the finest net-work thrown over them; some she blazons with heraldic insignia, giving them to bear in fields sable – azure – vert – gules – argent and or fesses – bars – bends – crosses – crescents – stars, and even animals. On many, taking her rule and compasses, she draws with precision mathematical figures; points, lines, angles, triangles, squares, and circles. On others she portrays, with mystic hand, what seem like hieroglyphic symbols, or inscribes them with the characters and letters of various languages, often very correctly formed; and what is more extraordinary, she has registered in others figures which correspond with several dates of the Christian era.

*An Introduction to Entomology; or, Elements of the Natural History of Insects*

Introductory Letter (pp. 5–6)

Longman, Green, Longman & Roberts. London, England. 1860

What numbers [of insects] vie with the charming offspring of Flora in various beauties! Some in the delicacy and variety of their colours, colours notlike those of flowers evanescent and fugitive, but fixed and durable,

surviving their subject, and adorning it as much after death as they did when it was alive ...

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (Volume 1)

Introductory Letter (p. 8)

Printed for Longman, Hurst, Rees, Orme & Brown. London, England. 1818

Beasts, birds, and fishes...attract our notice; but *insects*, unfortunate insects, are so far from attracting us, that we are accustomed to abhor them from our childhood. The first knowledge that we get of them is as tormentors; they are usually pointed out to us by those about us, as ugly, filthy, and noxious creatures; and the whole insect world, butterflies perhaps and some few others excepted, are tied by one universal ban to proscription and execration, as fit only to be trodden under our feet and crushed; so that often, before we can persuade ourselves to study them, we have to remove from our minds prejudices deeply rooted and of long standing.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)

Letter 1 (p. 2)

Longman, Brown, Green, Longmans & Robert. London, England. 1858

Being amongst the most minute of nature's productions, they [insects] do not so readily catch the eye of the observer; and when they do, mankind in general are so apt to estimate the worth and importance of things by their bulk, that because we usually measure them by the duodecimals of an inch instead of in the foot or by the yard, insects are deemed too insignificant parts of the creation, and of too little consequence to its general welfare, to render them worthy of any serious attention or study.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)

Letter 1 (p. 2)

Longman, Brown, Green, Longmans & Robert. London, England. 1858

...numerous other sources of pleasure and information will open themselves to you, not inferior to what any other science can furnish, when you enter more deeply into the study. Insects, indeed, appear to have been nature's favourite productions, in which, to manifest her power and skill, she has combined and concentrated almost all that is either beautiful and graceful, interesting and alluring, or curious and singular, in every other class and order of her children. To these, her valued miniatures, she has given the most delicate touch and highest finish of

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)

Letter 1 (p. 4)

Longman, Brown, Green, Longmans & Robert. London, England. 1858

...other insects seem emblematical of a different class of unearthly beings; when we behold some tremendous for the numerous horns and spines projecting in horrid array from their head or shoulders – others for their threatening

jaws of fearful length, and armed with cruel fangs: when we survey the dismal hue and demoniac air that distinguish others, the dens of darkness in which they live, the impurity of their food, their predatory habits and cruelty, the nets which they spread, and the pits which they sink to entrap the unwary, we can scarcely help regarding them as aptly symbolising evil demons, the enemy of man...

English man of letters

All was hushed and dream-like, and there was no sound save the murmur of happy insects, which seemed like the humming of the sunlight itself.

*The Highway to Happiness* (p. 141)

The Morningside Press. New York, New York, USA. 1913

**Levi, Primo** 1919–87

Italian writer and chemist

If a hypothetical zoologist, who specialized in birds and mammals but knew nothing about insects, was told that there exist hundreds of thousands of animal species, very different from one another, who have invented a way of building themselves an armor by exploiting an original derivate from glucose and ammonia; and that when, in growing, these little animals must “jump out of their skins,” that is to say, out of this unextendable armor, then throw it away and make themselves another, larger one... this improbable zoologist would refuse to believe it.

Translated by Raymond Rosenthal

*Other People's Trades*

Butterflies (p. 16)

Summit Books. New York, New York, USA. 1989

**Maeterlinck, Maurice** 1862–1949

Belgian playwright and poet

The insect does not belong to our world. The other animals, the plants even, notwithstanding their dumb life and the great secrets which they cherish, do not seem wholly foreign to us. In spite of all, we feel a certain earthly brotherhood in them. They often surprise and amaze our intelligence, but do not utterly upset it. There is something, on the other hand, about the insect that

does not seem to belong to the habits, the ethics, the psychology of our globe. One would be inclined to say that the insect comes from another planet, more monstrous, more energetic, more insane, more atrocious, more infernal than our own. One would think that it was born of some comet that had lost its course and died demented in space. In vain does it seize upon life with an authority, a fecundity unequalled here below; we cannot accustom ourselves to the idea that it is a thought of that nature of whom we fondly believe ourselves to be the privileged children and probably the ideal to which all the earth's efforts tend.

Maurice Maeterlinck

In Jean-Henri Fabre

*The Life of the Spider*

Preface (pp. 9–10)

Dodd, Mead & Co. New York, New York, USA. 1913

...it is time, under the conduct of an admirable guide, to penetrate behind the scenes of our fairy play and to study at close quarters the actors and supernumeraries [the insects], loathsome or magnificent, as the case may be, grotesque or sinister, heroic or appalling, genial or stupid and almost always improbable and unintelligible.

Maurice Maeterlinck

Film (1957)

**Pallister, William Hales** 1877–1946  
Canadian physician

Of the INSECTS, such numbers of species exist  
That their species have filled up whole volumes of  
books.

Over four hundred thousand are named in their list!

Everyone has six legs, though they differ in looks.

The long warfare with insects gives men little ease,

For four-fifths of the whole earth's species are these!

*Poems of Science* (p. 140)

Playford Press. New York, New York, USA. 1931

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

...in these minute creatures [insects], so nearly akin as  
they are to non-entity, how surpassing the intelligence,  
how vast the resources, and how ineffable the perfection  
which she [Nature] has displayed.

Translated by John Bostock and H.T. Riley

*The Natural History of Pliny* (Volume III)

Book XI (p. 2)

George Bell & Sons. London, England. 1892

**Pouchet, Félix Archimède** 1800–72  
French biologist

If anything in insects surpass the diversity of forms, it is  
the prodigious variety of colouring. Their mantles gleam  
with the richest hues in nature. Their sheen can only be  
compared to that of jewels and metals. The purest gold  
and silver, the sapphire and the emerald, gleam on their  
wings and corsages; their tints mingle and encounter, or  
imperceptibly shade into each other.

*The Universe: Or, The Infinitely Great and the Infinitely Little*

Book III (p. 93)

Blackie & Son. London, England. 1870

...among insects, there are architects, masons, uphol-  
sterers, paper-makers, joiners, pasteboard-makers, and  
hydraulic-engineers. Others dislike work, and are veri-  
table pirates, always engaged in war and pillage.

Chapter I (p. 16)  
Charles Knight. London, England. 1830

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Amid wars and rumours of war, while the acrimonies of disarmament conferences threaten the human race with unprecedented disaster, another conflict perhaps more important is receiving much less notice than it deserves – I mean the conflict between men and insects.

In Harry Ruja (ed.)  
*Mortals and Others* Volume 2  
Men versus Insects (p. 53)

**Swift, Jonathan** 1667–1745  
Irish-born English writer

Then turning to his first minister, who waited behind him with a white staff, near as tall as the mainmast of the *Royal Sovereign*, he observed how contemptible a thing was human grandeur, which could be mimicked by such diminutive insects as I: and yet, said he, I dare engage these creatures have their titles and distinctions of honour; they contrive little nests and burrows, that they call houses and cities; they make a figure in dress and equipage; they love, they fight, they dispute, they cheat, they betray.

*Gulliver's Travels*  
Chapter III (p. 123)  
Printed for Benj. Motte. London, England. 1727

**Teale, Edwin Way** 1899–1980  
American naturalist

If insects had the gift of speech, as we understand it, I am sure a main topic of conversation would begin: "Let me tell you about my molt."

*Near Horizons: The Story of an Insect Garden*  
Chapter 10 (p. 97)  
Dodd, Mead & Company. New York, New York, USA. 1943

## The Minister (Fictional character)

Do you know what you're implying? That we owe our human condition to the intervention of insects.

*Quatermass and the Pit*  
Film (1958)

## Wade, Nicholas

British-born scientific reporter, editor, and author

Tiny, Puny, Pestilential. Apart from a few exceptions like bees and butterflies, insects have a definite image problem. Zoologists may respect them as the most successful class of anthropoids, but to most people they are just bugs, menacing nuisances to be swatted or stepped on.

*The New York Times Book of Insects*  
Introduction (p. 1)  
The Lyons Press. Guilford, Connecticut, USA. 2003

**Webb, Mary** 1881–1927  
English novelist

Insects are the artists of fragrance; they have a genius for it; there seems to be some affinity between the tenuity of their being and this most refined of the sense-impressions.

*Poems and the Spring of Joy*  
Joy of Fragrance (p. 164)  
Jonathan Cape. London, England. 1937

**Wilson, John** 1785–1854  
Scottish writer

Devouring Ephemerals! Can you not suffer the poor insects to sport out their day? They must be insipid eating; but here are some savory exceedingly – it is needless to mention their name – that carry *sauce piquante* in their tails. Do try the taste of this bobber – but anyone of the three you please. There! Hold fast Kirby – for that is

*The Recreations of Christopher North*  
The Moors (p. 146)  
D. Appleton & Co. New York, New York, USA. 1870

**Wood, John George** 1827–1889  
English writer on natural history

The habits of insects are very mines of interesting knowledge, and it is impossible carefully to watch the proceedings of any insect, however insignificant, without feeling that no writer of fiction ever invented a drama of such absorbing interest as is acted daily before our eyes, though to indifferent spectators.

In W.J. Holland  
*The Moth Book: A Popular Guide to a Knowledge of the Moths of North America*  
Family Psychidae (p. 360)  
Doubleday, Page & Company. New York, New York, USA. 1904

## ANT

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

Yu never see two ants arguing sum phoolish question that neither ov them didn't understand; they don't kare whether the moon iz inhabited, or not; nor whether a fish weighing two pounds, put into a pail ov water allreddy phull, will make the pail slop over, or weigh more.

*Josh Billings' Wit and Humor*

The Ant (p. 115)

George Routledge & Sons. London, England. 1874

**Darwin, Charles Robert** 1809–82  
English naturalist

...the brain of an ant is one of the most marvelous atoms of matter in the world, perhaps more so than the brain of man.

In *Great Books of the Western World* (Volume 49)

*The Descent of Man*

Part I, Chapter II (p. 281)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Dr. Harold Medford (Fictional character)

None of the ants previously seen by man were more than an inch in length – most considerably under that size. But even the most minute of them have an instinct and talent for industry, social organization, and savagery that makes man look feeble by comparison.

*Them*

Film (1954)

The antennae! Shoot the antennae!

*Them*

Film (1954)

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The instincts of the ant are very unimportant, considered as the ant's; but the moment a ray of relation is seen to extend from it to man, and the little drudge is seen to be a monitor, a little body with a mighty heart, then all its habits, even that said to be recently observed, that it never sleeps, become sublime.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses and Lectures*

Language (p. 22)

The Library of America. New York, New York, USA. 1983

**Hölldobler, Bert** 1936–  
German myrmecologist

**Wilson, Edward O.** 1929–  
American biologist and writer

The foreign policy aim of ants can be summed up as follows: restless aggression, territorial conquest, and genocidal annihilation of neighboring colonies whenever possible.

If ants had nuclear weapons, they would probably end the world in a week.

*Journey to the Ants: A Story of Scientific Exploration*

War and Foreign Policy (p. 59)

Harvard University Press. Cambridge, Massachusetts, USA. 1994

**Levi, Primo** 1919–87  
Italian writer and chemist

After the planet becomes theirs, many millions of years will have to pass before a beetle particularly loved by God, at the end of its calculations will find written on a sheet of paper in letters of fire that energy is equal to the mass multiplied by the square of the velocity of light. The new kings of the world will live tranquilly for a long time, confining themselves to devouring each other and being parasites among each other on a cottage industry scale.

Translated by Raymond Rosenthal

*Other People's Trades*

Beetles (p. 29)

Summit Books. New York, New York, USA. 1989

**Lubbock, John, First Baron Avebury** 1834–1919  
English banker, politician, biologist, and archaeologist

The Anthropoid apes no doubt approach nearer to man in bodily structure than do any other animals; but when we consider the habits of ants, their social organization, their large communities and elaborate habitations, their roadways, their possession of domestic animals, and even, in some cases, of slaves, it must be admitted that they have a fair claim to rank next to man in the scale of intelligence.

*Ants, Bees and Wasps*

Introduction (p. 1)

D. Appleton & Company. New York, New York, USA. 1884

**Muir, John** 1838–1914  
American naturalist

Ants...whose tiny sparks of life only burn the brighter with the heat...

*My First Summer in the Sierra*

June 3 (pp. 10–11)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

**Shah, Idries** 1924–96  
Persian author and teacher in the Sufi tradition

Finding I could speak the language of ants, I approached one and inquired, "What is God like? Does he resemble the ant?"

*Thinkers of the East*

Iam Baqir (p. 101)

Jonathan Cape. London, England. 1971

### The Bible (King James Version)

Go to the ant, thou sluggard; consider her ways, and be wise:...

Proverbs 6:6

## The Ellinson girl (Fictional character)

THEM! THEM! THEM!

*Them*

Film (1954)

**Thomas, Lewis** 1913–93

American physician and biologist

Ants are so much like human beings as to be an embarrassment. They farm fungi, raise aphids as livestock, launch armies into wars, use chemical sprays to alarm and confuse enemies, capture slaves. The families of weaver ants engage in child labor, holding their larvae like shuttles to spin out the thread that sews the leaves together for their fungus gardens. They exchange information ceaselessly. They do everything but watch television.

*The Lives of a Cell: Notes of a Biology Watcher*

On Societies as Organisms (pp. 11–12)

The Viking Press. New York, New York, USA. 1974

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

It seems to me that in the matter of intellect the ant must be a strangely overrated bird. During the many summers, now, I have watched him, when I ought to have been in better business, and I have not yet come across a living ant that seemed to have any more sense than a dead one.

*A Tramp Abroad*

Chapter XXII (p. 139)

Penguin Books. New York, New York, USA. 1997

I have had no experience of those wonderful Swiss and African ones which vote, keep drilled armies, hold slaves, and dispute about religion. Those particular ants may be all that the naturalist paints them, but I am persuaded that the average ant is a sham. I admit his industry, of course; he is the hardest working creature in the world – when anybody is looking – but his leather-headedness is the point I make against him. He goes out foraging, he makes a capture, and then what does he do? Go home? No; he goes anywhere but home. He doesn't know where home is. His home may be only three feet away; no matter, he can't find it.

*A Tramp Abroad* (Volume 1) (3rd edition)

Chapter XXII (p. 206)

Chatto & Windus. London, England. 1880

Now and then, while we rested, we watched the laborious ant at his work. I found nothing new in him – certainly nothing to change my opinion of him. It seems to me that in the matter of intellect the ant must be a strangely overrated bird. During many summers now I have watched him, when I ought to have been in better business, and I have not yet come across a living ant that seemed to have any more sense than a dead one.

*A Tramp Abroad* (Volume 1) (3rd edition)

Chapter XXII (p. 206)

Chatto & Windus. London, England. 1880

He [an ant] makes his capture, as I have said; it is generally something which can be of no sort of use to himself or anybody else; it is usually seven times bigger than it ought to be; he hunts out the awkwardest place to take hold of it; he lifts it bodily up in the air by main force, and starts – not toward home, but in the opposite direction; not calmly and wisely, but with a frantic haste which is wasteful of his strength; he fetches up against a pebble, and, instead of going around it, he climbs over it backwards, dragging his booty after him, tumbles down on the other side, jumps up in a passion, kicks the dust off his clothes, moistens his hands, grabs his property viciously, yanks it this way, then that, shoves it ahead of him a moment, turns tail and lugs it after him another moment, gets madder and madder, then presently hoists it into the air and goes tearing away in an entirely new direction; comes to a weed; it never occurs to him to go around it. No; he must climb it, and he does climb it, dragging his worthless property to the top – which is as bright a thing to do as it would be for me to carry a sack of flour from Heidelberg to Paris by way of Strasburg steeple; when he gets up there he finds that that is not the place; takes a cursory glance at the scenery, and either climbs down again or tumbles down, and starts off once more – as usual, in a new direction. At the end of half an hour he fetches up within six inches of the place he started from, and lays his burden down. Meantime, he has been over all the ground for two yards around, and climbed all the weeds and pebbles he came across.

*A Tramp Abroad* (Volume 1) (3rd edition)

Chapter XXII (pp. 206–207)

Chatto & Windus. London, England. 1880

## APHID

**Allen, Grant** 1848–99

Canadian-born writer

To the world at large, the aphides, as we call them, are mere nameless nuisances pests that infest our choicest plants; to the eye of the naturalist, they are a marvelous and deeply interesting group of animals, with one of the oddest pedigrees, one of the queerest biographies, known to science.

*Flashlights on Nature*

Chapter I (p. 2)

Doubleday, Page & Co. New York, New York, USA. 1905

## BEDBUG

**Author undetermined**

The June bug hath a gaudy wing

The lightning bug a flame

The bedbug hath no wings at all  
But he gets there just the same.

In Arnold Mallis

*American Entomologist*

Chapter 8 (p. 205)

Rutgers University Press. New Brunswick, New Jersey, USA. 1971

## BEE

**Burroughs, John** 1837–1921

American naturalist and writer

There is no creature with which man has surrounded himself that seems so much like a product of civilization, so much like the result of development on special lines and in special fields, as the honey-bee.

*Birds and Bees Essays*

Bees (p. 45)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1914

The honey-bee goes forth from the hive in spring like the dove from Noah's ark, and it is not till after many days that she brings back the olive leaf, which in this case is a pellet of golden pollen upon each hip...

*Locusts and Wild Honey*

Fuscara, or the Bee Errant

The Grafton Press. New York, New York, USA. 1903

**Dickinson, Emily** 1830–86

American lyric poet

To make a prairie it takes a clover and one bee,  
One clover and a bee,  
And revery.

The revery alone will do,

If bees are few.

*The Complete Poems of Emily Dickinson*

No. 1755 (p. 710)

Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1960

**Gay, John** 1685–1732

English poet and dramatist

The careful insect 'midst his works I view,  
Now from the flow'rs exhaust the fragrant Dew;  
With golden Treasures load his little Thighs,  
And steer his airy Journey through the Skies;  
With liquid Sweets the waxen Cells distend,  
While some 'gainst Hostile Drones their Cave defend;  
Each in Toil a proper Station bears,  
And in the little Bulk a might Soul appears...

*Rural Sports: A Poem*

Canto I, l. 83–90

Printed for J. Tonson. London, England. 1713

**Kidd, Sue Monk** 1948–

American writer

People don't realize how smart bees are, evensmarter than dolphins. Bees know enough geometry to make row after row of perfect hexagons, angles so accurate you'd think they used rulers.

*The Secret Life of Bees*

Chapter Eight (p. 137)

Penguin Books. Middlesex, England. 2002

**Longgood, William**

**Smythe, Daniel** 1908–81  
American poet

The bees, those intergarden missiles,  
Now make their thin propellers hum  
To landing fields of flowers and thistles  
More certain of their goal than some.

Small Flyers  
*Nature Magazine*, Volume 50, Number 6, June–July 1957 (p. 292)

**Topsell, Edward** 1572–1625?  
English divine and writer

Of all Insects, Bees are the principal and are chiefly to be admired, being the only creature of that kinde framed for the nourishment of Man; but the rest are procreated either to be useful in physic, or for delight of the eyes, the pleasure of the ears, or the completing and ornament of the body...

*The History of Four-Footed Beasts and Serpents*  
The Theater of Insects  
Chapter I (p. 889)  
G. Sawbridge. London, England. 1658

## BEETLE

**Crowson, Roy Albert** 1914–99  
English biologist

The beetles are at once absolutely typical of, and unique among, the Insecta, a paradox of a kind which, though familiar to any practising systematist, is a constant stumbling block to laboratory experimentalists of the modern school.

*The Biology of the Coleoptera*  
Chapter 1 (p. 1)  
Academic Press. London, England. 1981

**Darwin, Charles Robert** 1809–82  
English naturalist

But no pursuit at Cambridge was followed with nearly so much eagerness or gave so much pleasure as collecting beetles. It was the mere passion for collecting, for I did not dissect them, and rarely compared their external characters with published descriptions, but got them named anyhow. I will give proof of my zeal: one day, on tearing off some old bark, I saw two rare beetles, and seized one in each hand; then I saw a third and new kind, which I could not bear to lose, so I popped the one which I held in my right hand into my mouth. Alas! It ejected some intensely acrid fluid, which burnt my tongue so that I was forced to spit the beetle out, which was lost, as was the third one.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Chapter II (p. 43)  
D. Appleton & Company. New York, New York, USA. 1896

It seems therefore that a taste for collecting beetles is some indication of future success in life!

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
Chapter II (p. 44)  
D. Appleton & Company. New York, New York, USA. 1896

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

...the Sacred beetle never chooses any shape but the sphere, though it necessitates such scrupulous accuracy; she acts as though she knew the laws of evaporation and geometry from beginning to end.

Translated by Alexander Teixeira de Mattos  
*The Sacred Beetle and Others*  
Chapter IV (pp. 67–68)  
Hodder and Stoughton. London, England. 1918

**Haldane, John Burdon Sanderson** 1892–1964  
English biologist

When asked by a group of theologians what one could conclude as to the nature of the Creator from a study of His creation, Haldane is said to have answered, “An inordinate fondness for beetles.”

In G. E. Hutchinson  
Homage to Santa Rosalia, or Why Are There So Many Kinds of Animals  
*American Naturalist*, Volume 93, 1959 (p. 146)

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

I am often spoken of as a Coleopterist – he said – but I have no right to so comprehensive a name. The genus *Scarabaeus* is what I have chiefly confined myself to, and ought to have studied exclusively. The beetles proper are quite enough for the labour of one man’s life. Call me a Scarabeeist if you will; if I can prove myself worthy of that name, my highest ambition will be more than satisfied.

*The Poet at the Breakfast Table*  
Chapter II (p. 48)  
J.M. Dent & Co. London, England. 1906

**Levi, Primo** 1919–87  
Italian writer and chemist

After the planet becomes theirs, many millions of years will have to pass before a beetle particularly loved by God, at the end of its calculations will find written on a sheet of paper in letters of fire that energy is equal to the mass multiplied by the square of the velocity of light. The new kings of the world will live tranquilly for a long time, confining themselves to devouring each other and being parasites among each other on a cottage industry scale.

*Other People’s Trades*  
Beetles  
Summit Books. New York, New York, USA. 1989

**Maeterlinck, Maurice** 1862–1949  
Belgian playwright and poet

Hardly has he [the Dung Beetle] begun, by dint of great efforts of his forehead and his bandy legs, to roll the toothsome sphere backwards, when an indelicate colleague, who has been awaiting the completion of the work, appears and hypocritically offers his services. The other well knows that, in this case, help and services, besides being quite unnecessary, will soon mean partition and dispossession; and he accepts the enforced collaboration without enthusiasm. But, so that their respective rights may be clearly marked, the lawful owner invariably retains his original place, that is to say, he pushes the ball with his forehead, whereas the compulsory guest pulls it towards him on the other side. And thus it jogs along between the two gossips, amid interminable vicissitudes, flurried falls, ludicrous tumbles, till it reaches the place chosen to receive the treasure and to become the banqueting-hall.

*Mountain Paths*

Chapter VIII (p. 84)

Methuen & Co. London, England. 1919

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

The sense of death is most in apprehension;  
And the poor beetle that we tread upon,  
In corporal sufferance finds a pang as great  
As when a giant dies.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

English poet

The beetle, panoplied in gems and gold  
A mailed angel on a battle day.

*The Complete Poetical Works of William Wordsworth*

Stanzas Written in My Pocket-Copy of Thomson's Castle of Indolence

Crowell. New York, New York, USA. 1888

## BUTTERFLY

**Ackerman, Diane** 1948–  
American writer

A hundred million monarchs migrate each year. Gliding, flapping, hitching rides on thermals like any hawk or eagle, they fly as far as four thousand miles and as high as two thousand feet, rivaling the great animal migrations of Africa, the flocking of birds across North America.

*The Rarest of the Rare: Vanishing Animals, Timeless Worlds*

The Winter Palace of Monarchs (p. 132)

Vintage Books. New York, New York, USA. 1997

**Bates, Henry Walter** 1825–92  
English naturalist and explorer

...the study of butterflies – creatures selected as the types of airiness and frivolity – instead of being despised, will some day be valued as one of the most important branches of biological science.

*The Naturalist on the River Amazons* (Volume 2)

Chapter V (p. 346)

John Murray. London, England. 1863

**Borland, Hal** 1900–78  
American writer

...the emergence of a chick from an egg, in itself a marvelous thing, is simplicity itself, for the chick is a miniature of the creature that laid the egg. Here we have a totally different event. A butterfly laid an egg. That egg hatched into a caterpillar with no hint of flight or winged beauty. That caterpillar retired into a cocoon or a chrysalis, and out of that house of change now comes a fragile-winged creature of the air, a living bit of sheer beauty and imagination.

*The Enduring Pattern*

Life – The Pygmy Hordes: Butterflies and Moths (p. 159)

Simon & Schuster. New York, New York, USA. 1959

**Brower, David** 1912–2000  
American environmentalist

“Butterfly is a stupid word,” the Spaniard said; “maripose is so much more beautiful.”

“I much prefer farfalla,” the Italian countered. The woman from Paris said, “papillon, of course.” The Japanese suggested, “I like the softness of chocho-san.” The German bristled and demanded, “What’s the matter with schmetterling?”

*For Earth's Sake: The Life and Times of David Brower*

Chapter I, Butterflies (p. 13)

Peregrine Smith Books, Salt Lake City, Utah, USA. 1990

**Dyson, Freeman J.** 1923–  
American physicist and educator

To me the most astounding fact in the universe, even more astounding than the flight of the Monarch butterfly, is the power of mind that drives my fingers as I write these words. Somehow, by natural processes still totally mysterious, a million butterfly brains working together in a human skull have the power to dream, to calculate, to see and to hear, to speak and to listen, to translate thoughts and feelings into marks on paper which other brains can interpret. Mind, through the long course of biological evolution, has established itself as a moving force in our little corner of the universe. Here on this small planet, mind has infiltrated matter and has taken control.

*Infinite in All Directions*

Part One, Chapter Six (p. 118)

HarperCollins Publishers, Inc. New York, New York, USA. 1988

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

Repentance is the weight  
Of indigested meals eat yesterday.  
'Tis for large animals that gorge on prey,  
Not for a honey-sipping butterfly.

**Jaeger, Benedict** 1789–?  
Austrian born American entomologist

Many to whom the Book of Nature is a sealed book have  
been enticed, by the splendor of their [butterfly] color and  
their fairy-like motions, to hunt for them in meadows,  
fields, and woods, to place them as ornaments in rich  
frame-work upon the walls of their parlors, or to nour-  
ish and raise them with the greatest care in their rooms,  
that they may not lose a single hair of their magnificent,  
variegated dress.

*The Life of North American Insects*

Preface (p. xii)

Harper & Brothers Publishers. New York, New York, USA. 1859

**Kirby, William F.** 1759–1850  
English clergyman and entomologist

The butterfly, adorned with every beauty and every  
grace, borne by radiant wings through the fields of ether,  
and extracting nectar from every flower, gives us some

idea of the blessed inhabitants of happier worlds, of  
angels, and of the spirits of the just arrived at their state  
of perfection.

*An Introduction to Entomology; or, Elements of the Natural History of  
Insects*

Letter I (p. 6)

Longman, Green, Longman & Roberts. London, England. 1860

**Levi, Primo** 1919–87  
Italian writer and chemist

The butterfly's attractiveness derives not only from col-  
ors and symmetry: deeper motives contribute to it. We  
would not think them so beautiful if they did not fly, or if  
they flew straight and briskly like bees, or if they stung,  
or above all if they did not enact the perturbing mystery  
of metamorphosis: the latter assumes in our eyes the  
value of a badly decoded message, a symbol, a sign.

*Other People's Trades*

Butterflies

Summit Books. New York, New York, USA. 1989

**Shelley, Percy Bysshe** 1792–1822  
English poet

What hand would crush the silken-winged fly,  
The youngest of inconstant April's minions,  
Because it cannot climb the purest sky,  
Where the swan sings, amid the sun's dominions?  
Not thine.

*The Complete Poetical Works*

To Mary (On Her Objecting to the Following Poem, Upon the Score of  
its Containing No Human Interest)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**Wilcox, Ella Wheeler** 1850–1919  
American poet and journalist

I happened one night in my travels  
To stray into Butterfly Vale,  
Where my wondering eyes beheld butterflies  
With wings that were wide as a sail  
They lived in such houses of grandeur,  
Their days were successions of joys  
And the very last fad these butterflies had  
Was making collections of boys.

*The Butterflies' Fad*

*The New York Times*, 16 June, 1895 (p. 27)

## CATERPILLAR

**Browning, Robert** 1812–89  
English poet

Born, bred, with just one instinct – that of growth:

*The Poetical Works of Robert Browning* (Volume 2)

The Red Cotton Nightcap Country (p. 422)

The Macmillan Co. New York, New York, USA. 1902

**Black, William** 1841–98  
Novelist

“Oh, Jim – a cockroach!” “Very well; it isn’t a kangaroo, is it?” said he, sulkily. “Besides, my revolver isn’t loaded.” “Such a beast! such a monster!”

“Why don’t you get into your hammock, then, instead of sitting there?”

“I’m going directly,” she said; for indeed her dread of these huge insects was such that they had had to rig up a hammock for her in her cabin.

*Yolande: A Novel*

Chapter XII (p. 115)

Harper & Brothers Publishers. New York, New York, USA. 1905

**Caudell, A. N.**

No biographical data available

Cockroaches thrive in British Columbia, as they do almost everywhere. The common species seems to be the German roach.... They are in everything, even the food. On this trip I had them served to me in three different styles, alive in strawberries, a la carte with fried fish, and baked in a biscuit

Notes on Some Orthoptera from British Columbia

*Entomological News and Proceedings of the Entomological Section of the Academy of Natural Sciences*, Volume XV, Number 2, February, 1904 (p. 63)

**Kay (Fictional character)**

I’ve just been down the gullet of an interstellar cockroach. That’s one of a hundred memories I don’t want.

*Men in Black*

Film (1997)

**Macleod, Norman** 1812–72

Scottish clergyman

...the name of cockroach is a double absurdity, as it is neither a cock nor a roach. The name, indeed, is a contraction of a Lingua-Franca word, which signifies light-shunner, and is therefore peculiarly appropriate to the darkness-loving cockroach.

*Good Words*

Only A Cockroach (p. 630)

Isbister & Co. London, England. 1879

**Walton, Izaak** 1593–1683

English writer

And, yet, I will exercise your promised patience by saying a little of the caterpillar, or the palmer-fly or worm; that by them you may guess what a work it were, in a discourse, but to run over those very many flies, worms, and little living creatures with which the sun and summer adorn and beautify the river-banks and meadows, both for the recreation and contemplation of us anglers; pleasures which, I think, I myself enjoy more than any other man that is not of my profession.

*The Complete Angler*

The Fourth Day (p. 92)

T.N. Foulis. London, England. 1913

## CHIGGER

**Hungerford, H. B.**

American entomologist

The thing called a chigger

Is really no bigger

Than the smaller end of a pin.

But the bump that it raises

Just itches like blazes

And that’s where the rub set in.

In Tyler A. Woolley

*Acarology: Mites and Human Welfare*

Chapter 4 (p. 41)

John Wiley & Sons, Inc. New York, New York, USA. 1988

## COCKROACH

**Eliot, T. S. (Thomas Stearns)** 1888–1965

American expatriate poet and playwright

She thinks that the cockroaches just need employment  
To prevent them from idle and wanton destruction.

So she’s formed from that lot of disorderly louts,

A troop of well-disciplined helpful boy scouts,

With a purpose in life and a good to do –

And she’s even created a Beetle Tattoo.

*The Collected Poems and Plays 1909–1950*

The Old Gumbie Cat (p. 151)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

**Janowitz, Tama** 1957–

American novelist

Long after the bomb falls and you and your good deeds  
are gone, cockroaches will still be here, prowling the  
street like armored cars.

*Slaves of New York*

Modern Saint #271 (pp. 2–3)

Simon & Schuster. New York, New York, USA. 1991

**Kidd, Sue Monk** 1948–

American writer

A roach is a creature no one can love, but you cannot kill  
it. It will go on and on and on. Just try to get rid of it.

*The Secret Life of Bees*

Chapter Nine (p. 175)

The Viking Press. New York, New York, USA. 2002

**Krutch, Joseph Wood** 1893–1970

American naturalist, conservationist, and writer

The cockroach and the birds were both here long before  
we were. Both could get along very well without us,

although it is perhaps significant that of the two the cockroach would miss us more.

*The Twelve Seasons*

November (pp. 118–119)

W. Sloane Associates. New York, New York, USA. 1949

**Marquis, Don** 1878–1937

American newspaperman, poet, and playwright

one thing the human  
bean never seems to  
get into it is the  
fact that humans  
appear just as unnecessary to  
cockroaches as cockroaches  
do to humans

*the lives and time of archy & mehitabel*

peace – at a price (p. 195)

Doubleday Doran & Co. Garden City, New York, USA. 1934

a good many  
failures are happy because they don't realize it many a  
cockroach believes  
himself as beautiful  
as a butterfly

have a heart o have a heart and let them dream on

*the lives and times of archy & mehitabel*

archygrams (p. 259)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

## CRICKET

**Marquis, Don** 1878–1937

American newspaperman, poet, and playwright

i can t see for the life of me what there is  
about crickets that makes people  
call them jolly they  
are the parrots of the insect race  
crying cheer up cheer up  
cheer up over and  
over again till you want to  
swat them

*the lives and time of archy & mehitabel*

the cheerful cricket (p. 139)

Doubleday Doran & Co. Garden City, New York, USA. 1934

**Riley, James Whitcomb** 1849–1916

American poet

But thou, O cricket, with thy roundelay,  
Shalt laugh them all to scorn! So wilt thou, pray  
Trill me thy glad song o'er and o'er again:  
In thy sweet prattle, since it sings the lone  
Heart home again.

*The Complete Works of James Whitcomb Riley* (Volume 3)

To the Cricket

P.F. Collier & Son, Company. New York, New York, USA. 1916

## DAMSEL FLY

**Barbault, Anna Laetitia** 1743–1825

English poet

Lo! the bright train their radiant wings unfold,  
With silver fring'd and freckl'd o'er with gold.  
On the gay bosom of some fragrant flower  
They idly fluttering live their little hour;  
Their life all pleasure, and their task all play,  
All spring their age, and sunshine all their day.

*Poems*

To Mrs. Priestley, with some Drawings of Birds and Insects (p. 46)

Printed for Joseph Johnson. London, England. 1773

**Moore, Thomas** 1779–1852

Irish poet

The beautiful blue-damsel flies  
That flutter'd round the jasmine stems,  
Like winged flowers or flying gems...

*The Poetical Works of Thomas Moore*

Paradise and the Pearl, l. 409–11

Lee & Shepard. Boston, Massachusetts, USA. 1873

## DEATH'S HEADED SPHINX

**Poe, Edgar Allan** 1809–49

American short story writer and poet

...let me read to you a schoolboy account of the genus *Sphinx*, of the family *Crepuscularia* of the order *Lepidoptera*, of the class of *Insecta* – or insects. The account runs thus:

'Four membranous wings covered with little colored scales of metallic appearance; mouth forming a rolled proboscis, produced by an elongation of the jaws, upon the sides of which are found the rudiments of mandibles and downy palpi; the inferior wings retained to the superior by a stiff hair; antennae in the form of an elongated club, prismatic; abdomen pointed, The Death's-headed Sphinx has occasioned much terror among the vulgar, at times, by the melancholy kind of cry which it utters, and the insignia of death which it wears upon its corslet.'

*The Works of Edgar Allan Poe* Volume 5

*The Sphinx* (pp. 31–32)

P.F. Colier & Sons. New York, New York, USA. 1914

## DRAGON FLY

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Clouds of insects danced and buzzed in the golden autumn light, and the air was full of the piping of the song-birds. Long, glinting dragonflies shot across the path, or hung tremulous with gauzy wings and gleaming bodies.

*The White Company*  
Chapter XI (p. 90)  
William Morrow & Company. New York, New York, USA. 1988

**Florian, Douglas** 1950–  
American writer and illustrator

I am the dragon,  
The demon of skies.  
Behold my bold  
Enormous eyes.  
I sweep  
I swoop  
I terrorize.  
For lunch I munch  
On flies and bees.  
Mosquitoes with  
My feet I seize.  
I am the dragon:  
Down on your knees!

*Insectlopedia: Poems and Paintings*  
The Dragonfly  
Harcourt Brace. San Diego, California, USA. 1998

**Jefferies, Richard** 1848–87  
English nature writer

On the wings of the dragon fly as he hovers an instant before he darts there is a prismatic gleam. These wing textures are even more delicate than the minute filaments on a swallow's quill, more delicate than the pollen of a flower.

The Pageant of Summer  
*Eclectic Magazine of Foreign Literature, Science, and Art*, Volume XXXVIII, Number 2, August, 1883 (p. 146)

## EARWIG

**Allen, Grant** 1848–99  
Canadian-born writer

Because he is small, he shall not be insulted with impunity. I see a helpless animal unduly exposed to vile detractions, and openly pursued with undeserved asperity. The sight arouses all the latent chivalry of my nature. I will gird on my sword to do battle for the right, and rush in, a scientific St. George, in defense of the innocent but persecuted earwig.

*Flashlights on Nature*  
Chapter VI (p. 122)  
Doubleday, Page & Co. New York, New York, USA. 1905

## FIREFLY

**Beebe, William** 1877–1962  
American ornithologist

A male firefly blazes his trail through the woods. At last he perceives a dim inconspicuous gleam, a mere spark,

but it is his LANDING BEACON and he levels off and steers straight for the wingless mate, who has laboriously climbed to the top of a fern and there hung out her signal...

*High Jungle*  
Chapter XXI (p. 335)  
Duell, Sloan & Pearce. New York, New York, USA. 1949

**Frost, Robert** 1874–1963  
American poet

Here come real stars to fill the upper skies,  
And here on earth come emulating flies,  
That though they never equal stars in size,  
(And they were never really stars at heart)  
Achieve at times a very star-like start.

*Complete Poems of Robert Frost*  
Fireflies in the Garden  
Henry Holt & Company. New York, New York, USA. 1949

**Melville, Herman** 1819–91  
American novelist

A French naturalist maintains, that the nocturnal radiance of the fire-fly is purposely intended as an attraction to the opposite sex; that the artful insect illuminates its body for a beacon to love. Thus: perched upon the edge of a leaf, and waiting the approach of her Leander, who comes buffeting with his wings the aroma of the flowers, some insect Hero may show a torch to her gossamer gallant.

*Mardi, and a Voyage Thither*  
Chapter XXXVIII (p. 109)  
The St. Botolph Society  
Boston, Massachusetts, USA. 1923

**Nash, Ogden** 1902–71  
American writer of humorous poetry

The firefly's flame  
Is something for which science has no name.  
I can think of nothing eerier  
Than flying around with an unidentified  
red glow on a person's posterior.

*Verses from 1929 On*  
The Firefly  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

## FLEA

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

It iz impossible to do ennything well with a flea on you, except sware, and fleas aint afraid ov that; the only way iz tew quit bizzness ov aul kinds and hunt for the flea, and when you have found him, he ain't thare. Thiz iz one ov the flea mysterys, the fackulty they hav ov being entirely lost jist as soon as you hav found them.

*Josh Billings' Wit and Humor*  
The Flea (p. 112)  
George Routledge & Sons. London, England. 1874

**de Balzac, Honoré** 1799–1850  
French novelist

Therefore, before all things, it is necessary to verify three serious things – viz., if the flea be a male, if it be female, or if it be a virgin; supposing it to be a virgin, which is extremely rare, since these beasts have no morals, are all wild hussies, and yield to the first seducer who comes, you will seize her hinder feet, and drawing them under her little caparison you must bind them with one of her hairs, and carry it to the superior, who will decide upon its fate after having consulted the chapter.

Translated by Gustave Doré

*Droll Stories: Collected from the Abbeys of Touraine*

The Merry Tattle of the Nuns of Poissy (p. 265)

John Camden Hotten. London, England. 1934

**Orrington, Julian D.**

No biographical data available

To the zoologist, fleas present one of the most marvelous examples of perfect adaptation to a highly specialized environment anywhere to be found. To the physician he means the dreaded bubonic plague; to the historian, the awful pandemics of this black death that have shaped the destinies of millions of people. To the average person they are some sort of tiny creatures, details unknown, that infest beggars and domestic animals; to the farmer, a serious pest on his livestock; while to the dog they represent an ever-present torment, which no amount of clawing, biting, and rolling over The Flea – Mighty Morician

*The Nature Magazine*, Volume 39, Number 4, April, 1946 (p. 221)

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

Nelson would have been afraid of ten thousand fleas, but a flea wouldn't be afraid of ten thousand Nelsons.

*Collected Tales, Sketches, Speeches, & Essays 1891–1910*

More Maxims of Mark (p. 945)

The Library of America. New York, New York, USA. 1992

Consider the flea! Incomparably the bravest of all the creatures of God, if ignorance of fear were courage.

*Pudd'nhead Wilson*

Chapter XII (p. 115)

Harper & Brothers Publishers. New York, New York, USA. 1904

**Young, Roland** 1887–1953

English actor

And here's the happy bounding flea –  
You cannot tell the he from she.  
The sexes look alike you see;  
But she can tell, and so can he.

*Not for Children*

The Flea

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

**FLY**

**Doane, R. W.**

No biographical data available

A few of them [flies] were nice things to have around, to make things seem homelike.... Those that were knocked into the coffee or the cream could be fished out; those that went into the soup or the hash were never missed.

*Insects and Disease*

Chapter V (p. 57)

Henry Holt & Company. New York, New York, USA. 1910

No biographical data available

O hideous little bat, the size of snot,

With polyhedral eye and shabby clothes,

To populate the stinking cat you walk

The promontory of the dead man's nose,

Climb with the fine leg of a Duncan-Phyfe

The smoking mountains of my food

And in a comic mood

In mid-air take to bed a wife.

*The Wild Card: Selected Poems, Early & Late*

The Fly

University of Illinois Press. Urbana, Illinois, USA. 1998

**Walton, Izaak** 1593–1683  
English writer

You are to know, that there are so many sorts of flies as there be of fruits: I will name you but some of them; as the dun-fly, the stone-fly, the red-fly, the moor-fly, the tawny-fly, the shell-fly, the cloudy or blackish-fly, the flag-fly, the vine-fly; there be of flies, caterpillars, and canker-flies, and bear-flies; and indeed too many either for me to name, or for you to remember. And their breeding is so various and wonderful, that I might easily amaze myself, and tire you in a relation of them.

*The Complete Angler*  
The Fourth Day (p. 92)  
T.N. Foulis. London, England. 1913

## GNAT

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

Where is it that she [Nature] has united so many senses as in the gnat? – not to speak of creatures that might be mentioned of still smaller size – Where, I say, has she found room to place in it the organs of sight? Where has she centred the sense of taste? Where has she inserted the power of smell? And where, too, has she implanted that sharp shrill voice of the creature, so utterly disproportioned to the smallness of its body? With what astonishing subtlety has she united the wings to the trunk, elongated the joints of the legs, framed that long, craving concavity for a belly, and then inflamed the animal with an insatiate thirst for blood, that of man more especially!

Translated by John Bostock and H.T. Riley  
*The Natural History of Pliny*  
Book XI (p. 2)  
George Bell & Sons. London, England. 1892

**Rudzewicz, Eugene**  
American educator and poet

Gnats are gnumerious  
But small.  
We hardly notice them  
At all.

In John Gardner  
*A Child's Bestiary*  
The Gnat  
Alfred A. Knopf. New York, New York, USA. 1977

## GRASSHOPPER

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

The Grasshopper tribe has its bursts of gladness; it has moreover the advantage of being able to express them with a sound, the simple satisfaction of the artist.

Translated by Alexander Teixeira de Mattos  
*The Life of the Grasshopper*  
Chapter XIII (p. 271)  
Dodd, Mead & Co. New York, New York, USA. 1920

**Lindsay, Vachel** 1879–1931  
American poet

The Grasshopper, the grasshopper,  
I will explain to you: He is the Brownies' racehorse,  
The fairies' Kangaroo.

*Collected Poems*  
The Grasshopper  
The Macmillan Company. New York, New York, USA. 1925

**Lovelace, Richard** 1618–58  
English cavalier and poet

O thou that swing'st upon the waving haire  
Of some well-filled Oaten Beard,  
Drunke ev'ry night with a Delicious teare,  
Dropt thee from Heav'n, where now th'art!  
The joys of Earth and Ayre are thine intire,  
That with thy feet and wings dost hop and flye;  
And when thy Poppy workes, thou dost retire  
To thy carv'd Acorn-bed to lye.

*The Poems of Richard Lovelace*  
Grasse-Hopper (p. 38)  
The Clarendon Press. Oxford, England. 1930

## HORNET

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

The hornet is an inflamibel bugger, sudden in hiz impresshuns and hasty in hiz conclusion, or end. Hiz natral disposishun iz a warm cross between red pepper in the pod and fusil oil, and hiz moral bias iz, "git out ov mi way."

*Josh Billings' Wit and Humor*  
The Hornet (p. 103)  
George Routledge & Sons. London, England. 1874

## KATYDID

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

Thou are a female, Katydid!  
I know it by the trill  
That quivers through thy piercing notes  
So petulant and shrill.  
I think there is a knot of you  
Beneath the hollow tree,  
A knot of spinster Katydids –  
Do Katydids drink tea?

*The Complete Poetical Works of Oliver Wendell Holmes*  
To an Insect  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

**Riley, James Whitcomb** 1849–1916  
American poet

Sometimes I keep  
From going to sleep,  
To hear the katydids “cheep-cheep!”  
And think they say  
Their prayer that way;  
But katydids don’t have to pray!  
*The Complete Works of James Whitcomb Riley*  
Volume 8, The Katydid  
P.F. Collier & Son, Company. New York, New York, USA. 1916

## LADY BIRD

**Hurdis, James** 1763–1801  
British poet

SIR JOHN: What ye look at?  
CECILIA: A little animal, that round my glove,  
And up and down to ev’ry finger’s tip,  
Has travell’d merrily, and travels still,  
Tho’ it has wings to fly. What its name is  
With learned men I know not. Simple folks  
Call it the Lady-bird.  
*Sir Thomas More: A Tragedy*  
Act 1, Scene Sir Thomas More’s Garden (p. 19)  
Printed for J. Johnson. London, England. 1792

## LIGHTNING BUG

### Author undetermined

The lightning bug seems brilliant  
But he has not any mind  
For he stumbles through existence  
With his head light on behind.  
*Entomological News*, Volume 16, Number 3, 1905 (p. 88)

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

a lightning bug got  
in here the other night a  
regular hick from the real country he was  
awful proud of himself you  
city insects may think  
you are some punkins  
but I don t see any  
of you flashing in the dark  
like we do in  
the country  
*the lives and time of archy & mehitabel*  
the flattered lightning bug (p. 62)  
Doubleday Doran & Co. Garden City, New York, USA. 1934

## LOCUST

**Milton, John** 1608–74  
English poet

As when the potent Rod  
Of Amrams Son in Egypt’s evil day  
Wav’d round the Coast, up call’d a pitchy cloud  
Of Locusts, warping on the Eastern Wind,  
That ore the Realm of impious Pharaoh hung  
Like Night, and darkened all the Land of Nile  
*Paradise Lost*  
Book 1

## LOUSE

**Nicolle, Charles** 1866–1936  
French bacteriologist

Man carries on his skin a parasite, the louse. Civilization rids him of it. Should man regress, should he allow himself to resemble a primitive beast, the louse begins to multiply again and treats man as he deserves, as a brute beast.  
*Nobel Lectures, Physiology or Medicine 1922–1941*  
Investigations on Typhus  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1967

**Marquis, Don** 1878–1937  
American newspaperman, poet, and playwright

a louse i  
used to know  
told me that  
millionaires and  
bums tasted  
about alike  
to him.  
*the lives and times of archy and mehitabel*  
random thoughts by archie (p. 224)  
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1933

## MOSQUITO

**Allen, Grant** 1848–99  
Canadian-born writer

...that sultry horn is almost more annoying than the bite which it precedes. You lie coiled within your mosquito-curtains, wooing sweet sleep with appropriate reflections, when suddenly, by your ear, comes that still small voice, so vastly more pungent and more irritating than the voice of conscience. You light a candle, and proceed to hunt for the unwelcome intruder. As if by magic, as you strike your match, that mosquito disappears, and you look in vain through every fold and cranny of the thin

gauze curtains. At last you give it up, and lie down again, when straightway, “z-z-z-z,” the humming at your ear commences once more, and you begin the unequal contest all over again. It is a war of extermination on either side you thirst for her life, and she thirsts for your blood. No peace is possible till one or other combatant is finally satisfied.

*Flashlights on Nature*

Chapter X (p. 250)

Doubleday, Page & Co. New York, New York, USA. 1905

### Beaver, Wilfred

No biographical data available

Mosquitoes are like little children – the moment they stop making noises you know they’re getting into something.

*Quote, the Weekly Digest*, November 10, 1968 (p. 378)

### Billings, Josh (Henry Wheeler Shaw) 1818–85

American writer and humorist

The philosophers tell us that the muskeeters who can’t sing won’t bight; this information may be ov grate use to science, but aint worth mutch to a phellow in a hot nite whare muskeeters are plenty.

*Josh Billings’ Wit and Humor*

The Cursid Musketo (p. 101 )

George Routledge & Sons. London, England. 1874

In the dark, still nite, when everything iz az noizeless az a pair of empty slippers, to hear one at the further end ov the room slowly but surely working hiz way up to yu, singing that same hot old sissing tune ov theirs, and harkmg to feel the exackt spot on yure face whare they intend tew lokate, iz simply premeditated sorrow tew me; i had rather look forward to the time when an elephant waz going tew step onto me.

*Josh Billings’ Wit and Humor*

The Cursid Musketo (p. 102)

George Routledge & Sons. London, England. 1874

### Brues, Charles Thomas 1879–1955

American entomologist

No other insects can compete with the mosquitoes as persistent annoyers of man, and none, with the possible exception of the rat-flea, hold over him such power for evil.

*Insects and Human Welfare*

Chapter I (p. 5)

Harvard University Press. Cambridge, England. 1920

### Cuppy, Will 1884–1929

American humorist and critic

I am often asked why Mosquitoes hum loudest when close to one’s ear. I don’t know.

*How to Attract the Wombat*

The Mosquito (fn 2, p. 146)

Rinehart & Company, Inc. New York, New York, USA. 1949

### Pallister, William Hales 1877–1946

Canadian physician

The whole of Africa is our domain,  
Millions of men have fought us, few remain.  
We rule the lowlands of the entire earth,  
The fertile lands, of far the greatest worth;  
Our swarms produce their billions as we wish,  
The world belongs to us, and to the fish.

*Poems of Science*

De Ipsa Natura, Moss Beginnings, Misquitoes (p. 219)

Playford Press. New York, New York, USA. 1931

## MOTH

### Carlyle, Thomas 1795–1881

English historian and essayist

But see! a wandering Night-moth enters,  
Allured by taper gleaming bright.  
What passions in her small heart whirling,  
Hopes boundless, adoration, dread;  
At length her tiny pinions twirling,  
She darts, and – puff! – the moth is dead.  
In Rodger L. Tarr and Flemming McClelland (eds.)  
*The Collected Poems of Thomas and Jane Welsh Carlyle*  
Tragedy of the Night-Moth, Stanza 2, (p. 1)  
The Penkevill Publishing Company. Greenwood, Florida, USA. 1986

### Hooper, Judith

American biology writer

Some might say that butterflies are Lepidoptera that people like while moths are ones they don’t like...

*Of Moths and Men: The Untold Story of Science and the Peppered Moth*  
Chapter 1 (p. 3)

W.W. Norton & Company, Inc. New York, New York, USA. 2002

### Marquis, Don 1878–1937

American newspaperman, poet, and playwright

i was talking to a moth  
the other evening  
he was trying to break into  
an electric light bulb  
and fry himself on the wires

why do you fellows  
pull this stunt i ask him

fire is beautiful  
and we know that if we get too close it will kill us  
but what does that matter  
it is better to be happy  
for a moment  
and be burned up with beauty

than to live a long time  
and be bored all the while  
*the lives and time of archy & mehitabel*  
the lesson of the moth (p. 95)

Doubleday Doran & Co. Garden City, New York, USA. 1934

**Nabokov, Vladimir Vladimirovich** 1899–1977  
Russian-born American novelist

He told me about the odors of butterflies – musk and vanilla; about the voices of butterflies; about the piercing sound given out by the monstrous caterpillar of a Malayan hawkmoth, an improvement on the mouselike squeak of our Death's Head moth; about the small resonant tympanum of certain tiger moths; about the cunning butterfly in the Brazilian forest which imitates the whir of a local bird. He told me about the incredible artistic wit of mimetic disguise...

*Nabokov's Butterflies: Unpublished and Uncollected Writings The Gift* (p. 178)  
Bacon Press. Boston, Massachusetts, USA. 2000

**Sharp, David** 1840–1922  
English entomologist

The only definition that can be given of Heterocera is the practical one that all Lepidoptera that are not butterflies are Heterocera.

*Cambridge Natural History* (Volume 6)  
Chapter VI, Section II (p. 366)  
Macmillan & Company Ltd. London, England. 1901

**Wilson, Edward O.** 1929–  
American biologist and writer

The three-toed sloth feeds on leaves high in the canopy of the lowland forests through large portions of South and Central America. Within its fur live tiny moths, the species *Cryptoses choloepi*, found nowhere else on Earth. When a sloth descends to the forest to defecate (once a week), female moths leave the fur briefly to deposit their eggs on the fresh dung. The emerging caterpillars build nests of silk and start to feed. Three weeks later they complete their development by turning into adult moths, and then fly up into the canopy in search of sloths. By living directly on the bodies of the sloths, the adult *Cryptoses* assure their offspring first crack at the nutrient-rich excrement and a competitive advantage over the myriad of other coprophages.

*Biophilia*  
Bernhardsdorp (p. 9)  
Harvard University Press. Cambridge, Massachusetts. 1984

## PRAYING MANTIS

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

The Mantis is fierce as a tigress, cruel as an ogress.  
Translated by Alexander Teixeira de Mattos

*Fabre's Book of Insects*  
Chapter IV (p. 45)  
Dodd, Mead & Co. New York, New York, USA. 1945

**Florian, Douglas** 1950–  
American writer and illustrator

Upon a twig  
I sit and pray  
For something big  
To wend my may:  
A caterpillar,  
Moth,  
Or bee –  
I swallow them  
Religiously.  
*Insectlopedia: Poems and Paintings*  
The Praying Mantis  
Harcourt Brace. San Diego, California, USA. 1998

## TERMITE

**Capelo, Hermenegildo** 1841–1917  
Portuguese explorer

**Ivens, Roberto** 1850–98  
Portuguese explorer

The termites, ever hard at work, were reconstructing their habitations. Strange *Arachnidios*, such as the silk-weaving spider, *ma-vuvi* (*Nephita bragantina*) were swinging from spray to spray, fastening them together with their delicate yellow webs. The active and obscure *Xylophages* were mining to the very heart the knotted trunks of ancient trees.

*From Benguella to the Territory of Yucca* (Volume 2)  
Entomology (p. 30)  
Sampson Low, Marston, Searle, & Rivington.. London, England. 1882

**Nash, Ogden** 1902–71  
American writer of humorous poetry

Some primal termite knocked on wood  
And tasted it, and found it good,  
And that is why your Cousin May  
Fell through the parlor floor today.

*Verses from 1929 On*  
The Termite  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**Thomas, Lewis** 1913–93  
American physician and biologist

When you consider the size of an individual termite, photographed standing alongside his nest, he ranks with the New Yorker and shows a better sense of organization than a resident of Los Angeles.

*The Lives of a Cell: Notes of a Biology Watcher*  
Living Language (p. 133)  
The Viking Press. New York, New York, USA. 1974

## WALKING STICK

**Florian, Douglas** 1950–  
American writer and illustrator

The walkingstick is thin, not thick,  
And has a disappearing trick:

By looking like a twig or stalk,  
It lives another day to walk.

*Insectlopedia: Poems and Paintings*

The Walkingstick

Harcourt Brace. San Diego, California, USA. 1998

## WASP

**Field, Eugene** 1850–95

American poet and journalist

See the wasp. He has pretty yellow stripes around his  
body, and a darning needle in his tail. If you will pat the  
wasp upon the tail we will give you a nice picture book.

*The Complete Tribune Primer* (p. 47)

The Mutual Book Company. Boston, Massachusetts, USA. 1901

**Gay, John** 1685–1732

English poet and dramatist

Of all the plagues that heav'n hath sent,  
A wasp is most impertinent!

*The Poetical Works of John Gay* (Volume 2)

Fable VIII, Volume the First, The Lady and the Wasp, l. 29–30

Lawrence & Bullen. London, England. 1893

**Jefferies, Richard** 1848–87

English nature writer

Fanning so swiftly, the wasp's wings are but just visible  
as he passes; did he pause, the light would be apparent  
through their texture.

The Pageant of Summer

*Eclectic Magazine of Foreign Literature, Science, and Art*, Volume

XXXVIII, Number 2, August, 1883 (p. 146)

**Sexton, Anne** 1928–74

American poet and writer

A red-hot needle  
hangs out of him, he steers by it  
as if it were a rudder, he  
would get in the house any way he could  
and then he would bounce from window  
to ceiling, buzzing and looking for you.

In Linda Gray Sexton (ed.)

*45 Mercy Street*

Wasp

Houghton Mifflin Company. Boston, Massachusetts, USA. 1976

**Topsell, Edward** 1572–1625?

English divine and writer

If you will have the endowments of his minde described,  
he is a political and flocking or regal creature, subject to  
Monarchy, laborious, a lover of his young, and a lover of  
his neighbor, of a very quarrelsome disposition, and very  
prone to cholera.

*The History of Four-Footed Beasts and Serpents*

The Theater of Insects

Chapter I (p. 921)

G. Sawbridge. London, England. 1658

## WEEVIL

**Florian, Douglas** 1950–

American writer and illustrator

We are weevils.

We are evil.

We've aggrieved

Since time Primeval.

*Insectlopedia: Poems and Paintings*

The Weevils

Harcourt Brace. San Diego, California, USA. 1998

## ANIMAL: MAMMAL

**Jefferson, Thomas** 1743–1826

3rd president of the USA

The term *Mammal* has no exact equivalent in the true  
vernacular of any modern language, the word itself, like  
its equivalents, the French *Mammifere* and the German  
*Saugetheir*, being entirely artificial.

*A History of Land Mammals in the Western Hemisphere*

Chapter I (p. 1)

The Macmillan Co. New York, New York, USA. 1913

## AARD-VARK

### Author undetermined

...it's aardvark, but it pays well.

In John S. Crosbie

*Crosbie's Dictionary of Puns* (p. 5)

**Sanderson, Ivan T.** 1911–73

Scottish naturalist and writer

[The aard-vark] stands quite alone in the mammalian tree  
of life, like a single green leaf caught adventitiously in a  
spider's web.

*Living Mammals of the World*

The Aard-Vark (p. 220)

Hanover House. Garden City, New York, USA. nd

## ANTELOPE

**Arnold, Sir Edwin** 1832–1904

English poet and journalist

Antelopes, pied and spotted; antelopes

Like great white bulls and cows; black antelopes

Horned as with spears; and one, purple with cream

Having striped shanks, dropped flanks, and ass's tail

And four soft horns.

*The Voyage of Ithobal*

The Third Day

John Murray. London, England. 1901

**APE**

**Broca, Paul** 1824–80  
French surgeon and anthropologist

I would rather be a transformed ape than a degenerate son of Adam.

In Carl Sagan

*Broca's Brain: Reflections on the Romance of Science*  
Part I, Chapter 1 (p. 6)  
Random House, Inc. New York, New York, USA. 1979

**Collins, Mortimer** 1827–76  
English Writer and Novelist

There was an ape in the days that were earlier;  
Centuries passed, and his hair became curlier;  
Centuries more gave a thumb to his wrist –  
Then he was MAN – and a Positivist.

In Tom Taylor (ed.)

*Pen Sketches by a Vanished Hand* (Volume I)  
Memoir (p. xv)  
Richard Bentley & Son. London, England. 1879

**Ennius, Quintus** c 239 BC–c 169 BC  
Father of Roman Poetry

*Simia, quam similis, turpissima bestia, nobis!*

[The ape, vilest of beast, how like us!]

In Cicero

*De Natura Deorum*  
Book I, 35

**Huxley, Thomas Henry** 1825–95  
English biologist

If you tell me that an Ape differs from a Man because the latter has a soul and the ape has not, I can only say it may be so; but I should uncommonly like to know how [you know] either that the ape has not one or that the man

In Leonard Huxley

*Life and Letters of Thomas Henry Huxley*  
Chapter XVII (p. 262)  
D. Appleton & Co. New York, New York, USA. 1916

**Young, Roland** 1887–1953  
English actor

The sacred ape, now, children, see.  
He's searching for the modest flea.  
If he should turn around we'd find  
He has no hair on his behind.

*Not for Children*

The Ape

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

**ARMADILLO**

**Nash, Ogden** 1902–71  
American writer of humorous poetry

The armadillo lives inside  
A corrugated plated hide.

Below the border this useful creature  
Of tidy kitchens use a feature,  
For housewives use an armadillo  
To scour their pots, instead of Brillo.

*Everyone but Thee and Me*

The Armadillo

Little, Brown & Company. Boston, Massachusetts, USA. 1962

**ASS**

**de Cervantes, Miguel** 1547–1616  
Spanish novelist, playwright, and poet

... the ass ... will carry the load, but not a double load.

Translated by John Ormsby

*Great Books of the Western World* (Volume 29)

*Don Quixote*

Part II, Chapter 71 (p. 421)

Encyclopedia Britannica, Inc. Chicago, Illinois, USA. 1952

**BABOON**

**Congreve, William** 1670–1729  
English playwright and poet

Baboons and apes ridiculous we find;  
For what? For ill resembling Human-kind.

*The Works of Mr. Congreve in Two Volumes*

Baboons (p. 248)

Printed for W. Lowndes. London, England. 1787

**BAT**

**Ackerman, Diane** 1948–  
American writer

Bats eat so much food each evening that they have weighed in at as much as 50 percent heavier after one night's dining.

*The Moon by Whale Light, and Other Adventures Among Bats and*

*Crocodylians, Penguins and Whales*

Chapter 1 (p. 14)

Random House, Inc. New York, New York, USA. 1991

Suddenly, smoke billowed from underneath the bridge.  
No, not smoke but a column of bats.

*The Moon by Whale Light, and Other Adventures Among Bats and*

*Crocodylians, Penguins and Whales*

Chapter 1 (p. 59)

Random House, Inc. New York, New York, USA. 1991

Bats kept surging out, and soon four columns stretched miles across the sky. A few strays looped and fed near us, passing like shuttles through the weave of the trees. The night was noticeably free of insects, but that was no surprise. These bats would eat five thousand pounds of insects that one night alone.

*The Moon by Whale Light, and Other Adventures Among Bats and*

*Crocodylians, Penguins and Whales*

Chapter 1 (p. 59)

Random House, Inc. New York, New York, USA. 1991

**Author undetermined**

The baby bat Screamed out in fright, "Turn on the dark  
I'm afraid of the light!"

Source undetermined

**Berryman, John** 1914–72

American poet and critic

Bats have no bankers and they do not drink and cannot  
be arrested and pay no tax and, in general, bats have it  
made.

*77 Dream Songs*

No. 63 (p. 70)

Farrar, Straus & Giroux. New York, New York, USA. 1964

**Collins, William** 1721–1759

English poet

Now air is hush'd, save where the weak-eyed bat  
With short shrill shriek flits by on leathern wing.

*Thy Poetical Works of William Collins*

Ode to Evening

William Pickering. London, England. 1827

**Dawkins, Richard** 1941–

English biologist

A bat is a machine, whose internal electronics are so  
wired up that its wing muscles cause it to home in on  
insects, as an unconscious guided missile homes in on  
an aeroplane.

*The Blind Watchmaker*

Chapter 2 (p. 37)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Montgomery, James** 1771–1854

Scottish poet and journalist

What shall I call thee – bird, or beast, or neither?  
– Just what you will; I'm rather both than neither;  
Much like the season when I whirl my flight,  
The dusk of evening – neither day nor night.

*Poetical Works of James Montgomery* (Volume 2)

The Bat

Printed for Longman, Rees, Orme, Brown, Green & Longman. London,  
England. 1836

**Nash, Ogden** 1902–71

American writer of humorous poetry

Myself, I rather like the bat,  
It's not a mouse, it's not a rat.  
It has no feathers, yet has wings,  
It's quite inaudible when it sings.  
It zigzags through the evening air  
And never lands on ladies' hair,  
A fact of which men spend their lives  
Attempting to convince their wives.

*Verses from 1929 On*

The Bat

Little, Brown & Company. Boston, Massachusetts, USA. 1959

**Sexton, Anne** 1928–74

American poet and writer

His awful skin  
Stretched out by some tradesman  
is like my skin, here between my fingers,  
a kind of webbing, a kind of frog.

In Linda Gray Sexton (ed.)

*45 Mercy Street*

Bat

Houghton Mifflin Company. Boston, Massachusetts, USA. 1976

**Tabb, John Banister** 1845–1909

American poet

To his cousin the Bat  
Squeaked the envious Rat,  
"How fine to be able to fly!"  
Tittered she, "Leather wings  
Are convenient things;  
But nothing to sit on have I."

*The Poetry of Father Tabb*

Humorous Verse, An Inconvenience

Dodd, Mead & Company. New York, New York, USA. 1928

**Tennyson, Alfred (Lord)** 1809–92

English poet

And bats went round in fragrant skies,  
And wheel'd or lit the filmy shapes  
That haunt the dusk, with ermine capes  
And woolly breasts and beaded eyes...

*Alfred Tennyson's Poetical Works*

In Memoriam, Verse XCIII

Oxford University Press, Inc. London, England. 1953

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

A bat is beautifully soft and silky; I do not know any  
creature that is pleasanter to the touch or is more grateful  
for caressings, if offered in the right spirit.

*Mark Twain's Autobiography* (Volume 1)

Chapters Begun in Vienna (p. 104)

Harper & Brothers Publishers. New York, New York, USA. 1924

**BEAR****Abbey, Edward** 1927–89

American environmentalist and nature writer

If people persist in trespassing upon the grizzlies' terri-  
tory, we must accept the fact that the grizzlies, from time  
to time, will harvest a few trespassers.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 9 (p. 86)

St. Martin's Press. New York, New York, USA. 1989

**du Bartas, Guillaume de Salluste** 1544–90

French poet

Like to the bear which bringeth forth  
In the end of thirty days a shapeless birth;

But after licking, it in shape she draws,  
And by degrees she fashions out the paws,  
The head, and neck, and finally doth bring  
To a perfect beast that first deformed thing.

*Devine Weeks and Works*

**Kipling, Rudyard** 1865–1936

British writer and poet

When the Himalayan peasant meets the he-bear in his  
pride,  
He shouts to scare the monster, who will often turn aside.  
But the she-bear thus accosted rends the peasant tooth  
and nail.

For the female of the species is more deadly than the  
male.

*The Years Between*

The Female of the Species

Doubleday, Page & Co. Garden City, New York, USA. 1919

**Lear, Edward** 1812–88

English humorist and artist

There was an old person of Ware,  
Who rode on the back of a bear;  
When they ask'd, "Does it trot?" he said, "Certainly not!  
He's a Moppsikon Floppsikon bear!"

*Of Pelicans and Pussycats*

Dial Books for Young Readers. New York, New York, USA. 1990

**Muir, John** 1838–1914

American naturalist

Bears are peaceable people and mind their own business,  
instead of going about like the devil seeking whom they  
may devour.

*Our National Parks*

Chapter I (p. 28)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

In my first interview with a Sierra bear we were fright-  
ened and embarrassed, both of us, but the bear's behavior  
was better than mine. After studying his appearance as he  
stood at rest, I rushed toward him to frighten him, that I  
might study his gait in running. But, contrary to all I had  
heard about the shyness of bears, he did not run at all;  
and when I stopped short within a few steps of him, as  
he held his ground in a fighting attitude, my mistake was  
monstrously plain. I was then put on my good behavior,  
and never afterward forgot the right manners of the wil-  
derness.

*Our National Parks*

Chapter VI (p. 174)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1901

**Pope, Alexander** 1688–1744

English poet

The fur that warms a monarch, warm'd a bear.

*The Complete Poetical Works* (Volume 2)

An Essay on Man, Epistle III, l. 44

Houghton Mifflin Company. New York, New York, USA. 1903

**Robinson, Phil** 1847–1902

English journalist and writer on natural history

Bears are of three kinds – as every child knows. There is  
the Great Big Bear, the Middle-sized Bear, and the Little  
Wee Bear.

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter VIII (p. 228)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

...unless provoked to attack you, these creatures [bears]  
will not do so – so naturalists assure us. A bear's notions  
of provocation, however, are so peculiar that perhaps the  
safest rule for strangers to observe is not to let the animal  
see you. The bear never attacks any person whom it can-  
not see. This is a golden rule for persons who are in the  
habit of meeting bears to observe.

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter VIII (p. 229)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

## BEAVER

**Outwater, Alice**

American environmental engineer and writer

The beaver is utterly familiar. Forty inches long and over  
a foot upright, a beaver seems like a little person with a  
fondness for engineering.

*Water: A Natural History*

Chapter Two (p. 19)

Basic Books, Inc. New York, New York, USA. 1996

**St. John de Crevecoeur, Hector**

No biographical data available

The beavers are the philosophers of the animals; the gen-  
tlest, the most humble, the most harmless. Yet brutal Man  
kills them. I was once a witness to the destructin of one of  
their associated confederancies. I saw many of them shed  
tears, and I wept also; nor am I ashamed to confess.

*Letters from an American Farmer*

Thoughts of an American Farmer on Various Rural Subjects, III (p. 301)

Thomas Davies. London, England. 1963

## BIGHORN SHEEP

**Muir, John** 1838–1914

American naturalist

The largest of the canon animals one is likely to see  
is the wild sheep, or Rocky Mountain bighorn, a most  
admirable beast, with limbs that never fail, at home on  
the most nerve-trying precipices, acquainted with all the  
springs and passes and broken-down jumpable places  
in the sheer ribbon cliffs, bounding from crag to crag in

easy grace and confidence of strength, his great horns held high above his shoulders, wild red blood beating and hissing through every fiber of him like the wind through a quivering mountain pine.

*Steep Trails*

Chapter XXIV (p. 375)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

## BUFFALO

### Author undetermined

The buffalo is the death  
that makes a child climb a thorn tree....  
He is the butterfly of the savannah:  
He flies along without touching the grass.  
When you hear thunder without rain –  
it is the buffalo approaching.

In Ulli Beier

*Yoruba Poetry*

Buffalo

General Publications Section, Ministry of Education. Ibadan, Nigeria. 1959

### Muir, John 1838–1914

American naturalist

I suppose we need not go mourning the buffaloes. In the nature of things they had to give place to better cattle, though the change might have been made without barbarous wickedness.

*Our National Parks*

Chapter X (p. 335)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

## CAMEL

### Carryl, Charles Edward 1842–1920

American children's literature author

There's never a question about my digestion,

Anything does for me!

In Burton Egbert Stevenson (ed.)

*The Home Book of Verse for Young Folks*

The Plaint of the Camel

Henry Holt & Co. New York, New York, USA. 1915

## CAT

### Billings, Josh (Henry Wheeler Shaw) 1818–85

American writer and humorist

The cat, is called a domestik animile – but i never hav bin able tew tell wharefore. You kant trust one, enney more than yu kan a case ov the gout. There iz only one mortal thing, that yu kan trust a cat with, and cum out even, and that iz, a bar ov hard sope.

*Josh Billings' Wit and Humor*

The Cat, and the Kangaroo (p. 86)

George Routledge & Sons. London, England. 1874

They [cats] are as meak as Mosiss, but az full ov develtry as Judus Iskaratt.

*Josh Billings' Wit and Humor*

The Cat, and the Kangaroo (p. 86)

George Routledge & Sons. London, England. 1874

You kant looze a cat – they are az hard to loozs, as a bad reputashun iz.

*Josh Billings' Wit and Humor*

The Cat, and the Kangaroo (p. 86)

George Routledge & Sons. London, England. 1874

### Krutch, Joseph Wood 1893–1970

American naturalist, conservationist, and writer

...cats seem to go on the principle that it never does any harm to ask for what you want.

*The Twelve Seasons*

February (p. 160)

W. Sloane Associates. New York, New York, USA. 1949

### Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

Of all God's creatures there is only one that cannot be made the slave of the lash. That one is the cat. If man could be crossed with the cat it would improve man, but it would deteriorate the cat.

*Mark Twain's Notebook* (p. 237)

Harper & Brothers Publishers. New York, New York, USA. 1935

### Whitehead, Alfred North 1861–1947

English mathematician and philosopher

If a dog jumps in your lap, it is because he is fond of you; but if a cat does the same thing, it is because your lap is warmer.

In Lucien Price

*Dialogues of Alfred North Whitehead*

Chapter XXV, December 10, 1941 (p. 187)

Little Brown. Boston, Massachusetts, USA. 1954

## COW

### Beecher, Henry Ward 1813–87

American Congregational preacher and orator

A cow is the saint of the barn-yard. She could be fat if she would only be selfish. But she economizes beauty that she may be profuse in milk.

In William Drysdale (ed.)

*Proverbs from Plymouth Pulpit*

Nature (p. 9)

D. Appleton & Co. New York, New York, USA. 1887

### Bryson, Bill 1951–

American author

To my mind, the only possible pet is a cow. Cows love you...They will listen to your problems and never ask a thing in return. They will be your friends forever.

And when you get tired of them, you can kill and eat them.

*Neither Here Nor There: Travels in Europe*

Chapter 5 (p. 56)

Harper Perennial. New York, New York, USA. 1993

**Young, Roland** 1887–1953

English poet and actor

The cow's a gentle, patient soul,  
With milk she fills the flowing bowl.  
She's kind to babies, mean to flies,  
She has the most coquettish eyes.

*Not for Children*

The Cow

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

## COYOTE

**Austin, Mary Hunter** 1868–1934

American novelist and essayist

When the five coyotes that range the Tejon from Pasteria to Tunawai planned a relay race to bring down an antelope strayed from the band, beside myself to watch, an eagle swung down from Mt. Pinos, buzzards materialized out of invisible ether, and hawks came trooping like small boys to a street fight.

*The Land of Little Rain*

The Scavengers (p. 55)

Houghton Mifflin & Company. Boston, Massachusetts, USA. 1903

**Crabtree, Bob**

No biographical data available

Coyotes are the ultimate icon of success and defiance of humans who think they can control nature.

Quoted in Mike Finkel

The Ultimate Survivor

*Audubon*, Volume 1, Number 3, May-June

**James, William** 1842–1910

American philosopher and psychologist

I saw a moving sight the other morning before breakfast... The young man of the house had shot a little wolf called a coyote in the early morning. The heroic little animal lay on the ground, with his big furry ears, and his clean white teeth, and his jolly cheerful little body, but his brave little life was gone. It made me think how brave all these living things are. Here little coyote was, without any clothes or house or books or anything, with nothing but his own naked self to pay his way with, and risking his life so cheerfully – and losing it – just to see if he could pick up a meal near the hotel. He was doing his coyote-business like a hero...

In Henry James (ed.)

*The Letters of William James* (Volume 2)

Letter to his Son Alexander, August 28, 1898 (pp. 81–82)

The Atlantic Monthly Press. Boston, Massachusetts, USA. 1920

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

The coyote is a living, breathing allegory of Want. He is always hungry. He is always poor, out of luck and friendless. The meanest creatures despise him and even the flea would desert him for a velocipede.

*Roughing It* (Volume 1)

Chapter V (p. 48)

Harper & Brothers Publishers. New York, New York, USA. 1899

**van Dyke, John Charles** 1856–1932

American art historian and critic

When he [the coyote] starts to move, it is with some deliberation. He prefers a dog-trot and often several shots from your rifle will not stir him into a run. He slips along easily and gracefully – a lean, hungry-looking wretch with all the insolence of a hoodlum and all the shrewdness of a thief.

*The Desert*

Chapter IX (p. 159)

Charles Scribner's Sons. New York, New York, USA. 1930

## DEER

**Blake, William** 1757–1827

English poet, painter, and engraver

The wild deer, wand'ring here and there,  
Keeps the Human Soul from Care.

*The Poems of William Blake*

Auguries of Innocence

Basil Montagu Pickering. London, England. 1874

**Muir, John** 1838–1914

American naturalist

Deer give beautiful animation to the forests, harmonizing finely in their color and movements with the gray and brown shafts of the trees as they stand in groups at rest...

*Steep Trails*

Chapter XXII (p. 320)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

**Scott, Sir Walter** 1771–1832

Scottish historical novelist and poet

The deep recess of the wildwood glen,  
Where roe and red-deer find sheltering den,  
When the sun is in his power.

*The Poetical Works of Sir Walter Scott*

Harold the Dauntless

Phillips, Sampson & Co. Boston, Massachusetts, USA. 1854

## DOG

**Beecher, Henry Ward** 1813–87

American Congregational preacher and orator

The dog was created specially for children. He is a god of frolic.

In William Drysdale (ed.)  
*Proverbs from Plymouth Pulpit*  
 Nature (p. 8)  
 D. Appleton & Co. New York, New York, USA. 1887

**Butler, Samuel** 1612–80  
 English novelist, essayist, and critic

The greatest pleasure of a dog is that you may make a fool of yourself with him and not only will he not scold you, but he will make a fool of himself.

In Geoffrey Keynes and Brian Hill (eds.)  
*Samuel Butler's Notebooks*  
 Dog (p. 314)  
 Jonathan Cape. London, England. 1951

**Doyle, Sir Arthur Conan** 1859–1930  
 Scottish writer

A hound it was, an enormous coal-black hound, but not such a hound as mortal eyes have ever seen. Fire burst from its open mouth, its eyes glowed with a smoldering glare, its muzzle and hackles and dewlap were outlined in flickering flame. Never in the delirious dream of a disordered brain could anything more savage, more appalling, more hellish be conceived than that dark form and savage face which broke upon us out of the wall of fog.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 2)  
*The Hound of the Baskervilles*, Chapter 14 (p. 100)  
 Wings Books. New York, New York, USA. 1967

**Jerome, Jerome K.** 1859–1927  
 English author

Fox terriers are born with about four times as much original sin in them as other dogs are ...

*Three Men in a Boat, to Say Nothing of the Dog!*  
 Chapter 13 (pp. 151–152)  
 Collins. London, England. 1957

**Nash, Ogden** 1902–71  
 American writer of humorous poetry

The truth I do not stretch or shove  
 When I state the dog is full of love.  
 I've also proved by actual test,  
 A wet dog is the lovingest.

*Everyone but Thee and Me*  
 The Dog (p. 71)  
 Little, Brown & Company. Boston, Massachusetts, USA. 1962

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
 American author and humorist

Heaven goes by favor. If it went by merit, you would stay out and your dog would go in.

In Albert Bigelow Paine  
*Mark Twain: A Biography* (Volume 4)  
 Chapter CCXCII (p. 1567)  
 Harper & Brothers Publishers. New York, New York, USA. 1912

If you pick up a starving dog and make him prosperous, he will not bite you. This is the principal difference between a dog and a man.

*Pudd'nhead Wilson's Calendar*  
 Chapter XVI (p. 158)  
 Harper & Brothers Publishers. New York, New York, USA. 1904

A composite dog is a dog that's made up of all the valuable qualities that's in the dog breed – kind of a syndicate; and a mongrel is made up of the riffraff that's left over.

*Mark Twain in Eruption: Hitherto Unpublished Pages About Men and Events*

In a Writer's Workshop  
 Platform Readings (p. 222)  
 Harper & Brothers Publishers. New York, New York, USA. 1922

## DONKEY

**Chesterton, G. K. (Gilbert Keith)** 1874–1936  
 English author

When fishes flew and forests walked  
 And figs grew upon thorn,  
 Some moment when the moon was blood  
 Then surely I was born;

With monstrous head and sickening cry  
 And ears like errant wings,  
 The devil's walking parody  
 On all four-footed things.

*The Wild Knight* (4th edition)  
 The Donkey  
 J.M. Dent & Co. London, England. 1914

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
 American author and humorist

I believe I would rather ride a donkey than any beast in the world. He goes briskly, he puts on no airs, he is docile, though opinionated. Satan himself could not scare him, and he is convenient – very convenient. When you are tired riding you can rest your feet on the ground and let him gallop from under you.

*The Innocents Abroad* (Volume 2)  
 Chapter XXX (pp. 396–397)  
 Harper & Brothers Publishers. New York, New York, USA. 1904

## DUCK-BILLED PLATYPUS

**Flanders, Michael** 1922–75  
 English actor and singer

We call him “Duck-billed Platypus”  
 And mock him for his name:  
 He does not seem to mind it.  
 He feels no sense of shame  
 Because he does not know himself  
 By such a title,

He's a "Golden, Shining Love-Bird"

In Duck-billed Platypese.

*Creatures Great and Small*

The Duck-Billed Platypus

Holt, Rinehart & Winston. New York, New York, USA. 1965

## ELEPHANT

**Atkins, Peter William** 1940–

English theoretical chemist

A great deal of the universe does not need any explanation. Elephants, for instance. Once molecules have learnt to compete and to create other molecules in their own image, elephants, and things resembling elephants, will in due course be found roaming the country side.... Some of the things resembling elephants will be men.

*The Creation*

Chapter 1 (p. 3)

W.H. Freeman & Co. Oxford, England. 1981

**Cuppy, Will** 1884–1929

American humorist and critic

In the Pleistocene Era, there were more than twenty kinds of elephants. Now there are only two. That's plenty.

*How to Get from January to December*

April 24 (p. 85)

Henry Holt & Company. New York, New York, USA. 1951

**Donne, John** 1572–1631

English poet and divine

Nature's great masterpiece, an Elephant.

The only harmless great thing; the giant of beasts.

In A.J. Smith (ed.)

*The Complete English Poems*

The Progress of the Soul, Stanza 39

St. Martin's Press. New York, New York, USA. 1971

**Heinlein, Robert A.** 1907–88

American science fiction writer

An elephant: A mouse built to government specifications.

*The Notebooks of Lazarus Long* (p. 9)

G.P. Putnam's Sons. New York, New York, USA. 1973

**Kipling, Rudyard** 1865–1936

British writer and poet

In the High and Far-Off Times the Elephant, O Best Beloved, had no trunk. He had only a blackish, bulgy nose, as big as a boot, that he could wiggle about from side to side; but he couldn't pick up things with it.

*The Elephant's Child* (p. 1)

A.P. Watt. London, England. 1900

**Lydekker, Richard** 1849–1915

English naturalist and geologist

if elephants were only known to us by their skeletons it would be more than doubtful if we should ever have

attained a correct idea of their true form; since although the conformation of their jaws and teeth would clearly indicate that they must have had some very peculiar method of feeding, yet it would have required a very bold, not to say a very imaginative man to have conceived the idea that these creatures were furnished with that unique organ which we term the trunk or proboscis.

*Life and Rock: a Collection of Zoological and Geological Essays*

Chapter I (p. 1)

The Universal Press. London, England. 1894

**Robinson, Phil** 1847–1902

English journalist and writer on natural history

Elephants are square animals with a leg at each corner – and a tail at both ends.

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter V (p. 110)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

The elephant hath joints, but none for courtesy. His legs are legs for necessity, not for flexure.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

Troilus and Cressida

Act II, Scene iii, l. 113–115

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Swift, Jonathan** 1667–1745

Irish-born English writer

So Geographers in Afric-Maps

With Savage Pictures fill their gaps;

And o'er unhabitable Downs

Place Elephants for want of Towns.

*The Poetical Works of Jonathan Swift* (Volume 2)

On Poetry

A Rhapsody, l. 177–180

William Pickering. London, England. 1833

Elephants are always drawn smaller than life, but a flea larger.

*The Tale of a Tub and Other Works*

Thoughts on Various Subjects (p. 409)

George Routledge & Sons. London, England. 1889

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

I could easily learn to prefer an elephant to any other vehicle, partly because of that immunity from collisions, and partly because of the fine view one has from up there, and partly because of the dignity one feels in that high place, and partly because one can look in at the windows and see what is going on privately among the family. The Lahore horses were used to elephants, but they were rapturously afraid of them just the same. It seemed curious.

Perhaps the better they know the elephant the more they respect him in that peculiar way. In our own case we are not afraid of dynamite till we get acquainted with it.

*Following the Equator* (Volume 2)

Chapter XXIV (p. 282)

Harper & Brothers Publishers. New York, New York, USA. 1899

## FOX

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

Of all the beasts who roam the hill tops, or clime the plains, there is none who makes so few blunders, and so many good hits as the fox.

*Josh Billings' Wit and Humor*

The Fox (p. 72)

George Routledge & Sons. London, England. 1874

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Plainly the fox belongs to a different order of things from that which reigns in the village. Our courts, though they offer a bounty for his hide, and our pulpits, though they draw many a moral from his cunning, are in few senses contemporary with his free forest life.

In Robert Sattelmeyer (ed.)

*Journal 1842–1848* (Volume 2)

(p. 89)

Princeton University Press. Princeton, New Jersey, USA. 1984

## GAZELLE

**Heine, Heinrich** 1797–1856

German journalist, essayist

The gazelles so gentle and clever, Skip lightly in frolicsome mood.

*Book of Songs, Lyrical*

Interlude Number 9

## GIRAFFE

**Young, Roland** 1887–1953

English actor

Now, children, you must never laugh

At the stately tall giraffe.

She's sensitive, as you can tell;

But, my dears, she kicks like hell!

*Not for Children*

The Giraffe

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

## GNU

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

GNU, n. An animal of South Africa, which in its domesticated state resembles a horse, a buffalo, and a stag. In its wild condition it is something like a thunderbolt, an earthquake, and a cyclone.

*The Cynic's Word Book*

Gnu (p. 137)

Doubleday, Page & Co. New York, New York, USA. 1906

## GOAT

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

A phatt gote would be a literary curiosity.

*Josh Billings' Wit and Humor*

The Gote (p. 80)

George Routledge & Sons. London, England. 1874

## GORILLA

**Bradley, Mary Hastings**

Geographer, traveler, and writer

The gorilla is a strict vegetarian like the elephant and buffalo – three of the four most dangerous animals in Africa.

It behooves one to walk softly with vegetarians.

*On the Gorilla Trail*

Chapter IX (p. 131)

D. Appleton & Company. London, England. 1922

**Fossey, Dian** 1932–85

American zoologist

The more you learn about the dignity of the gorilla, the more you want to avoid people.

In W.E. Smith

The Case of the Gorilla Lady Murder

*Time*, September 1, 1986 (p. 18)

## GUANACO

**Simpson, George Gaylord** 1902–84

American paleontologist

The guanaco is a camel but

He hasn't got a hump.

He's about three-quarters mountain goat

And seven-eighths a chump.

*Concession to the Improbable: An Unconventional Autobiography*

Chapter 8 (p. 72)

Yale University Press. New Haven, Connecticut, USA. 1978

## HIPPOPOTAMUS

**Belloc, Hilaire** 1870–1953

French-born poet and historian

I shoot the Hippopotamus

With bullets made of platinum,

Because if I use leaden ones  
His hide is sure to flatten 'em.

*Complete Verse*

The Hippopotamus (p. 237)

Gerald Duckworth. London, England. 1970

**Macaulay, Thomas Babington** 1800–59

English historian and writer

I have seen the hippopotamus, both asleep and awake;  
and I can assure you that, awake or asleep, he is the ugliest of the works of God.

In G. Otto Trevelyan

*The Life and Letters of Lord Macaulay* (Volume 2)

Chapter XIII, March 9, 1850 (p. 222)

Harper & Brothers. New York, New York, USA. 1876

**Montgomery, James** 1771–1854

Scottish poet and journalist

Amphibious monsters haunted the lagoon;  
The hippopotamus, amidst the flood,  
Flexile and active as the smallest swimmer;  
But on the bank, ill-balanced and infirm,  
He grazed the herbage, with huge head declined,  
Or lean'd to rest against some ancient tree.

*The Poetical Works of James Montgomery*

The Pelican Island

Little, Brown & Co. Boston, Massachusetts, USA. 1860

## HORSE

**Dickens, Charles** 1812–70

English novelist

“Bitzer,” said Thomas Gradgrind. “Your definition of a horse.”

“Quadruped. Graminivorous. Forty teeth, namely twenty-four grinders, four eye-teeth, and twelve incisive. Sheds coat in the spring; in marshy countries, sheds hoofs, too. Hoofs hard, but requiring to be shod with iron. Age known by marks in mouth.”

*Hard Times*

Book I, Chapter II (p. 208)

Chapman & Hall, Ltd. London, England. 1858

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

The horse is a very gregarious creature.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

Silver Blaze (p. 273)

Wings Books. New York, New York, USA. 1967

**Melville, Herman** 1819–91

American novelist, essayist, and poet

... what is a horse but a species of four-footed dumb man,  
in a leathern overall, who happens to live upon oats, and

toils for his masters, half-requted or abused, like the  
biped hewers of wood and drawers of water?

*Redburn*

Chapter XL (p. 26)

Jonathan Cape. London, England. 1937

**Moore, George** 1852–1933

Irish novelist

There is a touch of divinity even in brutes, and a special halo about a horse, that should forever exempt him from indignities. For as those majestic, magisterial truck-horses of the docks, I would as soon think of striking a judge on the bench, as to lay violent hand upon their holy hides.

*Evelyn Innes*

Chapter XIX

T. Fisher Unwin. London, England. 1898

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

A horse! A horse! My kingdom for a horse!

In *Great Books of the Western World* (Volume 26)

*The Plays and Sonnets of William Shakespeare* (Volume 1)

The Tragedy of King Richard the Third

Act V, Scene iv, l. 7

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

I have known the horse in war and in peace, and there is no place where a horse is comfortable. The horse has too many caprices, and he is too much given to initiative. He invents too many ideas. No, I don't want anything to do with a horse.

*The Complete Works of Mark Twain* (Volume 24)

*Mark Twain's Speeches*, Welcome Home (p. 201)

Harper & Brothers Publishers. New York, New York, USA. 1899

## HYENA

**Atkinson, Nick W.**

No biographical data available

To be top dog in a society of spotted hyenas, you've got to be a real bitch.

No Laughing Matter

*Natural History*, Volume 115 July/August 2006 (p. 12)

## JACKAL

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

The jackal's troop, in gather'd cry,  
Bay'd from afar complainingly,

With a mix'd and mournful sound,  
Like crying babe, and beaten hound.

*The Complete Poetical Works of Byron*  
Siege of Corinth, Stanza 33, l. 1024–27  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Ferry, Gabriel** 1809–52  
Writer

...jackals can only howl while the lion devours.

*The Wood-rangers*  
Chapter XLII (p. 321)  
Carleton. New York, New York, USA. 1875

## KANGAROO

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

Kangaroos liv upon roots, gras, and herbs, and kan out-jump ennything in the wilderness. In the face they resemble the deer, but in the length ov their tails they resemble a whole herd ov deer.

*Josh Billings' Wit and Humor*  
The Cat, and the Kangaroo (p. 88)  
George Routledge & Sons. London, England. 1874

## LEOPARD

**Hemingway, Ernest** 1899–1961  
American novelist, short-story writer and journalist

Close to the western summit [of Kilimanjaro] there is the dried and frozen carcass of a leopard. No one has explained what the leopard was seeking at that altitude.

*The Snows of Kilimanjaro*  
Chapter 1 (p. 3)  
Simon & Schuster. New York, New York, USA. 1995

**Wells, Carolyn** 1862–1942  
American writer

If strolling forth, a beast you view,  
Whose hide with spots is peppered,  
As soon as he has lept on you,  
You'll know it is the leopard.  
'Twill do no good to roar with pain,  
He'll only lep and lep again.

*Baubles*  
How to Tell the Wild Animals  
Dodd, Mead. New York, New York, USA. 1917

## LION

**Allen, Grant** 1848–99  
Canadian-born writer

...if we object to the king of beasts that (as Thersites said of Agamemnon) he devours his people, we may be told

in extenuation that, like Charles I., he is a good husband and a model father.

*Flashlights on Nature*  
Chapter III (p. 47)  
Doubleday, Page & Co. New York, New York, USA. 1905

**Gay, John** 1685–1732  
English poet and dramatist

The Lion is (beyond dispute)  
Allow'd the most majestic brute;  
His valor and his gen'rous mind  
Prove him superior of his kind.

*The Poetical Works of John Gay (Volume 2)*  
The Fables, Volume the Second, Fable IX, The Jackal, Leopard, and Other Beasts  
Lawrence & Bullen. London, England. 1893

**Pringle, Thomas** 1789–1834  
Scottish poet

Wouldst thou view the Lion's den?  
Search afar from haunts of men –  
Where the reed-encircled rill,  
Oozes from the rocky hill,  
By its verdure far descried  
'Mid the desert brown and wide.

*Afar in the Desert: And Other South African Poems; With a Memoir and Notes*  
The Lion and the Giraffe  
Stanza 1  
Longmans. London, England. 1881

## LLAMA

**Belloc, Hilaire** 1870–1953  
French-born poet and historian

The Llama is a woolly sort of fleecy hairy goat,  
With an indolent expression and an undulating throat  
Like an unsuccessful literary man.

*Complete Verse*  
The Llama (p. 245)  
Gerald Duckworth. London, England. 1970

**Nash, Ogden** 1902–71  
American writer of humorous poetry

The one-l lama,  
He's a priest.  
The two-l llama,  
He's a beast.  
And I will bet  
A silk pajama  
There isn't any three-l llama.

*Verses from 1929 On*  
The Lama  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**MAMMOTH**

**Blackie, John Stuart** 1809–95  
Scottish scholar

Mammoth, Mammoth! mighty old Mammoth!  
Strike with your hatchet and cut a good slice;  
The bones you will find, and the hide of the mammoth,  
Packed in stiff cakes of Siberian ice.

*Lays and Legends of Ancient Greece: With Other Poems*  
A Song of Geology (p. 24)  
Sutherland & Knox. Edinburgh, Scotland. 1857

**MANATEE**

**Nash, Ogden** 1902–71  
American writer of humorous poetry

The manatee is harmless  
And conspicuously charmless.  
Luckily the manatee  
Is quite devoid of vanity.

*Verses from 1929 On*  
The Manatee  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**MASTODON**

**Falconer, Hugh** 1808–65  
Scottish geologist, botanist, paleontologist, and paleoanthropologist

What a glorious privilege it would be, could we live  
back – were it but for an instant – into those ancient  
times when these extinct animals peopled the earth! To  
see them all congregated together in one grand natural  
menagerie – these Mastodons and Elephants, so numer-  
ous in species, toiling their ponderous forms and trum-  
peting their march in countless herds through the swamps  
and reedy forests:

In Charles Murchison (ed.)  
*Palaeontological Memoirs and Notes of the Late Hugh Falconer* (Vol-  
ume 1) (p. li)  
Robert Hardwicke. London, England. 1868

**MOLE**

**Grahame, Kenneth** 1859–1932  
English writer

The Mole was bewitched, entranced, fascinated. By  
the side of the river he trotted as one trots, when very  
small, by the side of a man who holds one spell-bound  
by exciting stories; and when tired at last, he sat on the  
bank, while the river still chattered on to him, a bab-  
bling procession of the best stories in the world, sent  
from the heart of the earth to be told at last to the insat-  
iable sea.

*The Wind in the Willows*  
Chapter I  
Charles Scribner's Sons. New York, New York, USA. 1908

**MONKEY**

**Beecher, Henry Ward** 1813–87  
American Congregational preacher and orator

The monkey is an organized sarcasm upon the human  
race, with variations multitudinous.

In William Drysdale (ed.)  
*Proverbs from Plymouth Pulpit*  
Nature (p. 8)  
D. Appleton & Co. New York, New York, USA. 1887

**Oswald, Felix Leopold**

No biographical data available

No monkey submits without “back-talk”...

*Zoological Sketches*  
Chapter I (p. 45)  
W.H. Allen & Co. London, England. 1883

**Robinson, Phil** 1847–1902

English journalist and writer on natural history

...monkeys...seem possessed by a demon of unrest, and  
are perpetually in kaleidoscopic motion.

*Noah's Ark; or, 'Mornings in the Zoo'*  
Chapter IV (p. 64)  
Sampson Low, Marston, Searle & Rivington. London, England. 1882

**SPIDER MONKEY**

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

There is something, particularly in a spider monkey's  
tail, that is too bold and purposeful to be easily called the  
product of simple chance. It floats there like a complete  
little personality. At least it may cause the true philoso-  
pher to pause hesitantly and ponder before he dismisses  
the universe as totally a world of chance.

*The Star Thrower*  
The Ghostly Guardian (p. 82)  
Times Books. New York, New York, USA. 1978

**MOUSE****Author undetermined**

The goal of science is to build better mousetraps. The  
goal of nature is to build better mice.

Source undetermined

Of mice there are many,  
Their kinds are profuse,  
We'd be lost without any  
Yet we ponder their use!

In William H. Carr  
*The Stir of Nature*  
Chapter Seven (p. 92)  
Oxford University Press, Inc. New York, New York, USA. 1930

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

Mice are the epitome of shrewdness; their faces beam with sharp praktiss; their little noses smell ov cunning, and their little black-beaded eyes titter with pettit lar-ceny.

*Josh Billings' Wit and Humor*

The Mouse (p. 67)

George Routledge & Sons. London, England. 1874

**Cuppy, Will** 1884–1929  
American humorist and critic

I have nothing against mice, in moderation.... My own mice just eat whatever I have in the place, including soap. Not an ideal diet, but they'll have to make it do or move elsewhere.

*How to Get From January to December*

January 20

Henry Holt & Company. New York, New York, USA. 1951

**Herford, Oliver** 1863–1935  
American writer and illustrator

Consider now the Humble Mouse. He is an Outlaw in the House. He makes his Hiding in the Wall And lives upon the Crumbs that fall.

*More Animals*

The Mouse (p. 19)

Charles Scribner's Sons. New York, New York, USA. 1901

## MULE

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

The mule is haf hoss and haf Jackass, and then kums tu a full stop, natur diskovering her mistake.

*Josh Billings' Wit and Humor*

The Mule (p. 110)

George Routledge & Sons. London, England. 1874

## OPOSSUM

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

The possum's tail bothers me. I hav looked at it bi the hour; i hav studded it, and tried tew parse it; i hav figgered on it az cluss as i would a proposishun in Euklid; i hav hung over it az fondly az a kemist; i have fretted and wondered, hav got mad, wept and swore, and kant tell to this day whi a possum should hav a hairless caudel.

*Josh Billings' Wit and Humor*

The Possum (p. 99)

George Routledge & Sons. London, England. 1874

**Cuppy, Will** 1884–1929  
American humorist and critic

The opossum is a marsupial and marsupials are animals who carry their young around in an abdominal pouch or marsupium. As they have done this for millions and millions of years, they are not likely to stop, no matter how you and I feel about it. Baby opossums are born in a rudimentary or unfinished state, from four to twenty at once. They are only half an inch long and smaller around than a honey bee. This seems hardly worthwhile, but it suits the mother opossum, and she is the one directly involved.

*How to Attract the Wombat*

The Opossum (pp. 49–50)

Rinehart & Company, Inc. New York, New York, USA. 1949

## ORANG-UTAN

**Maple, Terry**

No biographical data available

Let there always be orang-utans.

*Orang-utan Behavior*

Chapter 8 (p. 245)

van Nostrand Reinhold Co. New York, New York, USA. 1980

## OTTER

**Colum, Padraic** 1881–1972

Irish poet and writer

I'll be an otter, and I'll let you swim  
A mate beside me; we will venture down  
A deep, full river when the sky above  
Is shut of the sun; spoilers are we;  
Thick-coated; no dog's tooth can bite at our veins –  
With ears and eyes of poachers; deep-earthed ones  
Turned hunters; let him slip past,  
The little vole, my teeth are on an edge  
For the King-fish of the River!

*Collected Poems*

Otters

Devin-Adair. New York, New York, USA. 1953

## PANDA

**Schaller, George B.** 1933–

American zoologist

**Jinchu, Hu**

Chinese biologist

There are two giant pandas, the one that exists in our mind and the one that lives in its wilderness home. Soft, furry, and strangely patterned in black and white, with a large, round head and a clumsy, cuddly body, a panda seems like something to play with and hug. No other animal has so entranced the public... The real panda, however, the panda as it lives in the wild, has remained essentially a mystery.

*The Giant Pandas of Wolong*

Preface (p. xiii)

The University Press of Chicago. Chicago, Illinois, USA. 1985

**PANTHER**

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

Lifting her eyes she saw two bright objects starring the darkness with a reddish-green glow. She took them to be two coals on the hearth, but with her returning sense of direction came the disquieting consciousness that they were not in that quarter of the room, moreover were too high, being nearly at the level of the eyes – of her own eyes. For these were the eyes of a panther.

*The Eyes of the Panther*

The Eyes of the Panther (pp. 18–19)

Books for Libraries Press. Plainview, New York, USA. 1976

**PECCARY**

**Wilson, Edward O.** 1929–  
American biologist and writer

A tame peccary watched me with beady concentration from beneath the shadowed eaves of a house. With my own, taxonomist's eye I registered the defining traits of the collared species, *Dicotyles tajacu*: head too large for the piglike body, fur coarse and brindled, neck circled by a pale thin stripe, snout tapered, ears erect, tail reduced to a nub. Poised on still little dancer's legs, the young male seemed perpetually fierce and ready to charge yet frozen in place, like the metal boar on an ancient Gallic standard.

*Biophilia*

Bernhardsdorp (p. 4)

Harvard University Press. Cambridge, Massachusetts. 1984

**PIG**

**Perrin, Noel** 1927–2004  
American essayist

Pigs get bad press. Pigs are regarded as selfish and greedy – as living garbage pails. Pigs are the villains in George Orwell's *Animal Farm*. Pigs have little mean eyes. There is truth in this account – not that it's entirely the fault of the pigs. For perhaps five thousand generations pigs have been deliberately bred to be gluttonous.... Do the same thing with human beings for five thousand generations, and it would be interesting to see what kind of people resulted.

*Second Person Rural: More Essays of a Sometime Farmer*

Pig Tales (p. 143)

D. R. Godine. Boston, Massachusetts, USA. 1980

**PIKAS**

**Muir, John** 1838–1914  
American naturalist

...the mounds in front of their burrows glittering like heaps of jewelry – romantic ground to live in or die in.

*Our National Parks*

Chapter V (p. 162)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

**POLAR BEAR**

**Belloc, Hilaire** 1870–1953  
French-born poet and historian

The Polar Bear is unaware  
Of cold that cuts me through:  
For why? He has a coat of hair,  
I wish I had one too!

*Complete Verse*

The Polar Bear (p. 236)

Gerald Duckworth. London, England. 1970

**PORPOISE**

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and author

Porpoises left the land when mammalian brains were still small and primitive. Without the stimulus provided by agile exploring fingers, these great sea mammals have yet taken a divergent road toward intelligence of a high order. Hidden in their sleek bodies is an impressively elaborated instrument, the reason for whose appearance is a complex enigma. It is as though both man and porpoise were each part of some great eye which yearned to look both outward on eternity and inward to the sea's heart – that fertile entity so like the mind in its swarming and grotesque life.

*The Star Thrower*

The Long Loneliness (p. 43)

Times Books. New York, New York, USA. 1978

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

The porpoise is the kitten of the sea: he never has a serious thought, he cares for nothing but fun and play.

*Following the Equator* (Volume 1)

Chapter IX (p. 108)

Harper & Brothers Publishers. New York, New York, USA. 1899

The porpoise is the clown of the sea – evidently does his wild antics for pure fun; there is no sordid profit in it.

*Mark Twain's Notebook*

Chapter XXIII (p. 267)

Harper & Brothers Publishers. New York, New York, USA. 1935

**PRAIRIE DOG**

**Austin, Mary Hunter** 1868–1934  
American novelist and essayist

Old Peter Prairie-Dog  
Builds him a house

In Dog-Dog Town,  
 With a door that goes down  
 And down and down,  
 And a hall that goes under  
 And under and under,  
 Where you can't see the lightning,  
 You can't hear the thunder,  
 For they don't like thunder  
 In Dog-Dog Town.

*The Children Sing in the Far West*

Dog-Dog Town

Houghton Mifflin Company. Boston, Massachusetts, USA. 1928

## RAT

**Browning, Robert** 1812–89

English poet

Rats! They fought the dogs and killed the cats.  
 And bit the babies in the cradles,  
 And ate the cheeses out of the vats,  
 And licked the soup from the cooks' own ladles.  
 Split open the kegs of salted sprats,  
 Made nests inside men's Sunday hats,  
 And even spoiled the women's chats  
 By drowning their speaking  
 With shrieking and squeaking  
 In fifty different sharps and flats.

*The Complete Poetical Works of Robert Browning*

The Pied Piper of Hamelin

Macmillan & Co Ltd. London, England. 1921

**Zinsser, Hans** 1878–1940

US bacteriologist

Man and the rat will always be pitted against each other  
 as implacable enemies. And the rat's most potent weap-  
 ons against mankind have been its perpetual maintenance  
 of the infectious agents of plague and of typhus fever.

*Rats, Lice and History*

Chapter XII (p. 211)

Little, Brown & Co. Boston, Massachusetts, USA. 1963

## RHINOCEROS

**Belloc, Hilaire** 1870–1953

French-born poet and historian

Rhinoceros, your hide looks all undone,  
 You do not take my fancy in the least:  
 You have a horn where other brutes have none:  
 Rhinoceros, you are an ugly beast.

*Complete Verse*

The Rhinoceros (p. 239)

Gerald Duckworth. London, England. 1970

**Robinson, Philip Stewart** 1847–1902

English journalist and writer on natural history

[The rhinoceros] munches hay – not with any enthusiasm,  
 it is true, but with a subdued satisfaction that bespeaks a  
 philosophic and contented mind.

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter VI (p. 140)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

## SHEEP

**Muir, John** 1838–1914

American naturalist

No other animal seems to yield so submissively to the  
 manipulations of culture. Jacob controlled the color of  
 his flocks merely by causing them to stare at objects  
 of the desired hue; and possibly Merinos may have  
 caught their wrinkles from the perplexed brows of their  
 breeders.

*Steep Trails*

Chapter I (p. 17)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

It is almost impossible to conceive of a devastation more  
 universal than is produced among the plants of the Sierra  
 by sheep.... Nine tenths of the whole surface of the  
 Sierra has been swept by the source. It demands legisla-  
 tive interference.

In Linnie Marsh Wolfe (ed.)

*John of the Mountains*

Chapter III, Section 6, September 19, 1873 (p. 173)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

## SHREW

**Huxley, Julian** 1887–1975

English biologist, philosopher, and writer

Timid atom, furry shrew,  
 Is it a sin to prison you?  
 Through the runways in the grass  
 You and yours in hundreds pass,  
 An unimagined world of shrews,  
 A world whose hurrying twilight news  
 Never stirs but now and then  
 The striding world of booted men.

*The Captive Shrew and Other Poems of a Biologist*

The Captive Shrew

Harper & Brothers. New York, New York, USA. 1933

**Schaefer, Jack** 1907–91

American writer and journalist

Shrews are not mutual murderers. We'll just square off  
 and touch whiskers, assessing each other. Then we'll try  
 to out-sneak each other.

Interview with a Shrew

*Audubon*, Volume 77, Number 6, November, 1975 (p. 2)

**SKUNK**

**Adams, Roger** 1889–1971  
American organic chemist

Many thanks for the sending me the book “Biology of the Striped Skunk”.... Frankly, I doubt whether I shall read it or not, unless I happen to have some intimate contact with a skunk which may induce me to learn more about him.

In D.S. Tarbell and A. Tarbell  
*Roger Adams, Scientist and Statesman* (p. 192)  
American Chemical Society, Washington, D.C. 1981

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

I respect the skunk as a human being in a very humble sphere.

In William H. Carr  
*The Stir of Nature*  
Chapter Four (p. 48)  
Oxford University Press, Inc. New York, New York, USA. 1930

**Young, Roland** 1887–1953  
English actor

In this mechanic age the skunk  
Inspires no terror – he’s the bunk;  
For people in cars,  
Returning from bars,  
Quite frequently flatten the skunk.  
*Not for Children*  
The Skunk  
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

**SQUIRREL**

**Prelutsky, Jack** 1940–  
American poet

Squirrels, often found in parks,  
have tails resembling question marks,  
it’s just coincidental, though...  
there’s little squirrels care to know.  
*Something Big Has Been There*  
Squirrels  
William Morrow & Company. New York, New York, USA. 1990

**TIGER**

**Charlie Chan (Fictional character)**

Tiger going away from village is never feared.  
*Dangerous Money*  
Film (1946)

**Lawrence, D. H. (David Herbert)** 1885–1930  
English writer

I consider the tiger as a being, a created being. If you kill all tigers still the tiger-soul continues.... But the point is I don’t want the tiger superseded. Oh, may each she-tigress have seventy seven whelps, and may they all grow in strength and shine in stripes like day and night, and may each one eat at least seventy miserable featherless human birds, and lick red chops of gusto after it.

In James T. Boulton  
*Selected Letters of D.H. Lawrence*  
Chapter III, May, 1921, Letter to Earl and Achsah Brewster, 15 May, 1921 (pp. 204, 205)  
Cambridge University Press. Cambridge, England. 1997

**Wells, Carolyn** 1862–1942  
American writer

Or if some time when roaming round,  
A noble wild beast greets you,  
With black stripes on a yellow ground,  
Just notice if he eats you.  
This simple rule may help you learn  
The Bengal tiger to discern.

*Baubles*  
How to Tell the Wild Animals  
Dodd, Mead. New York, New York, USA. 1917

**TREE MOUSE**

**Scheffer, Victor B.**  
Zoologist

If a tree mouse did not exist and I were told to design one, I could hardly improve on Nature’s product – a small, sure-footed beast dressed in the protective colors of fir-tree cones, adapted to a resinous diet, and adapted to moving about in a narrow ecological niche.  
*Spires of Form*  
Introduction (p. 3)  
University of Washington Press. Seattle, Washington, USA. 1983

**WALRUS**

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

“The time has come,” the Walrus said,  
“To talk of many things:  
Of shoes – and ships – and sealing-wax –  
Of cabbages – and kings –  
And why the sea is boiling hot –  
And whether pigs have wings.”  
*The Complete Works of Lewis Carroll*  
Through the Looking-Glass  
Chapter IV (p. 186)  
The Modern Library. New York, New York, USA. 1936

**WHALE**

**Ackerman, Diane** 1948–  
American writer

The ocean transmits sound in strange and unlikely ways. There is a layer of water, known as the deep sound channel, in which sound waves can be trapped and spread great distances because they bend back into the channel over and over, without losing much energy. Under those circumstances, whale sound can travel as much as five hundred miles before blending into background noise.

*The Moon by Whale Light, and Other Adventures Among Bats and Crocodilians, Penguins and Whales*

Chapter 3 (p. 118)

Random House, Inc. New York, New York, USA. 1991

Whales navigate through a rich, complicated landscape at a stately pace, slow as zeppelins, majestic and alert.

*The Moon by Whale Light, and Other Adventures Among Bats and Crocodilians, Penguins and Whales*

Chapter 3 (p. 129)

Random House, Inc. New York, New York, USA. 1991

When a whale sleeps, it slowly tumbles in any-old-crazy, end-over-end, sideways fashion, and may even bonk its head on the bottom.

*The Moon by Whale Light, and Other Adventures Among Bats and Crocodilians, Penguins and Whales*

Chapter 3 (p. 174)

Random House, Inc. New York, New York, USA. 1991

**Beale, Thomas** 1807–49  
English surgeon

Mad with the agonies he endures from these fresh attacks, the infuriated Sperm Whale rolls over and over; he rears his enormous head, and with wide expanded jaws snaps at everything around him; he rushes at the boats with his head; they are propelled before him with vast swiftness, and sometimes utterly destroyed.

*The Natural History of the Sperm Whale*

Dodd, Mead. New York, New York, USA. 1917

**Chief Engineer Scott (Fictional character)**

Admiral, there be whales here!

*Star Trek IV*

Film (1986)

...the holy, hangs undisturbed over the whales' huge cradle.

*The Star Thrower*

Science and the Sense of the Holy (p. 199)

Times Books. New York, New York, USA. 1978

**Hart, Joseph** 1798–1855  
American novelist

Suddenly a mighty mass emerged from the water, and shot up perpendicularly in the air.... It was the whale....

*Miriam Coffin; or, The Whale Fisherman* (Volume 2)

Chapter X (p. 156)

G. & C. & H. Carvill. New York, New York, USA. 1834

**Payne, Roger**  
Biologist

Remote and imperturbable, the lives of whales are somehow enough to match any fantasy humanity can create. They are what we have lost, what we yearn for.

*Among Whales*, (p. 351)

Scribner. New York, New York, USA. 1995

As a consequence of their great size, whales escape much turmoil. With increasing size comes increasing serenity. Large creatures find less and less that is significant enough to be annoying and therefore experience fewer extremes, less upheaval.

*Among Whales*.

Chapter 1 (p. 20)

Charles Scribner's Sons. New York, New York, USA. 1995

**WOLF**

**Lugosi, Bela** 1882–1956  
Hungarian film star

Listen to them. Children of the night. What music they make.

*Dracula*

Film (1931)

**YAK**

**Belloc, Hilaire** 1870–1953  
French-born poet and historian

As a friend to the children commend me the Yak.

You will find it exactly the thing:

It will carry and fetch, you can ride on its back,

Or lead it about with a string.

*Complete Verse*

The Yak (p. 236)

Gerald Duckworth. London, England. 1970

**Smith, William Jay** 1918–  
American lyric poet

The long-haired Yak has long black hair,  
He lets it grow – he doesn't care.

He lets it grow and grow and grow,  
 He lets it trail along the stair.  
 Does he ever go to the barbershop? NO!  
 How wild and woolly and devil-may-care  
 A long-haired Yak with long black hair  
 Would look when perched in a barber chair!

*Mr. Smith and Other Nonsense*

Yak

Delacorte Press. New York, New York, USA. 1968

## ANIMAL: MOLLUSK

**Pallister, William Hales** 1877–1946

Canadian physician

Next, the MOLLUSCS present forty thousand kinds more,

With a limited life, but adapted for it;

In the space of the tide, with the sea and the shore

And the sunshine, the Molluscs successfully fit;

Some on land, some in lakes which were seas, they exist

And though tideless for ages, the Molluscs persist.

*Poems of Science*

Beginnings, Animal Life (p. 139)

Playford Press. New York, New York, USA. 1931

## CLAM

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

The clam iz a bulbous plant, and resides on the under side ov the water. He iz born az the birds are, but don't cum out ov his shell. He iz deserted by his parents at a young and tender age, but don't bekum clamorous on this akount, but sits still, and keeps watch with hiz mouth, for sumthin tew cum along.

*Josh Billings' Wit and Humor*

The Clam (p. 82)

George Routledge & Sons. London, England. 1874

**Cuppy, Will** 1884–1929

American humorist and critic

Clams lead quiet, uneventful lives for the most part. Buried in the mud and sand between the tide marks, or farther out in the water, they seldom get around much or hear any important news. Clams don't know what it's all about. They have no heads, so they do not bother with that sort of thing.... Clams are very conservative. They voted against having heads in the Ordovician Period and have stuck to it ever since. They never adopt a new idea until it has proven its worth.

*How to Attract the Wombat*

The Clam (p. 112, fn 1)

Rinehart & Company, Inc. New York, New York, USA. 1949

**Nash, Ogden** 1902–71

American writer of humorous poetry

The clam, esteemed by gourmets highly,  
 Is said to live the life of Riley;  
 When you are lolling on a piazza  
 It's what you are as happy as a.

*Verses from 1929 On*

The Clam

Little, Brown & Company. Boston, Massachusetts, USA. 1959

## LIMPET

**Browning, Robert** 1812–89

English poet

...white fishing gulls

Flit where the strand is purple with its tribe

Of nested limpets...

*The Poetical Works of Robert Browning* (Volume 2)

Paracelsus (p. 168)

Smith, Elder & Co. London, England. 1888

## OYSTER

**Babbage, Charles** 1792–1871

English mathematician

I now gave my mind to philosophy: the great object of my ambition was to make out a complete system of the universe, including and comprehending the origin, causes, consequences, and termination of all things. Instead of countenance, encouragement, and applause, which I should have received from everyone who has the true dignity of an oyster at heart, I was exposed to calumny and misrepresentation. While engaged in my great work on the universe, some even went so far as to accuse me of infidelity; such is the malignity of oysters.

*Passages from the Life of a Philosopher*

*Autobiography of an Oyster*

Title page

Longman, Green, Longman, Roberts & Green. London, England 1864

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

OYSTER, *n.* A slimy, gobby shellfish which civilization gives men the hardihood to eat without removing its entrails 1 The shells are sometimes given to the poor.

*The Collected Works of Ambrose Bierce* (p. 244)

The Neale Publishing Co. New York, New York, USA. 1911

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“O Oyster,” said the Carpenter,

“You’ve had a pleasant run!

Shall we be trotting home again?”

But answer came there none –

And this was scarcely odd, because

They’d eaten everyone.

*The Complete Works of Lewis Carroll  
Through the Looking-Glass  
Chapter IV (p. 188)  
The Modern Library. New York, New York, USA. 1936*

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

I cannot think why the whole bed of the ocean is not one solid mass of oysters so prolific the creatures seem.

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
*The Adventure of the Dying Detective* (p. 444)  
Wings Books. New York, New York, USA. 1967

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910  
American author and humorist

We know all about the habits of the ant, we know all about the habits of the bee, but we know nothing at all about the habits of the oyster. It seems almost certain that we have been choosing the wrong time for studying the oyster.

*The Tragedy of Pudd'nhead Wilson*  
Chapter XVI (p. 122)  
New American Library. New York, New York, USA. 1980

## SLUG

**Deyrup-Olsen, Ingrith** 1919–2004  
American zoologist

Most people think, “Slugs – yuk!” But I think that whenever you start to study an organism, you become overwhelmed by the beauty and complexity of it. I am always amazed and touched by the way these animals solve the tremendous problems they have, which are always really basically the same as ours. I have come to have very strong respect and admiration for them, and I’ve also found it’s a wonderful area to involve nonscientists in. The minute you begin to show them that slugs are very complicated, interesting animals with their own needs and demands, people begin to look at them with very different eyes. I’m very moved by the slug’s ingenuity and tremendous drive to continue living. I think in the end this is what makes me go on, no matter how frustrating the experiments happen to be at that time.

In Linda Jean Shepherd  
*Lifting the Veil: The Feminine Face of Science*  
Chapter 3 (pp. 69–70)  
Shambhala. Boston, Massachusetts, USA. 1993

## SNAIL

**Billings, Josh (Henry Wheeler Shaw)** 1818–85  
American writer and humorist

Snails are sed tew be delikate eating, but if i kan hav all the hash i want, i will try and struggle along without any

snail. You kant phool me with hash, I kno how that iz made, but i don’t kno how snail are put together. Ignorance iz sed tew be bliss, and i hav often thought that it waz, and if i don’t never kno how snails taste, i don’t think now i shall repent ov it.

*Josh Billings’ Wit and Humor*  
Snails, Snaiks, and Babies (p. 82)  
George Routledge & Sons. London, England. 1874

**Clare, John** 1793–1864  
English poet

There came the snail from his shell peeping out,  
As fearful and cautious as thieves on the rout.

*The Village Minstrel, and Other Poems*  
II (p. 32)  
Printed for Taylor & Hessey. London, England. 1821

**Cuppy, Will** 1884–1929  
American humorist and critic

What is the main thing about a snail? That’s right, the snail is slow. He believes in just taking it easy, and he is so slow at it that one gets all tired out just watching him. Following a snail around for any length of time makes me a total wreck. I don’t know why I do it. When a snail wants to go anywhere, he travels on the underside of his physique, twitching himself along by wave-like contractions of the muscles. This is not a satisfactory means of locomotion, if you’ve ever tried it, and carrying your house on your back at the same time would hardly improve matters. A snail never hurries to an appointment. He is sure that his date will be a day or two late, anyhow, so what’s the use?

*How to Attract the Wombat*  
The Snail (pp. 115–116)  
Rinehart & Company, Inc. New York, New York, USA. 1949

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

...the snail, whose tender horns being hit,  
Shrinks backward in his shelly cave with pain,  
And there, all smother’d in shade, doth sit,  
Long after fearing to creep forth again.

*The Complete Works of William Shakespeare*  
*Venus and Adonis*, l. 1033–1036  
Oxford University Press. London, England. 1954

## WHELK

**Wood, Robert William** 1868–1955  
American physicist

...if you listen to the shell,  
In which the Whelk is said to dwell,  
And hear a roar, beyond a doubt  
It indicates the Whelk is out.

*How to Tell the Birds from the Flowers and Other Wood-Cuts*  
The Elk. The Whelk (p. 43)  
Dover Publications, Inc. New York, New York, USA. 1959

**ANIMAL: MYTHICAL****AMPHISBAENA**

**Pope, Alexander** 1688–1744  
English poet

Thus Amphisbaena (I have read)  
At either end assails

None knows which leads, or which is led,  
For both Heads are but Tails.

*The Works of Alexander Pope* (Volume 3)

The Dunciad, Book III, Remarks (p. 290)

Longman, Brown & Co. London, England, 1847

**BASILISK**

**Kirchmayer, George Kaspard** b. 1635  
German writer

To deny the existence of the basilisk is to carp at the evidence of men's eyes and their experiences in many different places. Accordingly, we allow the basilisk a place in nature, as the most deadly and venomous creature and plague in the animal creation.

Translated by Edmund Goldsmid

*Un-natural History* (Volume 1)

Chapter II (p. 18)

Privately printed. Edinburgh, Scotland. 1886

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

It is produced in the province of Gyrene, being not more than twelve fingers in length. It has a white spot on the head, strongly resembling a sort of a diadem. When it hisses, all the other serpents fly from it: and it does not advance its body, like the others, by a succession of folds, but moves along upright and erect upon the middle. It destroys all shrubs, not only by its contact, but those even that it has breathed upon; it burns up all the grass too, and breaks the stones, so tremendous is its noxious influence.

Translated by John Bostock, Henry Thomas Riley

*The Natural History of Pliny* (Volume II)

Book VIII, Chapter 33 (p. 282)

George Bell & Sons. London, England. 1890

**BREAD-AND-BUTTER-FLY**

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

“Crawling at your feet,” said the Gnat (Alice drew her feet back in some alarm), “you may observe a Bread-and-butter-fly. Its wings are thin slices of bread-and-butter, its body is a crust, and its head is a lump of sugar.” “And what does *it* live on?”

“Weak tea with cream in it.”

In Florence Milner (ed.)

*Through the Looking-glass and What Alice Found There*

Chapter III (p. 52)

Rand McNally & Co. Chicago, Illinois, USA. 1917

**CATOBLEPAS**

**Pliny (C. Plinius Secundus)** 23–79  
Roman savant and author

Near this fountain [fountain of Nigris], there is found a wild beast, which is called the catoblepas; an animal of moderate size, and in other respects sluggish in the movement of the rest of its limbs; its head is remarkably heavy, and it only carries it with the greatest difficulty, being always bent down towards the earth. Were it not for this circumstance, it would prove the destruction of the human race; for all who behold its eyes, fall dead upon the spot.

Book VIII, Chapter 32 (pp. 281–282)

George Bell & Sons. London, England. 1890

**KRAKEN**

**Robinson, Phil** 1847–1902  
English journalist and writer on natural history

In the sea, the Kraken is king. It is the hierophant of the oceanic mysteries, secret as a Prince of the Assassins, or veiled Prophet, and sacred from its very secrecy like the Lama of Tibet or the Unseen God of the Tartars.

*Noah's Ark; or, 'Mornings in the Zoo'*

Chapter I (p. 8)

Sampson Low, Marston, Searle & Rivington. London, England. 1882

**ORK**

**Baum, Lyman Frank** 1856–919  
American author

The Ork sat upon its haunches much as a cat does, but used the finger-like claws of its front legs almost as cleverly as if they were hands. Perhaps the most curious thing about the creature was its tail, or what ought to have been its tail. This queer arrangement of skin, bones and muscle was shaped like the propellers used on boats and airships, having fan-like surfaces and being pivoted to its body.

*The Scarecrow of Oz*

Chapter III (pp. 37–38)

The Reilly & Britton Co. Chicago, Illinois, USA. 1915

**PHOENIX**

**Herodotus** 484 BCE–432 BCE  
Greek historian

It is said that the phoenix comes when his father dies. If the picture truly shows his size and appearance, his

plumage is partly golden and partly red. He is most like an eagle in shape and bigness.

Translated by Alfred Denis Godley

*Herodotus* (Volume 1)

Book II, 73 (p. 361)

William Heinemann. London, England. 1920

**Kirchmayer, George Kaspard** b. 1635

German writer

I have to enquire, with the help of God, what real truth there is in the Phoenix.

*Hexas Disputationum Zoologicarum*

Houghton Mifflin Company. Boston, Massachusetts, USA. 1939

## ROCKING-HORSE-FLY

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“All right,” said the Gnat. “Half way up that bush, you’ll see a Rocking-horse-fly, if you look. It’s made entirely of wood, and gets about by swinging itself from branch to branch.”

“What does it live on?” Alice asked, with a great curiosity.

“Sap and sawdust,” said the Gnat.

In Florence Milner (ed.)

*Through the Looking-glass, and What Alice Found There*

Chapter III (p. 51)

Rand McNally & Co

Chicago, Illinois, USA. 1917

## SEA SERPENT

### 19th Century Naval Song

Strange things come up to look at us –

The masters of the deep.

*The Modern Traveler*

The Return of the Admiral (p. 107)

Printed for T. Lowndes. London, England. 1776–1777

**Pontoppidan, Erich** 1698–1754

Bishop in Bergen, Norway

Amongst the many great things which are in the ocean, and concealed from our eyes or only presented to our view for a few minutes, is the Kraken. This creature is the largest and most surprising of all the animal creation, and consequently well deserves such an account as the nature of the thing, according to the Creator’s wise ordinance, will admit of.

*Natural History of Norway*

**Tennyson, Alfred (Lord)** 1809–92

English poet

Below the thunders of the upper deep;

Far, far beneath in the abysmal sea,

His ancient, dreamless, uninvaded sleep

The Kraken sleepeth...

*Alfred Tennyson’s Poetical Works*

The Kraken

Oxford University Press, Inc. London, England. 1953

## SNAP-DRAGON-FLY

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

“Look on the branch above your head,” said the Gnat, “and there you’ll find a Snap-dragon-fly. Its body is made of plum-pudding, its wings of holly-leaves, and its head is a raisin burning in brandy.”

“And what does it live on?” Alice asked, as before.

“Frumenty and mince-pie,” the Gnat replied; “and it makes its nest in a Christmas-box.”

In Florence Milner (ed.)

*Through the Looking-glass, and What Alice Found There*

Chapter III (p. 51)

Rand McNally & Co

Chicago, Illinois, USA. 1917

## ANIMAL: PROTOZOA

### AMOEBA

#### Author undetermined

When you were a soft amoeba, in ages past and gone,

Ere you were Queen of Sheba, or I King Solomon,

Alone and undivided, we lived a life of sloth,

Whatever you did, I did; one dinner served for both.

Anon came separation, by fission and divorce,

A lonely pseudopodium wandered on my course.

In Arnold Silcock

*Verse and Worse*

Evolution (pp. 167–168)

Faber & Faber Ltd. London, England. 1952

An amoeba named Sam and his brother

Were having a drink with each other.

In the midst of their quaffing

They split their sides laughing,

And each of them now is a mother.

Source undetermined

#### Cudmore, Lorraine Lee

American cell biologist

Ah, the architecture of this world. Amoebas may not have backbones, brains, automobiles, plastic, television, Valium or any other of the blessings of a technologically advanced civilization; but their architecture is two billion years ahead of its time.

*The Center of Life: A Natural History of the Cell*  
The Universal Cell (pp. 15–16)  
New York Times Book Company. New York, New York, USA. 1977

The amoeba had the architectural ideas of R. Buckminster Fuller before there was anyone around capable of having an idea.

*The Center of Life: A Natural History of the Cell*  
The Universal Cell (p. 16)  
New York Times Book Company. New York, New York, USA. 1977

An amoeba never is torn apart through indecision, though, for even if two parts of the amoeba are inclined to go in different directions, a choice is always made. We could interpret this a schizophrenia or just confusion, but it could also be a judicious simultaneous sampling of conditions, in order to make a wise choice of future direction.

*The Center of Life: A Natural History of the Cell*  
Locomotion (p. 73)  
New York Times Book Company. New York, New York, USA. 1977

**Cuppy, Will** 1884–1929  
American humorist and critic

Amoebas not only divide, they also blend. When it's all over there is one amoeba where there were two. Amoebas blend apparently because they enjoy blending for its own sake. The amoeba often frequents laboratories. You'll find quite a number of amoebas at Yale, Princeton, and Harvard.

*How to Get from January to December*  
March 7 (p. 53)  
Henry Holt & Company. New York, New York, USA. 1951

**Huxley, Julian** 1887–1975  
English biologist, philosopher, and writer

Amoeba has her picture in the book,  
Proud Protozoon! – Yet beware of pride,  
All she can do is fatten and divide;  
She cannot even read, or sew, or cook.

*Essays of a Biologist*  
Philosophic-Ants (p. 176)  
Alfred P. Knopf. New York, New York, USA. 1929

**Popper, Karl R.** 1902–94  
Austrian/British philosopher of science

The difference between the amoeba and Einstein is that, although both make use of the method of trial and error elimination, the amoeba dislikes erring while Einstein is intrigued by it...

*Objective Knowledge: An Evolutionary Approach*  
Chapter 2 (p. 70)  
Clarendon Press. Oxford, England. 1972

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

A process which led from amoeba to man appeared to the philosophers to be obviously a progress – though whether the amoeba would agree with this opinion is not known.

*Our Knowledge of the External World*  
Lecture I (p. 12)  
The Open Court Publishing Company. Chicago, Illinois. 1914

**Spencer, Herbert** 1829–1903  
English social philosopher

...this speck of animated jelly [amoeba] is at once all stomach, all skin, all mouth, all limb, and doubtless, too, all lung.

*The Principles of Biology* (Volume 1)  
Part I, Chapter II (p. 200)  
D. Appleton & Co. New York, New York, USA. 1910

## ANIMAL: REPTILE

**Miller, Hugh** 1802–56  
Scottish geologist and theologian

Reptiles, reptiles, reptiles – flying, swimming, waddling, walking...

*Sketch-Book of Popular Geology*  
Lecture Forth (p. 151)  
William P. Nimmo & Company. Edinburgh, Scotland. 1880

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

What, if one reptile sting another reptile?  
Where is the crime? The goodly face of nature  
Hath one disfeaturing stain the less upon it.  
*The Poetical Works of S.T. Coleridge* (Volume 2)  
Remorse  
William Pickering. London, England. 1835

**Huxley, Thomas Henry** 1825–1895  
English biologist

Placed side by side, a Humming-bird and a Tortoise, an Ostrich and a Crocodile, offer the strongest contrast, and a Stork seems to have little but animality in common with the Snake it swallows.

In Michael Foster and Edwin Ray Lankester (ed.)  
*The Scientific Memoirs of Thomas Henry Huxley* Volume 3  
Chapter XV (p. 305)  
Macmillan & Company Ltd. London, England. 1901

**Robinson, Philip Stewart** 1847–1902  
English journalist and writer on natural history

A reptile is not, perhaps, an amiable thing. Its name “that which creeps” prejudices some of us against it. Nor is there anything thoroughly unjustifiable in this. The necessities of speech require a word that shall compendiously express the idea of the contemptible and crawling, and at the same time the potentially hurtful. And “reptile” fulfils this obnoxious duty.

*The Poets and Nature; Reptiles, Fishes, and Insects*  
Chapter 4 (p. 3)  
Chatto & Windus. London, England. 1893

**ALLIGATOR**

**Ackerman, Diane** 1948–  
American writer

Nothing looks more contented than a resting alligator.  
The mouth falls naturally into a crumpled smile, the eyes  
half close in a sleepy sort of way...

*The Moon by Whale Light, and Other Adventures Among Bats and  
Crocodilians, Penguins and Whales*

Chapter 2 (p. 60)

Random House, Inc. New York, New York, USA. 1991

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

ALLIGATOR, N. The crocodile of America, superior  
in every detail to the crocodile of the effete monarchies  
of the Old World. Herodotus says the Indus is, with one  
exception, the only river that produces crocodiles, but  
they appear to have gone West and grown up with the  
other rivers. From the notches on his back the alligator  
is called a sawrian.

*The Collected Works of Ambrose Bierce* (p. 22)

The Neale Publishing Co. New York, New York, USA. 1911

**Dickens, Charles** 1812–20  
English novelist

...there is a poetry in wildness, and every alligator bask-  
ing in the slime is himself an Epic, self contained.

*Life and Adventures of Martin Chuzzlewit*

Chapter XXII (p. 348)

Macmillan & Company Ltd. London, England. 1892

**CROCODILE**

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

How cheerfully he seems to grin,  
How neatly spreads his claws,

And welcomes little fishes in  
With gently smiling jaws!

*The Complete Works of Lewis Carroll*

*Alice's Adventures in Wonderland*

Chapter II (p. 29)

The Modern Library. New York, New York, USA. 1936

**Montgomery, James** 1771–1854  
Scottish poet and journalist

The crocodile, the dragon of the waters,  
In iron panoply, fell as the plague,  
And merciless as famine, cranch'd his prey,  
While from his jaws, with dreadful fangs all serried,  
The life-blood dyed the waves with deadly streams.

*The Poetical Works of James Montgomery*

The Pelican Island

Little, Brown & Co. Boston, Massachusetts, USA. 1860

**Thomson, James** 1700–48  
Scottish poet

...half-conceal'd,  
Like a fallen cedar, far diffused his train,  
Cased in green scales, the crocodile extends.

*The Seasons*

Summer

A.S. Barnes & Burr. New York, New York, USA. 1860

**LIZARD**

**Gardner, John** 1933–82  
American writer and scholar

The Lizard is a timid thing  
That cannot dance or fly or sing;  
He hunts for bugs beneath the floor  
And longs to be a dinosaur.

*A Child's Bestiary*

The Lizard

Alfred A. Knopf. New York, New York, USA. 1977

**Herbert, George** 1593–1633  
Welsh poet, orator, and priest

It is better to be the head of the lizard than the tail of the  
lion.

*The Works of George Herbert in Prose and Verse*

Jacula Prudentum (p. 460)

John Wurtele Lovell. New York, New York, USA. 1881

**Kitching, Arthur Leonard**  
No biographical data available

...He who is bitten by a snake fears a lizard ...

*On the Backwaters of the Nile* (p. 133)

Charles Scribner's Sons. New York, New York, USA. 1912

**Lawrence, D. H. (David Herbert)** 1885–1930  
English writer

A lizard ran out on a rock and looked up, listening  
no doubt to the sounding of spheres.  
And what a dandy fellow! The right toss of a chin for  
you

And swirl of a tail!

If men were as much men as lizards are lizards  
they'd be worth looking at.

*The Complete Poems of D.H. Lawrence*

The Lizard

Viking Press. New York, New York, USA. 1973

**Mann, Thomas** 1875–1955  
German-born American novelist

Hold fast the time! Guard it, watch over it, every hour,  
every minute! Unregarded it slips away, like a lizard,  
smooth, slippery, faithless, a pixy-wife.

*The Beloved Returns* (p. 297)

Alfred A. Knopf. New York, New York, USA. 1950

**LIZARD: CHAMELEON**

**Montgomery, James** 1771–1854  
Scottish poet and journalist

...the light chameleon climb'd,  
And changed his color as his place he changed;  
The nimble lizard ran from bough to bough,  
Glancing through light, in shadow disappearing ...  
*The Poetical Works of James Montgomery*  
The Pelican Island  
Little, Brown & Co. Boston, Massachusetts, USA. 1860

**Prior, Matthew** 1664–1721  
English poet and diplomat

As the chameleon, who is known  
To have no colours of his own,  
But borrows from his neighbour's hue  
His white or black, his green or blue,

And struts as much in ready light,  
Which credit gives him upon sight,  
As if the rainbow were in tail  
Settled on him and his heirs male.  
*Poems on Several Occasions*  
The Chameleon  
Printed for Jacob Tonson  
London, England. 1718

**Wells, Carolyn** 1862–1942  
American writer

The true Chameleon is small,  
A lizard sort of thing;  
He 'asn't any ears at all,  
And not a single wing.  
If there is nothing on the tree,  
'Tis the Chameleon you see.  
*Baubles*  
How to Tell the Wild Animals  
Dodd, Mead. New York, New York, USA. 1917

**LIZARD: GILA MONSTER**

**Underhill, Ruth Murray** 1883–1984  
American anthropologist

A lizard maiden  
Was thirsty and crying.  
A gila monster ran up  
And comforted her.  
The maiden stopped crying.  
The monster carried her off  
And took her to wife.  
*Singing for Power* (p. 51)  
University of California Press. Berkeley, California, USA. 1938

Reptiles (p. 551)  
John van Voorst. London, England. 1841

**Montgomery, James** 1771–1854  
Scottish poet and journalist

Terribly beautiful, the serpent lay,  
Wreath'd like a coronet of gold and jewels,  
Fit for a tyrant's brow; anon he flew  
Straight as an arrow shot from his own rings,  
And struck his victim, shrieking ere it went  
Down his strain'd throat, that open sepulcher.  
*The Poetical Works of James Montgomery*  
The Pelican Island  
Little, Brown & Co. Boston, Massachusetts, USA. 1860

**Norton, Gayne T. K.**  
No biographical data available

If you are a lover of trees and woodlands, if you enjoy  
excursions through the bush and hardwoods, if you are

interested in the economics of agriculture and forest conservation, let the snake alone. Kill your impulse to kill – not the snake ...

Legless Tree Crop Guards and What they Do  
*Nature Magazine*, Volume I, Number 1, January, 1923 (p. 10)

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

The serpent crest of the king's crown, or of the god's, on the pillars of Egypt, is a mystery; but the serpent itself, gliding past the pillar's foot, is it less a mystery? Is there, indeed, no tongue, except the mute forked flash from its lips, in that running brook of horror on the ground?

*The Queen of the Air*  
Chapter II, 67 (p. 95)  
George Allen. London, England. 1903

The serpent *is* a honeysuckle with a head put on ...

*Deucalion* Volume 2  
Chapter I, 32 (p. 23)  
John Wiley & Sons. New York, New York, USA. 1886

You see that one-half of it can move anywhere without stirring the other; and accordingly you may see a foot or two of a large snake's body moving one way, and another foot or two moving the other way, and a bit between not moving at all; which I, altogether, think we may specifically call 'Parliamentary' motion ...

*Deucalion* (Volume 2)  
Chapter I, 37 (p. 28)  
John Wiley & Sons. London, England. 1886

That rivulet of smooth silver – how does it flow, think you? It literally rows on the earth, with every scale for an oar; it bites the dust with the ridges of its body. Watch it, when it moves slowly – A wave, but without wind! A current, but with no fall! All the body moving at the same instant, yet some of it to one side, some to another, or some forward, and the rest of the coil backwards; but all with the same calm will and equal way – no contraction, no extension; one soundless, causeless march of sequent rings, and spectral procession of spotted dust, with dissolution in its fangs, dislocation in its coils.

*The Queen of the Air*  
Chapter II, 68 (pp. 96–97)  
George Allen. London, England. 1903

Startle it – the winding stream will become a twisted arrow – the wave of poisoned life will lash through the grass like a cast lance. It scarcely breathes with its one lung (the other shriveled and abortive); it is passive to the sun and shade, and is cold or hot like a stone; yet, "it can outclimb the monkey, outswim the fish, outleap the zebra, outwrestle the athlete, and crush the tiger."

*The Queen of the Air*  
Chapter II, 68 (pp. 97–98)  
George Allen. London, England. 1903

It [a snake] is a divine hieroglyph of the demoniac power of the earth – of the entire earthly nature. As the bird is the clothed power of the air, so this is the clothed power of the dust; as the bird the symbol of the spirit of life, so this of the grasp and sting of death.

*The Queen of the Air*  
Chapter II, 68 (p. 98)  
George Allen. London, England. 1903

## ADDER

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

ADDER, *n.* A species of snake. So called from its habit of adding funeral outlays to the other expenses of living.  
*The Collected Works of Ambrose Bierce* (p. 19)  
The Neale Publishing Co. New York, New York, USA. 1911

**Dyer, John** 1699–1757  
Welsh poet

And there the poisonous adder breeds,  
Concealed in ruins, moss and weeds.  
*The Poetical Works of Armstrong, Dyer and Green*  
Grongar Hill  
James Nichol. Edinburgh, Scotland. 1858

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

It is the bright day that brings forth the adder;  
And craves wary walking.

In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*Julius Caesar*  
Act II, Scene i, l. 14

French novelist

Asp: Animal known through Cleopatra's basket of figs.  
*Dictionary of Accepted Ideas*  
M. Reinhardt. London, England. 1954

## COBRA

**Nash, Ogden** 1902–71  
American writer of humorous poetry

This creature fills its mouth with venom  
And walks upon its duodenum.  
He who attempts to tease the cobra  
Is soon a sadder he, and sobra.

*Verses from 1929 On*  
The Cobra  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**COPPERHEAD**

**Harte, Bret** 1884–1929  
American humorist and critic

...he coils in the ooze and the drip  
Like a thong idly flung from the slave-driver's whip...  
*The Poetical Works of Bret Harte*  
The Copperhead  
James R. Osgood & Co. Boston, Massachusetts, USA. 1877

**GARTER SNAKE**

**Cuppy, Will** 1884–1929  
American humorist and critic

The Garter Snake or Striped Snake is our most abundant North American serpent. Although they are always getting killed or driven from their natural homes, there are just as many Garter Snakes as ever, and I can tell you the reason. Garter Snakes are crazy about sex and they don't care who knows it.  
*How to Become Extinct*  
The Garter Snake (p. 53)  
Dover Publications. New York, New York, USA. 1964

**PYTHON**

**Nash, Ogden** 1902–71  
American writer of humorous poetry

The python has, and I fib no fibs,  
318 pairs of ribs.  
In stating this I place reliance  
On a séance with one who died for science.  
This figure is sworn to and attested;  
He counted them while being digested.  
*Verses from 1929 On*  
The Python  
Little, Brown & Company. Boston, Massachusetts, USA. 1959

**Prelutsky, Jack** 1940–  
American poet

A puzzled python shook its head  
and said, "I simply fail  
to tell if I am purely neck,  
or else entirely tail."  
*A Pizza the Size of the Sun: Poems*  
A Puzzled Python  
Greenwillow Books. New York, New York, USA. 1996

**VIPER**

**Cuppy, Will** 1884–1929  
American humorist and critic

Vipers show you what Mother Nature can think up when she puts her mind to it.

*How to Become Extinct*  
The Common Viper (p. 56)  
Dover Publications. New York, New York, USA. 1964

**TORTOISE**

**Herford, Oliver** 1863–1935  
American writer and illustrator

The Tortoise is, to say the Least,  
A very Contradictory Beast.  
Though he may walk the wide world o'er  
He cannot step outside his Door.

*More Animals*  
The Tortoise (p. 3)  
Charles Scribner's Sons. New York, New York, USA. 1901

**von Ebner-Eschenbach, Marie** 1830–1916  
Austrian novelist

Since the well-known victory over the hare by the tortoise, the descendants of the tortoise think themselves miracles of speed.  
Translated by Annis Lee Wister  
*Aphorisms*  
Number 87  
J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1883

**TURTLE**

**Montgomery, James** 1771–1854  
Scottish poet and journalist

The pregnant turtle, stealing out at eve,  
With-anxious eye, and trembling heart, explored  
The loneliest coves, and in the loose warm sand  
Deposited her eggs, which the sun hatch'd:  
Hence the young brood, that never knew a parent,  
Unburrow'd and by instinct sought the sea;  
Nature herself, with her own gentle hand,  
Dropping them one by one into the flood,  
And laughing to behold their antic joy,  
When launched in their maternal element.

*The Poetical Works of James Montgomery*  
The Pelican Island  
Little, Brown & Co. Boston, Massachusetts, USA. 1860

**Rudloe, Jack** 1943–  
American nature writer

The timeless turtle will look on as man works feverishly to develop destructive nuclear weapons that will blow the world apart many times over. And perhaps one day when he pops his head up from the sea, he'll see a world empty of man, with barnacles growing on the ruins of the cities and buildings. And somewhere, perhaps on a Mexican beach, a handful of Kemp's ridleys filled with eggs will crawl out on the sand, unmolested and free.

*Time of the Turtle*  
Chapter 9 (p. 106)  
Alfred A. Knopf. New York, New York, USA. 1979

**ANIMAL: WORM****EARTHWORM****Author undetermined**

In the eyes of most men...the earthworm is a mere blind, dumb, senseless, and unpleasantly slimy annelid. Mr. Darwin undertakes to rehabilitate his character, and the earthworm steps forth at once as an intelligent and beneficent personage, a worker of vast geological changes, a planer down of mountain sides...a friend of man...and an ally of the Society for the preservation of ancient monuments.

In Francis Darwin (ed.)

*The Life and Letters of Charles Darwin* (Volume 2)

Chapter IX (p. 395)

D. Appleton & Company. New York, New York, USA. 1896

**Beebe, William** 1877–1962

American ornithologist

There are many ways of considering a flatworm. A Creator might rightly be quoted, "He saw that it was good." To an ant accidentally blundering into its slime, the worm would be a certain, evil death. A bird would give it no second glance for its flesh is worse than inedible.

*High Jungle*

Chapter X (p. 171)

Duell, Sloan & Pearce. New York, New York, USA. 1949

**Blake, William** 1757–1827

English poet, painter, and engraver

O rose, thou art sick!  
The invisible worm  
That flies in the night,  
In the howling storm,  
Has found out thy bed  
Of crimson joy,  
And his dark secret love  
Does thy life destroy.

*The Complete Poetry and Prose of William Blake*

Songs of Experience, The Sick Rose

University of California Press. Berkeley, California, USA. 1982

**Boone, John Allen** 1882–1965

Author

...if you should ever encounter me walking along a dirt road and should see me pause, lift my hat and bow to the direction of the ground, you will know that I am paying my respects to a passing earthworm.

*Adventures in Kinship with All Life*

Wormy Ways (p. 123)

Harper & Brothers. New York, New York, USA. 1954

**Darwin, Charles Robert** 1809–82

English naturalist

It may be doubted whether there are many other animals which have played so important a part in the history of the world, as have these lowly organised creatures.

*Darwin on Humus and the Earthworm: The Formation of Vegetable*

*Mould Through the Action of Worms with Observations on Their Habits*

Chapter VII (p. 148)

Faber & Faber Ltd. London, England. 1945

Archaeologists are probably not aware how much they owe to worms for the preservation of many ancient objects. Coins, gold ornaments, stone implements, &c., if dropped on the surface of the ground, will infallibly be buried by the castings of worms in a few years, and will thus be safely preserved, until the land at some future time is turned up.

*The Formation of Vegetable Mould Through the Action of Worms*

Chapter IV (p. 178)

D. Appleton & Co. New York, New York, USA. 1909

The plough is one of the most ancient and most valuable of man's inventions; but long before he existed the land was in fact regularly ploughed, and still continues to be thus ploughed by earth-worms.

*The Formation of Vegetable Mould Through the Action of Worms*

Chapter VII (p. 316)

D. Appleton & Co. New York, New York, USA. 1907

**Eaton, Burnham**

No biographical data available

The earthworm who, described as lowly,  
Grinds, like the gods, exceedingly slowly,  
Doth also grind exceedingly small.

By diligent, continual

And through subterranean toil,

He doth homogenize the soil.

H-O-M-G-E-N-I-Z-A-T-I-O-N

*Nature Magazine*, Volume 50, Number 1, January, 1957 (p. 41)

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

Few insects enjoy more fame than the Glow-worm, the curious little animal who celebrates the joy of life by lighting a lantern at its tail-end. We all know it, at least by name, even if we have not seen it roaming through the grass, like a spark fallen from the full moon.

Translated by Alexander Teixeira de Mattos

*Fabre's Book of Insects*

Chapter V (p. 60)

Dodd, Mead & Co. New York, New York, USA. 1945

**Garstang, Walter** 1868–1949

English embryologist and amateur poet

The Onchosphere or Hexacanth was not designed for frolic,

His part may be described perhaps as coldly diabolic:

He's born amid some gruesome things, but this should count for virtue,

That steadily, 'gainst fearful odds, he plies his task – to hurt you.

He's now a Cysticerus in the muscles of a pig,  
With just a sporting chance of getting to grow up big.  
If you'll consent to eat your pork half-raw or underdone,  
His troubles will be over, and a Tapeworm will have won:  
He'll cast his anchors out, and on your best digested food

Will thrive, and bud an endless chain to raise a countless brood.

*Larval Forms, and Other Zoological Verses*

The Onchosphere, Stanza 1, 4 (p. 37)

The University of Chicago Press. Chicago, Illinois, USA. 1985

**Gilman, Charlotte Perkins** 1860–1935

American writer and feminist

I don't want to be a fly,

I want to be a worm!

In Burton Egbert Stevenson (ed.)

*The Home Book of Verse*

A Conservative

Henry Holt & Company. New York, New York, USA. 1915

**Hamilton, Jane** 1957–

American author

I spent whole afternoons in the dirt, making my patch of grown flawless. I even cleared the worms away, before I found out that all the tunnels they make give air, and probably other molecules I don't know about yet, to the plants.

*The Book of Ruth*

Chapter Two (p. 18)

Random House, Inc. New York, New York, USA. 1988

**Hooker, Sir Joseph Dalton** 1817–1911

English botanist and explorer

I must own I had always looked on worms as amongst the most helpless and unintelligent members of the creation; and am amazed to find that they have a domestic life and public duties! I shall now respect them, even in our Garden pots; and regard them as something better than food for fishes.

*Life and Letters of Sir Joseph Dalton Hooker* Volume 2

Chapter XL (p. 255)

J. Murray. London, England. 1918

**Martinson, Harry Edmund** 1904–78

Swedish novelist

Who really respects the earthworm,  
the farm worker far under the grass in the soil.

In Robert Bly

*Friends, You Drank Some Darkness: Three Swedish Poets*

The Earthworm (p. 139)

Beacon Press. Boston, Massachusetts, USA. 1975

**Pallister, William Hales** 1877–1946

Canadian physician

Then the WORMS seven thousand of species can show,  
All segmented, possessing a system of nerves:

Life becoming more conscious, beginning to know;  
The small earthworm is soil's great economy serves,  
Bringing earth to the surface, returning again,  
Even thus, he has buried old cities for men!

*Poems of Science*

Beginnings, Animal Life (p. 139)

Playford Press. New York, New York, USA. 1931

**Phillips, Adam**

British child psychotherapist and essayist

What would our lives be like if we took earthworms seriously, took the ground under our feet rather than the skies high above our heads, as the place to look, as well, eventually, as the place to be? It is as though we have been pointed in the wrong direction.

*Darwin's Worms*

Darwin Turns the Worm (pp. 60–61)

Faber & Faber Ltd. London, England. 1999

**Pliny (C. Plinius Secundus)** 23–79

Roman savant and author

Nature crying out and speaking to country people in these words: Clown, wherefore dost thou behold the heavens? Why dost thou seek after the stars? When thou art now weary with short sleep, the nights are troublesome to thee. So I scatter little stars in the grass, and I shew them in the evening when thy labour is ended, and thou art miraculously allured to look upon them when thou pass-est by: Dost thou not see how a light like fire is covered when she closeth her wings, and she carrieth both night and day with her.

In Thomas Moffett

*The Theater of Insects*

Glow-Worms

Printed by E. Cotes. London, England. 1658

**Sexton, Anne** 1928–74

American poet and writer

Slim inquirer, while the old fathers sleep you are reworking their soil, you have a grocery store there down under the earth and it is well stocked with broken wine bottles, old cigars, old door knobs and earth, that great brown flour that you kiss each day.

In Linda Gray Sexton (ed.)

*45 Mercy Street*

Earthworm

Houghton Mifflin Company. Boston, Massachusetts, USA. 1976

Have you no beginning and end? Which heart is the real one? Which eye the seer? Why is it in the infinite plan that you would be severed and rise from the dead like a gargoyle with two heads?

In Linda Gray Sexton (ed.)

*45 Mercy Street*

Earthworm

Houghton Mifflin Company. Boston, Massachusetts, USA. 1976

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

A worm is as good a traveler as a grasshopper or a cricket, and a much wiser settler. With all their activity these do not hop away from drought nor forward to summer. We do not avoid evil by fleeing before it, but by rising above or diving below its plane; as the worm escapes drought and frost by boring a few inches deeper.

*A Week on the Concord and Merrimack Rivers*  
Thursday (pp. 400–401)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1893

**White, Gilbert** 1720–93  
English naturalist and cleric

The most insignificant insects and reptiles are of much more consequence, and have much more influence in the economy of Nature, than the incurious are aware of; and are mighty in their effect, from their minuteness, which renders them less an object of attention; and from their numbers and fecundity. Earth-worms, though in appearance a small and despicable link in the chain of nature, yet, if lost, would make a lamentable chasm. For, to say nothing of half the birds, and some quadrupeds, which are almost entirely supported by them, worms seem to be the great promoters of vegetation, which would proceed but lamely without them, by boring, perforating, and loosening the soil, and rendering it pervious to rains and the fibers of plants, by drawing straws and stalks of leaves and twigs into it; and, most of all, by throwing up such infinite numbers of lumps of earth...

*The Natural History of Selborne*  
Letter XXXV  
Robert M. McBride & Company. New York, New York, USA. 1925

## MAGGOT

**Ammons, Archie Randolph** 1926–2001  
American poet

Honor the maggot, supreme catalyst: he spurs the rate of change....

*Collected Poems: 1951–1971*  
Catalyst, I. 1–3  
W.W. Norton & Company, Inc. New York, New York, USA. 1972

## ANIMAL COMMUNITY

**Elton, Charles S.** 1900–91  
English biologist

...the term “animal community” is really a very elastic one, since we can use it to describe on the one hand the fauna of the equatorial forest and on the other hand the fauna of a mouse’s caecum.

*Animal Ecology*  
Chapter II (p. 17)  
Sidgwick & Jackson, Ltd. London, England. 1927

## ANIMAL KINGDOM

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

It is my belief that naturalists are chasing a phantom, in their search after some material gradation among created beings, by which the whole Animal Kingdom may have been derived by successive development from a single germ, or from a few germs.

*Methods of Study in Natural History*  
Preface (pp. iii–iv)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1896

## ANIMAL LIFE

**Thomson, Sir John Arthur** 1861–1933  
Scottish naturalist

The first steps towards an appreciation of animal life must be taken by the student himself, for no book-lore can take the place of actual observation. The student must wash the quartz and dig for the diamonds, though a book may help him to find these, and thereafter to fashion them into a treasure.

*The Study of Animal Life* (2nd Edition)  
Part I, Chapter I (p. 1)  
John Murray. London, England. 1892

## ANIMAL LIFE, INFLUENCE OF

**Kelvin, Lord William Thomson** 1824–1907  
Scottish engineer, mathematician, and physicist

The influence of animal or vegetable life on matter is infinitely beyond the range of any scientific inquiry hitherto entered on. Its power of directing the motions of moving particles, in the demonstrated daily miracle of our human free-will, and in the growth of generation after generation of plants from a single seed, are infinitely different from any possible result of the fortuitous concurrence of atoms; and the fortuitous concurrence of atoms is the sole foundation in Philosophy on which can be founded the doctrine that it is impossible to derive mechanical effect from heat otherwise than by taking heat from a body at a higher temperature, converting at most a definite proportion of it into mechanical effect, and giving out the whole residue to matter at a lower temperature.

*Popular Lectures and Addresses* (Volume 2)  
On the Dissipation of Energy (p. 464)  
Macmillan & Co Ltd. London, England. 1894

## ANIMAL, RIGHTS OF

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

I believe I am not interested to know whether Vivisection produces results that are profitable to the human race or doesn't. To know that the results are profitable to the race would not remove my hostility to it. The pains which it inflicts upon unconsenting animals is the basis of my enmity towards it, and it is to me sufficient justification of the enmity without looking further. It is so distinctly a matter of feeling with me, and is so strong and so deeply-rooted in my make and constitution, that I am sure I could not even see a vivisector vivisected with anything more than a sort of qualified satisfaction. I do not say I should not go and look on; I only mean that I should almost surely fail to get out of it the degree of contentment which it ought, of course, to be expected to furnish.

Letter, London Anti-Vivisection Society, May 26, 1899

## ANIMAL SOUNDS

**Fabre, Jean-Henri** 1823–1915

French entomologist and author

Their [the cricket] song is a monotonous and artless, but well suited in its very lack of art to the simple gladness of reviving life. It is the hosanna of the awakening, the sacred alleluia understood by swelling seed and sprouting blade.

Translated by Alexander Teixeira de Mattos

*Fabre's Book of Insects*

Chapter XII (p. 208)

Dodd, Mead & Co. New York, New York, USA. 1945

**Friend, Tim**

No biographical data available

The different species on this planet may sound different and look different, but all are members of the same extended family, living here for the same essential reasons. And when we open our mouths, it's all animal talk.

*Animal Talk*

Nine (p. 250)

Free Press. New York, New York, USA. 2004

**O'Brien, Flann** 1911–66

Irish novelist and political commentator

"Of the musics you have ever got," asked Conan, "which have you found the sweetest?"...

"I incline to like pig-grunting in Magh Eithne, the bel-lowing of the stag of Ceara, the whinging of fauns in Derrynish. The low warble of water-owls in Loch Barra also, sweeter than life that. I am fond of wing-beating in dark belfries, owl-cries in pregnancy, trout-spurt in a lake-top. Also the whining of small otters in nettle-beds at evening, the croaking of small jays behind a wall, these are heart pleasing.

*At Swim-two-birds*

Chapter I (p. 16)

Maggibbon & Kee. London, England. 1961

## BIRD SONG

**Burroughs, John** 1837–1921

American naturalist and essayist

The charm of the songs of birds, like that of a nation's popular airs and hymns, is so little a question of intrinsic musical excellence and so largely a matter of association and suggestion, or of subjective coloring and reminiscence, that it is perhaps entirely natural for every people to think their own feathered songsters the best.

*Fresh Fields*

English and American Song-birds (p. 123)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1885

## ANIMAL WORLD

**Dr. Hudson**

In the animal world what happiness reigns! What ease, grace, beauty, leisure and content! Watch these living specks as they glide through their forests of algae;, all "without hurry and care," as if their 'span-long lives' could really endure for the thousand years that the old catch pines for. Here is no greedy jostling at the banquet that nature has spread for them, no dread of each other, but a leisurely inspection of the field that shows neither the pressure of hunger nor the dread of an enemy.

Quoted in John Lubbock

*The Beauties of Nature and the Wonders of the World We Live In*

Chapter III (pp. 76–77)

Macmillan & Company Ltd. London, England. 1903

## ANIMAL, CARNIVOROUS

**Joubert, Joseph** 1754–1824

French moralist

Carnivorous animals care not only for their prey, but for the chase. It is their game, their pastime, their pleasure.

All, in fact, hunt gaily – laughingly – so to speak.

Translated by Katharine Lyttelton

*Joubert*

#13 (p. 118)

Dodd, Mead & Co. New York, New York, USA. 1899

## ANIMAL, DISAPPEARANCE OF

**Wilson, Edward O.** 1929–

American biologist and author

It's [the loss of species] like having astronomy without knowing where the stars are.

*Time*, October 13, 1986

## ANIMALCULA

**van Leeuwenhoek, Antony**

1632–1723

Dutch biology researcher and microscope developer

In the past summer I have made many observations upon various waters, and in almost all discovered an abundance of very little and odd animalcules, whereof some were incredibly small, less even than the animalcules which others have discovered in water, and which have been called by the name of Water-flea or Water-louse.

Translated by Clifford Dobell

*Antony van Leeuwenhoek and His "Little Animals"*

Part II, Chapter I (p. 111)

John Bale, Sons, &amp; Danielsson. London, England. 1932

When these animalcula or living Atoms did move, they put forth two little horns, continually moving themselves...

In Clifford Dobell

*Antony van Leeuwenhoek and His "Little Animals"*

Chapter I, Plate XVIII (p. 112)

John Bale, Sons &amp; Danielsson Ltd. London, England. 1932

I now saw very plainly that these were little eels, or worms, lying all huddled up together and wriggling; just as if you say, with the naked eye, a whole tubful of very little eels and water, with the eels a-squirming among one another: and the whole water seemed to be alive with these multifarious animalcules. This was for me, among all the marvels that I have discovered in nature, the most marvellous of all; and I must say, for my part, that no more pleasant sight has ever yet come before my eye than these many thousands of living creatures, seen all alive in a little drop of water ...

Translated by Clifford Dobell

*Antony van Leeuwenhoek and His "Little Animals"*

Part II, Chapter I (p. 144)

John Bale, Sons, &amp; Danielsson. London, England. 1932

...I am persuaded that thirty million of these animalcules together wouldn't take up as much room, or be as big, as a coarse grain of sand.

Translated by Clifford Dobell

*Antony van Leeuwenhoek and His "Little Animals"*

Part II, Chapter I (p. 168)

John Bale, Sons, &amp; Danielsson. London, England. 1932

Here Gentlemen, you have the notes I have kept about my observations on duckweed and little animalcules: in making which I said to myself, How many creatures are still unknown to us, and how little do we yet understand!

In Clifford Dobell

*Antony van Leeuwenhoek and his "Little Animals"*

Part II, Chapter IV (p. 285)

John Bale, Sons &amp; Danielsson Ltd. London, England. 1932

## ANIMOSITY

**Hull, David L.** 1935–

American philosopher of biology

The animosities that arise during the course of science are complicated by the allegiances and alliances scientists form.

*Science As Process*

Chapter One (p. 15)

The University of Chicago Press. Chicago, Illinois, USA. 1988

## ANNUAL MEETING

**Glaisher, James Whitbread Lee** 1848–1928

English mathematician

...it is not without some compensating advantages. In these days when science is so much subdivided it is well that students of subjects even so diverse as those with which we have to deal should occasionally meet on common ground, and have the opportunity of learning from each other's lips the kind of work in which they are engaged.

*Report of the Sixtieth Meeting of the British Association for the Advancement of Science*

Presidential Address (p. 719)

John Murray. London, England. 1891

## ANOMALY

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Blank accident! Nothing's anomaly!

*The Poetical Works of S. T. Coleridge (Volume 1)*

Human Life

William Pickering. London, England. 1834

**Faraday, Michael** 1791–1867

English physicist and chemist

...the more we can enlarge the number of anomalous facts and consequences the better it will be for the subject; for they can only remain anomalies to us while we continue in error.

In John Tyndall

*Researches on Diamagnetism and Magne-crystalline Action*

Magnetic Remarks by Professor Faraday (p. 218)

Longmans, Green &amp; Co. London, England. 1870

**Iles, George**

No biographical data available

The man of science, like the man of law, has brought before him many an anomaly; but, unlike the judge or the advocate, he knows that the contradictions he studies are

only such in seeming; he feels confident that nature at the core is in agreement with herself.

*Flame, Electricity and the Camera*

Chapter VI (p. 76)

Doubleday & McClure. New York, New York, USA. 1900

**Jevons, William Stanley** 1835–82

English economist and logician

In no part of physical science can we be free from exceptions and outstanding facts, of which our present knowledge can give no account. It is among such anomalies that we must look for the clues to new realms of facts worthy of discovery. They are like the floating waifs which led Columbus to suspect the existence of the New World.

*The Principles of Science: A Treatise on Logic and Scientific Method*

Chapter XXV (p. 573)

Macmillan & Co Ltd. London, England. 1887

**Lovelock, James Ephraim** 1919–

English scientist

We have had a moon's-eye view of our home in space as it orbits the sun, and we are suddenly aware of being citizens of no mean planet, however mean and squalid the human contribution to this panorama may be in close-up.... [W]e are... a living part of a strange and beautiful anomaly in our solar system.

*Gaia*

Chapter 5 (pp. 59–60)

Oxford University Press. Oxford, England. 1982

## ANSWER

**Adams, Henry Brooks** 1838–1918

American man of letters

Unintelligible answers to insoluble problems.

In Bert Leston Taylor

*The So-Called Human Race* (p. 154)

Alfred A. Knopf. New York, New York, USA. 1922

**Arnold, John E.** 1913–63

American mechanical engineer

... there is no one right answer to creative problems.

In Sidney J. Parnes and Harold F. Harding

*A Source Book for Creative Thinking*

Useful Creative Techniques (p. 252)

Charles Scribner's Sons. New York, New York, USA. 1962

**Atkins, Peter William** 1940–

English physical chemist and writer

The stern and stony eye of science seeks answers that are not grounded in the fundamentality of purpose.

Will Science Ever Fail?

*New Scientist* August 8, 1992 (p. 32)

**Bauer, Henry H.** 1931–

American chemist

That science does not have all the answers does not mean that it has no answers. That science now has inadequate answers in some areas does not mean that the answers will not become adequate in the future; in fact, history teaches that science's answers become better and better as time goes by. That science is fallible does not mean that science is entirely fallible or that it is as fallible as such other modes of human knowledge and belief as folklore, religion, political ideology, or social science. That science has no answers in some matters – such as the value of human life or the purpose of living – does not mean that it has no answers in other areas – those areas that are within its purview, matters of forces and substances and natural phenomena. And that science has no direct answers on matters of human purpose does not mean that its answers on other matters have no bearing on how, and how well, we are able to think about human purpose, free will, and other such things.

*Scientific Literacy and the Myth of the Scientific Method*

Chapter 7 (p. 144)

University of Illinois Press. Urbana, Illinois, USA. 1992

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

And his answer trickled through my head,  
Like water through a sieve.

*Scientific American*, Volume 182, Number 4, April, 1950 (p. 13)

**Faraday, Michael** 1791–1867

English physicist and chemist

So much is unknown to the wisest man, that he may often be without an answer: as frequently he is so, because the subject is in the region of hypothesis, and not of facts.

*Experimental Researches in Chemistry and Physics*

Lecture on Mental Education (p. 486)

Richard Taylor & William Francis. London, England. 1859

**Feynman, Richard P.** 1918–88

American theoretical physicist

Quantum Mechanics is the description of the behavior of matter in all its details and, in particular, of the happenings on an atomic scale. Things on a very small scale behave like nothing that we have any direct experience about. They do not behave like waves, they do not behave like particles, they do not behave like clouds, or billiard balls, or weights or springs, or like anything that you have ever seen....

Because atomic behavior is so unlike ordinary experience, it is very difficult to get used to and it appears peculiar and mysterious to everyone, both to the novice and to the experienced physicist.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

Quantum Behavior (pp. 116, 117)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

**Friedlander, Michael W.**

Physicist

There are many more wrong answers than right ones, and they are easier to find.

*At the Fringes of Science*

Chapter 6 (p. 78)

Westview Press. Boulder, Colorado, USA. 1995

**Gould, Stephen Jay** 1941–2002

American paleontologist and evolutionary biologist

...people often reach correct answers for wrong or illogical reasons.

*Eight Little Piggies: Reflections in Natural History*

Chapter I (p. 29)

W.W. Norton & Co. New York, New York, USA. 1993

**Hawking, Stephen William** 1942–

English theoretical physicist

There may be ultimate answers, but if there are, I would be sorry if we were to find them. For my own sake I would like very much to find them, but their discovery would leave nothing for those coming after me to seek. Each generation builds on the advances of the previous generation, and this is as it should be. As human beings, we need the quest.

In J.L. Wilhelm

A Singular Man

*Quest*, April, 1979 (p. 39)

**Hodnett, Edward** 1901–84

English illustration historian

You have to ask a precise question to get a precise answer.

*The Art of Problem Solving*

Part I, Chapter 5 (p. 37)

Harper & Brothers. New York, New York, USA. 1955

**McKuen, Rod** 1933–

American poet

Think of all the men who never knew the answers think of all those who never even cared.

Still there are some who ask why who want to know, who dare to try.

*Listen to the Warm*

Here He Comes Again

Random House, Inc. New York, New York, USA. 1967

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932

Latvian-born German chemist

Science will always give a clear answer; if not today, in the near future.

*Letters to a Painter on the Theory and Practice of Painting*

Letter X (p. 92)

Ginn & Co. Boston, Massachusetts, USA. 1907

**Pasteur, Louis** 1822–95

French chemist

Science proceeds by successive answers to questions more and more subtle, coming nearer and nearer to the very essence of phenomena.

In René Dubos

*Louis Pasteur: Free Lance of Science*

Chapter VII (p. 207)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

**Poe, Edgar Allan** 1809–49

American short story writer and poet

I shall always know what to answer, and my reply will be imposed upon me by the witness of my senses.

Translated by George Bruce Halsted

*The Value of Science* (p. 118)

The Science Press. New York, New York, USA. 1907

**Price, Vincent** 1911–93

American actor

I shall look for the answer tonight at the bottom of a large rum and coke.

*The Eve of St. Mark*

Film (1944)

**Rothman, Tony** 1953–

American cosmologist

You only arrive at the right answer after making all possible mistakes. The mistakes began with the Greeks.

*Instant Physics: From Aristotle to Einstein, and Beyond*

Prologue (p. 1)

Ballentine Books. New York, New York, USA. 1995

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

From the point of view of philosophy, however, the discovery that a question is unanswerable is as complete an answer as any that could possibly be obtained.

*Mysticism and Logic: And Other Essays*

Chapter VI (p. 118)

Longmans, Green & Co. London, England. 1919

**Sagan, Carl** 1934–96  
American astronomer and author

We make our world significant by the courage of our questions and by the depth of our answers.

*Cosmos*

Chapter VII (p. 193)

Random House, Inc. New York, New York, USA. 1980

I find it more difficult, but also much more fun, to get the right answer by indirect reasoning and before all the evidence is in. It's what a theoretician does in science. But the conclusions drawn in this way are obviously more risky than those drawn by direct measurement, and most scientists withhold judgment until there is more direct evidence available. The principal function of such detective work – apart from entertaining the theoretician – is probably to so annoy and enrage the observationalists that they are forced, in a fury of disbelief, to perform the critical measurements.

*The Cosmic Connection: An Extraterrestrial Perspective*

Chapter 16 (p. 121)

Dell Publishing, Inc. New York, New York, USA. 1975

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

I was gratified to be able to answer promptly, and I did. I said I didn't know.

*Life on the Mississippi*

Chapter VI (p. 49)

Harper & Row, Publishers. New York, New York, USA. 1951

**van Gulik, Robert Hans** 1910–1967  
Dutch writer

Approach your problems from the right end and begin with the answers. Then, one day, perhaps you will find the final answer.

*The Haunted Monastery and The Chinese Maze Murders*

*The Chinese Maze Murders*

Nineteenth Chapter (p. 259)

Dover Publications. New York, New York, USA. 1977

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

...an answer which cannot be expressed the question too cannot be expressed.

*Tractatus Logico-Philosophicus*

6.5 (p. 187)

Harcourt, Brace & Co. New York, New York, USA. 1922

**Woodson, Thomas T.**  
American engineer

...it is safe money to wager that an unproven answer is wrong...

*Introduction to Engineering Design* (p. 240)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1966

## ANTHROPIC PRINCIPLE

**Davies, Paul Charles William** 1946–  
British-born physicist, writer, and broadcaster

...the Anthropic Principle does not assert that our existence somehow *compels* the laws of physics to have the form they do, nor need one conclude that the laws have been deliberately designed with people in mind. On the other hand, the fact that even slight changes to the way things are might render the universe unobservable is surely a fact of fundamental significance.

*The Mind of God: The Scientific Basis for a Rational World*

Chapter 8 (p. 200)

Simon & Schuster. New York, New York, USA. 1992

**Wallace, Alfred Russel** 1823–1913  
English humanist, naturalist, and geographer

We are situated in a vast universe and are products of it. We cannot detach ourselves from it and say, "we do not want the rest of the universe; the stars are no good to us; so long as we have our sun all the rest may go." The universe is a mighty organism; its whole aspect and structure assure us of the fact. We are a portion of it, and owe our position, our surroundings, our very existence to it. Looking at it as an evolutionist, I believe that it is only by tracing it back to some necessary earlier state that we shall be able to form some rational conception of how it has evolved, how it has come to be what it is, how we have come to be where we are. Then, and then only, shall we be able to give any probable answer to the question, What advantages have we derived from our nearly central position?

Man's Place in the Universe

*The Independent (New York)* Volume 55, 1903 (p. 2030)

## ANTHROPOMORPHISM

**Ardrey, Robert** 1908–80  
American anthropologist

There are times when anthropomorphisms are almost irresistible to even the most rigorous scientists. As unlikely victims as Niko Tinbergen and David Lack have found the word "righteous" inescapable when describing the behavior of a territorial proprietor threatened by an intruder.

*The Social Contract: A Personal Inquiry into the Evolutionary Sources of Order and Disorder*  
The Alpha Fish (p. 135)  
Atheneum. New York, New York, USA. 1970

## ANTHROPOLOGIST

**Grindal, Bruce** 1940–  
American anthropologist

**Salamone, Frank**  
Anthropologist

Anthropologists working in the USA must deal with a society with many different faces and voices, despite its overall familiarity. They must confront the challenge of being strangers in need of friends to guide them through the maze of assumptions that shape life just around the corner.

*Bridges to Humanity: Narrative on Anthropology and Friendship*  
Eutaw Jack (p. 7)  
Waveland Press, Inc. Prospect Heights, Illinois, USA.

The relationship between the anthropologist and a fellow human being in the field is many times problematic, involving contradictory feelings and the mutual and painful exchange of personhood and value. The anthropologist's understanding of that friendship is often not realized at the time but must await a later-life maturity that awakens the deeper revelations of a life lived.

*Bridges to Humanity: Narrative on Anthropology and Friendship*  
Immortality Denied (p. 63)  
Waveland Press, Inc. Prospect Heights, Illinois, USA.

The dilemma for social scientists is how to apply the precision of science to the ambiguity of human relationships. The particular problem for anthropologists is how to do this among people who live in social worlds created by different assumptions about reality. It is no doubt a comment on the human condition (or nature, if you will) that this cultural abyss is regularly bridged. Scientists and native, self and Other, subject and object become friends, sometimes more.

*Bridges to Humanity: Narrative on Anthropology and Friendship*  
Remembering Cinita (p. 115)  
Waveland Press, Inc. Prospect Heights, Illinois, USA.

**Krutch, Joseph Wood** 1893–1970  
American naturalist, conservationist, and writer

My dentist, patching up a tooth, warned me that I must understand, of course, that this was only temporary, and he seemed startled when I replied that so, after all, was life itself. What should so temporary a creature as I want with a really permanent set of teeth? They might possibly be of interest to some future anthropologist, but I can have no need for them.

*The Twelve Seasons*  
June (p. 43)  
W. Sloane Associates. New York, New York, USA. 1949

## ANTHROPOLOGY

### Author undetermined

Unfortunately, the vast majority of artists' conceptions are based more on imagination, than evidence.... Much of the reconstruction, however, is guesswork. Bones say nothing about the fleshy parts of the nose, lips, or ears. Artists must create something between an ape and a human being: the older a specimen is said to be, the more ape-like they make it.... Hairiness is a matter of pure conjecture. The guesswork approach often leads to errors.

Anthropological Art  
*Science Digest*, Volume 89, Number 3, April, 1981 (p. 44)

**Barley, Nigel** 1947–  
English anthropologist

Anthropology is not short of facts but simply of anything intelligent to do with them. The notion of "butterfly collecting" is familiar within the discipline and serves to characterize the endeavors of many ethnographers and failed interpreters, who simply amass neat examples of curious customs arranged by area, or alphabetically, or by evolutionary order, whatever the current style may be.

*The Innocent Anthropologist: Notes from a Mud Hut*  
Chapter 1 (pp. 9–10)  
British Museum Publications. London, England. 1983

**Boas, Franz** 1858–1942  
German-born American anthropologist

Anthropology is often considered a collection of curious facts, telling about the peculiar appearance of exotic people and describing their strange customs and beliefs. It is looked upon to an entertaining diversion, apparently without any bearing upon the conduct of life of civilized communities. This opinion is mistaken. More than that, I hope to demonstrate that a clear understanding of the principles of anthropology illuminates the social process of our own times and may show us, if we are ready to listen to its teachings, what to do and what to avoid.

*Anthropology and Modern Life*  
Chapter I (p. 11)  
W.W. Norton & Company, Inc. New York, New York, USA. 1928

...anthropology is the science that endeavors to reconstruct the early history of mankind, and that tries, wherever possible, to express in the form of laws ever-recurring modes of historical happenings.

*Lectures on Science, Philosophy and Art, 1907–1908*  
Anthropology (p. 8)  
The Columbia University Press. New York, New York, USA. 1908

**Diamond, Stanley** 1922–

Anthropology, abstractly conceived as the study of man, is actually the study of men in crisis by men in crisis.

*In Search of the Primitive: A Critique of Civilization*  
Chapter 3 (p. 93)  
Transaction Books. New Brunswick, New Jersey, USA. 1974

**Flannery, Kent V.** 1932–  
American environmental archaeologist

Archaeology is the only branch of anthropology where we kill our informants in the process of studying them. The Golden Marshalltown: A Parable for the Archaeology of the 1980s *American Anthropologist*, Volume 84, 1982

**Geertz, Clifford** 1926–  
American anthropologist

There is not much assurance or sense of closure, not even much sense of knowing what it is one precisely is after, in so indefinite a quest, amid such various people, over such a diversity of times. But it is an excellent way, interesting, dismaying, useful, and amusing, to expend a life. *After the Fact: Two Countries, Four Decades, One Anthropologist* Chapter 6 (p. 168) Harvard University Press. Cambridge, Massachusetts, USA. 1995

**Herskovits, Melville Jean** 1895–1963  
American anthropologist

No branch of anthropology requires more inference, or the weighing of imponderables; in short, the exercise of the scientific imagination, than prehistory. *Man and His Works* Chapter 7 (p. 97) Alfred A. Knopf. New York, New York, USA. 1949

**Huxley, Thomas Henry** 1825–95  
English biologist

Reckoned by centuries, the remoteness of the quaternary, or pleistocene, age from our own is immense, and it is difficult to form an adequate notion of its duration. Undoubtedly there is an abysmal difference between the Neanderthaloid race and the comely living specimens of the blond long heads with whom we are familiar. But the abyss of time between the period at which North Europe was first covered with ice, when savages pursued mammoths and scratched their portraits with sharp stones in central France, and the present day, ever widens as we learn more about the events which bridge it. And, if the differences between the Neanderthaloid men and ourselves could be divided into as many parts as that time contains centuries, the progress from part to part would probably be almost imperceptible.

*Man's Place in Nature and other Anthropological Essays* Chapter VI (p. 328) D. Appleton & Company. New York, New York, USA. 1896

**Kluckhohn, Clyde** 1905–60  
American anthropologist

...anthropology...has explored the gamut of human variability and can best answer the questions: what common ground is there between human beings of all tribes and nations? What differences exist? what is their source? how deep-going are they?

*Mirror for Man: The Relation of Anthropology to Modern Life* Chapter I (p. 2) McGraw-Hill Book Company, Inc. New York, New York, USA. 1949

Moreover, the recipe for action that must be drawn from applied anthropology thus far is that of caution, of modest expectations as to what can be accomplished by planning, of humanity as to what may be predicted with present instruments for observing and conceptualizing, of preference for *vis medicatrix naturae* in many social situations.

*Mirror for Man: The Relation of Anthropology to Modern Life* Chapter X (p. 262) McGraw-Hill Book Company, Inc. New York, New York, USA. 1949

**Marett, Robert Randolph** 1866–1943  
Social anthropologist

Anthropology is the child of Darwin. Darwinism makes it possible. Reject the Darwinian point of view, and you must reject anthropology also.

*Anthropology* Chapter I (p. 8) Henry Holt & Co. New York, New York, USA. 1912

Once people take up anthropology, they may be trusted not to drop it again. It is like learning to sleep with your window open. What could be more stupefying than to shut yourself up in a closet and swallow your own gas? But is it any less stupefying to shut yourself up within the last few thousand years of the history of your own corner of the world, and suck in the stale atmosphere of its own self-generated prejudices?

*Anthropology* Chapter I (p. 10) Henry Holt & Co. New York, New York, USA. 1912

...anthropology is like travel. Everyone starts by thinking that there is nothing so perfect as his own parish. But let a man go aboard ship to visit foreign parts, and, when he returns home, he will cause that parish to wake up.

*Anthropology* Chapter I (p. 10) Henry Holt & Co. New York, New York, USA. 1912

...anthropology has devoted most of its attention to the peoples of rude – that is to say, of simple – culture, who are vulgarly known to us as “savages.” The main reason for this, I suppose, is that nobody much minds so long as the darwinizing kind of history confines itself to outsiders. Only when it is applied to self and friends is it resented as an impertinence.

*Anthropology* Chapter I (p. 11) Henry Holt & Co. New York, New York, USA. 1912

...anthropology is science in whatever way history is science; that it is not philosophy, though it must conform to its needs; and that it is not policy, though it may subserve its designs.

*Anthropology*

Chapter I (p. 12)

Henry Holt &amp; Co. New York, New York, USA. 1912

**Mead, Margaret** 1901–78

American anthropologist

Everything is grist for anthropology's mill.

In Jane Howard

*Margaret Mead: A Life*

Chapter Twenty-One (p. 319)

Simon &amp; Schuster. New York, New York, USA. 1984

[Anthropology demands] the open-mindedness with which one must look and listen, record in astonishment and wonder that which one would not have been able to guess.

*Sex and Temperament in Three Primitive Societies*

Preface (p. ix)

Routledge &amp; Kegan Paul. London, England. 1977

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Isolated amidst a nature where everything was a mystery to him, terrified at each unexpected manifestation of incomprehensible forces, he [primitive man] was incapable of seeing in the conduct of the universe anything but caprice...

*The Foundations of Science* (p. 290)

The Science Press. New York, New York, USA. 1913

**ANTIBIOTIC****Fleming, Alexander** 1881–1955

Scottish bacteriologist

It seems likely that in the next few years a combination of antibiotics with different antibacterial spectra will furnish a "*cribrum therapeuticum*" from which fewer and fewer infecting bacteria will escape.

*Chemotherapy: Yesterday, Today, and Tomorrow* (p. 36)

Cambridge University Press. Cambridge, England. 1946

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

It is fortunate for human beings that no Geneva convention forbids the prosecution of germ warfare by germs themselves; if it did, there would be no antibiotics...

*Aristotle to Zoos: A Philosophical Dictionary of Biology*

Antibiotics (p. 20)

Harvard University Press. Cambridge, Massachusetts, USA. 1983

**ANTIBODY****Burnet, Sir Frank Macfarlane** 1899–1985

Australian virologist

The production of antibody is not the only, nor I believe the most important, manifestation of immunity, but for

reasons both historical and of experimental convenience antibody is likely to remain the touchstone of immunological theory. Any formulation of theory must cover the nature of antibody and lay down the conditions under which it will or will not be produced.

*Nobel Lectures, Physiology or Medicine 1942–1962*

Immunological Recognition of Self

Elsevier Publishing Co. Amsterdam, The Netherlands. 1964

**ANTI-EVOLUTIONISM****Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

It is naïve to suppose that the acceptance of evolution theory depends upon the evidence of a number of so-

called "proofs"; it depends rather upon the fact that the evolutionary theory permeates and supports every branch of biological science, such as the notion of the roundness of the earth underlies all geodesy and all cosmological theories on which the shape of the earth has a bearing. Thus anti-evolutionism is of the same stature as flat-earthism.

In Alan Bullock and Stephen Trombley (eds.)

*The Norton Dictionary of Modern Thought*

Evolution (p. 293)

W.W. Norton &amp; Co. New York, New York, USA. 1999

**ANTI-MATHEMATICIAN****Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

...the anti-mathematician must belong to the same class as the paradoxer, whose characteristic is to be wise in his ignorance, whereas the really wise man is ignorant in his wisdom.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 7)

D. van Nostrand Co. New York, New York, USA. 1893

**ANTI-MATTER****Furth, Harold P.** 1930–2002

Austrian-American physicist

Well beyond the troprostrata

There is a region stark and stellar

Where, on a streak of anti-matter

Lived Dr. Edward Anti-Teller.

Perils of Modern Living

*The New Yorker*, November 10, 1956 (The Talk of the Town, p. 56)**Heisenberg, Werner Karl** 1901–76

German physicist and philosopher

I think that this discovery of antimatter was perhaps the biggest jump of all the big jumps in physics in our century.

In J. Mehra (ed.)

*The Physicist's Conception of Nature: Symposium on the Development of the Physicist's Conception of Nature in the Twentieth Century*  
Chapter 11 (p. 271)

Reidel. Boston, Massachusetts, USA. 1973

**Schuster, Sir Arthur** 1851–1934

English physicist

Astronomy, the oldest and most juvenile of the sciences, may still have some surprises in store. May anti-matter be commended to its care!

Letter to the Editor, Potential Matter – A Holiday Dream  
*Nature*, Volume 58, Number 1503, August 18, 1898 (p. 367)

**Updike, John** 1932–

American novelist, short story writer, and poet

Think binary. When matter meets antimatter, both vanish, into pure energy. But both existed; I mean, there was a condition we'll call "existence." Think of one and minus one. Together they add up to zero, nothing, nada, niente, right? Picture them together, then picture them separating – peeling apart... Now you have something, you have two somethings, where you once had nothing.

*Roger's Version*

Chapter V (p. 304)

Alfred A. Knopf. New York, New York, USA. 1986

## ANTI-SCIENCE

**Asimov, Isaac** 1920–92

American author and biochemist

A public that does not understand how science works can, all too easily, fall prey to those ignoramuses...who make fun of what they do not understand, or to the sloganeers who proclaim scientists to be the mercenary warriors of today, and the tools of the military. The difference ... between ... understanding and not understanding ... is also the difference between respect and admiration on the one side, and hate and fear on the other.

In Lewis Wolpert

*The Unnatural Nature of Science*

Introduction (p. ix)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

**France, Anatole (Jean Jacques Brousson)** 1844–1924

French writer

I hate science...for having loved it too much, after the manner of voluptuaries who reproach women with not having come up to the dream they formed of them.

*The Opinions of Jérôme Coignard* (Volume 2)

Chapter 9 (p. 113)

John Lane. London, England. 1923

**Gissing, George** 1857–1903

English novelist

I hate and fear science because of my conviction that for long to come if not forever, it will be the remorseless

enemy of mankind. I see it destroying all simplicity and gentleness of life, all the beauty of the world; I see it restoring barbarism under a mask of civilization; I see it darkening men's minds and hardening their hearts; I see it bringing a time of vast conflicts which will pale into insignificance "the thousand wars of old" and, as likely as not, will wheel all the laborious advances of mankind in blood-drenched chaos.

In Morris Goran

*Science and Anti-Science*

Chapter 3 (p. 23)

Ann Arbor Science Publishers Inc. Ann Arbor, Michigan, USA. 1974

**Green, Celia** 1935–

English philosopher and psychologist

The object of modern science is to make all aspects of reality equally boring, so that no one will be tempted to think about them.

*The Decline and Fall of Science*

Aphorisms (p. 2)

Hamilton. London, England. 1976

## ANTIQUITY

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

...antiquities are history defaced, or some remnants of history, which have casually escaped the shipwreck of time.

In *Great Books of the Western World* (Volume 30)

*Advancement of Learning*

Second Book, Chapter II, Section 1 (p. 34)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Antiquities, or remnants of history, are, as was said, "*tanquam tabula naufragii*": when industrious persons, by an exact and scrupulous diligence and observation, out of monuments, names, words, proverbs, traditions, private records and evidences, fragments of stories, passages of books that concern not story, and the like, do not save and recover somewhat from the deluge of time.

In *Great Books of the Western World* (Volume 30)

*Advancement of Learning*

Second Book, Chapter II, Section 3 (p. 34)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...out of genealogies, annals, titles, monuments, coins, proper names and styles, etymologies of words, proverbs, traditions, archives and instruments as well public as private, fragments of histories scattered about in books not historical – contrive, I say, from all these things or some of them, to recover somewhat from the deluge of time ...

In James Spedding, Robert Leslie Ellis and Douglas Denon Heath

*The Works of Francis Bacon* (Volume 4)

*On the Dignity and Advancement of Learning*

Book II, Chapter VI (p. 304)

Longman & Co. London, England. 1858

**Browne, Sir Thomas** 1605–82  
English author and physician

Time which antiquates antiquities, and hath an art to make dust of all things, hath yet spared these minor monuments.

In David Lloyd Roberts  
*Religio Medici and Other Essays*  
*Hydriotaphia*  
Chapter V (p. 294)  
Sherratt & Hughes. Manchester, England. 1902

**Bury, John Bagnell** 1861–1927  
English historian and classical scholar

All the epochs of the past are only a few of the front carriages, and probably the least wonderful, in the van of an interminable procession.

*An Inaugural Lecture*  
The Science of History (pp. 28–29)

**Chapin, Edwin Hubbell** 1840–80  
Universalist minister, author, lecturer, and social reformer

Old ages are like the landscape that shows best in purple distance, all verdant and smooth and bathed in mellow light. But could we go back and touch the reality, we should find many a swamp of disease, and rough and grimy paths of rock and mire.

*Humanity in the City*  
Chapter II (pp. 46–47)  
De Witt & Davenport. New York, New York, USA. 1854

**Cuvier, Georges** 1769–1832  
French zoologist and statesman

As an antiquity of a new order, I have been obliged to learn the art of deciphering and restoring these remains, of discovering and bringing together, in their primitive arrangements, the scattered and mutilated fragments of which they are composed, of reproducing, in all their original proportions and characters, the animals to which these fragments formerly belonged, and then of comparing them with those animals which [are] still on the surface of the earth, an art which is almost unknown, and which presupposes, what had scarcely been obtained before, an acquaintance with those laws which regulate the coexistence of the forms by which the different parts of organized beings are distinguished.

*An Essay on the Theory of the Earth*  
Section I (pp. 1–2)  
Kirk & Mercein. New York, New York, USA. 1818

**de Verminac Saint-Maur, E.**  
No biographical data available

Antiquity is a garden that belongs by natural right to those who cultivate and harvest its fruits.

*Voyage de Luxor*  
Publisher undetermined  
Paris, France. 1835

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and writer

The door to the past is a strange door. It swings open and things pass through it, but they pass in one direction only. No man can return across that threshold, though he can look down still and see the green light waver in the water weeds.

*The Immense Journey*  
The Snout (p. 54)  
Vintage Books. New York, New York, USA. 1957

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

How cunningly nature hides every wrinkle of her inconceivable antiquity under roses and violets and morning dews.

Address  
Literary Societies of Dartmouth College, 22 July 1863

**Erzinclioglu, Zakaria** 1951–2002  
Turkish forensic entomologist

One of the most absurd and persistent misuses of words in science is the use of the word “ancient” to describe species that flourished millions of years ago. The truth is that organisms that lived long ago are “young” relative to those alive today. The animals themselves are not ancient in any sense at all. They died out a long time ago when the Earth was young. Why do we persist in misusing the term in this way.

Ancient Error  
*Nature*, Volume 355, Number 6357, January 16, 1992 (p. 195)

**Fuller, Thomas** 1608–61  
English clergyman and writer

... the pyramids themselves, dotting with age, have forgotten the names of their founders.

*The Holy and Profane State*  
Book III, Chapter XIV, Maxim VI (p. 180)  
Printed for Thomas Tegg. London, England. 1841

**Howell, James** 1594–1666  
English writer

They who make research into antiquity, may be said to pass often through many dark lobbies and dusky places before they come to the Aula Lucis, the great hall of light; they must repair to old archives, and peruse many moulded and moth-eaten records, and so bring light, as it were, out of darkness, to inform the present world what the former did, and make us see truth through our ancestors’ eyes.

*Londonopolis*  
Publisher undetermined

**Irving, Washington** 1783–1859  
American essayist and short story writer

History fades into fable; fact becomes clouded with doubts and controversy; the inscription moulders from

the tablet; the statue falls from the pedestal. Columns, arches, pyramids, what are they but heaps of sand; and their epitaphs, but characters written in the dust?

*The Sketch Book of Geoffrey Crayon*

Westminster Abbey

Belford, Clarke & Co. Chicago, Illinois, USA. 1886

**Joubert, Joseph** 1754–1824

French moralist

Antiquity! I love your ruins better than your restorations.

Translated by H.P. Collins

*Pensées and Letters of Joseph Joubert*

Chapter XVI (p. 108)

Books for Libraries Press, Freeport, New York, USA. 1972

**Mellor, Joseph William** 1863–1938

Chemist

...as man emerged from the mists of prehistoric antiquity, everything must have appeared to be full of wonder and mystery. He was overawed by the wind and the rain; by the lightning and the thunder; by the eclipse and the comet; and by the rainbow and the clouds. The student of nature lived in a bewildering dreamland of mixed magic and myth which led him to ascribe supernatural explanations to inaccurately known facts, and consequently, he seemed to be surrounded on all sides by *un monde invisible des esprits et des demons*.

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 2)

Longman, Green, & Co. London, England. 1922

**Oldfield, E.**

No biographical data available

Within no very distant period the study of antiquities has passed, in popular esteem, from contempt to comparative honour.

Introductory Address

*Archaeological Journal*, Volume IX, March, 1852 (p. 1)

**Pallister, William Hales** 1877–1946

Canadian physician

The ruined tombs of Egypt tell their tale,  
Survival-hopes of what was once mankind.  
Now sands are drifted deep as we unwind  
The bones of former rulers, now for sale:  
Thus does the splendor of the tomb avail!

*Poems of Science*

Men and the Stars, In Egypt (p. 91)

Playford Press. New York, New York, USA. 1931

**Pope, Alexander** 1688–1744

English poet

With sharpen'd sight pale Antiquaries pore,  
Th' inscription value, but the rust adore.  
This the blue varnish, that the green endears;  
The sacred rust of twice ten hundred years.

*The Complete Poetical Works*

Epistle to Mr. Addison, l. 35

Houghton Mifflin Company. New York, New York, USA. 1903

**Prior, Matthew** 1664–1721

English poet and diplomat

My copper-lamps, at any rate,  
For being true antique, I bought;  
Yet wisely melted down my plate,  
On modern models to be wrought;  
And trifles I alike pursue,  
Because they're old, because they're new.

*The Poetical Works of Matthew Prior*

Alma, Canto III, l. 458–463

Oxford University Press, Inc. New York, New York, USA. 1950

**Thomas, Cyrus** 1825–1910

American anthropologist

To gather and describe antiquities, although thoroughly and intelligently done, is by no means all of archaeology. True, these are to archaeology what the unfashioned and unadjusted materials of which the house is to be built are to the house, but they are not the house.

*Introduction to the Study of North American Archaeology*

Chapter I (p. 1)

The Robert Clarke Co. Cincinnati, Ohio, USA 1898

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

We do not associate the idea of antiquity with the ocean, nor wonder how it looked a thousand years ago, as we do of the land, for it was equally wild and unfathomable always.

*Cape Cod*

Chapter IX (p. 219)

Thomas Y. Crowell & Co. New York, New York, USA. 1908

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

True the billiard-tables were of the Old Silurian Period and the cues and balls of the Post-Pliocene; but there was refreshment in this, not discomfort; for there are rest and healing in the contemplation of antiquities.

*Life on the Mississippi*

Chapter XXII (p. 189)

Harper & Row, Publishers. New York, New York, USA. 1951

## APHORISM

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Exclusive of the abstract sciences, the largest and worthiest portion of our knowledge consists of *aphorisms*: and the greatest and best of men is but an *aphorism*.

*Aids to Reflection*

Aphorism XXVII (p. 16)

George Bell & Sons. London, England. 1904

**Fitch, Sir Joshua Girling** 1824–1903  
English educationist

No number of facts or aphorisms learned by heart makes a man a thinker, or does him much intellectual service.

*Lectures on Teaching*  
Chapter XI (p. 288)  
The Macmillan Co. New York, New York, USA. 1906

## APOTHECARIES

**Sterne, Laurence** 1713–68  
English novelist and humorist

Attornies are to lawyers, what apothecaries are to physicians only that they do not deal in *scruples*.

*The Works of Laurence Sterne: With a Life of the Author The Koran* (p. 335)  
William Durell & Co. New York, New York, USA. 1814

## APOTHECARY

**Colman, George (the Younger)** 1762–1836  
English playwright

A man, in a country town, we know,  
Professes openly with death to wrestle;  
Ent'ring the field against the grimly foe,  
Armed with a mortar and a pestle.  
Yet, some affirm, no enemies they are;  
But meet just like prize-fighters, in a fair,  
Who first shake hands before they box,  
Then give each other plaguy knocks,  
With all the love and kindness of a brother:  
So, many a suff'ring patient saith,  
Though the Apothecary fights with Death,  
Still they're sworn friends to one another.

In Helen and Lewis Melville  
*An Anthology of Humorous Verse*  
The Newcastle Apothecary  
Dodd, Mead & Company New York, New York, USA. 1924

**Hazlitt, William Carew** 1834–1913  
English bibliographer

One said an Apothecaries house must needs be healthful, because the windows, benches, boxes, and almost all the things in the house, tooke physick.

*Shakespeare Jest Books* (Volume 3)  
Conceit, Clichés, Flashes and Whimzies, Number 41  
Willis & Sotheran. London, England. 1864

**Pope, Alexander** 1688–1744  
English poet

So modern Pothecaries taught the Art  
By Doctor's Bills to play the Doctor's Part,  
Bold in the Practice of mistaken Rules,  
Prescribe, apply, and call their Masters Fools.

*The Complete Poetical Works*  
An Essay on Criticism, Part I, l. 108–111  
Houghton Mifflin Company. New York, New York, USA. 1903

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

I do remember an apothecary –  
And hereabouts he dwells – which late I noted  
In tatter'd weeds, with overwhelming brows,  
Culling of simples; meager were his looks,  
Sharp misery had worn him to the bones:  
And in his needy shop a tortoise hung,  
An Alligator stuff'd, and other skins  
Of ill-shaped fishes; and about his shelves  
A beggarly account of empty boxes,  
Green earthen pots, bladders and musty seeds,  
Remnants of packthread and old cakes of roses,  
Were thinly scatter'd to make up a show.

In *Great Books of the Western World* (Volume 26)  
*The Plays and Sonnets of William Shakespeare* (Volume 1)  
*Romeo and Juliet*  
Act V, Scene i, l. 37–48  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## APPEARANCE

**Balfour, Arthur James** 1848–1930  
English prime minister

Unless appearances are to be trusted, why should we believe in Science? If Science is true, how can we trust to appearances?

In Wilfred M. Short  
*Arthur James Balfour: As Philosopher and Thinker*  
Science; and Science and Theology (p. 449)  
Longmans, Green & Company. New York, New York, USA. 1912

**Leclerc, George-Louis, Comte de Buffon** 1707–88  
French naturalist

There is a strange variety in the appearance of individuals, and at the same time a constant resemblance in the whole species.

*Buffon's Natural History* (Volume 5) (pp. 128–129)  
London, England. 1812

## APPLICATION

**Babbage, Charles** 1792–1871  
English mathematician

...long intervals frequently elapse between the discovery of new principles in science and their practical application: nor ought this at all to surprise us. Those intellectual qualifications, which give birth to new principles or to new methods, are of quite a different order from those which are necessary for their practical application.

*Reflections on the Decline of Science in England, And on Some of Its Causes*

Chapter II (p. 17)

Printed for B. Fellowes. London, England. 1830

**Boole, George** 1815–64

English mathematician

Each new scientific conception gives occasion to new applications of deductive reasoning; but those applications may be only possible through the methods and the processes which belong to an earlier stage.

*A Treatise on Differential Equations*

Preface (p. vi)

Macmillan & Co Ltd. London, England. 1877

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

There cannot be a greater mistake than that of looking superciliously upon practical applications of science. The life and soul of science is its practical application, and just as the great advances in mathematics have been made through the desire of discovering the solution of problems which were of a highly practical kind in mathematical science, so in physical science many of the greatest advances that have been made from the beginning of the world to the present time have been made in the earnest desire to turn the knowledge of the properties of matter to some purpose useful to mankind.

*Popular Lectures and Addresses* (Volume 1)

Lecture, Institution of Civil Engineers

May 3, 1883 (pp. 79–80)

Macmillan & Company Ltd. London, England. 1894

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

It is no paradox to say that in our most theoretical moods we may be nearest to our most practical applications.

*An Introduction to Mathematics*

Chapter 7 (p. 71)

Oxford University Press, Inc. New York, New York, USA. 1958

## APPARATUS

**Davy, Sir Humphry** 1778–1829

English chemist

The apparatus essential to the modern chemical philosopher is much less bulky and expensive than that used by the ancients. An air pump, an electrical machine, a voltaic battery (all of which may be upon a small scale), a blow-pipe apparatus, a bellows and forge, a mercurial and water gas apparatus, cups and basins of platinum and glass, and the common reagents of chemistry, are what are required. All the implements absolutely necessary may be carried in a small trunk; and some of the best and most refined researches of modern chemists have been made by means of an apparatus

which might with ease be contained in a small travelling carriage, and the expense of which is only a few pounds.

*Consolations in Travel, or the Last Days of a Philosopher*

Dialogue V (p. 250)

J. Murray. London, England. 1830

## APPROXIMATE

**Hobson, Ernest William** 1856–1933

English mathematician

Much of the skill of the true mathematical physicist and of the mathematical astronomer consists in the power of adapting methods and results carried out on an exact mathematical basis to obtain approximations sufficient for the purposes of physical measurements. It might perhaps be thought that a scheme of Mathematics on a frankly approximative basis would be sufficient for all the practical purposes of application in Physics, Engineering Science, and Astronomy, and no doubt it would be possible to develop, to some extent at least, a species of Mathematics on these lines. Such a system would, however, involve an intolerable awkwardness and prolixity in the statements of results, especially in view of the fact that the degree of approximation necessary for various purposes is very different, and thus that unassigned grades of approximation would have to be provided for. Moreover, the mathematician working on these lines would be cut off from the chief sources of inspiration, the ideals of exactitude and logical rigor, as well as from one of his most indispensable guides to discovery, symmetry, and permanence of mathematical form.

Address to the Mathematical and Physical Section of the British Association for the Advancement of Science

*Science*, New Series, Volume 32, September 23, 1910 (p. 388)

## APPROXIMATION

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

We live in a system of approximations. Every end is prospective of some other end, which is also temporary; a round and final success nowhere. We are encamped in nature, not domesticated.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: Second Series*

Nature (p. 552)

The Library of America. New York, New York, USA. 1983

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

**Sands, Matthew L.** 1919–  
American physicist

Each piece, or part, of the whole of nature is always merely an approximation to the complete truth, or the complete truth so far as we know it. In fact, everything we know is only some kind of approximation, because we know that we do not know all the laws as yet. Therefore, things must be learned only to be unlearned again or, more likely, to be corrected.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 1–1 (p. 1–1)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA.  
1983

**Hammer, P. C.**

No biographical data available

One grievous error in interpreting approximations is to allow only good approximations.

Mind Pollution

*Cybernetics*, Volume 14, 1971

## ARBITRARY

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Are the law of acceleration, the rule of the composition of forces only arbitrary conventions? Conventions, yes; arbitrary, no; they would be so if we lost sight of the experiments which led the creators of the science to adopt them, and which, imperfect as they may be, suffice to justify them. It is well that from time to time our attention is carried back to the experimental origin of these conventions.

*The Foundations of Science*

*Science and Hypothesis*, Part III

Chapter VI (p. 106)

The Science Press. New York, New York, USA. 1913

## ARCHAEOASTRONOMY

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

The intellectual activity of mankind during prehistory is a vast almost uncharted ocean.... There have been only about 200 generations of history [but] upwards of 10,000 generations of prehistory.... Among the great throng, it seems to me likely that some must have gazed up at the sky and wondered earnestly about the sun, moon, and the stars. They would have done so with a basic intelligence equal to our own....

*On Stonehenge*

Chapter 6 (p. 115)

W.H. Freeman & Company. San Francisco, California, USA. 1977

## ARCHAEOLOGICAL EXCAVATION

**Droop, John Percival** 1882–1963

Archaeologist

...I may perhaps venture a short word on the question much discussed in certain quarters, whether in the work of excavation it is a good thing to have cooperation between men and women.... Of a mixed dig...have seen something, and it is an experiment that I would be reluctant to try again. I would grant if need be that women are admirable fitted for the work, yet I would uphold that they should undertake it by themselves...the work of an excavator on the dig and off it lays on those who share it a bond of closer daily intercourse than is conceivable...between men and women, except in chance cases, I do not believe that such close and unavoidable companionship can ever be other than a source of irritation; at any rate, I believe that however it may affect women, the ordinary male at least cannot stand it.... A minor...objection lies in one particular form of constraint..moments will occur on the best regulated dig when you want to say just what you think without translation, which before the ladies, whatever their feelings about it, cannot be done.

*Archaeological Excavation*

Chapter VII (pp. 63, 64)

At the University Press. Cambridge, England. 1915

## ARCHAEOLOGICAL RECORD

**Binford, Lewis R.** 1930–

American archaeologist

The archaeological record is here with us in the present.

*In Pursuit of the Past*

Chapter I (p. 1)University of California Press. Berkeley, California,

USA. 2002

## ARCHAEOLOGIST

**Bahn, Paul G.**

English archaeologist and writer

Field Archaeologists dig up rubbish,  
Theoretical Archaeologists write it down.

*Bluff Your Way in Archaeology* (p. 15)

Ravette Books. West Sussex, England. 1989

**Berryman, John** 1914–72

American poet and critic

Collating bones: I would have liked to do.

Henry would have been hot at that.

I missed his profession.

As a little boy I always thought

“I’m an archaeologist”; who

Could be more respected peaceful serious than that?

*77 Dream Songs*

No. 30 (p. 30)

Farrar, Straus & Giroux. New York, New York, USA. 1964

### Butler, E. M.

No biographical data available

Archaeologists all the world over owe a debt to Schliemann of Troy; the German poets owe none.

*The Tyranny of Greece over Germany* (p. 307)

Beacon Press. Boston, Massachusetts, USA. 1958

### Chesterton, G. K. (Gilbert Keith) 1874–1936

English author

An archaeologist is a man who studies old things and finds they are new.

*The Man who Knew Too Much*

Chapter VI (p. 150)

Harper & Brothers Publishers. New York, New York, USA. 1922

### Christie, Agatha 1890–1976

English author

...the remark attributed to Mrs. [Agatha] Christie that ‘the older you get, the more interesting you become to an archaeologist,’ was the creation of some pundit whose neck Mrs. Christie would be glad to wring if he would care to identify himself – she neither made the remark nor does she consider it particularly complimentary or amusing.

In Gordon C. Ramsey

*Agatha Christie; Mistress of Mystery*

Chapter II (p. 23)

Dodd Mead. New York, New York, USA. 1967

### Crawford, Osbert Guy Stanhope 1886–1957

English archaeologist

The archaeologist has work to do for the good of the race; he is making bricks for the mansions that others build after him shall build. That is his justification for devoting a lifetime to “unpractical” pursuits. He may be wrong, but you will not lightly convince him of his error.

*Man and His Past*

Chapter II (p. 37)

Oxford University Press, Inc. London, England. 1921

It is to the archaeologist that one must look for the completion of the outline the historian has sketched.

*Man and His Past*

Chapter III (p. 42)

Oxford University Press, Inc. London, England. 1921

### Daniel, Glyn 1914–86

Archaeologist and writer

We are all historians, we are all studying the past of man, whether we concentrate on Walpole, Beowulf, Stonehenge or Lascaux. Manuscripts, microliths, mega-

liths – it is all one. The past is the goal of the historian whether he is text abided or not...there are historians, in the strict sense of the word, who are frightened when they see archaeologists advancing toward them with dirt on their boots and a brief case full of air photographs and Carbon 14 dates. Dugdale, Aubrey, Lhwyd and Stukeley did not think they were other than historians, and for that matter, historians who could be members of the Royal Society. We have taken the distinction between a history that is mainly derived from material sources and one that is derived from the aid of texts, too far.

Editorial

*Antiquity*, Volume 41, 1967 (p. 170)

### Day, David Howard

American anthropologist, educator, and writer

The past, at whatever level and at whatever time, has lost none of its power to inspire. Archaeologists, whether on screen or off, hold a key to that treasure box.

*A Treasure Hard to Attain: Images of Archaeology in Popular Film*

Part I, Chapter Nine (p. 44)

Scarecrow Press. Lanham, Maryland. 1997

### Dillehay, Thomas D.

American anthropologist, educator, and writer

Archaeologists are, by necessity, masters of inference. From the meanest, most innocuous of things-discarded oyster shells, broken pots, the subtle bands of color and texture in an excavation wall – we try to re-create an entire world and its inhabitants.

The Battle of Mount Verde

*The Sciences*, Volume 37, Number 1, Jan/Feb 1997 (p. 29)

### Dr. Watson (Fictional character)

Archaeologists. They might have been dug up themselves.

*Pursuit to Algiers*

Film (1942)

### Durrell, Lawrence 1912–90

English writer

Like earnest mastodons petrified in the forest of their own apparatus the archaeologists come and go, each with his pocket Odyssey and his lack of modern Greek. Diligently working upon the refuse-heaps of some township for a number of years they erect on the basis of a few sherds or a piece of dramatic drainage, a sickly and enfeebled portrait of a way of life. How true it is we cannot say: but if an Eskimo were asked to describe our way of life, deducing all his evidence from a search in a contemporary refuse dump, his picture might lack certain formidable essentials.

*Prospero’s Cell and Reflections on a Marine Venus*

Prospero’s Cell, Chapter V (p. 59)

E.P. Dutton & Company, Inc. New York, New York, USA. 1960

**Eiseley, Loren C.** 1907–77  
American anthropologist, educator, and writer

The archaeologist, it is said, is a student of the artifact. That harsh, unlovely word, as sharply angled as a fist ax or a brick, denudes us of human sympathy. In the eye of the public we loom, I suppose, as slightly befuddled graybeards scavenging in grave heaps. We caw like crows over a bit of jade or a broken potsherd: we are eternally associated in the public mind with sharp-edged flints and broken statues. The utter uselessness of the past is somehow magnificently incorporated into our activities.

*The Night Country*  
Chapter 6 (pp. 80–81)  
Charles Scribner's Sons. New York, New York, USA. 1971

**Fagan, Brian**  
English archaeologist

To archaeologists, the human past is owned by no one. It represents the cultural heritage of everyone who has ever lived on Earth or will live on it in the future. Archaeology puts all human societies on an equal footing.

*The Oxford Companion to Archaeology*  
Introduction  
Oxford University Press, Inc. New York, New York, USA. 1996

**Hawkes, Jacquetta** 1910–96  
English archaeologist, historian, and writer

**Hawkes, Christopher** 1905–92  
English archaeologist

[The archaeologist] handles the actual things which helped men to pass their lives: the pots from which they ate and drank, the weapons with which they hunted or killed one another, their houses, their hearthstones and their graves. Such material keeps him much closer to the essentials of history. He must be concerned with the lives and achievements of countless ordinary, anonymous people.

*Prehistoric Britain*  
Forward (p. 9)  
Penguin Books. London, England. 1958

**Ogutsch, Edith**  
Fantasy poet

ARCHAEOLOGIST: Someone whose career lies in ruins.  
*Quote, the Weekly Digest*, January 29, 1967 (p. 97)

**Salmon, Merrilee H.** 1935–  
American archaeologist

Surely skill in doubting the familiar and imagining the unfamiliar are every bit as important to the archaeologist as to the philosopher.

*Philosophy and Archaeology*  
Concluding Remarks (p. 182)  
Academic Press. New York, New York, USA. 1982

**Quennell, Marjorie**  
No biographical data available

...the archaeologist is a pick and shovel historian.  
*Everyday Life in the Old Stone Age*

University Press of Virginia. Charlottesville, Virginia, USA. 1995

**Spaulding, Albert C.** 1914–90  
American archaeologist

...truth is to be determined by some sort of polling of archaeologists, that productivity is doing what other archaeologists do, and that the only purpose of archaeology is to make archaeologists happy.

Review of James A. Ford  
"Measurements of Some Prehistoric Design Developments in the Southeastern States"  
*American Anthropologist*, Volume 55, Number 4, 1953 (p. 590)

**Steve Banning (Fictional character)**

...many people believe that we archaeologists are just a collection of old fogeys digging around in ruins after old dried up skulls and bones...

*The Mummy's Tomb*  
Film (1942)

**Taylor, Walter W.** 1913–97  
American archaeologist

Archeology *per se* is no more than a method and a set of specialized techniques for the gathering of cultural information. The archeologist, as archeologist, is really nothing but a technician.

*A Study of Archeology*  
Part I, Chapter 2 (p. 41)  
Southern Illinois University Press, Carbondale, Illinois, USA. 1967

**Weigall, Arthur Edward** 1880–1934  
Egyptologist and writer

It is an unfortunate fact that the archaeologist is generally considered to be a kind of rag-and-bone man; one who, sitting all his life in a dusty room, shuns the touch of the wind and takes no pleasure in the vanities under the sun. Actually, this is not so very often a true description of him. The ease with which long journeys are now undertaken, the immunity from insult or peril which the traveler usually enjoys, have made it possible for the archaeologist to seek his information at its source in almost all the countries of the world.

*The Glory of the Pharaohs*

Chapter I (p. 3)

G. Putnam's Sons. New York, New York, USA. 1923

An archaeologist must be a historian. He must conjure up the past; he must play the Witch of Endor. His lists and indices, his catalogues and notebooks, must be but the spells which he uses to invoke the dead.

*The Glory of the Pharaohs*

Chapter I (p. 19)

G. Putnam's Sons. New York, New York, USA. 1923

The true archaeologist does not take pleasure in skeletons as skeletons, for his whole effort is to cover them decently with flesh and skin once more and to put some thoughts back into the empty skulls.

*The Glory of the Pharaohs*

Chapter II (p. 32)

G. Putnam's Sons. New York, New York, USA. 1923

Dead men are not useless; and the excavator must not cheat the world of any part of its great prerequisite. The dead are the property of the living, and the archaeologist is the world's agent for the estate of the grave.

*The Glory of the Pharaohs*

Chapter V (p. 98)

G. Putnam's Sons. New York, New York, USA. 1923

**Wheeler, Sir Mortimer** 1890–1976

English archaeologist

...the archaeologist is digging up, not things, but people.

*Archaeology from the Earth*

Preface (p. v)

At The Clarendon Press. Oxford, England. 1954

A lepidopterist is a great deal more than a butterfly-catcher, and an archaeologist who is not more than a potsherd-catcher is unworthy of his logoi. He is primarily a fact-finder, but his facts are the material records of human achievement; he is also, by the token, a humanist, and his secondary task is that of revivifying or humanizing his materials with a controlled imagination that inevitable partakes of the qualities of art and even philosophy.

*Archaeology from the Earth* (pp. 228–229)

At The Clarendon Press. Oxford, England. 1954

**Willey, Gordon R.** 1913–2002

American archaeologist and writer

**Sabloff, Jeremy**

American museum director

Any attempt on the part of the archaeologist to contribute to the larger problems of cultural understanding was met with an astonishment like that in the classic case of the "talking dog"; it was not what the dog said that was so amazing but the fact that he could do it at all.

*A History of American Archaeology*

Chapter Five (p. 131)

W.H. Freeman & Company. San Francisco, California, USA. No date

**Wilson, J. A.**

No biographical data available

It is necessary that we [archaeologists] attempt to attain a measure of exactness in a study which deals so largely with the unknown and the shifting and the absent.

Archaeology as a Tool in Humanistic and Social Studies

*Journal of Near Eastern Studies*, Volume 1, 1942 (p. 4)

**Wissler, C.** 1870–1947

American archaeologist

So, in short, the real equipment of an archaeologist is a scientific mind.

The New Archaeology

*American Museum Journal*, Volume 17, 1917 (p. 101)

**Zevi, Bruno** 1918–2001

Italian architectural historian and writer

The most incredible thing is to find archaeologists dedicating their lives to the structural features of monuments who depreciate any critical contribution and exult over the discovery of the slightest technical detail, and who, at the same time, are reactionaries with respect to modern architecture.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter V (p. 186)

Horizon Press. New York, New York, USA. 1957

## ARCHAEOLOGY

**Albright, William Foxwell** 1891–1971

American archaeologist and educator

There can be no doubt that archaeology has confirmed the substantial historicity of Old Testament tradition. Divergences from basic historical fact may nearly all be explained as due to the nature of oral tradition, to the vicissitudes of written transmission, and to honest, but erroneous combinations on the part of Israelite and Jewish scholars.

*Archaeology and the Religion of Israel*

Postscript (p. 176)

The Johns Hopkins Press, Baltimore, Maryland, USA; 1968

### Author undetermined

Archaeology is like law; it must be explained by science, not by opinion.

Review of *An Historical, Antiquarian, and Picturesque Account of Kirkstall Alley*

Review of Publications

*The Gentleman's Magazine*, January, 1898 (p. 40)

The greatest contribution archaeology has ever provided to society is the simple fact that everybody is destined to become a feature.

Source undetermined

**Atkinson, Richard John Copeland** 1920–94  
American archaeologist

Foremost among these [qualities for archaeological field work] is the power to observe, and, moreover, to observe critically, to be able to distinguish the important from the trivial. Next comes the ability to record what is observed accurately and neatly and objectively: there is no place in archaeology, any more than in other sciences, for intellectual partiality in the choice of facts. Finally, the archaeologist needs both a broad and a scientific outlook: broad to understand his work not as a subject contained in itself, but just one aspect of the wider study of man; and scientific to realize clearly the purpose and limitations of his methods, and meaning and value of his evidence.

*Field Archaeology*

Introduction (pp. 13–14)

Methuen & Company Ltd. London, England. 1946

**Bahn, Paul G.**

English archaeologist and writer

Archaeology is rather like a vast, fiendish jigsaw puzzle invented by the devil as an instrument of tantalizing torment, since:

- (a) it will never be finished
- (b) you don't know how many pieces are missing
- (c) most of them are lost forever
- (d) you can't cheat by looking at the picture.

*Bluff Your Way in Archaeology* (p. 5)

Ravette Books. West Sussex, England. 1989

As Champollion said, archaeology is a beautiful mistress but she brings a poor dowry.

*Bluff Your Way in Archaeology* (p. 9)

Ravette Books. West Sussex, England. 1989

**Bailey, Geoff**

English archaeologist

...archaeological study is condemned to apply concepts and theories derived from elsewhere rather than to formulate its own, and is thus reduced to an appendix – at best entertaining, at worst dispensable.

In G. Bailey and A. Sheridan (eds.)

*Economic Archaeology: Toward an Integration of Ecological and Social Approaches*

Chapter 9 (p. 104)

B.A.R. Oxford, England. 1981

**Ballard, Chris** 1963–

Australian historian

The search for unifying narratives, for a single logic that might underpin archaeological explanation universally, is a misplaced venture. Rather than grading different narratives for some form of absolute truth content, we should be asking which alternative we find the most useful relative to the immediate question at hand. One law to be

left in cleaning out the legislative cupboard must be the defense against...the notion that there is a single truth, a single narrative, a single past out there to be found, and that there is but one way of telling it.

Writing (pre)history: Narrative and Archaeological Explanation in the New Guinea Highlands

*Archaeology in Oceania*, Volume 38, 2003

**Berkeley, George** 1685–1753

Irish prelate and metaphysical philosopher

To anyone who considers that, on digging into the earth, such quantities of shells, and in some places bones and horns of animals, are found sound and entire, after having lain there, in all probability, some thousands of years, it would seem probable that gems, medals, and implements in metal or stone might have lasted entire, buried under ground forty or fifty thousand years, if the world had been so old. How comes it then to pass that no remains are found, no antiquities of those numerous ages preceding the Scripture accounts of time; that no fragments of buildings, no public monuments, no intaglios, cameos, statues, medals, inscriptions, utensils, or artificial works of any kind, are ever discovered, which may bear testimony to the existence of those mighty empires, those successions of monarchs, heroes, and demi-gods for so many thousand years?

In Charles Lyell

*Principles of Geology* (Volume 2)

Book III, Chapter XVI (p. 156)

James Kay Jun. & Brothers. Philadelphia, Pennsylvania, USA. 1837

**Bishop, Jim** 1907–87

American newspaper columnist and historian

Archaeology sounds like dull sport in five syllables. It isn't. It's the Peeping Tom of the sciences. It is the sandbox of men who care not where they are going: they merely want to know where everyone else has been.

Sifting the Sea for Time's Treasures

*NY Journal-American*, 14 March, 1961

**Clark, David** 1937–76

English analytical archaeologist

[Archaeology is] the discipline with the theory and practice for the recovery of unobservable hominid behavior patterns from indirect traces in bad samples.

*American Antiquity*, Volume 47, 1973 (p. 100)

**Cornwall, I. W.** 1909–94

British archaeologist

If archaeology itself is popularly regarded as a dry-as-dust study, that of fossil and sub-fossil bones may well seem, in the eyes of the general public, to be the quintessence of dryness and dustiness, the preserve of imaginary bearded professors and museum curators.

*Bones for the Archaeologist*

Introduction (p. 19)

The Macmillan Company. New York, New York, USA. 1956

**Crawford, Osbert Guy Stanhope** 1886–1957  
English archaeologist

Archaeology is an art which employs scientific technique.

In Sir Mortimer Wheeler

*Archaeology from the Earth*

Chapter XVII (pp. 201–202)

At The Clarendon Press. Oxford, England. 1954

### Deuel, Leo

No biographical data available

By nature and purpose – and almost by definition – archaeology belongs to the ground. Down on their knees, shoveling dirt, raising clouds of dust, burrowing into layers of soil, cutting trenches, tunneling warrens through man-made mounds, opening tombs, and divesting the dead of their travel goods to the nether world – amateurs and professionals have toiled for generations to wrest buried relics from lost civilizations.

*Flights into Yesterday: The Story of Aerial Archaeology*

Chapter 1 (p. 3)

St. Martin's Press. New York, New York, USA. 1969

### Editorial

Archaeology can be made very popular by throwing a halo over the past, but there is as much danger of going astray now as in former years, when we knew less. The hints are more suggestive, but the story is none the less fictitious.

The Imaginative Element in Archaeology

*The American Antiquarian and Oriental Journal*, Volume IV, Number 3, September, 1882 (p. 240)

### Eiseley, Loren C.

 1907–77

American anthropologist, educator, and writer

Archaeology is the science of man's evening, not of his midday triumphs.

*The Unexpected Universe*

Chapter 2, Section 4 (p. 39)

Harcourt, Brace & World, Inc. New York, New York, USA. 1969

A man who has once looked with the archaeological eye will never see quite normally. He will be wounded by what other men call trifles. It is possible to refine the sense of time until an old show in the bunch of grass or a pile of nineteenth-century beer bottles in an abandoned mining town tolls in one's head like a hall clock. This is the price one pays for learning to read time from surfaces other than an illuminated dial. It is the melancholy secret of the artifact, the humanly touched thing.

*The Night Country*

Chapter 6 (p. 81)

Charles Scribner's Sons. New York, New York, USA. 1971

### Flannery, Kent V.

 1932–

American environmental archaeologist

Is it too late for salvation? If not, please let me have the analytical expertise of the New Archaeology – and the humility and common sense of the Old.

*The Early Mesoamerican Village*

Chapter 12 (p. 373)

Academic Press. New York, New York, USA. 1976

### Foucault, Michel

 1926–84

French philosopher and historian

There was a time when archaeology, as a discipline devoted to silent monuments, inert traces, objects without context, and things left by the past, aspired to the condition of history, and attained meaning only through the restitution of a historical discourse; it might be said, to play on words a little, that in our time history aspires to the condition of archaeology, to the intrinsic description of the monument.

*Archaeology of Knowledge*

Chapter 1 (p. 8)

Routledge. Oxford, England. 2002

### Fowler, Peter J.

No biographical data available

Archaeology in particular has an escapist value offering the chance of academic retreat into the study of times and things past and of intellectual withdrawal similar to the absorbing unrealities of detective fiction and cross-word puzzles.

*Approaches to Archaeology*

Chapter 1 (p. 32)

St. Martin's Press. New York, New York, USA. 1977

### Glob, Peter Vilhelm

 1911–85

Danish archaeologist

The ground is like a beautiful woman. If you treat her gently, she'll tell you all her secrets.

*Washington Post*, 18 December, 1991

### Gordon, Alexander

 1793–1826

Scottish explorer

Seeing Reason and Knowledge are the Characteristicks which distinguish Mankind from the more ignoble Part of the Animal Creation, those Studies, which are the most improving, deserve our greatest application: In the number of which, Antiquity claims a great share, particularly Archeology, which consists of Monuments, or rather Inscriptions, still subsisting...

*Itinerarium Septentrionale; or, A Journey Thro' Most of the Counties and Those in the North of England*

Preface

Printed for the writer. London, England. 1726

### Hester, Thomas R.

American anthropologist

**Heizer, Robert F.** 1915–79  
American archaeologist and anthropologist

It is obvious that there is more to archaeology than finding bones and tools once used by the former inhabitants of an area. If the collecting of artifacts, the thrill of discovery, and the satisfying of curiosity were the primary objectives of excavation, then the archaeologist would be no better than the “pot hunter” or vandal who collects for personal gain or private pleasure.

*Field Methods in Archaeology*

Introduction (p. 3)

Mayfield Publishing Company. Palo Alto, California, USA. 1975

**Hewitt, John**  
No biographical data available

Modern archaeology differs from the old antiquarianism especially in this – that whatever it contributes to knowledge is required to be scrupulously true.

*Ancient Armour*, Part I (p. 2)

John Henry and James Parker. Oxford, England. 1860

### **Indiana Jones (Fictional character)**

Archaeology is the search for fact. Not truth. If it's truth you're interested in, Doctor Tyree's Philosophy class is right down the hall. So forget any idea's you've got about lost cities, exotic travels and digging up the world. We do not follow maps to buried treasure and “X” never, ever, marks the spot. Seventy percent of all archaeology is done in the library.

*Indiana Jones and the Last Crusade*

Film (1989)

...one of the great dangers of archaeology [is]...not to life and limb, although that does sometimes take place... [but] folklore.

*Raiders of the Lost Ark*

Film (1981)

**Isaac, Gyan Llwilyn** 1937–85  
South African archaeologist

Archaeological studies are at their most significant when they attempt to elucidate the development of relations both amongst men, and between man and the material world.... Prehistoric archaeology is thus in its total aims not a natural science, a social science or a branch of the humanities; rather it is a distinctive pursuit in which all of these meet.

Whither Archaeology?

*Antiquity*, Volume 45, Number 178, June 1971 (p. 125)

**Johnson, Matthew**  
No biographical data available

Archaeology can be very boring, distressing and physically uncomfortable. Every year we excavate thousands of sites, some with painstaking and mind-numbing

patience, some in a great and undignified hurry. Every year we get chilled to the marrow or bitten half to death by mosquitoes while visiting some unprepossessing, grassy mound in the middle of nowhere. Miles from a decent restaurant or even a warm bath, we try to look interested while the rain comes down in sheets and some great professor whose best work was twenty years ago witters on in a monotone about what was found in Trench 4B. Every year we churn out thousands of interminable, stultifying dull site reports, fretting over the accuracy of plans and diagrams, collating lists of grubby artifacts to go to microfiche that few will ever consult or use again.

*Archaeological Theory: An Introduction*

Chapter 1 (p. 1)

Blackwell Publishers. Oxford, England. 1999

**Kehoe, Alice Beck**  
American anthropologist

American archaeology is ready to be a mature science, one that accepts the primacy of its empirical data – for these can outlast theories – and the political and human ramifications of its actions, as it reflectively constructs and compares interpretations. Tolerance for ambiguity is as essential as the Marshalltown trowel.

*The Land of Prehistory: A Critical History of American Archaeology*

Chapter 12 (p. 230)

Routledge. New York, New York, USA. 1998

**Leakey, Mary** 1913–96  
English archaeologist

Archaeologists often divide things into three stages, usually ‘lower’, ‘middle’ and ‘upper’ if they are thinking stratigraphically. Afterwards, of course, they argue that the whole thing was continuous anyhow and that the divisions are arbitrary and for convenience only.

*Disclosing the Past: An Autobiography*

By way of prelude (p. 13)

Doubleday & Company, Inc. Garden City, New York, USA. 1984

**Meredith, Owen (Edward Robert Bulwer-Lytton, First Earl Lytton)** 1831–91  
English statesman and poet

It [archaeology] is to the skeleton of a former age that archaeology restores the flesh and the sinews and the lineaments that distinguish it from the countless centuries of which it is a link, clothes it in the very garments that it wore, and rebuilds the very home in which it dwelt.

*Speeches of Edward, Lord Lytton*

Chapter XXXIV (p. 193)

William Blackwood & Sons. Edinburgh, Scotland. 1874

Archaeology has been called the handmaid of history; and, indeed, without its aid, history would as little represent the particular time it endeavors to recall as the drawing of a skeleton would represent the features and

the form by which the individual human being was recognised while in life.

*Speeches of Edward, Lord Lytton* (Volume 2)  
XXXIV (p. 193)

William Blackwood & Sons. Edinburgh, Scotland. 1874

It [archaeology] disinters from neglected tombs the inventions of departed genius, and bids them serve as studies and sources of inspiration to the genius of a later day.

*Speeches of Edward, Lord Lytton* (Volume 2)  
XXXIV (p. 193)

William Blackwood & Sons. Edinburgh, Scotland. 1874

...archeology is not only the handmaid of history, it is also the conservator of art.

*Speeches of Edward, Lord Lytton* (Volume 2)  
XXXIV (p. 193)

William Blackwood & Sons. Edinburgh, Scotland. 1874

### **Moorehead, Warren K.** 1866–1939

American archaeologist

Archaeology is like any other comprehensive subject; it requires study, discriminating care, and enthusiasm. One should further add, it requires inspiration. A man who does not love to hunt specimens for the sake of hunting them has not his heart in the work.

*The Stone Age in North America* (Volume 2)  
Chapter XXXVII (p. 365)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1910

### **Murray, Margaret** 1863–1963

Anthropologist, archaeologist, and Egyptologist

The trend of all knowledge at the present is to specialize, but archaeology has in it all the qualities that call for the wide view of the human race, or its growth from the savage to the civilized, which is seen in all stages of social and religious developments. Archaeology is the study of humanity itself, and unless that attitude toward the subject is kept in mind archaeology will be overwhelmed by impossible theories or a welter of flint chips.

First Steps in Archaeology

*Antiquity*, Volume 35, 1961 (p. 13)

### **Norton, Charles Eliot** 1827–1908

American scholar

“The night of time far surpasseth the day,” said Sir Thomas Browne, and it is the task of archaeology to light up some parts of this long night with its torch, which burns ever with a clearer flame with each advancing step into the darkness.

In Sara Norton and Mark Antony de Wolfe Howe

*Letters of Charles Eliot Norton* (Volume 2)

Chapter X (p. 97)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1913

### **Paglia, Camille** 1947–

American social critic, intellectual, and writer

Archaeology is our voyage to the past, where we discover who we were and therefore who we are.

Mummy Dearest: Archaeology Is Unfairly Maligned by Trendy Academics

*Wall Street Journal*, September 30, 1999 (p. A–26)

### **Parker, John Henry** 1806–84

English writer on architecture

Archaeology differs from history in...that it has to do only with existing remains explained by history, while [history] has to do with the things that have been, without regard to whether there are any visible remains or not.

*The Archaeology of Rome* (Volume 1)

Advertisement (p. vii)

James Parker & Co. Oxford, England. 1874

### **Poe, Edgar Allan** 1809–49

American short story writer

This – all this – was in the olden Time long ago.

*The Best Tales of Edgar Allan Poe*

*The Fall of the House of Usher*

The Haunted Palace (p. 163)

### **Quennell, Marjorie**

No biographical data available

### **Quennell, Charles Henry Bourne**

Archaeology is like the design of a Roman pavement, built up of many small fragments, or tesserae.

*Everyday Life in the Old Stone Age*

Chapter IV (p. 196)

G.P. Putnam's Sons. New York, New York, USA. 1922

### **Renfrew, Colin** 1937–

English archaeologist

### **Bahn, Paul G.**

English archaeologist and writer

*Archaeology* is the ‘past tense of cultural anthropology.’

*Archaeology: Theories, Methods and Practice* (p. 12)

Thames & Hudson. 2008

Archaeology is partly the discovery of the treasures of the past, partly the meticulous work of the scientific analyst, partly the exercise of the creative imagination.... But it is also the painstaking task of interpretation so that we come to understand what these things mean for the human story.

*Archaeology: Theories, Methods and Practice* (p. 12)

Thames & Hudson. 2008

### **Sir Joseph (Fictional character)**

Much more is learned from bits of broken pottery than from all the sensational finds. Our job is to increase the sum of human knowledge of the past, not to satisfy our curiosity.

*The Mummy*

Film (1940)

**Spaulding, Albert C.** 1914–1990  
American anthropologist

Archaeology can be defined minimally as the study of interrelationships of forms, temporal locus, and spatial locus exhibited by artifacts. In other words, archaeologists are always concerned with these interrelationships, whatever broader interests they may have, and these interrelationships are the special business of archaeology.

In Gertrude E. Dole and Robert L. Carneiro (eds.)  
*Essays in the Science of Culture: In Honor of Leslie A. White*  
The Dimension of Archaeology (p. 439)  
Thomas Y. Crowell. New York, New York, USA. 1960

**Taylor, Walter W.** 1913–97  
American archaeologist

Archaeology is neither history nor anthropology. As an autonomous discipline, it consists of a method and a set of specialized techniques for the gathering or “production” of cultural information.

A Study of Archaeology, Memoir Number 69, Part 2  
*American Anthropologist*, Volume 50, Number 3, 1948 (p. 44)

**Thomas, Cyrus** 1825–1910  
American anthropologist

Archaeology in its widest sense and by derivation includes the investigation of the origin, language, beliefs, customs, arts – everything, in a word, that can be learned of the ancient life of a people.

*Introduction to the Study of North American Archaeology*  
Chapter I (p. 1)  
The Robert Clarke Co. Cincinnati, Ohio, USA 1898

**Weigall, Arthur Edward** 1880–1934  
Egyptologist and writer

Archaeology is too often considered to be the pursuit of weak-chested youths and eccentric old men; it is seldom regarded as a possible vocation for normal persons of sound health and balanced mind.

*The Glory of the Pharaohs*  
Chapter I (p. 8)  
G. Putnam’s Sons. New York, New York, USA. 1923

Nothing is more paralyzing to a student of archaeology than continuous book-work. A collection of facts is an extremely beneficial mental exercise, but the deductions drawn from such a collection should be regarded as an integral part of the work.

*The Glory of the Pharaohs*  
Chapter I (p. 18)  
G. Putnam’s Sons. New York, New York, USA. 1923

Archaeology... is a science which bars its doors to all but the most erudite; for, to the layman who has not been vouchsafed the opportunity of studying the dusty volumes of the learned, the bones of the dead will not reveal their secrets, nor will the crumbling pediments of naos

and cenotaph, the obliterated tombstones, or the worm-eaten parchments, tell us their story.

*The Glory of the Pharaohs*  
Chapter II (p. 31)  
G.P. Putnam’s Sons. New York, New York, USA. 1923

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

Out of the litter of muds and gravels that makes the soil of the world we have picked some traces of the past of our race and the past of life. In our observatories and laboratories we have gleaned some hints of its future. We have a vision of the opening of the story, but the first pages we cannot read.

*The Undying Fire*  
Chapter the Fourth, Section 1 (pp. 106–107)  
The Macmillan Company. New York, New York, USA. 1919

**Wheeler, Sir Mortimer** 1890–1976  
English archaeologist

...archaeology is a science that must be lived, must be “seasoned with humanity”. Dead archaeology is the driest dust that blows.

*Archaeology from the Earth*  
Preface (p. v)  
At The Clarendon Press. Oxford, England. 1954

Archaeology is not a science, it’s a vendetta.

In Peter Hopkirk  
*Foreign Devils on the Silk Road: The Search for the Lost Treasures of Central Asia*  
Chapter 12 (p. 170)  
Murray. London, England. 1980

If any layman were to ask a number of archaeologists to give, on the spur of the moment, a definition of archaeology, I suspect that such a person might find the answers rather confusing. He would, perhaps, sympathize with Socrates who, when he hoped to learn from the poets and artisans something about the arts they practised, was forced to go away with the conviction that, though they might themselves be able to accomplish something, they certainly could give no clear account to others of what they were trying to do.

*Archaeology*  
Archaeology (p. 5)  
The Columbia University Press. New York, New York, USA. 1908

**Wilde, Oscar** 1854–1900  
Irish wit, poet, and dramatist

I can understand archaeology being attacked on the ground of its excessive realism, but to attack it as pedantic seems to be very much beside the mark. However, to attack it for any reason is foolish; one might just as well speak disrespectfully of the equator.

*Intentions*  
The Truth of Masks (p. 242)  
Thomas B. Mosher. Portland, Maine, USA. 1904

**Wiley, Gordon R.** 1913–2002  
American archaeologist and writer

**Phillips, Philip** 1900–1994  
American archaeologist

American Archaeology is anthropology or it is nothing.  
*Method and Theory in American Archaeology*  
Introduction (p. 2)  
The University of Chicago Press. Chicago, Illinois, USA. 1958

## ARCHITECT

### Author undetermined

The imperial building is a perfect Babylon of cubes, cylinders, pyramids and prisms, piled together with inconceivable grandeur, and is the achievement of antediluvian architects, who learned their craft of the passionate ‘Sons of God,’ before the human mind had shrunk to its present dimensions.

The Symbol of Darkness  
*The Knickerbocker*, Volume 34, Number 3, September, 1849 (p. 213)

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

ARCHITECT, n. One who drafts a plan of your house, and plans a draft of your money; who estimates the whole cost, and himself costs the whole estimate.

*The Cynic’s Word Book*  
ARCHITECT (p. 20)  
Doubleday, Page & Co. New York, New York, USA. 1906

**Carr-Saunders, Sir A. M. (Alexander Morris),** 1886–1966  
English sociologist

**Wilson, Paul A.** 1903–  
No biographical data available

The architect therefore is not only a professional man but also an artist, and he shares in some measure both the problems and the qualities of temperament commonly associated with artists. Thus he lives in a world which is dominated by fashion and split up into cliques and coteries, and he brings to the consideration of professional business something of the outlook which characterizes his interest in the subject-matter of his art.

*The Professions*  
Architects (p. 184)  
Frank Cass & Company Ltd. London, England. 1964

**Cowper, William** 1731–1800  
English poet

But ‘tis not timber, lead and stone,  
An architect requires alone,  
To finish a fine building –

The palace were but half complete,  
If he could possibly forget  
The carving and the gilding.  
*The Poetical Works of William Cowper*  
Friendship (pp. 163–168)  
John W. Lovell Company. New York, New York, USA. No date

**Day, Clarence S.** 1874–1935  
American writer

... whenever a building is erected for the use of the public, the convenience of a nonclimbing person is wholly ignored.

I refer, of course, to the debonair habit which architects have of never designing an entrance that is easy to enter. Instead of leaving the entrance on the street level so that a man can walk in, they perch it on a flight of steps, so that no one can get in without climbing. The architect’s defense is, it looks better.

*The Crow’s Nest*  
Legs vs. Architects (p. 44)  
Alfred A. Knopf. New York, New York, USA. 1922

**de Bergerac, Cyrano** 1619–55  
French satirist and dramatist

The Architector that built my Prison, having made my Entries into it, did not bethink himself of making one Outlet.

*The Comical History of the States and Empires of the Worlds of the Moon and Sun* (pp. 25–26)  
Printed for Henry Rhodes. London, England. 1687

**Disraeli, Benjamin, First Earl of Beaconsfield** 1804–81  
English prime minister, founder of Conservative Party, and novelist

What is wanted in architecture, as in so many things, is – a man. Shall we find a refuge in a Committee of Taste? Escape from the mediocrity of one to the mediocrity of many? We only multiply our feebleness, and aggravate our deficiencies. But one suggestion might be made. No profession in England has done its duty until it has furnished its victim. The pure administration of justice dates from the deposition of Macclesfield. Even our boasted navy never achieved a great victory until we shot an admiral. Suppose an architect were hanged? Terror has its inspiration as well as competition.

*Tancred: Or, The New Crusade* (Volume 1)  
Chapter X (pp. 127–128)  
Bernh. Leipzig, Germany. 1847

**Esar, Evan** 1899–1995  
American humorist

The architect makes an old house look better just by talking about the cost of a new one.

*20,000 Quips and Quotes* (p. 40)  
Doubleday. Garden City, New York, USA. 1968

The architect who always talks shop is probably suffering from an edifice complex.

*20,000 Quips and Quotes* (p. 40)

Doubleday. Garden City, New York, USA. 1968

**Hertzberger, Herman** 1932–

Dutch architect

Just as the painter needs a subject, so too the architect needs to have something to say that rises above the obscure jargon that architects share with one another.

*Space and the Architect: Lessons in Architecture 2*

Chapter 4 (p. 100)

Publishers. Rotterdam, The Netherlands. 2000

Too often we find the creative process of the architect depicted as a succession of flashes of inspiration that the privileged evidently receive as a gift and others vainly keep waiting for, as though ideas are some kind of thunderbolt from on high.

*Space and the Architect: Lessons in Architecture 2*

Chapter 2 (p. 28)

Publishers. Rotterdam, The Netherlands. 2000

Architects, including the seriously gifted, construct their ideas, even if these are keys to utterly new insights, out of raw material that in one way or another had to be already present in their minds. Nothing, after all, can be born of nothing.

*Space and the Architect: Lessons in Architecture 2*

Chapter 2 (p. 28)

Publishers. Rotterdam, The Netherlands. 2000

The architect's most important attributes are not the traditional emblems of professional skill, the ruler and pair of compasses, but his eyes and ears.

*Space and the Architect: Lessons in Architecture 2*

Chapter 2 (p. 39)

010 Publishers. Rotterdam, The Netherlands. 2000

Architects must react to the world, not to each other.

*Space and the Architect: Lessons in Architecture 2*

Chapter 3 (p. 53)

010 Publishers. Rotterdam, The Netherlands. 2000

**Keate, George** 1729–97

When Troy was built, you recollect

I dabbled as an Architect;

A very sorry one, you'll say,

But worse since then have come in play,

And of the art I've understood

Enough, to do more harm than good...

*The Distressed Poet*

Canto the Second, l. 332

Printed for J. Dodsley. London, England. 1787

**Kirby, William** 1759–1850

English entomologist

**Spence, William** 1783–1860

English entomologist

Man thinks that he stands unrivalled as an architect, and that his buildings are without a parallel among the works

of the inferior orders of animals. He would be of a different opinion did he attend to the history of insects: he would find that many of them have been architects from time immemorial; that they have had their houses divided into various apartments, and containing staircases, gigantic arches, domes, colonnades, and the like; nay, that even tunnels are excavated by them so immense, compared with their own size, as to be twelve times bigger than that of Sir M. I. Brunel under the Thames.

*An Introduction to Entomology; Or, Elements of the Natural History of Insects* (7th edition)

Letter 1 (pp. 7–8)

Longman, Brown, Green, Longmans & Robert. London, England. 1858

**Le Corbusier (Charles-Edouard**

**Jeanneret)** 1887–1965

Swiss architect and city planner

The Architect, by his arrangement of forms, realizes an order which is a pure creation of his spirit; by forms and shapes he affects our senses to an acute degree and provokes plastic emotions; by the relationships which he creates he wakes profound echoes in us, he gives us the measure of an order which we feel to be in accordance with that of our world, he determines the various movements of our heart and of our understanding; it is then that we experience beauty.

Translated by Frederick Etchells

*Towards a New Architecture*

Argument (p. 7)

The Architectural Press. London, England. 1965

**Longfellow, Henry Wadsworth** 1807–82

American poet

... The architect

Built his great heart into these sculptured stones,

And with him toiled his children, and their lives

Were builded, with his own, into the walls,

As offerings unto God.

*The Poetical Works of Henry Wadsworth Longfellow*

Christus: A Mystery

The Golden Legend, In the Cathedral (p. 431)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Mangan, James Clarence** 1803–49

Irish poet

“Architect! my handsome country villa

Yesterday took fire, and naught could save it.

It now lies a ruin!” –

“Allah-el-illah!

Fire, like Air, will find or force expansion –

Fire must burn, and woodwork may not brave it!

But – I'll build thee a far handsomer mansion.”

– “Thanks, good Architect! The cost may make me

Poorer, but, Inshallah! ‘twill not break me.”

*Poems of James Clarence Mangan*

The Worst Loss, Stanza II, l. 9–16

O'Donoghue. Dublin, Ireland. 1903

**Milton, John** 1608–74  
English poet

The hasty multitude  
Admiring enter'd, and the work some praise  
And some the architect: his hand was known  
In heaven by many a tower'd structure high,  
Where scepter'd angels held their residence,  
And sat as princes.

In *Great Books of the Western World* (Volume 32)  
*Paradise Lost*  
Book I, l. 730  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**North, Roger** 1585–1652  
English biographer

For a profest architect is proud, opiniative and troublesome, seldom at hand, and a head workman pretending to the designing part, is full of paltry vulgar contrivances; therefore be your owne architect, or sitt still.

In H.M. Colvin  
*A Biographical Dictionary of English Architects, 1600–1840*  
Introduction (p. 13)  
John Murray. London, England. 1954

**Papworth, Wyatt**  
Architect

Architects are, like certain paralytics, always on the watch for some new manifestation that they may at once secure to be a help for their too manifest decrepitude. Every 'new thing' in detail is promptly seized and made available in any practicable way, and then the public are called to admire the great 'knowledge' of the 'architect' and how he has 'authority for every detail.'

The Completion of Saint Paul's  
*The Quarterly Review*, Volume 133, Number 266, August, 1872 (p. 375)

**Reynolds, Joshua** 1723–92  
English painter

What the back-ground is in Painting, in Architecture is the real ground on which the building is erected; and no Architect took greater care than he that his work should not appear crude and hard; that is, it did not abruptly start out of the ground without expectation or preparation.

*The Life and Discourses of Sir Joshua Reynolds*  
Discourse XIII (pp. 244–245)  
Sawyer, Ingersoll & Co. Hudson, Ohio, USA. 1858

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

An architect should live as little in cities as a painter. Send him to our hills, and let him study there what nature understands by a buttress, and what by a dome.

*True and the Beautiful in Nature, Art, Morals and Religion, Selected from the Works of John Ruskin*  
Part 3, The Lamp of Power (p. 129)  
John Wiley & Sons, Inc. New York, New York, USA. 1860

Every citizen may box himself up in as barbarous a tenement as suits his taste or inclination; the architect is his vassal, and must permit him not only to criticise, but to perpetuate.

*The Poetry of Architecture: Cottage, Villa, Etc.*  
Introduction (p. 4)  
John Wiley & Sons. New York, New York, USA. 1877

**Seneca (Lucius Annaeus Seneca)** 4 BCE–65 AD  
Roman playwright

Believe me, that was a happy age, before the days of architects, before the days of builders.

Translated by Richard M. Gummere

Part III, Chapter V (pp. 107–108)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

True, there are architects so called in this country, and I have heard of one at least possessed with the idea of making architectural ornaments have a core of truth, a necessity, and hence a beauty, as if it were a revelation to him. All very well perhaps from his point of view, but only a little better than the common dilettantism.

*The Writings of Henry David Thoreau* (Volume 2)  
*Walden*

Chapter I (p. 75)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

**Viollet-le-Duc, Eugène Emmanuel** 1814–79  
French architect and theorist

Our modern architects are like *parvenus* who have come all at once into possession of a large fortune and do not know how to adjust their expenditure with that discretion which belongs only to accustomed opulence.

Translated by B. Bucknal

*Lectures On Architecture* (Volume 2)

Lecture XIII (p. 105)

Samson Low, Marston, Searle & Rivington. London, England. 1881

**Vitruvius** ca 70–ca 25 BCE  
Roman architect

...architects who without culture aim at manual skill cannot gain a prestige corresponding to their labours, while those who trust to theory and literature obviously follow a shadow and not reality. But those who have mastered both, like men equipped in full armor, soon acquire influence and attain their purpose.

*Vitruvius on Architecture* (Volume 1)

Book I, Chapter I, 2 (p. 7)

W. Heinemann Ltd. London, England. 1931–34

**Wightwick, George** 1802–72  
English civil engineer

It is presumed your primary object in securing the services of an Architect involves the recognition of his pretensions as an Artist. The ordinary Builder may construct the edifice required: you apply to an Architect for the superadded graces of correct design and suitable decoration. In matters of Taste he engages to give you what he conceives to be correct, and to the amount only which your means allow, and not to sacrifice without reluctance his repute as an Artist to your individual wishes, not to suffer under your censure for limiting his decorations to their just proportion in the general outlay.

Letter to prospective clients, circa 1825

*Royal Institute of British Architects Proceedings*, New Series, Volume VII, 161, 1891

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

Today the difference between a good and a poor architect is that the poor architect succumbs to every temptation and the good one resists it.

Translated by Peter Winch

*Culture and Value* (p. 3e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Wren, Sir Christopher** 1632–1723  
English designer, astronomer, and geometer

An architect ought to be jealous of *novelties* in which fancy blinds the judgment: and to think his judges as well those that are to live five centuries after him, as those of his own time. That which is commendable now for novelty, will not be a new invention to posterity, when his works are often imitated, and when it is unknown which was the original; but the glory of that which is good of itself, is eternal.

*Lives of Eminent Persons*

Sir Christopher Wren (p. 30)

Baldwin & Cradock. London, England. 1833

**Wright, Frank Lloyd** 1867–1959  
American architect

The physician can bury his mistakes, but the architect can only advise his client to plant vines.

Frank Lloyd Wright and His Art

*New York Times Magazine*, 4 October, 1953 (p. 47)

Any good architect is by nature a physicist as a matter of fact, but as a matter of reality, as things are, he must be a philosopher and a physician.

*Frank Lloyd Wright: An Autobiography*

The Character of Form (p. 380)

Duell, Sloan & Pearce. New York, New York, USA. 1943

**Zevi, Bruno** 1918–2001  
Italian architectural historian and writer

Professional architects, who, in order to explore the problems of contemporary architecture, must necessarily have a profound passion for architecture in the living sense of the word, are largely lacking today in the specific cultural background which would qualify them for a knowledgeable entry into the arena of historical and critical debate.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter I (pp. 16–17)

Horizon Press. New York, New York, USA. 1957

## ARCHITECTURAL

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

Our object, let it always be remembered, is not the attainment of architectural data, but the formation of taste.

*The Poetry of Architecture: Cottage, Villa, Etc.*

The Cottage (p. 29)

John Wiley & Sons. New York, New York, USA. 1877

Architectural Deceits are broadly to be considered under three heads – First. The suggestion of a mode of structure or support, other than the true one; as in pendants of late Gothic roofs. Second. The painting of surfaces to represent some other material than that of which they actually consist (as in the marbling of wood), or the deceptive representation of sculptured ornament upon them. Third. The use of cast or machine-made ornaments of any kind.

*The Seven Lamps of Architecture*

Chapter 2 (p. 29)

John Wiley & Son. New York, New York, USA. 1865

**van Brunt, Henry** 1832–1903

American architect

Architectural ideas and motifs excite in the minds of architects certain emotions, which are rarely shared in their fullness by the laity.

*Greek Lines and Other Architectural Essays*

Architecture and Poetry (p. 236)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

The language of architectural forms is one of infinite artifice; it is born of traditions, is shaped by conventions, and speaks in parables and apologues, which are patent only to those who have studied the growth of thought in the development of its signs and symbols.

*Greek Lines and Other Architectural Essays*

Architecture and Poetry (p. 241)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

## ARCHITECTURE

### Author undetermined

Architecture is easy: you just stare at the paper until droplets of blood appear on your forehead.

Source undetermined

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

He that builds a fair house upon an ill seat, committeth himself to prison.

In Brian Vickers (ed.)

*Francis Bacon*

Essays of Buildings (p. 427)

Published for the British Council by Longman. Harlow, England. 1978

Houses are built to live in, and not to look on: therefore let use be preferred before uniformity.

In Brian Vickers (ed.)

*Francis Bacon*

Essays of Buildings (p. 427)

Published for the British Council by Longman. Harlow, England. 1978

**Belcher, John** 1841–1913

English architect

Good architecture never deceives the eye, even for a moment.

*Essentials in Architecture: An Analysis of the Principles & Qualities to be Looked for in Buildings*

Chapter I (p. 11)

B.T. Batsford, Ltd. London, England. 1907

**Blomfield, Sir Reginald** 1856–1942

English architect

Fine architecture is like fine literature: it is new inasmuch as it has something personal and individual to say, and it is old inasmuch as it uses familiar idioms, phrases, and words, and the quality of genius is shown in the use of these existing means of expression, not in the attempt to invent new ones as long as there are any old available for the purpose.

Modern London Architecture

*The Living Age*, Volume XXVII, August 12, 1922 (p. 402)

Architecture, if it is to be good, must be efficient for its purpose, but efficiency for its purpose in architecture has a wider range than it has in engineering or in simple building, because in architecture the appeal to the aesthetic sense has to be taken into account, and if that appeal fails the architecture fails with it.

Modern London Architecture

*The Living Age*, Volume 314, Number 4075, August 12, 1922 (p. 402)

...to nail down architecture to merely utilitarian purpose is as unsound critically as it is to limit painting to mere brushwork or mere pattern or whatever the latest fad may be.

Modern London Architecture

*The Living Age*, Volume 314, Number 4075, August 12, 1922 (p. 402)

Good architecture will always be as rare as good painting and good sculpture ...

Modern London Architecture

*The Living Age*, Volume 314, Number 4075, August 12, 1922 (p. 405)

**Bragdon, Claude Fayette** 1866–1945

American architect, writer, and stage designer

Architecture is preeminently the art of significant forms in space – that is, forms significant of their functions.

Wake Up and Dream

*Outlook*, May 27, 1931

**Buchanan, Robert Williams** 1841–1901

English poet and novelist

Thus I taught them architecture –  
How to hew the rocks and fashion  
Monuments that stand forever  
In despite of God and Time.

George Bell &amp; Sons. London, England. 1884

**Coleridge, Stephen** 1854–1936

English author, barrister and opponent of vivisection

In architecture it may be conceded that Science is entitled to a slight participation as a mechanical necessity. For architecture is always in a measure a Science and only sometimes an art. It is always a Science, because a building erected without knowledge of weights and strains will collapse. It is sometimes an art when it advances from mere utility to become a form of expression and to reveal the heart of the builder, and appeal to that of the beholder.

*The Idolatry of Science*

Chapter XI (pp. 87–88)

John Lane Co. London, England. 1920

**Cowper, William** 1731–1800

English poet

Silently as a dream the fabric rose;  
No sound of hammer or of saw was there.

John W. Lovell Company. New York, New York, USA. No date

**Dickens, Charles** 1812–70

English novelist

We didn't find that it [London] came to its likeness in the red bills at the shop doors; which I meanersay, added Joe, in an explanatory manner, as it is there drawd too architectooraloal.

*Great Expectations*

Chapter XXVII (p. 224)

Rinehart &amp; Company, Inc. New York, New York, USA. 1948

A man who could build a church, as one may say, by squinting at a sheet of paper.

*Martin Chuzzlewit*

Chapter XXXI (p. 458)

Dodd, Mead &amp; Company. New York, New York, USA. 1944

**Dimnet, Ernest** 1866–1954

French cleric

Architecture, of all the arts, is the one which acts the most slowly, but the most surely, on the soul.

*What We Live By*

Chapter VII (p. 141)

Simon &amp; Schuster. New York, New York, USA. 1932

**Elmes, James**

No biographical data available

He comprehends a whole, he grasps the extremities, he achieves variety – that variety and intricacy which the accomplished Sir Joshua Reynolds considered as a beauty and excellence worthy of being adopted into architecture: but he sees not the detail, he either neglects it or despise it, and certainly does not look at his art with a microscopic eye. He does not finish in architecture like Denner or the Dutch masters in painting; but to pursue the analogy; designs like a painter in fresco, and thinks with Michelangelo, that a finished or exquisite detail in architecture is like oil painting in the sister art, fit employment only for women and children.

*Metropolitan Improvements; Or London in the Nineteenth Century*

Chapter III (p. 92)

Jones &amp; Co. London, England. 1828

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The Gothic cathedral is a blossoming in stone subdued by the insatiable demand of harmony in man. The mountain of granite blooms into an eternal flower.

*Ralph Waldo Emerson: Essays and Lectures**Essays: First Series*

History (p. 246)

The Library of America. New York, New York, USA. 1983

The hand that rounded Peter's dome  
 And groined the aisles of Christian Rome,  
 Wrought in a sad sincerity;  
 Himself from God he could not free;  
 He builded better than he knew;  
 The conscious stone to beauty grew.  
*The Complete Works of Ralph Waldo Emerson* (Volume 9)  
 The Problem (p. 7)  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Earth proudly wears the Parthenon  
 As best gem upon her zone.

**Hertzberger, Herman** 1932–  
 Dutch architect

It is only where architecture generates other space, creates  
 other experiences and satisfies other conditions which  
 cause sensibilities to change, that it signifies anything of  
 value. Architecture is more than just a free-ranging, narcis-  
 sistic phenomenon.  
*Space and the Architect: Lessons in Architecture 2*  
 Chapter 3 (p. 52)  
 010 Publishers. Rotterdam, The Netherlands. 2000

**Jefferson, Thomas** 1743–1826  
 3rd president of the USA

Architecture worth great attention. As we double our  
 numbers every twenty years, we must double our houses.  
 Besides, we build of such perishable materials, that one  
 half of our houses must be rebuilt in every space of  
 twenty years, so that in that time, houses are to be built

for three-fourths of our inhabitants. It is, then, among the  
 most important arts; and it is desirable to introduce taste  
 into an art which shows so much.  
*The Writings of Thomas Jefferson* (Volume 17)  
 Traveling Notes for Mr. Rutledge and Mr. Shippen, June 3, 1788  
 (p. 292)  
 The Thomas Jefferson Memorial Association. Washington, D.C. 1907

 Jeanneret)** 1887–1965  
 Swiss architect and city planner

The house is a machine for living in.  
 Translated by Frederick Etchells  
*Towards a New Architecture*  
 Argument (p. 4)  
 The Architectural Press. London, England. 1965

Architecture is the first manifestation of man creating his  
 own universe, creating it in the image of nature, submit-  
 ting to the laws of nature, the laws which govern our own  
 nature, our universe. The laws of gravity, of statics and  
 of dynamics, impose themselves by a *reductio ad absurdum*:  
 everything must hold together or it will collapse.  
 Translated by Frederick Etchells  
*Towards a New Architecture*  
 Regulating Lines (pp. 69–70)  
 The Architectural Press. London, England. 1965

There is one profession and one only, namely archi-  
 tecture, in which progress is not considered necessary,  
 where laziness is enthroned, and in which the reference  
 is always to yesterday.

Translated by Frederick Etchells

*Towards a New Architecture*

Eyes Which Do Not See (p. 101)

English poet

Thus when we view some well-proportion'd dome...

No single parts unequally surprise,

All comes united to th' admiring eyes.

*The Complete Poetical Works*

Essay on Criticism, pt. II, l. 47

Houghton Mifflin Company. New York, New York, USA. 1903

**Reynolds, Joshua** 1723–92

English painter

Variety and intricacy is a beauty and excellence in every  
other of the arts which address the imagination; and why  
not in Architecture?

*The Life and Discourses of Sir Joshua Reynolds*

Discourse XIII (p. 244)

Sawyer, Ingersoll & Co. Hudson, Ohio, USA. 1858

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

We may live without her [architecture], and worship  
without her, but we cannot remember without her.

*True and the Beautiful in Nature, Art, Morals and Religion, Selected  
from the Works of John Ruskin*

Part 3, The Lamp of Memory (p. 140)

John Wiley & Sons, Inc. New York, New York, USA. 1860

Ornamentation is the principal part of architecture, con-  
sidered as a subject of fine art.

*True and the Beautiful in Nature, Art, Morals and Religion, Selected  
from the Works of John Ruskin*

Part 4, Sculpture (p. 208)

John Wiley & Sons, Inc. New York, New York, USA. 1860

Architecture is the art which so disposes and adorns the  
edifices raised by man for whatsoever uses, that the sight  
of them contribute to his mental health, power and plea-  
sure.

*The Seven Lamps of Architecture*

Chapter I (p. 7)

John Wiley & Son. New York, New York, USA. 1865

Architecture is an art for all men to learn, because all  
are concerned with it; and it is so simple, that there is no  
excuse for not being acquainted with its primary rules,  
any more than for ignorance of grammar or of spelling,  
which are both of them far more difficult sciences.

*The Seven Lamps of Architecture*

Chapter I (p. 16)

John Wiley & Sons. New York, New York, USA. 1885

We may live without her [architecture], and worship  
without her, but we cannot remember without her.

*The Seven Lamps of Architecture*

Chapter 6 (p. 147)

John Wiley & Son. New York, New York, USA. 1865

The ambition of the old Babel builders was well directed  
for this world: there are but two strong conquerors of the  
forgetfulness of men, Poetry and Architecture; and the  
latter in some sort includes the former, and is mightier  
in its reality; it is well to have, not only what men have  
thought and felt, but what their hands have handled, and  
their strength wrought, and their eyes beheld, all the days  
of their life.

*The Seven Lamps of Architecture*

Chapter 6 (p. 148)

John Wiley & Son. New York, New York, USA. 1865

...the architecture of a nation is great only when it is as  
universal and as established as its language; and when  
provincial differences of style are nothing more than so  
many dialects.

*The Seven Lamps of Architecture*

Chapter VI (p. 202)

George Allen. Sunnyside, England. 1880

...it does not matter one marble splinter whether we  
have an old or new architecture, but it matters everything

whether we have an architecture truly so called or not; that is, whether an architecture whose laws might be taught at our schools from Cornwall to Northumberland, as we teach English spelling and English grammar, or an architecture which is to be invented fresh every time we build a workhouse or a parish school.

*The Seven Lamps of Architecture*

The Lamp of Obedience (p. 203)

George Allen. Sunnyside, England. 1880

[T]he value of architecture depended on two distinct characters – the one, the impression it receives from human power; the other, the image it bears of the natural creation.

*The Seven Lamps of Architecture*

The Lamp of Beauty

Smith, Elder & Company. London, England. 1849

I would have, then, our ordinary dwelling-houses built to last, and built to be lovely; as rich and full of pleasantness as may be within and without...with such differences as might suit and express each man's character and occupation, and partly his history.

*The Seven Lamps of Architecture*

The Lamp of Memory

Smith, Elder & Company. London, England. 1849

We address ourselves, then, first to the task of determining some law of right, which we may apply to the architecture of all the world and of all time; and by help of which, and judgment according to which, we may as easily pronounce whether a building is good or noble, as, by applying a plumb-line, whether it be perpendicular.

*The Stones of Venice*

Chapter II (p. 35)

Smith, Elder & Co. London, England. 1873

Architecture is the work of nations...

*The Complete Works*

*The Stones of Venice*

Part 4, Sculpture (p. 241)

Bryan Taylor & Company. New York, New York, USA. 1894

The Science of Architecture, followed out to its full extent, is one of the noblest of those which have reference only to the creations of human minds.

*The Poetry of Architecture: Cottage, Villa, Etc.*

Introduction (p. 1)

John Wiley & Sons. New York, New York, USA. 1877

It [architecture] is not merely a science of the rule and compass, it does not consist only in the observation of just rule, or of fair proportion: it is, or ought to be, a science of feeling more than of rule, a ministry to the mind, more than to the eye.

*The Poetry of Architecture: Cottage, Villa, Etc.*

Introduction (p. 1)

John Wiley & Sons. New York, New York, USA. 1877

It will always be necessary to obtain some definite knowledge of the distinctive features of a country, before

we can form a just estimate of the beauties or the errors of its architecture.

*The Poetry of Architecture: Cottage, Villa, Etc.*

The Cottage (p. 16)

John Wiley & Sons. New York, New York, USA. 1877

To no one is the architecture of the exterior of a dwelling-house of so little consequence as to its inhabitant.

*The Poetry of Architecture: Cottage, Villa, Etc.*

The Villa (p. 153)

John Wiley & Sons. New York, New York, USA. 1877

All imitation has its origin in vanity, and vanity is the bane of architecture.

*The Poetry of Architecture: Cottage, Villa, Etc.*

The Villa (p. 224)

John Wiley & Sons. New York, New York, USA. 1877

### **Saarinen, Eero** 1910–67

Finnish-born US architect

Architecture is not just to fulfill man's need for shelter, but also to fulfill man's belief in the nobility of his existence on earth.

*The Maturing Modern*

*Time*, July 2, 1956

### **Scott, Geoffrey** 1884–1929

Architect, biographer, and architectural historian

Architecture is the art of organising a mob of craftsmen.

*The Architecture of Humanism: A Study in the History of Taste*

Chapter II (p. 42)

W.W. Norton & Co. New York, New York, USA. 1999

### **Scott, George Gilbert** 1811–78

English architect

Iron architecture is like the unmanageable mechanical man of Frankenstein; and we do not think it astonishing that, now that our architects have "developed" him, they are at a loss to know what to do with him, or rather how to prevent his destroying them!

Article III

*The North British Review*, Volume 28, Number 56, February-May, 1858 (p. 368)

### **Smart, Christopher** 1722–71

English poet

Ma'm, architecture you're not skill'd in,

I don't approve your way of building;

In this there's nothing like design,

Pray learn the use of Gunter's line.

*The Poetical Works of Christopher Smart*

The Blockhead and Beehive, Fable X, l. 59–62

Clarendon Press. Oxford, England. 1980

### **Smollett, Tobias George** 1721–71

Scottish novelist

The external appearance of an old cathedral cannot be but displeasing to the eye of every man who has any idea of

propriety or proportion, even though he may be ignorant of architecture as a science...

*The Miscellaneous Works of Tobias Smollett, M.D.: With Memoirs of His Life*

The Expedition of Henry Clinker (p. 200)  
Printed for Sylvester Doig. Edinburgh, Scotland. 1811

**Statham, H. Heathcote** 1839–1924  
Architect

Architecture... is the art of erecting expressive and beautiful buildings.

*Architecture for General Readers*

Architecture for General Readers (p. 3)  
Charles Scribner's Sons. New York, New York, USA. 1896

**Sturgis, Russell** 1836–1909  
American architect

In trying to train the mind to judge of works of architecture, one can never be too patient.

*How to Judge Architecture: A Popular Guide to the Appreciation of Buildings*

Chapter I (p. 11)  
The Baker & Taylor Co. New York, New York, USA. 1903

**Sullivan, Louis Henry** 1856–1924  
American architect

Form ever follows function.

The Tall Office Building Artistically Considered  
*Lippincott's Magazine*, March, 1896

**Sydney, Lady Morgan** 1776–1859  
Irish novelist

Architecture is the printing-press of all ages, and gives a history of the state of the society in which it was erected; from the cromlech of the Druids to those toyshops of royal bad taste – Carlton House and the Brighton Pavilion. The Tower and Westminster Abbey are glorious pages in the history of time, and tell the story of an iron despotism and the cowardice of unlimited power.

*Passages from My Autobiography*

Diary entry (p. 165)  
Howard Bentley. London, England. 1859

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

What does architecture amount to in the experience of the mass of men?

*Walden: or, Life in the Woods*

Economy (p. 39)  
J.M. Dent & Sons. London, England. 1912

**van Brunt, Henry** 1832–1903  
American architect

If a monument of architecture is like a “song without words,” it certainly touches the mind and heart as much as it moves the senses.

*Greek Lines and Other Architectural Essays*

Architecture and Poetry (p. 237)  
Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

I have found a paper of mine... in which I call architecture “petrified music”.

In Johann Peter Eckermann

*Conversations with Goethe*  
Monday, March 23, 1829 (p. 303)  
J.M. Dent & Sons Ltd. London, England. 1970

**Wells, H. G. (Herbert George)** 1866–1946  
English novelist, historian, and sociologist

I saw great and splendid architecture rising about me, more massive than any buildings of our own time, and yet, as it seemed, built of glimmer and mist.

*The Time Machine*

Chapter III (p. 31)  
Berkeley Publishing Corporation. New York, New York, USA. n.d.

**Whewell, William** 1794–1866  
English philosopher and historian

All architecture, to possess genuine beauty, must be mechanically consistent. The decorative members must represent a structure which has in it a principle of support and stability.

The Decay of Lying (p. 291)  
AMS Press. New York, New York, USA. 1909

**Wittgenstein, Ludwig Josef Johann** 1889–1951  
Austrian-born English philosopher

Remember the impression one gets from good architecture, that it expresses a thought. It makes one want to respond with a gesture.

Translated by Peter Winch

*Culture and Value* (p. 22e)  
The University of Chicago Press. Chicago, Illinois, USA. 1980

Architecture is a gesture. Not every purposive movement of the human body is a gesture. And no more is every building designed for a purpose architecture.

Translated by Peter Winch

*Culture and Value* (p. 42e)  
The University of Chicago Press. Chicago, Illinois, USA. 1980

Architecture immortalizes and glorifies something. Hence there can be no architecture where there is nothing to glorify.

Translated by Peter Winch

*Culture and Value* (p. 69e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

**Wotton, Henry** 1568–1639

English author and diplomat

...Architecture, can want no commendation, where there are Noble Men, or Noble minds ...

*The Elements of Architecture*

The Preface (p. vii)

Longmans, Green & Co. London, England. 1903

In Architecture as in all other Operative Arts, the end must direct the Operation.

*The Elements of Architecture*

Part I (p. 1)

Longmans, Green & Co. London, England. 1903

**Wren, Sir Christopher** 1632–1723

English designer, astronomer, and geometer

Architecture aims at Eternity

In J. Elmes

*Memoirs of Sir Christopher Wren*

Appendix, Parentalia (p. 126)

Publisher undetermined

London, England. 1823

Architecture has its political use; public buildings being the ornament of a country; it establishes a nation, draws people and commerce; makes the people love their native country, which is assuredly the original of all great actions in a commonwealth. The emulation of the cities of Greece was the true cause of their greatness. The obstinate valor of the Jews, occasioned by the love of their temple, was a cement that held together that people for many ages, through infinite changes. The care of public decency and convenience was a great cause of the establishment of the Low Countries, and of many cities in the world. Modern Rome subsists still by the ruins and imitations of the old; as does Jerusalem, by the Temple of the Sepulcher, and other remains of Helena's zeal.

Quoted in T.A. Buckley

Lecture

*Freemasons' Quarterly Magazine*, Volume 1 1853 (p. 176)

**Wright, Frank Lloyd** 1867–1959

American architect

The only thing wrong with architecture [is] the architects.

In Evan Esar

*20,000 Quips and Quotes* (p. 40)

Doubleday. Garden City, New York, USA. 1968

Machinery, materials and men – yes – these are the stuff by means of which the so-called American architect will

get his architecture.... Only by the strength of his spirit's grasp upon all three – machinery, materials and men – will the architect be able so to build that his work may be worthy the great name architecture.

In Bruce Brooks Pfeiffer and Gerald Nordland (eds.)

*Frank Lloyd Wright: In the Realm of Ideas* (p. 48)

Southern Illinois University Press, Carbondale, Illinois, USA. 1988

Bring out the nature of the materials, let their nature intimately into your scheme.... Reveal the nature of the wood, plaster, brick or stone in your designs; they are all by nature friendly and beautiful.

In Bruce Brooks Pfeiffer and Gerald Nordland (eds.)

*Frank Lloyd Wright: In the Realm of Ideas* (p. 48)

Southern Illinois University Press, Carbondale, Illinois, USA. 1988

Architecture is the triumph of human imagination over materials, methods and men, to put man into possession of his own earth.

In Bruce Brooks Pfeiffer and Gerald Nordland (eds.)

*Frank Lloyd Wright: In the Realm of Ideas* (p. 48)

Southern Illinois University Press, Carbondale, Illinois, USA. 1988

**Wyatt, Mrs. James**

No biographical data available

You must be aware that Architecture is the profession of a Gentleman, and that none is more lucrative when it is properly attended to.

*Egerton Manuscript*

3515, Letter to son Philip, 1808

**Zevi, Bruno** 1918–2001

Italian architectural historian and writer

To look at architecture with any system and intelligence one must already have a lively interest in the subject and be provided with a good deal of good will.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter I (p. 16)

Horizon Press. New York, New York, USA. 1957

*Les yeux qui ne voient pas*, the eyes which do not see the beauty of Purist forms are eyes that today do not see and do not understand the lessons of traditional architecture.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter I (p. 17)

Horizon Press. New York, New York, USA. 1957

Architecture...is like a great hollowed-out sculpture which man enters and apprehends by moving about within it.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter II (p. 22)

Horizon Press. New York, New York, USA. 1957

A satisfactory history of architecture has not yet been written, because we are still not accustomed to thinking in terms of space, and because historians of architecture

have failed to apply a coherent method of studying buildings from a spatial point of view.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter II (p. 22)

Horizon Press. New York, New York, USA. 1957

Architecture...does not consist in the sum of the width, length and height of the structural elements which enclose space, but in the void itself, the enclosed space in which man lives and moves.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter II (pp. 22–23)

Horizon Press. New York, New York, USA. 1957

Decorating, sculpture and painting enter into the grammar of architecture in their proper places as adjectives, not as substantives.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter II (p. 32)

Horizon Press. New York, New York, USA. 1957

Architecture is not art alone, it is not merely a reflection of conceptions of life or a portrait of systems of living. Architecture is environment, the stage on which our lives unfold.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter II (p. 32)

Horizon Press. New York, New York, USA. 1957

All the techniques of representation and all the paths to architecture which do not include direct experience are pedagogically useful, of practical necessity and intellectually fruitful; but their function is no more than allusive and preparatory to that moment in which we, with everything in us that is physical and spiritual and, above all, human, enter and experience the spaces we have been studying. That is the moment of architecture.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter III (p. 60)

Horizon Press. New York, New York, USA. 1957

Among the planets of the arts, architecture is the dark side of the moon.

Translated by Milton Gendel

*Architecture as Space: How to Look at Architecture*

Chapter VI (p. 227)

Horizon Press. New York, New York, USA. 1957

## ARCHITECTURE AND ART

**Belcher, John** 1841–1913

English architect

Architecture is not a science plus art, but a science interpenetrated in all its methods and applications by the true spirit of art.

*Essentials in Architecture: An Analysis of the Principles & Qualities to be Looked for in Buildings*

Introduction (p. 5)

B.T. Batsford, Ltd. London, England. 1907

**Statham, H. Heathcote** 1839–1924

Architect

...architecture, although a form of artistic expression, is not, like painting and sculpture, unfettered by practical considerations; it is an art inextricably bound up with structural conditions and practical requirements.

*Architecture for General Readers*

Architecture for General Readers (p. 5)

Charles Scribner's Sons. New York, New York, USA. 1896

...we must remember that architecture, although a form of artistic expression, is not, like painting and sculpture, unfettered by practical considerations; it is an art inextricably bound up with structural conditions and practical requirements.

*Architecture for General Readers*

Architecture for General Readers (p. 5)

Charles Scribner's Sons. New York, New York, USA. 1896

## ARCHITECTURE AND MUSIC

**Beltrami, Giacomo Costantino** 1779–1855

Italian jurist, author, and explorer

Architecture is like music – one note out of its place is sufficient to destroy the harmony of the whole.

*Pilgrimage in Europe and America*

Letter VII (p. 290)

Printed for Hunt & Clarke. London, England. 1828

**Statham, H. Heathcote** 1839–1924

Architect

Architecture is, like music, a metaphysical art; it deals with the abstract qualities of proportion, balance of form, and direction of line, but without any imitation of the concrete facts of nature.

*Architecture for General Readers*

Architecture for General Readers (pp. 6–7)

Charles Scribner's Sons. New York, New York, USA. 1896

The comparison between architecture and music is an exercise of the fancy which has often been pushed too far.

*Architecture for General Readers* (2nd edition)

Architecture for General Readers (p. 7)

Charles Scribner's Sons. New York, New York, USA. 1896

**van Brunt, Henry** 1832–1903

American architect

Painting has something to say which sculpture cannot say; architecture has a message which cannot be repeated in music; and vice versa.

*Greek Lines and Other Architectural Essays*

Architecture and Poetry (p. 237)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

## ARCHITECTURE AND POETRY

**van Brunt, Henry** 1832–1903  
American architect

...architecture does not reach its highest estate until it is so infused with imagination and fancy – not undisciplined imagination or capricious fancy – that the ordered fabric delights the eye of every intelligent observer and excites emotions like a poem.

*Greek Lines and Other Architectural Essays*

Architecture and Poetry (p. 235)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1893

## ARCHITECTURE, HISTORY OF

**Beltrami, Giacomo Costantino** 1779–1855  
Italian jurist, author, and explorer

...the history of architecture is like a series of waves, the crests the perfected styles, and the hollows the transition from the one into the next following.

*Pilgrimage in Europe and America*

Letter VIII

*Technology Quarterly and Proceedings of the Society of Arts*

The Study of Architecture

Volume 5, Number 4, December, 1892 (p. 375)

Printed for Hunt & Clarke. London, England. 1828

## ARCHIVE

**Anderson, James H.**

No biographical data available

Stored away in the archives of the nation, carefully guarded against depredation and destruction, are the annals of his struggles, the pean of her triumphs, the register of her defeats, perishable records at best; but graven on tables of stone and clay, in characters that are scattered and in part obliterated, yet capable of being welded into one conforming whole; characters that have withstood, in the main, the ravages of time; characters that are the open sesame to the mysterious past when old earth was young, and have awaited only the genie of intelligence, are evidences whence may be adduced tales of prehistoric marvels, monsters more ingenious than the Grendel of Beowulf, the creature of Frankenstein and peoples who were forgotten long ere the culture of Greece, the grandeur of Rome, were begun.

*Riddles of Prehistoric Times*

Chapter I (pp. 7–8)

Broadway Publishing Co. New York, New York, USA. 1911

## ARGUMENT

**Harvey, William** 1578–1657  
English physician

Some weak and inexperienced persons vainly seek by dialectics and farfetched arguments either to upset or establish things that are only to be founded on anatomical demonstration and believed on the evidence of the senses. He who truly desires to be informed of the question in hand... must be held bound either to look for himself, or to take on trust the conclusions to which they who have looked have come.

*Great Books of the Western World* (Volume 28)

A Second Disquisition to John Riolan (pp. 322–323)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

It would be very improper to adduce any example of a particular, where the force of the argument lies in the generality alone.

*Theory of the Earth: With Proofs and Illustrations* (Volume 2)

Chapter V (p. 159)

H.R. Engelmann & Weldon & Wesley. Weinheim, Germany. 1959

**Maxwell, James Clerk** 1831–79

Scottish physicist

One great art in argument when you have the first move is to divide everything into that which is and that which is not in some assigned class. In this way you make it the business of the opponent to discover what other important things there may be which may be said of the subject in hand.

Quoted in Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell: With a Selection from His Correspondence and Occasional Writings*

Chapter VIII (p. 233)

Macmillan & Co Ltd. London, England. 1882

**Sagan, Carl** 1934–96

American astronomer and author

...the cure for a fallacious argument is a better argument, not the suppression of ideas.

*Demon-Haunted World: Science As a Candle in the Dark*

Chapter 25 (p. 429)

Random House, Inc. New York, New York, USA. 1995

## ARGYRIA

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

So we must keep doctors awake by telling them that they have not yet shaken off astrology and the doctrine of signatures, as is shown by the form of their prescriptions, and their use of nitrate of silver, which turns epileptics into Ethiopians.

*The Professor at the Breakfast Table*

Chapter V (p. 132)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

## ARITHMETIC

**Author undetermined**

Arithmetic, then, means dealing logically with certain facts that we know, about numbers, with a view to arriving at knowledge which as yet we do not possess.

*Philosophy & Fun of Algebra*

Chapter 1 (p. 11)

C.W. Daniel Ltd. London, England.

**Arnheim, Rudolf** 1904–2007

German-born author, art and film theorist

We supply children with pocket calculators, but we must consider that the saving in time and effort is made at the expense of precious and elementary training of the brain. Genuine productive thinking starts at the simplest level, and the basic operations of arithmetic offer fine opportunities.

*New Essays on the Psychology of Art*

A Plea for Visual Thinking (p. 143)

University of California Press. Berkeley, California, USA. 1986

**Author undetermined**

Arithmetically speaking, rabbits multiply faster than adders add.

Source undetermined

**Bayly, Thomas Haynes** 1797–1839

English poet, songwriter, dramatist, and miscellaneous writer

As a boy, I had sighed over the mysteries of multiplication; addition had added materially to my distress, and subtraction taken away much of my repose.

*Musings and Prosings* (p. 207)

Printed by F. Bible. Boulogne, France. 1833

**Brandeis, Louis Dembitz** 1856–1941

Lawyer, reformer, and Supreme Court justice

Remember, O Stranger, Arithmetic is the first of the sciences and the mother of safety.

*Other People's Money*

Preface (p. viii)

Frederick A. Stokes. New York, New York, USA. 1914

...obsessed with the delusion that two and two make five, he fell at last a victim of the relentless rules of humble arithmetic.

Remember, O Stranger!

Arithmetic is the first of the sciences and the mother of safety.

In Alpheus T. Mason

*Brandeis: A Free Man's Life*

Chapter Thirteen (p. 200)

The Viking Press. New York, New York, USA. 1956

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

I know that two and two make four – & should be glad to prove it too if I could – though I must say if by any sort of process I could convert 2 & 2 into five it would give me much greater pleasure.

In Leslie A. Marchand (ed.)

*Byron's Letters and Journals* (Volume 3)

No. 10, Letter to Annabella Milbanke, November 10th, 1813 (p. 159)

Harvard University Press. Cambridge, Massachusetts, USA. 1973–82

**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

...the different branches of Arithmetic – Ambition, Distraction, Uglification, and Derision.

*The Complete Works of Lewis Carroll*

*Alice's Adventures in Wonderland*

Chapter IX (p. 103)

The Modern Library. New York, New York, USA. 1936

Let me see: four times five is twelve, and four times six is thirteen, and four times seven is – oh dear! I shall never get to twenty at that rate!

*Alice's Adventure in Wonderland*

Chapter 2 (pp. 19–20)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1869

**Churchill, Sir Winston Spencer** 1882–1965

British prime minister, statesman, soldier, and writer

You cannot ask us to take sides against arithmetic.

In F.B. Czarnomski

*The Wisdom of Winston Churchill*

Bias (p. 44)

George Allen & Unwin Ltd. London, England. 1956

**Collodi, Carlo** 1826–1890

Florentine children's writer

In school today, I'll learn to read, to-morrow to write, and the day after to-morrow I'll do arithmetic.

Translated by Carol Della Chiesa

*The Adventures of Pinocchio*

Chapter 9 (p. 32)

The MacMillan Company. New York, New York, USA. 1961

**Davis, Philip J.** 1923–

American applied mathematician

**Hersh, Reuben** 1827–

American mathematician

The sciences of quantity and of space in their simpler forms are known as *arithmetic* and *geometry*.

*The Mathematical Experience, Study Edition*

What Is Mathematics? (p. 6)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1998

**Dewey, John** 1859–1952

American philosopher and educator

The way to enable a student to apprehend the instrumental value of arithmetic is not to lecture him on the benefit it will be to him in some remote and uncertain future, but

to let him discover that success in something he is interested in doing depends on ability to use numbers.

*Democracy and Education: An Introduction to the Philosophy of Education*

Chapter Eighteen (p. 240)

The Free Press, New York, New York, USA. 1916

**Dickens, Charles** 1812–70

English novelist

Herein lay the spring of the mechanical art and mystery of educating the reason without stooping to the cultivation of the sentiments and affections. Never wonder. By means of addition, subtraction, multiplication, and division, settle everything somehow, and never wonder.

*Hard Times*

Book the First, Chapter VIII (p. 43)

J.M. Dent & Sons Ltd. London, England. 1966

**Dostoevsky, Fyodor Mikhailovich** 1821–81

Russian writer

...what do I care for the laws of nature and arithmetic, when, for some reason I dislike those laws and the fact that twice two makes four?

*Notes from the Underground*

Chapter III (p. 8)

Dover Publications. New York, New York, USA. 1992

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

For we do not listen with the best regard to the verses of a man who is only a poet, nor to his problems if he is only an algebraist; but if a man is at once acquainted with the geometric foundations of things and with their festal splendor, his poetry is exact and his arithmetic musical.

*The Complete Works of Ralph Waldo Emerson* (Volume 10)

*Society and Solitude*

Works and Days (p. 179)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

**Everett, Edward** 1794–1865

Whig Party politician

[Arithmetic] is another of the great master-keys of life. With it the astronomer opens the depths of the heavens; the engineer, the gates of the mountains; the navigator, the pathways of the deep. The skilful arrangement, the rapid handling of figures, is a perfect magician's wand.

*Orations and Speeches on Various Occasions* (Volume 3)

III (p. 47)

Little, Brown & Co. Boston, Massachusetts, USA. 1870

**Fitch, Sir Joshua Girling** 1824–1903

English educationist

It is by Arithmetic more than by any other subject in a school course that the art of thinking – consecutively, closely, logically – can be effectually taught.

*Lectures on Teaching*

Chapter XI (p. 293)

The Macmillan Co. New York, New York, USA. 1906

**Frege, Friedrich Ludwig Gottlob** 1848–1925

German logician

I compare arithmetic with a tree that unfolds upwards in a multitude of techniques and theorems while the root drives into the depths.

In I. Grattan-Guinness

*The Search For Mathematical Roots*

Chapter 1 (p. 3)

Princeton University Press. Princeton, New Jersey, USA. 2000

**Heinlein, Robert A.** 1907–88

American science fiction writer

...an intellectual is a highly educated man who can't do arithmetic with his shoes on, and is proud of his lack.

*The Cat Who Walks Through Walls: A Comedy of Manners*

Chapter XXVIII (p. 359)

G.P. Putnam's Sons. New York, New York, USA. 1985

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

I was just going to say, when I was interrupted, that one of the many ways of classifying minds is under the heads of arithmetical and algebraical intellects. All economical and practical wisdom is an extension or variation of the following arithmetical formula:  $2 + 2 = 4$ . Every philosophical proposition has the more general character of the expression  $a + b = c$ . We are the mere operatives, empirics, and egoists, until we learn to think in letters instead of figures.

*The Autocrat of the Breakfast-Table*

Chapter I (p. 1)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

**Hugo, Victor** 1802–85

French writer, lyric poet, and dramatist

Arithmetic, like the sea, is an undulation without any possible end.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 407)

The Heritage Press. New York, New York, USA. 1961

**Kipling, Rudyard** 1865–1936

British writer and poet

A rule to trick th' arithmetic.

*Rudyard Kipling's Verse*

To the True Romance

Hodder & Stroughton. London, England. 1919

**La Touche, Mrs.**

No biographical data available

I do hate sums. There is no greater mistake than to call arithmetic an exact science. There are Permutations and Aberrations discernible to minds entirely noble like mine; subtle variations which ordinary accountants fail to discover; hidden laws of Numbers which it requires a mind like mine to perceive. For instance, if you add

a sum from the bottom up, and then again from the top down, the result is always different.

In Maria Price La Touche

*The Letters of a Noble Woman*

Letter dated July 1878 (p. 49)

George Allen & Sons. London, England, 1908

**Leacock, Stephen** 1869–1944

Canadian humorist

His brain trained by long years of high living and plain thinking had become too subtle, too refined an instrument for arithmetic....

*Literary Lapses*

Lord Oxhead's Secret (p. 23)

John Lane. London, England, 1911

The student of arithmetic who has mastered the first four rules of his art, and successfully striven with money sums and fractions, finds himself confronted by an unbroken expanse of questions known as problems.

*Literary Lapses*

A, B, and C (p. 237)

John Lane. London, England, 1911

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

The pleasure we obtain from music comes from counting, but counting unconsciously. Music is nothing but unconscious arithmetic.

In Oliver Sacks

*The Republic*

Book VII, Section 526 (p. 394)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Arithmetic does not present to us that feeling of continuity which is such a precious guide; each whole number is separate from the next of its kind and has in a sense individuality; each in a manner is an exception and that is why general theorems are rare in the theory of numbers; and that is why those theorems which may exist are more hidden and longer escape those who are searching for them.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1909*

The Future of Mathematics (p. 131)

Government Printing Office. Washington, D.C. 1910

### **Rosenblatt, Roger**

American journalist, writer, and playwright

...Uncle Scrooge preferred to let the poor die “and decrease the surplus population.” Scrooge may not have God on his side, but his arithmetic was impeccable.

*The Man in the Water: Essays and Stories*

Do You Feel the Deaths of Strangers? (p. 177)

Random House, Inc. New York, New York, USA. 1994

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

All knowledge must be recognition, on pain of being mere delusion; Arithmetic must be discovered in just the same sense in which Columbus discovered the West Indies, and we no more create numbers than he created the Indians.... Whatever can be thought of has being and its [arithmetic] being is a precondition, not a result, of its being thought of.

Is Position in Space and Time Absolute or Relative

*Mind*, Volume X, 1901 (p. 312)

At present, in what concerns arithmetic, the boy or girl is given a set of rules, which present themselves as neither true nor false, but as merely the will of the teacher, the way in which, for some unfathomable reason, the teacher prefers to have the game played.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 62)

Longmans, Green & Co. London, England. 1919

### **Safford, Truman Henry** 1836–1901

American calculating prodigy

...arithmetic, as we shall see by and by, is overdone, in a certain sense, in our schools; just so far as the teaching is

based upon the concrete, so far is it profitable; but when the book-makers begin to make it too abstract, as they very often do, it becomes a torture to both teacher and learners, or, at best, a branch of imaginary knowledge unconnected with real life.

*Mathematical Teaching and Its Modern Methods*

Introduction (p. 10)

D.C. Heath & Co. Boston, Massachusetts, USA. 1888

### **Sandburg, Carl** 1878–1967

American poet and biographer

Arithmetic is where numbers fly like pigeons in and out of your head.

*Complete Poems*

Arithmetic

Harcourt, Brace. New York, New York, USA. 1950

Arithmetic is numbers you squeeze from your head to your hand to your pencil to your paper till you get the answer.

*Complete Poems*

Arithmetic

Harcourt, Brace. New York, New York, USA. 1950

If you ask your mother for one fried egg for breakfast and she gives you two fried eggs and you eat both of them, who is better in arithmetic, you or your mother?

*Complete Poems*

Arithmetic

Harcourt, Brace. New York, New York, USA. 1950

### **Schopenhauer, Arthur** 1788–1860

German philosopher

That arithmetic is the basest of all mental activities is proved by the fact that it is the only one that can be accomplished by means of a machine.

Translated by Mrs. Rudolph Dircks

*Essays of Schopenhauer*

Psychological Observations

W. Scott. London, England. 1897

### **Smith, Henry John Stephen** 1826–83

Irish mathematician

Of all those branches of human knowledge which are comprehended under the name of Science, Arithmetic is that which has the most abstract character, and which, at the same time, is of the most universal application in the study of natural phenomena.

*The Collected Mathematical Papers of Henry John Stephen Smith*

(Volume 2)

Appendix II (p. 691)

At The Clarendon Press. Oxford, England. 1894

[Arithmetic] is one of the oldest branches, perhaps the very oldest branch, of human knowledge; and yet some of its most abstruse secrets lie close to its tritest truths.

In E.T. Bell

*Men of Mathematics* (p. xv)

Simon & Schuster. New York, New York, USA. 1937

**Smith, Sydney** 1771–1845

English clergyman, writer, and wit

What would life be like without arithmetic, but a scene of horrors?

*The Letters of Sydney Smith* (Volume 2)

Letter 692, To Miss Lucie Austin, 22 July 1835 (p. 622)

At The Clarendon Press. Oxford, England. 1953

...Lucy, dear child, mind your arithmetic. You know, in the first sum of yours I ever saw, there was a mistake. You had carried two (as a cab is licensed to do), and you ought, dear Lucy, to have carried but one. Is this a trifle? What would life be without arithmetic but a scene of horrors?

In Sarah Austin

*A Memoir of the Reverend Sydney Smith* (Volume 2)

Letter 356 (p. 345)

Harper & Brothers Publishers. New York, New York, USA. 1855

**Steinbeck, John** 1902–68

American novelist

He was an arithmetician rather than a mathematician. None of the humor, the music, or the mysticism of higher mathematics ever entered his head.

*The Moon Is Down*

Chapter Two (p. 22)

Heinemann. London, England. 1968

**Turnbull, A.**

No biographical data available

Arithmetic is a science as well as an art, and of all the arts and sciences there is none so generally useful in the common concerns of life. A thorough knowledge of it must be of the utmost importance to everyone, whatever be his station in society; but to those engaged in trade or commerce, however trivial, it is indispensable. Beside the general utility of this branch of knowledge, it has another recommendation; it is easy of attainment.

*Arithmetic Made Easy*

Chapter I (p. 1)

Simpkin & Marshall. London, England. 1836

**Vyse, Charles**

No biographical data available

When we consider the utility of ARITHMETIC, on which science almost all the others do absolutely depend, we need not be surprised that so many efforts have been made to bring this useful branch of learning to the utmost degree of perfection: and although the vast extent of the subject does in some measure defeat these attempts, yet, upon account of its real value and use, it certainly merits all the study and pains that can be bestowed upon it.

*The Tutor's Guide*

15th Preface (p. iii)

Printed for G. Wilkie. London, England. 1815

I pretend not to boast of new discoveries, but flatter myself to have selected every necessary and useful rule

or proposition for obtaining a thorough knowledge in those sciences which depend upon Arithmetic...

*The Tutor's Guide*

15th Preface (p. v)

Printed for G. Wilkie. London, England. 1815

**Weaver, Jefferson Hane**

American science author

Arithmetic – not algebra or geometry or the calculus – is the mother lode of mathematical reasoning as well as the foundation from which all mathematics arises.

*Conquering Calculus: The Easy Road to Understanding Mathematics*

Chapter 3 (p. 57)

Plenum Press. New York, New York, USA. 1998

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

The first acquaintance which most people have with mathematics is through arithmetic. That two and two make four is usually taken as the type of a simple mathematical proposition which everyone will have heard of. Arithmetic, therefore, will be a good subject to consider in order to discover, if possible, the most obvious characteristic of the science. Now, the first noticeable fact about arithmetic is that it applies to everything, to tastes and to sounds, to apples and to angels, to the ideas of the mind and to the bones of the body.

*An Introduction to Mathematics*

Chapter I (p. 9)

Henry Holt & Co. New York, New York, USA. 1911

The territory of arithmetic ends where the two ideas of “variables” and of “algebraic form” commence their sway.

*An Introduction to Mathematics*

Chapter 5 (p. 48)

Oxford University Press, Inc. New York, New York, USA. 1958

**X. Y. Z.**

It was a notable day when I was equipped with an arithmetic and a slate and set to “doing sums.” “We were told to commit the preliminary definitions to memory, and forthwith commenced the task. At the appointed hour, we told our teacher, with more or less accuracy, that: arithmetic is the science of numbers,” etc. all of which, possibly, sounded very pretty, but was totally destitute of sense; we did not grasp it.

*How I Did (Not) Learn Arithmetic*

*The Indiana School Journal*, Volume 16 1871 (p. 21)

**Yeats, William Butler** 1865–1939

Irish poet and playwright

I have made formations of battle with Arithmetic that have put the hosts of heaven to the rout.

*The Hour-Glass and Other Plays*

The Hour-Glass (p. 14)

The Macmillan Co. New York, New York, USA. 1904

American rapper, singer, and actor

I write rhymes with addition and algebra, mental geometry.

*Mind over Matter*

O.G.: Original Gangster CD

**Orwell, George (Eric Arthur Blair)** 1903–50

English novelist and essayist

“Two and two are four .”

“Sometimes, Winston. Sometimes they are five. Sometimes they are three. Sometimes they are all of them at once. You must try harder. It is not easy to become sane.”

1984

Part III, Chapter III (p. 263)

Alfred A. Knopf. New York, New York, USA. 1992

**Paulos, John Allen** 1945–

American mathematician

Adding, though pleasant and easy, is often inappropriate.... Recall that mathematics as simple as ‘ $1 + 1 = 2$ ’ can be thoughtlessly misapplied: If 1 cup of popcorn is added to 1 cup of water, we do not end up with 2 cups of soggy popcorn.

*Innumeracy: Mathematical Illiteracy And Its Consequences* (p. 67)

**Pope, Alexander** 1688–1744

English poet

Ah! why, ye Gods! Should two and two make four?

*The Complete Poetical Works* (Volume 4)

The Dunciad, Book 2, l. 285

Houghton Mifflin Company. New York, New York, USA. 1903

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

Mrs. Bashom: At school I got as far as addition and subtraction; but I never could do multiplication or division.

Newton: Why, neither could I: I was too lazy. But they are quite unnecessary: addition and subtraction are quite sufficient. You ask the logarithms of the numbers; and the antilogarithm of the sum of the two is the answer. Let me see: three time seven?

*The Complete Plays of Bernard Shaw*

*In Good King Charles's Golden Days*, Act I (p. 1335)

Odhams Press. London, England. 1950

**West, Mae** 1893–1980  
American film actress

One figure can sometimes add up to a lot.  
*The Wit and Wisdom of Mae West* (p. 35)  
G.P. Putnam's Sons. New York, New York, USA. 1967

I learned that two and two are four and five will get you ten if you know how to work it.  
*The Wit and Wisdom of Mae West* (p. 52)  
G.P. Putnam's Sons. New York, New York, USA. 1967

## DIVISION

**Adams, Douglas** 1952–2001  
English author, comic radio dramatist, and musician

It is known that there is an infinite number of worlds, but that not everyone is inhabited. Therefore, there must be a finite number of inhabited worlds. Any finite number divided by infinity is as near to nothing as makes no odds, so if every planet in the Universe has a population of zero then the entire population of the Universe must also be zero, and any people you may actually meet from time to time are merely the products of a deranged imagination.  
*The Original Hitchhiker Radio Script*  
Fit the Fifth (p. 102)  
Harmony Books. New York, New York, USA.

**Carroll, Lewis (Charles Dodgson)** 1832–98  
English writer and mathematician

Can you do Division? Divide a loaf by a knife – what's the answer to that?  
*The Complete Works of Lewis Carroll*  
*Through the Looking-Glass*  
Chapter IX (p. 253)  
The Modern Library. New York, New York, USA. 1936

**Kemble, William H.**  
No biographical data available

Allow me to introduce you to my particular friend Mr. George O Evans.... He understands Addition, Division, and Silence.  
*New York Sun*, 20 June, 1872

**Mr. Silva (Fictional character)**

You've got so many refinements. I don't think you need to worry about your failure at long division. I mean, after all, you got through short division, and short division is all that a lady ought to be called on to cope with...  
*Baby Doll*  
Film (1956)

## MULTIPLICATION

**Chekhov, Anton Pavlovich** 1860–1904  
Russian author and playwright

There is no national science, just as there is no national multiplication table; what is national is no longer science.

*Note-Book of Anton Chekhov* (p. 18)  
B.W. Huebsch, Inc. New York, New York, USA. 1921

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

There was nothing to be said about addition and subtraction: they were so simple as to force themselves upon one at first sight. Multiplication spoilt things. There was a certain rule of signs which declared that minus multiplied by minus made plus. How I toiled over that wretched paradox!  
Translated by Alexander Teixeira de Mattos  
*The Life of the Fly*  
Chapter XII (p. 278)  
Dodd, Mead & Co. New York, New York, USA. 1915

**Melrose, A. R.**  
No biographical data available

Two-stymes, noun: 1 arithmetic if it has to do with the number two {2} {which is always a good number to have when doing anything}. 2 multiplication table of the number two {2}.

*The Pooh Dictionary*  
Dutton Children's Books. New York, New York, USA. 1995

**Zamyatin, Yevgeny** 1884–1937  
Russian novelist, playwright, and satirist

The multiplication table is more wise and more absolute than the ancient god, for the multiplication table never (do you understand – never) makes mistakes!  
Translated by Gregory Zilboorg  
*We*  
Record Twelve (pp. 63–64)  
E.P. Dutton & Company, Inc. New York, New York, USA. 1952

There are no more fortunate and happy people than those who live according to the correct, eternal laws of the multiplication table.  
Translated by Gregory Zilboorg  
*We*  
Record Twelve (p. 64)  
E.P. Dutton & Company, Inc. New York, New York, USA. 1952

## SUBTRACTION

**Dickens, Charles** 1812–70  
English novelist

The worst class of sum worked in the every-day world is ciphered by the diseased arithmeticians who are always in the rule of Subtraction as to the merits and successes of others, and never in Addition as to their own.  
*Little Dorrit*  
Book the Second, Chapter VI (p. 462)  
Bradbury & Evans. London, England. 1857

## ARROGANCE

**Kolb, Edward W. (Rocky)** 1951–  
American cosmologist

Even the best fathers are not without shortcomings. If we must accept arrogance, stubbornness, invectiveness, and vanity along with genius, so be it. If modern science must have a father, let it be Galileo.

*Blind Watchers of the Sky*

Chapter Four (p. 112)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

## ARTIFACT

**von Goethe, Johann Wolfgang** 1749–1832  
German poet, novelist, playwright, and natural philosopher

Little comes to us through time as a complete monument; much comes as remnants; much as techniques, as practical manual; some things because of their close affinity to man, like mathematics; other things because they are always encouraged, like astronomy and geography; other things because of man's needs, like medicine; and finally some things, because the human being, without wanting to, continues to produce them, like music and the other fine arts.

In Karl J. Fink

*Goethe's History of Science*

Chapter 5 (p. 66)

Cambridge University Press. Cambridge, England. 1991

## ARTIFICIAL LIMBS

**Melville, Herman** 1819–91  
American novelist

Now, for most folks one pair of legs lasts a lifetime, and that must be because they use them mercifully, as a tender-hearted old lady uses her roly-poly old coach horses. But Ahab; oh he's a hard driver. Look, driven one leg to death, and sprained the other for life, and now wears out bone legs by the cord.

In *Great Books of the Western World* (Volume 48)

*Moby Dick*

Chapter 108 (p. 348)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## ASSAULT

### The Bible (King James Version)

A certain man went down from Jerusalem to Jericho, and fell among thieves, which stripped him of his raiment, and wounded him, and departed, leaving him half dead.

Luke 10:30

## ASSENT

**Chamberlin, Thomas Chrowder** 1843–1928  
American geologist

It is as important to withhold assent, when the proof is inadequate, as to yield assent when it is ample.

The Ethical Functions of Scientific Study

*The Journal of Geology*, Volume 2, Number 6, December, 1888 (p. 385)

## ASSERTION

**Faraday, Michael** 1791–1867  
English physicist and chemist

A man who makes assertions, or draws conclusions, regarding any given case, ought to be competent to investigate it. He has no right to throw the onus on others, declaring it their duty to prove him right or wrong. His duty is to demonstrate the truth of that which he asserts, or to cease from asserting.

*Experimental Researches in Chemistry and Physics*

Lecture on Mental Education (p. 486)

Richard Taylor & William Francis. London, England. 1859

**Goddard, Robert H.** 1882–1945  
American physicist

It is dangerous to believe hastily that anything is either possible or impossible, for there are few scientific assertions which have been proved to universal satisfaction. Our firmest scientific beliefs of today may be shattered tomorrow.

*The Papers of Robert H. Goddard* (Volume 1)

On Taking Things for Granted (p. 65)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

**Huxley, Thomas Henry** 1825–95  
English biologist

...assertion which outstrips evidence is not only a blunder but a crime.

*Science and Education*

Chapter VI (p. 133)

American Home Library Co. New York, New York, USA. 1902

## ASSESSMENT

### Charlie Eppes (Fictional character)

Forgive me if all my years of advanced applied mathematics take issue with that assessment.

*Numbers*

Film (2005)

**Hill, Austin Bradford** 1897–1991  
English epidemiologist

It appears sometimes to be thought that there is some necessary antagonism between the clinical assessment of

a few cases and the “cold mathematics” of the statistically analyzed trial dealing with a larger number. It is difficult to see how in fact there can be any such antagonism. The clinical assessment, or the clinical impression, must itself be numerical in the long run – that patients are reacting in a way different from the way the clinician believes was customary in the past. In the control trial an attempt is made to systematize those impressions (and other measurements) and to add them up.

*Principles of Medical Statistics* (9th edition) (p. 266)  
Oxford University Press. New York, New York, USA. 1971

## ASSOCIATIONS

**von Liebig, Justus** 1803–73  
German organic chemist

One of the most remarkable features of modern times is the combination of large numbers of individuals representing the whole intelligence of nations, for the express purpose of advancing science by their united efforts, of learning its progress, and of communicating new discoveries. The formation of such associations is, in itself an evidence that they were needed.

*Chemistry In Its Application to Agriculture and Physiology*  
Preface (p. 3)  
T.B. Peterson. Philadelphia, Pennsylvania, USA. 1847

## ASSUMPTION

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

When the consequences of either assumption are the same, we should always assume that things are finite rather than infinite in number, since in things constituted by nature that which is infinite and that which is better ought, if possible, to be present rather than the reverse...

In *Great Books of the Western World* (Volume 8)  
*Physics*  
Book VIII, Chapter 7, 259a [5]  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Pick the assumptions to pieces till the stuff they are made of is exposed to plain view – this is the cardinal rule for understanding the basis of our beliefs.

*The Search for Truth*  
Chapter I, Section 5 (p. 25)  
George Allen & Unwin Ltd. London, England. 1935

Mathematicians and scientists of the conservative persuasion may feel that a science constrained by an explicitly formulated set of assumptions has lost some of its freedom and is almost dead. Experience shows that the only

loss is the denial of the privilege of making avoidable mistakes in reasoning. As is perhaps but humanly natural, each new encroachment of the postulational method is vigorously resisted by some as an invasion of hallowed tradition. Objection to the method is neither more or less than objection to mathematics.

*The Development of Mathematics*  
Chapter 3 (p. 72)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**Clarke, Arthur C.** 1917–  
English science and science fiction writer

No equation, however impressive and complex, can arrive at the truth if the initial assumptions are incorrect.

*Profiles of the Future: An Inquiry into the Limits of the Possible*  
Chapter 1 (p. 7)  
Harper & Row, Publishers. New York, New York, USA. 1973

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

It is all too easy to make some plausible simplifying assumptions, do some elaborate mathematics that appear to give a rough fit with at least some experimental data, and think one has achieved something. The chance of such an approach doing anything useful, apart from soothing the theorist’s ego, is rather small....

*What Mad Pursuit: A Personal View of Scientific Discovery*  
Chapter 10 (pp. 113–114)  
Basic Books, Inc., Publishers. New York, New York, USA. 1988

Part Seven, Chapter 25 (p. 333)  
Random House, Inc. New York, New York, USA. 1995

**Huxley, Thomas Henry** 1825–95  
English biologist

...nothing can be more incorrect than the assumption one sometimes meets with, that physics has one method, chemistry another, and biology a third.

*Method and Results: Essays*  
The Progress of Science (p. 60)  
D. Appleton & Co. New York, New York, USA. 1898

**Savage-Rumbaugh, Sue**  
American psychologist

**Lewin, Roger Amos** 1946–  
Anthropologist and science writer

We do not realize how deeply our starting assumptions affect the way we go about looking for and interpreting the data we collect. We should recognize that nonhuman organisms need not meet every new definition of human language, tool use, mind, or consciousness in order to have versions of their own that are worthy of serious study. We have set ourselves too much apart, grasping for definitions that will distinguish man from all other life on the planet. We must rejoin the great stream of life from whence we arose and strive to see within it the seeds of all we are and all we may become.

**Barnes-Svarney, Patricia**  
No biographical data available

I do not mean to scare anyone, but there are asteroids out there with our name on them.

*Asteroid: Earth Destroyer or New Frontier?*  
Introduction (p. 1)  
Plenum Press. New York, New York, USA. 1996

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

Is he not the celebrated author of the Dynamics of an Asteroid, a book which ascends to such rarefied heights of pure mathematics that it is said that there was no man in the scientific press capable of criticizing it?

In William S. Baring-Gould (ed.)  
*The Annotated Sherlock Holmes* (Volume 1)  
*The Valley of Fear* (p. 472)  
Wings Books. New York, New York, USA. 1967

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The asteroids are the chips of an old star, and a meteoric stone is a chip of an asteroid.

*The Complete Works of Ralph Waldo Emerson* (Volume 8)  
*Letters and Social Aims*  
Chapter VII (p. 224)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Kowal, Charles T.** 1940–  
American astronomer

In fact, it is safe to say that the situation has degenerated to the point of absurdity. Asteroids have been named after girlfriends, financial supporters, cats, and computers. For the traditionalist like myself, it seems a pity that the naming of asteroids has become so trivialized.

*Asteroids: Their Nature and Utilization*  
Chapter 1 (p. 17)  
Ellis Horwood Ltd. Chichester, England. 1988

**Moulton, Forest Ray** 1872–1952  
American astronomer

I have heard the great geologist Suess, a man of the widest interests and richest imagination, describe a certain astronomer as “one of those who busy themselves with those vermin of the skies – minor planets and comets.”

The Semi-centennial of the Dearborn Observatory  
*Popular Astronomy*, Volume XXIV, Number 9, November, 1916 (p. 555)

**Peebles, Curtis**  
American aerospace historian

Lost amid the stars, there are mountains in the sky.

*Asteroids: A History*  
Chapter 1 (p. 1)  
Smithsonian Institution Press. Washington, D.C. 2000

**Sagan, Carl** 1934–96  
American astronomer and author

The asteroid belt may be a place where a planet was once prevented from forming because of the gravitational

tides of the giant nearby planet Jupiter; or it may be the shattered remains of a planet that blew itself up. This seems improbable because no scientist on Earth knows how a planet might blow itself up, which is probably just as well.

*Cosmos*

Chapter IV (p. 87)

Random House, Inc. New York, New York, USA. 1980

**Shoemaker, Eugene** 1928–97

American geologist

If all the potentially threatening asteroids were discovered, however, the risk to Earth would no longer be a matter of chance. We would know whether a collision is imminent. The time of impact could be predicted centuries in advance, and the place of impact could be predicted fairly accurately decades in advance.

Plaque at Meteor Crater, Arizona, USA

Statement

Near-Earth Asteroids

April 19, 1997

**Tsiolkovsky, Konstantin Eduardovich** 1857–1935

Russian research scientist

To set foot on the soil of the asteroids, to lift by hand a rock from the Moon, to observe Mars from a distance of several tens of kilometers, to land on its satellite or even on its surface, what can be more fantastic? From the moment of using rocket devices a new great era will begin in astronomy: the epoch of the more intensive study of the firmament.

## ASTRONAUT

### Apollo 11

Here men from the planet Earth first set foot upon the  
Moon July 1969, A.D. WE CAME IN PEACE FOR ALL  
MANKIND.

Plaque left behind on the moon's surface

**Cernan, Gene** 1934–  
American astronaut

Bob, this is Gene, and I'm on the surface; and, as I take  
man's last step from the surface, back home for some  
time to come – but we believe not too long into the  
future – I'd like to just (say) what I believe history will  
record. That America's challenge of today has forged  
man's destiny of tomorrow. And, as we leave the Moon  
at Taurus-Littrow, we leave as we came and, God willing,  
as we shall return, with peace and hope for all mankind.  
Godspeed the crew of Apollo 17.

Transcript of flight of Apollo 17

**Conrad, Pete** 1930–99  
American astronaut

Whoopee! Man, that may have been a small one for Neil,  
but it's a long one for me.

Transcript of flight of Apollo 12

**Gagarin, Yuri** 1934–68  
Soviet pilot and cosmonaut

*Poyekhali!*

Let's go!

Shouted as Vostok 1 lifted off, 12 April, 1961

**Scott, Dave** 1932–  
American astronaut

Man must explore. And this is exploration at its greatest.  
Transcript of flight of Apollo 15

**Shepherd, Alan** 1923–98  
American astronaut

It's been a long way, but we're here.

American actor

Gus Grissom: What the hell's "astronaut" mean anyway?  
*The Right Stuff*  
Film (1983)

**Young, John** 1930–  
American astronaut

There you are:  
Mysterious and Unknown  
Descartes.  
Highland plains. Apollo 16 is gonna change your image.  
I'm sure glad they got ol' Brer Rabbit,  
here, back in the briar patch where he belongs.  
Transcript of flight of Apollo 16

## ASTRONOMER

### Author undetermined

Every day the astronomer discovers something which quickens his curiosity to discover more. Every day he catches new glimpses of the Almighty Wisdom, which stimulate his desire for a further revelation. And all he learns, and all he anticipates learning, combine to produce in him an emotion of awe. What grandeur lies before him in that endless procession of worlds-in that array of suns and stars extending beyond the limits of the most powerful telescopic vision! How marvellous it is! How beautiful! Observe the combination of simplicity with power; note how a great principle of "law" underlies the apparent intricacy of eccentric and intersecting orbits.

*The Story of The Herschels: A Family of Astronomers*  
Chapter I (p. 7)  
T. Nelson & Sons. London, England. 1889

The astronomer has no fear of feeling the satiety of an Alexander, when he lamented that he had no more worlds

to conquer. What Newton said of himself is true of every astronomer,-he is but as a child on the sea-shore, picking up a shell here and a shell there, but unable to grasp a full conception of the mighty ocean that thunders in his ears!  
*The Story of The Herschels: A Family of Astronomers*  
Chapter I (p. 8)  
T. Nelson & Sons. London, England. 1889

Once an astronomer, always an astronomer; the stars, we may fancy, will not relax the spell they lay upon their votary.  
*The Story of The Herschels: A Family of Astronomers*  
Chapter I (p. 8)  
T. Nelson & Sons. London, England. 1889

The astronomer's must have been very clever to have found out the names of all the stars.  
A View of the Heavens  
*The Physics Teacher*, Volume 8, Number 7, October, 1970 (p. 413)

Astronomers seem to be able to predict everything more and more precisely-except the end of the century.  
Source undetermined

Those who study the stars have fellowship with astronomers of all ages.  
The Stars and the Promises  
*The Quarterly Journal of Prophecy*, Volume VIII, October, 1856 (p. 383)

The astronomer's acuteness of eye is not likely to co-exist with the musician's accuracy of ear.  
The Emotions in Music  
*The New Englander*, Volume 33, Number CXXVII, April, 1874 (p. 266)

**Baring-Gould, Sabine** 1834–1924  
English hagiographer, antiquarian, novelist, and eclectic scholar

Astronomy is certainly an alluring science; set an astronomer before a telescope, and an overwhelming attraction draws his soul away through the tube up into heaven, and leaves his body without mundane interests.  
*Historic Oddities and Strange Events* (2nd edition)  
A Wax and Honey-moon (p. 235)  
Methuen & Co. London, England. 1890

**Barrett, Frank**  
No biographical data available

Couldn't you be an astronomer? There is something majestic in that study, and astronomers live to a great age. They seem to me almost as grand as patriarchs, and I never heard of one falling into bad habits.  
*Lieutenant Barnabas, A Novel* (Volume 3)  
Chapter XIV (p. 230)  
Richard Bentley & Son. London, England. 1881

**Bennett, Jeffrey O.**  
American astrophysicist and writer

This is how astronomers might imagine the set of instructions used by a Creator: Start with a Big Bang, run it through a fraction of a second of inflation to sprinkle it

with seeds for structure, throw in a few simple laws of physics and voila! – 10 billion years or so of cosmic evolution and out pops humanity.

*On the Cosmic Horizon: Ten Great Mysteries for Third Millennium Astronomers*

Mystery 2 (p. 153)

Addison Wesley Longman. New York, New York, USA. 2001

**Boyle, Robert** 1627–91

English natural philosopher and theological writer

Arithmetic and geometry, those wings on which the astronomer soars as high as heaven.

*Works* (Volume 3)

Usefulness of Mathematics to Natural Philosophy (p. 429)

Printed for A. Millary. London, England. 1744

**Bucke, Charles** 1781–1846

English writer

Woman, even to the eye of an astronomer, is the most attractive constellation in the whole range of the universe.

*On the Beauties, Harmonies, and Sublimities of Nature* (Volume 3) (2nd edition)

Book VII, Chapter I (pp. 215–216)

G. & W.B. Whittaker. London, England. 1823

**Campbell, William Wallace** 1862–1938

American astronomer

...the nature of an astronomer's work is seldom understood.

The Nature of An Astronomer's Work

*Publications of the Astronomical Society of the Pacific*, Volume XX, Number 122, October 10, 1908 (p. 251)

The opinion prevails quite generally that an astronomer's duty consists in sitting all night with his eye at the end of the telescope, "sweeping the heavens," in order to discover new bodies – comets, planets, moons, and new stars: and that this is the end and aim of the science.

The Nature of An Astronomer's Work

*Publications of the Astronomical Society of the Pacific*, Volume XX, Number 122, October 10, 1908 (p. 252)

**Carlyle, Thomas** 1795–1881

English historian and essayist

I wish I were an Astronomer. Is it not an interesting reflection to consider, that a little creature such as man – though his eye can see the heaven but as it were for a moment – is able to delineate the aspect which it presented long ages before he came into being – and to predict the aspects which it will present when ages shall have gone by? The past, the present, and the future are before him.

In Charles Eliot Norton

*Early Letters of Thomas Carlyle*

Letter XVII (p. 51)

Macmillan & Co Ltd. London, England. 1886

**Clerke, Agnes Mary** 1842–1907

Irish astronomer

The astronomer has become, in the highest sense of the term, a physicist; while the physicist is bound to be something of an astronomer.

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Part II, Chapter I (p. 176)

Adam & Charles Black. London, England. 1893

**Crichton-Browne, Sir James** 1840–1938

English physician

We follow with awe and thrilling interest the prodigious revelation of our astronomers, but after all, our conception of the Stellar Universe does not go much further than: Twinkle, twinkle little star...

*From the Doctor's Notebook*

Matrimonial Obedience (p. 152)

Duckworth. London, England. 1937

The astronomers are wonderful and impressive in their own sphere, but when they stray into literature they become annoying. We have all rejoiced in that beautiful elegy on the Burial of Sir John Moore, and know the essential line:

"By the struggling moonbeam's misty light."

Well, the astronomers have worked it out and found there was no moon the night of the Battle of Corunna.

*From the Doctor's Notebook*

The Astronomers (p. 192)

Duckworth. London, England. 1937

The astronomers with all their hypotheses give us no satisfying or abiding conception of the Universe. We are left as bewildered as ever.

*From the Doctor's Notebook*

Tea (p. 224)

Duckworth. London, England. 1937

**Calder, Nigel** 1931–

English science writer

When astronomers express dissatisfaction with both the Big Bang and the Steady State concepts of the universe, they are in trouble, because it is hard to imagine radical alternatives.

*Violent Universe: An Eyewitness Account of The New Astronomy*

Chapter III (pp. 121–122)

Viking Press. New York, New York, USA. 1970

**Cunningham, Clifford J.**

Canadian amateur astronomer and writer

Today's astronomers live and die by journals and conferences.

The Baron and His Celestial Police

*Sky & Telescope*, Volume 75, Number 3, March, 1988 (p. 271)

**D'Avenant, Sir William** 1606–68  
English poet, playwright, and theatrical producer

You that so wisely studious are  
To measure and to trace each Starr,  
How swift they travaile, and how farr,  
Now number your celestially store,  
Planets, or lesser lights, and trie  
If in the face of all the skie  
You count so many as before!

*Salmacida Spolia*

III, Song, Stanza I

Printed by T.H. for Thomas Walkley. London, England. 1639

**de Fontenelle, Bernard le Bovier** 1657–1757  
French writer

...since the princes have seized on the earth, it is fit the philosophers (who are as proud as the best of them) should reserve the heavens for themselves, without any competitors.

*Conversations on the Plurality of Worlds*

The Fourth Evening (p. 113)

Printed for Peter Wilson. Dublin, Ireland. 1761

**de Morgan, Augustus** 1806–71  
English mathematician and logician

Astronomers! What can avail  
Those who calumniate us;  
Experiment can never fail  
With such an apparatus.

*A Budget of Paradoxes*

The Astronomer's Drinking Song (p. 234)

Longmans, Green. London, England. 1872

**de Saint-Exupéry, Antoine** 1900–44  
French aviator and writer

This asteroid has only once been seen through the telescope. That was by a Turkish astronomer, in 1909. On making his discovery, the astronomer had presented it to the International Astronomical Congress, in a great demonstration. But he was in Turkish costume, and so nobody would believe what he said.

Translated by Katherine Woods

*The Little Prince*

Chapter IV (p. 17)

Harcourt, Brace & Company. New York, New York, USA. 1943

**D'Israeli, Isaac** 1766–1848  
English critic and historian

It does at first appear that an astronomer rapt in abstraction, while he gazes on a star, must feel more exquisite delight than a farmer who is conducting his team.

Eleonora, l. 264–265

The Riverside Press. Cambridge, Massachusetts, USA. 1949

**Dunne, Finley Peter** 1867–1936  
American journalist and humorist

...I know about marriage th' way an astronomer knows about th' stars.

*Mr. Dooley at His Best*

Marriage

Charles Scribner's Sons. New York, New York, USA. 1938

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
English novelist

...she one day asked Mr. Stelling if all astronomers hated women, or whether it was only this particular astronomer. But, forestalling his answer, she said, "I suppose it's all astronomers; because, you know, they live up in high towers, and if the women came there, they might talk and hinder them from looking at the stars."

*The Mill on the Floss*

Book Second, Chapter I (p. 134)

Harper & Brothers Publishers. New York, New York, USA. 1860

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

The astronomer, the geometer, rely on their irrefragable analysis, and disdain the results of observation.

*Ralph Waldo Emerson: Essays and Lectures*

*Nature: Addresses, and Lectures*

Idealism (p. 37)

The Library of America. New York, New York, USA. 1983

**Fernie, J. D.**  
Astronomer

The definitive study of the herd instincts of astronomers has yet to be written, but there are times when we resemble

nothing so much as a herd of antelope, heads down in tight formation, thundering with firm determination in a particular direction across the plain. At a given signal from the leader we whirl about, and, with equally firm determination, thunder off in a quite different direction, still in tight parallel formation.

The Period-luminosity Relation: A Historical Review  
*Astronomical Society of the Pacific*, Volume 81, Number 483, December, 1969 (pp. 719–720)

**Fort, Charles** 1874–1932

American writer

...if nobody looks up, or checks up, what the astronomers tell us, they are free to tell us anything that they want to tell us.

*The Books of Charles Fort*  
*Lo*, Part 2, Chapter XX  
Henry Holt & Company. New York, New York, USA. 1941

CLOSED

Because it has been discovered that the earth does not revolve around the sun and does not rotate on an axis; because the “stars” have been found to be lights only a few miles away; because almost every pronouncement from this hall of learning issued since its corner-stone was so solemnly laid has been a mistake, a joke, an error or a hoax – the older and more susceptible of the professors who once played whist here in the shadow of the refracting telescope have gone away to die of chagrin while the younger among us take a short trip to what we have so often jokingly referred to as “the constellation Orion”. Back in thirty days.

(signed) The Astronomers

*Lo!*  
Introduction (p. 1)  
Claude Kendall. New York, New York, USA. 1931

**Fosdick, Harry Emerson** 1878–1969

American clergyman and educator

The stars are not so strange as the mind that studies them, analyzes their light, and measures their distance.

*On Being a Real Person*  
Chapter I, Section VI (p. 25)  
Harper & Brothers. New York, New York, USA. 1943

**Friedman, Herbert** 1916–2000

American space scientist and astrophysicist

To the astronomer of today, probing ever deeper with mind and telescope, the universe is more than beautiful: it is amazing, violent, and endlessly mysterious. The revelations of recent research have been so dramatic and so extreme as to leave both scientists and laymen bewildered. Modern astronomy deals with the birth and death of stars; with exotic matter and fantastic energies; with near-infinities of space and time; with creation, evolution, and the ultimate destiny of the universe. As the sum

of knowledge grows, the astronomer continues to seek answers to man’s most profound questions: what is grand design of the universe? How was it created? How did we get here? What are we? Are we alone?

*The Amazing Universe*  
Chapter 1 (p. 10)  
National Geographic Society. Washington, D.C. 1980

**Frost, Robert** 1874–1963

American poet

As a confirmed astronomer  
I’m always for a better sky.

A-Wishing Well  
Henry Holt & Company. New York, New York, USA. 1949

**Gay, Mary Ann Harris** 1828–1918

American author

An astronomer who can devote his life to the sublime study of the heavenly bodies, and not exclaim, with deep humility of spirit, Great and marvelous are thy works, Lord God Almighty! Thou art worthy to receive glory, and honor, and power, for thou hast “created all things, and for thy pleasure they were created,” is a madman indeed.

*Prose and Poetry* (2nd edition)  
An Undevout Astronomer is Mad (p. 223)  
South-Western Publishing House. Nashville, Tennessee, USA. 1859

**Geminus of Rhodes** fl. 110 BCE–40 BCE

Greek astronomer and mathematician

For it is no part of the business of an astronomer to know what is by nature suited to a position of rest, and what sort of bodies are apt to move, but he introduces hypotheses under which some bodies remain fixed, while others move, and then considers to which hypotheses the phenomena actually observed in the heavens will correspond.

In T. Heath  
*Greek Astronomy* (p. 125)  
Dover Publications, Inc. New York, New York, USA. 1991

**Giberne, Agnes** 1845–1939

English writer

The wisest astronomer living cannot tell us how far the stars reach...[f]or there is no getting to the borders of space.

*Sun, Moon, and Stars*  
Chapter I (p. 5)  
Seeley, Jackson, & Halliday. London, England. 1880

**Gibran, Kahlil** 1883–1931

Lebanese-American philosophical essayist

The astronomer may speak to you of his understanding of space, but he cannot give you his understanding.

*The Prophet*  
On Teaching (p. 56)  
Alfred A. Knopf. New York, New York, USA. 1969

**Grondal, Florence Armstrong**

American astronomer and photographer

How thrilling to read of great hunts for treasure! Yet the pirates who dug their spades into the earthy loam never cached such jewels as are hidden along the dark slopes of the sky. Armed with a chart of the heavens, the fledgling astronomer prods about in the depths of the gloom, shovels the dark with the aid of his telescope, and discovers – even more surely than the pirate his chest – some wonderful treasure. Sometimes the find is a star-like diamond, a twinkling emerald, a fire-filled ruby or a cluster of star gems of colorful hues, but it may be, too, a profusion of riches, heaped in a magnificence that leaves one breathless.

*The Music of the Spheres: A Nature Lover's Astronomy*

Chapter I (p. 3)

The Macmillan Company. New York, New York, USA. 1926

**Gunn, James E.** 1923–

American science fiction writer

When they [radio astronomers] grew weary at their electronic listening posts, when their eyes grew dim with looking at unrevealing dials and studying uneventful graphs, they could step outside their concrete cells and renew their dull spirits in communion with the giant mechanism they commanded, the silent, sensing instrument in which the smallest packets of energy, the smallest waves of matter, were detected in their headlong, eternal flight across the universe. It was the stethoscope with which they took the pulse of the all and noted the birth and death of stars, the probe with which, here on an insignificant planet of an undistinguished star on the edge of its galaxy, they explored the infinite.

*The Listeners*

Chapter 1 (p. 12)

Charles Scribner's Sons. New York, New York, USA. 1972

**Hale, George Ellery** 1868–1938

American astronomer

According to the old view, the astronomer, soon after the setting of the Sun, retires to a lofty tower, from whose summit he gazes at the heavens throughout the long watches of the night. His eye, fixed to the end of a telescope tube, perceives wonders untold, while his mind sweeps with his vision through the very confines of the universe.

*The Study of Stellar Evolution: An Account of Some Recent Methods of Astrophysical Research*

Chapter 2 (p. 9)

The University of Chicago Press. Chicago, Illinois, USA. 1908

**Halley, Edmond** 1656–1742

English astronomer and mathematician

We therefore recommend again and again, to the curious investigators of the stars to whom, when our lives are

over, these observations are entrusted, that they, mindful of our advice, apply themselves to the understanding of these observations vigorously. And for them we desire and pray for all good luck, especially that they not be deprived of this coveted spectacle by the unfortunate obscuration of cloudy heavens, and that the immensities of the celestial spheres, compelled to more precise boundaries, may at last yield to their glory and eternal fame.

A Unique Method by Which the Parallax of the Sun, or Its Distance from the Earth, May Be Securely Determined by Means of Observing Venus Against the Sun *Philosophical Transactions of the Royal Society of London*, Number 348, April, May, June, 1716 (p. 460)

**Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

Astronomers...if they would be more than mere artisans, must be more or less mathematicians, and must separately study the mathematical grounds of their science ...

English metaphysical poet

The fleet Astronomer can bore,  
And thred the spheres with his quick-piercing mind:  
He views their stations, walks from dore to dore,  
Surveys, as if he had design'd  
To make a purchase there: hee sees their dances,  
And knoweth long before,  
Both their full ey'd aspects, & secret glances.

*The Temple*

The Church, Vanity, l. 1–7 (p. 126)

Medieval & Renaissance Texts & Studies. Binghamton, New York, USA. 1995

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

...when, after dilating his thoughts to comprehend the grandeur of those ideas his [the astronomer] calculations have called up, and exhausting his imagination and the powers of his language to devise similes and metaphors illustrative of the immensity of the scale on which his universe is constructed, he shrinks back to his native sphere, he finds it, in comparison, a mere point; so lost – even in the minute system to which it belongs – as to be

invisible and unsuspected from some of its principal and remoter members.

*Outlines of Astronomy*

Introduction (pp. 2–3)

D. Appleton & Co. New York, New York, USA. 1876

The magnitudes, distances, arrangement, and motions of the great bodies which make up the visible universe, their constitution and physical condition, so far as they can be known to us, with their mutual influences and actions on each other, so far as they can be traced by the effects produced, and established by legitimate reasoning, form the assemblage of objects to which the attention of the astronomer is directed.

*Outlines of Astronomy*

Chapter I (p. 11)

D. Appleton & Co. New York, New York, USA. 1876

### **Hilliard, George Stillman** 1808–79

American politician

...it seems to me that, if an undevout astronomer be mad, an unpoetical astronomer is monstrous.

*The Relation of the Poet to His Age*

Discourse (p. 38)

Charles C. Little & James Brown. Boston, Massachusetts, USA. 1843

### **Hodgson, Ralph** 1871–1962

English poet

Reason has moons,  
but moons not hers  
Lie mirrored on her sea,  
Confounding her astronomers,  
But O! delighting me.

*Collected Poems*

Reason Has Moons

Macmillan & Company Ltd. London, England. 1961

### **Howard, Neale E.**

No biographical data available

Astronomers work always with the past; because light takes time to move from one place to another, they see things as they were, not as they are.

*The Telescope Handbook and Star Atlas*

The Sky, Chapter III (p. 33)

Crowell. New York, New York, USA. 1975

### **Howe, Herbert Alonzo** 1858–1926

American astronomer

The astronomer, whether in charge of an elaborate observatory, filled with costly instruments, or simply the possessor of a good opera-glass, or small portable telescope, is the man who by patient study of the sky adds to the sum total of astronomical knowledge.

*A Study of the Sky*

Chapter VII (p. 113)

Charles Scribner's Sons. New York, New York, USA. 1901

### **Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

The astronomer seems at first sight to be the most helpless of all scientists. He cannot experiment with the Universe. It is a significant matter of nomenclature that whereas we speak of experimental work in other sciences we speak of observational work in astronomy.

*Frontiers of Astronomy*

Prologue (p. xv)

Harper & Row, Publishers. New York, New York, USA. 1955

The astronomer is severely handicapped as compared with other scientists. He is forced into a comparatively passive role. He cannot invent his own experiments as the physicists, the chemist or the biologist can. He cannot travel about the Universe examining the items that interest him. He cannot, for example, skin a star like an onion and see how it works inside.

*The Nature of the Universe*

Chapter 1 (pp. 3–4)

At The University Press. Cambridge, England. 1933

Astronomers seem to live in terror that someday they will discover something important.

*Home is Where the Wind Blows: Chapters from a Cosmologist's Life*

Part II, Chapter 12 (p. 159)

University Science Books. Mills Valley, California, USA. 1994

Here is an example of what seems to be general practice in astronomy: when two alternatives are available, choose the more trivial. It was so with the discovery of pulsars – white dwarfs, everybody said they were, until confrontations with fact showed otherwise. And it is so today throughout cosmology. Astronomers seem to live in terror that someday they will discover something important.

*Home Is Where the Wind Blows: Chapters from a Cosmologist's Life*

Part Two, Chapter 19 (p. 269)

University Science Books, Mill Valley, California, USA. 1994

### **Jacoby, Harold** 1865–1932

American astronomer

The beginner in astronomy is always modest as to his abilities, and blames himself if the universe fails to fit the printed directions. Nor does any real astronomer ever lose this modest characteristic of the beginner; for he who has studied this science most deeply is ever most of all convinced that he is still a beginner.

*Astronomy: A Popular Handbook*

Chapter III (p. 46)

The Macmillan Company. New York, New York, USA. 1926

### **Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

The task of the observational astronomer is to survey and explore the universe, and to describe and classify the various

types of objects which it is constituted, discovering what law and order he may in their observed arrangement and behavior. But only the dullest of human minds can rest content with a mere catalogue of observed facts; an alert mind asks always for the why and the wherefore.

*Astronomy and Cosmogony*

Chapter I (p. 1)

Dover Publications, Inc. New York, New York, USA. 1961

**Jeffers, Robinson** 1887–1962

American poet

Or as mathematics, a human invention  
...parallels but never touches reality, gives the astronomer

Metaphors through which he may comprehend

The powers and the flow of things...

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Double Axe: The Inhumanist (p. 260)

Stanford University Press. Stanford, California. USA. 1988

Nor can the astronomer see his moon-dazzled  
Constellations: let him give one night in the month to  
earth and the moon,

Women and games.

*The Beginning and the End and Other Poems*

Full Moon (p. 41)

Random House, Inc. New York, New York, USA. 1963

**Jones, Sir Harold Spencer** 1890–1960

10th Astronomer Royal of England

The task of the astronomer is to learn what he can about  
the universe as he finds it. To endeavor to understand the  
purpose behind it and to explain why the universe is built  
as it is, rather than on some different pattern which might  
have accorded better with our expectations, is a more dif-  
ficult task; for this the astronomer is no better qualified  
than anybody else.

*Life on Other Worlds*

Chapter X (p. 253)

English Romantic lyric poet

Then I felt like some watcher of the skies

When a new planet swims into his ken.

*The Complete Poetical Works and Letters of John Keats*

On First Looking into Chapman's Homer

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

**Kepler, Johannes** 1571–1630

German astronomer

That astronomer well performs his office who predicts with  
the greatest measure of approximation the motions and sit-  
uations of the stars: but he does better and is held worthy of  
the greater praise who in addition to this furnishes us with  
true opinions concerning the form of the world.

*Opera Omnia* (Volume 1) (p. 242)

For astronomers ought not simply to enjoy a licence of  
making any fictions they choose without rational grounds.

*Opera Omnia* (Volume 6) (p. 121)

**Kirshner, Robert P.**

American astronomer

Like the fifteenth-century navigators, astronomers  
today are embarked on voyages of exploration, charting  
unknown regions. The aim of this adventure is to bring  
back not gold or spices or silks but something more valu-  
able: a map of the universe that will tell of its origin, its  
texture, and its fate.

In Marcia Bartusiak

*Thursday's Universe*

Chapter 7 (p. 167)

Random House, Inc. New York, New York, USA. 1986

**Kolb, Edward W. (Rocky)** 1951–

American cosmologist

...knowledge about the universe is not easily won. In  
spite of tremendous effort, almost all of the time we fail  
to find an answer. Most of the time we even fail to ask  
the right question. But occasionally, through some com-  
bination of serendipity, work, genius, and insight, we do  
see the sky a little more clearly. It is the hope of seeing  
something no one else has seen, or understanding some-  
thing no one has understood before that keep astron-  
omers awake so many nights.

*Blind Watchers of the Sky*

Chapter Eleven (pp. 293–294)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

**Kühnert, Franz** 1852–1918

**Sandage, Allan** 1926–

American astronomer

What are galaxies? No one knew before 1900. Very few people knew in 1920. All astronomers knew after 1924.

*The Hubble Atlas of Galaxies*

Galaxies (p. 1)

Carnegie Institute of Washington. Washington, D.C. 1961

**Sayers, Dorothy L.** 1893–1957

English novelist and essayist

**Eustace, R.**

No biographical data available

The biologist can push it back to the original protist, and the chemist can push it back to the crystal, but none of them touch the real question of why or how the thing began at all. The astronomer goes back untold million of years and ends in gas and emptiness, and then the mathematician sweeps the whole cosmos into unreality and leaves one with mind as the only thing of which we have any immediate apprehension. *Cogito ergo sum, ergo omnia esse videntur*. All this bother, and we are no further than Descartes. Have you noticed that the astronomers and mathematicians are much the most cheerful people of the lot? I suppose that perpetually contemplating things on so vast a scale makes them feel either that it doesn't matter a hoot anyway, or that anything so large and elaborate must have some sense in it somewhere.

*The Documents in the Case*

Letter 22, John Munting to Elizabeth Drake (p. 70)

Victor Gollancz Ltd., London, England. 1978

**Schawlow, Arthur** 1921–99

American physicist

Astronomers are very brave and bold, and make vast assumptions based on very little data. Very clever, though.

In Dennis Brian

*Genius Talk: Conversations with Noble Scientists and Other Luminaries*

Chapter 11 (p. 249)

Plenum Press. New York, New York, USA. 1995

**Schiller, Friedrich** 1759–1805

German poet, philosopher, historian, and dramatist

Of the Nebulae and planets do not babble so to me;  
What! is Nature only mighty inasmuch as you can see?  
Inasmuch as you can measure her immeasurable ways,  
As she renders world on world, sun and system to your gaze?

Though through space your object be the Sublimest to embrace,

Never the Sublime abideth – where you vainly search – in space!

Translated by Edward, Lord Lytton

*The Poems and Ballads of Schiller*

To Astronomers (p. 185)

George Routledge &amp; Sons. London, England. 1887

So the Astronomer's art lays out the chart of the heavens  
Better his way to steer through inaccessible space ...

*The Poems of Schiller*

Human Knowledge (p. 303)

H. Holt &amp; Co. New York, New York, USA. 1902

**Schlesinger, Frank** 1871–1943

American astronomer

The astronomer has borrowed almost all his tools from the physicist; the prism, the grating, the photoelectric cell, the interferometer, the photographic plate, even the telescope itself, were all used in the laboratory before they were applied to the sky.

In Lorande Woodruff

*The Development of the Sciences*

Chapter IV (p. 166)

**Schneider, Don**

American astronomer

How anyone can go out at night and look up and not want to be an astronomer is beyond me.

In Richard Preston

*First Light*

Part 3 (p. 182)

Random House, Inc. New York, New York, USA. 1996

**Sedgwick, William Thompson** 1855–1921

American bacteriologist

...the object of an astronomer is to put together the history of the celestial motions from careful observations, and then to set forth their causes or hypotheses about

them, if he cannot find the real causes, so that those motions can be computed on geometrical principles. But it is not necessary that his hypotheses should be true, they need not even be probable; it is sufficient if the calculations founded on them agree with the observations.

*A Short History of Science*

Chapter X (p. 200)

The Macmillan Co. New York, New York, USA. 1917

### **Shakespeare, William** 1564–1616

English poet, playwright, and actor

These earthly godfathers of heaven's lights,  
That give a name to every fixed star  
Have no more profit of their shining nights  
Than those that walk, and wot not what they are.

In *Great Books of the Western World* (Volume 26)

American astronomer

The astronomer's rule of thumb: if you don't write it down, it didn't happen.

*The Cuckoo's Egg: Tracking a Spy Through the Maze of Computer Espionage*

Chapter 5 (p. 28)

Doubleday. New York, New York, USA. 1989

### **Swift, Jonathan** 1667–1745

Irish-born English writer

This load-stone is under the care of certain astronomers, who from time to time give it such positions as the monarch directs. They spend the greatest part of their lives in observing the celestial bodies, which they do by the assistance of glasses, far excelling ours in goodness.

In *Great Books of the Western World* (Volume 36)

*Gulliver's Travels*

Part III, Chapter III (p. 102)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

There was an astronomer who had undertaken to place a sun-dial upon the great weather-cock on the town-house, by adjusting the annual and diurnal motions of the earth and sun, so as to answer and coincide with all accidental turnings of the wind.

In *Great Books of the Western World* (Volume 36)  
*Gulliver's Travels*  
 Part III, Chapter V (p. 108)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Thompson, Francis** 1859–1907  
 English writer

Starry amorist, starward gone,  
 Thou art – what thou didst gaze upon!  
 Passed through thy golden garden's bars,  
 Thou seest the Gardner of the Stars.

*Complete Poetical Works of Francis Thompson*  
 A Dead Astronomer, Stanza 1  
 Boni & Liveright, Inc., Publishers. New York, New York, USA. 1923

**Thoreau, Henry David** 1817–62  
 American essayist, poet, and practical philosopher

The astronomer is as blind to the significant phenomena,  
 or the significance of phenomena, as the wood-sawyer  
 who wears glasses to defend his eyes from the sawdust.

*Journal (Volume 3: 1848–1851)*  
 August 5, 1851 (p. 354)  
 Princeton University Press. Princeton, New Jersey, USA. 1981

It is interesting to observe with what singular unanimity  
 the farthest sundered nations and generations consent to  
 give completeness and roundness to an ancient fable, of  
 which they indistinctly appreciate the beauty or the truth.  
 By a faint and dream-like effort, though it be only by the  
 vote of a scientific body, the dullest posterity slowly add  
 some trait to the myths. As when astronomers call the  
 lately discovered planet Neptune; or the asteroid Astra,  
 that the Virgin who was driven from earth to heaven at  
 the end of the golden age, may have her local habitation  
 in the heavens more distinctly assigned her – for the  
 slightest recognition of poetic worth is significant. By  
 such slow aggregation has mythology grown from the  
 first.

*A Week on the Concord and Merrimack Rivers*  
 Sunday (pp. 66–67)  
 James R. Osgood & Co. Boston, Massachusetts, USA. 1873

**Tischner, August**  
 No biographical data available

In order to comprehend the observable phenomena, they  
 [astronomers] have resolved to search after their causes,  
 and to produce these, they have imagined theories which  
 are often devoid of sense and not without contradictions.

*The Fixed Idea of Astronomical Theory* (p. 32)  
 Gustav Fock. Leipzig, Germany. 1885

The observable phenomena look to-day as in old times,  
 but the intelligence of man is modified, it may enlarge, and  
 science will be perfected. What they don't comprehend  
 to-day, they will comprehend perhaps tomorrow, and we  
 are persuaded, that the number of those who will occupy  
 themselves earnestly and attentively with the study of

the celestial phenomena, will increase, and then the most  
 sublime object of nature, heaven and its phenomena, will  
 find better commentators than we can exhibit now.

*The Fixed Idea of Astronomical Theory* (p. 32)  
 Gustav Fock. Leipzig, Germany. 1885

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

For three hundred years now, the Christian astronomer  
 has known that his Deity didn't make the stars in  
 those tremendous six days; but the Christian astronomer  
 doesn't enlarge upon that detail. Neither does the priest.

In Bernard Devoto (ed.)  
*Letters from the Earth*  
 Letter III (p. 16)  
 Harper & Row, Publishers. New York, New York, USA. 1959

I do not see how astronomers can help feeling exquisitely  
 insignificant, for every new page of the Book of the  
 Heavens they open reveals to them more & more that  
 the world we are so proud of is to the universe of careering  
 globes as is one mosquito to the winged & hooved  
 flocks & herds that darken the air & populate the plains &  
 forests of all the earth. If you killed the mosquito, would  
 it be missed? Verily, What is Man, that he should be considered  
 of God?

*Mark Twain's Letters (Volume 4, 1870–1871)*  
 Letter to Olivia L. Langdon  
 8 January, 1870 (p. 12)  
 University of California Press. Berkeley, California, USA. 1995

I AM a great astronomer; I find a new star every night;  
 And, 'tis a wondrous mystery, Each changes color to my  
 sight.

Translated by Stella Bloch  
*Star Glints*  
 The Astronomer (pp. 15–16)  
 John F. Grabau. Buffalo, New York, USA. 1917

**Whitman, Walt** 1819–92  
 American poet, journalist, and essayist

When I heard the learn'd astronomer,  
 When the proofs, the figures, were ranged in columns  
 before me,  
 When I was shown the charts and diagrams to add, divide,  
 and measure them,

When I sitting heard the astronomer where he lectured  
with much applause in the lecture-room,  
How soon unaccountable I became tired and sick...

*Complete Poetry and Collected Prose*

When I Heard the Learn'd Astronomer

The Library of America. New York, New York, USA. 1982

### Wilkie, Agnes Rollo

No biographical data available

The dear astronomer is indeed a wonderful man, one sent  
out from God.... His power and wisdom is divine inspira-  
tion. He is greater and grander far than all mere learned  
or educated excellence, and his pre-eminent greatness is  
the outcome of daily communion with the Eternal Source  
of all purity and goodness.

*Rosa*

Chapter XXXVII (p. 269)

W. Stewart & Co. London, England. 1882

### Wordsworth, William 1770–1850

English poet

Spirits that crowd the intellectual sphere  
With mazy boundaries, as the astronomer  
With orb and cycle girds the starry throng.

*The Complete Poetical Works of William Wordsworth*

Ecclesiastical Sonnets, Part II, Section 5, l. 12–14

Crowell. New York, New York, USA. 1888

Eyes of some men travel far  
For the finding of a star;  
Up and down the heavens they go...  
Like a sage astronomer.

*The Complete Poetical Works of William Wordsworth*

To the Small Celandine, l. 16–19

Crowell. New York, New York, USA. 1888

### Wright, Thomas 1711–86

English cosmologist

In this great Celestial Creation, the Catastrophy of a  
World such as ours, or even the total Dissolution of a  
System of Worlds, may possibly be no more to the great  
Author of Nature, than the most common Accident in  
Life with us, and in all Probability such final and general  
Doom-Days may be as frequent there as even Birthdays,  
or Mortality with us upon the Earth. This Idea has some-  
thing so cheerful in it, that I own I can never look upon  
the Stars without wondering why the whole World does  
not become Astronomers...

*An Original Theory or New Hypothesis of the Universe*

Letter the Eighth (p. 76)

Printed for the Author. London, England. 1750

### Young, Charles Augustus 1834–1908

American astronomer

Astronomers do not overlook a wide and open valley,  
but rather from the foothills of a mountain range, look

upward into mists and clouds, and every path soon  
disappears into obscurity, except where here and there  
sunlight breaks through.

In George Isles

*The Skies and the Earth*

The Astronomical Outlook (p. 54)

Doubleday, Page & Co. New York, New York, USA. 1902

Irregular Galaxies

*The Astrophysical Journal*, Volume 519, July 1, 1999 (p. 59)

## ASTRONOMICAL

### Boethius, Anicius Manlius Severinus ca. 475–524

Roman philosopher and statesman

Think then thus upon it, and see that it is but a slight  
thing of no weight. As you have learnt from astronomers'  
shewing, the whole circumference of the earth is but as  
a point compared with the size of the heavens. That is, if  
you compare the earth with the circle of the universe, it  
must be reckoned as of no size at all.

Translated by W.W. Cooper

*The Consolation of Philosophy*

Book II, Prose VII (pp. 48–49)

J.M. Dent & Sons Ltd. London, England. 1902

### Cook, Joseph

*The Defenders of Fallacy* (p. 129)  
 McKinlay, Stone & Mackenzie. New York, New York, USA. 1910

**Hoyle, Sir Fred** 1915–2001  
 English mathematician and astronomer

No literary genius could have harvested a story one-hundredth part as fantastic as the sober facts that have been unearthed by astronomical science.

*The Nature of the Universe*  
 Chapter 7 (p. 133)  
 At the University Press. Cambridge, England. 1933

**Paracelsus (Theophrastus Phillippus Aureolus Bombastus von Hohenheim)** 1493–1541  
 Swiss alchemist and mystic

All this you should know exists in man and realize that the firmament is within man, the firmament with its great movements of bodily planets and stars which result in exaltations, conjunctions, oppositions and the like, as you call these phenomena as you understand them. Everything which astronomical theory has searched deeply and gravely by aspects, astronomical tables and so forth – this self-same knowledge should be a lesson and teaching to you concerning the bodily firmament. For, none among you who is devoid of astronomical knowledge may be filled with medical knowledge.

In Allen G. Debus  
*The French Paracelsians*  
 Chapter 1 (p. 9)  
 Cambridge University Press. Cambridge, England. 1991

## ASTRONOMICAL PHOTOGRAPHY

**Stone, Ormond** 1847–1933  
 American astronomer, mathematician, and educator

One would infer, I think, that there is no longer any use for that venerated, but now to-pass-away, class of individuals hereafter to be known as “old fashioned astronomers,” and that hereafter observers skilled in the use of the meridian circle and the micrometer, will bear about the same relation to astronomical photographers as did the astronomers who lived before the invention of the telescope to the Herschels and the Struves of later date.  
 Photographers versus Old Fashioned Astronomers  
*The Sidereal Messenger, or Monthly Review of Astronomy*, Volume 6, Number 1, January, 1887 (p. 2)

## ASTRONOMICAL RESEARCH

**Mitchel, Ormsby MacKnight** 1805–62  
 American astronomer

Rapidly have we descended the current of astronomical research, we have attained the boundary of the known. We stand on the dim confines of the unknown. All behind us is clear, and bright, and perfect; all before us is shrouded in gloom, and darkness, and doubt. Yet the twilight of the known flings its feeble light into the domain of the unknown; and we are permitted to gather some idea, not of all that remains to be done, but of that which must be first accomplished.

*The Orbs of Heaven*  
 Introductory (pp. 15–16)  
 Office of the National Illustrated Library. London, England. 1851

## ASTRONOMICAL SCIENCE

**Miller, Robert Kalley**  
 No biographical data available

...if we consider not so much the study of the science itself, in its profound and recondite details, as the results to which it attains, the magnitude and importance of the subjects it treats of, and the beauty and grandeur of the phenomena it investigates, we shall have to acknowledge that somewhere or other in the ponderous tomes of astronomical science there must lie entombed rich stores of novel and unwonted interest.

*The Romance of Astronomy*  
 The Romance of Astronomy (p. 2)  
 Macmillan & Company Ltd. London, England. 1873

## ASTRONOMICAL STUDY

**Young, Charles Augustus** 1834–1908  
American astronomer

At present the end and object of astronomical study is chiefly knowledge pure and simple; so far as now appears, its development has less direct bearing upon the material interests of mankind than that of any other of the natural sciences.

*A Text-book of General Astronomy for Colleges and Scientific Schools*  
Introduction (p. 1)  
Ginn & Co. Boston, Massachusetts, USA. 1898

## ASTRONOMICAL TIME

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

It was not easy to visualize the vastness of astronomical space, and it is even less easy to conceive of the immensity of astronomical time. A fairly lengthy book contains about 200,000 words averaging five letters each. Let us take the whole of such a book to represent the age of the earth. Then the whole of civilization is represented by the last word or two, and the whole of the Christian era by something less than the last letter. A single lifetime is a good deal less than the final full stop with which the book ends. Such is the age of our won planet, and, whatever view we take, the age of the whole universe, on the same scale, is a matter of volumes. If the view I put forward is correct, it must be represented by a library of some thousands of volumes.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1936*  
The Size and Age of the Universe (p. 136)  
Government Printing Office. Washington, D.C. 1937

## ASTRONOMY

**Abbot, Charles Greeley** 1872–1973  
American astrophysicist

Astronomy is the distinguished child of the gypsy-like mother, astrology.

*Poet Lore*, Volume 18, 1907 (p. 439)

**Arago, Francois** 1786–1853  
French physicist

Astronomy is the science of which the human mind may most justly boast. It owes this indisputable pre-eminence to the elevated nature of its object, to the grandeur of its means of investigation, to the certainty, the utility, and the unparalleled magnificence of its results.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1874*  
Laplace (p. 131)  
Government Printing Office. Washington, D.C. 1875

Astronomy is a happy science, it has not need for decorations.

In L.I. Ponomarev  
*The Quantum Dice* (p. 225)  
Institute of Physics Publishing. Bristol, England. 1993

It may indeed appear extraordinary that no mention should yet have been made of the great desiderata of astronomy – those questions which have exercised the curiosity and employed the time and attention of astronomers ever since the science has assumed its present character – such as the parallax of the fixed stars, their proper motion, the motion or rest of our own system, and its connection with the rest of the universe. But these and many other points are too obviously suggested by their importance to need any distinction which this society can bestow: the applause of the human race attends his labours; and no additional stimulus can be offered to those by which he is impelled.

Report to the First Annual General Meeting  
*Memoirs of the Astronomical Society of London*, 9 February, 1821,  
Volume I, 1822–25 (pp. 24–25)

Astronomy, although the oldest and in many respects the most perfect of the sciences, in many of its questions is still in its infancy.

Scientific Miscellany  
*The Galaxy*, Volume XIII, March, 1872 (p. 419)

GURU: Today I will discourse upon the violence in astronomy.

DISCIPLE: Revered Sir! Will you be describing the violent phenomena in the Universe?

GURU: Yes, and I will also dwell upon the controversies amongst the astronomers about what these events imply – controversies which are no less violent than the phenomena themselves.

In Jayant Narlikar  
*Violent Phenomena in the Universe*  
Chapter 1 (p. 1)  
Oxford University Press. Oxford, England. 1982

**Author undetermined**

Of all the sciences, none would seem to yield a purer intellectual gratification than that of Astronomy.

*The Story of The Herschels: A Family of Astronomers*  
Chapter I

T. Nelson & Sons. London, England. 1889

It has been, said that “an undevout astronomer is mad;” and if Astronomy, of all the sciences, be the one most calculated to gratify the intellect, surely it is the one which should most vividly awaken the religious sentiment.

*The Story of The Herschels: A Family of Astronomers*  
Chapter I

T. Nelson & Sons. London, England. 1889

...because Astronomy cherishes the feelings of awe and reverence and praise, because it inspires a continual yearning after additional knowledge, because it reveals to us something of the character of God, we conceive that of all the sciences it affords the purest intellectual gratification.

*The Story of The Herschels: A Family of Astronomers*  
Chapter I

T. Nelson & Sons. London, England. 1889

It may indeed appear extraordinary that no mention should yet have been made of the great desiderata of astronomy, - those questions which have exercised the curiosity and employed the time and attention of astronomers ever since the science has assumed its present character - such as the parallax of the fixed stars, their proper motion, the motion or rest of our own system, and its connection with the rest of the universe. But these and many other points are too obviously suggested by their importance to need any distinction which this society can bestow: the applause of the human race attends his labours; and no additional stimulus can be offered to those by which he is impelled.

Introduction (p. vii)

Harper & Brothers Publishers. New York, New York, USA. 1896

**Bennett, Arnold** 1867–1931

English novelist and playwright

He knew not how to look at a landscape nor at a sky. Of plants and trees he was as exquisitely ignorant as of astronomy. It had not occurred to him to wonder why the days are longer in summer, and he vaguely supposed that the cold of winter was due to an increased distance of the earth from the sun. Still, he had learnt that Saturn had a ring and sometimes he unconsciously looked for it in the firmament, as for a tea-tray.

*Clayhanger*

Book I, Chapter II, Section III (p. 14)

E.P. Dutton & Company. New York, New York, USA. 1910

**Bichat, Xavier** 1771–1802

French physician and pathologist

To say that physiology is made up of the physics of animals is to give a very inaccurate idea of it; as well might we say that astronomy is the physiology of the stars.

*Physiological Researches on Life and Death*

Chapter VII, Section I (p. 81)

Arno Press. New York, New York, USA. 1977

**Black, William** 1841–98

Novelist

“Oh, I hate astronomy,” she says, perhaps glad enough to get away to this new subject. “There is no plan in astronomy, no regularity; everything is different from everything else, and that is what makes it difficult to understand. Now, for example, why shouldn't there be a crescent sun as well as a crescent moon?”

*The Strange Adventures of a House-boat: A Novel*

Chapter VII (p. 73)

Harper & Brothers Publishers. New York, New York, USA. 1904

**Brewster, David** 1781–1868

English physicist

Of all the sciences cultivated by mankind, astronomy is acknowledged to be, and undoubtedly is, the most sublime, the most interesting, and the most useful; for, by knowledge derived from this science, not only the bulk of the earth is discovered, the situation and extent of the

countries and kingdoms upon it ascertained, trade and commerce carried on to the remotest parts of the world, and the various products of several countries distributed for the health, comfort, and conveniency of its inhabitants; but our very faculties are enlarged with the grandeur of the ideas it conveys, our minds exalted above the low contracted prejudices of the vulgar, and our understandings clearly convinced, and affected with the conviction of the existence, wisdom, power, goodness, immutability, and superintendency of the Supreme Being!

*Ferguson's Astronomy, Explained upon Sir Isaac Newton's Principles* (Volume 1)

Chapter I (p. 1)

Printed for the author. London, England. 1756

### **Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

Astronomy is not the apex of science or of invention. But it is a test of the cast of temperament and mind that underlies a culture.

*The Ascent of Man*

Chapter 6 (p. 190)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

### **Burnham, Robert, Jr.** 1931–93

American astronomer

No one can date that remote epoch when astronomy “began” – we can say only that the fascination of the heaven is as old as man’s ability to think; as ancient as his capacity to wonder and to dream. And in company with most of the special enchantments of human life, the unique appeal of astronomy is incommunicable; easily understood through direct experience, but not to be precisely defined or explained. Nor should any explanation be thought necessary. The area of astronomy is both intellectual and aesthetic; it combines the thrill of exploration and discovery, the fun of sight-seeing, and the sheer pleasure of firsthand acquaintance with incredibly wonderful and beautiful things.

*Burnham's Celestial Handbook* (Volume 1)

Chapter 1 (p. 5)

Celestial Handbook Publications. Flagstaff, Arizona, USA.

### **Burroughs, John** 1837–1921

American naturalist and essayist

...in astronomy, some of the most important discoveries seem inspirations, or a kind of winged, ecstatic reasoning, quite above and beyond the real facts.

Harper & Brothers. New York, New York, USA. 1959

### **Clerke, Agnes Mary** 1842–1907

Irish astronomer

It [physical astronomy] welcomes the most unpretending co-operation. There is no one “with a true eye and a faithful hand” but can do good work in watching the heavens. And not unfrequently prizes of discovery which the most perfect appliances failed to grasp have fallen to the share of ignorant or ill-provided assiduity.

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Introduction (p. 6)

Adam & Charles Black. London, England. 1893

Astronomy generalises the results of other sciences. She exhibits the laws of Nature working over a wider area, and under more varied conditions, than ordinary experience presents. Ordinary experience, on the other hand, has become indispensable to her progress. She takes in at one view the indefinitely great and the indefinitely little. The mutual revolutions of the stellar multitude during tracts of time which seem to lengthen out to eternity as the mind attempts to traverse them, she does not admit to be beyond her ken ...

*A Popular History of Astronomy During the Nineteenth Century* (3rd edition)

Introduction (p. 9)

Adam & Charles Black. London, England. 1893

[Astronomy] is a science of hairbreadths and fractions of a second. It exists only by the rigid enforcement of arduous accuracy and unwearying diligence. Whatever secrets the universe still has in store for man will only be communicated on these terms.

*A Popular History of Astronomy During the Nineteenth Century*  
Part I, Chapter VI (p. 123)  
A. & C. Black. London, England. 1908

...the science of the nature of the heavenly bodies...is full of the audacities, the inconsistencies, the imperfections, the possibilities of youth.... It promises everything; it has already performed much; it will doubtless perform much more.

Scottish theologian and philosopher

The objects which astronomy discloses afford subjects of sublime contemplation, and tend to elevate the soul above vicious passions and groveling pursuits.

In Elijah H. Burritt

*The Geography of the Heavens, and a Class-book of Astronomy: Accompanied by a Celestial Atlas*

Introduction

Mason Brothers. New York, New York, USA. 1863

Astronomy is that department of knowledge which has for its object to investigate the motions, the magnitudes, and distances of the heavenly bodies; the laws by which their movements are directed, and the ends they are intended to subserve in the fabric of the universe. This is a science which has in all ages engaged the attention of the poet, the philosopher, and the divine, and has been the subject of their study and admiration. Kings have descended from their thrones to render it homage, and have sometimes enriched it with their labours; and humble shepherds, while watching their flocks by night, have beheld with rapture the blue vault of heaven, with its thousand shining orbs, moving in silent grandeur, till the morning star announced the approach of day.

*The Complete Works of Thomas Dick, LL.D.* (Volume 7)

Celestial Scenery, Introduction (p. 8)

Edwards & Bushnell. St. Louis, Missouri, USA. 1857

To consider astronomy merely as a secular branch of knowledge, which improves navigation, and gives scope

to the mathematician's skill, and to overlook the demonstrations it affords of the invisible Divinity, would be to sink this noble study far below its native dignity, and to throw into the shade the most illustrious manifestations of the glories of the Eternal Mind.

Chapter V (p. 267)

Merriam & Cooke. West Brookfield, Massachusetts, 1847  
USA.

### Dickson, Frank

No biographical data available

The little boy had received his first lesson in astronomy and was proudly exhibiting his knowledge to his still smaller sister.

"That star," he said, pointing to one of the most brilliant ornaments of the heavens, "is much larger than the earth."

"You can't make me believe that." the sister replied. "If it's as big as that, why doesn't it keep the rain off us?"

Good Stories You Can Use

Quote, *the Weekly Digest*, July 17, 1966 (p. 14)

### Donne, John 1572–1631

English poet and divine

We thinke the heavens enjoy their Spherical,  
Their round proportion embracing all.  
But yet their various and perplexed course,  
Observ'd in divers ages doth enforce  
Men to finde out so many Eccentrique parts,  
Such divers downe-right lines, such overthwarts,  
As disproportion that pure forme. It teares  
The Firmament in eight and forty sneers.

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1884

**Everett, Edward** 1794–1865

American statesman, educator, and orator

...the unspeakable glories of the rising and the setting sun; the serene majesty of the moon, as she walks in full-orbed brightness through the heavens; the soft witchery of the morning and the evening star; the imperial splendors of the firmament on a bright, unclouded night; the comet, whose streaming banner floats over half the sky – these are objects which charm and astonish alike the philosopher and the peasant, the mathematician who weighs the masses and defines the orbits of the heavenly bodies, and the untutored observer who sees nothing beyond the images painted upon the eye.

An Oration

The Uses of Astronomy, Albany, New York, 28 July 1856 (p. 20)  
Ross & Tousey. New York, New York, USA. 1856

**Fitz, Henry** 1808–63

American telescope manufacturer

Astronomy is truly the handmaid of science, and the road to knowledge. For if the heavens declare the glory of God, that science which opens a door to the investigation into the heavens, which declare God's glory, and furnishes the means of illustration of the firmament, where God's handiwork is seen and exhibited, is a Divine Science.

*The Layman's Legacy* (Volume 2)

Sermon XXIV (p. 471)

P. Price. New York, New York, USA. 1840

**Flammarion, Camille** 1842–1925

French astronomer and writer

Astronomy is the most accurate of the sciences. All the truths which it teaches are absolutely demonstrated, and cannot be disputed by any mind which gives itself the trouble, or rather the pleasure, to gain information in the study of this admirable science.

*Popular Astronomy: A General Description of the Heavens*

Book I, Chapter VI (p. 53)

Chatto &amp; Windus. London, England. 1894

The Science of Astronomy is sublime and beautiful. Noble, elevating, consoling, divine, it gives us wings, and bears us through Infinitude. In these ethereal regions all is pure, luminous, and splendid. Dreams of the Ideal, even of the Inaccessible, weave their subtle spells upon us. The imagination soars aloft, and aspires to the sources of Eternal Beauty.

Translated by Frances Alice Welby

*Astronomy for Amateurs*

Introduction (p. 1)

D. Appleton &amp; Co. New York, New York, USA. 1915

Far from being a difficult and inaccessible science, Astronomy is the science which concerns us most, the one most necessary for our general instruction, and at the same time the one which offers for our study the greatest charms and keeps in reserve the highest enjoyments. We

cannot be indifferent to it, for it alone teaches us where we are and what we are; and, moreover, it need not bristle with figures, as some severe savants would wish us to believe. The algebraical formulæ are merely scaffoldings analogous to those which are used to construct an admirably designed palace. The figures drop off, and the palace of Urania shines in the azure, displaying to our wondering eyes all its grandeur and all its magnificence.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book I, Chapter I (p. 1)

Chatto &amp; Windus. London, England. 1894

It [astronomy] ceases to be a figure and becomes alive. The spectacle of the universe is transfigured before our astonished minds. It is no longer inert bodies rolling in silence in eternal night that the finger of Urania shows us in the depths of the heavens; it is life – life immense, universal, eternal, unfolding itself in waves of harmony out to the inaccessible horizon of an eternal infinite.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book I, Chapter I (p. 3)

Chatto &amp; Windus. London, England. 1894

The science of the stars [astronomy] ceases to be the confidential secret of a small number of the initiated; it penetrates all understandings, it illuminates nature.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book I, Chapter I (p. 4)

Chatto &amp; Windus. London, England. 1894

All the truths which it [astronomy] teaches are absolutely demonstrated, and cannot be disputed by any mind which gives itself the trouble, or rather the pleasure, to gain information in the study of this admirable science.

Translated by J. Ellard Gore

*Popular Astronomy: A General Description of the Heavens*

Book I, Chapter VI (p. 53)

Chatto &amp; Windus. London, England. 1894

**Forbes, George** 1849–1936

Physician

In no realm of nature is the principle of cause and effect more conspicuous than in astronomy; and we fall into the habit of thinking of its laws as not only being unchangeable in our universe, but necessary to the conception of any universe that might have been substituted in its place.

*History of Astronomy*

Book I (p. 5)

G.P. Putnam's Sons. New York, New York, USA. 1909

**Friedman, Herbert** 1916–2000

American space scientist and astrophysicist

Astronomy brings us new wonders every day. The store of new knowledge seems inexhaustible.

The Invisible Universe of X-rays and Gamma Rays

*Proceedings, American Philosophical Society*, Volume 141, Number 4, 1977 (p. 416)

Astronomy is a great human endeavor, international in its ideals and performance, and shared by thousands of scientists, technicians, engineers, and craftsmen. Its instruments are the most beautifully precise, exquisitely delicate, and incredibly sensitive that the genius of man can produce.

*The Amazing Universe*

Chapter I (p. 19)

National Geographic Society. 1975

**Frost, Robert** 1874–1963

American poet

“But Cygnus isn’t in the Zodiac,”

Dick longed to say, but wasn’t sure enough

Of his astronomy...

*Complete Poems of Robert Frost*

From Plane to Plane

Henry Holt & Company. New York, New York, USA. 1949

**Galilei, Galileo** 1564–1642

Italian physicist and astronomer

Astronomy, for instance, is hardly mentioned, and only the sun, and the moon, and Lucifer are named. Surely, if the holy writers had intended us to derive our astronomical knowledge from the Sacred Books, they would not have left us so uninformed. That they intentionally forbore to speak of the movements and constitution of the stars is the opinion of the most holy and most learned fathers. And if the Holy Spirit has omitted to teach us those matters as not pertinent to our salvation, how can it be said that one view is de Fide and the other heretical? I might here insert the opinion of an ecclesiastic raised to the degree of Eminentissimo: That the intention of the Holy Ghost is to teach us how we shall go to Heaven, and not how the heavens go.

In Lord Northcliffe (Alfred Harmsworth) and S.S. McClure (eds.)

*The World’s Greatest Books* (Volume 13)

*The Authority of Scripture in Philosophical Controversies*

Section I

The Defenders of Fallacy (p. 132)

W.H. Wise. New York, New York, USA. 1910

It is surely harmful to souls to make it a heresy to believe what is proved. The prohibition of astronomy would be an open contempt of a hundred texts of the Holy Scriptures, which teach us that the glory and the greatness of Almighty God are admirably discerned in all His works, and divinely read in the open book of the heavens.

In and J.A. Hammerton (ed.)

**Grant, Robert** 1814–92

English astronomer

Astronomy is not only one of the most ancient of the physical sciences, but also one of those which present the most alluring invitations to the contemplative mind. The starry heavens, spangling with countless luminaries of every shade of brilliancy, and revolving in eternal harmony round the earth, constitute one of the most imposing spectacles which nature offers to our observation.

*History of Physical Astronomy, from the Earliest Ages to the Middle of the Nineteenth Century*

Introduction (p. 1)

Robert Baldwin. London, England. 1852

**Graves, Robert Perceval** 1895–1985

English poet

Against astronomy, indeed, the objection from utility is singularly infelicitous, and almost ludicrously inapplicable: astronomy, which binding in so close connexion the earth with the visible heaven, and mapping the one in the other, has guided through wastes, which else were trackless, the fleet and the caravan, and made a path over the desert and the deep.

*Life of Sir William Rowan Hamilton* (Volume 1)

Chapter XIV (pp. 650–651)

Hodges, Figgis & Co. Dublin, Ireland. 1882

**Guillemin, Amédée** 1826–93

French journalist and scientific writer

...it is Astronomy that reveals to us the Universe in its majestic whole; it is she who has made us comprehend its structure, and after having gathered its thousand various elements into a gorgeous picture, has initiated us into the eternal laws that govern the Heavens.

In Norman Lockyer and Richard Anthony Proctor

*The Heavens: An Illustrated Handbook of Popular Astronomy* (7th edition)

The Heavens (p. 4)

Richard Bentley & Son. London, England. 1878

**Hale, George Ellery** 1868–1938

American astronomer

At any period in the progress of observational astronomy there are two most important subjects for consideration. One relates to the accomplishment of a great amount of routine observation and the discussion of results, and the other relates to the introduction of new ideas and to

the beginnings of the new methods which will make the astronomy of the future.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1907*

Some Opportunities for Astronomical Work with Inexpensive Apparatus (p. 267)

Government Printing Office. Washington, D.C. 1908

### **Hall, Asaph** 1829–1907

American astronomer

Astronomy, in some of its forms, reaches back to the most distant historical epochs, and the changes that it has undergone during this long lapse of time give to this science a peculiar interest. In no other branch of human knowledge have we such a long and continuous history o the search after truth, of the painful struggle through which men have passed in freeing themselves from theories approved by the wise of their own times, and in overthrowing beliefs which had become incorporated into the life am culture of those times.

Address by Professor Asaph Hall

*Science*, Volume 1, September 11, 1880 (p. 123)

It is the spirit of honest, unrelenting criticism, and of impartial examination, that finally eliminates error and awards to everyone his just due, that makes astronomy honorable and attractive; and it is by cultivating this spirit that astronomy confers its chief benefit, for it is this that shall break in pieces and destroy all false assumptions in science and in philosophy.

Address by Professor Asaph Hall

*Science*, Volume 1, September 11, 1880 (p. 127)

The question is sometimes asked, of what use is astronomy? And the reply generally made is that it has conferred great benefits on navigation and on commerce, since it is by means of his astronomical knowledge that the sailor determines the position of his ship on the ocean. There is a truth in this reply, but it is only partial. The great value of astronomy is that it is really a science, and that it has broken the path and led the way through which all branches of science must past if they ever become scientific.

Address by Professor Asaph Hall

*Science*, Volume 1, September 11, 1880 (p. 127)

### **Hamilton, Sir William Rowan** 1805–65

Anglo-Irish mathematician, physicist, and astronomer

The design of physical science in general is to record and explain appearances ; to classify and generalise facts; to discover the secret unity and constancy of nature, amid its seeming diversity and mutability ; to construct, at least in part, a history of the outward world, adapted to the understanding of man; to account for past and to foresee future phenomena; to learn the language and interpret the oracles of the universe. How well Astronomy has answered this description it does not need to say.

In Robert Perceval Graves

*Life of Sir William Rowan Hamilton* (Volume 1)

Introductory Lecture On Astronomy (p. 501)

Hodges, Figgus & Co. Dublin, Ireland. 1882

The time has returned when, according to the provisions of this our University, we are to join our thoughts together, and direct them in concert to astronomy – the parent of all the sciences, and the most perfect and beautiful of all. And easily and gladly could I now expatiate on the dignity and interest of astronomy, but the very assurance of your complete and perfect sympathy renders needless any attempt at excitement. I must not and cannot suppose that any of those who are assembled here this day, are insensible to the inward impulses, and unconscious of the high aspirations, by which the stars, from their thrones of glory and of mystery, excite and win toward themselves the heart of man; that the golden chain has been let down in vain; and that celestial beauty and celestial power have offered themselves in vain to human view.

In Robert Perceval Graves

*Life of Sir William Rowan Hamilton* (Volume 1)

Introductory Lecture on astronomy (p. 640)

Hodges, Figgis & Co. Dublin, Ireland. 1882

### **Hardy, Thomas** 1840–1928

English poet and regional novelist

...if you are cheerful, and wish to remain so, leave the study of astronomy alone. Of all the sciences, it alone deserves the character of the terrible.

*Two on a Tower* (Volume 1)

Chapter IV (p. 78)

Sampson, Low, Marston, Searle & Rivington. London, England. 1882

...if...you are restless and anxious about the future, study astronomy at once. Your troubles will be reduced amazingly. But your study will reduce them in a singular way, by reducing the importance of everything.

*Two on a Tower* (Volume 1)

Chapter IV (p. 78)

Sampson, Low, Marston, Searle & Rivington. London, England. 1882

**Herschel, Sir John Frederick William** 1792–1871  
English astronomer and chemist

If proof were wanted of the inexhaustible fertility of astronomical science in points of novelty and interest, it would suffice to adduce the addition to the list of members of our system of no less than eight new planets and satellites during the preparation of these sheets for the press.

*Outlines of Astronomy*

Preface (p. 5)

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1849

There is no science which, more than astronomy, stands in need of such a preparation, or draws more largely on that intellectual liberality which is ready to adopt whatever is demonstrated, or concede whatever is rendered highly probable, however new and uncommon the points of view may be in which objects the most familiar may thereby become placed.

*Outlines of Astronomy: By Sir John F. W. Herschel*

Introduction (p. 22)

American Home Library Co. New York, New York, USA. 1902

**Higgins, Sir William**

Physicist and astronomer

...surely in no part of Nature are the noblest and most profound conceptions of the human spirit more directly called forth than in the study of the heavens and the host thereof.

*The New Astronomy*

*The Nineteenth Century*, Volume XLI, June, 1897 (p. 907)

**Hoyle, Sir Fred** 1915–2001

English mathematician and astronomer

If I were asked to define theoretical astronomy in one sentence I should say that it consists of discovering the properties of matter, partly by experiments carried out on the Earth and partly through the detailed observation of near-by space, and in then applying the results to the Universe as a whole.

*The Nature of the Universe*

Chapter 1 (p. 5)

At the University Press. Cambridge, England. 1933

**Hubble, Edwin Powell** 1889–1953

American astronomer

Astronomy is something like the ministry.... No one should go into it without a "call."

In Barry Parker

*Creation: The Story of the Origin and Evolution of the Universe*

Chapter 2 (p. 29)

Plenum Press. New York, New York, USA. 1998

...the history of astronomy is a history of receding horizons.

*Science News Letter*, Volume 11, Number 306 (p. 1)

Astronomy is like ministry. You need a calling.

In Alexander S. Sharov and Igor D. Novikov

*Edwin Hubble, The Discoverer of the Big Bang Universe*

Part I, Choosing the Way (p. 8)

Cambridge University Press. Cambridge, England. 1993

**Huxley, Julian** 1887–1975

English biologist, philosopher, and writer

I turn the handle and the story starts:

Reel after reel is all astronomy,

Till life, enkindled in a niche of sky,

Leaps on the stage to play a million parts.

Life leaves the slime and through the oceans darts;

She conquers earth, and raises wings to fly;

Then spirit blooms, and learns how not to die,

Nesting beyond the grave in others' hearts.

I turn the handle; other men like me

Have made the film; and now I sit and look

In quiet, privileged like Divinity

To read the roaring world as in a book.

If this thy past, where shall thy future climb,

O Spirit, built of Elements and Time!

*Essays of a Biologist*

Evolution: At the Mind's Cinema (p. 2)

Alfred A. Knopf. New York, New York, USA. 1929

**Huxley, Thomas Henry** 1825–95

English biologist

When Astronomy was young "the morning stars sang together for joy," and the planets were guided in their courses by celestial hands. Now, the harmony of the stars has resolved itself into gravitation according to the inverse squares of the distances, and the orbits of the planets are deducible from the laws of the forces which allow a schoolboy's stone to break a window.

*Collected Essays* (Volume 2)

*Darwiniana*

The Origin of Species (p. 56)

Macmillan & Company Ltd. London, England. 1904

Astronomy – which tells them [men's mind] that this so vast and seemingly solid earth is but an atom among atoms, whirling, no man knows whither, through illimitable space; which demonstrates that what we call the peaceful heaven above us, is but that space, filled by an infinitely subtle matter whose particles are seething and surging, like the waves of an angry sea; which opens up to us infinite regions where nothing is known, or ever seems to have been known, but matter and force, operating according to rigid rules; which leads us to contemplate phenomena the very nature of which demonstrates that they must have had a beginning, and that they must have an end, but the very nature of which also proves that

the beginning was, to our conceptions of time, infinitely remote, and that the end is as immeasurably distant.

*Lay Sermons, Addresses and Reviews*

Chapter I (p. 14)

D. Appleton & Co. New York, New York, USA. 1903

**Jacoby, Harold** 1865–1932

American astronomer

A generation ago, men thought the “perfect science,” for so we love to, call astronomy, could advance only by increasing a little the exact precision of observation.

*Practical Talks by an Astronomer*

The Pole Star (p. 19)

Charles Scribner’s Sons. New York, New York, USA. 1902

**Jeans, Sir James Hopwood** 1877–1946

English physicist and mathematician

Most sciences progress by pursuing nature into the realms of infinitely small, but for astronomy and cosmogony progress lies in the direction of the infinitely great, or, to be more exact, of the unthinkable great.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1926*

The New Outlook in Cosmogony (p. 151)

Government Printing Office. Washington, D.C. 1928

Astronomy has always stood aloof from the other sciences; her field of research is apart, her methods are entirely her own, and, most significant of all, her results have different values from those of other sciences. While these reward mankind by utilitarian gifts, new methods for the production of wealth, the increase of pleasure or the avoidance of pain, astronomy has so far given us only food for intellectual contemplation.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1926*

The New Outlook in Cosmogony (p. 151)

Government Printing Office. Washington, D.C. 1928

**Jeffers, Robinson** 1887–1962

American poet

Therefore astronomy is the most noble science: is the most useless.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Double Axe: The Inhumanist (p. 291)

Stanford University Press. Stanford, California. USA. 1988

There is nothing like astronomy to pull the stuff out of man, His stupid dreams and red-rooster importance: let him count the star-swirls.

In Tim Hunt (ed.)

*The Collected Poetry of Robinson Jeffers* (Volume 3)

The Polar Ice-Caps Are Melting (p. 476)

Stanford University Press. Stanford, California. USA. 1988

**Keill, John** 1671–1721

Scottish mathematician and natural philosopher

Among all the Mathematical Sciences which have been continually improved, and are daily improving in the

World, the First Place has, as it were, by general Consent, Been always given to Astronomy.

*An Introduction to the True Astronomy*

To His Grace Jones Duke of Chandos

Printed for Bernard Lintot. London, England. 1721

Astronomy teaches us to observe and discover the Motions of the Heavenly Bodies, and it weighs and considers the Force and Vigor by which they circulate in their Orbs. It is a Science which the greatest Heroes from the beginning of the World have taken Pleasure to Study and improve; so that it was always esteemed as a Science fit for Kings and Emperors to employ themselves in.

*An Introduction to the True Astronomy*

The Preface (p. I)

Printed for Bernard Lintot. London, England. 1721

There is nothing in Nature that does more show the piercing Force of Human Understanding, the sublimity of its Speculations and deep researchers, than true Astronomy. It raises our Minds above our Senses, and even in contradiction to them, shows us the true System of the World: the faculty of Reason by which we have made these great discoveries in the Heavens must needs be derived from Heaven, since no Earthly Principle can attain so great a Perfection.

*An Introduction to the True Astronomy*

Lecture IV (pp. 27–28)

Printed for Bernard Lintot. London, England. 1721

**Kepler, Johannes** 1571–1630

German astronomer

But whoever is too stupid to understand astronomical science, or too weak to believe Copernicus without affecting his faith, I would advise him that, having dismissed astronomical studies and having damned whatever philosophical opinions he pleases, he minds his own business and betakes himself home to scratch in his own dirt patch, abandoning this wandering about the world.

*New Astronomy*

Author’s introduction (pp. 65–66)

At the University Press. Cambridge, England. 1992

It is true that a divine voice, which enjoins humans to study astronomy, is expressed in the world itself, not in words or syllables, but in things themselves and in the conformity of the human intellect and senses with the sequence of celestial bodies and their disposition.

*New Astronomy*

Part II, 7 (p. 183)

At the University Press. Cambridge, England. 1992

Astronomy has two ends, to save the appearances and to contemplate the true form of the edifice of the world.

In Michael Zeilik

*Astronomy: The Evolving Universe* (6th edition)

Chapter Three, The New Cosmic Order (p. 43)

John Wiley & Sons, Inc. New York, New York, USA. 1991

I am much occupied with the investigation of physical causes. My aim in this is to show that the celestial machine is to be likened not to a divine organism, but rather a clockwork...

In Michael Zeilik

*Astronomy: The Evolving Universe* (6th edition)

Chapter Four, The Clockwork Universe (p. 51)

John Wiley & Sons, Inc. New York, New York, USA. 1991

As in every discipline, so in astronomy, too, the conclusions that we teach the reader are seriously intended, and our discussion is no mere game.

*Opera Omnia* (Volume 1) (p. 239)

**Lanczos, Cornelius** 1893–1974

Hungarian mathematician and physicist

Astronomy was the cradle of the natural sciences and the starting point of geometrical theories.

*Space Through the Ages*

Academic Press, Inc. London, England. 1970

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

Of all the natural sciences Astronomy is that which presents the longest series of discoveries. There is an immense distance from the first view of the heavens, to that general view by which, at the present day, we comprehend the past and future state of the system of the world.

Translated by John Pond

*The System of the World* (Volume 1)

System of the World (p. 1)

Printed for Richard Phillips. London, England. 1809

Astronomy has already made an important step, in making us acquainted with the motion of the Earth, and the epicycles which the Moon and the satellites describe on the orbits of their respective planets. But if ages were necessary in order to know the motions of the planetary system, what a great length of time must be required for the determination of the motions of the Sun and the stars; notwithstanding this, such motions appear to be already indicated by observations.

Translated Henry H. Harte

*The Systems of the World* (Volume 2) (p. 338)

University Press. Dublin, Ireland. 1830

The progress of astronomy depends on these three things: the measure of time, that of angles, and the perfection of optical instruments. The two first are nearly as perfect as we could wish; it is therefore to the improvement of the latter that our attention should be directed.

Translated Henry H. Harte

*The Systems of the World* (Volume 2) (p. 339)

University Press. Dublin, Ireland. 1830

Contemplated as one grand whole, astronomy is the most beautiful monument of the human mind; the noblest record of its intelligence.

Translated by John Pond

*The System of the World* (Volume 2)

Book V, Chapter VI (p. 373)

Printed for Richard Phillips

London, England. 1809

Astronomy, considered in the most general way, is a great problem of mechanics, the arbitrary data of which are the elements of the celestial movements; its solution depends both on the accuracy of observations and on the perfection of analysis.

*Celestial Mechanics*

Preface

Chelsea Publishing Company. Bronx, New York, USA. 1966

**Lapworth, Charles** 1842–1920

English Geologist

Along the whole range of the concrete sciences there is perhaps not one that has so effectually compelled the respect of men as Astronomy. There is not one in whose progress they have taken so keen an interest, or whose conclusions have been so unhesitatingly accepted.

The Relations of Geology

*Scottish Geographical Magazine*, Volume XIX, Number 8, August, 1902 (p. 395)

**Larrabee, Eric** 1922–90

American historian

Astronomy was independently discovered by Copernicus and Kepler, who sent the news to each other (*de nova stella*) by sidereal messenger.

John Lane. London, England. 1911

**Lichtenberg, Georg Christoph** 1742–99

German physicist and satirical writer

Astronomy is perhaps the science whose discoveries owe least to chance, in which human understanding appears in its whole magnitude, and through which man can best learn how small he is.

*Lichtenberg: Aphorisms & Letters*

Notebook c, Aphorism 23

Jonathan Cape. London, England. 1969

**Long, Roger** 1680–1770

English astronomer

Astronomy is a science which, in all ages and countries flourishing in arts and politeness, has engaged the attention of the curious: it has not only employed the pens of

the most eloquent orators and embellished the writings of poets of the most elevated genius; but has also been cultivated by the greatest princes, the ablest statesmen, and the wisest philosophers...

*Astronomy, In Five Books* (Volume 1)

Preface (p. iii)

Printed for the Writer. Cambridge, England. 1742

**Lowell, Percival** 1855–1916

American astronomer

Astronomy is usually thought of as the study of the bodies visible in the sky. And such it largely is when the present state of the universe alone is considered. But when we attempt to peer into its past and to foresee its future, we find ourselves facing a new side of the heavens – the contemplation of the invisible there. For in the evolution of worlds not simply must the processes be followed by the mind’s eye, so short the span of human life, but they begin and end in what we cannot see.

*The Evolution of Worlds*

Chapter I (p. 1)

If astronomy teaches anything, it teaches that man is but a detail in the evolution of the universe, and that resembling though diverse details are inevitably to be expected in the host of orbs around him. He learns that, though he will probably never find his double anywhere, he is destined to discover any number of cousins scattered through space.

*Mars*

Conclusion (p. 212)

Longmans, Green, & Co. London, England. 1896

**Mann, Horace** 1796–1859

American educator

Astronomy...one of the sublimest fields of human investigation. The mind that grasps its facts and principles receives something of the enlargement and grandeur belonging to the science itself.

*Annual Reports of the Secretary of the Board of Education of Massachusetts for 1844* (p. 441)

Lea & Shepard Publishers. Boston, Massachusetts, USA. 1891

Truly the study of the stars – the science of astronomy – is the science of Infinity and Eternity.

*Secrets of the Stars*

Chapter I (pp. 3–4)

Thomas Y. Crowell Co. New York, New York, USA. 1922

**Melville, Herman** 1819–91

American novelist

I am of a meditative humour, and at sea used often to mount aloft at night, and, seating myself on one of the upper yards, tuck my jacket about me and give loose to reflection. In some ships in which I have done this, the

sailors used to fancy that I must be studying astronomy – which, indeed, to some extent, was the case.... Then, to study the stars upon the wide, boundless sea, is divine ...

*White Jacket: Or, The World in a Man-of-War*

Chapter XIX (pp. 75, 75)

A.L. Burt Co. New York, New York, USA. 1892

“Ay,” cried Media, “the study of astronomy is wonderfully facilitated by wine. Fill up, old Ptolemy, and tell us should you discover a new planet.

*Mardi* (Volume 2)

Chapter XLVII (p. 194)

Harper & Brothers Publishers. New York, New York, USA. 1849

**Miller, Robert Kalley**

No biographical data available

Anyone listening to the conversation of two astronomers, and hearing them descanting enthusiastically about perigees, apogees, and syzygies, right ascensions and declinations, precession of the equinoxes, and the longitude of the moon’s ascending node; or anyone opening at random the pages of a work on the science, and finding an incomprehensible mass of calculations, formulae extending over twenty lines and using up all the letters of two or three alphabets, and diagrams like nothing in the earth beneath, or in the waters under the earth, and only bearing a very faint resemblance to things in heaven above; anyone, we repeat, on getting such an introduction to the subject, would be very much tempted to think that romance and astronomy were altogether incompatible.

*The Romance of Astronomy* (2nd edition)

The Romance of Astronomy (pp. 1–2)

Macmillan & Company Ltd. London, England. 1873

The science which fathoms the infinite and reckons up the eternal, which pierces the abysses of space, grasps the orb which we see now by the light that left it eighty thousand years ago, measures its distance, and traces its movements – the science which accomplishes such marvels as these, and the history of the great men who achieved these noblest triumphs of human intellect – must surely furnish many themes and contain many episodes of a character as wonderful and as truly romantic as we can find within the airy realms of fiction or of poetry.

*The Romance of Astronomy* (2nd edition)

The Romance of Astronomy (pp. 2–3)

Macmillan & Company Ltd. London, England. 1873

...besides the grandeur of the phenomena of astronomy and the romance which gathers round its history in all ages and casts a brilliant gleam here and there upon its sober annals, there often flashes even across the pages of the driest and most mathematical parts of the subject a glimpse of strange and unexpected interest; and a fact here and a figure there will start the mind in a train of fresh and novel speculation, and set the fancy to luxuriate in new and untrodden realms. Many of these points,

moreover, to which we allude, though very interesting and wonderful in themselves, are yet of comparatively little importance from an astronomical point of view; their interest centres in themselves, and the results to which they lead must be regarded as rather curious than valuable; and hence they are but little to be met with in books, or if touched upon at all, are soon abandoned with the remark that it is time to quit such regions of endless and unavailing speculation.

*The Romance of Astronomy* (2nd edition)

The Romance of Astronomy (p. 3)

Chapter I (p. 3)

National Academy Press. Washington, D.C. 1982

### **Newcomb, Simon** 1835–1909

Canadian-born American astronomer

[Astronomy] seems to have the strongest hold on minds which are not intimately acquainted with its work. The view taken by such minds is not distracted by the technical details which trouble the investigator, and its great outlines are seen through an atmosphere of sentiment, which softens out the algebraic formulae with which the astronomer is concerned into those magnificent conceptions of creation which are the delight of all minds, trained or untrained.

*Harper's New Monthly Magazine*, February, 1885

The so-called problems of astronomy are not separate and independent, but are rather the parts of one great problem, that of increasing our knowledge of the universe in its widest extent.

In George Iles

*Little Masterpieces of Science*

Problems of Astronomy (p. 33)

Doubleday, Page & Co. New York, New York, USA. 1902

### Orchard, Thomas Nathaniel

No biographical data available

Astronomy is the oldest and sublimest of the sciences. The dazzling splendor of the great Orb of Day; the subdued radiance of the silvery Moon with her ever-recurring phases; the luster and glow of the swift-speeding planets; the number and brilliancy of the stars all moving in harmonious unison and in orderly array excite in the mind of a contemplative observer, thoughts of the deepest wonder and admiration.

*Milton's Astronomy: The Astronomy of "Paradise Lost"*

Chapter I (p. 2)

Longmans, Green & Co. London, England. 1913

### Pagel, Bernard 1930–

British astronomer

Astronomy is a branch of science that enjoys a universal fascination. One of the reasons why it fascinates people is that the sheer romance of the night sky never palls even for the most hard-bitten observer – at least in the warm and comparatively short nights of the summer. In winter it has to be admitted that observing is not quite so romantic after one has been at it for six hours or more, but there are always enough interesting things in the sky itself to compensate one for the effort.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1963*

The Analysis of Starlight (p. 301)

Government Printing Office. Washington, D.C. 1964

### Penrose, Roger 1931–

English mathematical physicist

Yet nature does not always prefer conventional explanations, least of all in astronomy.

Black Holes

*Scientific American*, Volume 226, Number 5, May, 1972 (p. 46)

### Penzias, Arno 1933–

German-American mathematical physicist

Astronomy leads us to a unique event, a universe which was created out of nothing, one with the very delicate balance needed to provide exactly the conditions required to permit life, and one which has an underlying (one might say “supernatural”) plan.

In Henry Margenau and Roy Abraham Varghese (eds.)

### Pliny (C. Plinius Secundus) 23–79

Roman savant and author

Most Men are ignorant of that Secret which, by great Study of the Heavens, Men of deep Learning have found out: namely, that it is the Fires of uppermost Planets, which, falling to the Earth, carry the Name of Lightnings ...

*Pliny's Natural History. In Thirty-seven Books*

Book II, Chapter XX (p. 58)

Printed for the Club by G. Barclay. London, England. 1847–1849

### Poincaré, Jules Henri 1854–1912

French mathematician and theoretical astronomer

Governments and parliaments must find that astronomy is one of the sciences which cost most dear: the least

instrument costs hundreds of thousands of dollars, the least observatory costs millions; each eclipse carries with it supplementary appropriations. And all that for stars which are so far away, which are complete strangers to our electoral contests, and in all probability will never take any part in them. It must be that our politicians have retained a remnant of idealism, a vague instinct for what is grand; truly, I think they have been calumniated; they should be encouraged and shown that this instinct does not deceive them, that they are not dupes of that idealism.

*The Foundations of Science*

*The Value of Science*

Part II, Chapter VI (p. 289)

The Science Press. New York, New York, USA. 1921

Astronomy is useful because it raises us above ourselves; it is useful because it is grand; that is what we should say. It shows us how small is man's body, how great his mind, since his intelligence can embrace the whole of this dazzling immensity, where his body is only an obscure point, and enjoy its silent harmony.

*The Foundations of Science*

*The Value of Science*

Part II, Chapter VI (p. 289)

The Science Press. New York, New York, USA. 1921

### **Proctor, Richard Anthony** 1837–88

English astronomer

Astronomy...is of all others the science which seems to present to us the most striking instance of waste...

*Our Place Among the Infinities*

Of Seeming Waste in Nature (p. 40)

Chatto & Windus. London, England. 1879

Among the many striking contrasts between the seeming and the real suggested by the study of astronomy, there is none more startling than the contrast which exists between the apparent repose of the heavens and what is really taking place among the star depths.

*Select Translations from the Greek Minor Poets*

An Epigram (p. 299)

Simpkin, Marsahl & Co. London, England. 1838

### **Raymo, Chet** 1936–

American physicist and science writer

Astronomy is a science of faint lights. The excitement of astronomy lies in the way grand knowledge is distilled from barely luminous blurs in the night sky.

*The Virgin and the Mousetrap: Essays in Search of the Soul of Science*

Chapter 3 (p. 28)

The Viking Press. New York, New York, USA. 1991

It is easy to be overawed by the visions of the new astronomy. Many among us would prefer to retreat into a comfortable cloud of unknowing. But if we are truly interested in knowing who we are, then we must be brave enough to accept what our senses and our reason tell us. We must enter into the universe of the galaxies and the light-years, even at the risk of spiritual vertigo, and know what after all must be known.

*The Soul of the Night*

Preface (p. ix)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1985

## **Rectangle**

To fanciful minds and theoretical speculators, the so-called "science" of modern astronomy furnishes a field, unsurpassed in any science for the unrestrained license of the imagination, and the building up of a complicated conjunction of absurdities such as to overawe the simpleton and make him gape with wonder; to deceive even those who truly believe their assumptions to be facts, and to "make men doubt Divine Revelation with as little discrimination as they were formerly called upon to believe.

*Zetetic Cosmogony*

Introduction (p. iii)

T.L. Cullingworth. Durban, South Africa. 1899

Talk about ridicule, the whole of modern astronomy is like a farcical comedy – full of surprises. One never knows what monstrous or ludicrous absurdity may come forth next.

*Zetetic Cosmogony*

Sun's Distance (p. 115)

T.L. Cullingworth. Durban, South Africa. 1899

### **Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

In astronomy, the law of gravitation is plainly better worth knowing than the position of a particular planet on a particular night, or even on every night throughout a year. There are in the law a splendor and simplicity and sense of mastery which illuminate a mass of otherwise uninteresting details....

*Basic Writings of Bertrand Russell*

On History

Simon & Schuster. New York, New York, USA. 1961

### **Russell, Henry Norris** 1877–1957

American astronomer

The main object of astronomy, as of all science, is not the collection of facts, but the development, on the basis

of collected facts, of satisfactory theories regarding the nature, mutual relations, and probable history and evolution of the objects of study.

Some Problems of Sidereal Astronomy  
*Proceedings of the National Academy of Sciences*, Volume 5, Number 10, October 15, 1919 (p. 391)

**Ryle, Martin** 1918–84  
English radio astronomer

Astronomy differs from most sciences in that we cannot do experiments; the astronomer must build up from his existing observations a picture or “model” of the Universe, and then look for further effects which should be observable if his model is correct.

Radio Astronomy and Cosmology  
*Proceedings of the Royal Institution*, Volume 38, Number 173, 1961 (p. 439)

**Sagan, Carl** 1934–96  
American astronomer and author

It has been said that astronomy is a humbling and character building experience. There is perhaps no better demonstration of the folly of human conceits than this distant image of our tiny world. To me, it underscores our responsibility to deal more kindly with one another, and to preserve and cherish the pale blue dot, the only home we’ve ever known.

*Pale Blue Dot: A Vision of the Human Future in Space*  
Chapter 1 (p. 9)  
Random House, Inc. New York, New York, USA. 1994

**Serviss, Garrett Putnam** 1851–1921  
American science fiction writer

What Froude says of history is true also of astronomy: it is the most impressive where it transcends explanation.

*Curiosities of the Sky*  
Preface (p. xv)  
Harper & Brothers Publishers. New York, New York, USA. 1909

**Seung, T. K.** 1930–  
Korean philosopher

The distinction between pure and empirical astronomy is like the distinction between pure and empirical geometry. Pure geometry is a priori; it is independent of empirical data. Empirical Geometry is a posteriori; it is based on empirical data.

*Plato Rediscovered: Human Value and Social Order*  
Chapter 4 (p. 118)  
Rowman & Littlefield Publishers  
Lanham, Maryland, USA. 1996

**Shakespeare, William** 1564–1616  
English poet, playwright, and actor

There’s some ill planet reigns.  
I must be patient till the heavens look  
With an aspect more favorable.

Act II, Scene ii, l. 116–117  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shapley, Harlow** 1885–1972  
American astronomer

...the most interesting feature of this science astronomy (and of all science) is our eager ignorance.

Astronomy  
*Scientific American*, Volume 183, Number 3, September, 1950 (pp. 25–26)

**Sherrod, P. Clay**  
American astronomer and educator

Astronomy is a unique science in that as we learn more and more, the universe becomes even less known and more mysterious. In the theoretical end of things, astronomy allows the average person to think as far away as the mind will allow.

*A Complete Manual of Amateur Astronomy*  
Preface (p. xii)  
Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1981

Above us, the sparkling stars of the night skies stretch out like thousands of diamonds suspended on the curtain of space. Unfolding through the beauty and the mysteries of this seemingly endless expanse are patterns and answers familiar to those willing to study them...There is an affinity for the eternity of space experienced by all mankind, a kind of motherhood in the stars to those who study space.

*A Complete Manual of Amateur Astronomy*  
Introduction (p. 1)  
Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1981

**Sillman, Benjamin** 1779–1864  
American chemist and geologist

Astronomy is, not without reason, regarded, by mankind, as the sublimest of the natural sciences. Its objects, so frequently visible, and therefore familiar, being always remote and inaccessible, do not lose their dignity.

*Elements of Chemistry* (Volume 1)  
Introduction (p. 11)  
Hezekiah Howe. New Haven, Connecticut, USA. 1830

**Smith, Goldwin** 1823–1910  
British-Canadian historian and journalist

Astronomy has its practical uses, without which man's intellect would scarcely rouse itself to those speculations; but its greatest result is a revelation of immensity pervaded by one informing mind; and this revelation is made by astronomy only in the same sense in which the telescope reveals the stars to the eye of the astronomer.

*The World's Best Orations: From the Earliest Period to the Present Time* (Volume 9)

The Secret Beyond Science (p. 3476)

Ferd. P. Keiser. St. Louis, Missouri, USA. 1899

**Somerville, Mary** 1780–1872  
English mathematician

Physical astronomy is the science which compares and identifies the laws of motion observed on earth with the motions that take place in the heavens; and which traces, by an uninterrupted chain of deduction from the great principle that governs the universe, the revolutions and rotations of the planets, and the oscillations of the fluids at their surfaces; and which estimates the changes the system has hitherto undergone, or may hereafter experience – changes which require millions of years for their accomplishment.

*The Connection of the Physical Sciences* (9th edition)

Introduction (p. 3)

John Murray. London, England. 1858

A complete acquaintance with Physical Astronomy can only be attained by those who are well versed in the higher branches of mathematical and mechanical science: such alone can appreciate the extreme beauty of the results, and of the means by which these results are obtained.

*Mechanism of the Heavens*

Preliminary Dissertation (p. vii)

John Murray. London, England. 1831

A complete acquaintance with Physical Astronomy can only be attained by those who are well versed in the higher branches of mathematical and mechanical science: such alone can appreciate the extreme beauty of the results, and of the means by which these results are obtained.

*Mechanism of the Heavens*

Preliminary Dissertation (p. 2)

John Murray. London, England. 1831

**Steele, Joel Dorman** 1836–86  
American educator

It [astronomy] is, above all others, a science that cultivates the imagination. Yet its theories and distances are based upon rigorous mathematical demonstrations. Thus the study has at once the beauty of poetry and the exactness of Geometry.

*The Story of the Stars: New Descriptive Astronomy*

Introductory Remarks (p. 1)

American Book Co. Chicago, Illinois, USA. 1884

**Struve, Otto** 1897–1963  
Russian-born American chemist and geologist

Astronomy has had three great revolutions in the past four hundred years: The first was the Copernican revolution that removed the earth from the center of the solar system and placed it 150 million kilometers away from it; the second occurred between 1920 and 1930 when, as a result of the work of H. Shapley and R. J. Trumpler, we realized that the solar system is not at the center of the Milky Way but about 30,000 light years away from it, in a relatively dim spiral arm; the third is occurring now, and, whether we want it or not, we must take part in it. This is the revolution embodied in the question: Are we alone in the universe?

*The Universe*

Chapter VI (p. 157)

The MIT Press. Cambridge, Massachusetts, USA. 1962

English poet

These are Astronomy and Geology, terrible Muses!

*Alfred Tennyson's Poetical Works*

Parnassus, Part II, l. 15

Oxford University Press, Inc. London, England. 1953

We fronted there the learning of all Spain,  
All their cosmogonies, their astronomies...

*Alfred Tennyson's Poetical Works*

Columbus, l. 41–42

Oxford University Press, Inc. London, England. 1953

**Thatcher, Oliver Joseph**  
Writer

Astronomy is the soul of geography and hydrography, for the various appearances of the sky in various districts and regions of the earth and sea are known only by astronomy.

*The Library of Original Sources*

On the Principles of Astronomy (p. 311)

University Research Extension Co. Milwaukee, Wisconsin, USA. 1915

It [astronomy] is the science of treating of the causes of those celestial appearances which we who live on the earth observe and which mark the changes of times and seasons; by the studying of which we are able to predict for the future the face of the heavens, that is, the stellar phenomena, and to assign fixed dates for those which have occurred in the past.

*The Library of Original Sources* (Volume 5)

On the Principles of Astronomy (p. 311)

University Research Extension Co. Milwaukee, Wisconsin, USA. 1915

It [astronomy] is...subordinate to the general subject of mathematics and uses arithmetic and geometry as its two wings, studying the extent and form of the bodies and motions of the universe and computing the periods, by

these means expediting its demonstrations and reducing them to use and practical value.

*The Library of Original Sources* (Volume 5)

On the Principles of Astronomy (p. 311)

University Research Extension Co. Milwaukee, Wisconsin, USA. 1915

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Astronomy is a fashionable study, patronized by princes, but not fungi.

*The Journal of Henry D. Thoreau* (Volume 12)

October 15, 1859 (p. 391)

Houghton Mifflin Company, Boston, Massachusetts, USA. 1949

**Todd, David Peck**

No biographical data available

**Lynn, William Thynne**

No biographical data available

Astronomy may be styled a very aristocrat among the sciences; but, while its cosmic conceptions never fail to arouse the broadest general interest, it is an interest that has by no means led to a knowledge of this engrossing science proportionately widespread.

*Stars and Telescopes: A Hand-book of Popular Astronomy*

Introduction (p. 1)

Little, Brown & Co. Boston, Massachusetts, USA. 1899

**Treeby, S.**

No biographical data available

Of all the subjects that engage the lucubrations of the sage, the speculations of the philosopher, or which, enrich the understandings of mankind, Astronomy is, without competition, the most sublime. It is nothing less than the contemplation of the operations of omnipotent power, directed by infinite wisdom, which are circulated through boundless space, for the happiness of an incalculable number of created beings, whether they lire with us upon the earth, are inhabitants of our satellite the Moon, or residents of the purer regions of Mercury, or the denser climates of Saturn; all are the offspring of one benign parent, and partake alike of his fatherly munificence.

*The Elements of Astronomy* (2nd edition)

Preface (p. 7)

Samuel Wood & Son. New York, New York, USA. 1826

**Todhunter, Isaac** 1820–84

English mathematician

Admission to its [astronomy] sanctuary, and to the privileges and feelings of a votary, it is only to be gained by one means, – sound and sufficient knowledge of mathematics, the great instrument of all exact inquiry, without which no man can ever make such advances in this or any other of the higher departments of science as can entitle him to form an independent opinion on any subject of discussion within their range.

*The Conflict of Studies and Other Essays on Subjects Connected with Education*

Private Study of Mathematics (p. 66)

Macmillan & Company Ltd. London, England. 1873

**Trumbull, John** 1756–1843

American painter

Though in astronomy survey'd,

His constant course was retrograde;

O'er Newton's system though he sleeps,

And finds his wits in dark eclipse!

In Florian Cajori

*The Teaching and History of Mathematics in the United States*

Chapter II (p. 62)

Government Printing Office. Washington, D.C. 1890

**Twain, Mark (Samuel Langhorne**

**Clemens)** 1835–1910

American author and humorist

I love to revel in philosophical matters – especially astronomy. I study astronomy more than any other foolishness there is. I am a perfect slave to it. I am at it all the time. I have got more smoked glass than clothes. I am as familiar with the stars as the comets are. I know all the facts and figures and I have all the knowledge there is concerning them. I yelp astronomy like a sun-dog, and paw the constellations like Ursa Major.

Letter from Mark Twain, San Francisco, Alta California, August 1, 1869

**van Vleck, Edward B.** 1863–1943

American mathematician

Astronomy is the foe of small thought.

Address at the Dedication of the van Vleck Observatory

*Popular Astronomy*, Volume XXIV, Number 7, August-September, 1916 (p. 418)

**Virgil** 70 BCE–19 BCE

Roman epic, didactic, and idyllic poet

...may the Muses sweet,

Whose rites I hear with mighty passion pierced,

Receive, and show the paths and stars of heaven,

The sun's eclipses and the labouring moons...

In *Great Books of the Western World* (Volume 13)

*The Georgics*

Book II, l. 475–478

**Voltaire (François-Marie Arouet)** 1694–1778

French writer

Superstition is to religion what astrology is to astronomy!

a very stupid daughter of a very wise mother.

In J. de Finad

*A Thousand Flashes of French Wit, Wisdom, and Wickedness*

D. Appleton & Company. New York, New York, USA. 1890

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

While the illusion of the senses would make the stars stationary in the vault of heaven, Astronomy, by her

aspiring labors, has assigned indefinite bounds to space; and if she have set limits to the great nebula to which our solar system belongs, it has only been to show us in those remote regions of space, which appear to expand in proportion to the increase of our optic powers, islet on islet of scattered nebulae.

Translated by E. C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 1)

Introduction (p. 40)

Harper & Brothers Publishers. New York, New York, USA. 1858

### **Warren, Henry White** 1831–1912

American teacher, lecturer, and writer

The greatest triumphs of men's minds have been in astronomy – and ever must be. We have not learned its alphabet yet. We read only easy lessons, with as many mistakes as happy guesses. But in time we shall know all the letters, become familiar with the combinations, be apt at their interpretation, and will read with facility the lessons of wisdom and power that are written on the earth, blazoned in the skies, and pictured by the flowers below and the rainbows above.

*Recreations in Astronomy*

Chapter I (p. 5)

Chautauqua Press. New York, New York, USA. 1886

### **White, William Hale (Mark Rutherford)** 1831–1913

English novelist

The great beauty of astronomy is not what is incomprehensible in it, but its comprehensibility – its geometrical exactitude.

*Miriam's Schooling and Other Papers*

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1890

### **Whitehead, Hal** 1952–

Canadian/British biologist

Studying the behavior of large whales has been likened to astronomy. The observer glimpses his subjects, often at long range; he cannot do experiments, and he must continually try to infer from data that are usually inadequate.

Why Whales Leap

*Scientific American*, Volume 252, Number 3, March, 1985 (p. 86)

### **Wigner, Eugene Paul** 1902–95

Hungarian-born American physicist

Physics can teach us only what the laws of nature are today. It is only Astronomy that can teach us what the initial conditions for these laws are.

The Case for Astronomy

*Proceedings of the American Philosophical Society*, Volume 8, Number 1, February, 1964 (p. 6)

The Wheel in Space: Episode 3, 1963

## ASTROPHYSICS

### **Campbell, William Wallace** 1862–1938

American astronomer

It is not possible to separate entirely the child Astrophysics from the parent Astronomy. The two are mutually dependent in much of their instrumental equipment and in many of their methods, and their results are often intimately related.

Reviews (problems in Astrophysics)

*The Astrophysical Journal*, Volume 18, Number 2, September, 1903 (p. 156)

### **Douglas, A. Vibert** 1894–1988

Canadian astronomer

On the uplifting wings of imagination the astrophysicist roams the universe from atom to atom, from star to star, from star to atom, from atom to star.

From Atoms to Stars

*Atlantic Monthly*, Volume 144, Number 2, August, 1929 (p. 165)

**Greenstein, Jesse L.** 1909–2002  
American astronomer

Theory may often delay understanding of new phenomena observed with new technology unless theorists are quite open-minded as to what types of physical laws may need to be applied: conservatism is unsafe.... In astrophysics, historically, theories have only seldom had predictive usefulness as guides to experimenters.

In W.T. Sullivan III

*The Early Years of Radio Astronomy*

Optical and Radio Astronomers in the Early Years (p. 77)  
Cambridge University Press, Cambridge, England. 1982

**Keeler, James E.** 1847–1900  
American astrophysicist

The degree of importance which we attach to a newly discovered fact or principle is influenced by many circumstances, among which we cannot fail to recognize some of the failings of human nature. When progress is rapid, individual achievements lose their prominence, like mountain peaks rising from a high plateau. The discovery of an asteroid was once a notable event. Now it attracts little attention, outside of a small circle of observers, and it is probable that few of us could say just how many of these little bodies have been brought to light during the past year. In astrophysics discoveries of the highest significance have succeeded one another so rapidly that they are now taken as a matter of course.

The Importance of Astrophysical Research and Their Relation of Astrophysics to Other Physical Sciences

*The Astrophysical Journal*, Volume 6, Number 4, November, 1897 (p. 274)

A feature of astrophysical research which I do not wish to leave unmentioned is the interest which is felt in it by the public. Those who are interested in the results of science, but who care little for methods, and know nothing of elegant forms of analysis, are naturally more attracted by the view of the heavenly bodies which astrophysics presents, than by the view which is obtained from the standpoint of the older astronomy. Astrophysics paints its picture in the brighter colors.

The Importance of Astrophysical Research and Their Relation of Astrophysics to Other Physical Sciences

*The Astrophysical Journal*, Volume 6, Number 4, November, 1897 (p. 275)

What an effort to grasp something tangible we observe in the earlier writing on Fermat's principle! What a groping in the dark after a principle felt rather than seen! And how obvious the same principle is from the standpoint of the wave theory! In a field so wide and so little explored as astrophysics, there must be novelties which can be gathered with comparatively little effort, and which may nevertheless be of no small importance. But there are also problems whose solution calls for the exercise of the highest intellectual faculties, and for the most strenuous exertion.

The Importance of Astrophysical Research and Their Relation of Astrophysics to Other Physical Sciences

*The Astrophysical Journal*, Volume 6, Number 4, November, 1897 (pp. 276–277)

The discovery of unknown laws and principles, as well as the explanation of phenomena by laws already known, is one of its [astrophysics] most important objects.

The Importance of Astrophysical Research and the Relation of Astrophysics to Other Physical Sciences

*The Astrophysical Journal*, Volume 6, Number 4, November, 1897 (p. 277)

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

Astrophysics is a science which should be pursued in the following manner. Drink some vodka on a clear, cold night, wrap your feet in a warm blanket, sit down on your balcony and stare into the sky.... If this prescription is not followed, the science in question will appear as a petrified forest of numbers and equations; but he who observes the prescription will experience a curious state of trance. The algebraic signs will change into violin clefs and out of the bizarre equations will emerge the symphony of the rise and decline of the universe ...

*Arrow in the Blue*

Chapter XXXI (p. 341)

The Macmillan Co. London, England. 1970

**Luminet, Jean-Pierre** 1951–  
French astrophysicist

Astrophysicists have the formidable privilege of having the largest view of the Universe; particle detectors and large telescopes are today used to study distant stars, and throughout space and time, from the infinitely large to the infinitely small, the Universe never ceases to surprise us by revealing its structures little by little.

In Jean-Pierre Luminet

*Black Holes*

Forward to the French Edition (p. xv)

University Press, Cambridge, England. 1991

**Spenser, Edmund** 1552–99  
English poet

For who so list into the heavens looke,  
And search the courses of the rowling spheares,  
Shall find that from the point, where first they tooke  
Their setting forth, in these few thousand years  
They all are wandred much; that plaine appears.

William Pickering. London, England. 1844

## ATMOSPHERE

**Baden-Powell, Robert Stephenson**

**Smyth** 1857–1941  
British army lieutenant-general

The atmosphere forms a vast ocean above us, an ocean but little explored. We crawl about the ground like crabs on the bottom of the sea. We make our meteorological observations down on the ground, ignorant of all that is going on in the midst of that great expanse of air above our heads, where the clouds hang about, where the rain and the hail are formed, where the lightning-flashes have their origin.

*Quarterly Journal of the Royal Meteorological Society*, 1907 (p. 193)

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

I say that the blueness we see in the atmosphere is not intrinsic colour, but is caused by warm vapour evaporated in minute and insensible atoms on which the solar rays fall, rendering them luminous against the infinite darkness of the fiery sphere which lies beyond and includes it.

*The Notebooks of Leonardo da Vinci – Complete*

On the Color of the Atmosphere (p. 300)

Publisher undetermined

**Fourcroy, Antoine-François** 1755–1809  
French chemist

The atmosphere is a vast laboratory, in which nature operates immense analyses, solutions, precipitins, and combinations: it is a grand receiver, in which all the attenuated and volatilized productions of terrestrial bodies are received, mingled, agitated, combined, and separated.

*The Philosophy of Chemistry*

Chapter III (p. 15)

Printed for J. Johnson. London, England. 1795

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

We inhabitants of the earth enjoy a piece of good fortune to which we give very little thought, which, indeed, we take almost as much for granted as the air we breathe – I mean the fact that we have a transparent atmosphere. Some of the other planets, for instance Venus and Jupiter, have atmospheres which are so thick with clouds as to be totally opaque. If we had been born on Venus or Jupiter, we should have lived our lives without ever seeing through the clouds, and so should have known nothing of the beauty and poetry of the night sky, and nothing of the intellectual excitement and joy of trying to decipher the meaning of the vast panorama of lights which are scattered round us in all directions in space.

*The Stars in Their Courses*

Chapter 1 (p. 1)

The Macmillan Co. New York, New York, USA. 1931

**Joule, James Prescott** 1818–89  
English physicist

I cannot but be filled with admiration and gratitude for the wonderful provision thus made by the Author of nature for the protection of his creatures. Were it not for the atmosphere which covers us with a shield, impenetrable in proportion to the violence which it is called upon to resist, we should be continually exposed to a bombardment of the most fatal and irresistible character. To say nothing of the larger stones, no ordinary buildings could afford shelter from very small particles striking at the velocity of eighteen miles per second. Even dust flying at such a velocity would kill any animal exposed to it.

*The Scientific Papers of James Prescott Joule*

On Shooting Stars (p. 288)

Taylor & Francis. London, England. 1884

**van Dyke, John Charles** 1856–32  
American art critic

Even the clearest atmosphere has some coloring about it. Usually it is an indefinable blue. Air-blue means the most delicate of all colors – something not of surface depth but of transparency, builded up by superimposed strata of air many miles perhaps in thickness.

*The Desert: Further Stories in Natural Appearance*

Chapter V (p. 82)

Charles Scribner's Sons. New York, New York, USA. 1902

**ATOM****Atkins, Peter William** 1940–

English physical chemist and writer

...one or two atoms can convert a fuel to a poison, change a color, render an inedible substance edible, or replace a pungent odor with a fragrant one. That changing a single atom can have such consequences is the wonder of the chemical world.

*Molecules* (p. 2)

W.H. Freeman &amp; Company. New York, New York, USA. 1987

One of the wonders of this world is that objects so small can have such consequences: any visible lump of matter – even the merest speck – contains more atoms than there are stars in our galaxy.

*Molecules* (p. 4)

W.H. Freeman &amp; Company. New York, New York, USA. 1987

Each new atom brings something of the personality of its element to the molecule, and this conspiracy of atoms results in a molecule with properties that are richer than those of each atom alone.

*Molecules* (p. 13)

W.H. Freeman &amp; Company. New York, New York, USA. 1987

**SCIENCE'S GREATEST DISCOVERY****THE ATOM SPLIT AT 100,000 VOLTS**

Secret of Cambridge Laboratory

**MAKING A NEW WORLD**

A dream of scientists has been realised. The atom has been split, and the limitless energy thus released may transform civilisation. On the authority of Lord Rutherford, the world-famous scientist, Reynold's is able to announce exclusively that yeas of patient experiment at the Cavendish Laboratory at Cambridge have at last been successful. The effect of splitting the atom is that the electrical power now available to mankind may be multiplied 160 times. This is the greatest scientific discovery of the age.

*Reynold's Illustrated News* (London edition) Sunday, May 1, 1932

Nascent atoms are equipped with arms, with which they can combine with other atoms.

Classroom Emanations

*Journal of Chemical Education*, Volume 2, Number 7, July 1925 (p. 611)

I remember, I remember,  
When an atom was so small  
It really hardly paid you  
To think of one at all.

It was so small that anywhere  
An atom safe could be  
And pass his time in molecules  
In elemental glee.

Past and Present

*Industrial and Engineering Chemistry: News Edition*, Volume 12, Number 3, April 20, 1934 (p. 161)

10 October 1929

Rostow na Donu

USSR

Dear Professor Rutherford,

We students of our university physics club elect you our honorary president because you proved that atoms have balls.

In George Gamow

*My World Line: An Informal Autobiography*

Chapter 3 (p. 76)

The Viking Press. New York, New York, USA. 1979

**Author undetermined**

Old Time is a-flying; the atoms are dying;

Come, list to their parting oration: –

We'll soon disappear to a heavenly sphere

On account of their disintegration.

Our action's spontaneous in atoms uranious

Or radious, actinious or thorious:

But for others, the gleam of a heaven-sent beam

Must encourage their efforts laborious.

'For many a day we've been slipping away

While the savants still dozed in their slumbers;

Till at last came a man with gold-leaf and tin can

And detected our infinite numbers.'

Thus the atoms in turn, we now clearly discern,

Fly to bits with the utmost facility;

They wend on their way, and in splitting, display

An absolute lack of stability.

'Tis clear they should halt on the grave of old Dalton

On their path to celestial spheres;

And a few thousand million – let's say a quadrillion –

Should bedew it with reverent tears.

There's nothing facetious in the way that Lucretius

Imagined the Chaos to quiver;

And electrons to blunder, together, asunder,

In building up atoms forever!

Sung at the Chemical Laboratory dinner, University College, November 17, 1905

*The Death-Knell of the Atom***Baruch, Bernard M.** 1870–1965

American presidential advisor

Science has taught us how to put the atom to work. But to make it work for good instead of evil lies in the domain dealing with the principles of human duty. We are now facing a problem more of ethics than physics.

The Baruch Plan for Banning the Atom Bomb

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

When people talk of atoms obeying fixed laws, they are either ascribing some kind of intelligence and free will to atoms or they are talking nonsense.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks* (p. 72)

Jonathan Cape. London, England. 1951

Atoms have a mind as much smaller and less complex than ours as their bodies are smaller and less complex.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks* (p. 73)

Jonathan Cape. London, England. 1951

The idea of an indivisible atom is inconceivable by the lay mind. If we can conceive an idea of the atom at all, we can conceive it as capable of being cut in half...

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks* (p. 84)

Jonathan Cape. London, England. 1951

Some things can teach much to some things and little to others; some can be taught much by some things and little by others; some can neither be taught much nor teach much. All depends upon the kind of company into which an atom has got. If it has got into bad hands it will have to part with them before it can get into better. But all atoms being immortal go on learning and unlearning, combining and separating, appointing, disappointing, and being disappointed forever and ever.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks*

Immortality of Atoms and Teaching (p. 126)

Jonathan Cape. London, England. 1951

We shall never get people whose time is money to take much interest in atoms.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks*

Atoms (p. 133)

Jonathan Cape. London, England. 1951

The puzzle which puzzles every atom is the same which puzzles ourselves – a conflict of duties – our duty towards ourselves, and our duty as members of a body of politic. It is swayed by its sense of being a separate thing – of having a life to itself which nothing can share; it is also swayed by the feeling that in spite of this it is only part of an individuality which is greater than itself and which absorbs it.

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks*

Unity and Separateness (p. 143)

Jonathan Cape. London, England. 1951

**Čapek, Milič** 1909–97

Czechoslovakian philosopher and physicist

There can hardly be a sharper contrast than that between the everlasting atoms of classical physics and the vanishing "particles" of modern physics.

### Close, Frank

English writer and physicist

### Martin, M.

No biographical data available

Take a deep breath! You have just inhaled oxygen atoms that have already been breathed by every person who ever lived. At some time or other your body has contained atoms that were once part of Moses or Isaac Newton. The oxygen mixes with carbon atoms in your lungs and you exhale carbon dioxide molecules. Chemistry is at work. Plants will rearrange these atoms, converting carbon dioxide back to oxygen, and at some future date our descendants will breathe some in.... If atoms could speak, what a tale they would tell.

*The Particle Explosion*

Chapter 1 (p. 7)

Oxford University Press, Inc. Oxford, England, 1987

Atoms are the complex end-products of creation. Their best constituents were created within the first seconds of the Big Bang. Several thousand years elapsed before these particles combined to make atoms. The cold conditions where atoms exist today are far removed from the intense heat of the Big Bang. So to learn about our origins we have to see within the atoms, and study the seeds of matter.

*The Particle Explosion*

Chapter 1 (p. 7)

Oxford University Press, Inc. Oxford, England, 1987

### Cole, A. D.

American physicist

...an atom is a world in itself.... How has the indivisible unit evolved into the complex microcosm we now imagine?

Recent Evidence for the Existence of the Nucleus Atom

*Science*, New Series, Volume 41, Number 1046, January 15, 1915

(p. 73)

**Colebrooke, Henry Thomas** 1765–1837  
English orientalist

The mote, which is seen in a sunbeam, is the smallest perceptible quantity. Being a substance and an effect, it must be composed of what is less than itself: and this likewise is a substance and an effect; for the component part of a substance that has magnitude must be an effect. This again must be composed of what is smaller, and that smaller thing is an atom. It is simple and uncomposed: else the series would be endless: and, were it pursued indefinitely, there would be no difference of magnitude between a mustard-seed and a mountain, a gnat and an elephant, each alike containing an infinity of particles. The ultimate atom then is simple.

*Essays on the Religion and Philosophy of the Hindus*

Chapter VII (p. 176)

Williams & Norgate, London, England, 1858

With characteristic boldness, present physicists have calculated the size of an atom, and the effort is at least ingenious. Thus, says Lord Kelvin, "If a drop of water be magnified to the size of the earth, the atoms will average something between cricket balls and small shot." (Professor Tait suggests plums.) But this illustration, though lucid enough in its way, is not realisable; it however endorses the principle of atomic size.

*From Matter to Man: A New Theory of the Universe*

Chapter IV (p. 50)

Chapman & Hall, Ltd. London, England. 1898

**Douglas, A. Vibert** 1894–1988

Canadian astronomer

You cannot solve the riddles of the stars without invoking the aid of the atom, nor can you fully comprehend the atom without the aid of the stars. On the uplifting wings of imagination the astrophysicist roams the universe from atom to atom, from star to star, from star to atom, from atom to star. Impelled by curiosity regarding the natural universe, encouraged by the evidence for his faith in the reality of cosmic harmony, he presses on and on – a sweet and a fitting thing it is to toil for the Truth.

The atom stands as a monument to the wisdom of the Human Race. One day it may stand a tombstone to its folly.

*The Atom Story, Being the Story of the Atom and the Human Race*

Chapter I (p. 1)

Philosophical Library. New York, New York, USA. 1953

The powerful weapon which first smashed the atom was not a massive machine in a physics laboratory but a puny pencil in the hands of a genius. The year was 1905 and the genius was Albert Einstein.

*The Atom Story, Being the Story of the Atom and the Human Race* (p. 91)

Philosophical Library. New York, New York, USA. 1953

**Feynman, Richard P.** 1918–88

American theoretical physicist

The behavior of things on a very tiny scale is simply different. An atom does not behave like weight hanging on a spring and oscillating. An atom does not behave like a

miniature representation of the solar system with little planets going around orbits. Nor does it appear to be somewhat like a cloud or fog of some sort surrounding the nucleus. It behaves like nothing you have ever seen before.

*The Character of Physical Law*

Chapter 6 (p. 128)

British Broadcasting Company. London, England. 1965

I,

a universe of atoms,

an atom of the universe.

*What Do You Care What Other People Think?*

The Value of Science (p. 243)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

...the atoms that are in the brain are being replaced: the ones that were there before have gone away.

So what is this mind of ours: what are these atoms with consciousness? Last week's potatoes! They now can remember what was going on in my mind a year ago – a mind which has long ago been replaced.

To note that the thing I call my individuality is only a pattern or dance, that is what it means when one discovers how long it takes for the atoms of the brain to be replaced by other atoms. The atoms come into my brain, dance a dance, and then go out – there are always new atoms, but always doing the same dance, remembering what the dance was yesterday.

*What Do You Care What Other People Think?*

The Value of Science (p. 244)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

If instead of arranging the atoms in some definite pattern, again and again repeated, on and on, or even forming little lumps of complexity like the odor of violets, we make an arrangement which is always different from place to place, with different kinds of atoms arranged in many ways, continually changing, not repeating, how much more marvelously is it possible that this thing might behave? Is it possible that that "thing" walking back and forth in front of you, talking to you, is a great glob of these atoms in a very complex arrangement, such that the sheer complexity of it staggers the imagination as to what it can do? When we say we are a pile of atoms, we do not mean we are merely a pile of atoms, because a pile of atoms which is not repeated from one to the other might well have the possibilities which you see before you in the mirror.

*Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher*

Atoms in Motion (p. 20)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

If, in some cataclysm, all of scientific knowledge were to be destroyed, and only one sentence passed on to the next generation of creatures, what statement would contain the most information in the fewest words? I believe

it is the atomic hypothesis (or the atomic fact, if you wish to call it that) that all things are made of atoms – little particles that move around in perpetual motion, attracting each other when they are a little distance apart, but repelling upon being squeezed into one another.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 1–1 (p. 1–2)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Feynman, Richard P.** 1918–88

American theoretical physicist

**Leighton, Robert B.** 1919–97

American physicist

Everything is made of atoms. That is the key hypothesis. The most important hypothesis in all of biology, for example, is that everything that animals do, atoms do. In other words, there is nothing that living things do that cannot be understood from the point of view that they are made of atoms acting according to the laws of physics. This was not known from the beginning: it took some experimenting and theorizing to suggest this hypothesis, but now it is accepted, and it is the most useful theory for producing new ideas in the field of biology.

*The Feynman Lectures on Physics* (Volume 1)

Chapter 1–4 (pp. 1–8)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

...if all of this, all the life of a stream of water, can be nothing but a pile of atoms, how much more is possible?

*The Feynman Lectures on Physics* (Volume 1)

Chapter 1–4 (pp. 1–9)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

Atoms are completely impossible from the classical point of view...

*The Feynman Lectures on Physics* (Volume 3)

Chapter 2–4 (pp. 2–6)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

**Flammarion, Camille** 1842–1925

French astronomer and writer

The visible, tangible, ponderable, and constantly moving universe is composed of invisible, intangible, imponderable, and inert atoms.

Translated by Augusta Rice Stetson

*Urania*

Chapter VI (p. 239)

Chatto & Windus. London, England. 1891

**Freeman, Ira M.**

No biographical data available

O'er the atom's wondrous, useful pieces,

The physicist effuses;

Applauding too as Man releases

The atom's peaceful uses.

Nuclear Situation Unclear

*The Physics Teacher*, Volume 13, Number 5, May, 1975 (p. 319)

**Frisch, Otto Robert** 1904–79

Austrian-born English physicist

Today we no longer ask what really goes on in an atom; we ask what is likely to be observed – and with what likelihood – when we subject atoms to any specified influences such as light or heat, magnetic fields or electric currents.

*What Little I Remember*

Atoms (p. 20)

Cambridge University Press. Cambridge, England. 1979

**Gassendi, Pierre** 1592–1655

French logician and philosopher

As letters are the elements of writing and from letters are formed first syllables, and then successively words, phrases, and speeches, so also atoms are the elements of all things. From the atoms the smallest molecules are joined together first, and then successively somewhat bigger ones, still bigger ones, the finest and the coarsest bodies, and finally the biggest bodies.

In Walter Charleton

*Physiologia Epicuro-Gassendo-Charltoniana; or, a fabric of science natural, upon the hypothesis of atoms founded by Epicurus, repaired by Petrus Gassendus, augmented by Walter Charleton*

Animadversions (p. 108)

**Goeppert-Mayer, Maria** 1906–72

German-American physicist

No one has ever seen, nor probably ever will see, an atom, but that does not deter the physicist from trying to draw a plan of it, with the aid of such clues to its structure as he has.

The Structure of the Nucleus

*Scientific American*, Volume 184, Number 3, March, 1951 (p. 22)

**Guth, Alan** 1947–

American physicist

When one studies the properties of atoms one found that the reality is far stranger than anybody would have invented in the form of fiction.

*Parallel Universes*

BBC broadcast. February 14, 2002

**Hall, John**

No biographical data available

If that this thing we call the world

By chance on atoms was begot

Which through in ceaseless motion whirled

Yet weary not

How doth it prove

Thou art so fair and I in love.

In John D. Barrow

*The World Within the World* (p. 162)

Clarendon Press. Oxford, England. 1988

**Harrow, Benjamin** 1888–1970  
American chemist

If the constituent atoms in a tumbler of water could all be labeled for later identification, and the water were then mixed with all the water in the world, and if, after thoroughly mixing, the tumbler were again filled, it would contain two thousand of the original atoms.

In Bernard Jaffe

*New World of Chemistry* (p. 56)

Silver, Burdett & Company. New York, New York, USA. 1935

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

The atom of modern physics can be symbolized only through a partial differential equation in an abstract space of many dimensions. All its qualities are inferential; no material properties can be directly attributed to it. That is to say, any picture of the atom that our imagination is able to invent is for that very reason defective. An understanding of the atomic world in that primary sensuous fashion...is impossible.

In S.F. Mason

*A History of Science* (p. 502)

Collier Books. New York, New York, USA. 1962

It is not surprising that our language should be incapable of describing the processes occurring within the atoms, for, as has been remarked, it was invented to describe the experiences of daily life, and these consist only of processes involving exceedingly large numbers of atoms. Furthermore, it is very difficult to modify our language so that it will be able to describe these atomic processes, for words can only describe things of which we can form mental pictures, and this ability, too, is a result of daily experience.

*The Physical Principles of the Quantum Theory*

Translated by Carl Eckhart and Frank C. Hoyt (p. 11)

The University of Chicago Press. Chicago, Illinois, USA. 1930

All the qualities of the atom of modern physics are derived, it has no immediate and direct physical properties at all, i.e., every type of visual conception we might wish to design is *eo ipso*, faulty.

Translated by F.C. Hayes

*Philosophic Problems of Nuclear Science*

Chapter 2 (p. 38)

Faber & Faber Ltd. London, England. 1952

It is important that we should understand the “handwriting” of atoms for it is something which has not been thought out by man; it has far deeper meaning. Even when we shall have mastered and understood it, let us not forget that is the content not the words which is important in a tragedy or comedy and that this also holds good for our world.

*Philosophic Problems of Nuclear Science*

Chapter 7 (p. 108)

Faber & Faber Ltd. London, England. 1952

In the experiments about atomic events we have to do with things and facts, with phenomena that are just as real as any phenomena in daily life. But the atoms of the elementary particles are not as real; they form a world of potentialities or possibilities rather than one of things or facts.

*Physics and Philosophy: The Revolution in Modern Science*

Chapter X (p. 186)

Harper & Row, Publishers. New York, New York, USA. 1958

...atoms are neither things nor objects...atoms are part of observational situations...

**Higgins, Bryan** 1737–1820  
Irish physicist

...the atoms of each element are globular or nearly so; and that the spiral, spicular and other figures ascribed to these atoms are fictitious, unnecessary, and are inconsistent with the uniformity of nature, and are repugnant to experience.

In D.S.L. Cardwell (ed.)

*John Dalton & the Progress of Science*

Quoted in B.B. Kelham

Atomic Speculation in the Late Eighteenth Century (p. 112)

Manchester University Press. Manchester, England. 1968

**Hoffman, A. W.**

No biographical data available

Let the croquet balls represent our atoms, and let us distinguish the atoms of different elements by different colours. The white balls are hydrogen, the green ones chlorine atoms; the atoms of fiery oxygen are red, those of nitrogen, blue; the carbon atoms, lastly, are naturally represented by black balls.

On the Combining Power of Atoms

*Proceedings of the Royal Institution*, Volume IV, April 7, 1865 (p. 416)

**Huxley, Aldous** 1894–1963  
English writer and critic

Atoms, or perhaps it would be more accurate to say those aspects of the atom which scientists chose to consider, are immeasurable less complicated than men.

*Proper Studies*

Introduction (p. vii)

Chatto & Windus. London, England. 1957

**Jeans, Sir James Hopwood** 1877–1946  
English physicist and mathematician

The universe was a stage in which always the same actors – the atoms – played their parts, differing in disguises and groupings, but without change of identity. And these actors were endowed with immortality.

*The Mysterious Universe*

Chapter III (p. 56)

The Macmillan Company. New York, New York, USA. 1932

All the innumerable substances which occur on earth – shows, ships, sealing-wax, cabbages, kings, carpenters, walruses, oysters, everything we can think of – can be analyzed into their constituent atoms.... It might be thought that a quite incredible number of different kinds of atoms would emerge from the rich variety of substances we find on earth. Actually the number is quite small. The same atoms turn up again and again, and the great variety of substances we find on earth result, not from any great variety of atoms entering into their composition, but from the great variety of ways in which a few types of atoms can be combined.

*The Universe Around Us*

Chapter II (pp. 97–98)

The Macmillan Company. New York, New York, USA. 1929

**Jeffers, Robinson** 1887–1962

American poet

...Useless intelligence of far stars, dim knowledge of the spinning demons that make an atom...

*The Collected Poetry of Robinson Jeffers* (Volume 1)

Roan Stallion (p. 189)

Stanford University Press. Stanford, California. USA. 1988

**Jenkin, Fleeming** 1833–85

English engineer

We are not wholly without hope that the real weight of each such atom may some day be known...; that the form and motion of the parts of each atom, and the distance by which they are separated, may be calculated; that the motions by which they produce heat, electricity, and light may be illustrated by exact geometrical diagrams.... Then the motion of the planets and music of the spheres will be neglected for a while in admiration of the maze in which the tiny atoms turn.

In Sidney Colvin and J.A. Ewing (eds.)

*Papers, Literary, Scientific, & c., by the Late Fleeming Jenkin* (Volume 1)

Lucretius and the Atomic Theory

1868 (p. 213)

Longmans, Green & Company. London, England. 1887

**Kekulé, Friedrich August** 1829–96

German chemist

The question of whether atoms exist or not has but little significance from a chemical point of view: its discussion belongs rather to metaphysics. In chemistry we have only to decide whether the assumption of atoms is an hypothesis adapted to the explanation of chemical phenomena. More especially have we to consider the question whether a further development of the atomic hypothesis promises to advance our knowledge of the mechanism of chemical phenomena...

Should the progress of science lead to a theory of the constitution of chemical atoms – important as such a knowledge might be for the general philosophy of matter – it

would make but little alteration in chemistry itself. The chemical atoms will always remain the chemical unit...

In Ida Freund

*The Study of Chemical Composition*

Chapter XIX (p. 624)

At the University Press. Cambridge, England. 1904

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

The idea of an atom has been so constantly associated with incredible assumptions of infinite strength, absolute rigidity, mystical actions at a distance and indivisibility, that chemists and many other reasonable naturalists of modern times, losing all patience with it, have dismissed it to the realms of metaphysics, and made it smaller than “anything we can conceive.”

On the Size of Atoms

**Krauss, Lawrence M.** 1954–

American theoretical physicist

Our atoms are vibrant messengers from the past, and harbingers of the future. They connect us in a definite way to everything we can see about us. Let us enjoy, with them, our moment in the sun.

*Atom: An Odyssey from the Big Bang to Life on Earth...and Beyond*

Chapter 19 (p. 283)

Little, Brown & Company. Boston, Massachusetts, USA. 2001

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

The most important discoveries of the laws, methods and progress of Nature have nearly always sprung from the examination of the smaller objects which she contains.

In James R. Newman (ed.)

*The World of Mathematics* (Volume 2)

Atomic Numbers (p. 842)

Simon & Schuster. New York, New York, USA. 1956

**Le Bon, Gustave** 1841–1931

French social psychologist, author, and amateur physicist

When we study the structure of the atom, we shall arrive at the conclusion that it is an immense reservoir of energy solely constituted by a system of imponderable elements maintained in equilibrium by the rotations, attractions and repulsions of its component parts.

Translated by F. Legge

*The Evolution of Matter*

Book I, Chapter I (p. 10)

The Walter Scott Publishing Co., Ltd. London, England. 1907

**Leacock, Stephen** 1869–1944  
Canadian humorist

When Rutherford was done with the atom all the solidity was pretty well knocked out of it.

*The Boy I Left Behind Me*

Chapter VI (p. 169)

The Bodley Head. London, England. 1947

**Lederman, Leon** 1922–  
American high-energy physicist

Although atoms are way more than 99.99 percent empty space, I have a real problem in walking through a wall.

*The God Particle: If the Universe Is the Answer, What Is the Question?*

Chapter 5 (p. 184)

Bantam Dell Doubleday Publishing Group. New York, New York, USA. 1993

**Leibniz, Gottfried Wilhelm** 1646–1716  
German philosopher and mathematician

Atoms are the effect of the weakness of our imagination, for it likes to rest and therefore hurries to arrive at a conclusion in subdivisions or analyses; this is not the case in Nature, which comes from the infinite and goes to the infinite. Atoms satisfy only the imagination, but they shock the higher reason.

In John D. Barrow

*The World Within the World* (p. 166)

Clarendon Press. Oxford, England. 1988

**Lemaître, Abbé Georges** 1894–1966  
Belgian astronomer and cosmologist

The atom-world was broken into fragments, each fragment into still smaller pieces. To simplify matters, supposing that this fragmentation occurred in equal pieces, two hundred sixty generations would have been needed to reach the present pulverization of matter into our poor little atoms, almost too small to be broken again. The evolution of the world can be compared to a display of fireworks that has just ended: some few red wisps, ashes and smoke. Standing on a well-chilled cinder, we see the slow fading of the suns, and we try to recall the vanished brilliance of the origin of the worlds.

*The Primeval Atom*

Chapter II (p. 78)

van Nostrand Company, Inc. New York, New York, USA. 1950

**Lewis, Edwin Herbert** 1866–1938  
American rhetorician, novelist, and poet

She wondered why the particles of a metal stick so close together. Lucretius had said it was because the atoms were hooked. It did rather look as if in some way they overlapped, but then it also looked as if the atoms themselves were compressed. She wondered what force could be so tremendous as to squeeze atoms into iron, nickel, ruthenium, rhodium, palladium, and osmium, each a little denser than the preceding.

*White Lightning*

Chapter 76 (p. 309)

Covici-McGee. Chicago, Illinois, USA. 1923

**Lloyd, Seth** 1960–  
American professor of mechanical engineering

It's just hard to string a lot of atoms together. I mean, these things are wicked small.... They're sensitive little buggers too. But people are getting to the point where they can control these things. It's a big technological crapsnoot. In the not-too-distant future people might be able to do full-blown quantum computation.

The Best Computer in All Possible Worlds

*Discover Magazine*, October, 1995

**Locke, John** 1632–1704  
English philosopher and political theorist

...a blind fortuitous concourse of atoms, not guided by an understanding agent...

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book IV, Chapter XX, Section 15 (p. 393)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Lodge, Sir Oliver** 1851–1940  
English physicist

We do not in the least know how to harness the energy locked up in the atoms of matter. If it could be liberated at will, we would experience a violence beside which the suddenness of high explosive is gentle and leisurely.

In Thomas Thornely

*Collected Verse*

The Atom

Cambridge, England. 1939

...inside an atom there exist both attractive and repulsive forces; the resolution of an atom into its electron constituents, and the aggregation of these constituents into fresh atoms, are both perfectly thinkable. All we have to do is to ascertain by careful and patient investigation what really happens; and my experience has led me to feel sure of this, that whatever hypotheses and speculations we may frame, we cannot exceed the reality in genuine wonder. And I believe that the simplicity and beauty of the truth concerning even the material universe, when we know it, will be such as to elicit feelings of reverent awe and adoration.

*Modern Views on Matter* (p. 24)

At The Clarendon Press. Oxford, England. 1915

**Macfie, Ronald Campbell** 1867–1931  
Scottish poet and physician

...the atoms and molecules are as real as the ice-crystals in the cirrus clouds that he cannot reach – as real as the unseen members of a meteoric swarm whose death-glow is lost in the sunshine, or which past us unentangled in the night” – that the atoms are in fact “not

merely helps to puzzled mathematicians, but physical realities.”

*Science, Matter and Immortality*

Chapter IV (p. 42)

William & Norgate. London, England. 1909

...the most wonderful thing about atoms and molecules is not their power of destroying, but their powers of creating. They themselves choose their partners, and their partnerships have made the world as we know it.

*Science, Matter and Immortality*

Chapter 4 (p. 53)

William & Norgate. London, England. 1909

The atoms and molecules, by their aggregation and arrangement, by their weddings and partnerships, make everything. We put a packet of molecules, known as a seed, into the ground, and they attract other molecules from the air and soil – molecules of carbonic acid, and lime, and potassium, and so on, and lo! a lily, or a pine tree. Without mistake they carry out more machinery in each molecular brick than in a chronometer, and more molecular bricks in each leaflet than in a cathedral.

*Science, Matter and Immortality*

Chapter 4 (pp. 53–54)

William & Norgate. London, England. 1909

Atoms and molecules have been weighed; they have been proved to dance, they have been persuaded to wed, and yet their shape is still unknown.

*Science, Matter and Immortality*

Chapter IV (p. 58)

William & Norgate. London, England. 1909

Let us consider even such a minor wonder as a hen’s egg...these atoms in the egg have been gathered together in a few hours, and have come from all quarters of the earth. Not so long ago the oxygen may have come on the wings of the wind from the leaf of a lily, the hydrogen from the teardrop of a maiden, the carbon from a factory chimney, the nitrogen from the plains of Chili, the sulphur from Mount Pelée, and the iron from a meteorite. And behold, there they all are collected together by red rivers of blood into an eggshell, ready to make a chicken!

*Science, Matter and Immortality*

Chapter 17 (pp. 215–216)

William & Norgate. London, England. 1909

### **Mach, Ernst** 1838–1916

Austrian physicist and philosopher

The atomic theory plays a part in physics similar to that of certain auxiliary concepts in mathematics: it is a mathematical model for facilitating the mental reproduction of facts. Although we represent vibrations by the harmonic formula, the phenomena of cooling by exponentials, falls by squares of time, etc., no one would fancy that vibrations in themselves have anything to do with circular functions, or the motion of falling bodies with squares.

*The Science of Mechanics* (5th edition)

Chapter IV, Part IV, Section 9 (p. 590)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

If belief in the reality of atoms is so important to you, I cut myself off from the physicist’s mode of thinking.

In Timothy Ferris

*The Red Limit: The Search for the Edge of the Universe*

Letter to Max Planck (p. 65)

William Morrow & Company, Inc. New York, New York, USA. 1977

The atom must remain a tool for representing phenomena, like the functions of mathematics.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

The Economical Nature of Physical Inquiry (p. 207)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

### **Mann, Thomas** 1875–1955

German-born American novelist

The atom was a cosmic system, laden with energy; in which heavenly bodies rioted rotating about a centre like a sun; through whose ethereal space comets drove with the speed of light years, kept in their eccentric orbits by the power of the central body.

*The Magic Mountain*

Chapter V

Research (p. 284)

Alfred A. Knopf. New York, New York, USA. 1966

### **Maxwell, James Clerk** 1831–79

Scottish physicist

At any rate the atoms are a very tough lot, and can stand a great deal of knocking about...

In Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell with Selections from His Correspondence and Occasional Writings*

Correspondence (p. 391)

Macmillan & Company Ltd. London, England. 1882

At quite uncertain times and places,

The atoms left their heavenly path,

And by fortuitous embraces,

Engendered all that being hath.

In Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell with Selections from His Correspondence and Occasional Writings*

Molecular Evolution (p. 637)

Macmillan & Company Ltd. London, England. 1882

How freely he scatters his atoms before the beginning of years;

How he clothes them with force as a garment, those small incompressible spheres!

In Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell with Selections from His Correspondence and Occasional Writings*

British Association, 1874 (p. 639)

Macmillan & Company Ltd. London, England. 1882

In the very beginning of science,  
the parsons, who managed things then,

Being handy with hammer and chisel,  
made gods in the likeness o' men;  
Till Commerce arose and at length  
some men of exceptional power  
Supplanted both demons and gods by  
the atoms, which last to this hour.

In John D. Barrow

*The World Within the World* (p. 168)

Clarendon Press. Oxford, England. 1988

[Atoms]...the imperishable foundation-stones of the universe.

In James Jeans

*The Mysterious Universe*

Chapter III (p. 64)

The Macmillan Company. New York, New York, USA. 1932

An atom is a body which cannot be cut in two.

In W.D. Niven (ed.)

*The Scientific Papers of James Clerk Maxwell* (Volume 2)

Molecules (p. 361)

Dover Publications. New York, New York, USA. 1965

...though many a speculator, as he has seen the vision recede before him into the innermost sanctuary of the inconceivably little, has had to confess that the quest was not for him, and though philosophers in every age have been exhorting each other to direct their minds to some more useful and attainable aim, each generation, from the earliest dawn of science to the present time, has contributed a due proportion of its ablest intellects to the quest of the ultimate atom.

Molecules

*Nature*, September, 1873 (p. 437)

**Mendeleev, Dmitry Ivanovich** 1834–1907

Russian chemist

Chemical atoms may be regarded as separate members of such systems (as, for instance, the sun, planets, comets, and other heavenly bodies), whilst the ether of light may be likened to the cosmic dust which without doubt is distributed throughout space. The present condition of molecular mechanics is, to a certain extent, copied from celestial mechanics, but there is nothing to prove the entire similarity of both worlds, although it appears to the mind that, starting from the primary elements of the unity of creation, such a representation is the most likely.

*The Principles of Chemistry* (Volume 1)

Introduction (p. 29)

Longmans, Green & Co. London, England. 1891

The invisible world of chemical atoms is still waiting for the creator of chemical mechanics.

*The Principles of Chemistry* Part IV

Appendix I (p. 455)

P.F. Collier & Son. New York, New York, USA. 1902

**Nabokov, Vladimir Vladimirovich** 1899–1977

Russian-born American novelist

But the individual atom is free: it pulsates as it wants, in high or low gear; it decides itself when to absorb and when to radiate energy.

*Bend Sinister* (p. 159)

Henry Holt & Company. New York, New York, USA. 1947

**Ostwald, Friedrich Wilhelm** 1853–1932

Latvian-born German chemist

We must renounce the hope of representing the physical world by referring natural phenomena to a mechanics of atoms. "But" – I hear you say – "but what will we have left to give us a picture of reality if we abandon atoms?" To this I reply: "Thou shalt not take unto thee any graven images, or any likeness of anything." Our task is not to see the world through a dark and distorted mirror, but directly, so far as the nature of our minds permits. The task of science is to discern relations among realities...

In Nick Herbert

*Quantum Reality: Beyond the New Physics*

Chapter 1 (pp. 11–12)

Anchor Press. Garden City, New York, USA. 1985

**Pallister, William Hales** 1877–1946

Canadian physician

Each atom is a tiny universe  
In which electrons in orbit rehearse  
The motions of the planets round the sun,  
In miniature the actions there begun.  
It's particles revolve so far apart  
The solar system might have taught the art.

**Rees, Martin John** 1942–

15th Astronomer Royal of England

If we are to understand an everyday question like “Where  
did the atoms we are made of come from?” we must  
understand the stars.

Interview by Claudia Dreifus

*New York Times*, April 26, 1998

**Robb, Alfred Arthur** 1873–1936

English physicist

What's in an atom  
The innermost substratum?  
That's the problem he is working at today.  
He lately did discover  
How to shoot them down the player,  
And the poor little things can't get away.  
He uses as munitions  
On his hunting expeditions  
Alpha particles which out of Radium sprang.

In Ruth Moore

*Niels Bohr: The Man, His Science, and the World They Changed*  
Chapter 7 (p. 113)

Alfred A. Knopf. New York, New York, USA. 1966

A Corpusele once did oscillate so quickly to and fro,  
He always raised disturbances wherever he did go.  
He struggled hard for freedom against a powerful foe –  
An atom – who wouldn't let him go.

The Revolution of the Corpusele

*The American Physics Teacher*, Volume 17, Number 3, June, 1939  
(p. 180)

All preconceived notions he sets at defiance  
By means of some neat and ingenious appliance

By which he discovers a new law of science  
Which no one had ever suspected before.

All the chemists went off into fits,  
Some of them thought they were losing their wits,  
When quite without warning  
(Their theories scorning)

The atom one morning

He broke into bits.

In Cecilia Payne-Gaposchkin

*Introduction to Astronomy*

On J.J. Thomson (p. 341)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1954

English chemist

Atoms are round bits of wood invented by Mr. Dalton.

In William H. Brock

*The Norton History of Chemistry*

Chapter 4 (p. 128)

W.W. Norton & Company, Inc. New York, New York, USA. 1993

**Rothman, Tony** 1953–

American cosmologist

YOU MUST REMEMBER THIS: Atoms cannot be  
seen. To show that the world was made of particles a mil-  
lion times smaller than objects visible to the naked eye  
was so difficult that their existence was not established  
beyond reasonable doubt until the end of the nineteenth  
century.

*Instant Physics: From Aristotle to Einstein, and Beyond*

Chapter 2 (p. 47)

Ballentine Books. New York, New York, USA. 1995

**Rowland, Henry Augustus** 1848–1901

American physicist

The round hard atom of Newton which God alone  
could break into pieces has become a molecule com-  
posed of many atoms and each of these smaller atoms  
has become so elastic that after vibrating 100,000 times  
its amplitude of vibration is scarcely diminished. It has  
become so complicated that it can vibrate with as many  
thousand notes. We cover the atom with patches of elec-  
tricity here and there and make of it a system compared  
with which the planetary system, nay the universe itself,  
is simplicity.

*The Physical Papers of Henry Augustus Rowland*

The Highest Aim of the Physicist (p. 671)

Johns Hopkins Press. Baltimore, Maryland, USA. 1902

**Rukeyser, Muriel** 1930–80

American poet and activist

The universe is made of stories,  
not of atoms.

*The Speed of Darkness*

The Speed of Darkness

Stanza IX

Random House, Inc. New York, New York, USA. 1968

**Rutherford, Ernest** 1871–1937  
English physicist

The atom will always be a sink of energy and never a reservoir.

In Ritchie Calder  
*Profile of Science*  
Chapter 1 (p. 23)

George Allen & Unwin Ltd. London, England. 1951

My work on the atom goes on in fine style. Several atoms succumb each week.

In Ruth Moore  
*Niels Bohr: The Man, His Science, & the World They Changed*  
Chapter 7 (p. 114)  
Alfred A. Knopf. New York, New York, USA. 1966

[Atom] a nice, hard fellow, red or grey in color according to taste.

*From Quarks to Quasars: A Tour of the Universe*  
Chapter 6 (p. 57)  
Athenaeum. New York, New York, USA. 1987

**Schrödinger, Erwin** 1887–1961  
Austrian theoretical physicist

Why must our bodies be so large compared with the atom?

*What Is Life? Mind and Matter: The Physical Aspect of the Living Cell*  
Chapter I, Section 4 (p. 6)  
At the University Press. Cambridge, England. 1945

**Shapley, Harlow** 1885–1972  
American astronomer

Splitting the atom has been going on for billions of years in the universe. It is an old, old story so far as the suns and stars are concerned. They do it easily, whereas man has toiled to accomplish it, and when he did he caused a world-wide headache and a crisis for humanity.

In S.J. Woolf  
Dr. Harlow Shapley  
*American Scientist*, Volume 34, Number 3, July 1946 (p. 468)

**Siegel, Eli** 1902–784  
American philosopher, poet, critic, and founder of Aesthetic Realism

A pimple has atoms to it; and mucus has electrons.

*Damned Welcome*  
Aesthetic Realism, Maxims, Part Two, #234 (p. 121)  
Definition Press. New York, New York, USA. 1972

**Silver, Brian L.**  
Israeli professor of physical chemistry

In solids, atoms or molecules generally occupy permanent sites from which they rarely stray, but they can be crudely envisaged as a gospel choir, each singer swaying, wobbling, and bobbing up and down, but remaining tethered to their places as a consequence of the close proximity of their neighbors.

*The Ascent of Science*  
Part Five, Chapter 16 (p. 202)  
Solomon Press Book. New York, New York, USA. 1998

**Ray Glaser**  
No biographical data available

**Sir Lancelot** 1903–2001

Some men with brains in their cranium  
Took a piece of uranium  
They did what other men could not do  
They split the atom right in two.

*Atomic Energy*  
Sung by Sir Lancelot  
Charter 102, 1947

**Smith, Robert Angus** 1817–84  
Scottish chemist

We believe in atoms, because Nature seems to use them, and we break them up continuously because we do not know where to stop. There are various methods of spanning the distance from nothing to something.

In Ida Freund  
*The Study of Chemical Composition*  
Chapter XI (p. 301)  
At the University Press. Cambridge, England. 1904

**Smith, Sydney** 1771–1845  
English clergyman, writer, and wit

Let onion atoms lurk within the bowl...

*The Wit and Wisdom of Sydney Smith: A Selection of the Most Memorable Passages in His Writings and Conversations*  
Recipe for a Salad (p. 429)  
G.P. Putnam's Sons. New York, New York, USA. 19–?

**Smollett, Tobias George** 1721–71  
Scottish novelist

I, Nathaniel Peacock, of the parish of St Giles's, haberdasher and author, solemnly declare, That, on the third of last August, sitting alone in my study, up three pair of stairs, between the hours of eleven and twelve at night, meditating upon the uncertainty of sublunary enjoyment, I heard a shrill, small voice, seemingly proceeding from a chink or crevice in my own pericranium, call distinctly three times – "Nathaniel Peacock! Nathaniel Peacock! Nathaniel Peacock!" – Astonished, yea, even affrighted, at this citation, I replied, in a faltering tone – "In the name of the Lord, what art thou?" Thus adjured, the voice answered and said – "I am an Atom."

*The Miscellaneous Works of Tobias Smollett, M.D.: With Memoirs of His Life*  
The Adventures of an Atom (p. 403)  
Printed for Sylvester Doig. Edinburgh, Scotland. 1811

**Snelson, Kenneth** 1927–  
American artist

It seems clear that the mind hungers for pictures of everything – atoms, no less than trees, flowers and creatures.

*Kenneth Snelson Exhibition*  
The Nature of Structure, The New York Academy of Sciences, January–April, 1989, Portraying the Atom

**Soddy, Frederick** 1877–1956

English chemist

Yet the atom, for all that, is not Nature's unit, but ours.

*Matter and Energy*

Chapter V (p. 143)

Henry Holt & Company. New York, New York, USA. 1991

The atoms are to the chemist and physicist what bricks are to the architect – the units supplied ready-made to a certain limited number of standard specifications and dimensions capable of an endless variety of combinations and arrangements, each with its own peculiarities and external relationships.

*The Interpretation of Radium and the Structure of the Atom*

Part I, Chapter I (p. 2)

G.P. Putnam's Sons. New York, New York, USA. 1920

As buildings are built of bricks, so compounds can nowadays be built up out of atoms. The atoms are to the chemist and physicist what bricks are to the architect – the units supplied ready-made to a certain limited number of standard specifications and dimensions capable of an endless variety of combinations and arrangements, each with its own peculiarities and external relationships.

*The Interpretation of Radium and the Structure of the Atom*

Chapter I (pp. 2–3)

J. Murray. London, England. 1909

**Stableford, Brian M.** 1948–

Science fiction writer

The world of the atom is a world we know only by inference. We cannot perceive events in the microcosm, but we can contrive effects by which to detect and study them. Though we cannot see the subatomic particles themselves we can see the tracks which they leave as they pass through cloud-chambers: a wake of condensation which precipitates out around the ions formed as electrons are stripped from atoms by the speeding particles. But these contrived effects are all that we can see and therefore all that we can measure. Everything we know about subatomic particles has to be deduced from their interactions with grosser pieces of matter. This is no mean task, and it puts severe limitations on the kind of thing we can know about microatomic events. It is rather as if an alien intelligence were to try to comprehend the human world on the basis of aerial photographs taken from photographs taken forty thousand feet and nothing else.

*The Mysteries of Modern Science*

Chapter 2 (p. 35)

Routledge & Kegan Paul. London, England. 1977

**Stedman, Edmund Clarence** 1833–1908

American banker, poet, and critic

White orbs like angels pass

Before the triple glass

That men may scan the record of each flame –

Of spectral line and line

The legendary divine

Finding their mould the same, and aye the same,

The atoms that we knew before

Of which ourselves are made – dust, and no more.

*The Poems of Edmund Clarence Stedman*

Poems of Occasion

Corda Concordia

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

**Stevenson, Adlai E.** 1900–65

American political leader and diplomat

There is no evil in the atom; only in men's souls.

Speech

30 April, 1946, House of Commons

**Stoppard, Tom** 1937–

Czech-born English playwright

There is a straight ladder from the atom to the grain of sand, and the only real mystery in physics is the missing rung. Below it, particle physics; above it, classical physics; but in between, metaphysics. All the mystery in life turns out to be this same mystery, the join between things which are distinct and yet continuous, mind and body, free will and causality, living cells and life itself; the moment before the foetus. Who needed God when everything worked like billiard balls?

*Tom Stoppard: Plays*

*Hapgood*, Act I, Scene 5 (p. 545)

Faber & Faber Ltd. London, England. 1999

...make a fist, and if your fist is as big as the nucleus of one atom then the atom is as big as St Paul's, and if it happens to be a hydrogen atom then it has a single electron flitting about like a moth in the empty cathedral, now by the dome, now by the altar ...

*Hapgood* (p. 81)

Samuel French, Inc. New York, New York, USA. 1990

**Tennyson, Alfred (Lord)** 1809–92

English poet

If all be atoms, how then should the Gods

Being atomic not be dissoluble,

Not follow the great law?

*Alfred Tennyson's Poetical Works*

Lucretius, l. 114–116

Oxford University Press, Inc. London, England. 1953

...saw the flaring atom-streams

And torrents of her myriad universe,

Ruining along the illimitable inane,

Fly on to clash together again, and make

Another and another frame of things

Forever ...

In Henry van Dyke and David Laurance Chambers

*Poems of Tennyson*

Lucretius

Ginn & Co. Boston, Massachusetts, USA. 1903

**Tesla, Nikola** 1856–1943  
Croatian-American electrical engineer

But now a mechanism consisting of a finite number of parts and few at that, cannot perform an infinite number of definite motions, hence the impulses which govern its movements must come from the environment. So the atom, the ulterior element of the universe's structure is tossed about in space eternally, a play of external influences, like a boat in a troubled sea. Were it to stop its motion it would die. Matter at rest, if such a thing could exist, would be matter dead. Death of matter! Never has a sentence of deeper philosophical meaning been uttered. . . . There is no death of matter, for throughout the infinite universe, all has to move to vibrate, that is, to live.

*Lectures, Patents, Articles*

On light and other high frequency phenomena, Delivered before the Franklin Institute, Philadelphia, February, 1893. Tesla Museum, Beograd, Yugoslavia, 1956 (p. L–110)

**Thompson, Hunter S.** 1937–2005  
American journalist and writer

He seemed surprised. "You found a knife that can cut off an atom?" he said. "In this town?" I nodded. "We're sitting on the main nerve right now," I said.

In Leon Lederman

*The God Particle: If the Universe Is the Answer, What Is the Question?* Chapter 2 (p. 25)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

**Thomson, Sir Joseph John** 1856–1949  
English physicist

...there are regions in the atom, probably the most interesting of all, about which we know little or nothing, whose investigation will provide intensely interesting work for many generations of physicists, who will most assuredly have no reason to be 'mournful that no new wonder may betide'. No fact discovered about the atom can be trivial, nor fail to accelerate the progress of physical science, for the greater part of natural philosophy is the outcome of the structure and mechanism of the atom.

*The Atomic Theory* (p. 39)

Clarendon Press. 1914

**Tillich, Paul** 1886–1965  
German-born American theologian

Only the eternal can save us from the anxiety of being a meaningless bit of matter in a meaningless vortex of atoms and electrons.

*The Eternal Now* (p. 77)

Charles Scribner's Sons. New York, New York, USA. 1963

**Tyndall, John** 1820–93  
Irish-born English physicist

Take your dead hydrogen-atoms, your dead nitrogen-atoms, your dead phosphorus-atoms, and all the other atoms, dead as grains of shot, of which the brain is formed.

Imagine them separate and sensationless, observe them running together and forming all imaginable combinations. This, as a purely mechanical process, is seeable by the mind. But can you see, or dream, or in any way imagine, how out of that mechanical act, and from these individually dead atoms, sensation, thought, and emotion are to arise?

Address Delivered Before the English Association Assembled at Belfast Report of the 44th Meeting August, 1874 (p. 37)

**Vaihinger, Hans** 1852–1933  
German philosopher

The opponents of the atom are generally content to point to its contradictions and reject it as unfruitful for science. A rash form of caution, for without the atom science falls.

*The Philosophy of "As If"*

Part I, Chapter XV (pp. 70–71)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1925

**Verne, Jules** 1828–1903  
French novelist

An observer endued with an infinite range of vision, and placed in that unknown center around which the entire world revolves, might have beheld myriads of atoms filling all space during the chaotic epoch of the universe. Little by little, as ages went on, a change took place; a general law of attraction manifested itself, to which the hitherto errant atoms became obedient: these atoms combined together chemically according to their affinities, formed themselves into molecules, and composed those nebulous masses with which the depths of the heavens are strewn. These masses became immediately endued with a rotary motion around their own central point. This center, formed of indefinite molecules, began to revolve around its own axis during its gradual condensation; then, following the immutable laws of mechanics, in proportion as its bulk diminished by condensation, its rotary motion became accelerated, and these two effects continuing, the result was the formation of one principal star, the center of the nebulous mass.

*From the Earth to the Moon*

Chapter V

**von Baeyer, Hans Christian** 1938–  
German-born physicist and author

The atom is not a static structure but a dynamic mechanism in constant interaction with its equally dynamic environment. It is not a grain of sand but a wave-tossed buoy blinking from afar. If we want to understand it, we must look beyond still pictures and record the action in a movie.

*Taming the Atom*

Chapter 7 (p. 117)

Random House, Inc. New York, New York, USA. 1992

If atoms obey spooky rules, and we are made of atoms, why don't we follow the same rules? The answer to the quandary must lie on the theoretical ladder that leads from the laboratory down into the world of atoms, precisely at the missing rung between the two regimes, where classical physics loses its relevance and quantum mechanics takes over.

*Taming the Atom*

Chapter 11 (p. 164)

Random House, Inc. New York, New York, USA. 1992

**von Lindemann, Louis Ferdinand** 1852–1939

German mathematician

...the oxygen atom has the shape of a ring, and the sulphur atom, the shape of a clot.

In L.I. Ponomarev

*The Quantum Dice* (p. 40)

Institute of Physics Publishing, Bristol, England. 1993

**von Weizsäcker, Carl Friedrich (Baron)** 1912–2007

German theoretical physicist and philosopher

...only after the atom has lost the last sensible quality does its true meaning for the physical world view become clear; the unity – real, though remote from our immediate perception – of all that our perception knows only as a multitude of appearances is systematically held together and symbolically represented in it, but not mechanically explained.

Translated by Majorie Grene

*The World View of Physics*

Chapter Two (pp. 55–56)

Routledge & Kegan Paul. London, England. 1952

**Wallace, Robert C.** 1881–1955

Scottish-Canadian geologist and educator

It is almost with a sense of shock that we realize that the essence of physics and chemistry alike lies in the arrangements within the atom.

Cooperation in the Natural and Human Sciences

*Canadian Historical Review*, Volume XIV, Number 4, December, 1933 (p. 374)

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

A little while ago we thought of the atoms as we thought of bricks, as solid building material, as substantial matter, as unit masses of lifeless stuff, and behold! these bricks are boxes, treasure boxes, boxes full of the intensest force.

*The World Set Free*

Prelude, Section 8

E.P. Dutton. & Company. New York, New York, USA. 1914

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

For every atom belongs to me as good as belongs to you.

*Complete Poetry and Collected Prose*

Song of Myself, I.

The Library of America. New York, New York, USA. 1982

I celebrate myself, and sing myself,  
And what I assume you shall assume,  
For every atom belongs to me as good belongs to you.

*Leaves of Grass*

Song of Myself

Mitchell Kennerley

New York, New York, USA. 1914

**Wordsworth, William** 1770–1850

English poet

To let a creed, built in the heart of things,  
Dissolve before a twinkling atom!

*The Complete Poetical Works of William Wordsworth*

The Borderers, Act III, I. 1220–1221

Crowell. New York, New York, USA. 1888

**Wysong, R. L.**

American veterinary surgeon

A well known principle in physics is the Heisenberg principle of uncertainty. The principle basically argues that the movement of electrons and atoms is a random process. If the atom is governed by random processes, how could there be biochemical bias? If the law of the atom is randomness how can we cite the atom as the source of order?

*The Creation-Evolution Controversy*

Chapter 7 (p. 126)

Inquiry Press. Midland, Texas, USA. 1976

## ATOMIC

**Dr. T (Fictional character)**

Dr. T.: "Is it, is it... atomic?"

Bert Collins: "Yes sir, very atomic!"

*The 5000 Fingers of Dr. T.*

The film (1953)

**Macfie, Ronald Campbell** 1867–1931

Scottish poet and physician

It is often assumed that the atomic theory has divested nature of its mystery, and has reduced natural and evolutionary processes to the level of ordinary mechanics. But this is not so. The atomic theory doubles the mystery and the wonder of life. Any artist might mould a bird or beast of clay, but where is the artist who could make so much as a little finger-nail or a single eyelash out of the dancing molecules? And yet continually this miracle is wrought. The molecules I take for dinner, the molecules I unconsciously breathe, will find their way to the little finger-nail or eyelash, and will take there their appointed places.

*Science, Matter and Immortality*

Chapter 17 (p. 213)

William & Norgate. London, England. 1909

## ATOMIC AGE

### Dr. Harold Medford (Fictional character)

When Man entered the atomic age, he opened a door into a new world. What will he eventually find in that new world, nobody can predict.

*Them*

Film (1954)

## ATOMIC BOMB

### Churchill, Winston Spencer 1882–1965

British prime minister, statesman, soldier, and author

This revelation of the secrets of nature, long mercifully withheld from man, should arouse the most solemn reflections in the mind and conscience of every human being capable of comprehension. We must indeed pray that these awful agencies will be made to conduce to peace among the nations, and that instead of wrecking measureless havoc upon the entire globe, they may become a perennial fountain of world prosperity.

Statement by Prime Minister Attlee and Former Prime Minister Churchill on the Atomic Bomb, August 6, 1945

### Compton, Arthur H. 1892–1962

American physicist

It is hard to think of fissionable materials when fashioned into bombs as being a source of happiness. However this may be, if with such destructive weapons men are to survive, they must grow rapidly in human greatness.

*Atomic Quest: A Personal Narrative*

Prologue (p. xix)

Oxford University Press. London, England. 1956

### Farrell, Thomas Francis 1891–1967

US Army General

The whole country was lighted by a searching light with the intensity many times that of the midday sun.

*Dawn over Zero*

Part III, Chapter Thirteen (p. 194)

Alfred A. Knopf. New York, New York, USA. 1946

### Einstein, Albert 1879–1955

German-born physicist

Often in evolutionary processes a species must adapt to new conditions in order to survive. Today the atomic bomb has altered profoundly the nature of the world as we know it, and the human race consequently finds itself in a new habitat to which it must adapt its thinking.

*New York Times Magazine*, June 23, 1946

### Fulbright, James William 1905–95

American politician

What a curious picture it is to find man, homo sapiens, of divine origin, we are told, seriously considering going

underground to escape the consequences of his own folly. With a little wisdom and foresight, surely it is not yet necessary to forsake life in the fresh air and in the warmth of the sunlight. What a paradox if our own cleverness in science should force us to live underground with the moles.

*Congressional Record* (Volume 91)

*The Effect of the Atomic Bomb on American Foreign Policy*

Appendix (p. A4654)

US Government Printing Office. Washington, D.C. November 2, 194

### Harris Homer 1916–2000

American blues singer

It was early one morning, when all the good work was done

It was early one morning, when all the good work was done  
And that big bird was loaded, with that awful atomic bomb.

*Atomic Bomb Blues*

Sung by Homer Harris (with Muddy Waters)

### Khrushchev, Nikita S. 1894–1971

Russian statesman

I happened to read recently a remark by the American nuclear physicist W. Davidson, who noted that the explosion of one hydrogen bomb releases a greater amount of energy than all the explosions set off by all countries in all wars known in the entire history of mankind. And he, apparently, is right.

*The New York Times*, September 19, 1959 (p. 8)

### Le Guin, Ursula K. 1929–

American writer

...it is only when science asks why, instead of simply describing how, that it becomes more than technology. When it asks why, it discovers Relativity. When it only shows how, it invents the atomic bomb, and then puts its hands over its eyes and says, *My God what have I done?*

In Susan Wood (ed.)

*The Language of the Night*

The Stalin in the Soul (p. 219)

G.P. Putnam's Sons. New York, New York, USA. 1976

### O'Casey, Seán 1889–1964

Irish dramatist and memoirist

The flame from the angel's sword in the garden of Eden has been catalyzed into the atom bomb; God's thunderbolt became blunted, so man's thunderbolt [sic] has become the steel star of destruction.

*Sunset and Evening Star*

An Evening Star (p. 326)

The Macmillan Co. New York, New York, USA. 1954

### Oppenheimer, James Robert 1904–67

American theoretical physicist

There is only one future of atomic explosives that I can regard with any enthusiasm: that they should never be used in war.

*The Open Mind*

Chapter I (p. 5)

Simon & Schuster. New York, New York, USA. 1955

It is possible that in the large light of history, if indeed there is to be history, the atomic bomb will appear not very different than in the bright light of the first atomic explosion.

*The Open Mind*

Atomic Weapons and American Policy (p. 61)

Simon & Schuster. New York, New York, USA. 1955

If atomic bombs are to be added as new weapons to the arsenals of a warring world, or to the arsenals of nations preparing for war, then the time will come when mankind will curse the names of Los Alamos and Hiroshima. The people must unite, or they will perish.

In Alice Kimball Smith and Charles Weiner

Robert Oppenheimer: The Los Alamos Years

*Bulletin of the Atomic Scientists*, Volume 36, Number 6, June, 1980 (p. 14)

But when you come, right down to it, the reason that we did this job [build the atomic bomb] is because it was an organic necessity. If you are a scientist you cannot stop such a thing. If you are a scientist you believe that it is good to find out how the world works; that it is good to find out what the realities are; that it is good to turn over to mankind at large the greatest possible power to control the world and to deal with it according to its lights and values.

In Alice Kimball Smith and Charles Weiner

Robert Oppenheimer: The Los Alamos Years

*Bulletin of the Atomic Scientists*, Volume 36, Number 6, June, 1980 (p. 15)

... we have made a thing, a most terrible weapon, that has altered abruptly and profoundly the nature of the world. We have made a thing that, by all standards of the world we grew up in, is an evil thing. And by doing so, by our participation in making it possible to make these things, we have raised again the question of whether science is good for man, of whether it is good to learn about the world, to try to understand it, to try to control it, to help give to the world of men increased insight, increased power. Because we are scientists, we must say an unalterable yes to these questions; it is our faith and our commitment, seldom made explicit, even more seldom challenged, that knowledge is a good in itself, knowledge and such power as must come with it.

Atomic Weapons

*Proceedings, American Philosophical Society*, Volume 90, Number 1 (p. 7)

**Paglia, Camille** 1947–

American author, teacher, and social critic

There are no accidents, only nature throwing her weight around. Even the bomb merely releases energy that nature has put there. Nuclear war would be just a spark in the grandeur of space. Nor can radiation alter nature: she will absorb it all. After the bomb, nature will pick up

the cards we have spilled, shuffle them, and begin her game again.

*Sexual Personae: Art and Decadence From Nefertiti to Emily Dickinson*

Chapter 1 (p. 38)

Yale University Press. New Haven, Connecticut, USA. 1990

**Pauling, Linus** 1901–94

American chemist

It is the atomic bomb which is responsible for my being here tonight – just as the atomic bomb may be responsible for our all not being here a few years from now.

In Barbara Marinacci

*Linus Pauling in His Own Words*

Chapter VII (p. 145)

Simon & Schuster. New York, New York, USA. 1995

**Pope, Alexander** 1688–1744

English poet

Atoms or systems into ruin hurled, And now a bubble burst, and now a world.

*The Works of Alexander Pope* (Volume 2)

*An Essay of Man*

Epistle I

John Murray. London, England. 1871

**Shaw, George Bernard** 1856–1950

Irish playwright

Now that we, the human race, have began monkeying with the atom may I point out one possible consequence that would end all our difficulties?

For some years past our too few professional astronomers have been reinforced by a body of amateurs whose main activity is the watching and study of variable stars. They have been excited several times by the sudden flaming up of what they call a new star, though it is, in fact, an old star too small and cool to be visible which has suddenly burst and blown up, leaving nothing but a cloud of star dust called a nebula. The heat energy liberated in the explosion is beyond human apprehension. Apparently what has happened to these stars, and may happen to this earth of ours, is that the protons with their planetary electrons, and the heavier planetless neutrons of which their matter is composed, have combined, and produced a temperature at which the whole star has pulverized and evaporated, and its inhabitants, if any, have been cremated with an instantaneous thoroughness impossible at Golder's Green.

*The Times of London*, The Atomic Bomb August 20, 1945 (p. 21)

## ATOMIC COCKTAIL

**Gillard, Slim**

American singer

It's the drink that you don't pour

Now when you take one sip you won't need anymore

You're small as a beetle or big as a whale  
BOOM-Atomic Cocktail

*Atomic Cocktail*  
Atomic 215-A  
Recorded 1945

## ATOMIC ENERGY

**Aston, Francis William** 1877–1945  
English physicist and chemist

Should the research worker of the future discover some means of releasing this [atomic] energy in a form which could be employed, the human race will have at its command powers beyond the dream of scientific fiction, but the remotest possibility must always be considered that the energy once liberated will be completely uncontrollable and by its intense violence detonate all neighboring substances. In this event, the whole of the hydrogen on earth might be transformed at once and the success of the experiment published at large to the universe as a new star.

*Nobel Lectures, Chemistry 1922–1941*  
Mass Spectra and Isotopes (p. 20)  
Elsevier Publishing. Amsterdam, The Netherlands. 1966

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

If indeed, the subatomic energy in the stars is being freely used to maintain their great furnaces, it seems to bring a little nearer to fulfillment our dream of controlling this latent power for the well-being of the human race – or for its suicide.

*The Internal Constitution of Stars*  
*Nature*, Volume 106, Number 2603, 2 September, 1920 (p. 19)

**Einstein, Albert** 1879–1955  
German-American physicist

Since I do not foresee that atomic energy is to be a great boon for a long time, I have to say that for the present it is a menace. Perhaps it is well that it should be. It may intimidate the human race into bringing order into its international affairs, which, without the pressure of fear, it would not do.

*Atomic War or Peace*  
*Atlantic Monthly*, November, 1945

**Lewis, Edwin H.**  
No biographical data available

Now this is the law of Ryerson and this is the price of peace –

That men shall learn to measure or ever their strife shall cease.

They shall measure the cost of killing, and measure the hearts that bleed,

And measure the earth for sowing, and measure the sowing of seed.

When Ryerson rose like a dream, none dreamed of the lightning massed

In the welded heart of an atom.

In Arthur H. Compton  
The First of the Sciences  
*Popular Astronomy*, Volume 47, Number 7, September, 1939 (p. 349)

## ATOMIC LANDSCAPE

**Church, Peggy Pond** 1903–86  
American poet

We had thought the magicians were all dead, but this was the blackest of magic.

There was even the accompaniment of fire and brimstone,

The shape of evil, towering leagues high into the heaven  
In terrible, malevolent beauty, and, beneath, the bare trees

Made utterly leafless in one instant, and the streets where no one

Moved, and some wall still standing

Eyeless, and as silent as before Time.

*Ultimatum for Man*  
The Nuclear Physicist  
Stanford University Press. Stanford, California, USA. 1946

**Eddington, Sir Arthur Stanley** 1882–1944  
English Astronomer and physicist

I am afraid the knockabout comedy of modern atomic physics is not very tender towards our aesthetic ideals. The stately drama of stellar evolution turns out to be more like the hair-breadth escapades in the films. The music of the spheres has a painful suggestion of – jazz.”

*Stars and Atoms*  
Lecture I (p. 27)  
Yale University Press. New Haven, Connecticut, USA. 1927

**Laurence, William Leonard** 1888–1977  
Lithuanian-American journalist

And just at that instant there rose as if from the bowels of the earth a light not of this world, the light of many suns in one.

It was a sunrise such as the world had never seen, a great green super-sun climbing in a fraction of a second to a height of more than 8,000 feet, rising ever higher until it touched the clouds, lighting up earth and sky all around with dazzling luminosity.

Up it went, a great wall of fire about a mile in diameter, changing colors as it kept shooting upward, from deep purple to orange, expanding, growing bigger, rising as it was expanding, an elemental force freed from its bonds after being chained for billions of years.

Drama of the Atomic Bomb Found Climax in New Mexico Test  
*New York Times*, A16, column 5, September 26, 1945

**Narrator**

But the end, when it came, was to be from the sky. Irresistible. Unimaginable. Mushroom shaped.

*The World at War*

Episode 22, Japan

Film documentary

**Wells, H. G. (Herbert George)** 1866–1946

English novelist, historian, and sociologist

[W]hile man still struggles and dreams, his very substance will change and crumble from beneath him.... Suppose, indeed, that is to be the end of our planet; no splendid climax and finale, no towering accumulation of achievements, but just – atomic decay! I add that to the ideas of the suffocating comet, the dark body out of space, the burning out of the sun, the distorted orbit, as a new and far more possible end – as Science can see ends – to this strange by-play of matter that we call human life. I do not believe this can be the end; no human soul can believe in such an end and go on living, but to it science points as a possible thing, science and reason alike. If single human beings – if one single ricketty infant – can be born as it were by accident and die futile, why not the whole race?

*Tono-Bungay*

Book the Third, Chapter the Fourth, V (p. 387)

Duffield & Company. New York, New York, USA. 1921

**ATOMIC PARTICLE****Dalton, John** 1766–1844

English chemist and physicist

In the last lecture we endeavored to shew that matter, though divisible in an *extreme degree*, is nevertheless not infinitely indivisible – that there must be some point beyond which we cannot go in the division of matter. The existence of these ultimate particles of matter can scarcely be doubted, though they are probably much too small ever to be exhibited by microscopic improvements.

In Henry Enfield Roscoe

*John Dalton and the Rise of Modern Chemistry*

Chapter VI (p. 136)

The Macmillan Co. New York, New York, USA. 1895

**ATOMIC POWER****Compton, Arthur H.** 1892–1962

American physicist

The reward for using the atom's power towards man's welfare is great and sure. The punishment for its misuse would seem to be death and the destruction of the civilization that has been growing for a thousand years. These are the alternatives that atomic power, as the steel of Daedalus, presents to mankind. We are forced to grow to greater manhood.

*Atomic Quest: A Personal Narrative*

Prologue (p. xix)

Oxford University Press. London, England. 1956

**Hawkins, Hawkshaw**

American country artist

**Big Slim**

Then a flash, a rumbling roar out across the desert floor  
They had found the atomic power from above  
Then God with His mighty hand showed the world  
it could not stand

When they found the mighty, mighty Atomic Power

*When They Found the Atomic Power*

King 611, 19476

**Kirby, Fred**

American country artist and radio personality

Atomic power, atomic power

Was given by the mighty hand of God

Atomic power, atomic power

It was given by the mighty hand of God

*Atomic Power*

RCA Victor 20–1850, 1946

**ATOMIC THEORY****Sylvester, James Joseph** 1814–97

English mathematician

By the *new* Atomic Theory I mean that sublime invention of Kekule which stands to the *old* in a somewhat similar relation as the Astronomy of Kepler to Ptolemy's, or the System of Nature of Darwin to that of Linnaeus – like the latter it lies outside of the immediate sphere of energetics, basing its laws on pure relations of form, and like the former as perfected by Newton, these laws admit of exact arithmetical definitions.

On An Application of the New Atomic Theory to the Graphical Representation of the Invariants and Covariants of Binary Quantics – With Three Appendices

*American Journal of mathematics*, Volume 1, Number 1, 1878 (p. 64)

**ATOMIC WEIGHT****Crookes, Sir William** 1832–1919

English chemist and physicist

I conceive, therefore, that when we say the atomic weight of, for instance, calcium is 40, we really express the fact that, while the majority of calcium atoms have an actual atomic weight of 40, there are not a few which are represented by 39 or 41, a less number by 38 or 42, and so on.

*Report of the Fifty-sixth Meeting of the British Association for the Advancement of Science*

Presidential Address (p. 569)

John Murray. London, England. 1887

**Richards, Theodore William** 1868–1928  
American chemist

If our inconceivably ancient Universe even had any beginning, the conditions determining that beginning must even now be engraved in the atomic weights. They are the hieroglyphics which tell in a language of their own the story of the birth or evolution of all matter, and the Periodic Table containing the classification of the elements is the Rosetta Stone, which may enable us to interpret them. Until, however, these hieroglyphics are clearly visible in their true form, we cannot hope for an interpretation.

*Nobel Lectures, Chemistry 1901–1921*

Nobel lecture for award received in 1914

Atomic Weights (p. 282)

Elsevier Publishing Company. Amsterdam, Netherlands. 1966

## ATOMICITY

**Sylvester, James Joseph** 1814–97  
English mathematician

The beautiful theory of atomicity has its home in the attractive but somewhat misty border land lying between fancy and reality and cannot, I think, suffer from any not absolutely irrational guess which may assist the chemical enquirer to rise to a higher level of contemplation of the possibilities of his subject.

On An Application of the New Atomic Theory to the Graphical Representation of the Invariants and Covariants of Binary Quantics – With Three Appendices

*American Journal of mathematics*, Volume 1, Number 1, 1878 (p. 79)

## ATOMISM

**Democritus of Abdera** 460 BCE–370 BCE  
Greek philosopher

By convention are sweet and bitter, hot and cold, by convention is color; in truth are atoms and the void.... In reality we apprehend nothing exactly, but only as it changes according to the condition of our body and the things that impinge on or offer resistance to it.

In G.S Kirk and J.E. Raven

*The Pre-Socratic Philosophers: A Critical History with a Selection of Texts*

Fragment 589 (p. 422)

At the University Press. Cambridge, England. 1963

**Lucretius** ca. 99 BCE–55 BCE  
Roman poet

Again after the revolution of many of the sun's years a ring on the finger is thinned on the under side by wearing, the dripping from the eaves hollows a stone, the bent ploughshare of iron imperceptibly decreases in the fields, and we behold the stone-paved streets worn down by

the feet of the multitude.... These things then we see are lessened, after they are thus worn down; but what bodies depart at any given time nature has jealously shut out the means of seeing...

In *Great Books of the Western World* (Volume 12)

*Lucretius: On the Nature of Things*

Book One, l. 311–324 (p. 5)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## ATTENTION

**Lepper, George Henry**

No biographical data available

...the most striking mental peculiarity of mankind in the past has been its proneness, in all ages, to focus attention on the things at a distance rather than on those close at hand, to prefer the abstruse to the simple, the miraculous to the natural, the obscure to the obvious.

*From Nebula to Nebula* (3rd edition)

Introduction (p. 13)

Privately printed. Pittsburgh, Pennsylvania, USA. 1917

**Willmott, Robert Eldridge Aris** 1809–63  
English writer and poet

Attention makes the genius; all learning, fancy, and science, depend upon it. Newton traced back his discoveries to its unwearied employment. It builds bridges, opens new worlds, and heals diseases; without it Taste is useless, and the beauties of literature are unobserved ...

Chapter X (p. 37)

G. Routledge & Co. London, England. 1855

## ATTRACTION

**Davy, Sir Humphry** 1778–1829  
English chemist

Attraction, of whatever kind, tends, as it were, to produce rest – a sort of eternal sleep in Nature.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Sixth (p. 179)

Cassell & Co., Ltd. London, England. 1889

**Newton, Sir Isaac** 1642–1727  
English physicist and mathematician

By the Table in the second Part of the second Book, wherein the thicknesses of colour'd Plates of Water between two Glasses are set down, the thickness of the Plate where it appears very black, is three eighths of the ten hundred thousandth part of an Inch. And where the Oil of Oranges between the Glasses is of this thickness, the Attraction collected by the foregoing Rule, seems to be so strong, as within a Circle of an Inch in diameter, to suffice to hold up a Weight equal to that of a Cylinder of Water of an Inch in diameter, and two or three Furlongs in

length. And where it is of a less thickness the Attraction may be proportionally greater, and continue to increase, until the thickness[es] do not exceed that of a single Particle of the Oil. There are therefore Agents in Nature able to make the Particles of Bodies stick together by very strong Attractions. And it is the Business of experimental Philosophy to find them out.

## AURORA BOREALIS

**Ackerman, Diane** 1948–

American writer

As we flew down across the Canadian Arctic, we were beneath an arc of northern lights, which were pure green and bell-shaped. We and the plane were the clapper of this bell, with the green light over us. And for the first time in my life I felt that I was in the position of the whale that is singing to you when you're in the boat and just listening to it.

*The Moon by Whale Light, and Other Adventures Among Bats and Crocodilians, Penguins and Whales*

The Moon by Whale Light (p. 130)

Random House, Inc. New York, New York, USA. 1991

### Author undetermined

...those northern lights have this peculiar nature, that the darker the night is, the brighter they seem, and they always appear at night but never by day, most frequently in the densest darkness and rarely by moonlight. In appearance they resemble a vast flame of fire viewed from a great distance. It also looks as if sharp points were shot from this flame up into the sky, they are of uneven height and in constant motion, now one, now another darting highest; and the lights appears to blaze like a living flame... it seems to me not unlikely that the frost and the glaciers have become so powerful there that they are able to radiate forth these flames.

Translated by L.M. Larson

English writer

The cauld blaie North was streaming forth

Her lights, wi' hissing eerie din.

*The Complete Poetical Works of Robert Burns*

A Vision

Houghton Mifflin Company. Boston, Massachusetts, USA. 1897

**Faraday, Michael** 1791–1867

English physicist and chemist

I hardly dare venture, even in the most hypothetical form, to ask whether the Aurora Borealis and Australis may not be the discharge of electricity, thus urged towards the poles of the earth, from whence it is endeavoring to return by natural and appointed means above the earth to the equatorial regions.

*Experimental Researches in Electricity*

Evolution of Electricity from Magnetism (p. 56)

Richard & John Edward Taylor. London, England. 1839

**Haliburton, Thomas C.** 1796–1865

Canadian jurist and writer

The sun has scarcely set behind the dark wavy outline of the western hills, ere the aurora borealis mimics its setting beams, and revels with wild delight in the heavens, which it claims as its own, now ascending with meteor speed to the zenith, then dissolving into a thousand rays of variegated light, that vie with each other which shall first reach the horizon; now flashing bright, brilliant and glowing, as emanations of the sun, then slowly retreating from view pale and silvery white like wandering moonbeams.

*The Old Judge*

The Seasons (p. 210)

Clarke, Irwin & Company Ltd. Toronto, Ontario, Canada. 1968

**Kingsley, Charles** 1819–75

English clergyman and writer

Night's son was driving

His golden-haired horses up;

Over the eastern firths

High flashed their manes.

*Poems*

The Longbeards' Saga

Ticknor & Fields. Boston, Massachusetts, USA. 1856

**Longfellow, Henry Wadsworth** 1807–82

American poet

And now the Northern Lights begin to burn, faintly at first, like sunbeams playing in the waters of the blue sea. Then a soft crimson glow tinges the heavens. There is a blush on the cheek of night. The colors come and go, and change from crimson to gold, from gold to crimson. The snow is stained with rosy light. Twofold from the zenith, east and west, flames a fiery sword; and a broad band passes athwart the heavens like a summer sunset.

Soft purple clouds come sailing over the sky, and through their vapory folds the winking stars shine white as silver. With such pomp as this is Merry Christmas ushered in, though only a single star heralded the first Christmas.

*The Prose Works of Henry Wadsworth Longfellow*

Driftwood-Frithiof's Saga (p. 325)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

**von Payer, Julius** 1841–1915

Austro-Hungarian arctic explorer

It is very difficult to characterise the forms of this phenomenon [aurora borealis], not only because they are manifold, but because they are constantly changing. Sometimes the Aurora appears like flaming arches with glowing balls of light; sometimes in irregular meridians painted on the heavens, sometimes in brilliant bands and patches of light on the sky.

*New Lands Within the Arctic Circle* (Volume 1)

Chapter XV (p. 322)

Macmillan & Company Ltd. London, England. 1876

**Nansen, Fridtjof** 1861–1930

Norwegian explorer, oceanographer, and statesman

The glowing fire-masses had divided into glistening, many coloured bands, which were writhing and twisting across the sky both in the south and north. The rays sparkled with the purest, most crystalline rainbow colours, chiefly violet-red or carmine and the clearest green. Most frequently the rays of the arch were red at the ends, and changed higher up into sparkling green.... It was an endless phantasmagoria of sparkling colour, surpassing anything that one can dream. Sometimes the spectacle reached such a climax that one's breath was taken away; one felt that now something extraordinary must happen – at the very least the sky must fall.

*Fridtjof Nansen: The Fram Expedition–Nansen in the Frozen World*

A.G. Holman. Philadelphia, Pennsylvania, USA. 1897

**Remek, Vladimír** 1948–

Czechoslovakian cosmonaut

Firefly meteorites blazed against a dark background, and sometimes the lightning was frighteningly brilliant. Like a boy, I gazed open-mouthed at the fireworks, and suddenly, before my eyes, something magical occurred. A greenish radiance poured from Earth directly up to the station, a radiance resembling gigantic phosphorescent organ pipes, whose ends were glowing crimson, and overlapped by waves of swirling green mist. Consider yourself very lucky, Vladimír, I said to myself, to have watched the northern lights.

## AUTHOR

**Coleridge, Samuel Taylor** 1772–1834  
English lyrical poet, critic, and philosopher

Friend! were an author privileged to name his own judge – in addition to moral and intellectual competence I should look round for some man, whose knowledge and opinions had for the greater part been acquired experimentally; and the practical habits of whose life had put him on his guard with respect to all speculative reasoning, without rendering him insensible to the desirableness of principles more secure than the shifting rules and theories generalized from observations merely empirical, or unconscious in how many departments of knowledge, and with how large a portion even of professional men, such principles are still a *desideratum*.

*The Complete Works of Samuel Taylor Coleridge* (Volume 2)  
Preface to Second Edition (p. 15)  
Harper & Brothers Publishers. New York, New York, USA. 1884

## AUTHORITY

**Andreski, Stanislaw** 1919–  
Polish sociologist

So long as authority inspires awe, confusion and absurdity enhance conservative tendencies in society. Firstly, because clear and logical thinking leads to a cumulation of knowledge (of which the progress of the natural sciences provides the best example) and the advance of knowledge sooner or later undermines the traditional order. Confused thinking, on the other hand, leads nowhere in particular and can be indulged indefinitely without producing any impact upon the world.

## AUTONOMY

**Swartz, Norman**  
 American philosopher

If the physical laws of this world are autonomous, we are not free; if we are free, then the physical laws are not autonomous.

*The Concept of Physical Law*  
 Chapter 10  
 Cambridge University Press. Cambridge, England. 1985

## AUTOPSY

**Eliot, George (Mary Ann Evans Cross)** 1819–80  
 English novelist

Mrs. Dollop became more and more convinced...Dr Lydgate meant to let the people die in the Hospital, if not to poison them, for the sake of cutting them up without saying by your leave or with your leave; for it was a known "fac" that he had wanted to cut up Mrs. Goby, as respectable a woman as any in Parley Street, who had money in trust before her marriage – a poor tale for a doctor, who if he was good for anything should know what was the matter with you before you died, and not want to pry into your inside after you were gone.

*Middlemarch*  
 Book V, Chapter XLV (p. 434)  
 Clarendon Press. Oxford, England. 1986

**Flexner, Abraham** 1866–1959  
 American educator

The effective teaching of pathology is dependent on ease and frequency of access to the autopsy-room.... The post-mortem is in this country relatively rare and precarious.... [N]ot infrequently pathological courses are organized and given whose illustrative material is limited to models, to a small number of preserved specimens, or even to bits of material already cut into microscopic sections or just lacking that last touch.

*Medical Education in the United States and Canada: A Report to the Carnegie Foundation for the Advancement of Teaching*  
 Bulletin 4 (p. 66)  
 The Carnegie Foundation. New York, New York, USA. 1910

The physician is constantly in contact with disease processes that he is unable to correlate with the accompanying structural modifications. Occasionally the surgeon throws a stream of light upon such a situation; too often all is dark until the autopsy reveals the truth.

*Medical Education in the United States and Canada: A Report to the Carnegie Foundation for the Advancement of Teaching*  
 Bulletin 4 (p. 66)  
 The Carnegie Foundation. New York, New York, USA. 1910

**Giles, Roscoe C.**  
 No biographical data available

A check-up of one's clinical findings at the autopsy table is indispensable to the progress of the art and science of medicine. The public is being aroused to the importance of autopsies as a matter of self-protection. I believe it is only a matter of time before physicians as well as hospitals will be rated by the percentage of autopsies they do or see in their practices.

Some Clinical Lessons from a Year's Observation in the Department of Pathology of the University of Vienna  
*Journal of the National Medical Association*, Volume 24, 1932

**Morgagni, Giovanni Battista** 1682–1771  
 Italian anatomist and pathologist

*Taceant colloquia. Effugiat risus.*

*Hic locus est ubi mors gaudet succurrere vitae.*

(Let conversations cease. Let laughter depart.

This is the place where death delights to help the living.)

## AVALANCHE

**Heinlein, Robert A.** 1907–88  
 American science fiction writer

If a man pushes a rock, can he ignore an avalanche that follows?

*Time Enough for Love*  
 Chapter IX (p. 238)  
 G.P. Putnam's Sons. New York, New York, USA. 1973

**Muir, John** 1838–1914  
 American naturalist

When the snow first gives way on the upper slopes of their basins a dull muffled rush and rumble is heard, which increasing with heavy deliberation, seems to draw rapidly near with appalling intensity of tone. Presently the white flood comes in sight bounding out over bosses and sheer places, leaping from bench to bench, spreading and narrowing and throwing off clouds of whirling diamond dust like a majestic foamy cataract.

*The Yosemite*  
 Chapter 3 (p. 46)  
 Sierra Club Books. San Francisco, California, USA. 1988

Compared with cascades and falls, avalanches are short-lived, few of them lasting more than a minute or two, and

the sharp clashing sounds so common in dashing water are usually wanting; but in their low massy thunder-tones and purple-tinged whiteness, and in their dress, gait, gestures, and general behavior, they are much alike.

*The Yosemite*

Chapter 3 (pp. 46–47)

Sierra Club Books. San Francisco, California, USA. 1988

**Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

I heard the rumbling thunder of the falling avalanche and marked the smoke of its passage.

*Frankenstein*

Chapter 9 (p. 108)

The Cornhill Publishing Co. Boston, Massachusetts, USA. 1922

## AVERAGE

**Alderson, M. H.**

No biographical data available

If at first you don't succeed, you are running about average.

In Paul Dickson

*The Official Explanations* (p. A-4)

Delacorte Press. New York, New York, USA. 1980

**Atherton, Gertrude** 1857–1948

American novelist

...but they are more hysterical than the average because they have the opportunity their constituents lack, of shouting in public.

*Senator North*

Book II, VII (p. 172)

John Lane: The Bodley Head. New York, New York, USA. 1900

The average intelligence is always shallow, and in electric climates very excitable.

*Senator North*

Book III, Chapter IX (p. 303)

John Lane: The Bodley Head. New York, New York, USA. 1900

**Author undetermined**

*In medio fortissimus ibis.*

Always choose the middle road.

Source undetermined

**Bailey, Thomas D.**

No biographical data available

There must be such a thing as a child with average ability, but you can't find a parent who will acknowledge that it is his child....

Notable and Quotable

*Wall Street Journal*, December 17, 1962 (p. 16)

**Bernard, Claude** 1813–78

French physiologist

Another very frequent application of mathematics to biology is the use of averages which, in medicine and physiology, leads, so to speak, necessarily to error.... By destroying the biological character of phenomena, the use of averages in physiology and medicine usually give only apparent accuracy to the results.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter II, Section IX (p. 134)

Henry Schuman, Inc. New York, New York, USA. 1927

Chemical averages are also often used. If we collect a man's urine during twenty-four hours and mix all this urine to analyze the average, we get an analysis of a urine which simply does not exist; for urine, when fasting, is different from urine during digestion. A startling instance of this kind was invented by a physiologist who took urine from a railroad station urinal where people of all nations passed, and who believed he could thus present an analysis of average European urine!

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Part Two, Chapter II, Section ix (pp. 134–135)

Henry Schuman, Inc. New York, New York, USA. 1927

**Billings, Josh (Henry Wheeler Shaw)** 1818–85

American writer and humorist

About the hardest thing a phellow can do, iz tew spark two girls at onest, and preserve a good average.

*Old Probability: Perhaps Rain – Perhaps Not*

May, 1870 (Green Section)

G.W. Carleton & Company, Publishers. New York, New York, USA.

1879

**Bowley, Arthur Lyon** 1869–1957

English statistician and economist

Of itself an arithmetic average is more likely to conceal than to disclose important facts; it is the nature of an abbreviation, and is often an excuse for laziness.

*The Nature and Purpose of the Measurement of Social Phenomena* (p. 46)

P.S. King & Son. London, England. 1915

**Brandeis, Louis Dembitz** 1856–1941

Lawyer, reformer, and Supreme Court justice

I abhor averages. I like the individual case. A man may have six meals one day and none the next, making an average of three meals per day, but that is not a good way to live.

In Alpheus T. Mason

*Brandeis: A Free Man's Life*

Chapter Ten (p. 145)

The Viking Press. New York, New York, USA. 1956

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

Have shaving too entailed upon their chins –  
A daily plague, which in the aggregate

May average on the whole with parturition.

*The Complete Poetical Works of Byron*

Don Juan

Canto XIV, 23–24

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Carrel, Alexis** 1873–1944

French surgeon and biologist

The best way of increasing the [average] intelligence of scientists would be to reduce their number.

*Man the Unknown*

Chapter 2, Section 4 (p. 49)

Harper & Brothers Publishers. New York, New York, USA. 1939

**Cohen, Morris Raphael** 1880–1947

American philosopher

The concept of average was developed in the Rhodian laws as to the distribution of losses in maritime risks.

*The Statistical View of Nature*

*Journal of the American Statistical Association*, Volume 31, Number 194, June, 1936 (p. 328)

**Jacobs, Joseph** 1854–1916  
Australian writer

Such is the past career, present condition, and certain future of the Middle American. There are as many above him as below him, and especially as many below him as above him.

The Middle American

*American Magazine*, Volume 63, March, 1907

**Jung, Carl G.** 1875–1961  
Swiss psychologist and psychiatrist

Myth is more individual and expresses life more precisely than does science. Science works with concepts of averages which are far too general to do justice to the subjective variety of an individual life.

*Memories, Dreams, Reflections*

Chapter I (p. 3)

Vintage Books. New York, New York, USA. 1963

**Juster, Norton** 1929–  
American architect and writer

“Pardon me for staring,” said Milo, after he had been staring for some time, “but I’ve never seen half a child before.”

“It’s .58 to be precise,” replied the child from the left side of his mouth (which happened to be the only side of his mouth).

“I beg your pardon?” said Milo.

“It’s .58,” he repeated; “it’s a little bit more than a half ... we’re just the average family,” he said thoughtfully; “mother, father, and 2.58 children – and, as I explained, I’m the .58.”...

“But averages aren’t real,” objected Milo, “they’re just imaginary.”

“That may be so,” he agreed, “but they’re also very useful at times. For instance, if you didn’t have any money at all, but you happened to be with four other people who had ten dollars apiece, then you’d each have an average of eight dollars. Isn’t that right?”

*The Phantom Tollbooth*

Chapter 16 (p. 196)

Alfred A. Knopf. New York, New York, USA. 1989

**Keegan, John** 1934–  
English military historian

“...hitting the target”, for centuries the principal military skill, is henceforth to be left to the law of averages.

*The Face of Battle* (p. 307)

The Viking Press. New York, New York, USA. 1979

**Krutch, Joseph Wood** 1893–1970  
American naturalist, conservationist, and writer

One need not accept Shaw’s own estimate of his intellectual equipment to see that the doctor’s remark cut through a confusion in which psychologists and sociologists flounder. Frequently they make no distinction between what is “normal” and what is “usual”, “average”, or “statistically probable”.

*Human Nature and the Human Condition*

Chapter V (p. 75)

Random House, Inc. New York, New York, USA. 1959

...the question “How many legs does a normal man have?” should be answered by finding a statistical average. And since some men have only one leg, or none, this would lead inevitably to the conclusion that a “normal” man is equipped with one and some fraction legs.

*Human Nature and the Human Condition*

Chapter V (p. 76)

Random House, Inc. New York, New York, USA. 1959

**Lao Tzu** fl. 6th century BCE  
Chinese philosopher and father of Taoism

The wise student hears of the Tao and practices it diligently. The average student hears of the Tao and gives it thought now and again.

Translated by Gia-Fu Feng and Jane English  
*Tao Te Ching*

Forty-one  
Alfred A. Knopf, New York, New York, USA. 1974

**Lathrop, Julia** 1858–1932  
American social reformer

Averages are like the economic man; they are inventions, not real. When applied to salaries they hide gaunt poverty at the lower end.

*Address and Proceedings of the Fifty-Seventh Annual Meeting (Volume 57)*  
The Children's Bureau (p. 115)

*The Education of T.C. MITS*  
Part I, Chapter VI (p. 71)  
W.W. Norton & Company, Inc. New York, New York, USA. 1944

**Moroney, Michael Joseph** 1918–90  
English statistician

In former times, when the hazards of sea voyages were much more serious than they are today, when ships buffeted by storms threw a portion of their cargo overboard, it was recognized that those whose goods were sacrificed had a claim in equity to indemnification at the expense of those whose goods were safely delivered. The value of the lost goods was paid for by agreement between all of those whose merchandise had been in the same ship. This sea damage to cargo in transit was known as “*havaria*” and the word came naturally to be applied to the compensation money which each individual was called upon to pay. From this Latin word derives our modern word average.

Probability

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910  
American author and humorist

The average man's a coward.... The average man don't like trouble and danger.

*The Adventures of Huckleberry Finn*

Chapter XXII (pp. 187–188)

Grosset & Dunlap Publishers. New York, New York, USA. 1948

The only very marked difference between the average civilized man and the average savage is that the one is gilded and the other painted.

*Mark Twain Laughing: Humorous Anecdotes by and about Samuel Clemens*

1904, #370 (p. 98)

University of Tennessee Press. Knoxville, Tennessee, USA. 1985

**Venn, John** 1834–1923  
English logician

Why do we resort to averages at all?

On the Nature and Uses of Averages

*Journal of the Royal Statistical Society*, Volume 54, 1891 (p. 429)

How can a single introduction of our own [average], and that a fictitious one, possibly take the place of the many values which were actually given to us? And the answer surely is, that it cannot possibly do so; the one thing cannot take the place of the other for purposes in general, but only for this or that specific purpose.

On the Nature and uses of Averages

*Journal of the Royal Statistical Society*, Volume 54, 1891 (p. 430)

If we start with the assumption, grounded on experience, that there is uniformity in this average, and so long as this is secured to us, we can afford to be perfectly indifferent to the fate, as regards causation, of the individuals which compose the average.

*The Logic of Chance: An Essay on the Foundation and Province of the Theory of Probability*

Chance, Causation, and Design, Section 4 (p. 239)  
Macmillan & Company Ltd. London, England. 1888

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

CECILY: Mr. Mancreif and I are engaged to be married, Lady Brocknell.

LADY BROCKNELL [with a shiver, crossing to the sofa and sitting down]: I do not know whether there is anything peculiarly exciting in the air of this particular part of Hertfordshire, but the number of engagements that go on seems to me considerably above the proper average that statistics have laid down for our guidance.

*The Importance of Being Earnest: A Trivial Comedy for Serious People*  
Act III (p. 104)

Walter H. Baker Company. Boston, Massachusetts, USA. 19–?

## AVERAGE MAN

**Irwin, Wallace** 1875–1959

American writer

Statistics declare that the Average Man  
Finds the Average Woman and mates;  
That the Average Family, children all told,  
Is something like two and three-eighths.  
(Though fractional children disturb and appall,  
The Average Man isn't worried at all.)

*Random Rhymes and Odd Numbers*

To the Average Man Stanza 4

The Macmillan Co. New York, New York, USA. 1906

## AVOGADRO'S HYPOTHESIS

**Avogadro, Amedeo** 1776–1856

Italian savant

...the quantitative proportions of substances in compounds seem only to depend on the relative number of molecules which combine, and on the number of composite molecules which result. It must then be admitted that very simple relations also exist between the volumes of gaseous substances and the numbers of simple or compound molecules which form them. The first hypothesis to present itself in this connection, and apparently even the only admissible one, is the supposition that the number of integral molecules in any gases is always the same for equal volumes, or always proportional to the volumes.

Essay on a Manner of Determining the Relative Masses of the Elementary Molecules of Bodies, and the Proportions in Which They Enter into These Compounds

*Journal de Physique*, Volume 73 1811 (p. 58)

## AWARENESS

**Gilkey, Langdon** 1919–2004

American protestant theologian

Surely one of the most important characteristics of a scientific, introverted, specialized, hence infinitely intellectual culture is its drive toward, and faith in, total "awareness". Awareness of almost every conceivable factor influencing almost every conceivable situation is our characteristic panacea or cure-all. In this sense, gnosis, the total consciousness, and self-consciousness are the major goals of our secular culture. We really believe that if we know or are aware of everything, if we can understand all relevant causes and factors, we can control everything.

*Religion and the Scientific Future: Reflections on Myth, Science, and Theology*

Chapter III (p. 78)

Harper & Row, Publishers. New York, New York, USA. 1970

## AXIAL TILT

**Milton, John** 1608–74

English poet

Some say he bid his angels turn ascance  
The poles of Earth twice ten degrees and more  
From the suns axle; they with labour push'd  
Oblique the Centric Globe: Some say the Sun  
Was bid turn Reines from th' Equinoctial Rode  
Like distant breadth to Taurus with the sev'n  
Atlantic Sisters, and the Spartan Twins,  
Up to the Tropic Crab; thence down amain  
By Leo and the Virgin and the Scales,  
As deep as Capricorn, to bring in change  
Of Seasons to each Clime; else had the Spring  
Perpetual smil'd on Earth with vernant Flours,  
Equal in Days and Nights...

The sun, as from Thyestean Banquet, turn'd  
His course intended; else how had the World  
Inhabited, though sinless, more than now  
Avoided pitching cold and scorching heate?

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book X, l. 668–680, 688–691

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## AXIOM

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

...though it be true that I am principally in pursuit of works and the active department of the sciences, yet I wait for harvest-time, and do not attempt to mow the

mass or to reap the green corn. For I well know that axioms once rightly discovered will carry whole troops of works along with them, and produce them, not here and there one, but in clusters.

*Instauratio Magna*

The Plan of the Instauration Magna

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

I once told an audience of school children that the world would never change if they did not contradict their elders. I was chagrined to find next morning that this axiom outraged their parents. Yet it is the basis of the scientific method. A man must see, do and think things for himself, in the face of those who are sure that they have already been over all that ground. In science, there is no substitute for independence.

*Science and Human Values*

The Sense of Human Dignity (pp. 60–61)

Harper & Row, Publishers. New York, New York, USA. 1965

**Chargaff, Erwin** 1905–2002

Austrian biochemist

...nowadays our sciences, quick and fickle, wear out dogmas in 10 years, and axioms take only a little longer.

Bitter Fruits from the Tree of Knowledge

*Perspectives in Biology and Medicine*, Volume 16, Number 4, Summer, 1973 (p. 496)

**Clifford, William Kingdon** 1845–79

English mathematician

The danger of asserting dogmatically that an axiom based on the experience of a limited region holds universally will now be to some extent apparent to the reader. It may lead us to entirely overlook, or when suggested at once reject, a possible explanation of phenomena. The hypotheses that space is not homaloidal, and again, that its geometrical character may change with the time, may or may not be destined to play a great part in the physics of the future; yet we cannot refuse to consider them as possible explanations of physical phenomena, because they may be opposed to the popular dogmatic belief in the universality of certain geometrical axioms – a belief which has arisen from centuries of indiscriminating worship of the genius of Euclid.

*The Common Sense of the Exact Sciences* (5th edition)

Chapter IV (p. 226)

Kegan Paul, Trench, Trubner & Co. London, England. 1907

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

It has long been an axiom of mine that the little things are infinitely the most important.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 1)

*A Case of Identity* (p. 414)

Wings Books. New York, New York, USA. 1967

**Dumas, Alexandre** 1824–95

French dramatist and novelist

...it is one of the axioms of mathematics that the container must be greater than the contained.

*Romances* (Volume 1)

*The Vicomte de Bragellone or Ten Years Later*

Chapter XX (p. 193)

Estes & Lauriat. Boston, Massachusetts, USA. 1893

**Frayn, Michael** 1933–

English dramatist

For hundreds of pages the closely-reasoned arguments unroll, axioms and theorems interlock. And what remains with us in the end? A general sense that the world can be expressed in closely-reasoned arguments, in interlocking axioms and theorems.

*Constructions*

No. 277

Wildwood House. London, England. 1974

**Planck, Max** 1858–1947

German physicist

There is scarcely a scientific axiom that is not nowadays denied by somebody. And at the same time almost any nonsensical theory that may be put forward in the name of science would be almost sure to find believers and disciples Translated by James Murphy

*Where is Science Going?*

Chapter II (p. 65)

George Allen & Unwin. London, England. 1933

Axioms are instruments which are used in every department of science, and in every department there are purists who are inclined to oppose with all their might any expansion of the accepted axioms beyond the boundary of their logical application.

*Where Is Science Going?*

Chapter VI (p. 179)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

**Raju, Poolla Tirupati** 1904–

Indian philosopher

We are driven to conclude that science, like mathematics, is a system of axioms, assumptions, and deductions; it may start from being, but later leaves it to itself, and ends in the formation of a hypothetical reality that has nothing to do with existence; or it is the discovery of an ideal being which is, of course, present in what we call actuality, and renders it an existence for us only by being present in it.

*Idealistic Thought of India*

Chapter II, Section VII (p. 84)

The Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Reid, Thomas** 1710–96  
Scottish philosopher

The science [mathematics], once firmly established upon the foundation of a few axioms and definitions, as upon a rock, has grown from age to age, so as to become the loftiest and the most solid fabric that human reason can boast.

In James Walker

*Essays on the Intellectual Powers of Man* (6th edition) (p. 369)  
Phillips, Sampson, & Co. Boston, Massachusetts, USA. 1855

**von Neumann, John** 1903–57  
Hungarian-American mathematician

**Morgenstern, Oskar** 1902–77  
German-born American economist

A choice of axioms is not purely a subjective task. It is usually expected to achieve some definite aim – some specific theorem or theorems are to be derivable from the axioms – and to this extent the problem is exact and objective. But beyond this there are always other important desiderata of a less exact nature: the axioms should not be too numerous, their system is to be as simple and transparent as possible, and each axiom should have an immediate intuitive meaning by which its appropriateness can be judged directly.

*Theory of Games and Economic Behavior*

Chapter 3.5.2 (p. 25)

Princeton University Press. Princeton, New Jersey, USA. 1947

## AXIOMIZE

**Weyl, Hermann** 1885–1955  
German mathematician

– I should not pass over in silence the fact that today the feeling among mathematicians is beginning to spread that the fertility of these abstracting methods is approaching exhaustion. The case is this: that all these nice general notions do not fall into our laps by themselves. But definite concrete problems were conquered in their undivided complexity, singlehanded by brute force, so to speak. Only afterwards the axiomaticians came along and stated: Instead of breaking in the door with all your might and bruising your hands, you should have constructed such and such a key of skill, and by it you would have been able to open the door quite smoothly. But they can construct the key only because they are able, after the breaking in was successful, to study the lock from within and without. Before you can generalize, formalize and axiomatize, there must be a mathematical substance. I think that the mathematical substance in the formalizing of which we have trained ourselves during the last decades, becomes gradually exhausted. And so I foresee that the generation now rising will have a hard time in mathematics.

Emmy Noether

*Scripta Mathematica*, Volume 3, 1935

## B

### BABY

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

The human baby, the human being, is a mosaic of animal and angel.

*The Ascent of Man*  
Lower than the Angels (p. 31)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

### BACKBONELESS

**Bradley, Jr., John Hodgdon** 1898–1962  
American geologist

Backboneless marine animals are the creatures of the sea in which they live. Like the sea itself they are sluggish, if not entirely sedentary. Like the rest of us they are products of their environment.

*Parade of the Living*  
Part I, Chapter V (p. 55)  
Coward-McCann, Inc. New York, New York, USA. 1930

### BACTERIA

**Cohn, Ferdinand Julius** 1828–98  
German botanist and bacteriologist

At last, in the most recent times, an unexpected knowledge of the secret life energies of bacteria has been revealed, through which they rule with demoniacal power over the weak and woe, and even over the life and death of man.

*Bacteria: The Smallest of Living Organisms*  
Lüder. Berlin. 1872

If one could inspect a man under a similar lens-system he would appear as big as Mont Blanc or even as Mt. Chimborazo. But even under these colossal magnifications the smallest bacteria look no larger than the periods and commas of good print; little or nothing can be distinguished of their inner parts, and of them their very existence would have remained unsuspected if it had not been for their countless numbers.

In Kenneth Thimann  
*The Life of Bacteria: Their Growth, Metabolism, and Relationships*  
Chapter II (p. 33)  
The Macmillan Company. New York, New York, USA. 1963

**Dyer, Betsey Dexter** 1954–  
American biologist

Before refrigeration, when seafood might be kept a few days in a chilly basement, this phenomenon of glowing decay [from bacteria] was observed and noted. Charles Dickens, in *A Christmas Carol*, likens Marley's face in the knocker of Scrooge's door to a glowing lobster: "Marley's face...had a dismal light about it, like a bad lobster in a dark cellar." How many nonmicrobiologists have passed over that line, unable to decipher what image Dickens had in mind?

*A Field Guide to Bacteria*  
Chapter 8 (p. 131)  
Cornell University Press. Ithaca, New York, USA. 2003

**Feynman, Richard P.** 1918–88  
American theoretical physicist

The proteins of bacteria and the proteins of humans are the same. In fact it has recently been found that the protein-making machinery in the bacteria can be given orders from the red cells to produce red cell proteins. So close is life to life.

*The Meaning of It All: Thoughts of a Citizen Scientist*  
Chapter I (p. 11)  
Perseus Books. Reading, Massachusetts, USA. 1998

**Grassé, Pierre P.** 1895–1985  
French zoologist

Bacteria, the study of which has formed a great part of the foundation of genetics and molecular biology, are the organisms which, because of their huge numbers, produce the most mutants. This is why they gave rise to an infinite variety of species, called strains, which can be revealed by breeding or tests. Like *Erophila verna*, bacteria, despite their great production of intraspecific varieties, exhibit a great fidelity to their species. The bacillus *Escherichia coli*, whose mutants have been studied very carefully, is the best example. The reader will agree that it is surprising, to say the least, to want to prove evolution and to discover its mechanisms and then to choose as a material for this study a being which practically stabilized a billion years ago!

*Evolution of Living Organisms: Evidence for a New Theory of Transformation*  
Chapter III (p. 87)  
Academic Press. New York, New York, USA. 1977

**Haber, Fritz** 1868–1934  
German physical chemist

Nitrogen bacteria teach us that Nature, with her sophisticated forms of the chemistry of living matter, still understands and utilizes methods, which we do not as yet know how to imitate.

*Nobel Lectures, Chemistry 1901–1921*  
The Synthesis of Ammonia from Its Elements  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

### Harrisons' Nurseries

The work of bacteria is like that of the buzzards, which gather from everywhere and consume a dead body.

Lime Action (p. 21)

Harrison's Nurseries. Berlin, Maryland, USA. 1911

### Helmuth, William Tod 1833–1902

American physician

Oh, powerful bacillus,  
With wonder how do you fill us,  
Every day!

While medical detectives,  
With powerful objectives,  
Watch you play.

*"Scratches" of a Physician*

Ode to the Bacillus

W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

### Mayo, Charles Horace 1865–1939

American physician

The philosophic view of bacteria is to consider them necessary to life as the minute chemists of the air, waste, and the soil.

Stone in the Kidney

*Annals of Surgery*, Volume 7 1920

### Paulos, John Allen 1945–

American mathematician

We are trying to measure bacteria with a yardstick.

*New York Times*, 22 November, 2000 (p. A31)

### Peattie, Donald Culross 1898–1964

American botanist, naturalist, and author

No picture of life today is even worth a glance that does not show the bacteria as the foundation of life itself, the broad base of the pyramid on which all the rest is erected.

*An Almanac for Moderns*

November Twenty-Seventh (p. 275)

G.P. Putnam's Sons. New York, New York, USA. 1935

The bacteria are only the most primitive, and adaptable-to-the-primitive beings that are at present known. They may have had – may still have – antecedents even more hardy and fitted to digest the raw stuff of the universe, perhaps even the interstellar calcium that is one of the recent discoveries of the watchers of the skies.

*An Almanac for Moderns*

November Thirtieth (p. 278)

G.P. Putnam's Sons. New York, New York, USA. 1935

### Postgate, John

No biographical data available

Life manages very well without oxygen, evolving into flourishing communities of anaerobes. Acidity... presents

no problem, as sulphur bacteria and their co-habitants illustrate, nor does a considerable degree of alkalinity bother alkophiles.... Water purity is a trivial matter: saturated salt brines support abundant bacterial life. And pressure is quite irrelevant, with bacteria growing happily in a near vacuum or at the huge hydrostatic pressure of deep ocean trenches. Temperature, too, presents little problem: boiling hot springs support bacterial life, and bacteria have been found growing at 112° C in super-heated geothermal water under hydrostatic pressure; conversely, other types of bacteria thrive at well below zero, provided the water is salty enough not to freeze. And even if they do get frozen, many bacteria revive when their habitat thaws. Even organic food is not a prerequisite ...

*The Outer Reaches of Life*

Chapter 18 (p. 251)

Cambridge University Press. Cambridge, England. 1994

### Tyndall, John 1820–93

Irish-born English physicist

We have been scourged by invisible throngs, attacked from impenetrable ambuscades, and it is only today that the light of science is being let in upon the murderous dominion of our foes.

In H.H. Newman (ed.)

*The Nature of the World and of Man*

In Edwin O. Jordan

*The Bacteria* (p. 215)

The University of Chicago Press. Chicago, Illinois, USA. 1927

### Wallin, Ivan E. 1883–1969

American biologist

It is a rather startling proposal that bacteria, the organisms which are popularly associated with the disease, may represent the fundamental causative factor in the origins of species.

*Symbioticism and the Origin of Species*

Chapter I (p. 8)

Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

### Zinsser, Hans 1878–1940

U.S. bacteriologist

...infectious disease is merely a disagreeable instance of a widely prevalent tendency of all living creatures to save themselves the bother of building, by their own efforts, the things they require. Whenever they find it possible to take advantage of the constructive labors of others, this is the path of least resistance. The plant does the work with its roots and its green leaves. The cow eats the plant. Man eats both of them; and bacteria (or investment bankers) eat the man.

*Rats, Lice and History*

Chapter II (pp. 8–9)

Transaction Publishers

Somerset, New Jersey, USA. 2007

**BACTERIOLOGIST**

**Andrewes, Frederick William** 1859–1932  
British pathologist

It may very properly be asked whether the attempt to define distinct species, of a more or less permanent nature, such as we are accustomed to deal with amongst the higher plants and animals, is not altogether illusory amongst such lowly organised forms of life as the bacteria. No biologist nowadays believes in the absolute fixity of species...but there are two circumstances which here render the problem of specificity even more difficult of solution. The bacteriologist is deprived of the test of mutual fertility or sterility, so valuable in determining specific limits amongst organisms in which sexual reproduction prevails. Further, the extreme rapidity with which generation succeeds generation amongst bacteria offers to the forces of variation and natural selection a field for their operation wholly unparalleled amongst higher forms of life.

‘The Evolution of the Streptococci’  
*The Lancet*, Volume 2, 1906 (p. 1415)

**Doyle, Sir Arthur Conan** 1859–1930  
Scottish writer

I’m a bacteriologist, you know. I live in a nine-hundred-diameter microscope. I can hardly claim to take serious notice of anything that I can see with my naked eye. I’m a frontiersman from the extreme edge of the Knowable, and I feel quite out of place when I leave my study and come into touch with all you great, rough, hulking creatures.

*The Lost World*  
Chapter II (p. 18)

Hodder & Stroughton. New York, New York, USA. 1912

**BAG-LIMIT**

**Hornaday, William Temple** 1854–1937  
American naturalist

The fatalistic idea that bag-limit laws can save the game is today *the curse of all our game birds, mammals and fishes!* It is a fraud, a delusion and a snare. That miserable fetch has been worshipped much too long. Our game is being exterminated, everywhere, by blind insistence upon “open seasons,” and solemn reliance upon “legal bag-limits.”

**BALANCE**

**Chargaff, Erwin** 1905–2002  
Austrian biochemist

A balance that does not tremble cannot weigh.

*Heracleitean Fire: Sketches from a Life Before Nature*  
Part III

The Trembling of a Balance (p. 179)

Rockefeller University Press. New York, New York, USA. 1978

**Johnston, James Finlay Weir** 1796–1855  
Scottish chemist

...the first object one notices is a glass case standing on a table. It is the balance. How much light this fragile, simple instrument has shed on the natural sciences! How many phenomena it has explained! How many hidden truths it has revealed! Who could enumerate the discussions it has ended, the hypotheses it has destroyed! Who, in former times, would have believed that the determination of abstract truths and the development of the laws of nature would depend on the oscillations of this moving beam!

In Mary Elvira Weeks

*The Discovery of the Elements* (pp. 533–534)

Journal of Chemical Education. Easton Pennsylvania, USA. 1956

**von Liebig, Justus** 1803–73  
German organic chemist

For all great discoveries chemists are indebted to the “balance” – that incomparable instrument which gives permanence to every observation, dispels all ambiguity, establishes truth, detects error, and guides us in the true path of inductive science.

*Familiar Letters in Chemistry*

Letter I (p. 6)

Taylor & Walton. London, England. 1843

**BAROMETER**

**Berry, John J.**

No biographical data available

We often hear it said that however reliable the fluctuations of the barometer may be in other sections, as indicating the approach of storms, upon the Pacific Coast some exceptional rule or, rather, no rule exists, and that the variations of the barometer really indicate nothing. And when we find, as we often do, that the movement of the mercury accompanies, instead of preceding by hours and days, storms of wind or rain, we are very apt to regard instrument and indications alike as wholly unreliable.

*Life of David Belden*

Chapter V (p. 105)

Beldon Brothers. New York, New York, USA. 1891

**Bierce, Ambrose** 1842–1914  
American newspaperman, wit, and satirist

BAROMETER, n. An ingenious instrument which indicates what kind of weather we are having.

*The Cynic's Word Book*

Barometer (p. 28)

Doubleday, Page & Co. New York, New York, USA. 1906

## BATHYBIUS

**Huxley, Thomas Henry** 1825–95  
English biologist

Bathybius [is] a vast sheet of living matter, enveloping the whole earth beneath the seas.

On Some Organisms Living at Great Depths in the North Atlantic Ocean  
*Microscopical Journal*, October, 1868

## BAYESIAN

**Kadane, Joseph**  
Statistician

I believe that assumptions are useful to state in statistical practice because they impose a discipline on the user. Once a full set of assumptions is stated, the conclusion should follow. (Actually, only a Bayesian analysis can meet this standard, but that's another topic for another time.)

Comment

*Statistical Science*, Volume 1, Number 1, February, 1986 (p. 12)

**Wang, Chamont** 1949–  
Statistician

...there are at least 46,656 varieties of Bayesians.

*Sense and Nonsense of Statistical Inference: Controversy, Misuse, and Subtlety*

Chapter 6 (p. 158)

Marcel Dekker. New York, New York, USA. 1993

## BEACH

**Jones, Thomas Rymer** 1810–80  
English surgeon and zoologist

And now, gentle reader, let us hasten to the beach: the tide is near its ebb, and yonder rocks, baring their shoulders to the sunshine, seem to rest themselves in grim repose.

This is the time for work. Come boy! The fishing basket and the muslin landing-net – a hammer and an iron chisel. Mind, too, you don't forget the large glass jar with handles made of rope, wherein to put what specimens we find.

*The Aquarian Naturalist: A Manual for the Sea-Side*

John van Voorst. London, England. 1858

**Morton, Ron L.**  
No biographical data available

Beaches are nomads, have been nomads, and always will be nomads. Our attempts to shape them into our image of what we think they should be is a lost cause if ever there was one.

*Music of the Earth: Volcanoes, Earthquakes, and Other Geological Wonders*

Chapter 8 (p. 227)

Plenum Press. New York, New York, USA. 1996

**Tennyson, Alfred (Lord)** 1809–92  
English poet

Here about the beach I wandered, nourishing a youth sublime

With the fairy tales of science, and the long results of time.

*Alfred Tennyson's Poetical Works*

Locksley Hall, Stanza 6

Oxford University Press, Inc. London, England. 1953

## BEAK

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

I do not think it is distinctly enough felt by us that the beak of a bird is not only its mouth, but its hand, or rather its two hands. For, as its arms and hands are turned into wings, all it has to depend upon, in economical and practical life, is its beak. The beak, therefore, is at once its sword, its carpenter's tool-box, and its dressing-case; partly also its musical instrument; all this besides its function of seizing and preparing the food, in which functions alone it has to be a trap, carving-knife, and teeth, all in one.

*Love's Meinie*

Lecture 1, 20 (pp. 20–21)

John Wiley & Son. New York, New York, USA. 1873

## BEAUTY

**Abbey, Edward** 1927–89  
American environmentalist and nature writer

All we have, it seems to me, is the beauty of art and nature and life, and the love which that beauty inspires.

*The Journey Home: Some Words in Defense of the American West*

Chapter 4 (p. 57)

E.P. Dutton. New York, New York, USA. 1977

**Angier, Natalie** 1958–  
Writer and science journalist

The beauty of the natural world lies in the details, and most of those details are not the stuff of calendar art.

*The Beauty of the Beastly: New Views on the Nature of Life*

Introduction (p. xi)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1995

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

Now since the good and the beautiful are different... those who assert that the mathematical sciences say nothing of the beautiful or the good are in error. For these sciences say and prove a great deal about them; if they do not expressly mention them, but prove attributes which are their results or definitions, it is not true that they tell us nothing about them. The chief forms of beauty are order and symmetry and definiteness, which the mathematical sciences demonstrate in a special degree.

In *Great Books of the Western World* (Volume 8)

*Metaphysics*

Book XIII, Chapter 3, 1078a [30]

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The mathematical sciences particularly exhibit order, symmetry, and limitation; and these are the greatest forms of the beautiful.

In *Great Books of the Western World* (Volume 8)

*Metaphysics*

Book XIII, Chapter 3 (p. 610)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Awiakta, Marilou** 1936–  
Native American writer

Beauty is no threat to the wary  
who treat the mountain in its way,  
the copperhead in its way,  
and the deer in its way,  
knowing that nature is the human heart  
made tangible.

*Selu: Seeking the Corn-Mother's Wisdom*

Trail Warning (p. 39)

Fulcrum Publishers. Golden, Colorado, USA. 1993

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

There is no excellent beauty that hath not some strangeness in the proportion.

In Brian Vickers (ed.)

*Francis Bacon*

Essays of Beauty (p. 425)

Published for the British Council by Longman. Harlow, England. 1978

**Boltzmann, Ludwig Edward** 1844–1906  
Austrian physicist

Certain methods have frequently yielded the most beautiful results, and many persons have been tempted to believe that the development of science to the end of all time would consist in the systematic and unremitting application of them. But suddenly they begin to show indications of impotency, and all efforts are then bent upon discovering new and antagonistic methods. Then there usually arises a conflict between the adherents of the old method and those of the new. The point of view of

the former is characterized by its opponents as antiquated and obsolete; whilst its upholders in their turn look down with scorn upon the innovators as perverters of true classical science.

The Recent Development of Method in Theoretical Physics

*The Monist*, Volume 11, 1901 (p. 229)

**Bridges, Robert Seymour** 1844–1930  
English poet

For beauty being the best of all we know  
Sums up the unsearchable and secret aims  
Of nature.

*Poetical Works of Robert Bridges* (Volume 1)

The Growth of Love, 8 (p. 226)

Smith, Elder & Company. London, England. 1898

**Bryan, J. Ingram**  
No biographical data available

Nature seems to exist only to satisfy man's thirst for beauty; it is her way of teaching him confidence in the integrity of the Universe...

*The Interpretation of Nature in English Poetry*

Chapter I (p. 1)

Kaitakusha. Tokyo, Japan. 1932

**Burke, Edmund** 1729–97  
British statesman and philosopher

The stomach, the lungs, the liver, as well as other parts, are incomparably well adapted to their purposes; yet they are far from having any beauty.

*On the Sublime and the Beautiful*

Part III, Section VI (p. 196)

Printed for F.C. & J Rivington & others. London, England. 1812

**Cayley, Arthur** 1821–95  
English mathematician

It is difficult to give an idea of the vast extent of modern mathematics. The word "extent" is not the right one: I mean extent crowded with beautiful detail – not an extent of mere uniformity such as an objectless plain, but of a tract of beautiful country seen at first in the distance, but which will bear to be rambled through and studied in every detail of hillside and valley, stream, rock, wood, and flower. But, as for everything else, so for mathematical theory – beauty can be perceived but not explained.

*The Collected Mathematical Papers of Arthur Cayley* (Volume 11)

Presidential Address, British Association, September, 1883 (p. 449)

The University Press. Cambridge, England. 1889–97

**Chandrasekhar, Subrahmanyan** 1910–95  
Indian-born American astrophysicist

This "shuddering before the beautiful," this incredible fact that a discovery motivated by a search after the beautiful in mathematics should find its exact replica in Nature, persuades me to say that beauty is that to

which the human mind responds at its deepest and most profound.

*Truth and Beauty: Aesthetics and Motivations in Science*

Chapter 3, Section VI (p. 54)

The University of Chicago Press. Chicago, Illinois, USA. 1987

All of us are sensitive to nature's beauty. It is not unreasonable that some aspects of this beauty are shared by the natural sciences.

*Beauty and the Quest for Beauty in Science*

*Physics Today*, Volume 32, Number 7, July 1979 (p. 25)

### **Coleridge, Stephen** 1854–1936

English author, barrister, and opponent of vivisection

Science strives day and night to blind men's eyes so that they shall not see it, and where it succeeds men are robbed of a perfect and stainless happiness; for the appreciation and perception of beauty is its own reward, it confers pleasure that is utterly pure, it fosters in the mind refined and tender feelings and emotions, it elevates the character and fills the heart with wonder and love and gratitude...

*The Idolatry of Science*

Chapter XII (p. 99)

John Lane Co. London, England. 1920

### **Collins, Wilkie** 1824–89

English novelist

Admiration of those beauties of the inanimate world, which modern poetry so largely and so eloquently describes, is not, even in the best of us, one of the original instincts of our nature. As children, we none of us possess it. No uninstructed man or woman possesses it. Those whose lives are exclusively passed amidst the ever-changing wonders of sea and land are also those who are most universally insensible to every aspect of Nature not directly associated with the human interest of their calling. Our capacity of appreciating the beauties of the earth we live on is, in truth, one of the civilized accomplishments which we all learn, as an art; and, more, that very capacity is rarely practiced by any of us except when our minds are most indolent and most unoccupied.

*The Woman in White*

The Story Begun by Walter Hartright

Chapter VIII (p. 43)

Everyman's Library. London, England. nd

### **Copernicus, Nicolaus** 1473–1543

Polish astronomer

Among the many and varied literary and artistic studies upon which the natural talents of man are nourished, I think that those above all should be embraced and pursued with the most loving care which have to do with things that are very beautiful and very worthy of knowledge.

*Cold Spring Harbor Symposia on Quantitative Biology*

Volume XXIV, 1959 (p. 15)

Cold Spring Harbor Laboratory. Cold Spring Harbor, New York, USA.

### **Darwin, Charles Robert** 1809–82

English naturalist

How the sense of beauty in its simplest form – that is, the reception of a peculiar kind of pleasure from certain colours, forms, and sounds – was first developed in the mind of man and of the lower animals, is a very obscure subject. The same sort of difficulty is presented, if we enquire how it is that certain flavours and odours give pleasure, and others displeasure.

*The Origin of Species* (6th edition)

Chapter VI (p. 162)

John Murray. London, England. 1882

### **Davy, Sir Humphry** 1778–1829

English chemist

Amidst the various infinitely diversified changes of things, nothing can be said to be accidental or without design. Even the most terrible of the ministrations of nature in their ultimate operation are pregnant with blessings and with benefits. Beauty and harmony are made to result from apparent confusion, and all the laws of the material world are ultimately made subservient to the preservation of life and the promotion of happiness.

*Humphry Davy on Geology: The 1805 Lectures for the General Audience*

Lecture Ten (p. 139)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1980

### **Dickinson, Emily** 1830–86

American lyric poet

Beauty – be not caused – It is...

*The Complete Poems of Emily Dickinson*

No. 516 (p. 252)

Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1960

**Dirac, Paul Adrien Maurice** 1902–84  
English theoretical physicist

We may try to make progress by following in Hamilton's footsteps, taking mathematical beauty as our guiding beacon, and setting up theories which are of interest, in the first place, only because of the beauty of their mathematics. We may then hope that such equations will ultimately prove their value in physics, basing this hope on the belief that Nature demands mathematical beauty in her laws.  
Hamiltonian Methods and Quantum Mechanics  
*Proceedings of the Royal Irish Academy*, Volume 63, Section A, Number 3, January, 1964 (p. 59)

The researcher worker, in his efforts to express the fundamental laws of Nature in mathematical form, should strive mainly for mathematical beauty. He should still take simplicity into consideration in a subordinate way to beauty.... It often happens that the requirements of simplicity and beauty are the same, but where they clash the latter must take precedence.

The Relation Between Mathematics and Physics  
*Proceedings of the Royal Society (Edinburgh)*, Volume LIX, February 25, 1939 (p. 124)

It is quite clear that beauty does depend on one's culture and upbringing for certain kinds of beauty, pictures, literature, poetry and so on.... But mathematical beauty is of a rather different kind. I should say perhaps it is of a completely different kind and transcends these personal factors. It is the same in all countries and at all periods of time.

In Helge Kragh  
*Dirac: A Scientific Biography*  
Chapter 14 (p. 288)  
Cambridge University Press. Cambridge, England. 1990

**Dretske, Fred I.** 1932–  
American philosopher

Beauty is in the eye of the beholder, and information is in the head of the receiver.

*Knowledge and the Flow of Information*  
Preface (p. vii)  
Center for the Study of Language and Information, Leland Stanford Junior College, USA. 1999

**Duhem, Pierre-Maurice-Marie** 1861–1916  
French physicist and mathematician

It is impossible to follow the march of one of the greatest theories of physics, to see it unroll majestically its regular deductions starting from initial hypotheses, to see its consequences represent a multitude of experimental laws down to the smallest detail, without being charmed by the beauty of such a construction, without feeling keenly that such a creation of the human mind is truly a work of art.

*The Aim and Structure of Physical Theory*  
Part I, Chapter II (p. 24)  
Princeton University Press. Princeton, New Jersey, USA. 1954

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Beauty is the form under which the intellect prefers to study the world.

*The Conduct of Life*  
Beauty (p. 225)  
Houghton Mifflin Co. Boston, Massachusetts, USA. 1894

We ascribe beauty to that which is simple; which has no superfluous parts; which exactly answers its end.

*Ralph Waldo Emerson: Essays and Lectures*  
*The Conduct of Life*  
Beauty (p. 1093)  
The Library of America. New York, New York, USA. 1983

Beauty rests on necessities. The line of beauty is the line of perfect economy.

*Ralph Waldo Emerson: Essays and Lectures*  
*The Conduct of Life*  
Beauty (p. 1097)  
The Library of America. New York, New York, USA. 1983

For the world is not painted, or adorned, but is from the beginning beautiful; and God has not made some beautiful things, but Beauty is the creator of the Universe.

*Ralph Waldo Emerson: Essays and Lectures*  
*Essays: Second Series*  
The Poet (p. 449)  
The Library of America. New York, New York, USA. 1983

**Erdős, Paul** 1913–96  
Hungarian mathematician

It's like asking why Beethoven's Ninth Symphony is beautiful. If you don't see why, someone can't tell you. I *know* numbers are beautiful. If they aren't beautiful, nothing is.

Quoted in Paul Hauffman  
The Man Who Loves Only Numbers  
*The Atlantic Magazine*, Volume 260, Number 5, November, 1987 (p. 44)

**Gross, David J.** 1941–  
American particle physicist

At the fundamental level nature, for whatever reason, prefers beauty and is marvelously inventive in inventing new forms of beauty.

The Role of Symmetry in Fundamental Physics  
*Proceedings of the National Academy of Science USA*, Volume 93, Number 25, December 10, 1996

**Heisenberg, Werner Karl** 1901–76  
German physicist and philosopher

If nature leads to mathematical forms of great simplicity and beauty – to forms that no one has previously encountered – we cannot help thinking that they are true and that they revealed genuine features of Nature.

*Selected Papers S. Chandrasekhar* (Volume 7)  
The Series Paintings of Claude Monet and the Landscape of General Relativity (p. 138)  
The University of Chicago Press. Chicago, Illinois, USA. 1997

...beauty in exact science, no less than in the arts is the most important source of illumination and clarity.

*Across the Frontiers*

Chapter XIII (p. 183)

Harper & Row, Publishers. New York, New York, USA. 1974

### **Hilbert, David** 1862–1943

German mathematician

Our Science, which we loved above everything, had brought us together. It appeared to us as a flowering garden. In this garden there were well-worn paths where one might look around at leisure and enjoy oneself without effort, especially at the side of a congenial companion. But we also liked to seek out hidden trails and discovered many an unexpected view which was pleasing to our eyes; and when the one pointed it out to the other, and we admired it together, our joy was complete.

In Constance Reid

*Hilbert – Courant*

Hilbert

Chapter XV (p. 121)

Springer-Verlag. New York, New York, USA. 1986

### **Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

...wisdom is the abstract of the past, but beauty is the promise of the future.

*The Professor at the Breakfast Table*

Chapter II (p. 44)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

### **Huntley, Henry Edwards**

No biographical data available

Nature's beauty dies. The day dawns when the nautilus is no more. The rainbow passes, the flower fades away, the mountain crumbles, the star grows cold. But the beauty in mathematics – the divine proportion, the golden rectangle, *spira mirabilis* – endures for evermore.

*The Divine Proportion: A Study in Mathematical Beauty*

Chapter XIII (p. 176)

Dover Publications. New York, New York, USA. 1970

### **Jefferies, Richard** 1848–87

English nature writer

The exceeding beauty of the earth, in her splendor of life, yields a new thought with every petal. The hours when the mind is absorbed by beauty are the only hours when we really live ....[A]ll else is illusion, or mere endurance.

The Pageant of Summer

*Eclectic Magazine of Foreign Literature, Science, and Art*, Volume

XXXVIII, Number 2, August, 1883 (p. 146)

### **Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

The scientific man sees and feels beauty as much as any mere observer – as much as any artist or painter. But he also sees something underlying that beauty; he wishes to learn something of the actions and forces producing those beautiful results.

*Popular Lectures and Addresses* (Volume 2)

The Bangor Laboratories

Address

Physical and Chemical Laboratories in University College

Bangor, North Wales, February 2, 1885 (p. 477)

Macmillan & Company Ltd. London, England. 1894

### **Kolb, Edward W. (Rocky)** 1951–

American cosmologist

To those who say Newton removed the hand of God from the heavens, I say he replaced a toilsome hand of brute force with a sublime hand of beauty.

*Blind Watchers of the Sky*

Chapter Five (p. 135)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1996

### **Kragh, Helge** 1944–

Science historian

The main problem is that beauty is essentially subjective and hence cannot serve as a commonly defined tool for guiding or evaluating science. It is, to say the least, difficult to justify aesthetic judgment by rational arguments.... The sense of aesthetic standards is part of the socialization that scientists acquire; but scientists, as well as scientific communities, may have widely different ideas of how to judge the aesthetic merit of a particular theory. No wonder that eminent physicists do not agree on which theories are beautiful and which are ugly.

*Dirac: A Scientific Biography*

Chapter 14 (pp. 287–288)

Cambridge University Press. Cambridge, England. 1990

### **Lax, Peter** 1926–

Hungarian-born American mathematician

I like to start with some phenomenon, the more striking the better, and then use mathematics to try to understand it.... There's an aesthetic quality, yes, but if you try to pin that down, you are just begging the question. What is beautiful is purely subjective. Saying something is beautiful may be no different from saying that you have a feeling that something is important. You know, one of the complaints that pure mathematicians have against applied mathematicians is that it is ugly. ...Beauty is in the eye of the beholder. It's a poor guide, aesthetics is. You have to feel that what you are doing is beautiful but, after all, someone used to classical art regards modern art as horrible and ugly.

In D. Albers, G. Alexanderson and C. Reid

*More Mathematical People: Contemporary Conversations* (p. 155)

Harcourt Brace Jovanovich. Boston, Massachusetts, USA. 1990

**Leibniz, Gottfried Wilhelm** 1646–1716  
German philosopher and mathematician

The beauty of nature is so great and its contemplation so sweet...whoever tastes it can't help but view all other amusements as inferior.

Translated by Elizabeth Oehlkers

In Ernest Peter Fischer

*Beauty and the Beast*

Chapter 2 (p. 47)

Plenum Trade. New York, New York, USA. 1999

**Buchner, Ludwig** 1824–99

German physician and philosopher

Individual human qualities and imperfections are transferred to philosophical notions, and belief is made to occupy the place of actual knowledge.

*Force and Matter*  
Chapter I (p. 7)  
Trubner & Co  
London, England. 1864

**Darwin, Charles Robert** 1809–82

English naturalist

Thus disbelief crept over me at a very slow rate, but was at last complete. The rate was so slow that I felt no distress, and have never since doubted even for a second that my conclusion was correct. I can indeed hardly see how anyone ought to wish Christianity to be true; for if so the plain language of the text seems to show that the men who do not believe, and this would include my Father, Brother and almost all of my friends, will be everlastingly punished.

And this is a damnable doctrine.

*The Autobiography of Charles Darwin, 1809–1882: With Original Omissions Restored*  
Religious Belief (p. 87)  
Harcourt, Brace. New York, New York, USA. 1959

At some future period, not very distant as measured by centuries, the civilised races of man will almost certainly exterminate, and replace, the savage races throughout the world. At the same time the anthropomorphous apes, as Professor Schaaffhausen has remarked, will no doubt be exterminated. The break between man and his nearest allies will then be wider, for it will intervene between man in a more civilised state, as we may hope – [more civilized] than the Caucasian, and some ape as low as a baboon, instead of as now between the negro or Australian and the gorilla.

In *Great Books of the Western World* (Volume 49)  
*The Descent of Man*  
Part I, Chapter VI (p. 336)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**de Morgan, Augustus** 1806–71

English mathematician and logician

...belief is but another name for imperfect knowledge...

*Formal Logic: Or, The Calculus of Inference, Necessary and Probable*  
Chapter IX (p. 173)  
Taylor & Walton. London, England. 1847

Chapter XI (p. 131)  
Chapman & Hall, Ltd. London, England. 1898

**Heinlein, Robert A.** 1907–88

American science fiction writer

I don't "believe" in anything. I know certain things – little things, not the Nine Billion Names of God – from experience. But I have no beliefs. Belief gets in the way of learning.

*Time Enough for Love*  
Prelude, Chapter II (p. 41)  
G.P. Putnam's Sons. New York, New York, USA. 1973

**Huxley, Thomas Henry** 1825–95

English biologist

Every belief is the product of two factors: the first is the state of mind to which the evidence in favor of that belief is presented; and the second is the logical cogency of the evidence itself.

*Collected Essays* (Volume 2)  
*Darwiniana*  
The Coming of Age of "The Origin of Species" (p. 230)  
Macmillan & Company Ltd. London, England. 1904

**Redi, Francesco** 1626–78

Italian physician

Belief [that worms in meat were derived from the droppings of flies] would be vain without the confirmation of experiment, hence in the middle of July, I put a snake, some fish, some eels of the Arno, and a slice of milk-fed veal in four large, wide-mouthed flasks; having well closed and sealed them, I then filled the same number of flasks in the same way, only leaving these open.

Translated by Mab Bigelow  
*Experiments on the Generation of Insects*  
Meat in Sealed Flasks (p. 33)  
The Open Court Publishing Company. Chicago, Illinois, USA. 1909

**Robinson, James Harvey** 1863–1936

American historian and educator

We are incredibly heedless in the formation of our beliefs, but find ourselves filled with an illicit passion for them when anyone proposes to rob us of their companionship. It is obviously not the ideas themselves that are dear to us, but our self-esteem, which is threatened.

*The Mind in the Making*  
Chapter II (p. 40)  
Harper & Brothers Publishers. New York, New York, USA. 1921

**Sayers, Dorothy L.** 1893–1957

English novelist and essayist

But you see, I can believe a thing without understanding it. It's all a matter of training.

*Strong Poison and Have His Carcase*  
Have His Carcase  
Chapter XXII (p. 301)  
Harcourt, Brace & Company. New York, New York, USA. No date

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

There is no harder scientific fact in the world than the fact that belief can be produced in practically unlimited quantity and intensity, without observation or reasoning, and even in defiance of both, by the simple desire to believe founded on a strong interest in believing.

*The Doctor's Dilemma*  
Preface on Doctors  
Credulity and Chloroform (p. xviii)  
Brentano's. New York, New York, USA. 1920

## BELIEFS

**Sagan, Carl** 1934–96

American astronomer and author

We are constantly prodding, challenging, seeking contradictions or small, persistent residual errors, proposing alternative explanations, encouraging heresy. We give our highest rewards to those who convincingly disprove established beliefs.

*Demon-Haunted World: Science As a Candle in the Dark*  
Chapter 2 (p. 33)  
Random House, Inc. New York, New York, USA. 1995

## BENEFACTOR

**Rowland, Henry Augustus** 1848–1901  
American physicist

He who makes two blades of grass grow where one grew before is the benefactor of mankind; but he who obscurely worked to find the laws of such growth is the intellectual superior as well as the greater benefactor of the two.

*The Physical Papers of Henry Augustus Rowland*  
The Highest Aims of the Physicist (p. 669)  
The Johns Hopkins Press. Baltimore, Maryland, USA. 1902

## BENZENE THEORY

**Kekule, August** 1829–96  
German organic chemist

Someone has said that the benzene theory appeared like a meteor from the sky. It came absolutely new and uninitiated. The human mind does not work in this manner. Nothing has ever been thought of which is absolutely new, certainly not in chemistry...

In Harry Clary Jones  
*A New Era in Chemistry*  
Chapter I (p. 13)  
D. van Nostrand Co. New York, New York, USA. 1913

## BESSEL FUNCTION

**Feynman, Richard P.** 1918–88  
American theoretical physicist

When I see equations, I see the letters in colors – I don't know why. As I'm talking, I see vague pictures of Bessel functions from Jahnke and Ernde's book, with light-tan j's, slightly violet-bluish n's, and dark brown x's flying around. And I wonder what the hell it must look like to the students.

*What Do You Care What Other People Think?*  
It's as Simple as One, Two, Three... (p. 59)  
W.W. Norton & Company, Inc. New York, New York, USA. 1988

## BETA DECAY

**Wu, Chien-Shiung** 1912–97  
Chinese-American physicist

Beta decay was...like a dear old friend. There would always be a special place in my heart reserved especially for it.

In H. B. Newman and T. Ypsilantis (eds.)  
*History of Original Ideas and Basic Discoveries in Particle Physics*  
Parity Violation (pp. 390–391)  
Plenum Press. New York, New York, USA. 1996

## BEWILDERED

**Darwin, Charles Galton** 1809–82  
English naturalist

...the more I think the more bewildered I become...

In Francis Darwin  
*The Life and Letters of Charles Darwin* (Volume 2)  
Darwin to Asa Gray, May 22, 1860 (p. 106)  
D. Appleton & Co. New York, New York, USA. 1887

## BIBLIOGRAPHER

**Minot, Charles Sedgwick** 1852–1914  
American anatomist

The biological bibliographer is like an explorer in a forest – he finds no open way to travel, but must laboriously hunt for the specimens which belong in the same class according to our intellectual systems, and which he must discover as they lie scattered, unclassified, and, all too often, concealed.

*Biological Lectures Delivered at the Marine Biological Laboratory of Wood's Hole*  
Tenth Lecture (pp. 149–150)  
Ginn & Co. Boston, Massachusetts, USA. 1896

## BIBLIOGRAPHY

**de Cervantes, Miguel** 1547–1616  
Spanish novelist, playwright, and poet

Now let us come to those references to authors which other books have, and you want for yours. The remedy for this is very simple; You have only to look out for some book that quotes them all, from A to Z as you say yourself, and then insert the very same alphabet in your book, and though the imposition may be plain to see, because you have so little need to borrow from them, that is no matter; there will probably be some simple enough to believe that you have made use of them all in this plain, artless story of yours. At any rate, if it answers no other purpose this long catalogue of authors will serve to give a surprising look of authority to your book.

In *Great Books of the Western World* (Volume 29)  
*The History of Don Quixote de la Mancha*  
Preface (p. xiii)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Weil, André** 1906–98  
French mathematician

We know only too well...that one should not invariably assume a mathematician to be fully aware of the work of his predecessors, even when he includes it among his references; which one of us has read all the books he has listed in the bibliographies of his own writings?

In Raymond George Ayoub  
*Musings of the Masters: An Anthology of Mathematical Reflections*  
History of Mathematics (p. 210)  
Mathematical Association of America. Washington, D.C. 2004

## BIFOCAL VISION

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

I have no doubt that you, ladies, have frequently received delicate compliments upon your eyes, but I feel sure that no one has ever told you, and I know not whether it will flatter you, that you have in your eyes, be they blue or black, little geometricians. You say you know nothing of them? Well, for that matter, neither do I. But the facts are as I tell you.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

Why Has Man Two Eyes? (pp. 71–72)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

## BIG BANG

**Alphonsus X** 1221–84

Castilian monarch and patron of the sciences

...a certain King of Castile, a great mathematician, (but not much troubled with religion) said, that, “had God consulted him when he made the world, he would have told him how to have framed it better.”

In Bernard de Fontenelle

*Conversations on the Plurality of Worlds*

The First Evening (pp. 13–14)

Printed for Peter Wilson. Dublin, Ireland. 1761

**Ball, Philip** 1962–

English science writer

Origins are seldom uncontentious. Current fashion sometimes has it that the idea of a cosmic Big Bang is best regarded as our latest cultural myth, as much a social construct as the slaying of Ymir. On the one hand, it can only be arrogant to suggest otherwise; on the other, it’s this particular kind of confidence that makes science possible.

*Life’s Matrix: A Biography of Water*

Part One, Chapter 1 (p. 5)

Farrar, Straus &amp; Giroux. New York, New York, USA. 2000

**Čapek, Milič** 1909–97

Czechoslovakian philosopher and physicist

World history thus began by a “super-radioactive explosion” of the original single quantum, and the development of the universe is a continuation of this process of fragmentation of energy into the increasing number of smaller and smaller quanta. The enormous energy of the cosmic rays is merely a “fossil remnant” of the high-frequency radiation from the original phase of cosmic history.

*The Philosophical Impact of Contemporary Physics*

Chapter XVII (p. 352)

D. van Nostrand Company, Inc. Toronto, Ontario, Canada. 1961

**Cardenal, Ernesto** 1925–

Nicaraguan poet and Roman Catholic priest

And that was Big Bang.

The Great Explosion.

The universe subjected to relations of uncertainty, its radius of curvature undefined,

its geometry imprecise

with the uncertainty principle of Quantum Mechanics.

Translated by John Lyons

*Cosmic Canticle*

Cantigua 1, Big Bang (p. 11)

Curbstone Press. Willimantic, Connecticut, USA. 1993

**Ehrenreich, Barbara** 1941–

American social critic and essayist

If that’s how it all started, then we might as well face the fact that what’s left out there is a great deal of shrapnel and a whole bunch of cinders (one of which is, fortunately, still hot enough and close enough to be good for tanning).

*The Worst Years of Our Lives*

Blocking the Gates to Heaven (p. 267)

Pantheon Books. New York, New York, USA. 1981

**Ferris, Timothy** 1944–

American science writer

We have at present only two kinds of physics to choose from, classical and quantum; and classical physics, as Alex Vilenkin notes, “fails to describe the beginning of the universe.” Its breakdown is clearly signaled by the fact that general relativity invokes a singularity at time zero, which is to say that its equations yield infinities and can produce no meaningful result. Roger Penrose and a youthful Stephen Hawking proved this in 1970, in theorems demonstrating that if gravitation is always attractive and if the universe has anything like the matter density we observe to have, then there must have been a singularity at the outset of time. So we are left with quantum cosmology – the attempt to apply quantum precepts, previously employed in studying subatomic particles and fields, to the universe as a whole.

*The Whole Shebang: A State-of-the-Universe’s Report*

The Origin of the Universe (p. 249)

Simon &amp; Schuster. New York, New York, USA. 1996

The term “big bang” was coined with derisive intent by Fred Hoyle, and its endurance testifies to Sir Fred’s creativity and wit. Indeed, the term survived an international competition in which three judges – the television science reporter Hugh Downs, the astronomer Carl Sagan, and myself – sifted through 13,099 entries from 41 countries and concluded that none was apt enough to replace it. No winner was declared, and like it or not, we are stuck with “big bang.”

*The Whole Shebang: A State-of-the-Universe’s Report*

Notes, 10 (p. 323)

Simon &amp; Schuster. New York, New York, USA. 1996

**Gamow, George** 1904–68  
Russian-born American physicist

God was very much disappointed, and wanted first to contract the Universe again, and to start all over from the beginning. But it would be much too simple. Thus, being almighty, God decided to correct His mistake in a most impossible way.

And God said: "Let there be Hoyle." And there was Hoyle. And God looked at Hoyle...and told him to make heavy elements in any way he pleased.

And Hoyle decided to make heavy elements in stars, and to spread them around by supernova explosions.

*My World Line: An Informal Autobiography*

Chapter 6 (p. 127)

The Viking Press. New York, New York, USA. 1979

**Guth, Alan** 1947–  
American physicist

...the big bang theory is not really a theory of a bang at all. It is only a theory of the aftermath of a bang...the standard big bang theory says nothing about what banged, why it banged, or what happened before it banged.

*The Inflationary Universe: The Quest For a New Theory of Cosmic Origins*

Preface (p. xiii)

Addison-Wesley Publishing Company, Inc. Reading, Massachusetts, USA. 1997

**Hoyle, Sir Fred** 1915–2001  
English mathematician, astronomer, and writer

The big bang theory requires a recent origin of the Universe that openly invites the concept of creation.

*The Intelligent Universe*

Chapter 9 (p. 237)

Holt, Rinehart & Winston. New York, New York, USA. 1983

On scientific grounds this big bang assumption is much the less palatable of the two [steady state theory or point source origin theory]. For it is an irrational process that cannot be described in scientific terms.

*The Nature of the Universe*

Chapter 6 (p. 124)

The University Press. Cambridge. 1933

A major reason for the popularity of big-bang theory is undoubtedly that it is simple enough to place no burden on the mind. Undoubtedly, too, there are many who are attracted by its retreat into metaphysics. For myself, I find the retreat into nonexplanation unsatisfactory, contrasting so markedly with the exquisite subtlety of all science outside cosmology. Can the Universe really be so crude while the rest is so refined?

*Home Is Where the Wind Blows: Chapters from a Cosmologist's Life*

Part Three, Chapter 24 (p. 354)

University Science Books, Mill Valley, California, USA. 1994

Big-bang cosmology is a form of religious fundamentalism, as is the furor over black holes, and this is why

these peculiar states of mind have flourished so strongly over the past quarter century. It is in the nature of fundamentalism that it should contain a powerful streak of irrationality and that it should not relate, in a verifiable, practical way, to the everyday world. It is also necessary for a fundamentalist belief that it should permit the emergence of gurus, whose pronouncements can be widely reported and pondered on endlessly – endlessly for the reason that they contain nothing of substance, so that it would take an eternity of time to distill even one drop of sense from them. Big-bang cosmology refers to an epoch that cannot be reached by any form of astronomy, and, in more than three decades, it has not produced a single successful prediction.

*Home Is Where the Wind Blows: Chapters from a Cosmologist's Life*

Part Three, Chapter 28 (pp. 413–414)

University Science Books, Mill Valley, California, USA. 1994

An ultimate theory, like the Holy Grail, is something the physicist must always seek but will never find.

*Ten Faces of the Universe*

The Physicist's Universe (p. 34)

W.H. Freeman & Company. San Francisco, California, USA. 1977

It is a suspicious feature of the explosion theory that no obvious relics of a superdense state of the Universe can be found.

*Frontiers of Astronomy* (p. 322)

Harper & Row, Publishers. New York, New York, USA. 1955

**Jeffers, Robinson** 1887–1962  
American poet

...there is no way to express that explosion; all that exists

Roars into flame, the tortured fragments rush away from each other into all the sky, new universes

Jewel the black breast of night; and far off the outer nebulae like charging spearmen again

Invade emptiness.

No wonder we are so fascinated with fire-works.

*The Beginning and the End and Other Poems*

The Great Explosion (p. 3)

Random House, Inc. New York, New York, USA. 1963

**Levi, Primo** 1919–87  
Italian writer and chemist

Twenty billion years before now,

Brilliant, soaring in space and time

There was a ball of flame, solitary, eternal,

Our common father and our executioner.

It exploded, and every change began.

Even now the thin echo of this one reverse catastrophe

Resounds from the furthest reaches.

Translated by Ruth Feldman and Brian Swann

*Collected Poems*

In the Beginning

Faber & Faber. Boston, Massachusetts, USA. 1988

**MacRobert, Alan**

Editor

The idea of an oscillating universe, in which the Big Bang resulted from the recollapse of a previous phase of the universe, gained currency merely because it avoided the issue of creation – not because there was the slightest evidence in favor of it.

Beyond the Big Bang  
*Sky & Telescope*, Vols. 65–66, March, 1983 (p. 211)

**Maddox, John Royden** 1925–

Welsh chemist and physicist

The microwave background radiation, which fills even the corners of the universe, would psychologically have been more compelling evidence for the Big Bang if it had been predicted before its discovery in 1965. That it was not is something of a surprise, which is nevertheless now irrelevant.

The Best Cosmology There Is  
*Nature*, Volume 372, Number 6501, 3 November, 1994 (p. 15)

**Mather, John C.** 1946–

American astrophysicist

“The Big Bang Theory comes out a winner. This is the ultimate in tracing one’s cosmic roots.” He added, “We are seeing the cold glow still remaining from the initially very hot Big Bang.... The closer we examine the Big Bang the simpler the picture gets.”

In P. Cleggett-Haleim  
Big Bang Theory Passes Toughest Test  
*NASA Press Release*, Washington, D.C., January 7, 1993

**Parker, Barry**

Canadian physicist

If we accept the big bang theory, and most cosmologists now do, then a “creation” of some sort is forced upon us.  
*Creation: The Story of the Origin and Evolution of the Universe*  
Chapter 11 (p. 202)  
Plenum Press. New York, New York, USA. 1998

**Poe, Edgar Allan** 1809–49

American short story writer

I am fully warranted in announcing that the Law which we have been in the habit of calling Gravity exists on account of Matter’s having being irradiated, at its origin, atomically, into a limited sphere of Space, from one, individual, unconditional, irrelative, and absolute Particle Proper, by the sole process in which it is possible to satisfy, at the same time, the two conditions, irradiation and generally equable distribution throughout the sphere, that is to say, by a force varying in direct proportion with the squares of the distances between the irradiated atoms, respectively, and the Particular centre of Irradiation.

*Eureka*  
Line 8 (p. 67)  
Geo. P. Putnam. New York, New York, USA. 1848

**Silk, Joseph** 1942–

American astronomer and physicist

It’s impossible that the Big Bang is wrong.  
In Eric J. Lerner  
*The Big Bang Never Happened*  
Chapter 1 (p. 11)  
Random House, Inc. New York, New York, USA. 1991

American astrophysicist

What we have found is evidence for the birth of the universe.... It’s like looking at God.  
In T.H. Maugh  
Relics of “Big Bang” Seen for First Time  
*Los Angeles Times*, April 24, 1992:A1

**Turner, Michael S.**

American astrophysicist

The significance of this cannot be overstated. They have found the Holy Grail of cosmology.  
American Scientists Find a “Holy Grail”  
*International Herald Tribune*, London, April 24, 1992:1

**Updike, John** 1932–

American novelist, short story writer, and poet

Space-time. Three spatial dimensions, plus time. It knots. It freezes. The seed of the universe has come into being. Out of nothing. Out of nothing and brute geometry, laws that can’t be otherwise, nobody handed them to Moses, nobody had to. Once you’ve got that little seed, that little itty-bitty mustard seed – ka-boom! Big Bang is right around the corner.

*Roger’s Version*  
Chapter V (p. 303)  
Alfred A. Knopf. New York, New York, USA. 1986

**Weinberg, Steven** 1933–

American nuclear physicist

In the beginning there was an explosion. Not an explosion like those familiar on earth, starting from a definite center and spreading out to engulf more and more of the circumambient air, but an explosion which occurred simultaneously everywhere, filling all space from the beginning, with every particle of matter rushing apart from every other particle.

*The First Three Minutes*  
Chapter I (p. 5)  
Basic Books, Inc., Publishers. New York, New York, USA. 1988

**Weldon, Fay** 1931–

English novelist

Who cares about half a second after the big bang; what about the half second before?  
In Paul Davies  
*About Time: Einstein’s Unfinished Revolution*  
Header (p. 129)  
Simon & Schuster. New York, New York, USA. 1995

**Wheeler, John Archibald** 1911–

American physicist and educator

Not only particles and the fields of force had to come into being at the big bang, but the laws of physics themselves, and this by a process as higgledy-piggledy as genetic mutation or the second law of thermodynamics.

The Computer and the Universe

*International Journal of Theoretical Physics*, Volume 21, Numbers 6/7, June 1982 (p. 565)

**Zeldovich, Yakov Borisovich** 1914–87

Russian physicist

The point of view of a sinner is that the church promises him hell in the future, but cosmology proves that the glowing hell was in the past.

In Joseph Silk

*The Big Bang* (p. 101)

W.H. Freeman. New York, New York, USA. 1989

**BINARY****Author undetermined**

In the binary system we count on our fists instead of on our fingers.

Source undetermined

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

It was thus that Leibnitz believed he saw the image of creation in his binary arithmetic where he employed only the two characters, unity and zero. He imagined, since God can be represented by unity and nothing by zero, that the Supreme Being had drawn from nothing all beings, as unity with zero expresses all the numbers in this system of arithmetic. This idea was so pleasing to Leibnitz that he communicated it to the Jesuit Grimaldi, president of the tribunal of mathematics in China, in the hope that this emblem of creation would convert to Christianity the emperor there who particularly loved the sciences.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter XVI (p. 169)

John Wiley &amp; Sons. New York, New York, USA. 1902

**BINOMIAL EXPANSION****Kaminsky, Kenneth**

American mathematics professor, writer, and editor

...yeah, our apartment was small. It was so small, we had to go out in the hall just to use the binomial expansion.

Professor Fogelfro

*Mathematical Magazine*, Volume 69, Number 2, April, 1996 (p. 142)**BINOMIAL THEOREM****Fabre, Jean-Henri** 1823–1915

French entomologist and author

And now we are together, O mysterious tome, whose Arab name breathes a strange mustiness of occult lore and claims kindred with the sciences of almagest and alchemy. What will you show me? Let us turn the leaves at random. Before fixing one's eyes on a definite point in the landscape, it is well to take a summary view of the whole. Page follows swiftly upon page, telling me nothing. A chapter catches my attention in the middle of the volume; it is headed, Newton's Binomial Theorem.

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

To accept the biocentric outlook and regard ourselves and the world from its perspective is to see the whole natural domain of living things and their environment as an order of interconnected objects and events.

*Respect for Nature: A Theory of Environmental Ethics*

The Natural World As A System of Interdependence (p. 116)

Princeton University Press. Princeton, New Jersey, USA. 1986

**BIOCHEMIST****Chargaff, Erwin** 1905–2002

Austrian biochemist

There are few things in the world before which the biochemist feels as uncomfortable as when he has to deal with life itself.

*Voices in the Labyrinth: Nature, Man and Science* (p. 73)

The Seabury Press. New York, New York, USA. 1977

**BIOCHEMISTRY****Chantrenne, H.**

No biographical data available

Biochemistry is no longer the chemistry of death and decay; it is the chemistry of the living cell, with its essential irreversible, oriented processes admirably organized and controlled.

In Nathan O. Kaplan and Eugene P. Kennedy (eds.)

*Current Aspects of Biochemical Energetics: Fritz Lipmann Dedicatory Volume*

For the 25th Anniversary of ~ P (p. 37)

Academic Press. New York, New York, USA. 1966

**Chargaff, Erwin** 1905–2002

Austrian biochemist

...biochemistry is helpless before life, having to kill the organism before investigating it. Biochemistry is, in fact, much more successful in practicing the second part of its composite name than in following the prefix.

Triviality in Science: A Brief Meditation on Fashions  
*Perspectives in Biology and Medicine*, Volume 19, Number 3, Spring, 1976 (p. 333)

What I liked about chemistry was its clarity surrounded by darkness; what attracted me, slowly and hesitatingly, to biology was its darkness surrounded by the brightness of the givenness of nature, the holiness of life. And so I have always oscillated between the brightness of reality and the darkness of the unknowable. When Pascal speaks of God in hiding, *Deus absconditus*, we hear not only the profound existential thinker, but also the great searcher for the reality of the world. I consider this unquenchable resonance as the greatest gift that can be bestowed on a naturalist.

*Heraclitean Fire: Sketches from a Life before Nature*

The Silence of the Heavens (p. 55)

**Darling, David** 1953–

Freelance science writer

Every human being, and every human mind, has roots that extend indefinitely far back through time. The genes that regulate all aspects of our physical development, including the prenatal fabrication of our brains, were in existence long before we or our parents were born. Those genes, in turn, evolved, step by step, from more primitive genetic material that can trace its ancestry back to the first biochemical reactions on Earth. And we do not have to stop there. We can carry the search for the ultimate origin of ourselves back still further – back to the very beginning of the universe.

To dialyze, or not to dialyze – that is the question: –  
Whether 'tis better for the protein to suffer  
The wear and tear of defective Visking  
Or to take the chances against a sea of buffers  
By chromatography instead?

Biochemist's Soliloquy

*Perspectives in Biology and Medicine*, Volume VIII, Number 2, Winter 1965 (p. 277)

**Fruton, Joseph S.** 1912–

Polish-born American biochemist

**Simmonds, Sophia**

No biographical data available

The ultimate goal of biochemistry is to describe the phenomena that distinguish the “living” from the “non-living” in the language of chemistry and physics.

*General Biochemistry* (2nd edition)

Chapter 1 (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1958

**Hopkins, Frederick Gowland** 1844–89

English biochemist

The task of the biochemist wishing to get to the heart of his problem is exceptional in that he must study systems in which the organization of chemical events counts for more, and is carried far beyond, such simpler coordinations as may be found in non-living systems. He would be over-bold were he to claim at present that such high organization can depend alone upon adjusted concentrations and ordered structural distributions among specialized colloidal catalysts, but he is justified, I think, in feeling sure that such factors contribute to that organization in a significant sense. The biochemist, when he aims at describing living systems in his own language, comes in contact with philosophical thought.... His may not be the last word in the description of life, but without his help the last word will never be said.

In Joseph Needham and Ernest Baldwin (eds.)

*Hopkins & Biochemistry*

Problems of Specificity in Biochemical Catalysis

33rd Robert Boyle Lecture, 1931 (p. 223)

W. Heffer & Sons Ltd. Cambridge, England. 1949

**Meyerhof, Otto** 1884–1951

German biochemist

Biochemistry has an important bearing on the progress of medicine. But because of this, it must itself remain a pure science, whose initiates are inspired by a craving for understanding and by nothing else.

Biochemistry

*Scientific American*, Volume 183, Number 3, September, 1950 (p. 68)

**Ochoa, Severo** 1905–93

Spanish biochemist and molecular biologist

In recent years biochemistry – the chemistry of life – has come more and more into the foreground of biological research. This is natural since chemical reactions are at the bottom of all life.

*Les Prix Nobel. The Nobel Prizes in 1959*

Nobel banquet speech for award received in 1959

Nobel Foundation. Stockholm, Sweden. 1960

**Rose, Steven Peter Russell** 1938–

No biographical data available

Biochemists are different from organic and natural-product chemists in a number of important ways. First,

for us the structure, sequence and molecular properties of substances derived from living organisms are not of great interest in their own right, but only insofar as they may be seen as providing information which casts light on the biological role of the substance.... Second...we are likely to be less interested in the properties of "pure" molecules in isolation, and more concerned with the ways in which they are involved in complex interactions with other molecules.

Reflections on Reductionism

*Trends in Biochemical Sciences*, Volume 13, 1988 (p. 161)

### van Bergeijk, W. A.

No biographical data available

Biology implies biochemistry, but not the other way around.

In George Gaylord Simpson

*Biology and Man*

Chapter Two (p. 19)

Harcourt, Brace & World, Inc. New York, New York, USA. 1969

## BIODIVERSITY

### Terborgh, John 1936–

Tropical biologist

...to save biodiversity, we must act before the virgin forest disappears, because no effort at ecosystem rehabilitation, however sophisticated, will ever recreate nature in its primeval state.

*Diversity and the Tropical Rain Forest*

Chapter 9 (p. 232)

Scientific American Library. New York, New York, USA. 1992

### Wilson, Edward O. 1929–

American biologist and writer

Biological diversity – "biodiversity" in the new parlance – is the key to the maintenance of the world as we know it. Life in a local site struck down by a passing storm springs back quickly because enough diversity still exists. Opportunistic species evolved for just such an occasion rush in to fill the spaces. They entrain the succession that circles back to something resembling the original state of the environment.

*The Diversity of Life*

Chapter One (p. 15)

W.W. Norton & Company, Inc. New York, New York, USA. 1992

The most wonderful mystery of life may well be the means by which it created so much diversity from so little physical matter.

*The Diversity of Life*

Chapter Four (p. 35)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

We should judge every scrap of biodiversity as priceless while we learn to use it and come to understand what

it means to humanity. We should not knowingly allow any species or race to go extinct. And let us go beyond mere salvage to begin the restoration of natural environments in order to enlarge wild populations and stanch the hemorrhaging of biological wealth. There can be no purpose more enspiriting than to begin the age of restoration, reweaving the wondrous diversity of life that still surrounds us.

*The Diversity of Life*

Chapter Fifteen (p. 351)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

## BIOGENESIS

### Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

A law of nature of the sort we know and love will not create biological information, or indeed any information at all.... The secret of life lies, not in its chemical basis, but in the logical and informational rules it exploits.... Real progress with the mystery of biogenesis will be made, I believe, not through exotic chemistry, but from something conceptually new.

*The Fifth Miracle: The Search for the Origin and Meaning of Life*

Chapter 18 (pp. 210, 216)

Simon & Schuster. New York, New York, USA. 1999

## BIOGEOGRAPHY

### Darwin, Charles Robert 1809–82

English naturalist

In considering the distribution of organic beings over the face of the globe, the first great fact which strikes us is, that neither the similarity nor the dissimilarity of the inhabitants of various regions can be wholly accounted for by climatal and other physical conditions.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XII (p. 181)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

A third great fact...is the affinity of the productions of the same continent or sea, though the species themselves are distinct at different points and stations. It is a law of the widest generality, and every continent offers innumerable instances. Nevertheless the naturalist in traveling, for instance, from north to south never fails to be struck by the manner in which successive groups of beings, specifically distinct, yet clearly related, replace each other.

In *Great Books of the Western World* (Volume 49)

*The Origin of Species by Means of Natural Selection*

Chapter XII (p. 182)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Forbes, Edward 1815–54

English naturalist

**Godwin-Austin, Robert Alfred Cloyne** 1808–84  
English geologist

Everyone knows that the same animals and plants are not found everywhere...but that they are distributed so as to be gathered in distinct zoological and botanical provinces, of greater or less extent, according to their degree of limitation by physical conditions, whether features of the earth's outline, or climate.

*The Natural History of the European Seas*

Chapter I (p. 1)

J. van Voorst. London, England. 1859

## BIO-GEOLOGY

**Kingsley, Charles** 1819–75  
English clergyman and author

Bio-geology, then, begins with asking every plant or animal you meet, large or small, not merely – What is your name? That is the collector and classifier's duty; and a most necessary duty it is, and one to be performed with the most conscientious patience and accuracy, so that a sound foundation may be built for future speculations. But young naturalists should act not merely as Nature's registrars and census-takers, but as her policemen and gamekeepers; and ask everything they meet – How did you get there? By what road did you come? What was your last place of abode? And now you are here, how do you get your living? Are you and your children thriving, like decent people who can take care of themselves, or growing pauperized and degraded, and dying out?

## BIOINFORMATICS

**Spengler, Sylvia J.**  
American researcher in genetics

Perhaps bioinformatics – the shotgun marriage between biology and mathematics, computer science, and engineering – is like an elephant that occupies a large chair in the scientific living room.... There are probably many biologists who feel that a major product of this bioinformatics elephant is large piles of waste material.

Bioinformatics in the Information Age

*Science*, Volume 287, Number 5456, 18 February, 2000 (p. 1221)

## BIOLOGICAL

**Arber, Agnes Robertson** 1879–1960  
English botanist

Since the first step in biological research involves the decision as the question on which to concentrate, the researcher is at once put upon his mettle, for the full

recognition and appreciation of a problem may task him even more severely than its solution.

*The Mind and the Eye: A Study of the Biologist's Standpoint*

Chapter I (p. 6)

At the University Press. Cambridge, England, USA. 1954

**Bernard, Claude** 1813–78  
French physiologist

If we mean to build up the biological sciences, and to study fruitfully the complex phenomena which occur in living beings, whether in the physiological or the pathological state, we must first of all lay down principles of experimentation, and then apply them to physiology, pathology and therapeutics.

Translated by Henry Copley Greene

*An Introduction to the Study of Experimental Medicine*

Introduction (p. 2)

A dramatic demonstration of the importance of biological structure was provided by the experiments of Skoultchi

and Morowitz, who cooled the eggs of the brine shrimp *Artemia* to temperatures below 2 degrees K (–271 C) and showed that upon rewarming their hatch rate was the same as that of control eggs held at room temperature. Since at that temperature we have structure but presumably no process, it is reasonable to conclude that structure is not only a necessary condition, but even a sufficient condition for initiating biological function. It would thus appear that living processes could be generated by putting together the proper structures, the synthesis of life becoming “merely” a very complicated exercise in organic chemistry.

Chapter I (p. 1)

Chatto & Windus. London, England. 1898

**Woodger, Joseph Henry** 1894–1981

English biologist

If we make a general survey of biological science we find that it suffers from cleavages of a kind and to a degree which is unknown in such a well unified science as, for example, chemistry. Long ago it has undergone that inevitable process of subdivision into special branches which we find in other sciences, but in biology

this has been accompanied by a characteristic divergence of method and outlook between the exponents of the several branches which has tended to exaggerate their differences and has even led to certain traditional feuds between them. This process of fragmentation continues, and with it increases the time and labour requisite for obtaining a proper acquaintance with any particular branch.

**Gerstein, Mark**

American physical and biological scientist

**Levitt, Michael**

No biographical data available

When scientists publish models of biological molecules in journals, they usually draw their models in bright colors and place them against a blank, black background. We now know that the background in which these molecules exist – water – is just as important as they are.

Simulating Water and the Molecules of Life

*Scientific American*, November, 1998 (p. 105)

## BIOLOGICAL TEACHING

**Patten, William** 1861–1932

American biologist

Much of our biological teaching is like a shop window display of nature's competitive goods, with a varied assortment of human notions thrown in, but with no guarantee as to their significance, or quality, or usefulness.

*The Grand Strategy of Evolution: The Social Philosophy of a Biologist*

Appendix (p. 424)

Richard G. Badger. Boston, Massachusetts, USA. 1920

## BIOLOGIST

**Allee, Warder C.** 1885–1955

American zoologist

Our tasks as biologists, and as citizens of a civilized country, is a practical engineering job. We need to help arrange so that the existing trend toward a workable world organization will be guided along practical lines

which accord with sound biological theory. And we must remember always that in such matters the idealist with the long-range view is frequently the true realist.

Where Angels Fear to Tread: A Contribution from General Sociology to Human Ethics  
*Science*, Volume 97, 1943 (p. 517?)

**Allen, Durward L.** 1910–87

Wildlife biologist

The biologist has a term for the progress of the seasons; he calls it phenology. It becomes a matter of habit to interpret almost any observation in terms of what has happened and what is going to happen. The present is a moment in a sequence of changes. The basis of phenology is, of course, the climatic cycle through the year.

*Wolves of Minong: Their Vital Role in a Wild Community*  
Chapter 7 (p. 142)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1979

**Author undetermined**

A group of goose biologists were meeting to brainstorm about the migration tactics of Canada geese. They were particularly interested in applying for a \$100,000 Federal grant to investigate the ‘V’ formation of goose flight. It had been observed that one side of the ‘V’ is always longer than the other side. This group would put together a research proposal to apply for the \$100,000 grant and hopefully find out why this happens.

To start off the discussion, Todd, the Consulting Firm Biologist stands up and says in typical consultant fashion, ‘I say we ask for \$200,000, and attempt to model the wind drag coefficients. We can have our geologists record and map the ground topography and then our staff meteorologists can predict potential updraft currents. Our internal CAD department can then produce 3D drawings of the predicted wing tip vortices. Then, after several years of study, our in-house publications department could produce a nice thick report full of charts and graphs.’

The Senior Research Biologist, a professor at the local university, cleared his throat and responded, ‘No, no!, That’s not it at all. We only need \$150,000. We can train a group of domesticated geese to fly in formations of equal length and then compare their relative fitness to wild geese. We can then publish the results in the *Journal of Wildlife Management*.

About then, the hardworking field biologist stands up and begins walking for the door. ‘Where are you going?’ the group asks. ‘I’m leaving’ he replies, ‘I’ve heard enough. No one has to give me \$100,000 to find out that the reason one side of the ‘V’ is longer is simply because there are more geese on that side!’

Source undetermined

**Boyle, Robert** 1627–91

English natural philosopher and theological writer

Great mathematicians are like fastball pitchers. They’re at their peak in their 20s, and after that they’re finished. Great chemists are like curveball or screwball pitchers. They make their contributions in their 30s. But great biologists are like knuckle-ball pitchers. They can go on for years because they don’t burn out. In fact, biologists get better with age.

Fisheries Biologist William Ricker is a Real Hall of Famer in His Field  
*Sports Illustrated*, November 12, 1984 (p. 129)

**Connolly, Cyril** 1903–74

English critic and editor

The answer seems to rest with three categories of thinkers; the physicists, who incline to believe in God, but are now all busy making explosives; the biologists and chemists who can produce almost everything except life, and who, if they could create life, would prove that it might have arisen accidentally; and the psychologists and physiologists, who are struggling to discover the relation of mind to brain, the nature of consciousness.

*The Unquiet Grave*

Part III (p. 80)

Hamish Hamilton. London, England. 1945

**Cudmore, Lorraine Lee**

American cell biologist

All cell biologists are condemned to suffer an incurable secret sorrow: the size of the objects of their passion.

*The Center of Life: A Natural History of the Cell*

The Universal Cell (p. 5)

New York Times Book Company. New York, New York, USA. 1977

We are a sad lot, the cell biologist. Like the furtive collectors of stolen art, we are forced to be lonely admitters of spectacular architecture, exquisite symmetry, dramas of violence and death, nobility, self-sacrifice and yes, rococo sex.

*The Center of Life: A Natural History of the Cell*

The Universal Cell (p. 6)

New York Times Book Company. New York, New York, USA. 1977

**Darbishire, Arthur Dukinfield** 1879–1915

Statistician

The cocksureness of the scientific biologist should surely be the cause of the gravest misgivings. The more certain a man is that he is right the more probable is it that he is wrong; because it means that facts are as soft clay in his hands, and his certainty moulds them to his purpose.

*An Introduction to a Biology*

Chapter I (p. 32)

Funk & Wagnalls Co. New York, New York, USA. 1917

Those who prefer swimming out of their depth may speculate upon first causes and on what happens after death. But the biologist, whose business is the difficult task of understanding life, must be careful to undertake a much less ambitious and precarious task.

*An Introduction to a Biology*

Appendix to an Introduction to Biology (p. 105)

Funk & Wagnalls Co. New York, New York, USA. 1917

Chatto & Windus. London, England. 1926

**Huxley, Thomas Henry** 1825–95

English biologist

I do not question for a moment, that while the Mathematician is busied with deductions from general propositions, the Biologist is more especially occupied with observations, comparisons, and those processes which lead to general propositions.

*Lay Sermons, Addresses, and Views*

On the Educational Value of the Natural History Sciences (p. 87)

New York, New York, USA. 1872

The Biologist deals with a vast number of properties of objects, and his inductions will not be completed, I fear, for ages to come; but when they are, his science will be as deductive and as exact as the Mathematics themselves.

*Lay Sermons, Addresses and Reviews*

Chapter V (p. 87)

D. Appleton & Co. New York, New York, USA. 1903

**Kellogg, Vernon Lyman** 1867–1937

American zoologist

...the biologist seems unable to escape from the use of a terminology that is to be found in the larger dictionaries – and these dictionaries are at home, while the public is in the lecture-hall.

The Biologist Speaks of Death

*The Atlantic Monthly*, June, 1921 (p. 778)

**Loeb, Jacques** 1859–1924

German physiologist

...the investigations of the biologist differ from those of the chemist and physicist in that the biologist deals with the analysis of the mechanism of a special class of machines. Living organisms are chemical machines, made of essentially colloidal material which possess the peculiarity of developing, preserving and reproducing themselves automatically. The machines ... have thus far been reproducing themselves, though no one can say with certainty that such machines might not one day be constructed artificially.

The Recent Development of Biology, I

*Science*, Volume 20, Number 519, December 9, 1904 (p. 778)

**Martin, Charles-Noël** 1923–

French physicist

Despite the vast number of facts he has at his fingertips, the modern biologist still knows next to nothing about life itself, its origins, or its workings.

Translated by A.J. Pomerans

*The Role of Perception in Science*

Chapter 4 (p. 76)

Hutchinson of London. London, England. 1963

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

Biologists work very close to the frontier between bewilderment and understanding. Biology is complex, messy and richly various, like real life; it travels faster nowadays than physics or chemistry (which is just as well, because it has so much farther to go), and it travels nearer to the ground.

*Pluto's Republic*

Induction and Intuition in Scientific Thought (p. 73)  
Oxford University Press, Inc. Oxford, England. 1982

**Pearson, Will**

American speaker

Molecular biologists are like mechanics at a small-town garage – drive in any model of vehicle and they want to pop the hood to see what makes it run. Microbiologists are like dealership mechanics, working only on certain makes.

Little, Brown & Co. Boston, Massachusetts, USA. 1963

## BIOLOGIST, MOLECULAR

**Zack, Michael H.**

The situation [copying to a short stretch of the long message coded in DNA] for a molecular biologist is like that

of a spy who knows that there was a paragraph in a vital document that started with “sometimes a...“and ends with”...originally planned”. The spy knows the document has been mixed with millions of other documents and refuse at the local dump. The goal is to read the paragraph.

*Knowledge and Strategy*

Part Two, Chapter 5 (p. 76)

Butterworth-Heinemann. Boston, Massachusetts, USA. 1999

## BIOLOGY

**Abbey, Edward** 1927–89

American environmentalist and nature writer

The basic science is not physics or mathematics but biology – the study of life. We must learn to think both logically and bio-logically.

*A Voice Crying in the Wilderness: Notes from a Secret Journal*

Chapter 10 (p. 94)

St. Martin's Press. New York, New York, USA. 1989

### Author undetermined

Biology is the only science in which multiplication means the same thing as division.

Source undetermined

Biology is really Chemistry, Chemistry is really Physics, Physics is really Mathematics, and Mathematics is really Philosophy.

Source undetermined

**Bartlett, Elisha** 1804–55

American physician

With certain limited exceptions, the laws of physical science are positive and absolute, both in their aggregate, and in their elements, – in their sum, and in their details; but the ascertainable laws of the science of life are approximative only, and not absolute.

*An Essay on the Philosophy of Medical Science*

Part II, Chapter 11

Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1844

**Bates, Marston** 1906–74

American zoologist

Natural history is not equivalent to biology. Biology is the study of life. Natural history is the study of animals and plants – of organisms. Biology thus includes natural history, and much else besides.

*The Nature of Natural History*

Chapter 1 (p. 7)

Scribner. New York, New York, USA. 1950

**Berlinski, David** 1942–

American mathematician

Mathematical sciences require *theories*, molecular biology *facts*.

*A Tour of Calculus*

Chapter 26 (p. 306)

Pantheon Books. New York, New York, USA. 1995

**Bernard, Claude** 1813–78

French physiologist

...the science of vital phenomena must have the same foundations as the science of phenomena of inorganic bodies, and...there is no difference in this respect between the principles of biological science and those of physico-chemical science.

Translatede by Henry C. Greene

*An Introduction to the Study of Experimental Medicine*

Chapter III

Henry Schuman, Inc. New York, New York, USA. 1927

**Burroughs, John** 1837–1921

American naturalist and essayist

at their everlasting tasks, but biology is as a flower that cometh in a day and on the morrow is cut down.

*Under the Apple Tree*

The Primal Mind (p. 129)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Capra, Fritjof** 1939–

Austrian-born American physicist

The exploration of the atom has forced physicists to revise their basic concepts about the nature of physical reality in a radical way. The result of the revision is a coherent dynamic theory, quantum mechanics, which transcends the principal concepts of Cartesian-Newtonian science. In biology, on the other hand, the exploration of the gene has not led to a comparable revision of basic concepts, nor has it resulted in a universal dynamic theory.

*The Turning Point: Science, Society, and the Rising Culture*

Chapter 4 (p. 121)

Simon & Schuster. New York, New York, USA. 1982

**Carson, Rachel** 1907–64

American marine biologist and author

I like to define biology as the history of the earth and all its life – past, present, and future. To understand biology is to understand that all life is linked to the earth from which it came; it is to understand that the stream of life, flowing out of the dim past into the uncertain future, is in reality a unified force, though composed of an infinite number and variety of separate lives....

*Humane Biology Projects*

Introduction

Animal Welfare Institute. Washington, D.C. 1977

Any concept of biology is not only sterile and profitless, it is distorted and untrue, if it puts its primary focus on unnatural conditions rather than on those vast forces not

of man's making that shape and channel the nature and direction of life.

*Humane Biology Projects*

Introduction

Animal Welfare Institute. Washington, D.C. 1977

**Chargaff, Erwin** 1905–2002

Austrian biochemist

In the old times, the knowledge of biology was perhaps similar to what could be made out in a very large, very dark house. Many objects could be more felt than seen with equal dimness, once the eyes got used to the darkness; and scientists were conscious of the limiting conditions under which they worked. In our time, however, a few very powerful and very narrow beams of light have been thrown into a few corners of this dark house, and several things can be seen in clarity and illumination that almost distort their significance. But at the same time we have lost our dark-adaptation; and since we all have a tendency to follow the light, we have moved into these cozy corners, to the detriment of the rest, which still is, by far, the major part of nature. In pointing this out one runs the risk of being accused of trying to spread the darkness.

*Essays on Nucleic Acids*

Chapter 3 (pp. 39–40)

Elsevier Publishing Company. Amsterdam, Netherlands. 1963

In no other science[ than biology] is the span so wide between what it ought to understand and what it can understand.

*Heraclitean Fire: Sketches from a Life before Nature* (p. 163)

The Rockefeller University Press. New York, New York, USA. 1978

Evolution And Democracy (p. 142)

Charles Scribner's Sons. New York, New York, USA. 1922

**Conn, Herbert William** 1859–1917

Biologist

Biology is often described as the most recent of the sciences, despite the fact that it was one of the first to be studied.

*Biology: An Introductory Study for Use in Colleges*

Chapter I (p. 1)

Silver, Burdett & Co. Boston, Massachusetts, USA. 1912

**Crick, Francis Harry Compton** 1916–2004

English biochemist

The development of biology is going to destroy to some extent our traditional grounds for ethical belief, and it is not easy to see what to put in their place.

*Thinking About the Brain*

*Scientific American*, Volume 241, Number 3, September, 1979 (p. 185)

The ultimate aim of the modern movement in biology is in fact to explain all biology in terms of physics and chemistry.

*Of Molecules and Men*

The Nature of Vitalism (p. 10)

University of Washington Press. Seattle, Washington, USA. 1966

**Darbishire, Arthur Dukinfield** 1879–1915

Statistician

The function of biology, if we adopt the literal, etymological meaning of the word, is to describe and interpret the essential manifestations of life, and to extract from these interpretations a conception, or theory, of life. But the word "biology" has come to be used in certain very much restricted senses, of which it will suffice to mention two. In its commonest signification it merely serves as a convenient common term for the subject matter of both botany and zoology. Another common meaning of it is the study of the habits of a particular animal or plant.

*An Introduction to a Biology*

Chapter I (pp. 1–2)

Funk & Wagnalls Co. New York, New York, USA. 1917

**Dawkins, Richard** 1941–

English ethologist, evolutionary biologist, and popular science writer

What lies at the heart of every living thing is not a fire, not warm breath, not a "spark of life." It is information, words, instructions. If you want a metaphor, don't think of fires and sparks and breath. Think, instead, of a billion discrete, digital characters carved in tablets of crystal. If you want to understand life, don't think about vibrant, throbbing gels and oozes, think about information technology.

*The Blind Watchmaker*

Chapter 5 (p. 112)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

Biology is the study of the complex things in the Universe. Physics is the study of the simple ones.

The Necessity of Darwinism

*New Scientist*, Volume 94, Number 1301, 15 April 1982 (p. 130)

But, however many ways there may be of being alive, it is certain that there are vastly more ways of being dead, or rather not alive.

*The Blind Watchmaker*

Chapter 1 (p. 9)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

**Dobzhansky, Theodosius** 1900–75

Russian-American scientist

Seen in the light of evolution, biology is, perhaps, intellectually the most satisfying and inspiring science. Without that light it becomes a pile of sundry facts – some of them interesting or curious but making no meaningful picture as a whole.

In J. Peter Zetterberg (ed.)

*Evolution versus Creationism: The Public Education Controversy*

Nothing in Biology Make Sense Except in the Light of Evolution (p. 18)

Oryx Press, Phoenix, Arizona, USA. 1983

The lack of real contact between mathematics and biology is either a tragedy, a scandal, or a challenge, it is hard to decide which.

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*

Chapter One (p. 2)

Springer-Verlag, New York, New York, USA. 1992

**Kauffman, Stuart A.** 1939–

Theoretical biologist

If biologists have ignored self-organization, it is not because self-ordering is not pervasive and profound. It is because we biologists have yet to understand how to think about systems governed simultaneously by two sources of order. Yet who seeing the snowflake, who seeing simple lipid molecules cast adrift in water forming themselves into cell-like hollow lipid vesicles, who seeing the potential for the crystallization of life in swarms of reacting molecules, who seeing the stunning order for free in networks linking tens upon tens of thousands of variables, can fail to entertain a central thought: if ever we are to attain a final theory in biology, we will surely, surely have to understand the commingling of self-organization and selection. We will have to see that we are the natural expressions of a deeper order. Ultimately, we will discover in our creation myth that we are expected after all.

*At Home in the Universe: The Search for Laws of Complexity*

Chapter 5 (p. 112)

Oxford University Press, Inc. New York, New York, USA. 1995

**Lamarck, Jean-Baptiste Pierre Antoine** 1744–1829

French biologist

A sound Physics of the Earth should include all the primary considerations of the earth's atmosphere, of the characteristics and continual changes of the earth's external crust, and finally of the origin and development of living organisms. These considerations naturally divide the physics of the earth into three essential parts, the first being a theory of the atmosphere, or Meteorology, the second a theory of the earth's external crust, or Hydrogeology, and the third a theory of living organisms, or Biology.

Translated by Albert V. Carozzi

*Hydrogeology*

Forward (p. 18)

University of Illinois Press, Urbana, Illinois, USA. 1964

A Biologist's Mail (p. 20)

Saturday Review Press. New York, New York, USA. 1970

**Lovelock, James Ephraim** 1919–

English scientist

The successes of molecular biology are so beguiling that we forget the organism and its physiology. Schrödinger's disciples, who founded the church of molecular biology, have turned his wisdom into the dogma that life is self-replicating and corrects its errors by natural selection. There is much more to life than this naïve truth, just as there is more to the Universe than atoms alone – grandmothers live and enjoy the shade of Lombardy poplar trees not knowing that they and the trees are deemed by this dogma to be dead.

Living Alternatives

*Nature*, Volume 320, Number 6063, 17 April, 1986 (p. 646)

**Mayr, Ernst** 1904–2005

German-born American biologist

There is more to biology than rats, *Drosophila*, *Caenorhabditis*, and *E. coli*.

In Lynn Margulis and Dorion Sagan

*Acquiring Genomes: A Theory of the Origins of Species*

Forward (p. xiv)

Basic Books, Inc. New York, New York, USA. 2002

Biology was referred to as a “dirty science,” an activity, according to the physicist Ernest Rutherford, not much better than “postage stamp collecting.” At best it was a second-class, “provincial” science.

*Toward a New Philosophy of Biology: Observations of an Evolutionist*

Is Biology an Autonomous Science? (p. 9)

Harvard University Press. Cambridge, Massachusetts, USA. 1988

**Medawar, Sir Peter Brian** 1915–87

Brazilian-born English zoologist

If the task of scientific methodology is to piece together an account of what scientists actually do, the testimony of biologists should be heard with specially close attention. Biologists work very close to the frontier between bewilderment and understanding. Biology is complex, messy and richly various, like real life; it travels faster nowadays than physics or chemistry (which is just as well, since it has so much farther to go) and it travels nearer to the ground. It should therefore give us a specially direct and immediate insight into science in the making.

*Induction and Intuition in Scientific Thought*

Chapter I, Section 1 (p. 1)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1969

**Monod, Jacques** 1910–76

French biochemist

Biology occupies a position among the sciences at once marginal and central. Marginal because – the living world constituting but a tiny and very “special” part of the universe – it does not seem likely that the study of living beings will ever uncover general laws applicable outside the biosphere. But if the ultimate aim of the whole of science is indeed, as I believe, to clarify man's relationship to the universe, then biology must be accorded a central position since of all disciplines it is the one that endeavors to go most directly to the heart of the problems that must be resolved before that of “human nature” can be framed in other than metaphysical terms.

Translated by Austryn Wainhouse

So long as we insist on regarding biology as a crystallized creed, requiring no more than a possible rectification of some of its tenets, so long shall we continue groping in the dark to get an insight into the mysteries we are professedly trying to solve.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1936*  
Some New Aspects of Evolution (p. 241)  
Government Printing Office. Washington, D.C. 1937

**Rashevsky, Nicolas** 1899–1972  
Mathematical biophysicist

There is no successful mathematical theory which would treat the integrated activities of the organism as a whole.... The fundamental manifestation of life drops out from all our theories in mathematical biology.

*Mathematical Biophysics: Physico-Mathematical Foundations of Biology* (Volume 2)  
Chapter XXVIII (p. 306)  
The University of Chicago Press. Chicago, Illinois, USA. 1948

Let us, however, appraise the problem [of dealing with forces] realistically. In celestial mechanics, where we deal with forces varying as simply as the inverse square of the distance and acting on rigid masses, the three-body problem, let alone the n-body problem, still defies in its generality the ingenuity of mathematicians. The forces between cells are much more complex; they are non-conservative, and the cells themselves are not merely displaced but also changed externally and internally by these forces. What are the chances within a foreseeable number of generations to even approximately master the problem of an organism as an aggregate of cells, considering that this organism consists of some 10<sup>14</sup> of cells, hundreds of different tissues, and thousands of complex interrelated structures. Pessimism is not a healthy thing in science, but neither is unrealistic optimism.

*Mathematical Biophysics: Physico-Mathematical Foundations of Biology* (Volume 2)  
Chapter XXVIII (p. 307)  
The University of Chicago Press. Chicago, Illinois, USA. 1948

When we observe the phenomena of biological integration we notice, however, not quantities, varying continuously or discontinuously, but certain rather complex relations.... Topological analogies go much deeper in the realm of the living when we observe not merely structural but functional (in a biological sense) relations. The unity of the organism and the unity of all life is expressed by just that kind of relation.

*Mathematical Biophysics: Physico-Mathematical Foundations of Biology* (Volume 2)  
Chapter XXVIII (p. 308)  
The University of Chicago Press. Chicago, Illinois, USA. 1948

I can hear my good friend, the Professor of Biology, rather impatiently reporting that his science asks assent only to what it can demonstrate. "Come with me to my laboratory, and I will give you proofs...." But how am I, quite untrained in his science, to weigh his arguments or interpret what his microscopes may show?

The Age of Faith

*The Atlantic Monthly*, Volume cx, July, 1912 (p. 114)

**Rostand, Jean** 1894–1977

French historian and biologist

[Biology] is the least self-centered, the least narcissistic of the sciences – the one that, by taking us out of ourselves, leads us to re-establish a link with nature and to shake ourselves free from our spiritual isolation.

Translated by Jonathan Griffin

*Can Man Be Modified?*

Victories and the Hopes of Biology (p. 31)

Basic Books, Inc. New York, New York, USA. 1959

**Sam (Fictional character)**

Biology, now there's something you can sink your teeth into, so to speak. Your problem is real. The solution is real.

*Ginger Snaps*

Film (2000)

**Sandeman, George** 1863–1952

Spanish-born American philosopher

...the outstanding evil is that every science suffers from an insular ignorance of what is meant by the others; philosophy, for instance, at present knows little of animals and plants but what it has learned through the biology of hypothesis, and accepts the results of the latter for observation; and biology is content to find the true differences of organisms in the structure of small particles within them, through an inadequate knowledge of the methods of physics. In a word, one science is only too ready to accept the abstractions of others as answering to the nature of the matter studied.

*Problems of Biology*

Chapter I (p. 13)

Swan Sonnenschein & Co., Ltd. London, England. 1896

**Sears, Paul Bigelow** 1891–1990

American plant ecologist and conservationist

Biology is the link – still too largely a missing link – between the physical and social sciences. Through it, and it alone, can the student come to understand the natural communities of plants and animals which, during the centuries, have shaped his own region for its present human utility.

The Importance of Biology Teaching for Secondary School Pupils

*The American Biology Teacher*, Volume 1, Number 4, January, 1939 (p. 67)

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

There is nothing like biology. "The cloud-capped towers, the solemn binnacles, the gorgeous temples, the great globe itself: yea, all that it inherit shall dissolve, and, like this influential parent faded, leave not a rack behind." That's biology, you know. Good sound biology.

*Back to Methuselah*

Part II, XXXIII (p. 48)

Constable & Company Ltd. London, England. 1921

**Simpson, George Gaylord** 1902–84

American paleontologist

Experimental biology...may reveal what happens to a hundred rats in the course of ten years under fixed and simple conditions, but not what happened to a billion rats in the course of ten million years under the fluctuating conditions of earth history. Obviously, the latter problem is more important.

*Tempo and Mode in Evolution*

Introduction (p. xvii)

Columbia University Press. New York, New York, USA. 1944

Biology, then, is the science that stands at the centre of all science. It is the science most directly aimed at science's major goal and most definitive of that goal. And it is here, in the field where all the principles of all the sciences are embodied, that science can truly become unified.

*This View of Life: The World of an Evolutionist*

Chapter Five (p. 107)

Harcourt, Brace & World, Inc. New York, New York, USA. 1964

**Standen, Anthony**

Anglo-American science writer

Analogy is a wonderful, useful and most important form of thinking, and biology is saturated with it. Nothing is worse than a horrible mass of undigested facts, and facts are indigestible unless there is some rhyme or reason to them. The physicist, with his facts, seeks reason; the biologist seeks something very much like rhyme, and rhyme is a kind of analogy....

*Science Is a Sacred Cow*

Chapter IV (p. 98)

E.P. Dutton. New York, New York, USA. 1950

In its central content, biology is not accurate thinking, but accurate observation and imaginative thinking, with great sweeping generalizations.

*Science Is a Sacred Cow*

Chapter IV (pp. 99–100)

E.P. Dutton. New York, New York, USA. 1950

**Sullivan, John William Navin** 1886–1937

Irish mathematician

It is possible, nevertheless, that our outlook on the physical universe will again undergo a profound change. This change will come about through the development of biology. If biology finds it absolutely necessary, for the description of living things, to develop new concepts of

its own, then the present outlook on “inorganic nature” will also be profoundly affected.... The notions of physics will have to be enriched, and this enrichment will come from biology.

*The Limitations of Science*

Chapter 7, Section 8 (pp. 188, 189)

New American Library. New York, New York, USA. 1956

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Biology has a particular end – that of describing the life of plants and animals, and that end is not necessarily achieved by discoveries in the physics and chemistry of living bodies.

*Introduction to Science*

Chapter II (p. 53)

Henry Holt & Co. New York, New York, USA. 1911

...questions that the biologist must ask and answer before he can go far in generalization appear at first sight to be very numerous and varied, but, from a certain distance, we see that there are only four: What is this living creature as regards form and structure? How does it work? Whence has it arisen? How has it come to be as it is?

*Introduction to Science*

Classification of the Sciences (p. 110)

Henry Holt & Co. New York, New York, USA. 1911

**Tiffany, Lewis**

No biographical data available

We believe that there is a unified science of life, a general biology that is distinct from a shotgun marriage of botany and zoology, or any others of the special life sciences. We believe that this science has a body of established and working principles. We believe that literally nothing on earth is more important to a rational living than basic acquaintance with those principles.

*Life: An Introduction to Biology* (2nd edition)

Preface from First Edition (p. v)

Harcourt, Brace & World, Inc. New York, New York, USA. 1965

**Ulam, Stanislaw** 1909–84

Polish-born mathematician

After reading about [the biological developments] which were coming fast, I became curious about a conceptual role which mathematical ideas could play in biology. If I may paraphrase one of President Kennedy’s famous statements, I was interested in “not what mathematics can do for biology but what biology can do for mathematics.” I believe that new mathematical schemata, new systems of axioms, certainly new systems of mathematical structures will be suggested by the study of the living world.

Some ideas and prospects in biomathematics

*Annual Review of Biophysics and Bioengineering 1*, 1972 (p. 285)

**Weaver, Warren** 1894–1978

American mathematician

The century of biology upon which we are now well embarked is no matter of trivialities. It is a movement of really heroic dimensions, one of the great episodes in man’s intellectual history. The scientists who are carrying the movement forward talk in terms of nucleoproteins, of ultra-centrifuges, of biochemical genetics, of electrophoresis, of the electron microscope, or molecular morphology, of radioactive isotopes. But do not be fooled into thinking this is more gadgetry. This is the dependable way to seek a solution of the cancer and polio problems, the problem of rheumatism and of the heart. This is the knowledge on which we must base our solution of the population and food problems. This is the understanding of life.

In R.B. Fosdick

*The Story of the Rockefeller Foundation*

Letter to H.M.H. Carson, 17 June, 1949 (p. 166)

Harper & Brothers Publishers. New York, New York, USA. 1952

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

Unfortunately in this book of nature the biologists fare badly. Every expression of life takes time. Nothing that is characteristic of life can manifest itself at an instant. Murder is a prerequisite for the absorption of biology into physics as expressed in these traditional concepts.

Supplementary

*Aristotelian Society*, Volume II, Time, Space and Material (p. 45)

The living cell is to biology what the electron and the proton are to physics.

*Science and the Modern World*

Chapter VI (p. 146)

The Macmillan Company. New York, New York, USA. 1929

Science is taking on a new aspect that is neither purely physical nor purely biological. It is becoming the study of the larger organisms; whereas physics is the study of the smaller organisms.

*Science and the Modern World*

Chapter VI (p. 150)

The Macmillan Company. New York, New York, USA. 1929

Accordingly, biology apes the manners of physics. It is orthodox to hold that there is nothing in biology but what is physical mechanism under somewhat complex circumstances.

*Science and the Modern World*

Chapter VI (p. 150)

The Macmillan Company. New York, New York, USA. 1929

**Wilson, Andrew** 1852–1912

No biographical data available

There are many less effective things, in the way of modern culture, than a popular training in biology.

*Leisure-time Studies, Chiefly Biological: A Series of Essays and Lectures*  
Preface  
Chatto & Windus. London, England. 1898

Birth control: Banned parenthood.  
*Quote, the Weekly Digest*, February 18, 1968 (p. 137)

**Gäbor, Dennis** 1900–79  
Hungarian-English physicist

The technique of birth control can be suppressed only if one abolishes also the technique of death control: medicine and hygiene.

*Inventing the Future*  
Overpopulation (p. 82)  
Secker & Warburg. London, England. 1963

**Sanger, Margaret** 1879–1966  
American pioneer birth control advocate

The menace of another pregnancy hung like a sword over the head of every poor woman...

*My Fight for Birth Control*  
Awaking and Revolt (p. 49)  
Farrar & Rinehart, Incorporated. New York, New York, USA. 1931

“Yes, yes – I know, Doctor,” said the patient with trembling voice, “but,” and she hesitated as if it took all of her courage to say it, “what can I do to prevent getting that way again?”

“Oh, ho! laughed the doctor good naturedly. You want your cake while you eat it too, do you? Well, it can't be done.... I'll tell you the only sure thing to do. Tell Jake to sleep on the roof!”

*My Fight for Birth Control*  
Awaking and Revolt (pp. 52–53)  
Farrar & Rinehart, Inc. New York, New York, USA. 1931

**BLACK HOLE**

**Asimov, Isaac** 1920–92  
American author and biochemist

Since 1960 the universe has taken on a wholly new face. It has become more exciting, more mysterious, more violent, and more extreme as our knowledge concerning it has suddenly expanded. And the most exciting, most mysterious, most violent, most extreme phenomena of all has the simplest, plainest, calmest, and mildest name – nothing more than a “black hole.”

*The Collapsing Universe*

Chapter 1 (p. 1)

Walker. New York, New York, USA. 1977

**Author undetermined**

A black hole is where God divides by zero.  
Source undetermined

**Cardenal, Ernesto** 1925–  
Nicaraguan poet and Roman Catholic priest

But a star a little heavier than a neutron star  
is a black hole.

The forces of a black hole.

Like a cosmic vacuum cleaner.

Where gravitation is so great, the curvature so great,  
that light is swallowed up.

Translated by John Lyons

*Cosmic Canticle*

Cantigua 3, Autumn Fugue (p. 32)

Curbstone Press. Willimantic, Connecticut, USA. 1993

**Chandrasekhar, Subrahmanyan** 1910–95  
Indian-born American astrophysicist

The black holes of nature are the most perfect macroscopic objects there are in the universe: the only elements in their construction are our concepts of space and time. And since the general theory of relativity provides only a single unique family of solutions for their descriptions, they are the simplest objects as well.

*The Mathematical Theory of Black Holes*

Prologue (p. 1)

Oxford University Press, Inc. Oxford, England. 1992

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

I think there should be a law of Nature to prevent a star  
from behaving in this absurd way!

Relativistic Degeneracy

*Observatory*, Volume 58, Number 729, 1935(p. 37)

**Gardner, Martin** 1914–  
American writer and mathematics games editor

Our entire universe may slowly stop expanding, go into a contracting phase, and finally disappear into a black hole, like an acrobatic elephant jumping into its anus.

*Science: Good, Bad, and Bogus*

Chapter 32 (p. 336)

Prometheus Books. Buffalo, New York, USA. 1981

The healthy side of the black-hole craze is that it reminds us of how little science knows, and how vast is the realm about which science knows nothing.

*Science: Good, Bad, and Bogus*

Chapter 32 (p. 343)

Prometheus Books. Buffalo, New York, USA. 1981

**Hawking, Stephen William** 1942–  
English theoretical physicist

Although Bekenstein’s hypothesis that black holes have a finite entropy requires for its consistency that black holes should radiate thermally, at first it seems a complete miracle that the detailed quantum-mechanical calculations of particle creation should give rise to emission with a thermal spectrum. The explanation is that the emitted particles tunnel out of the black hole from a region of which an external observer has no knowledge other than its mass, angular momentum and electric charge. This means that all combinations or configurations of emitted particles that have the same energy, angular momentum and electric charge are equally probable. Indeed, it is possible that the black hole could emit a television set or the works of Proust in 10 leather-bound volumes...

*The Quantum Mechanics of Black Holes*

*Scientific American*, Volume 236, Number 1, January, 1977 (p. 40)

**Israel, Werner** 1931–  
Canadian physicist

It is one of the little ironies of our times that while the layman was being indoctrinated with the stereotype of black holes as the ultimate cookie monsters, the professionals have been swinging round to the almost directly opposing view that black holes, like growing old, are really not so bad when you consider the alternative.

In John D. Barrow

*The World Within the World* (p. 312)

Clarendon Press. Oxford, England. 1988

**Koestler, Arthur** 1905–83  
Hungarian-born English writer

Young Archie, the intrepid mole,  
Went down to explore a Black Hole.

A stark singularity,

Devoid of all charity,

Devoured the mole as a whole.

In Bernard Dixon (ed.)

*From Creation to Chaos: Classic Writings in Science*  
Cosmic Limerick (p. 108)  
Basil Blackwell Ltd. Oxford, England. 1989

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

There exist in the heavens therefore dark bodies, as large as and perhaps as numerous as the stars themselves. Rays from a luminous star having the same density as the Earth and a diameter 250 times that of the Sun would not reach us because of its gravitational attraction; it is therefore possible that the largest luminous bodies in the Universe may be invisible for this reason.

In Jean-Pierre Luminet  
*Black Holes* (p. 6)  
Cambridge University Press. New York, New York, USA. 1992

A luminous star, of the same density as the Earth, and whose diameter should be two hundred and fifty times larger than that of the Sun, would not, in consequence of its attraction, allow any of its rays to arrive at us; it is therefore possible that the largest luminous bodies in the universe, may, through this cause, be invisible.

*The System of the World* (Volume 2)  
Book V, Chapter VI (p. 367)  
Printed for Richard Phillips  
London, England. 1809

**Lasota, Jean-Pierre**  
No biographical data available

Black holes may still be black, but they can no longer hide in disguise. We are learning how to unmask them.  
Unmasking Black Holes  
*Scientific American*, Volume 280, Number 5, May, 1999 (p. 47)

**Levi, Primo** 1919–87  
Italian writer and chemist

The sky is strewn with horrible dead suns,  
Dense sediments of mangled atoms.  
Only desperate heaviness emanates from them,  
Not energy, not messages, not particles, not light.  
Light itself falls back down, broken by its own weight.  
Translated by Ruth Feldman and Brian Swann  
*Collected Poems*  
The Black Stars  
Faber & Faber Ltd. Boston, Massachusetts, USA. 1988

**Longair, Malcolm** 1941–  
Scottish physicist

“Just keep away from the black hole garbage bin by the door as you leave,” said the Caterpillar. “It’s very useful for getting rid of theoretical papers and weak students!”  
*Alice and the Space Telescope*  
Chapter 7 (p. 68)  
The Johns Hopkins University Press. Baltimore, Maryland, USA. 1989

**Michell, John** 1724–93  
English geologist and astronomer

If the semi-diameter of a sphere of the same density as the Sun in the proportion of five hundred to one, and by supposing light to be attracted by the same force in proportion to its [mass] with other bodies, all light emitted from such a body would be made to return towards it, by its own proper gravity.

On the Means of discovering the Distance, Magnitude, etc. of the Fixed Stars  
*Philosophical Transactions of the Royal Society of London*, 1784

**Milne, A. A. (Alan Alexander)** 1882–1956  
English playwright, poet, and story writer

A great enormous thing, like – like nothing. A huge big – well, like a – I don’t know – like an enormous big nothing.  
*The Complete Tales & Poems of Winnie-the-Pooh*  
Winnie-the-Pooh. Piglet Meets a Heffalump (p. 68)  
Dutton Children’s Books. New York, New York, USA. 2001

**Ruffini, Remo** 1940–  
American theoretical physicist

What was once the core of a star no longer visible. The core like a Cheshire cat fades from view. One leaves behind only its grin, the other, only its gravitational attraction. Gravitational attraction, yes; light, no. No more than light do any particles emerge. Moreover, light and particles incident from outside emerge and go down the black hole only to add to its mass and increase its gravitational attraction.

Our Universe: The Known and the Unknown  
*American Scientist*, Volume 56, Number 1, Spring 1968 (p. 9)

**Sagan, Carl** 1934–96  
American astronomer and author

Black holes may be apertures to elsewhere. Were we to plunge down a black hole, we would re-emerge, it is conjectured, in a different part of the universe and in another epoch of time.... Black holes may be the entrances to Wonderland. But are there Alices or white rabbits?

*Cosmic Connection: An Extraterrestrial Perspective*  
Chapter 36 (p. 248)  
Anchor Press/Doubleday. Garden City, New York, USA. 1973

**Smolin, Lee** 1940–  
American theoretical physicist

...each black hole is a bud that leads to a new universe of moments.

*The Life of the Cosmos*  
Part Two, Chapter Seven (p. 94)  
Oxford University Press, Inc. New York, New York, USA. 1997

**Thorne, Kip S.** 1940–  
American theoretical physicist

Of all the conceptions of the human mind from unicorns to gargoyles to the hydrogen bomb the most fantastic is the black hole: a hole in space with a definite edge over which anything perhaps can fall and nothing can escape;

a hole with a gravitational field so strong that even light is caught and held in its grip; a hole that curves space and warps time.

*Cosmology + 1*

Chapter 8 (p. 63)

W.H. Freeman & Company, San Francisco, California, USA. 1977

**Wheeler, John Archibald** 1911–

American theoretical physicist and educator

Every black hole brings an end to time and space and the laws of physics.

English poet

It is not now as it hath been of yore –

Turn wheresoe'er I may,

By night or day,

The things which I have seen I can now see no more.

*The Complete Poetical Works of William Wordsworth*

Recollections of Early Childhood

Ode: Intimations of Immortality

Crowell. New York, New York, USA. 1888

## BLOOD PRESSURE

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

A man's life may be said to be a gift of his blood pressure, just as Egypt is a gift of the Nile.

In Harvey Cushing

*The Life of Sir William Osler* (Volume 2) (p. 297)

Clarendon Press. Oxford, England. 1925

## BLUEPRINT

**Ridley, Matt** 1958–

English science writer

Incidentally, you will not find the tired word “blueprint” in this book, after this paragraph, for three reasons. First, only architects and engineers use blueprints and even they are giving them up in the computer age, whereas we all use books. Second, blueprints are very bad analogies for genes. Blueprints are two-dimensional maps, not one-dimensional digital codes. Third, blueprints are too literal for genetics, because each part of a blueprint makes an equivalent part of the machine or building; each sentence of a recipe book does not make a different mouthful of cake.

*Genome: The Autobiography of a Species in 23 Chapters*

Introduction (p. 8)

HarperCollins Publishers, Inc. New York, New York, USA. 2000

## BOOK

**Adair, Robert K.**

American physicist

It has been said that all expository books are simply forms of selected plagiarism.

*The Great Design: Particles, Fields, and Creation*

Preface (p. vi)

Oxford University Press. Oxford, England. 1989

*T. Rex and the Crater of Doom*

Chapter 2 (p. 19)

Princeton University Press. Princeton, New Jersey, USA. 1997

**Bacon, Sir Francis** 1561–1626

English lawyer, statesman, and essayist

But the images of men's wits and knowledges remain in books, exempted from the wrong of time, and capable of perpetual renovation. Neither are they fitly to be called images, because they generate still, and cast their seeds in the minds of others, provoking and causing infinite actions and opinions in succeeding ages ...

*The Advancement of Learning* (Volume 1)

The First Book (p. 66)

Macmillan & Co Ltd. London, England. 1905

**Bernstein, Jeremy** 1929–

American physicist, educator, and writer

...a physics book, unlike a novel, not only has no happy ending, but has no real ending at all.

*Elementary Particles and Their Currents*

Chapter 15 (p. 318)

W.H. Freeman. San Francisco, California, USA. 1968

**Boyle, Robert** 1627–91

English natural philosopher and theological writer

...if judicious men skilled in chymical affaires shall once agree to write clearly and plainly of them, and thereby keep men from being stunned, as it were, or imposed upon by dark or empty words; 'tis to be hoped that these men finding that they can no longer write impertinently and absurdly, without being laughed at for doing so, will be reduced either to write nothing, or books that may teach us something, and not rob men, as formerly, of invaluable time; and so ceasing to trouble the world with riddles or impertinencies, we shall either by their books receive an advantage, or by their silence escape an inconvenience.

*The Sceptical Chymist*

The Fourth Part (pp. 116–117)

J.M. Dent & Sons. London, England. 1911

**Brewster, George**

No biographical data available

A very considerable number of books, which, year after year, emanate from the press, and no small share of the

lectures delivered upon the sciences, are nothing more nor less than the repetition of old ideas in a new garb, to prevent the petty plagiarism from being too barefaced, and that garb too oftentimes made less elegant and less attractive than the original.

*A New Philosophy of Matter; Showing the Identity of All the Imponderables* (3rd edition)

Chapter I (p. 15)

Edward H. Fletcher. New York, New York, USA. 1858

**Brown, Hugh Auchincloss** 1878–1975

American electrical engineer

For the earth is a great stone book

With strata of stone for pages;

In which we'll find if we look

The living record of ancient ages.

*Cataclysms of the Earth*

The Earth Is a Great Stone Book (p. 275)

Twayne Publishers. New York, New York, USA. 1967

**Cloos, Hans** 1885–1951

German geologist

By far the most important books for geology students were the quarries and clay pits, the cliffs and creek beds, the road and railroad cuts in woods and fields. Our words and letters were the imprints of plants and animals in stone, the minerals and crystals, and our vast inexhaustible, incorruptible, and infallible library was nature itself.

*Conversation with the Earth*

Chapter II (p. 28)

Alfred A. Knopf. New York, New York, USA. 1953

**Comstock, John Henry** 1849–1931

American entomologist

Fill your note-book with descriptions, but digest them carefully, sifting out for publication only those that exhaustive study and repeated observations prove to be valuable.

*Insect Life: An Introduction to Nature-Study and a Guide for Teachers, Students, and Others*

Part II, Chapter III (p. 323)

D. Appleton & Co. New York, New York, USA. 1898

**Cornford, Francis M.** 1874–1943

English academic

Books are the sources of material for lectures. They should be kept from the young; for to read books and remember what you read well enough to reproduce it is called 'cramming', and this is destructive of all true education. The best way to protect the young from books is, first, to make sure that they shall be so dry as to offer no temptation; and, second, to store them in such a way that no one can find them without several years' training.

*Microcosmographia Academica*

The Principles of Government, of Discipline (Including Religion), and of Sound Learning

Bowes & Bowes, Publishers. Cambridge, England. 1908

**Cushing, Harvey** 1869–1939  
American neurosurgeon

Books are the most important tools of our craft when assembled in mass in our great medical libraries.

In R. Kagan (ed.)  
*Leaders of Medicine*  
Chapter VII (p. 72)  
The Medico-Historical Press. Boston, Massachusetts, USA. 1941

**Darwin, Charles Robert** 1809–82  
English naturalist

I have heard, by roundabout channel, that Herschel says my book [*The Origin of the Species*] “is the law of higgledy-piggledy.” What this exactly means I do not know, but it is evidently very contemptuous. If true this is a great blow and discouragement.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin*  
Letter to C. Lyell  
December 12, 1859 (p. 37)  
D. Appleton & Company. New York, New York, USA. 1896

What a book a devil’s chaplain might write on the clumsy, wasteful, blundering, low, and horribly cruel works of nature!

In Sir Francis Darwin (ed.)  
*More Letters of Charles Darwin* (Volume 1)  
Letter 48 (p. 95)  
D. Appleton & Co. New York, New York, USA. 1903

**Darwin, Erasmus** 1731–1802  
English physician and poet

Now, happier lot! Enlighten’d realms possess  
The learned labours of the immortal Press;  
Nursed on whose lap the births of science thrive,  
And rising Arts the wrecks of Time survive.

*The Temple of Nature*  
Canto IV

**Day, Clarence S.** 1874–1935  
American writer

The world of books is the most remarkable creation of man. Nothing else that he builds ever lasts. Monuments fall; nations perish, civilizations grow old and die out; and after an era of darkness, new races build others. But in the world of books are volumes that have seen this happen again and again, and yet live on, still young, still as fresh as the day they were written, still telling men’s hearts of the hearts of men centuries dead.

*The Story of the Yale University Press Told by a Friend* (p. 7)  
At the Earl Trumbull Williams Memorial. New Haven, Connecticut, USA. 1920

**de Bury, Richard** 1287–1345  
English bibliophile

...all the glory of the world would be buried in oblivion, unless God had provided mortals with the remedy of books.

Translated by E.C. Thomas  
*The Love of Books Being the Philobiblon of Richard de Bury*  
Chapter I (p. 9)  
Chatto & Windus. London, England. 1925

**de Morgan, Augustus** 1806–71  
English mathematician and logician

The *Theorie des Probabilites* is the Mont Blanc of mathematical analysis; but the mountain has this advantage over the book, that there are guides always ready near the former, whereas the student has been left to his own method of encountering the latter.

Article IV  
*The Dublin Review*, Number IV, April, 1837 (p. 347)

**Fabre, Jean-Henri** 1823–1915  
French entomologist and author

There are for each one of us, according to his turn of mind, certain books that open up horizons hitherto undreamed of and mark an epoch in our mental life. They fling wide the gates of a new world wherein our intellectual powers are henceforth to be employed; they are the spark which lights the fuel on a hearth doomed, without its aid, to remain indefinitely bleak and cold.

Translated by Alexander Teixeira de Mattos  
*The Hunting Wasps*  
Chapter I (p. 1)  
Dodd, Mead & Co. New York, New York, USA. 1916

**Flammarion, Camille** 1842–1925  
French astronomer and writer

Such a book [a popular treatise on astronomy], altho of more real interest and more attractive than a novel, should be read with attention, and only on this condition can the ideas it contains impart lasting scientific instruction. But whereas when we reach the last page of a novel we know just as much as when we began the first, we must be either blind or oblivious to all intellectual apprehension if the reading of a scientific work does not greatly extend the sphere of our knowledge, and does not more and more elevate the level of our judgment.

Translated by J. Ellard Gore  
*Popular Astronomy: A General Description of the Heavens*  
Book I, Chapter I (pp. 1–2)  
Chatto & Windus. London, England. 1894

**French, John** 1616–57  
English physician

There is a glut of chemical books, but a scarcity of chemical truths.

*Art of Distillation*  
To the Reader  
By E. Cotes for Thomas Williams. London, England. 1653

**Goldsmith, Oliver** 1728–74  
Anglo-Irish writer, poet, and physician

There are an hundred faults in this thing, and an hundred things might be said to prove them beauties. But it is

needless. A book may be amusing with numerous errors, or it may be very dull without a single absurdity.

*The Miscellaneous Works of Oliver Goldsmith*

*The Vicar of Wakefield*

Advertisement (p. 1)

Macmillan & Company Ltd. London, England. 1881

**Gutenberg, Beno** 1889–1960

German-American seismologist

Books and papers dealing with hypotheses on the development of the earth's crust are as the sands of the sea.

*Internal Constitution of the Earth*

Hypotheses on the Development of the Earth (p. 178)

Dover. New York, New York, USA. 1951

**Huxley, Thomas Henry** 1825–95

English biologist

Books are the money of Literature, but only the counters of Science.

*Collected Essays* (Volume 3)

*Science and Education*

Universities: Actual and Ideal (p. 213)

Macmillan & Company Ltd. London, England. 1904

You may read any quantity of books, and you may be almost as ignorant as you were at starting, if you don't have, at the back of your minds, the change for words in definite images which can only be acquired through the operation of your observing faculties on the phenomena of nature.

*Collected Essays* (Volume 3)

*Science and Education*

On the Study of Biology (p. 283)

Macmillan & Company Ltd. London, England. 1904

... a single book tells us more than Methuselah could have learned, had he spent every waking hour of his thousand years in learning ...

*Hume*

Chapter VII (p. 129)

Macmillan & Company Ltd. London, England. 1902

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

Boswell: But, Sir is it not somewhat singular that you should happen to have Cocker's Arithmetic about you on your journey?

Dr. Johnson: Why, Sir if you are to have but one book with you upon a journey, let it be a book of science. When you read through a book of entertainment, you know it, and it can do no more for you; but a book of science is inexhaustible.

In James Boswell

*The Life of Samuel Johnson, LL.D.* Part Two

Chapter XIV (p. 268)

P.F. Collier & Son. New York, New York, USA. 1901

Sir, to leave things out of a book merely because people tell you they will not be believed, is meanness.

In James Boswell

*The Life of Samuel Johnson, LL. D.*

1772–AETAT. 63 (p. 281)

George Dearborn. New York, New York, USA. 1833

**Kant, Immanuel** 1724–1804

German philosopher

I did not enter on the prosecution of this undertaking [writing the book] until I saw myself in security regarding the duties of religion. My zeal was redoubled when at every step I saw the clouds disperse that appeared to conceal monsters behind their darkness; and when they were scattered I saw the glory of the Supreme Being break forth with the brightest splendor.

Translated by W. Hastie

*Kant's Cosmogony*

Preface (p. 18)

James Maclehose & Sons. Glasgow, Scotland. 1900

**King, Charles William** 1818–88

English writer

I have therefore once again gone with a will into the mines of antiquity to dig out fresh ore – no fear of exhausting the endless veins; have again wandered lovingly through the true Aladdin's Garden of Eastern literature, plucking its fruits, which be all manner of precious stones – no fear of thinning the teeming crop; or, to descend to prose, have carefully referred to my copious stock of notes and collectanea, and selected much therefrom that struck me as calculated to increase the interest and the utility of numerous portions of the work before me.

*The Natural History, Ancient and Modern, of Precious Stones and Gems, and of the Precious Metals*

Preface (p. vi)

Bell & Daldy. London, England. 1867

**Lemery, Nicolas** 1645–1715

French chemist

My Lord, the Treatise I now offer you, is not writ after the usual way of ordinary Chymists, it has none of the bombastik Expressions nor ridiculous Pretences, none of the Melancholick dreams and wretched Enthusiasms, none of the palpable Falsities, and even Impossibilites, wherewith the common rate of Chymical Books has been stuff'd hitherto.

*Course of Chemistry* (English edition)

Dedication

London. 1677

**Locke, John** 1632–1704

English philosopher and political theorist

Things in print must stand and fall by their own worth, or the reader's fancy.

*An Essay Concerning Human Understanding*

Dedication (p. iii)

Printed for Thomas Tegg. London, England. 1841

I here put into thy hands, what has been the diversion of some of my idle and heavy hours: if it has the good luck to prove so of any of thine, and thou hast but half so much pleasure in reading, as I had in writing it, thou wilt as little think thy money, as I do my pains, ill bestowed.

*An Essay Concerning Human Understanding*

Epistle to the Reader (p. v)

Printed for Thomas Tegg, London, England. 1841

**Maxwell, James Clerk** 1831–79

Scottish physicist

...the perusal of it [Isaac Taylor's *Physical Theory of Another Life*] has a tendency rather to excite speculation than to satisfy curiosity, and the author obtains the approbation of the reader, while he fails to convince him of the soundness of his views ...

In Lewis Campbell and William Garnett

*The Life of James Clerk Maxwell*

Appendix A (p. 341)

Macmillan & Co Ltd. London, England. 1884

**Mills, Simeon**

No biographical data available

To learn from books, stores the mind with the wisdom of the past, but teaches us nothing that was not known before the books were made.

*Readings from the Book of Nature*

Chapter I (p. 11)

Charles H. Kerr & Co. Chicago, Illinois, USA. 1893

**Newman, James Roy** 1911–66

Mathematician and mathematical historian

The style of the book certainly suggests teamwork. It is by turns waggish, pompous, chummy, coy, brutal, arch, rude, man-to-man, Air Force crisp, energetic, tongue-tied, pretentious, ingenuous, spastic, ironical, savage, malapropos, square-bashing and moralistic. Solecisms, pleonasms and jargon abound; The clichés and fused participles are spectacular; there are many sad examples of...cannibalism – words devouring their own kind.

Book review of *Thermonuclear War*

*Scientific American*, Volume 204, Number 2, March, 1961 (p. 197)

**Mitchell, Maria** 1818–89

American astronomer and educator

Newton rolled up the cover of a book; he put a small glass at one end, and a large brain at the other – it was enough.

In Phebe Mitchell Kendall

*Maria Mitchell: Life, Letters, and Journals*

Chapter IX (p. 180)

Lee & Shepard. Boston, Massachusetts, USA. 1896

**Osler, Sir William** 1849–1919

Canadian physician and professor of medicine

I am firmly convinced that the best book in medicine is the book of Nature, as written large in the bodies of men.

The Natural Method of Teaching the Subject of Medicine

*Journal of the American Medical Association*, Volume 36, 1901

**Pascal, Blaise** 1623–62

French mathematician and physicist

The last thing one settles in writing a book is what one should put in first.

In *Great Books of the Western World* (Volume 33)

*Pensées*

Section I, 19

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Ramón y Cajal, Santiago** 1852–1934

Spanish neuropathologist

We may learn a great deal from books, but we learn much more from the contemplation of nature – the reason and occasion for all books.

*Advice for a Young Investigator*

Chapter 4 (p. 62)

The MIT Press. Cambridge, Massachusetts, USA. 1999

**Richardson, David Lester** 1801–65

Poet and writer

It is an exquisite encouragement to the toiling heart of genius to remember that books are immortal!

*Literary Chit-Chat*

Chapter X (p. 85)

P.S. D'Rozario and Co. Calcutta, India. 1848

**Rota, Gian-Carlo** 1932–

Italian-born American mathematician

When too many books are written on a subject, one of two suspicions arises: either the subject is understood and the book is easy to write – as is the case with books on real variables, convexity, projective geometry in the plane, or compact orientable surfaces. Or the subject is important, but nobody understands what is going on; such is the case with quantum field theory, the distribution of primes, pattern recognition, and cluster analysis.

*Indiscrete Thoughts*

Chapter XX (p. 216)

Birkhäuser. Boston, Massachusetts, USA. 1997

**Sagan, Carl** 1934–96

American astronomer and author

Books permit us to voyage through time, to tap the wisdom of our ancestors. The library connects us with the

insights and knowledge, painfully extracted from Nature, of the greatest minds that ever were, with the best teachers, drawn from the entire planet and from all of our history, to instruct us without tiring, and to inspire us to make our own contribution to the collective knowledge of the human species.

*Cosmos*

Chapter XI (p. 233)

Ballentine Books. New York, New York, USA. 1985

**Schuster, Arthur** 1851–1934

German-born English physicist

If we ransack old books of science we often come across passages of long-forgotten writings, in which, when they are properly construed, when new meanings are given to old words and obscure expressions are freely translated, we may trace a faint prophetic glimmering of a modern theory.

The Influence of Mathematics on the Progress of Physics

*van Nostrand's Engineering Magazine*, Volume XXVI, Number CLX, April, 1882 (p. 317)

**Slosson, Edwin E.** 1865–1929

American chemist and journalist

The Book of Nature is issued only in uncut editions, and the scientist has to open its pages one by one as he reads.

*Keeping Up with Science*

Introduction (p. vi)

Jonathan Cape. London, England. 1924

One obstacle in the way of spreading science, that is, of inculcating the scientific habit of mind, is that people have learned to read too well. Books may become an impediment to learning. Our students are taught how to learn to read but not always how to read to learn.

*Digest of the Proceedings of the Second Annual Meeting of the American Association for Adult Education*

Adult Education in Science, 1927 (p. 53)

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

What then is the aim of this book? It is to give the intelligent student-citizen, otherwise called “the man in the street,” a bunch of intellectual keys by which to open doors which have been hitherto shut to him, partly because he got no glimpse of the treasures behind the doors, and partly because the portals were made forbidding by an unnecessary display of technicalities.

*The Outline of Science: A Plain Story Simply Told*

Introductory Notes (p. iii)

G.P. Putnam's Sons. New York, New York, USA. 1922

**Thompson, Silvanus P.** 1851–1916

English physics professor and author

One other thing will the professed mathematicians say about this thoroughly bad and vicious book: that the

reason why it is so easy is because the author has left out all the things that are really difficult. And the ghastly fact about this accusation is that – it is true!

*Calculus Made Easy: Being a Very-Simplest Introduction to Those Beautiful Methods of Reckoning Which Are Generally Called by the Terrifying Names of the Differential Calculus and the Integral Calculus* (2nd edition)

Epilogue and Apologue (p. 284)

The Macmillan Company. New York, New York, USA. 1929

**Thoreau, Henry David** 1817–62

American essayist, poet, and practical philosopher

Our books of science, as they improve in accuracy, are in danger of losing the freshness and vigor and readiness to appreciate the real laws of Nature, which is a marked merit in the oftentimes false theories of the ancients.

*The Writings of Henry David Thoreau* (Volume 1)

*A Week on the Concord and Merrimack Rivers*

Friday (pp. 479–480)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

I would keep some book of natural history always by me as a sort of elixir, the reading of which should restore the tone of the system. To the sick, indeed, nature is sick, but to the well, a fountain of health.

*The Writings of Henry David Thoreau* (Volume 5)

*Natural History of Massachusetts* (p. 105)

Houghton Mifflin & Co. New York, New York, USA. 1906

One studies books of science merely to learn the language of naturalists, to be able to communicate with them.

In Harrison Gray Otis Blake (ed.)

*The Writings of Henry David Thoreau*

March 23, 1853 (p. 212)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1893

**Tyndall, John** 1820–93

Irish-born English physicist

It is one of the disadvantages of reading books about natural scenery that they fill the mind with pictures, often exaggerated, often distorted, often blurred, and, even when well drawn, injurious to the freshness of first impressions.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews*

Chapter VII (p. 175)

D. Appleton & Co. New York, New York, USA. 1897

Half of our book writers describe experiments which they never made, and their descriptions often lack both force and truth; but, no matter how clever or conscientious they may be, their written words cannot supply the place of actual observation.

*Fragments of Science*

Part One

A Lecture to School Masters (p. 365)

P.F. Collier & Son. New York, New York, USA. 1901

**Valéry, Paul** 1871–1945

French poet and critic

Nearly all the books I prize, and absolutely all that have been of any use to me, are books that don't make easy reading.

Translated by Stuart Gilbert

*The Collected Works of Paul Valery* (Volume 14)

*Analects*

Odds and Ends (p. 17)

Princeton University Press, Princeton, New Jersey, USA. 1979

**Willmott, Robert Eldridge Aris** 1809–63

English writer, poet

Every noble book is a stronghold of the mind, built upon some high place of contemplation, and overlooking wide tracts of intellectual country.

*Pleasures, Objects, and Advantages, of Literature* (4th edition)

Chapter X (p. 37)

G. Routledge & Co. London, England. 1855

Whether a book be read from the oak lectern of a college library, in the parlor window, or beneath the trees of summer, no fruit will be gathered unless the thoughts are steadily given up to the perusal.

*Pleasures, Objects, and Advantages, of Literature* (4th edition)

Chapter X (p. 37)

G. Routledge & Co. London, England. 1855

**Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

The popular scientific books by our scientists aren't the outcome of hard work, but are written when they are resting on their laurels.

Translated by Peter Winch

*Culture and Value* (p. 42e)

The University of Chicago Press, Chicago, Illinois, USA. 1980

## BOOK REVIEW

**Chapman, C. H.**

No biographical data available

In a review article it is impossible to do more than point out with hasty gestures the landmarks which must guide the traveler who would explore the vast intellectual territory ...

## BOSON

**Gilmore, Robert**

No biographical data available

Bosons *like* to get together in the same state. Bosons are easily led; they are inherently gregarious.

*Alice in Quantum Land*

Chapter 5 (p. 85)

Springer-Verlag, New York, New York, USA. 1955

## BOTANICAL

**Goebel, Karl** 1855–1932

German botanist

If we may use a metaphor, we might say that Botanical Science is like a mountaineer, who, after long, weary climbing, only discovers that after all there still rises – steep and apparently impossible to scale – the real peak; but, notwithstanding this, on casting his eyes around, he finds himself well rewarded for the toil he has undergone.

On the Study of Adaptations in Plants

*Science Progress*, 1894

## BOTANIST

**Allen, Grant** 1848–99

Canadian-born writer

...if you ever venture to say again behind my back that the botanist is a dull, dried-up, unimaginative person, who cares nothing for the beauty of the lovely flowers, but goes in only for classification, herbariums, and sesquipedalian Latin names, I will arise and slay you with

my hand in another article just as long and every bit as argumentative as this one.

The Joy of Living

*Murray's Magazine*, Volume I, Number 3, April, 1877 (p. 405)

### Author undetermined

We botanists cannot be so mathematically exact as geographers, and where an isthmus is very narrow, [the geographers] must class the peninsula with the island. How often does it happen that two large orders, say of five hundred to two thousand or three thousand species, totally distinct from each other in all these species by a series of constant characters, are yet connected by some small isolated genus of a dozen, half a dozen, nay a single species in which these characters are so inconstant, uncertain or variously combined as to leave no room for the strait, through which we ought to navigate between the two islands.

De Candolle's Prodrromus

*London Journal of Botany*, Volume IX, 1845 (p. 232)

My mother is a botanist, and she even names a flower after me. It's called the Bloomin' Idiot.

Source undetermined

...a botanist is too commonly looked upon as merely one who can call plants by name. Making specimens and naming plants no more make a botanist than taking an altitude makes an astronomer.

Sketch of Professor Gray

*The Popular Science Monthly*, August, 1872 (p. 491)

### Barton, Benjamin Smith 1766–1815

American scientist

No man [can] become a nice, discriminating, and eminent botanist, without possessing that acumen in perception in proportion, colour, harmony of design, and obscure differences in the objects of the vegetable world, which alone belong to the eye of the painter.

In William Paul Crillon Barton,

*A Biographical Sketch Read Pursuant to Appointment before the Philadelphia Medical Society* (p. 7)

The Philadelphia Medical Society. Philadelphia, Pennsylvania, USA. 1816

### Brandes, Georg Morris Cohen 1842–1927

Danish literary critic

It makes the plant neither more nor less interesting that it smells sweet or stings; but the dispassionate interest of the botanist is often accompanied by the purely human pleasure in the beauty of the flower.

*Main Currents in Nineteenth, Century Literature*

Introduction (p. 3)

The Macmillan Co. New York, New York, USA. 1906

### Butler, Samuel 1612–80

English novelist, essayist, and critic

Why should the botanist, geologist or other-ist give himself such airs.... Is it because he names his plants or specimens with Latin names, and divides them into genre and species...

In Geoffrey Keynes and Brian Hill (eds.)

*Samuel Butler's Notebooks*

Botanists and Draper's Shopman (p. 264)

Jonathan Cape. London, England. 1951

A botanist is a person whose aim is to uproot, kill and exterminate every plant that is at all remarkable for rarity or any special virtue, and the rarer it is the more bitterly he will hunt it down.

*The Note-books of Samuel Butler*

Chapter XVII (p. 281)

E.P. Dutton & Co. New York, New York, USA. 1917

### Croll, Oswald 1560–1609

German chemist and physician

Oh that the Botanists of our time, who being ignorant of the internal Form of plants, know only their matter, substance, and body, would devote as much care to the discernment of the Signatures of Plants as they do to their manifold and frequently frivolous disputes about the accurate naming of them, it would render a much richer and more beneficial service to medicine.

*Basilica Chymica*

Tractatus de Signaturis (p. 1)

Printed for John Starkey. London, England. 1670

### Crothers, Samuel McChord 1857–1927

American clergyman and writer

Here are botanists who love the growing things in the fields and woods better than the specimens in their herbariums. They love to describe better than to analyze. Now and then one may meet a renegade who carries a geologist's hammer. It is a sheer hypocrisy, like a fishing rod in the hands of a contemplative rambler. It is merely an excuse for being out of doors and among the mountains.

*The Gentle Reader*

The Hinter-Land of Science (pp. 236–237)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

### Darwin, Charles Robert 1809–82

English naturalist

But there is a growing pleasure in comparing the character of the scenery in different countries, which to a certain degree is distinct from merely admiring its beauty. It depends chiefly on an acquaintance with the individual parts of each view. I am strongly induced to believe that as in music, the person who understands every note will, if he also possesses a proper taste, more thoroughly enjoy

the whole, so he who examines each part of a fine view, may also thoroughly comprehend the full and combined effect. Hence, a traveler should be a botanist, for in all views plants form the chief embellishment.

*The Voyage of the Beagle*

Chapter XXI (pp. 502–503)

Heron Books. Sheridan, Oregon, USA. 1968

**Farley, Harriet** 1817–1907

American writer and editor

The Botanist looks with a more earnest eye upon the beauties of Nature, than does the Painter or the Poet; and in those plants which escape the notice of the latter, he can find both occupation and amusement.

*Shells from the Strand of the Sea of Genius*

The Pleasure of Science (p. 12)

J. Munroe and Co. Boston, Massachusetts, USA. 1847

**Fisher, Robert**

No biographical data available

To be a Botanist is to be like a traveler, going from country to country, and in each finding new wonders and new beauties.

*Flower-Land: An Introduction to Botany* (p. 3)

Bemrose & Sons. London, England. 1889

**Holder, Charles Frederick** 1851–1915

American sportsmen and naturalist

The field botanist is one who, being passionately fond of plants, and having mastered the rudiments of botany and become familiar with the names and classification of plants, searches the country for new and rare species, and for new localities for old ones ...

*Charles Darwin, His Life and Work*

Chapter XX (p. 243)

G.P. Putnam's Sons. New York, New York, USA. 1899

**Hunter, Maddy**

Writer

You know how most women go into a clothing store and have to finger all the soft fabrics and fur collars? Botanists are like that, too, except instead of touching merchandise, we're all over the local flora. We can't keep our hands off those unfamiliar leaves and flowers, and unfortunately, nature tends to be thorny.

*G'day to Die: A Passport to Peril Mystery* (p. 102)

Pocket Books. New York, New York, USA. 2006

**Johnson, Samuel** 1696–1772

English critic, biographer, and essayist

“Are you a botanist, Dr. Johnson?”

“No, Sir, (answered Johnson,) I am not a botanist; and, (alluding no doubt, to his near sightedness) should I wish to become a botanist, I must first turn myself into a reptile.”

*Boswell's "Life of Samuel Johnson"*

Summer 1762 (p. 267)

Oxford University Press, Inc. Oxford, England. 1965

**Kett, Henry** 1761–1825

English college teacher and writer

The botanist follows nature into her most retired abodes, and views her in her simple taste, and native majesty.

*Elements of General Knowledge* (Volume 2)

Chapter IV (p. 125)

Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

The botanist enjoys a pleasing and innocent amusement, most agreeably combined with a love of rural retirement, and which gives a new and growing interest to every walk and ride, in the most delightful season of the year. He collects a harvest from all countries for the purpose of reviewing his treasures at leisure, and growing rich in scientific acquisitions.

*Elements of General Knowledge* (Volume 2)

Chapter IV (p. 126)

Printed by E. Bronson. Philadelphia, Pennsylvania, USA. 1805

**Kington, Miles** 1941–

English journalist, jazz musician and broadcaster

The way botanists divide up flowers reminds me of the way Africa was divided into countries by politicians.

*Nature Made Ridiculously Simple, or, How to Identify Absolutely Everything*

**Linnaeus, Carl (von Linné)** 1707–78

Swedish botanist and explorer

To you, my dearly-beloved botanists, I submit my rules, the rules which I have laid down for myself, and in accordance with which I intend to walk. If they seem to you worthy, let them be used by you also; if not, please propound something better!

*Critica Botanica*

Preface (pp. xxiii–xxiv)

The Ray Society. London, England. 1938

**Masters, M. T.**

No biographical data available

On the principle of recognising Hercules from his foot, or a lion by his claw, a botanist is too often expected to recognise some miserable scrap of a specimen, smashed it may be beyond hope of certain recognition in its transit through the post, and rendered unrecognisable by the stupid practice of enveloping the “specimen” in cotton wool. On the Nomenclature of Garden Plants

*Journal of the Royal Horticultural Society*, Volume V 1879 (p. 127)

**Moore, Jared Sparks** 1879–1951

American psychologist

The dissecting botanist is interested in the ugliest weed as much as in the beautiful flower ...

*The Foundations of Psychology*

Book II, Chapter IV (p. 100)

Princeton University Press. Princeton, New Jersey, USA. 1921

**Rousseau, Jean-Jacques** 1712–78

Swiss-French philosopher

...I know no rational study which is only a science of words: and to which of the two, I pray you, shall I grant the name of botanist, – to him who knows how to spit out a name or a phrase at the sight of a plant, without knowing anything of its structure, or to him who, knowing that structure very well, is ignorant nevertheless of the very arbitrary name that one gives to the plant in such and such a country?

Quoted in John Ruskin

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Book IX, Chapter VI (pp. 127–128)

George Allen. London, England. 1882

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

...the recent phrenzy for the investigation of digestive and reproductive operations in plants may by this time have furnished the microscopic malice of botanists with providentially disgusting reasons, or demoniacally nasty necessities, for every possible spur, spike, jag, sting, rent, blotch, flaw, freckle, filth, or venom, which can be detected in the construction, or distilled from the dissolution, of vegetable organism.

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Part VII, Chapter I (p. 6)

George Allen. London, England. 1882

**Sayre, G. Armington**

No biographical data available

A fundamental principle in the higher education of botanists is embodied in the simple lines – “To love the flower and leave it on its stalk.” To do this requires more heroism than the majority of collectors possess.

Devastation of Nature

*The American Botanist*, Volume I, Number 1, July 1901 (p. 2)

**Teale, Edwin Way** 1899–1980

American naturalist

Today I had lunch in the city with two scientists, a botanist and an ichthyologist. The botanist said he never kept a garden and the ichthyologist said he never went fishing.

*Circle of the Seasons*

December 8 (p. 282)

Dodd, Mead & Company. New York, New York, USA. 1953

**Timiriazeff, C. A.**

Russian botanist

It is not, I think, much beside the mark to say that the word ‘botanist’ still calls up in the minds of many even well educated people not conversant with science one of two

pictures. Either they expect in the botanist a tedious pedant with an inexhaustible vocabulary of double-barrelled Latin names, sometimes most barbarous, who is able to name at a glance any kind of plant, and also ready on occasion, it may be, to describe (quite incorrectly) their medicinal properties – the type of botanist who bores one to death and is certainly incapable of exciting any interest in his subject: or, on the other hand, ‘botanist’ depicts the somewhat less sombre figure of the passionate lover of flowers, who flits like a butterfly from one bloom to another, admiring their bright colouring, inhaling their perfume, singing the praises of the proud rose and the modest violet – in other words, the elegant adept of the *amabilis scientia*, as botany was called in olden times.

Translated by Anna Sheremeteva

*Die Sinne der Pflanzen*

Chapter I (p. 1)

Longmans, Green & Co. London, England. 1912

A botanist is either a pedantic nomenclator or an amateur horticulturist, an apothecary or an aesthete; but in no sense is he a man of science.

Translated by Anna Sheremeteva

*Die Sinne der Pflanzen*

Chapter I (p. 1)

Longmans, Green & Co. London, England. 1912

**Tolstoy, Leo** 1828–1910

Russian writer

...the botanist who finds that the apple falls because the cellular tissue decays and so forth is equally right with the child who stands under the tree and says the apple fell because he wanted to eat it and prayed for it.

Translated by Leo Wiener

*War and Peace*

Book 9, Chapter I (p. 8)

J.M. Dent & Co. London, England. 1904

**BOTANY**

**Abbot, Charles** 1761–1817

Grammar school teacher

The fair daughters of Albion have evinced a zeal and ardor in Botanical researches which have not only done the highest honor to themselves, but have eminently contributed to rescue these pursuits from unmerited reproach, to elevate them into reputation, and to impart to them, if not a superior value, at least a superior currency and fashion. – That such excellence should have been attained in this branch of science by so many of the female sex, notwithstanding the disadvantages they labour under from the want of scholastic and technical instruction, is a convincing proof of the liberality with which Nature has endowed the female mind.

*Flora Bedfordiensis*

Printed by W. Smith. London, England. 1798

**Author undetermined**

I hate botany. What is the good of having a set of rules which divide flowers off into classes, and teach one how to analyse them? I shouldn't care for a flower a bit better for knowing how it is constructed. Only fancy, on the very first page, the book told me to cut up an anemone. I couldn't do it – it went to my heart; so I cut up the book instead and threw it into the kitchen-fire.

Reata: Or, What's in a Name (part III)  
*Blackwood's Edinburgh Magazine*, Volume 25, Number 763, May, 1879 (p. 529)

**Bierce, Ambrose** 1842–1914

American newspaperman, wit, and satirist

BOTANY, n. The science of vegetables – those that are not good to eat, as well as those that are. It deals largely with their flowers, which are commonly badly designed, inartistic in color, and ill-smelling.

*The Cynic's Word Book*  
Botany (p. 37)  
Doubleday, Page & Co. New York, New York, USA. 1906

**Burroughs, John** 1837–1921

American naturalist and writer

We study botany so hard that we miss the charm of the flower entirely.

In the Noon of Science  
*The Atlantic Monthly*, Volume cx, September, 1912 (p. 324)

**Cable, George W.** 1844–1925

American writer and reformer

She loved no other part of botany quite so much as its Latin.

American lecturer, poet, and essayist

To science there is no poison; to botany no weed; to chemistry no dirt.

*The Complete Works of Ralph Waldo Emerson* (Volume 12)  
*Natural History of Intellect*  
Chapter I (p. 55)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

But these young scholars, who invade our hills,  
Bold as the engineer who fells the wood,  
And travelling often in the cut he makes,  
Love not the flower they pluck, and know it not  
And all their botany is Latin names.

The old men studied magic in the flowers.  
*The Complete Works of Ralph Waldo Emerson* (Volume 9)  
*Blight* (p. 140)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Our botany is all names, not powers: poets and romancers talk of herbs of grace and healing, but what does the botanist know of the virtues of his weeds?

*The Conduct of Life*

Beauty (p. 281)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1904

**Gerard, John** 1545–1612

English herbalist

Although my paines have not been spent (curteous Reader) in the gratuitous discoveries of golden mines, nor in the tracing after silver veins, whereby my native country might be enriched with such merchandize as it hath most in request and admiration; yet hath my labor (I trust) been otherwise profitably employed, in descrying of such a harmless treasure of herbes, trees, and plants, as the earth frankly without violence offereth unto our most necessarie uses.

*The Herbal of John Gerard*

Preface

Publisher undetermined

**Gilmour, John** 1906–86

English plant taxonomist and horticulturist

Botany is perhaps the least sensational of sciences. The importance of the vegetable kingdom in human affairs is basic rather than immediate, and only rarely – as in the case of penicillin – does plant science enjoy the bold type of a headline.

*British Botanists*

Introductory (p. 7)

Collins. London, England. 1946

**Gray, Asa** 1810–88

American botanist

Great as the merits of the work undoubtedly are, we must nevertheless be excused from adopting the terms of extravagant and sometimes equivocal eulogy employed by a popular author, who gravely informs his readers that no book, since printed Bibles were first sold in Paris by Dr. Faustus, ever excited so much surprise and wonder as did Dr. Torrey's edition of Lindley's *Introduction to the Natural System of Botany*.

In Charles Sprague Sargent

*Scientific Papers of Asa Gray* (Volume 1)

Lindley's *Natural System of Botany* (pp. 1–2)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1869

**Hale, Sarah Josepha Buell** 1788–1879

American writer

The explanations of these [classes and orders] must necessarily be very brief; my aim being rather to stimulate curiosity respecting the subject of Botany than to impart instruction is the science.

*The Book of Flowers*

Introduction (p. vii)

Saunders & Otley. London, England. 1836

**Henry, Thomas**

No biographical data available

The sciences of Natural History and Botany require so much time to be devoted to them that, however pleasing, they may be justly considered as improper objects for the man of business to pursue scientifically, so as to enter into the exact arrangement and classification of the different bodies of the animal, vegetable, and mineral kingdoms. But reading and personal observation will supply him with ample matter for reflection and admiration.

*Memoirs and Proceedings – Manchester Literary and Philosophical Society*

Literary and Philosophical with Commercial Pursuits

Taylor & Francis. London, England. 1883

**Henslow, John Stevens** 1796–1861

English botanist

To obtain a knowledge of a science of observation, like botany, we need make very little more exertion at first than is required for adapting a chosen set of terms to certain appearances of which the eye takes cognizance, and when this has been attained, all the rest is very much like reading a book after we have learned to spell, where every page affords a fresh field of intellectual enjoyment.

On the Requisites Necessary for the Advance of Botany

*Magazine of Zoology and Botany*, Volume 1, 1837 (p. 115)

**Herbert, Edward** 1856–1925

Old Testament scholar

**Lee, Sidney L.**

No biographical data available

I conceive it is a fine study, and worthy a gentleman to be a good botanic, that so he may know the nature of all herbs and plants, being our fellow-creatures, and made for use of man.

*The Autobiography of Edward* (p. 57)

John C. Nimo. London, England. 1886

**Howitt, William** 1792–1879

English author

Botany has introduced us to a more intimate acquaintance with the names and characters, and with something also of the physical economy of both “the trees of the wood” and of the smallest plants which flourish at their feet; so that wherever we cast our eyes, we behold matter for both admiration and research.

*The Book of the Seasons*

October (pp. 353–354)

Henry Colburn & Richard Bentley. London, England. 1831

**Jefferson, Thomas** 1743–1826

3rd president of the USA

And botany I rank with the most valuable sciences, whether we consider its subjects as furnishing the principal subsistence of life to man and beast, delicious

varieties for our tables, refreshment from our orchards, the adornments of our flower-borders, shade and perfume of our groves, materials for our buildings or medicaments for our bodies ...

In Eva Beard

Thomas Jefferson, Statesman and Scientist

*Nature Magazine*, April, 1958 (p. 202)

**Kelvin, Lord William Thomson** 1824–1907

Scottish engineer, mathematician, and physicist

Forty years ago I asked Liebig walking somewhere in the country, if he believed that the grass and flowers which we saw around us grew by mere chemical forces; he answered, “NO, no more than I could believe that a book of botany describing them grew by mere chemical force.”

In P. Thompson

*The Life of William Thomson* (Volume 2)

Letter to *The Times*, May 2, 1903 (pp. 1099–1100)

**Lincoln, Almira H.** 1793–1884

Botanist

A person ignorant of Botany, on beholding the profusion of flowers which adorn the face of nature, would discover general resemblances, and form in his mind some order of arrangement; but the Botanist learns to distinguish the least conspicuous parts of a plant as most important in a system of classification.

*Familiar Lectures on Botany, Practical, Elementary and Physiological*  
Introduction (p. 10)

F.J. Huntington & Co. New York, New York, USA. 1853

**Linnaeus, Carl (von Linné)** 1707–78

Swedish botanist and explorer

What toils, what science would be more wearisome and painful than Botany, did not some singular spell of desire, which I myself cannot define, often hurry us into this pursuit, so that the love of plants often overcomes our self-love? Good God! When I observe the fate of Botanists, upon my word I doubt whether to call them sane or mad in their devotion to plants.

*Critica Botanica*

Generic Names (p. 65)

The Ray Society. London, England. 1938

**Nuttall, Thomas** 1786–1859

English naturalist

Let us not, however, imagine that the science of Botany ends in the mere acquisition of imposed names; we may become acquainted with the structure of plants and their curious economy, like the human anatomist, without troubling ourselves materially with the particular name given to the individual subject. But we cannot proceed far, without employing something like definite language for the several parts of the object under view.

*An Introduction to Systematic and Physiological Botany*

Part I, Chapter I (pp. 1–2)

Hillard & Brown. Cambridge, England. 1830

**Phelps, Almira Hart Lincoln** 1793–1884

American educator and writer

The study of Botany seems peculiarly adapted to females; the objects of its investigation are beautiful and delicate; its pursuits, leading to exercise in the open air, are conducive to health and cheerfulness. It is not a sedentary study which can be acquired in the library, but the objects of the science are scattered over the surface of the earth, along the banks of the winding brooks, on the borders of precipices, the sides of mountains, and the depths of the forest. concerns, it is indispensable to the success of the one, and to the comfort of those interested in the other.

*Familiar Lectures on Botany, Practical, Elementary and Physiological*  
(5th edition)

Lecture I (p. 14)

F.J. Huntington & Co. New York, New York, USA. 1837

You are now to study Botany; here the objects about which you are to learn, will be placed before you, to *see*, to *touch*, and to *smell*. Thus three of your *senses* will be called upon to aid the *memory* and *understanding*; and as flowers are objects of much beauty and interest, your *imagination* also may be gratified.

*Botany for Beginners*

Chapter I (p. 9)

Huntington & Savage. 1849

**Queneau, Raymond** 1903–76

French poet, novelist, and publisher

After nearly taking root under a heliotrope, I managed to graft myself on to a vernal speedwell where my hips and haws were squashed indiscriminately and where there was an overpowering axillary scent. There I ran to earth a young blade or garden pansy whose stalk had run to seed and whose nut, cabbage or pumpkin was surmounted by a capsule encircled by snakeweed. This corny, creeping sucker, transpiring at the palms, nettled a common elder who started to tread his daisies and give him the edge of his bristly ox-tongue, so the sensitive plant stalked off and parked himself. Two hours later, in fresh woods and pastures new, I saw this specimen again with another willowy young parasite who was shooting a line, recommending the sap to switch the top bulbous vegetable ivory element of his mantle blue to a more elevated apex – as an exercise in style.

*Exercises in Style*

Botanical (pp. 171–172)

New Direction Publishing Corporation. New York, New York, USA. 1981

**Richards, Herbert Maul** 1871–1928

No biographical data available

Botany consists in the gathering of plants, and the dismembering of them, in connection with the use of a complicated terminology. That is the beginning and end of botany as it is understood by the majority; there is nothing more to be said.

*Lectures on Science, Philosophy and Art, 1907–1908*

Botany (p. 5)

The Columbia University Press. New York, New York, USA. 1908

### **Rousseau, Jean-Jacques** 1712–78

Swiss-French philosopher

I understand, my dear, that one is vexed to take so much trouble without learning the names of the plants one examines; but I confess to you in good faith that it never entered into my plan to spare you this little chagrin. One pretends that Botany is nothing but a science of words, which only exercises the memory, and only teaches how to give plants names.

Quoted in John Ruskin

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Book IX, Chapter V (p. 127)

George Allen. London, England. 1882

It is the chain of accessory ideas that makes me love botany

*Reveries of the Solitary Walker*

Seventh Walk (p. 120)

Penguin Books. London, England. 1979

### **Schleiden, Matthias Jacob** 1804–81

German botanist

Botany, as an inductive science, comprehends the study of the laws and forms of the Vegetable Kingdom. As an experimental science, it takes a very low position; and, at present, embraces but a very narrow circle of actually established facts, few indications of natural laws, and no fundamental principles and ideas by which it might be developed. This becomes very obvious when even the answer to the question, “What is a Plant?” is yet a problem of Botany.

Translated by Edwin Lankester

*Principles of Scientific Botany; Or, Botany as an Inductive Science*

Introduction (p. 1)

Longman, Brown, Green & Longmans. London, England. 1849

### **van Rensselaer, Schuyler**

No biographical data available

To a person who knows nothing of botany, the trees and flowers which he calls familiar are like the attractive faces that meet him day after day in the street – unnamed faces representing lives and souls which are hidden from his ken.

Part XVI (p. 333)

Charles Scribner’s Sons. New York, New York, USA. 1893

### **Wakefield, Priscilla** 1750–1832

English writer and philanthropist

Botany is a branch of Natural History that possesses many advantages; it contributes to health of body and cheerfulness of disposition, by presenting an inducement to take air and exercise; it is adapted to the simplest capacity, and the objects of its investigation offer themselves without expense or difficulty, which renders them attainable to every rank in life; but with all these allurements, till of late years, it has been confined to the circle of the learned, which may be attributed to those books that treat of it, being principally written in Latin; a difficulty that deterred many, particularly the female sex, from attempting to obtain the knowledge of a science, thus defended, as it were, from their approach.

*An Introduction to Botany, in a Series of Familiar Letters, with Illustrative Engravings*

Thomas Burnside. Dublin, Ireland. 1796

### **White, Gilbert** 1720–93

English naturalist and cleric

The standing objection to botany has always been, that it is a pursuit that amuses the fancy and exercises the memory, without improving the mind or advancing any real knowledge; and, where the science is carried no farther than a mere systematic classification, the charge is but too true. But the botanist that is desirous of wiping off this aspersion should be by no means content with a list of names; he should study plants philosophically, should investigate the laws of vegetation, should examine the powers and virtues of efficacious herbs, should promote their cultivation; and graft the gardener, the planter, and the husbandman, on the phytologist.

*The Natural History and Antiquities of Selborne*

Letter XL (pp. 160–161)

Nathaniel Cooke. London, England. 1853

### **Wordsworth, Dorothy** 1771–1855

English author, poet and diarist

The woods extremely beautiful with all autumnal variety and softness. I carried a basket for mosses, and gathered some wild plants. Oh ! that we had a book of botany. All flowers now are gay and deliciously sweet.

### **von Sachs, Julian**

No biographical data available

...the task of the historian of Botany...is a very difficult one, for it is only with great labour that he succeeds in

picking the real thread of scientific thought out of an incredible chaos of empirical material.

Translated by E.F. Garnsey  
*History of Botany (1530–1860)*  
 Preface (p. vi)

At The Clarendon Press. Oxford, England. 1890

## BOTANY, STUDY OF

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Balfour's "Manual of Botany." "Sap," – yes, at last. "Article 257. Course of fluids in exogenous stems." I don't care about the course just now: I want to know where the fluids come from. "If a plant be plunged into a weak solution of acetate of lead," – I don't in the least want to know what happens. – From the minuteness of the tissue, it is not easy to determine the vessels through which the sap moves." Who said it was? If it had been easy, I should have done it myself. "Changes take place in the composition of the sap in its upward course." I dare say; but I don't know yet what its composition is before it begins going up. "The Elaborated Sap by Mr. Schultz has been called 'latex.'" I wish Mr. Schultz were in a hogshead of it, with the top on. "On account of these movements in the latex, the laticiferous vessels have been denominated cin-enchymatous." I do not venture to print the expressions which I here mentally make use of.

*Proserpina* (Volume 1)

Lecture III, 14 (pp. 47–48)

John Wiley & Sons. New York, New York, USA. 1886

## BOULDER

**Burroughs, John** 1837–1921

American naturalist and essayist

The grazing or ruminating cattle add a picturesque feature, but the gray granite boulders have been lying there chewing their stony cuds vastly longer. How meditative and contented they look, dreaming the centuries away!

*The Writings of John Burroughs* (Volume 19)

Chapter II (p. 42)

Houghton, Mifflin. Boston, Massachusetts, USA. 1916

## BOWEL MOVEMENT

**Hippocrates** 460 BCE–377 BCE

Greek physician

The excrement is best which is soft and consistent, is passed at the hour which was customary to the patient when in health, in quantity proportionate to the ingesta; for when the passages are such, the lower belly is in a healthy state.

In *Great Books of the Western World* (Volume 10)

*Hippocratic Writings*

The Book of Prognostics, 11 (p. 21)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## BRACTS

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

These, and such undeveloping leaves, wherever they occur, are called "bracts" by botanists, a good word, from the Latin "bractea," meaning a piece of metal plate, so thin as to crackle. They seem always a little stiff, like bad parchment, – born to come to nothing – a sort of infinitesimal fairy-lawyer's deed.

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Part VII, Chapter I (p. 16)

George Allen. London, England. 1882

## BREATH

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

This breath of life, so precious and so fated, is to plants and animals a common inspiration. Every leaf of Burnham beeches, of the jungles of Minas Geraes, respire oxygen, day and night, like the panting jungle beasts. Deprived of free oxygen, some cells, bacteria and yeasts and molds, may still breathe, in a sort of smothered ferment. But breathe, in one sense or another, they must. Very low drops the breathing of the frog, frozen at the bottom of the pond, and low the breathing of the butternut, in all its crusty coats. But never while life is in them will it stop.

*Flowering Earth*

Chapter 4 (p. 46)

G.P. Putnam's Sons. New York, New York, USA. 1939

## BRIDGE

**Andric, Ivo** 1892–1975

Yugoslavian writer

When the angels saw how unfortunate men could not pass those abysses and ravines to finish the work they had to do, but tormented themselves and looked in vain and shouted from one side to the other, they spread their wings above those places and men were able to cross. So men learned from the angels of God how to build bridges, and therefore, after fountains, the greatest blessing is to build a bridge...

*The Bridge on the Drina*

Chapter XVI (pp. 208–209)

George Allen & Unwin Ltd. London, England. 1959

**Broun, Heywood** 1888–1939

American writer, journalist, and critic

Men build bridges and throw railroads across deserts, and yet they contend successfully that the job of sewing on a button is beyond them. Accordingly, they don't have to sew buttons.

*Seeing Things at Night*  
Holding a Baby (p. 168)  
Harcourt, Brace. New York, New York, USA. 1921

## Magna Carta

No township or subject shall be compelled to make bridges at river banks, except those who by ancient usage are legally bound to do so.

In J.C. Dickinson  
*The Great Charter*  
Chapter 23 (p. 22)  
Published by the Historical Association by G. Philip. London, England. 1955

**McGonagall, William** ca. 1825–1902  
Scottish weaver, actor and poet

Oh! ill fated Bridge of the Silv'ry Tay,  
I must now conclude my lay  
By telling the world fearlessly and without the least dismay,  
That your central girders would not have given way,  
At least many sensible men do say,  
Had they been supported on each side with buttresses,  
At least many sensible men confesses,  
For the stronger we our houses do build,  
The less chance of being killed.

*Last Poetic Gems Selected from the Works of William McGonagall, Poet and Tragedian*  
The Tay Bridge Disaster (p. 92)  
David Winter & Son. Dundee, Scotland. 1968

**Mermin, Norman David** 1935–  
Mathematician

Bridges would not be safer if only people who knew the proper definition of a real number were allowed to design them.

Topological Theory of Defects  
*Review of Modern Physics*, Volume 51, Number 3, July 1979

**Petroski, Henry** 1942–  
American civil engineer

Designing a bridge or any other large structure is not unlike planning a trip or vacation. The end may be clear and simple: to go from here to there. But the means may be limited only by our imagination.

*To Engineer Is Human: The Role of Failure in Successful Design*  
(p. 64)  
St. Martin's Press. New York, New York, USA. 1985

**Roebing, John** 1806–69  
German-American civil engineer

The contemplated work, when constructed in accordance with my designs, will not only be the greatest Bridge in existence, but it will be the greatest engineering work

of this continent, and of the age. Its most conspicuous features, the great towers, will serve as landmarks to the adjoining cities, and they will be entitled to be ranked as national monuments.

*Report to the New York Bridge Company*  
1867

**Schuyler, Montgomery** 1814–96  
American journalist and architectural critic

It so happens that the work which is likely to be our most durable monument, and to convey some knowledge of us to the most remote posterity, is a work of bare utility; not a shrine, not a fortress, not a palace but a bridge.

The Bridge as a Monument  
*Harper's Weekly*, Volume XXVII, Number 137927, May, 1883 (p. 326)

**Steinman, D. B.**  
American engineer

Between two towers soaring high  
A parabolic arc is swung  
To form a cradle for the stars;  
And from this curve against the sky  
A span of gleaming steel is hung –  
A highway of speeding cars.  
Between the cable and the span  
A web of silver strands is spaced,  
With sky above and ships below  
In human dream was born the plan  
Of strength and beauty interplaced –  
A harp against the sunset glow!  
Suspension Bridge  
*American Engineer*, February 22–28, 1953 (p. 33)

**Woodson, Thomas T.**  
No biographical data available

Poor arithmetic will make the bridge fall down just as surely as poor physics, poor metallurgy, or poor logic will.

*Introduction to Engineering Design* (p. 245)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1966

## BROOK

**Rooke, Octavius**  
No biographical data available

If the ocean is like the organ in the world's great orchestra, is not the brook as the sweet flute, whose notes melodious sink into the heart of all?

*The Channel Islands: Pictorial, Legendary and Descriptive*  
Chapter XIV (p. 113)  
L. Booth. London, England. 1857

**BROWNIAN MOTION**

**Brown, Robert** 1773–1858  
Scottish scientist

These [Brownian] motions were such as to satisfy me, after frequently repeated observation, that they arose neither from currents in the fluid, nor from its gradual evaporation, but belonged to the particle itself.

*The Miscellaneous Botanical Works of Robert Brown* (Volume 1)  
A Brief Account of Microscopical Observations made in the Middle of June, July, and August, 1827, on the Particles Contained in the Pollen of Plants (p. 467)

Robert Hardwicke. London, England. 1846

**BRUTES**

**Melville, Herman** 1819–91  
American novelist

There are unknown worlds of knowledge in brutes; and whenever you mark a horse, or a dog, with a peculiarly mild, calm, deep-seated eye, make sure he is an Aristotle or a Kant, tranquility speculating upon the mysteries in man.

*Redburn*

Chapter XL (p. 226)

Jonathan Cape. London, England. 1937

**BUBBLE**

**Boys, Charles Vernon** 1855–1944  
English inventor and physicist

I do not suppose that there is any one in this room who has not occasionally blown a common soap-bubble, and while admiring the perfection of its form, and the marvellous brilliancy of its colours, wondered how it is that such a magnificent object can be so easily produced.

I hope that none of you are yet tired of playing with bubbles, because, as I hope we shall see during the week, there is more in a common bubble than those who have only played with them generally imagine.

*Soap-bubbles and the Forces which Mould Them* (p. 9)

Society for Promoting Christian Knowledge. London, England. 1896

...a soap bubble is a beautiful thing. It appeals to several senses and to many kinds of minds; it is a source of delight to children, and we who know what somewhat of the mysteries of molecular physics which it helps to reveal look at it with admiration.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1912)

Experiment with Soap Bubbles (p. 211)

Government Printing Office. Washington, D.C. 1913

**Lawrence, D. H. (David Herbert)** 1885–1930  
English writer

But the pressure was too great. He would have to find something to make good the equilibrium. Something must come with him into the hollow void of death in his soul, fill it up, and so equalise the pressure within to the pressure without. For day by day he felt more and more like a bubble...

*Women in Love*

Chapter XXIV (p. 308)

The Viking Press. New York, New York, USA. 1950

**Maxwell, James Clerk** 1831–79  
Scottish physicist

On an Etruscan vase in the Louvre figures of children are seen blowing bubbles. Those children probably enjoyed their occupation just as modern children do. Our admiration of the beautiful and delicate forms, growing and developing themselves, the feeling that it is our breath that is turning dirty soap suds into spheres, the fear lest by an irreverent touch we may cause the gorgeous vision to vanish with a sputter of soapy water in our eyes, our wistful gaze as we watch the perfect bubble when it sails away from the pipe's mouth to join, somewhere in the sky, all the other beautiful things that have vanished before it.

Plateau on Soap-Bubbles

*Nature*, Volume 10, Number 242, Thursday, June 18, 1874 (p. 119)

**Mukaiyama, Teruaki** 1927–  
Japanese chemist and scientific statesman

Vigorous evolution of gas, quick coloration to brown, and the formation of precipitates; there hidden, was the treasure of possibility in the bubbles of foam on the surface, which were observed in the reaction vessel in a corner of our small laboratory! For organic chemists, facing such an unpredictable phenomenon is not uncommon. In flasks, that which can be predicted by thought or discussion with co-workers often happens.

*Challenges In Synthetic Organic Chemistry*

Prologue (p. 1)

Clarendon Press. Oxford, England. 1990

**BUG****Author undetermined**

The Lightning-bug has wings of gold.

The June-bug wings of flame.

The Bed-bug has no wings at all.

But he gets there all the same!

**BUILD****Author undetermined**

Those who personally dominate are heroes for the hour; those who build are immortal.

*Journal of Engineering Education*, Volume 30, Number 3, November, 1939 (p. 314)**Bronowski, Jacob** 1908–74

Polish-born British mathematician and polymath

The most powerful drive in the ascent of man is his pleasure in his own skill. He loves to do what he does well and, having done it well, he loves to do it better. You see it in his science. You see it in the magnificence with which he carves and builds, the loving care, the gaiety,

the effrontery. The monuments are supposed to commemorate kings and religions, heroes, dogmas, but in the end the man they commemorate is the builder.

*The Ascent of Man*

The Grain in the Stone (p. 116)

Little, Brown & Co. Boston, Massachusetts, USA. 1973

Those who personally dominate are heroes for the hour; those who build are immortal.

*Journal of Engineering Education*, Volume 30, Number 3, November, 1939 (p. 314)

**Longfellow, Henry Wadsworth** 1807–82

American poet

Michael A: Ah, to build, to build!  
That is the noblest art of all the arts.  
Painting and sculpture are but images,  
Are merely shadows cast by outward things  
On stone or canvas, having in themselves  
No separate existence. Architecture,  
Existing in itself, and not seeming  
A something it is not, surpasses them  
As substance shadow.

*The Poetical Works of Henry Wadsworth Longfellow*

Michael Angelo, III, San Silvestro

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

...to build, to build That is the noblest art of all the arts.  
Painting and sculpture are but images, Are merely shadows  
cast by outward things On stone or canvas, having in  
themselves No separate existence. Architecture, Existing  
in itself, and not in seeming A something it is not, sur-  
passes them As substance shadow.

Michael Angelo (p. 420)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1899

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

Therefore when we build, let us think that we build (public edifices) forever. Let it not be for present delight, nor for present use alone, let it be such work as our descendants will thank us for, and let us think, as we lay stone to stone, that a time is to come when those stones will be held sacred because our hands have touched them, and that men will say as they look upon the labor and wrought substance of them, "See!"

*True and the Beautiful in Nature, Art, Morals and Religion, Selected from the Works of John Ruskin*

Part 3, The Lamp of Memory (pp. 142–143)

John Wiley & Sons, Inc. New York, New York, USA. 1860

To build, literally to confirm, is by common understanding to put together and adjust the several pieces of any edifice or receptacle of a considerable size. Thus we have church building, house building, ship building, and coach building.

*The Seven Lamps of Architecture*

Chapter I (p. 7)

John Wiley & Son. New York, New York, USA. 1865

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

When we mean to build,  
We first survey the plot, then draw the model.  
And when we see the figure of the house,  
Then must we rate the cost of the erection,  
Which if we find outweighs ability,  
What do we then but draw anew the mode  
In fewer offices, or at least desist  
To build at all?

*In Great Books of the Western World* (Volume 26)

**Wooten, Henry**

No biographical data available

In *Architecture* as in all other *Operative Arts*, the end must direct the *Operation*.

The *end* is to build well.

Well building hath three Conditions.

Commodities, Firmness, and Delight.

*The Elements of Architecture*

The I. part (p. 1)

Printed by John Bill. London, England. 1624

## BUILDER

**Ruskin, John** 1819–1900

English writer, art critic, and social reformer

No person who is not a great sculptor or painter can be an architect. If he is not a sculptor or painter, he can only be a builder.

*True and the Beautiful in Nature, Art, Morals and Religion, Selected from the Works of John Ruskin*

Part 4, Sculpture (p. 209)

John Wiley & Sons, Inc. New York, New York, USA. 1860

But of them [the builders], and their life, and their toil upon the earth, one reward, one evidence, is left to us in those gray heaps of deep-wrought stone. They have taken with them to the grave their powers, their honors, and their errors; but they have left us their adoration.

*The Seven Lamps of Architecture*

Chapter I (p. 24)

John Wiley & Son. New York, New York, USA. 1865

In no art is there closer connection between our delight in the work, and our admiration of the workman's mind, than in architecture, and yet we rarely ask for a builder's name.

*The Stones of Venice*  
Chapter II (p. 38)  
Smith, Elder & Co. London, England. 1873

## BUILDING

### de Staël (Anne-Louise-Germaine),

**Mme.** 1766–1817  
French romantic writer

The sight of such a building [St. Peter's Cathedral] is like a ceaseless, changeless melody ...

Translated by Isabel Hill  
*Corinne*  
Chapter II (p. 62)  
New York, New York, USA. 1876

### Disraeli, Benjamin, 1st Earl of Beaconsfield

1804–81  
English prime minister, founder of Conservative Party, and novelist

Nothing more completely represents a nation than a public building.

*Tancred, Or The New Crusade*  
Chapter X (p. 112)  
Longmans, Green & Co. London, England. 1900

### Hertzberger, Herman

1932-  
Dutch architect

We will have to accept that buildings, like household and other appliances, are showing less and less of their contents and their workings, and starting to behave increasingly like urban containers.

*Space and the Architect: Lessons in Architecture 2*  
Chapter 4 (p. 102)  
010 Publishers. Rotterdam, The Netherlands. 2000

### Ruskin, John

1819–1900  
English writer, art critic, and social reformer

All that is fantastic in form, or frivolous in detail, annihilates the aristocratic air of a building: it at once destroys its sublimity and size, besides awakening, as is almost always the case, associations of a mean and low character.

*The Poetry of Architecture: Cottage, Villa, Etc*  
The Cottage (p. 26)  
John Wiley & Sons. New York, New York, USA. 1877

Everything about it [a building] should be natural, and should appear as if the influences and forces which were in operation around it had been too strong to be resisted, and had rendered all efforts of art to check their power, or conceal the evidence of their action, entirely unavailing.

*The Poetry of Architecture: Cottage, Villa, Etc*  
The Cottage (p. 44)  
John Wiley & Sons. New York, New York, USA. 1877

...the material which Nature furnishes, in any given country, and the form which she suggests, will always render the building the most beautiful ...

*The Poetry of Architecture: Cottage, Villa, Etc*  
The Cottage (p. 48)  
John Wiley & Sons. New York, New York, USA. 1877

...the more polished the mind of its designer, the less national will be the building; for its architect will be led away by a search after a model of ideal beauty, and will not be involuntarily by deep-rooted feelings, governing irresistibly his heart and hand.

*The Poetry of Architecture: Cottage, Villa, Etc*  
The Villa (p. 82)  
John Wiley & Sons. New York, New York, USA. 1877

### Statham, H. Heathcote

1839–1924  
Architect

...a building ought to express in its external design its internal planning and arrangement; in other words, the architectural design should arise out of the plan and disposition of the interior, or be carried on concurrently with it, not designed as a separate problem.

*Architecture for General Readers*  
Architecture for General Readers (p. 5)  
Charles Scribner's Sons. New York, New York, USA. 1896

## BUILDINGS

### Glog, John

1896–1981  
Architectural writer

Architecture cannot lie, and buildings, although inanimate, are to that extent morally superior to men.

Presentation  
The Significance of Historical Research in Architectural and Industrial Design  
Royal Society of Arts, 20 March, 1963

### Hugo, Victor

1802–85  
French author, lyric poet, and dramatist

Great edifices, like great mountains, are the work of ages.

*Notre-Dame de Paris*  
Book III, Chapter 1 (p. 107)  
J.M. Dent & Sons Ltd. London, England. 1910

### Ruskin, John

1819–1900  
English writer, art critic, and social reformer

Better the rudest work that tells a story or records a fact, than the richest without meaning. There should not be a single ornament put upon great civic buildings, without some intellectual intention.

*True and the Beautiful in Nature, Art, Morals and Religion, Selected from the Works of John Ruskin*

Part 3, The Lamp of Memory (p. 142)  
John Wiley & Sons, Inc. New York, New York, USA. 1860

...we require from buildings, as from men, two kinds of goodness: first, the doing their practical duty well: then that they be graceful and pleasing in doing it; which last is itself another form of duty.

*The Works of John Ruskin*

*The Stones of Venice* (Volume 1)

Chapter II, Section 1 (p. 36)

John Wiley & Sons, Inc. New York, New York, USA. 1887

The Sweep-Nest Harvest

July 21<sup>st</sup> (p. 117)

Harper & Brothers Publishers. New York, New York, USA. 1900

## C

### CALCINATION

**Rey, Jean** 1583–1645  
French physician and chemist

Let now all the greatest minds in the world be fused into one mind, and let this great mind strain every nerve beyond its power; let him seek diligently on the earth and in the heavens, let him search every nook and cranny of nature: he will only find the cause of this augmentation in the air when the Sun's rays heat it, and render it dense and heavy, so that it then mixes with the calx as the anti-mony on calcination crumbles and becomes adherent in its minutest particles.

*Essays of Jean Rey*  
Essay XXV (p. 51)  
William F. Clay. Edinburgh, Scotland. 1895

### CALCULATE

**Poe, Edgar Allan** 1809–49  
American short story writer

...to calculate is not in itself to analyse.  
*Tales of Mystery and Imagination*  
*The Murders in the Rue Morgue* (p. 83)  
Henry Frowde. London, England. 1903

**Shanks, William** 1812–82  
English amateur mathematician

Whether any other Mathematician will appear, possessing sufficient leisure, patience, and facility of computation, to calculate the value of  $[\pi]$  to a still greater extent, remains to be seen: all that the Author can say is, he takes leave of the subject for the present ...

*Contributions to Mathematics*  
Introductory Remarks and Historical Notes (p. xvi)  
G. Bell. London, England. 1853

### CALCULATING

**Browning, Robert** 1812–89  
English poet

That low man goes on adding one to one,  
His hundred's soon hit;  
This high man, aiming at a million,  
Misses a unit.

*Poems of Robert Browning*  
A Grammarian's Funeral  
Oxford University Press. London, England. 1913

### CALCULATING MACHINE

**Babbage, Charles** 1792–1871  
English mathematician

On two occasions, I have been asked [by the members of Parliament], – “Pray, Mr. Babbage, if you put into the machine wrong figures, will the right answers come out?” In one case, a member of the Upper, and in the other a member of the Lower, House put this question. I am not able rightly to apprehend the kind of confusion of ideas that could provoke such a question.

*Passages from the Life of a Philosopher*  
Chapter V (p. 67)  
Longman, Green, Longman, Roberts & Green. London, England. 1864

**Hamilton, William** 1788–1856  
Scottish philosopher

It is the highest compliment to the ingenuity of a Pascal, a Leibnitz, and a Babbage, in their invention of the arithmetical machine, that there would not be required, in those who use it, more than the dexterity of a turnspit.

*Discussions on Philosophy and Literature, Education and University Reform*  
On the Study of Mathematics as an Exercise of the Mind (p. 283)  
Harper & Brothers Publishers. New York, New York, USA. 1861

### CALCULATION

**Austen, Jane** 1775–1817  
English novelist

...if the first calculation is wrong, we make a second better...

*Mansfield Park*  
Chapter V (p. 38)  
J.M. Dent & Sons Ltd. London, England. 1906

### Author undetermined

As I was going to St. Ives,  
I met a man with seven wives;  
Every wife had seven sacks,  
Every sack had seven cats,  
Every cat had seven kit.  
Kits, cats, sacks, and wives,  
How many were going to St. Ives?  
Source undetermined

Integral z-squared dz  
From 1 to the square root of 3  
Times the cosine  
Of three pi over 9  
Equals log of the cube root of 'e'  
Source undetermined

**Belloc, Hilaire** 1870–1953

French-born poet and historian

The student must be careful in calculations involving the decimal point to put it in its exact place, neither too much to the right nor too much to the left.

*The Aftermath*

Appendix (fn, p. 147)

Duckworth &amp; Company. London, England. 1910

**Bennett, Charles H.**

No biographical data available

Multiplication is vexation,  
Division is as bad;  
The Rule of Three doth puzzle me,  
And Practice drives me mad.

G.W. Carleton &amp; Company, Publishers. New York, New York, USA. 1879

**Bloch, Felix** 1905–83

American physicist and educator

Erwin with his psi can do  
Calculations quite a few.  
But one thing has not been seen  
Just what psi really mean.

In John D. Barrow

*The World Within the World* (p. 141)

Clarendon Press. Oxford, England. 1988

**Bolton, Henry Carrington** 1843–1903

American chemist, bibliographer, and historian

In his calculations the chemist relies on the supposed chemical relations of the invisible, intangible, and immeasurable particles he calls atoms. These relations

have been determined by others in whom he has confidence, and the accuracy of these constants has to be accepted on faith.

In Joseph William Mellor

*Mellor's Modern Inorganic Chemistry*

Chapter 8 (p. 115)

Longmans. London, England. 1967

**Buck, Pearl S.** 1892–1973

American writer

“And if hydrogen, what about the hydrogen in sea water? Might not the explosion of the atomic bomb set off an explosion of the ocean itself? Nor was this all that Oppenheimer feared. The nitrogen in the air is also unstable, though less in degree. Might not it, too, be set off by an atomic explosion in the atmosphere?”

“The earth would be vaporized,” I said.

“Exactly,” Compton said, and with what gravity! “It would be the ultimate catastrophe. Better to accept the slavery of the Nazis than to run the chance of drawing the final curtain on mankind!”

Again Compton took the lead in the final decision. If, after calculation, he said, it were proved that the chances were more than approximately three to one million that the earth would be vaporized by the atomic explosion, he would not proceed with the project. Calculation proved the figures slightly less – and the project continued.

The Bomb – The End of the World?

*American Weekly*, March 8, 1959**Carroll, Lewis (Charles Dodgson)** 1832–98

English writer and mathematician

The real dilemma, which I have had to face, is this: given that the brain is in so wakeful a condition that, do what I will, I am certain to remain awake for the next hour or so, I must choose between two courses, viz. either to submit to the fruitless self-torture of going through some worrying topic, over and over again, or else to dictate to myself some topic sufficiently absorbing to keep the worry at bay. A mathematical problem is, for me, such a topic; and is a benefit, even if it lengthens the wakeful period a little. I believe that an hour of calculation is much better for me than half-an-hour of worry.

*Curiosa Mathematica* Part I (3rd edition)

Preface to the Second Edition (p. viii)

Macmillan &amp; Co Ltd. London, England. 1894

**Churchill, Winston Spencer** 1882–1965

British prime minister, statesman, soldier, and author

The human story does not always unfold like a mathematical calculation on the principle that two and two make four. Sometimes in life they make five or minus three; and sometimes the blackboard topples down in the middle of the sum and leaves the class in disorder and the pedagogue with a black eye.

In F.B. Czarnomski  
*The Wisdom of Winston Churchill*  
 Calculation (p. 59)  
 George Allen & Unwin Ltd. London, England. 1956

**de Saint-Exupéry, Antoine** 1900–44  
 French aviator and writer

The sailing vessel itself was once a machine born of the calculations of engineers, yet it does not disturb our philosophers. The sloop took its place in the speech of men. There is a poetry of sailing as old as the world. There have always been seamen in recorded time. The man who assumes that there is an essential difference between the sloop and the airplane lacks historic perspective.

 Monsignor Georges Lemaitre (p. 370)  
 D. Reidel Publishing Company. Hingham, Massachusetts, USA. 1984

**Eisenhower, Dwight David** 1890–1969  
 34th president of the USA

...these calculations overlook the decisive element: what counts is not necessarily the size of the dog in the fight – it's the size of the fight in the dog.  
 Address to Republican National Committee  
 January 31, 1958

**Emerson, Ralph Waldo** 1803–82  
 American lecturer, poet, and essayist

Nature hates calculators; her methods are salutatory and impulsive.

*Ralph Waldo Emerson: Essays and Lectures*  
*Essays: Second Series*  
 Experience (p. 483)  
 The Library of America. New York, New York, USA. 1983

**Fabre, Jean-Henri** 1823–1915  
 French entomologist and author

There was a certain rule of signs which declared that minus multiplied by minus made plus. How I toiled over that wretched paradox! It would seem that the book did not explain this subject clearly, or rather employed too abstract a method. I read, reread, and meditated in vain: the obscure text retained all its obscurity. That is the drawback of books in general: they tell you what is printed in them and nothing more. If you fail to understand, they never advise you, never suggest an attempt along another road which might lead you to the light. The merest word would sometimes be enough to put you on the right track; and that word the books, hidebound in a regulation phraseology, never give you.

Translated by Alexander Teixeira de Mattos  
*The Life of the Fly*  
 Chapter XII (p. 285)

 Stanza LVI & LVII  
 Thomas Y. Crowell & Company. New York, New York, USA. 1800

**Galois, Evariste** 1811–32  
 French mathematician

Since the beginning of the century, computational procedures have become so complicated that any progress

by those means has become impossible, without the elegance which modern mathematicians have brought to bear on their research, and by means of which the spirit comprehends quickly and in one step a great many computations. It is clear that elegance, so vaunted and so aptly named, can have no other purpose...

Go to the roots, of these calculations! Group the operations. Classify them according to their complexities rather than their appearances! This, I believe, is the mission of future mathematicians. This is the road on which I am embarking in this work.

In R. Bourgne and J.P. Azra

## CALCULUS

### Author undetermined

Alcohol and calculus don't mix. Never drink and derive.

Source undetermined

O Lord, hear my anxious plea

Calculus is killing me

I know not of 'dx' or 'dy'

And probably won't until the day I die.

Please, Lord, help me in this hour

As I take my case to the highest power.

I care not for fame or loot

Just help me find one square root.

And Lord, please let me see

One passing mark in organic chemistry.

Oh such a thing I constantly dread

I'd just as soon join the Marines instead.

Lord, please give me a sign

That you've been listening all the time.

Please lead me out of this constant coma

And give me a shot at my diploma.

Source undetermined

**Bell, E. T. (Eric Temple)** 1883–1960

Scottish-American mathematician and educator

It may be emphasized once for all that a close description of how mathematics handles the problem of continuous change is neither possible nor desirable in a first approach. Further, to turn aside for a moment if I may be allowed to vent a heretical opinion, I strongly disbelieve in ever giving either engineers or mathematical physicists a rigorous course in the calculus – the mathematics of continuous change. By rigorous I mean going right down to the ambiguous logical roots of the number system. Any professional mathematician who is not also an analytical bigot knows that the foundations of analysis are in a terrible mess. And any scientifically literate mathematician who follows what mathematical physicists are doing with this analysis, and who criticizes them for their bold use of their dangerous mathematical machinery, proclaims himself a mathematical bigot of the first magnitude.

*The Handmaiden of the Sciences*

Chapter 4 (pp. 62–63)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Berlinski, David** 1942–

American mathematician

If science begins in awe as the eye extends itself throughout the cold of space, past the girdle of Orion and past the galaxies pinwheeling on their axes, then in the calculus mankind has created an instrument commensurate with its capacity to wonder.

*A Tour of the Calculus*

Introduction (pp. xi–xii)

Pantheon Books. New York, New York, USA. 1995

The overall structure of the calculus is simple. The subject is defined by a fantastic leading idea, one basic axiom, a calm and profound intellectual invention, a deep property, two crucial definitions, one ancillary definition, one major theorem, and the fundamental theorem of the calculus.

*A Tour of the Calculus*

The Frame of the Book (p. xvii)

Pantheon Books. New York, New York, USA. 1995

If the calculus is much like a cathedral, its construction the work of centuries, it remained until the nineteenth century a cathedral suspiciously suspended in midair, the thing simply hanging there, with no one absolutely convinced that one day the gorgeous and elaborate structure

would not come crashing down and fracture in a thousand pieces.

*A Tour of the Calculus*

Chapter 8 (p. 49)

Pantheon Books. New York, New York, USA. 1995

...the calculus serves to demonstrate with an eerie aptness the extent to which ordinary concepts are not ordinary at all. Simple speed seems a concept on the margins of the infinite, and yet the strangest thing of all, stranger by far than those black holes in space, is the fact that the cat's cradle of words that Cauchy offered the world [as a definition of limit] is sufficient to purge speed of its paradoxes.

*A Tour of the Calculus*

Chapter 14 (p. 119)

Pantheon Books. New York, New York, USA. 1995

**Boas, Jr., Ralph P.** 1913–92

Mathematician

Rewards in Math are plenty

But this obstacle looms big:

How can you shine in calculus

If you won't learn any trig?

Reprinted in Ralph P. Boas, Jr.

*Lion Hunting and Other Mathematical Pursuits* (p. 102)

Mathematical Association of America. Washington, D.C. 1995

Thus, differential calculus has all the exactitude of other algebraic operations.

Translated by Frederick Wilson Truscott and Frederick Lincoln

*A Philosophical Essay on Probabilities*

Chapter V (p. 45)

John Wiley & Sons. New York, New York, USA. 1902

## Mathematical Sciences Education Board

Although discrete mathematics and statistics provide necessary foundations for computer engineering and social sciences, calculus remains the archetype of higher mathematics. It is a powerful and elegant example of the mathematical method, leading both to major applications and to major theories. The language of calculus has spread to all scientific fields; the insight it conveys about the nature of change is something that no educated person can afford to be without.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*

Curriculum (pp. 51–52)

National Academy Press. Washington, D.C. 1989

### Modjeski, Ralph 1861–1940

Polish-born American engineer

### Waddell, John Alexander Low 1854–1938

American bridge engineer

Mathematics higher than the calculus is of small value to the engineer, except possibly as a training for the mind . . . The Teaching of Mathematics to Students of Engineering *Science*, New Series, Volume 28, Number 710, August 7, 1908 (p. 165)

### Newman, James Roy 1911–66

Mathematician and mathematical historian

...it is to the definite integral that structural engineers must render thanks for the Golden Gate Bridge, for it rests on this even more than on concrete and steel.

Chance and Chanceability – The Calculus (p. 340)

Simon & Schuster. New York, New York, USA. 1940

### O'Brien, Katharine

American mathematician

How dear to my heart are cylindrical wedges,  
when fond recollection presents them once more,  
and boxes from tin by upturning the edges,  
and ships landing passengers where on the shore.  
The ladder that slid in its slanting projection,  
the beam in the corridor rounding the ell,  
the rarest of all in that antique collection  
the leaky old bucket that hung in the well –  
the creaky old bucket, the squeaky old bucket,  
the leaky old bucket that hung in the well.

The Old Oaken Calculus Problem

*The American Mathematical Monthly*, Volume 73, Number 8, October, 1966 (p. 881)

### Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

The Calculus required continuity, and continuity was supposed to require the infinitely little; but nobody could discover what the infinitely little might be. It was plainly

not quite zero, because a sufficiently large number of infinitesimals, added together, were seen to make up a finite whole. But nobody could point out any fraction which was not zero, and yet not finite. Thus, there was a deadlock.

*Mysticism and Logic: And Other Essays*

Chapter V (p. 82)

Longmans, Green & Co. London, England. 1919

### Thompson, Silvanus P. 1851–1916

English physics professor and author

Considering how many fools can calculate, it is surprising that it should be thought either a difficult or a tedious task for any other fool to learn how to master the same tricks. Some calculus-tricks are quite easy. Some are enormously difficult. The fools who write the textbooks of advanced mathematics – and they are mostly clever fools – seldom take the trouble to show you how easy the easy calculations are. On the contrary, they seem to desire to impress you with their tremendous cleverness by going about it in the most difficult way. Being myself a remarkably stupid fellow, I have had to unteach myself the difficulties, and now beg to present to my fellow fools the parts that are not hard. Master these thoroughly, and the rest will follow. What one fool can do, another can.

*Calculus Made Easy: Being a Very-Simplest Introduction to Those Beautiful Methods of Reckoning Which Are Generally Called by the Terrifying Names of the Differential Calculus and the Integral Calculus* (2nd edition)

Prologue (p. xi)

The Macmillan Company. New York, New York, USA. 1929

### Tolstoy, Leo 1828–1910

Russian writer

If they'd told me at college that other people understood the integral calculus, and I didn't, then pride would have come in. But in this case one wants first to be convinced that one has certain qualifications for this sort of business, and especially that all this business is of great importance.

*Anna Karenina*

Part III, Chapter III (p. 228)

Barnes & Noble Books. New York, New York, USA. 2003

### Weaver, Jefferson Hane

American science author

Calculus is both one of the most intriguing and one of the most intimidating branches of mathematics to the general public. The very word “calculus” suggests an accessibility that is limited to only a chosen few, typically those who wear glasses with thick lenses and keep their pens and pencils neatly arranged in the plastic sheaths of their breast pockets.

*Conquering Calculus: The Easy Road to Understanding Mathematics*

Chapter I (p. 1)

Plenum Press. New York, New York, USA. 1998

If one is happy running the milkshake machine or flipping hamburgers or watching restaurant training films in the back room, then, quite frankly, there is little point in acquiring a knowledge of calculus. Oh, one can impress one's fellow shift members by writing various ominous-looking mathematical symbols on the bathroom walls or by tossing such words as "derivative" and "integral" into everyday conversations, but the ordinary demands of a food management career will probably not involve the knowledge of calculus.

*Conquering Calculus: The Easy Road to Understanding Mathematics*  
Chapter 1 (p. 2)  
Plenum Press. New York, New York, USA. 1998

Liberal arts majors may quibble with the idea that calculus should be studied purely because more and more of our society's better-paying jobs are in industries in which quantitative analysis is required. But we should point out that William Shakespeare must have agreed with the sentiment expressed in this book regarding the value of studying calculus because he never actually wrote a play in which the protagonist said, "Sod the calculus." Nowhere will you find Hamlet asking himself, "To study the calculus or not to study the calculus – that is the question." Nor will you hear Romeo calling up to Juliet on her balcony, urging her to toss aside her calculus book and run away with him.

*Conquering Calculus: The Easy Road to Understanding Mathematics*  
Chapter 1 (p. 3)  
Plenum Press. New York, New York, USA. 1998

## CALORIE

### High school chemistry student

A calorie is the amount of pressure required to push 1 g of water 1°C.

Classroom Emanations  
*Journal of Chemical Education*, Volume 2, Number 7, July, 1925 (p. 611)

## CAMERA

### Iles, George

No biographical data available

Turned to the heavens [the camera], this power to grasp the invisible brings into view a breadth of the universe unseen by the acutest observer using the most powerful telescope.

In *George Isles*  
*The Skies and the Earth*  
Photography of the Skies (p. 80)  
Doubleday, Page & Co. New York, New York, USA. 1902

### Le Corbusier (Charles-Edouard

**Jeanneret)** 1887–1965  
Swiss architect and city planner

Today we are saturated with images. That impassive machine, the camera lens, has gone beyond the human retina. This mechanism fears neither heat nor cold; it is never tired. In consequence, it has the advantage of exceptional sight to such an extent that its products are a revelation to us. They permit us to enter into the mysteries of the cosmos through investigations that our human possibilities could not hope to attain.

*Architecture and the Arts*  
*Daedalus*, Volume 89, Number 1, Winter, 1960 (p. 46)

## CANALS OF MARS

### Lowell, Percival 1855–1916

American astronomer

Girdling their globe and stretching from pole to pole, the Martian canal system not only embraces their whole world, but is an organized entity. Each canal joins another, which in turn connects with a third, and so on over the entire surface of the planet.

*Mars and Its Canals*  
Chapter XXXII (pp. 376–377)  
The Macmillan Co. New York, New York, USA. 1906

## CANDLE

### Faraday, Michael 1791–1867

English physicist and chemist

There is no law under which any part of this universe is governed which does not come into play and is touched upon in these phenomena. There is no better, there is no more open door by which you can enter into the study of natural philosophy, than by considering the physical phenomena of a candle.

*The Chemical History of a Candle* (p. 1)  
Larlin Corporation. Marietta, Georgia. 1978

## CANYON

### Peattie, Donald Culross 1898–1964

American botanist, naturalist, and author

This earth, this third planet from the sun, was lifeless once. The rocks tell that much. There is one place in the world where the complete record is written on a single stone tablet. The Grand Canyon of the Colorado River is a cross section of geologic time. Cut by a master hand, the testimony appears to our eyes marvelously magnified. The strata burn with their intense elemental colors; they are defined as sharply as chapters, and the book is flung wide open. A silver thread of river underscores the bottom-most line, the dark Vishnu schist where no life ever was.

*Flowering Earth*  
Chapter 6 (p. 60)  
G.P. Putnam's Sons. New York, New York, USA. 1939

## CAPRICE

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

[Caprice is] an essential source of branch beauty: being in reality the written story of all the branch's life, – of the theories it formed, the accidents it suffered, the fits of enthusiasm to which it yielded in certain delicious warm springs; the disgusts at weeks of east wind, the mortifications of itself for its friends' sakes; or the sudden and successful inventions of new ways of getting out to the sun.

*Modern Painters* (Volume 5)

Part VI, Chapter 8 (p. 69)

John Wiley & Sons. New York, New York, USA. 1879

## CARBOHYDRATE

**Fischer, Emil Hermann** 1852–1919  
German chemist

And so, progressively, the veil behind which Nature has so carefully concealed her secrets is being lifted where the carbohydrates are concerned.

*Nobel Lectures, Chemistry 1901–1921*

Syntheses in the Purine and Sugar Group

Elsevier Publishing Co. Amsterdam, The Netherlands. 1966

## CATALOGUE

**Darwin, Sir George Howard** 1845–1912  
English astronomer and mathematician

A mere catalogue of facts, however, well arranged has never led to any important scientific generalisation.

Address to British Association

*Nature*, Section A, Volume 34, Number 879, September 2, 1886 (p. 420)

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

Consider what you have in the smallest chosen library. A company of the wisest and wittiest men that could be picked out of all civil countries, in 1,000 years, have set in best order the results of their learning and wisdom. The men themselves were hid and inaccessible, solitary, impatient of interruption, fenced by etiquette; but the thought which they did not uncover to their bosom friend is here written out in transparent words to us, the strangers of another age.

*The Complete Works of Ralph Waldo Emerson* (Volume 7)

*Society and Solitude*

Books (p. 190)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

**Herschel, Friedrich Wilhelm**  
(Sir William) 1738–1822

English astronomer

In this research, it became necessary to look out for proper stars. I took some pains to find out what double stars had been recorded by astronomers, but my situation permitted me not to consult extensive libraries. Nor indeed was it very material; for, as I intended to view the heavens myself, Nature, that great volume appeared to me to contain the best catalogue upon this occasion.

On the Parallax of the Fixed Stars

*Philosophical Transactions of the Royal Society of London*, Volume 72, 1782 (p. 97)

**Melancon, Robert**

No biographical data available

A great public library, in its catalogue and its physical disposition of its books on shelves, is the monument of literary genres.

*World Literature Today*, Spring 1982 (p. 231)

## CATALOGUING

**Margenau, Henry** 1901–97  
American physicist

Much practical good can come from careful cataloguing of reliable knowledge, but the pretense of ultimacy implied by the movement, whose adherents are with few notable exceptions not scientists in the strictest sense, must be exposed as spurious. Science is more than a record of results which can be stated with precision; indeed facts can be so fully certain as to be trivial and uninteresting to science, as most facts are.

*The Nature of Physical Reality: A Philosophy of Modern Physics*

Chapter 2 (pp. 18–19)

McGraw-Hill Book Co., Inc. New York, New York, USA. 1950

## CATARACT

## FALLS OF MONTMORENCY

**Sears, Robert**

No biographical data available

...the true lover of nature – he who looks with the eye of an enthusiast upon the sublime and the beautiful, as it came from the hand of the Creator – can spend many an hour of pleasure and delight in watching the Montmorency, as it comes rushing and thundering down the steep precipice, sending forth its rainbows of light spray, in token of joy that the rough way is passed over, and that

its waters may afterward roll on in peace and quiet.

*The Wonders of the World*

Cataracts (p. 18)

Robert Sears. New York, New York, USA. 1848

## NIAGARA FALLS

### Sears, Robert

No biographical data available

This the name [Niagara Falls] given to unquestionably the finest and most celebrated waterfalls in the known world. The power of language can give but a very faint and inadequate idea of their imposing grandeur and sublimity.

*The Wonders of the World*

Cataracts (p. 13)

Robert Sears. New York, New York, USA. 1848

## CATASTROPHE

### Gould, Stephen Jay 1941–2002

American paleontologist, evolutionary biologist, and historian of science

[T]he catastrophists were much more empirically minded than [Sir Charles] Lyell. The geologic record does seem to record catastrophes: rocks are fractured and contorted; whole faunas are wiped out .... To circumvent this literal appearance, Lyell imposed his imagination upon the evidence. The geologic record, he argued, is extremely imperfect and we must interpolate into it what we can reasonably infer but cannot see. The catastrophists were the hardnosed empiricists of their day, not the blinded theological apologists.

This View of Life. Catastrophes and Steady State Earth

*Natural History*, Volume 84, Number 2, February, 1975 (pp. 16–17)

In the great debates of early nineteenth century geology, catastrophes followed the stereotypical method of objective science – empirical literalism. They believed what they saw, interpolated nothing, and read the record of the rocks directly.

*Hen's Teeth and Horse's Toes*

The Stinkstones of Oeningen (p. 105)

W.W. Norton & Company, Inc. New York, New York, USA. 1983

It seems the height of antiquated hubris to claim that the universe carried on as it did for billions of years in order to form a comfortable abode for us. Chance and historical contingency give the world of life most of its glory and fascination. I sit here happy to be alive and sure that some reason must exist for “why me?” Or the earth might have been totally covered with water, and an octopus might now be telling its children why the eight-legged God of all things had made such a perfect world for cephalopods. Sure we fit. We wouldn't be here if we didn't. But the world wasn't made for us and it will endure without us.

*An Urchin in the Storm: Essays About Books and Ideas*

Chapter 14 (p. 206)

W.W. Norton & Company, Inc. New York, New York, USA. 1987

In the bad old days, before men rose from their armchairs to look at rocks in the field, biblical limitations of the Mosaic chronology precluded any understanding of our earth's history.

*Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time*

Chapter 1 (p. 5)

Harvard University Press. Cambridge, Massachusetts, USA. 1987

### Vitaliano, Dorothy

American geologist

For unless human nature has changed considerable through the ages, what is considered news, and therefore may be remembered when the normal events of daily life are long forgotten, is the unusual, particularly the violently unusual. And what is more violently unusual than a natural catastrophe?

*Legends of the Earth*

Chapter 2 (p. 11)

Indiana University Press. Bloomington, Indiana, USA. 1973

## CATASTROPHIC PROCESS

### Ager, Derek Victor 1923–98

Geologist

...have been trying to show how I think geology got into the hands of the theoreticians who were conditioned by the social and political history of their day more than by observation in the field.... In other words, we have allowed ourselves to be brain-washed into avoiding any interpretation of the past that involves extreme and what might be termed ‘catastrophic’ processes.

*The Nature of the Stratigraphical Record*. (2nd edition)

Chapter 4 (p. 46)

Macmillan & Company Ltd. London, England. 1981

## CATASTROPHISM

### Huxley, Thomas Henry 1825–95

English biologist

Catastrophism has insisted upon the existence of a practically unlimited bank of force, on which the theorist might draw; and it has cherished the idea of the development of the earth from a state in which its form, and the forces which it exerted, were very different from those we now know. That such difference of form and power once existed is a necessary part of the doctrine of evolution.

*Lay Sermons, Addresses and Reviews*

Chapter XI (p. 242)

Macmillan & Co Ltd. London, England. 1874

## CATHEDRAL

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The Gothic cathedral is a blossoming in stone subdued by the insatiable demand of harmony in man. The mountain of granite blooms into an eternal flower with the lightness and delicate finish as well as the aerial proportions and perspective of vegetable beauty.

*Essays*

History (p. 18)

James Munroe & Co. Boston, Massachusetts, USA. 1841

## CAUSALITY

**Einstein, Albert** 1879–1955

German-born physicist

It is only in the quantum theory that Newton's differential method becomes inadequate, and indeed strict causality fails us. But the last word has not yet been said. May the spirit of Newton's method give us the power to restore unison between physical reality and the profoundest characteristic of Newton's teaching – strict causality.

*Nature*, March 26, 1927 (p. 467)

**Gell-Mann, Murray** 1929–

American physicist

Physical causality can be traced directly to the existence of a simple initial condition of the universe. But how does that initial condition enter into the theory?

*The Quark and the Jaguar: Adventures in the Simple and the Complex* (p. 216)

W.H. Freeman. New York, New York, USA. 1994

**Planck, Max** 1858–1947

German physicist

The law of causality is neither true nor false. It is rather a heuristic principle, a signpost – an in my opinion, our most valuable signpost – to help us find our bearings in a bewildering maze of occurrences, and to show us the direction in which scientific research must advance in order to achieve fertile results.

*Scientific Autobiography and Other Papers*

The Concept of Causality in Physics (p. 149)

Philosophical Library. New York, New York, USA. 1949

## CAUSATION

**Murchison, Roderick Impey** 1792–1871

English geologist

...we should greatly err, if we endeavored to assimilate the intensity of causation of all ancient nature with existing operations.

*Siluria: A History of the Oldest Fossiliferous Rocks and Their Foundations* (3rd edition)

Chapter XX (p. 527)

John Murray. London, England. 1859

**Russell, Bertrand Arthur William** 1872–1970

English philosopher, logician, and social reformer

All philosophers, of every school, imagine that causation is one of the fundamental axioms or postulates of science, yet, oddly enough, in advanced sciences such as gravitational astronomy, the word “cause” never occurs.... The reason why physics has ceased to look for causes is that, in fact, there are no such things. The law of causality, I believe, like much that passes muster among philosophers, is a relic of a bygone age, surviving, like the monarchy, only because it is erroneously supposed to do no harm.

In C.A. Fritz, Jr. (ed.)

*On the Philosophy of Science*

On the Notion of Cause (p. 163)

Bobbs-Merrill. Indianapolis, Indiana, USA. 1965

## CAUSE

**Aristotle** 384 BCE–322 BCE

Greek philosopher

It is evident, then...that all men seem to seek the causes named in the *Physics*, and that we cannot name any beyond these; but they seek these vaguely; and though in a sense they have all been described before, in a sense they have not been described at all. For the earliest philosophy is, on all subjects, like one who lisp, since it is young and in its beginnings.

In *Great Books of the Western World* (Volume 1)

*Metaphysics*

Book I, Chapter 10 (p. 511)

Encyclopaedia Britannica, Inc. Chicago, Illinois, USA. 1952

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

The art of discovering the causes of phenomena, or true hypotheses, is like the art of deciphering, in which an ingenious conjecture often greatly shortens the road.

Translated by Alfred Gideon Langley

*New Essays Concerning Human Understanding*

Book IV, Chapter XII (p. 526)

The Open Court Publishing Co. Chicago, Illinois, USA. 1916

**Metcalf, Samuel Lytler**

No biographical data available

Nor is it possible that men should avail themselves fully of the powers which are in nature, without knowing the cause of these powers.

*Caloric* (Volume 1)

Preface (p. xiii)

William Pickering. London, England. 1843

**Poincaré, Jules Henri** 1854–1912  
French mathematician and theoretical astronomer

If all the parts of the universe are interchained in a certain measure, any one phenomenon will not be the effect of a single cause, but the resultant of causes infinitely numerous; it is, one often says, the consequence of the state of the universe the moment before.

Translated by George Bruce Halsted

*The Value of Science*

Part I, Chapter II (p. 33)

The Science Press. New York, New York, USA. 1907

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

To speak of *the* cause of an event is therefore misleading. Any set of antecedents from which the event can theoretically be inferred by means of correlations might be called a cause of the event. But to speak of the cause is to imply a uniqueness which does not exist.

*Mysticism and Logic: And Other Essays*

Chapter VII (p. 136)

Longmans, Green & Co. London, England. 1919

**Shelley, Mary Wollstonecraft** 1797–1851  
English Romantic writer

I paused, examining and analysing all the minutiae of causation ...

*Frankenstein: Or, The Modern Prometheus*

Chapter IV (p. 70)

George Routledge & Sons. London, England. 1888

**Tyndall, John** 1820–93  
Irish-born English physicist

have no reason to believe that the sheep or the dog, or indeed any of the lower animals, feel an interest in the laws by which natural phenomena are regulated. A herd may be terrified by a thunderstorm; birds may go to roost, and cattle return to their stalls, during a solar eclipse; but neither birds nor cattle, as far as we know, ever think of inquiring into the causes of these things. It is otherwise with man.

*Fragments of Science*

Part One

A Lecture to School Masters (p. 362)

P.F. Collier & Son. New York, New York, USA. 1901

**von Liebig, Justus** 1803–73  
German organic chemist

If we do not succeed in discovering causes by our researches, we have no right to create them by the imagination.

In John Blyth (ed.)

*Familiar Letters on Chemistry*

Letter I (p. 17)

Walton & Maberly. London, England. 1859

**Whewell, William** 1794–1866  
English philosopher and historian

...in order to discover the principles on which the mechanical sciences truly rest, we must examine the nature and origin of our knowledge of Causes.

(Volume 1) (2nd edition)

Part I, Book II, Chapter XII (p. 165)

John W. Parker. London, England. 1847

## CAUSE AND EFFECT

**Akenside, Mark** 1721–70  
English poet and physician

Give me to learn each secret cause;  
Let number's figure motion's laws  
Revealed before me stand;  
These to great Nature's secret apply,  
And round the Globe, and through the sky,  
Disclose her working hand.

*The Poetical Works of Mark Akenside*

Hymn to Science in Works of the English Poets

Associated University Presses. Cranbury, New Jersey, USA. 1996

**Aquinas, St. Thomas** 1227?–74  
Dominican philosopher and theologian

The universal cause is one thing, a particular cause another. An effect can be haphazard with respect to the plan of the second, but not of the first. For an effect is not taken out of the scope of one particular cause save by another particular cause which prevents it, as when wood dowsed with water, will not catch fire. The first cause, however, cannot have a random effect in its own order, since all particular causes are comprehended in its causality. When an effect does escape from a system of particular causality, we speak of it as fortuitous or a chance happening...

*Summa Theologiae*

Part I, Question 22. God's Providence, Article 2, Is Everything Subject to Divine Providence?

McGraw-Hill Book Company, Inc. New York, New York, USA. 1975

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

Thus, all the action of men must necessarily be referred to seven causes: chance, nature, compulsion, habit, reason, anger, and desire.

*The Art of Rhetoric*

Book I, Chapter X

Harvard University Press. Cambridge, Massachusetts, USA. 1959

Night the Fifth  
Harvard University Press. Cambridge, Massachusetts, USA. 1964

**Atherton, Gertrude** 1857–1948  
American novelist

The law of cause and effect does not hide in the realm of the unexpected when intelligent beings go looking for it.  
*Senator North*  
Book II, XXI (p. 240)  
John Lane: The Bodley Head. New York, New York, USA. 1900

**Aurelius Antoninus, Marcus** 121–180  
Roman emperor

In the series of things those which follow are always aptly fitted to those which have gone before...  
In *Great Books of the Western World* (Volume 12)  
*The Meditations of Marcus Aurelius*  
Book IV, # 45 (p. 267)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### Author undetermined

I am not a heretic; I do believe in causality.  
Source undetermined

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

The end of our foundation is the knowledge of causes, and secret motions of things; and the enlarging of the bounds of human empire, to the effecting of all things possible.  
*New Atlantis* (p. 288)  
D. van Nostrand Company, Inc. New York, New York, USA. 1942

**Bergson, Henri** 1859–1941  
French philosopher

...the present contains nothing more than the past, and what is found in the effect was already in the cause.  
Translated by Arthur Mitchell  
*Creative Evolution*  
Chapter I (p. 17)  
The Modern Library. New York, New York, USA. 1944

**Bernard, Claude** 1813–78  
French physiologist

First causes are outside the realm of science; they forever escape us in the sciences of living as well as in those of inorganic bodies.  
Translated by Henry Copley Greene  
*An Introduction to the Study of Experimental Medicine*  
Part Two, Chapter I, Section iv (p. 66)  
Henry Schuman, Inc. New York, New York, USA. 1927

**Boole, George** 1815–64  
English mathematician

So to apprehend in all particular instances the relation of cause and effect, as to connect the two extremes in thought according to the order in which they are

connected in nature (for the *modus operandi* is, and must ever be, unknown to us), is the final object of science.

*An Investigation of the Law of Thought*  
Chapter XX (p. 320)  
Dover Publications, Inc. New York, New York, USA. 1951

**Burnet, Thomas** 1635–1715  
English cleric and scientist

There is nothing doth more awaken our thoughts or excite our minds to enquire into the causes of such things, than the actual view of them; as I have had experience myself when it was my fortune to cross the Alps and Apennine Mountains; for the sight of those wild, vast and indigested heaps of Stones and Earth, did so deeply strike my fancy, that it was not easier till I could give myself some tolerable account how that confusion came in Nature.  
*The Sacred Theory of the Earth* (2nd edition)  
Book I, Chapter XI (p. 110)  
Printed by R. Norton. London. 1691

**Chamberlin, Thomas Chrowder** 1843–1928  
American geologist

There is no nobler aspiration of the human intellect than desire to compass the cause of things. The disposition to find explanations and to develop theories is laudable in itself. It is only ill use that is reprehensible. The vitality of study quickly disappears when the object sought is a mere collection of dead unmeaning facts.  
The Method of Multiple Working Hypotheses  
*Science*, Volume 148, Number 3671, 7, 1965 (p. 755)

**Chuang Tzu** 4th or 3rd century BCE  
Taoist philosopher

Everything can be a “that”; everything can be a “this.” One man cannot see things as another sees them.... Therefore it is said “That” comes from “this” and “this” comes from “that” – which means “that” and “this” give birth to one another.  
Translated by Gia-Fu Feng and Jane English  
*Chuang-Tzu: Inner Chapters*  
Chapter Two (p. 29)  
Alfred A. Knopf. New York, New York, USA. 1974

*Essays: First Series*  
Compensation (p. 290)  
The Library of America. New York, New York, USA. 1983

Do not clutch at sensual sweetness until it is ripe on the slow tree of cause and effect.

*Ralph Waldo Emerson: Essays and Lectures*  
*Essays: First Series*  
 Prudence (p. 360)  
 The Library of America. New York, New York, USA. 1983

Cause and effect are two sides of one fact.

*Ralph Waldo Emerson: Essays and Lectures*  
*Essays: First Series*  
 Circles (p. 410)  
 The Library of America. New York, New York, USA. 1983

Shallow men believe in luck, believe in circumstances:  
 It was somebody's name, or he happened to be there at  
 the time, or, it was so then, and another day it would have  
 been otherwise. Strong men believe in cause and effect.

*The Conduct of Life*  
 Worship (p. 173)  
 Houghton Mifflin Co. Boston, Massachusetts, USA. 1894

**Empiricus, Sextus** fl. Second century AD  
 Medical doctor and teacher

...if there were no causes, everything would come from  
 everything, and by chance. For example, perhaps horses  
 would come from mice, and elephants from ants; and in  
 Egyptian Thebes there would have been rainstorms and  
 snow and the south would have no rain, if there had not  
 been a cause on account of which the south is stormy in  
 winter, and the east is dry.

Translated by Benson Mates  
*The Skeptic Way: Sextus Empiricus's Outlines of Pyrrhonism*  
 Sextus Empiricus: Outlines of Pyrrhonism  
 Book III, Section 5 (p. 176)  
 Oxford University Press, Inc. New York, New York, USA. 1996

**Fourier, (Jean Baptiste-) Joseph** 1768–1830  
 French mathematician and physicist

Primary causes are unknown to us; but are subject to  
 simple and constant laws, which may be discovered by  
 observation, the study of them being the object of natural  
 philosophy.

In *Great Books of the Western World* (Volume 43)  
*The Analytical Theory of Heat*  
 Preliminary Discourse (p. 169)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

 Calvinism (p. 12)  
 Charles Scribner's Sons. New York, New York, USA. 1890

**Heise, David R.** 1937–  
 American sociologist and mathematician

Causation depends on an extraordinary turning of reality  
 at a particular instant such that one event transmutes into  
 another.

*Causal Analysis* (p. 6)  
 John Wiley & Sons, Inc. New York, New York, USA. 1975

**Heisenberg, Werner Karl** 1901–76  
 German physicist and philosopher

The chain of cause and effect could be quantitatively  
 verified only if the whole universe were considered as a  
 single system – but then physics has vanished, and only a  
 mathematical scheme remains. The partition of the world  
 into observing and observed system prevents a sharp  
 formulation of the law of cause and effect.

*The Physical Principles of the Quantum Theory*  
 Translated by Carl Eckhart and Frank C. Hoyt (p. 58)  
 The University of Chicago Press. Chicago, Illinois, USA. 1930

**Holbach, Paul Henri Thiry** 1723–89  
 French philosopher

...it is thus that in the universe everything is connected;  
 it is itself but an immense chain of causes and effects,  
 which flow without ceasing one from the other.

Translated by H.D. Robinson  
*The System of Nature, Or, Laws of the Moral and Physical World*  
 Chapter III (p. 31)  
 J.P. Mendum. Boston, Massachusetts, USA. 1868

**Holmes, Oliver Wendell** 1809–94  
 American physician, poet, and humorist

But he who, blind to universal laws,  
 Sees but effects, unconscious of the causes, –  
*The Complete Poetical Works of Oliver Wendell Holmes*  
 A Metrical Essay  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

**Hume, David** 1711–76  
 Scottish philosopher and historian

Here is a billiard ball lying on the table, and another  
 ball moving toward it with rapidity. They strike; the  
 ball which was formerly at rest now acquires a motion.  
 This is as perfect an instance of the relations of cause  
 and effect as any which we know either by sensation or  
 reflection.

In *Great Books of the Western World* (Volume 35)  
*An Enquiry Concerning Human Understanding*  
 An Abstract of a Treatise of Human Nature (pp. 186–187)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In a word, then, every effect is a distinct event from its  
 cause.

In *Great Books of the Western World* (Volume 35)  
*An Enquiry Concerning Human Understanding*  
 Section IV, Part I (p. 460)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

From causes which appear similar we expect simi-  
 lar effects. This is the sum of all our experimental  
 conclusions.

In *Great Books of the Western World* (Volume 35)  
*An Enquiry Concerning Human Understanding*  
 Section IV, Part II (p. 462)  
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It is universally allowed that nothing exists without a cause of its existence, and that chance, when strictly examined, is a mere negative word, and means not any real power which has anywhere a being in nature.

In *Great Books of the Western World* (Volume 35)

*An Enquiry Concerning Human Understanding*

Section VIII, Part I (p. 478)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

All effects follow not with like certainty from their supposed causes.

In *Great Books of the Western World* (Volume 35)

*An Enquiry Concerning Human Understanding*

Section X (p. 489)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Huxley, Thomas Henry** 1825–95

English biologist

All that can be ascertained concerning the structure, succession of conditions, actions, and position in space of the earth, is the matter of fact of its natural history. But, as in biology, there remains the matter of reasoning from these facts to their causes, which is just as much science as the other, and indeed more; and this constitutes geological etiology.

*Collected Essays* (Volume 8)

*Discourses, Biological and Geological*

Geological Reform (p. 318)

Macmillan & Company Ltd. London, England. 1904

### **Jackson, Hughlings** 1835–1911

English neurologist

The study of the causes of things must be preceded by the study of things caused.

In W.I.B. Beveridge

*The Art of Scientific Investigation*

Chapter One (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

American philosopher and psychologist

With earth's first clay they did the last man knead,  
And there of the last harvest sowed the seed.

And the first morning of creation wrote

What the last dawn of reckoning shall read.

The Dilemma of Determinism

*Unitarian Review and Religious Magazine*, Volume XXII, Number 3, September, 1884

As in the night all cats are gray, so in the darkness of metaphysical criticism all causes are obscure.

*The Principles of Psychology* (Volume 1)

Chapter V (p. 140)

Harvard University Press. Cambridge, Massachusetts, US. 1981

### **Kant, Immanuel** 1724–1804

German philosopher

Pure mathematics can never deal with the possibility, that is to say, with the possibility of an intuition answering to

the conceptions of the things. Hence it cannot touch the question of cause and effect, and consequently, all the finality there observed must always be regarded simply as formal, and never as a physical end.

In Ernst Behler (ed.)

*Philosophical Writings*

*The Critique of Judgment*

Critique of Teleological Judgment, p. 63, fn

Continuum. New York, New York, USA. 1986

### **Kepler, Johannes** 1571–1630

German astronomer

Some physical causes are recognized by all; others, by only very few people; indeed, many things exist naturally, but from causes hitherto known to no man. And of the causes, which we know, there are some whose kind and nature we all usually understand, and others whose kind or indirect cause are understood by very few people, or by nobody.

*Fundamentis. Astrologiae Certioribus*

Thesis IV

Prague, Czechoslovakia. 1602

### **Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

We ought to regard the present state of the universe as the effect of its anterior state and as the cause of the one that is to follow.

*A Philosophical Essay on Probabilities*

Chapter II (p. 4)

Dover Publications, Inc. New York, New York, USA. 1951

An intelligence which could comprehend all the forces by which nature is animated and the respective situation of the beings who compose it – an intelligence sufficiently vast to submit these data to analysis – it would embrace in the same formula the movements of the greatest bodies of the universe and those of the lightest atoms; for it, nothing would be uncertain and the future, as the past, would be present to its eyes. The human mind offers, in the perfection which it has been able to give to astronomy, a feeble idea of this intelligence.

*A Philosophical Essay on Probabilities*

Chapter II (p. 4)

Dover Publications, Inc. New York, New York, USA. 1951

### **Lee, Hannah Farnham** 1780–1865

American writer

Causes are often disproportionate to effects.

*The Log Cabin, or, the World Before You*

Part the Second

Appleton. Philadelphia, Pennsylvania, USA. 1844

Aphorisms (p. 62)

Jonathan Cape. London, England. 1969

**Lyell, Sir Charles** 1797–1875

English geologist

When we are unable to explain the monuments of past changes, it is always more probable that the difference arises from our ignorance of all the existing agents, or all their possible effects in an indefinite lapse of time, than that some cause was formerly in operation which has ceased to act...

*Principles of Geology* (Volume 1)

Chapter IX (pp. 164–165)

John Murray. London, England. 1830

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

In speaking of cause and effect, we arbitrarily give relief to those elements to whose connection we have to attend in the reproduction of a fact in the respect in which it is important to us. There is no cause nor effect in nature; nature has but an individual existence; nature simply is. Recurrences of like cases in which A is always connected with B, that is, like results under like circumstances, that is again, the essence of the connection of cause and effect, exist but in the abstraction which we perform for the purpose of mentally reproducing the facts.

**Thompson, Francis** 1859–1907  
English writer

All things by immortal power,  
Near or far  
Hiddenly  
To each other linked are,  
That thou canst not stir a flower  
Without troubling of a star.

*Complete Poetical Works of Francis Thompson*  
The Mistress of Vision, Stanza XXII  
Boni & Liveright, Inc., Publishers. New York, New York, USA. 1923

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Our last deed, like the young of the land crab, winds its way to the sea of cause and effect as soon as born, and makes a drop there to eternity.

*Journal (Volume 1): 1837–1844*  
March 14, 1838 (p. 38)  
Princeton University Press. Princeton, New Jersey, USA. 1981

**Tolstoy, Leo** 1828–1910  
Russian writer

Man’s mind cannot grasp the causes of events in their completeness, but the desire to find those causes is implanted in man’s soul. And without considering the multiplicity and complexity of the conditions any one of which taken separately may seem to be the cause, he snatches at the first approximation to a cause that seems to him intelligible and says: “This is the cause!”

In *Great Books of the Western World* (Volume 51)  
*War and Peace*  
Book Thirteen, Chapter I (p. 563)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Tyndall, John** 1820–93  
Irish-born English physicist

Taking our facts from Nature, we transfer them to the domain of thought: look at them, compare them, observe their mutual relations and connections, and bringing them ever clearer before the mental eye, finally alight upon the cause which unites them. This is the last act of the mind, in this centripetal direction in its progress from the multiplicity of facts to the central cause on which they depend. But, having guessed the cause, we are not yet contented. We set out from the center and travel in the other direction. If the guess be true, certain consequences must follow from it, and we appeal to the law and testimony of experiment whether the thing is so. Thus is the circuit of thought completed from without inward, from multiplicity to unity, and from within outward, from unity to multiplicity.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 1)  
Chapter 11 (p. 282)  
D. Appleton & Co. New York, New York, USA. 1896

Chapter I (p. 18)  
Harper and Row, Publishers. New York, New York, USA. 1965

**CAVERN****Harrington, Thomas**

No biographical data available

If we could descend into the bowels of the Earth, we should there see dark chambers and apartments, strange subterraneous passages, holes and caverns, some filled with smoke and fire, some with water, and some with vapour and mouldy air...

*Science Improved, or The Theory of the Universe*

Section III (p. 18)

Printed for the Author. London, England. 1774

**CAVITY****Davies, Robertson** 1913–95

Canadian novelist

I went to my dentist today in a high state of apprehension. None of my teeth were hurting me, but I know from bitter experience that a tooth of mine can have a cavity as big as the Grotto at Lourdes before it informs me of the fact.

*The Table Talk of Samuel Marchbanks* (p. 202)

Clarke, Irwin. Toronto, Ontario, Canada. 1949

**Walis, Claudia**

No biographical data available

Tooth decay was a perennial national problem that meant a mouthful of silver for patients, and for dentists a pocketful of gold.

Today's Dentistry: A New Drill

*Time*, September 9, 1985 (p. 73)

**CELESTIAL****Aristotle** 384 BCE–322 BCE

Greek philosopher

The glory, doubtless, of the heavenly bodies fills us with more delight than the contemplation of these lowly things, but the heavens are high, and far off, and the knowledge of celestial things that our senses give us, is scanty and dim.

In Edith Hamilton

*The Greek Ways*

Chapter II (p. 32)

W.W. Norton & Company, Inc. New York, New York, USA. 1993

**Smyth, William Henry** 1788–1865

English admiral and scientific writer

Such study [of celestial objects] constitutes a sort of scrutiny into futurity, and truly elevates the mind above the mundane system. We cannot see, without peculiar

emotion, that the great law of gravitation, so recently acknowledged and demonstrated in our own system, is decidedly extended throughout the vast heavens; and it is palpable, that all the perceptible universe is amenable to the operation of time and space, motion and force, in similar relations with our own, and equally open to mathematical disquisition.

*A Cycle of Celestial Objects, Observed, Reduced and Discussed* (p. 680)

At The Clarendon Press. London, England. 1881

**Spinrad, Hyron** 1934–

American astronomer

It is a very human tendency to climb a celestial mountain. So it stands for any race, including that of finding individual objects at greater and greater distances ...

The Most Distant Galaxies

*Astrophysics Update*, August 22, 2003 (p. 6)

**CELESTIAL BODY****Burroughs, John** 1837–1921

American naturalist and essayist

An infinity of celestial bodies ruled by rigidly mechanical laws, going their inevitable rounds at the risk of cosmic collisions and disruptions in which suns and systems are at times shipwrecked, unutterably sublime and awe-inspiring, but lifeless, mindless, unhuman.

*Under The Apple Tree*

The Primal Mind (p. 126)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Morehouse, George Wilkinson** 1840–?

American naturalist

They [celestial bodies] are scattered as lavishly and wastefully as are pollen grains, or the grains of sand on the shores of the ocean. Nature, with infinite resources, can well afford to be prodigal, even of worlds.

*The Wilderness of Worlds*

Chapter IV (p. 21)

Peter Eckler, Publisher. New York, New York, USA. 1898

**CELESTIAL MECHANICS****Lowell, Percival** 1855–1916

American astronomer

Ever since celestial mechanics in the skillful hands of Leverrier and Adams led to the world-amazed discovery of *Neptune* a belief has existed begotten of that success that still other planets lay beyond, only waiting to be found.

*Memoirs* (Volume 1)

A Trans-Neptunian Planet (p. 3)

Thomas P. Nichols & Son. Lynn, Massachusetts, USA. 1915

## CELESTIAL MOTION

**Lucretius** ca. 99 BCE–55 BCE  
Roman poet

...we must well grasp the principle of things above, the principle by which the courses of the sun and moon go on, the force by which everything on earth proceeds.

In *Great Books of the Western World* (Volume 12)

*Lucretius: On the Nature of Things*

Book One, l. 124–127 (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Milton, John** 1608–74  
English poet

That day, as other solemn dayes, they spent  
In song and dance about the sacred Hill,  
Mystical dance, which yonder starrie Sphere  
Of Planets and of fixt in all her Wheeles  
Resembles nearest, mazes intricate,  
Eccentric, intervovl'd, yet regular  
Then most, when most irregular they seem:  
And in their motions harmonic Divine  
So smooths her charming tones, that God's own ear  
Listens delighted.

In *Great Books of the Western World* (Volume 32)

*Paradise Lost*

Book V, l. 618–627

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## CELESTIAL SOUND

**Radcliffe, Ann Ward** 1764–1823  
English author

...celestial sounds have sometimes been heard on earth.

*The Mysteries of Udolpho*

Chapter XXVI (p. 270)

Derby & Jackson. New York, New York, USA. 1859

## CENTRAL LIMIT THEOREM

**Massey, William A.**  
No biographical data available

When you are listening to corn pop, are you hearing the Central Limit Theorem?

Correspondence with J. Laurie Snell

*Chance News*, January 9, 1996

## CEREMONY

**Faraday, Michael** 1791–1867  
English physicist and chemist

Ceremony is useless in many cases, and sometimes impertinent; now between you and me it may not be the last, yet I conceive it is the first: therefore I have banished

it at this time.

In Bence Jones

*The Life and Letters of Faraday* (Volume I)

Chapter I (p. 16)

J.B. Lippincott & Co. Philadelphia, Pennsylvania, USA. 1870

## CERTAINTY

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

...if a man will begin with certainties he shall end in doubts, but if he will be content to begin with doubts, he shall end in certainties.

In *Great Books of the Western World* (Volume 30)

*The Advancement of Learning*

First Book, Chapter V, Section 8 (p. 16)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Baggott, Jim**  
Science writer

It is in the nature of theoretical science that there can be no such thing as certainty. A theory is only “true” for as long as the majority of the scientific community maintain the view that the theory is the one best able to explain the observations.

*The Meaning of Quantum Theory*

Chapter 4 (p. 157)

Oxford University Press, Inc. Oxford, England. 1992

**Belloc, Hilaire** 1870–1953  
French-born poet and historian

Oh! let us never doubt  
What nobody is sure about!

*Complete Verse*

The Microbe

Gerald Duckworth. London, England. 1970

**Butler, Samuel** 1612–80  
English novelist, essayist, and critic

There is one thing certain, namely that we can have nothing certain; and therefore it is not certain that we can have nothing certain.

*Samuel Butler's Notebooks* (p. 195)

Jonathan Cape. London, England. 1951

**Camus, Albert** 1913–60  
Algerian-French novelist, essayist, and playwright

...we're not sure, we can't be sure. Otherwise, there would be a solution; at least one could get oneself taken seriously.

*The Fall* (p. 74)

Alfred A. Knopf. New York, New York, USA. 1958

**da Vinci, Leonardo** 1452–1519  
Italian High Renaissance painter and inventor

There is no certainty where one can neither apply any of the mathematical sciences nor any of those which are based upon the mathematical sciences.

In Edward McCurdy

*Leonardo da Vinci's Note-books*

Book I: Life (p. 54)

Duckworth & Co. London, England. 1906

**Dampier-Whetham, William** 1867–1952

English science writer

Sometimes the probability in favor of a generalization is enormous, but the infinite probability of certainty is never reached.

*Science and the Human Mind*

Chapter X

Longmans, Green & Company. New York, New York, USA. 1912

**Froude, James Anthony** 1818–94

English historian and biographer

It was not a PERHAPS; it was a certainty.

*Short Studies on Great Subjects* (Volume 1)

Times of Erasmus, Desiderius and Luther, Lecture I (p. 52)

Longmans, Green & Company. London, England. 1879

**Galsworthy, John** 1867–1933

English novelist and dramatist

If one thing is more certain than another – which is extremely doubtful –

*End of the Chapter*

Maid in Waiting, Chapter 13 (p. 108)

Charles Scribner's Sons. New York, New York, USA. 1937

**Hesiod** ca. 700 BCE

Greek pastoral poet

He is a fool who leaves certainties for uncertainties.

*Fragments*

Frag 18, Quoted by Plutarch, *Moralia*, Section 505D (p. 278)

**Hoffer, Eric** 1902–83

American longshoreman and philosopher

We can be absolutely certain only about things we do not understand.

*The True Believer*

Part 3, Chapter XII, Section 57 (p. 79)

Harper & Row, Publishers, New York 1951

**Holmes, Jr., Oliver Wendell** 1841–1935

American jurist

But certainty generally is illusion, and repose is not the destiny of man.

*The Path of the Law*

*Harvard Law Review*, Volume 10, Number 7, February 25, 1897 (p. 466)

Certitude is not the test of certainty. We have been cocksure of many things that were not so.

*Natural Law*

*Harvard Law Review*, Volume 32, Number 1, November, 1918

Heads I win, Tails you lose.

*The Professor at the Breakfast-Table*

Chapter VIII (p. 252)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

**Iyer, S. Sandaram**

No biographical data available

Man has two means of attaining certainty – mathematics and common sense.

*Thoughts on the Metaphysics of Theosophy*

*The Paradoxes of the Highest Science*

Synthetic Recapulation (p. 91)

The Calcutta Central Press. Calcutta, India. 1883

Outside complete, universal, and absolute certainty there are only beliefs or opinions.

*Thoughts on the Metaphysics of Theosophy*

Synthetic Recapulation (p. 91)

The Calcutta Central Press. Calcutta, India. 1883

**Jung, Carl G.** 1875–1961

Swiss psychologist and psychiatrist

Anyone who takes the sure road is as good as dead.

*Memories, Dreams, Reflections*

Chapter X (p. 297)

Vintage Books. New York, New York, USA. 1970

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

Yet I shall not deny that the number of phenomena which are happily explained by a given hypothesis may be so great that it may be taken as morally certain.

*Philosophical Papers and Letters* (Volume 1)

On the Elements of Natural Science (p. 347)

The University of Chicago Press. Chicago, Illinois, USA. 1956

**Locke, John** 1632–1704

English philosopher and political theorist

...the highest probability amounts not to certainty, without which there can be no true knowledge.

In *Great Books of the Western World* (Volume 35)

*An Essay Concerning Human Understanding*

Book IV, Chapter III, Section 14 (p. 316)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Mansfield, Lord, William Murray** 1705–93

Chief justice of England

As mathematical and absolute certainty is seldom to be attained in human affairs, reasoning and public utility require that judges and all mankind in forming their opinion of the truth of facts should be regulated by the superior number of probabilities on the one side or the other.

In Francis Wellman

*The Art of Cross-Examination* (p. 168)

The Macmillan Company. New York, New York, USA. 1923

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

With the idol of certainty (including that of degrees of imperfect certainty or probability) there falls one of the

defences of obscurantism which bar the way of scientific advance. For the worship of this idol hampers not only the boldness of our questions, but also the rigor and the integrity of our tests. The wrong view of science betrays itself in the craving to be right; for it is not his possession of knowledge, of irrefutable truth, that makes the man of science, but his persistent and recklessly critical quest for truth.

*The Logic of Scientific Discovery*

Part II, Chapter X, Section 85 (pp. 280–281)

Basic Books, Inc. New York, New York, USA. 1959

### **Sagan, Carl** 1934–96

American astronomer and science writer

Humans may crave absolute certainty; they may aspire to it; they may pretend, as partisans of certain religions do, to have attained it. But the history of science – by far the most successful claim to knowledge accessible to humans – teaches that the most we can hope for is successive improvement in our understanding, learning from our mistakes, an asymptotic approach to the Universe, but with the proviso that absolute certainty will always elude us. We will always be mired in error. The most each generation can hope for is to reduce the error bars a little, and to add to the body of data to which error bars apply.

*The Demon-Haunted World: Science as a Candle in the Dark*

Chapter 2 (p. 28)

Random House, Inc. New York, New York, USA. 1995

### **Shakespeare, William** 1564–1616

English poet, playwright, and actor

Not a resemblance, but a certainty.

In *Great Books of the Western World* (Volume 27)

*The Plays and Sonnets of William Shakespeare* (Volume 2)

*Measure for Measure*

Act IV, Scene ii, l. 203

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

### **Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

I must have certainty. Give it to me; or I will kill you when next I catch you asleep.

*Back to Methuselah*

Part I, Act I (p. 15)

Constable & Company Ltd. London, England. 1921

### **Walker, Marshall John**

American physicist

All predictions are statistical, but some predictions have such a high probability that one tends to regard them as certain.

*The Nature of Scientific Thought*

Chapter VI (p. 70)

Prentice-Hall, Inc., Englewood Cliffs, New Jersey, USA. 1963

## CHAIN REACTION

### **Compton, Arthur H.** 1892–1962

American physicist

The Italian Navigator has reached the New World.

In Laura Fermi

*Atoms in the Family*

Chapter 19 (p. 198)

University of Chicago Press. Chicago, Illinois, USA. 1954

### **Fermi, Enrico** 1901–54

Italian-born American physicist

Pull it out another foot.... Now the pile will chain-react.

In Laura Fermi

*Atoms in the Family*

Chapter 19 (p. 197)

University of Chicago Press. Chicago, Illinois, USA. 1954

### **Woods, Leona**

When do we become scared?

In Laura Fermi

*Atoms in the Family*

Chapter 19 (p. 197)

University of Chicago Press. Chicago, Illinois, USA. 1954

## CHANCE

### **Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

A tree is known by its fruits – and the fruits of chance are incoherence, incompleteness, unsteadiness, the stammering utterance of blind, unreasoning force.

*Geological Structures*

Chapter I (p. 21)

Ticknor & Fields. Boston, Massachusetts, USA. 1866

### **Ambler, Eric** 1909–98

English novelist

A Frenchman named Chamfort, who should have known better, once said that chance was a nickname for Providence.

*A Coffin for Dimitrios*

Chapter I (p. 1)

Sun Dial Press. New York, New York, USA. 1939

### **Aquinas, St. Thomas** 1227?–74

Dominican philosopher and theologian

In all such beings chance occurs, not in the sense that everything about them occurs by chance, but that in each of them there is room for chance and this very fact is a sign that they are subject to someone's rule.

*Summa Theologiae*

Part I, Question 103, God's Government Taken as a Whole, Article 5,

Whether All Things Are Subject to God's Government

**Arbuthnot, John** 1667–1735  
Scottish mathematician and physician

To understand the Theory of *Chance* thoroughly, requires a great Knowledge of Numbers, and a pretty competent on of *Algebra*.

*An Essay on the Usefulness of Mathematical Learning* (3rd edition) (p. 20)  
Printed for J. Barrett  
London, England. 1745

**Aron, Raymond** 1905–83  
French sociologist and historian

...rational action is merely a question of calculating the chances.

*The Opium of the Intellectuals*  
Chapter VI (p. 165)  
Secker & Warburg. London, England. 1957

**Astaire, Fred** 1899–1955  
American dancer, actor, and singer

Chance is the fool's name for fate.  
*The Gay Divorcee*  
Film (1934)

### Author undetermined

*Omnium versatur urna serius ocius sors exitura.*

Age at death is a chance variable.  
Source undetermined

No more chance than a snowball in Hell.  
Source undetermined

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

Even the effects already discovered are due to chance and experiment, rather than to the sciences; for our present sciences are nothing more than peculiar arrangements of matters already discovered, and not methods for discovery or plans for new operations.

In *Great Books of the Western World* (Volume 30)  
*Novum Organum*  
First Book, Aphorism 8 (p. 107)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Men are further beholding...generally to chance, or anything else, than to logic, for the invention or arts and sciences.

In *Great Books of the Western World* (Volume 30)  
*The Advancement of Learning*  
Second Book, Chapter XIII, Section 2 (p. 57)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Games of chance are probably as old as the human desire to get something for nothing; but their mathematical

implications were appreciated only after Fermat and Pascal in 1654 reduced chance to law.

*The Development of Mathematics* (p. 154)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

**Blake, William** 1757–1827  
English poet, painter, and engraver

Every night and every morn  
Some to misery are born;  
Every morn and every night  
Some are born to sweet delight.

*The Complete Poetry and Prose of William Blake*  
Auguries of Innocence, l. 119–121  
University of California Press. Berkeley, California, USA. 1982

**Boethius, Anicius Manlius Severinus** ca. 475–524  
Roman philosopher and statesman

Then said she, “Think you that this universe is guided only at random and by mere chance? or think you there is any rule of reason constituted in it?”

*The Consolation of Philosophy* (Trans. W.V. Cooper; 1902)  
Book I (p. 22)  
J.M. Dent & Sons Ltd. London, England. 1902

Chance, too which seems to rush along with slack reins, is bridled and governed by law

*The Consolation of Philosophy*  
Book V, Poem I (p. 93)  
Dover Publications. Mineola, New York, USA. 2002

**Borel, Félix Edouard Justin Emile** 1871–1956  
French mathematician

Can there be laws of chance? The answer, it would seem should be negative, since chance is in fact defined as the characteristic of the phenomena which follow no law, phenomena whose causes are too complex to permit prediction.

Translated by Maurice Baudin  
*Probabilities and Life*  
Introduction (p. 1)  
Dover Publications. New York, New York, USA. 1962

**Born, Max** 1882–1970  
German-born English physicist

...the conception of chance enters into the very first steps of scientific activity in virtue of the fact that no observation is absolutely correct. I think chance is a more fundamental conception than causality; for whether in a concrete case, a cause–effect relationship holds or not can only be judged by applying the laws of chance to the observation.

*Natural Philosophy of Cause and Chance*  
Chapter VI (p. 47)  
At The Clarendon Press. Oxford, England. 1949

**Bridgman, Percy Williams** 1882–1961  
American physicist

Chance has no meaning except in the setting of order.

*The Nature of Physical Theory*

Chapter IX (p. 123)

Princeton University Press. Princeton, New Jersey, USA. 1936

**Buchner, Ludwig** 1824–99

German physician and philosopher

What we still designate as chance, merely depends on a concatenation of circumstances, the internal connection, and the final causes of which we have as yet been unable to unravel.

*Force and Matter*

The Fitness of Things in Nature (p. 179)

Truth Seeker. New York, New York, USA. 1950

**Buckle, Henry Thomas** 1821–62

English historian

...in the ordinary march of society, an increasing perception of the regularity of nature destroys the doctrine of Chance, and replaces it by that of Necessary Connexion.

*History of Civilization* (Volume 1)

Chapter I (p. 7)

D. Appleton & Co. New York, New York, USA. 1866

**Burroughs, John** 1837–1921

American naturalist and essayist

The collisions and disruptions that take place in the vast depths of sidereal space show that chance takes a hand in the game even there, though the universal law of gravitation is not annulled.

*Under The Apple Tree*

Life and Chance (p. 243)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

There are no rational checks in Nature – all is left to chance; and the scheme works because Nature has all power and all time. There is no other, no rival. The All can go its own way; to play the game, to win and lose – the stakes are Nature’s in any event.

*Under The Apple Tree*

Life and Chance (p. 288)

Houghton Mifflin Co. Boston, Massachusetts, USA. 1916

**Butler, Samuel** 1612–80

English novelist, essayist, and critic

It must always be remembered that man’s body is what it is through having been molded into its present shape by the chances and changes of an immense time...

*Erewhon; and Erewhon Revisited*

Chapter XXIV (p. 242)

The Modern Library. New York, New York, USA. 1955

We see but a part, and being thus unable to generalize human conduct, except very roughly, we deny that it is subject to any fixed laws at all, and ascribe much both of a man’s character and actions to chance, or luck, or fortune...

*Erewhon and Erewhon Revisited*

Chapter XXV (p. 246)

The Modern Library. New York, New York, USA. 1955

Quoth She: I’ve heard old cunning Stagers

Say, Fools for Arguments use wagers.”

*The Poetical Works of Samuel Butler* (Volume 1)

The Second Part, Canto I, l. 298–299

Bell & Daldy. London, England. 1835

**Chamfort, Sebastien Roch** 1741–94

French writer

*Quelqu’un disait que la providence strat le nom de bapteme du hasard....* Chance is a nickname of Providence.

*Maximes et Pensées*

I, b. 62

Le Livre de Poche. Paris, France. 1970

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English writer

“Proof!” he cried. Good God! the man is looking for proof! Why, of course, the chances are twenty to one that it has nothing to do with them. But what else can we do? Don’t you see we must either follow one wild possibility or else go home to bed.

*Favorite Father Brown Stories*

The Blue Cross (p. 8)

Dover Publications. New York, New York, USA. 1993

**Cicero (Marcus Tullius Cicero)** 106 BCE–43 BCE

Roman orator, politician, and philosopher

...but things that happen by chance cannot be certain.

Translated by William Armistead Falconer

*Cicero: De Senectute, De Amicitia, De Divinatione*

De Divinatione, II, IX (p. 397)

Harvard University Press. Cambridge, Massachusetts, USA. 1938

**Claude, Albert** 1898–1983

Belgian-American cytologist

Of course, we know the laws of trial and error, of large numbers and probabilities. We know that these laws are part of the mathematical and mechanical fabric of the universe, and that they are also at play in biological processes. But, in the name of the experimental method and out of our poor knowledge, are we really entitled to claim that everything happens by chance, to the exclusion of all other possibilities?

*Nobel Lectures, Physiology or Medicine 1971–1980*

Nobel lecture for award received in 1974

The Coming Age of the Cell

World Scientific Publishing Company. Singapore. 1992

**Colton, Charles Caleb** 1780–1832

English sportsman and writer

As in the game of billiards, the balls are constantly producing effects from mere chance, which the most skillful player could neither execute nor foresee, but which, when they do happen, serve mainly to teach him how much he has still to learn...

*Lacon; or, Many Things in a Few Words* (p. 345)

William Gowans. New York, New York, USA. 1849

**Comfort, Alex** 1920–2000  
English gerontologist and author

One has to be extraordinarily lucky, in our society, to meet one nymphomaniac in a lifetime.

*Darwin and the Naked Lady: Discursive Essays on Biology and Art*  
The Rape of Andromeda (p. 87)  
G. Braziller. New York, New York, USA. 1961

**Conrad, Joseph** 1857–1924  
Polish-born English novelist

And if you ask me how, wherefore, for what reason? I will answer you: Why, by chance! By the merest chance, as things do happen, lucky and unlucky, terrible or tender, important or unimportant; and even things which are neither, things so completely neutral in character that you would wonder why they do happen at all if you didn't know that they, too, carry in their insignificance the seeds of further incalculable chances.

*Chance: A Tale in Two Parts*  
Chapter IV (pp. 99–100)  
Doubleday, Page & Company. New York, New York, USA. 1924

.... Chance, whose ally is Time that cannot be hurried, and whose enemy is Death, that will not wait.

*Lord Jim*  
Chapter XXXIV (p. 278)  
Rinehart & Company, Inc. New York, New York, USA. 1957

**Cowper, William** 1731–1800  
English poet

A fool must now and then be right, by chance.

*The Poetical Works of William Cowper*  
Conversation, l. 96  
John W. Lovell Company. New York, New York, USA. No date

**Crick, Francis Harry Compton** 1916–2004  
English biochemist

When times get tough, true novelty is needed – novelty whose important features cannot be preplanned – and for this we must rely on chance. Chance is the only source of true novelty.

*Life Itself: Its Origin and Nature*  
Chapter 4 (p. 58)  
Simon & Schuster. New York, New York, USA. 1981

**da Costa, J. Chalmers** 1863–1933  
American physician

Even in the tangled threads of what we call “Chance,” there is order, and there was law in the tangling. We don't happen to see the order and know the law, but both are there.

*The Trials and Triumphs of the Surgeon*  
Stepping Stones and Stumbling Blocks (p. 235)  
Dorrance & Company. Philadelphia, Pennsylvania, USA. 1944

**Dante, Alighieri** 1265–1321  
Italian poet and writer

When the game of hazard is broken up, he who loses remains sorrowful...

*In Great Books of the Western World* (Volume 21)  
*The Divine Comedy of Dante Alighieri*  
Purgatory, Canto VI, l. 1–2  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Darwin, Charles Galton** 1809–82  
English naturalist

I cannot anyhow be contented to view this wonderful universe, and especially the nature of man, and to conclude that everything is the result of brute force. I am inclined to look at everything as resulting from designed laws, with the details, whether good or bad, left to the working out of what we may call chance.

In Francis Darwin  
*The Life and Letters of Charles Darwin* (Volume 2)  
Darwin to Asa Gray, May 22, 1860 (p. 105)  
D. Appleton & Co. New York, New York, USA. 1887

**Darwin, Charles Robert** 1809–82  
English naturalist

When we look at the plants and bushes clothing an entangled bank, we are tempted to attribute their proportional numbers and kinds to what we call chance. But how false a view this is!

*In Great Books of the Western World* (Volume 49)  
*The Origin of Species by Means of Natural Selection*  
Chapter III (p. 37)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I am inclined to look at everything as resulting from designed laws, with the details, whether good or bad, left to the working out of what we may call chance.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 2)  
C. Darwin to Asa Gray, May 22nd [1860] (p. 105)  
D. Appleton & Company. New York, New York, USA. 1896

I cannot think that the world as we see it is the result of chance; and yet I cannot look at each separate thing as the result of Design.... I am, and shall ever remain, in a hopeless muddle.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 2)  
Darwin to Gray, 26 November, 1860 (p. 146)  
D. Appleton & Company. New York, New York, USA. 1896

**de Moivre, Abraham** 1667–1754  
French-born mathematician

...some of the Problems about Chance having a great appearance of Simplicity, the Mind is easily drawn into a belief, that their Solution may be attained by the meer Strength of natural good Sense; Which generally providing otherwise and the Mistakes occasioned thereby being not unfrequent. 'Tis presumed that a Book of this Kind, which teaches to distinguish Truth from what seems nearly to resemble it, will be looked upon as a help to good reasoning.

*The Doctrine of Chances*  
Preface (p. iii)  
Printed for W. Pearson. London, England. 1718

And thus in all cases it will be found, that although Chance produces irregularities, still the Odds will be infinitely great, that in process of Time, those Irregularities will bear no proportion to the recurrency of that Order which naturally results from Original Design.

*The Doctrine of Chances: or, A Method of Calculating the Probabilities of Events in Play* (3rd edition)

A Method of Approximating the Sum of the Terms of the Binomial... (p. 251)

Printed for Millar. London, England. 1756

...there are Writers, of a Class indeed very different from that of James Bernoulli, who insinuate as if the Doctrine of Probabilities could have no place in any serious Enquiry; and that studies of this kind, trivial and easy as they be, rather disqualify a man for reasoning on every other subject. Let the Reader chuse.

*The Doctrine of Chances: or, A Method of Calculating the Probabilities of Events in Play* (3rd edition)

A Method of Approximating the Sum of the Terms of the Binomial... (p. 254)

Printed for Millar. London, England. 1756

**de Morgan, Augustus** 1806–71

English mathematician and logician

Montucla remarked, that if any subject might be expected to baffle the mathematician, it would be *chance*.

Article IV

*The Dublin Review*, Number IV, April, 1837 (p. 338)

...the notion of chance, probability, likelihood, or by whatever name it may be called, is as much of its own nature the object of mathematical reasoning, as force or colour: it contains in itself a distinct application of the notion of relative magnitude; it is *more* or *less*, and the only difficulty (as in many other cases) lies in the assignment of the test of quantity, *how much* more or less.

Article IV

*The Dublin Review*, Number IV, April, 1837

**Democritus of Abdera** 460 BCE–370 BCE

Greek philosopher

Nothing can come into being from that which is not, or pass away into what is not.

In Diogenes Laertius

*Lives of Eminent Philosophers*

Chapter IX

**Disraeli, Benjamin, First Earl**

**of Beaconsfield** 1804–81

English prime minister, founder of Conservative Party, and novelist

If you mean by chance an absence of accountable cause, I do not believe such a quality as chance exists. Every incident that happens, must be a link in a chain.

*Venetia*

Chapter VIII (p. 435)

Longmans, Green & Co. London, England. 1897

**Doyle, Sir Arthur Conan** 1859–1930

Scottish writer

Chance has put in our way a most singular and whimsical problem, and its solution is its own reward.

In William S. Baring-Gould (ed.)

*The Annotated Sherlock Holmes* (Volume 2)

*The Adventure of the Blue Carbuncle* (p. 467)

Wings Books. New York, New York, USA. 1967

**Dryden, John** 1631–1700

English poet, dramatist, and literary critic

Be juster, Heaven: such virtue punished thus,  
Will make us think that Chance rules all above,  
And shuffles, with a random hand, the Lots  
Which Man is forc'd to draw.

*The Poetical Works of Dryden*

*All For Love*

Act V

The Riverside Press. Cambridge, Massachusetts, USA. 1949

**du Noüy, Pierre Lecomte** 1883–1947

French scientist

The laws of chance have rendered, and will continue to render, immense services to science. It is inconceivable that we could do without them, but they only express an admirable, subjective interpretation of certain inorganic phenomena and of their evolution. They are not a true explanation of objective reality.

*Human Destiny*

Chapter 3 (p. 37)

Longmans, Green & Company. London, England. 1947

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

There was once a brainy baboon,  
Who always breathed down a bassoon,  
For he said "It appears  
That in billions of years,  
I shall certainly hit on a tune."

*New Pathways in Science*

Chapter III, Section IV (p. 62)

The Macmillan Company. New York, New York, USA. 1935

We have swept away the anti-chance from the field of our current physical problems, but we have not got rid of it. When some of us are so misguided as to try to get back milliards of years into the past we find the sweepings piled up high like a high wall, forming a boundary – a beginning of time – which we cannot climb over.

*New Pathways in Science*

Chapter III, Section III (p. 60)

The Macmillan Company. New York, New York, USA. 1935

**Einstein, Albert** 1879–1955

German-born physicist

In our scientific expectation, we have grown antipodes. You believe in God playing and I in perfect laws in the world of things existing as real objects, which I try to grasp in a wildly speculative way.

Letter to Max Born, 7 November, 1944

**Eldridge, Paul** 1888–1982  
American educator

Value depends upon price and price upon chance and caprice.

*Maxims for a Modern Man*  
1855

T. Yoseloff. New York, New York, USA. 1965

**Euripides** ca. 480 BCE–406 BCE  
Greek playwright

Great Jove!

What shall I say? that thou from Heaven look'st down  
Upon mankind, or have they rashly formed

A vain opinion, deeming that the race  
Of gods exists, though fortune governs all?

In *Great Books of the Western World* (Volume 5)

*The Plays of Euripides*

*Hecuba*, l. 486

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Fermi, Enrico** 1901–54  
Italian-born American physicist

A general is a man who takes chances. Mostly, he takes a 50-50 chance; if he happens to win three times in succession he is considered a great general.

In Leo Szilard

*Leo Szilard: His Version of the Facts*

Chapter V (p. 147)

The MIT Press. Cambridge, Massachusetts, USA. 1978

**Fisher, Sir Ronald Aylmer** 1890–1962  
English statistician and geneticist

The effects of chance are the most accurately calculable, and therefore the least doubtful of all the factors of an evolutionary situation.

Croonian Lecture: Population Genetics

*Proceedings of the Royal Society of London*, Volume 141, 1955 (p. 515)

**Galsworthy, John** 1867–1933  
English novelist and dramatist

It's all chance, but we can't stop now.

*End of the Chapter*

Maid in Waiting, Chapter 28 (p. 229)

Charles Scribner's Sons. New York, New York, USA. 1937

**Guest, Judith** 1936  
American writer

He had left off being a perfectionist then, when he discovered that not promptly kept appointments; not a house circumspectly clean, not even membership in Onwentsa, or the Lake Forest Golf and Country Club, or the Lawyer's Club, not power – not anything – cleared you through the terrifying office of chance; that it is chance and not perfection that rules the world.

*Ordinary People*

Chapter 11 (p. 90)

The Viking Press. New York, New York, USA. 1976

**Helvetius, Claude Adrien** 1715–1771  
French philosopher

...chance, that is, an infinite number of events, with respect to which our ignorance will not permit us to perceive their causes, and the chain that connects them together. Now, this chance has a greater share in our education than is imagined. It is this that places certain objects before us and, in consequence of this, occasions more happy ideas, and sometimes leads us to the greatest discoveries...

*On Mind*

Essay III, Chapter I

Printed for the translator. London, England. 1751

If chance be generally acknowledged to be the author of most discoveries in almost all the arts, and if in speculative sciences its power be less sensibly perceived, it is not perhaps less real...

*On Mind*

Essay III, Chapter IV (p. 331)

Printed for the translator. London, England. 1751

**Herodotus** 484 BCE–432 BCE  
Greek historian

...it is well to bear in mind that chances rule men, and not men chances.

**Johnson, Samuel** 1696–1772  
English critic, biographer, and essayist

Nothing was ever said with uncommon felicity, but by the cooperation of chance; and therefore, wit, as well as valor must be content to share its honors with fortune.

*The Yale Edition of The Works of Samuel Johnson*  
The Idler and the Adventurer, Idler Number 58  
Yale University Press. New Haven, Connecticut, USA. 1978

**Laplace, Pierre Simon** 1749–1827  
French mathematician, astronomer, and physicist

...chance has not reality in itself; it is only a term fit to designate our ignorance concerning the manner in which the different parts of a phenomenon are arranged among themselves and in relation to the rest of Nature.

In K.M. Baker  
*Condorcet: From Natural Philosophy to Social Mathematics*  
Chapter 3 (p. 168)  
The University of Chicago Press. Chicago, Illinois, USA. 1975

Amid the variable and unknown causes which we comprehend under the name of chance, and which render uncertain and irregular the march of events, we see appearing, in the measure that they multiply, a striking regularity which seems to hold to a design and which has been considered as a proof of Providence.

*A Philosophical Essay on Probabilities*  
Chapter VIII (p. 60)  
John Wiley & Sons. New York, New York, USA. 1902

**Longfellow, Henry Wadsworth** 1807–82  
American poet

I shot an arrow into the air,  
It fell to earth I know not where,  
For so swift it flew, the sight  
Could not follow it in its flight.

*The Poetical Works of Henry Wadsworth Longfellow*  
The Arrow and the Song  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Masters, Dexter** 1908–89  
American writer

“I should estimate,” this scientist was supposed to have said, “that there is one chance in ten nothing will happen with the bomb, and one chance in a hundred that it will ignite the atmosphere.”

*The Accident*  
Part I, Chapter 3 (p. 16)  
Alfred A. Knopf. New York, New York, USA. 1955

But then I was reading in the paper just the other day about one of them saying there wasn't more than one chance in God-knows-what, a trillion maybe, that these Bikini bombs could blow up the world. I said to myself, this seems pretty safe odds. But then I said to myself, hey! how come any odds at all? Who's running this show anyway? I sort of get to wondering every once in a while whether anybody knows the middle and the end of what's going on as well as the beginning.

*The Accident*  
Part VII, Chapter 7 (p. 382)  
Alfred A. Knopf. New York, New York, USA. 1955

**Merz, John Theodore** 1840–1922  
German-born British industrial chemist and philosopher

The study of blind chance in theory and practice is one of the great performances of the nineteenth century.

American science fiction writer

But from outside there is no knowing which is true. From outside, there is a five-tenths chance that the cat's alive. But a cat can't be five-tenths alive.

*The Coming of the Quantum Cats*

22 August, 1983, 4:20 A.M., Senator Dominic DeSota (p. 69)

Bantam Books. Toronto, Ontario, Canada. 1986

**Poincaré, Jules Henri** 1854–1912

French mathematician and theoretical astronomer

Every phenomenon, however minute, has a cause; and a mind infinitely powerful, infinitely well-informed about the laws of nature, could have foreseen it from the beginning of the centuries. If such a mind existed, we could not play with it at any game of chance; we should always lose.

*The Foundations of Science*

*Science and Method*, Book I

Chapter IV, Section I (p. 395)

The Science Press. New York, New York, USA. 1913

And first, what is chance? The ancients distinguished between phenomena seemingly obeying harmonious laws, established one and for all, and those which they attributed to chance; these were the ones unpredictable because rebellious to all law. In each domain, the precise laws did not decide everything, they only drew limits between which chance might act. In this conception, the word chance had a precise and objective meaning: what was chance for one was also chance for another and even for the gods.

*The Foundations of Science*

*Science and Method*, Book I

Chapter IV, Section I (p. 395)

The Science Press. New York, New York, USA. 1913

Chance is only the measure of our ignorance.

*The Foundations of Science*

*Science and Method*, Book I

Chapter IV, Section I (p. 395)

The Science Press. New York, New York, USA. 1913

The greatest bit of chance is the birth of a great man. It is only by chance that the meeting of two germinal cells, of different sex, containing precisely, each on its side, the mysterious elements whose mutual reaction must produce the genius. One will agree that these elements must be rare and that their meeting is still more rare. How slight a thing it would have required to deflect from its route the carrying spermatozoon. It would have suffered to deflect it a tenth of a millimeter and Napoleon would not have been born and the destinies of a

continent would have been changed. No example can better make us understand the veritable characteristics of chance.

*The Foundations of Science*

*Science and Method*, Book I

Chapter IV, Section IX (pp. 410–411)

The Science Press. New York, New York, USA. 1913

**Pope, Alexander** 1688–1744

English poet

All chance, direction, which thou canst not see;

All discord, harmony, not understood,

All partial evil, universal good:

And, spite of Pride, in erring Reason's spite,

One truth is clear, "Whatever is, is Right."

T. Hatchard. London, England. 1856

**Tyndall, John** 1820–93

Irish-born English physicist

Your atoms are individually without sensation, much more are they without intelligence. May I ask you, then, to try your hand upon this problem. Take your dead hydrogen atoms, your dead oxygen atoms, your dead carbon atoms, your dead nitrogen atoms, your dead phosphorus atoms, and all the other atoms, dead as grains of shot, of which the brain is formed. Imagine them separate and sensationless; observe them running together and forming all imaginable combinations. This, as a purely mechanical process, is seeable by the mind. But can you see, or dream, or in any way imagine, how out of that mechanical act, and from these individually dead atoms, sensation, thought, and emotion are to rise? Are you likely to extract Homer out of the rattling of dice, or the differential calculus out of the clash of billiard-balls?

Supposed quotation by Bishop Butler

Apothegm 41 (p. 4)

Longman, Green, Longman, Roberts & Green. London, England. 1865

## CHANGE

**Agassiz, Jean Louis Rodolphe** 1807–73  
Swiss-born American naturalist, geologist, and teacher

When chemists have brought their knowledge out of their special laboratories into the laboratory of the world, where chemical combinations are and have been through all time going on in such vast proportions, – when physicists study the laws of moisture, of clouds and storms, in past periods as well as in the present, – when, in short, geologists and zoologists are chemists and physicists, and vice versa, – then we shall learn more of the changes the world has undergone than is possible now that they are separately studied.

*Geological Sketches*

Chapter III (p. 73)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1886

**Alexander, Christopher** 1936–  
Austria-born English architect

Even the most aimless changes will eventually lead to well-fitting forms, because of the tendency to equilibrium inherent in the organization of the process. All the agent need do is recognize failures when they occur, and to react to them. And this even the simplest man can do. For although only few men have sufficient integrative ability to invent form of any clarity, we are all able to criticize existing forms. It is especially important to understand that the agent in such a process needs no creative strength. He does not need to be able to improve the form, only to make some sort of change when he notices a failure. The changes may not always be for the better; but it is not necessary that they should be, since the operation of the process allows only the improvements to persist.

*Notes on the Synthesis of Form*

Chapter 4 (pp. 52–53)

Harvard University Press. Cambridge, Massachusetts, USA. 1964

**Allen, Robert Porter** 1905–63  
American author and conservationist

A million years have done little to change the aspect of a hidden pool inside the mangrove. If you don't believe it, crawl with crocodiles and terrapin through the slime and

watch the lowly gastropod leave his smooth track beside yours. A million years have not changed them. Best of all, stay out there at night. You will listen to the silence of centuries and you will hear, as I have, the noiseless murmur of the Pleistocene.

*On the Trail of Vanishing Birds*

Chapter II (p. 19)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1957

**Aristotle** 384 BCE–322 BCE  
Greek philosopher

But the whole vital process of the earth takes place so gradually and in periods of time which are so immense compared with the length of our life, that these changes are not observed, and before their course can be recorded from beginning to end whole nations perish and are destroyed.

In *Great Books of the Western World* (Volume 8)

*Meteorology*

Book I, Chapter 14 (p. 457)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Beattie, James** 1735–1803  
Scottish poet and essayist

Of chance or change O let not man complain,  
Else shall he never, never cease to wail:

For, from the imperial dome, to where the swain

Rears the lone cottage in the silent dale, All feel the  
assault of fortune's fickle gale;

Art, empire, earth itself to change are doom'd;

Earthquakes have raised to heaven the humble vale,

And gulphs the mountain's mighty mass entomb'd,

And where the Atlantic rolls wide continents have  
bloom'd.

*The Minstrel; or, the Progress of Genius* – Book II

G. Routledge. London, England. 1858

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

Common experience teaches us that continual, varying change is the order of nature. As the old hymn has it, 'Change and decay in all around I see,' which seems a needlessly pessimistic paraphrase of the dictum of Heraclitus, 'All things flow'.

*The Handmaiden of the Sciences*

Chapter 4 (p. 61)

Williams & Wilkins Co. Baltimore, Maryland, USA. 1937

**Bergson, Henri** 1859–1941  
French philosopher

...for a conscious being, to exist is to change, to change is to mature, to mature is to go on creating oneself endlessly.

*Creative Evolution*

Chapter I (p. 7)

Henry Holt & Co. New York, New York, USA. 1911

**Burns, Robert** 1759–96  
Scottish poet

Look abroad through Nature's range  
Nature's mighty law is change.

*The Complete Poetical Works of Robert Burns*  
Inconstancy in Love

Houghton Mifflin Company. Boston, Massachusetts, USA. 1897

**Cuvier, Georges** 1769–1832  
French zoologist and statesman

We now propose to examine those changes which still take place on our globe, investigating the causes which continue to operate on its surface.... This portion of the history of the earth is so much the more important, as it has been long considered possible to explain the more ancient revolutions on its surface by means of these still existing causes.... But we shall presently see that unfortunately this is not the case in physical history; the thread of operations is here broken, the march of nature is changed, and none of the agents that she now employs were sufficient for the production of her ancient works.

*An Essay on the Theory of the Earth*  
Section 8 (p. 44)

Kirk & Mercein. New York, New York, USA. 1818

**de Quincey, Thomas** 1785–1859  
English author

For, listen: – Where now the mightiest of oceans rolls in pacific beauty, once were anchored continents and boundless forests. Where the south pole now shuts her frozen gates inhospitably against the intrusions of flesh, once were probably accumulated the ribs of empires; man's imperial forehead, woman's roseate lips, gleamed upon ten thousand hills; and there were innumerable contributions to antarctic journals almost as good (but not quite) as our own [English].

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 170)  
Adam & Charles Black. Edinburgh, Scotland. 1871

Not otherwise by secular periods, known to us geologically as facts, though obscure as durations, Tellus herself, the planet, as a whole, is forever working by golden balances of change and compensation of ruin and restoration. She recasts her glorious habitations in decomposing them; she lies down for death, which perhaps a thousand times she has suffered; she rises for a new birth, which perhaps for the thousandth time has glorified her disc. Hers is the wedding-garment, hers is the shroud, that eternally is being woven in the loom of palingenesis.

*The Works of Thomas de Quincey*

System of the Heavens as Revealed by Lord Rosse's Telescope (p. 171)  
Adam & Charles Black. Edinburgh, Scotland. 1871

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

All change is relative. The universe is expanding relatively to our common material standards; our material

standards are shrinking relatively to the size of the universe. The theory of the "expanding universe" might also be called the theory of the "shrinking atom".

*The Expanding Universe*

Chapter III, Section VI (p. 90)

At the University Press. Cambridge, England. 1952

**Emerson, Ralph Waldo** 1803–82  
American lecturer, poet, and essayist

There are no fixtures in nature. The universe is fluid and volatile. Permanence is but a word of degrees. Our globe seen by God is a transparent law, not a mass of facts. The law dissolves the fact and holds it fluid.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: First Series*

Circles (p. 403)

The Library of America. New York, New York, USA. 1983

**Grainger, Elena**

No biographical data available

Our earth is vigorous with life, and like all living things must change. Change will continue constructively if we allow it to continue, and perhaps therein lies the future role of geologists. They seek to understand scenery of the earth, the life upon it, the resources under its soil and waters, in its rocks, came into being. It is they who can direct the way from destruction to preservation and restoration, restraining humankind from impending or even destroying the immemorial process of change and evolution.

No biographical data available

Nothing is static forever in nature; change is going on everywhere.

*Historical Geology: The Geologic History of North America*  
Chapter XXI (p. 445)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1947

**Hutton, James** 1726–97  
Scottish geologist, chemist, and naturalist

...from the top of the mountain to the shore of the sea, which are the two extremities of our land, everything is in a state of change; the rock and solid strata dissolving, breaking, and decomposing, for the purpose of becoming soil; the soil traveling along the surface of the earth, in its way to the shore; and the shore wearing and wasting by the agitation of the sea...

*The Theory of the Earth* (Volume 2)  
Part II, Chapter VII (p. 236)  
Messrs. Cadwell, Junior & Davies. London, England. 1795

**Lyell, Sir Charles** 1797–1875  
English geologist

Never was there a dogma more calculated to foster indolence, and to blunt the keen edge of curiosity, than this assumption of the discordance between the ancient and existing causes of change.

In *George Isles*  
*The Skies and the Earth*  
Uniformity in Geological Change (p. 134)  
Doubleday, Page & Co. New York, New York, USA. 1902

When we are unable to explain the monuments of past changes, it is always more probable that the difference arises from our ignorance of all the existing agents, or all their possible effects in an indefinite lapse of time, than that some cause was formerly in operation which has ceased to act...

*Principles of Geology* (Volume 1)  
Chapter IX (p. 164)  
John Murray. London, England. 1830

**Mitchell, Maria** 1818–89  
American astronomer and educator

We may turn our gaze [to other stars] as we turn a kaleidoscope, and the changes are infinitely more startling, the combinations infinitely more beautiful; no flower garden presents such a variety and such delicacy of shades.

In Phebe Mitchell Kendall  
*Maria Mitchell: Life, Letters, and Journals*  
Chapter XI (p. 235)  
Lee & Shepard. Boston, Massachusetts, USA. 1896

**Ovid** 43 BCE–17 AD  
Roman poet

All things are in a state of flux, and everything is brought into being with a changing nature. Time itself flows on in constant motion, just like a river. For neither the river nor the swift hour can stop its course; but, as wave is pushed on by wave, and as each wave as it comes is both pressed on and itself presses the wave in front, so time both flees and follows and is ever new.

Translated by Frank Justus Miller  
*Metamorphoses* (Volume 2)  
Book XV, l. 178–182 (p. 377)  
William Heinemann. London, England. 1916

Nothing retains its own form; but Nature, the great renewer, ever makes up forms from other forms. Be sure, there's nothing perishes in the whole universe; it does but vary and renew its form.

Translated by Frank Justus Miller  
*Metamorphoses* (Volume 2)  
Chapter XV, l. 252 (p. 383)  
William Heinemann. London, England. 1916

**Planck, Max** 1858–1947  
German physicist

But the circumstance which calls for ever greater wonderment, because it is not self-evidently a matter of course by any means, is that the new world picture does not wipe out the old one, but permits it to stand in its entirety, and merely adds a special condition for it... As the multitude of the natural phenomena observed in all fields unfolds in an ever richer and more variegated profusion, the scientific world picture, which is derived from them, assumes an always clearer and more definite form. The continuing changes in the world picture do not therefore signify an erratic oscillation in a zigzag line, but a progress, an improvement, a completion.

Translated by F. Gaynor  
*Scientific Autobiography and Other Papers* (p. 98)  
Philosophical Library. New York, New York, USA. 1949

**Playfair, John** 1748–1819  
Scottish geologist, physicist, and mathematician

...a change 'in the animal kingdom seems to be a part of the order of nature, and is visible in instances to which human power cannot have extended.'

*The Works of John Playfair* (Volume 1)  
*Illustrations of the Huttonian Theory*, Paragraph 413 (p. 459)  
Printed for Archibald Constable & Co. Edinburgh, Scotland. 1822

**Rohault, Jacques** 1618–72  
French philosopher and physicist

Daily Experience, and a Thousand Observations made by the Industry of Men in past Ages, and which we ourselves have confirmed, do sufficiently convince us, that there is no part of the Earth, be it never so great or small, but that in Time it undergoes some Alteration...

*Rouhault's System of Natural Philosophy* (Volume 2)  
Part III, Chapter I  
Johnson Reprint Corporation. New York, New York, USA. 1969

**Ruskin, John** 1819–1900  
English writer, art critic, and social reformer

the truths of nature are one eternal change – one infinite variety. There is no bush on the face of the globe exactly like another bush; – there are no two trees in the forest whose boughs bend into the same network, nor two

leaves on the same tree which could not be told one from the other, nor two waves in the sea exactly alike.

*Modern Painters* (Volume 1)

Part II, Section I, Chapter II (p. 55)

John Wiley & Sons. New York, New York, USA. 1888

**Sagan, Carl** 1934–96

American astronomer and science writer

Our epoch is unpredictable because it is simultaneously complex and changing rapidly. This seems also to be the reason for the madness of our times. There is in no moment in the history of mankind when so many changes in so many different areas – social, political, economic, scientific, technological, sexual, and educational – have occurred. They are happening too fast for too many people. Madness is one way of coping.

*Other Worlds* (p. 139)

BantamBooks. New York, New York, USA. 1975

**Sexton, Anne** 1928–74

American poet and writer

Rocks crumble, make new forms,  
oceans move the continents,  
mountains rise up and down like ghosts  
yet all is natural, all is change.

*The Complete Poems*

The Wall

Houghton Mifflin Company. Boston, Massachusetts, USA. 1981

Oxford University Press, Inc. London, England. 1953

Forward, Forward let us range,

Let the great world spin for ever down the ringing groves of change.

*Alfred Tennyson's Poetical Works*

Locksley Hall, Stanza 91

Oxford University Press, Inc. London, England. 1953

**Twain, Mark (Samuel Langhorne Clemens)** 1835–1910

American author and humorist

Change is the handmaiden Nature requires to do her miracles with.

*Roughing It* (Volume 2)

Chapter XV (p. 150)

Harper & Brothers Publishers. New York, New York, USA. 1899

## CHANGE, INSTRUMENTS OF

**Lyell, Sir Charles** 1797–1875

English geologist

...should we ever establish by unequivocal proofs, that certain agents have, at particular periods of past time, been more potent instruments of change over the entire surface of the earth than they now are, it will be more consistent with philosophical caution to presume, that after an interval of quiescence they will recover their pristine vigour, than to regard them as worn out.

*Principles of Geology*

Chapter IX (p. 165)

John Murray. London, England. 1830

## CHAOS

**Adams, Henry Brooks** 1838–1918

American man of letters

Chaos often breeds life, when order breeds habit.

In Ernest Samuels (ed.)

*The Education of Henry Adams*

Chapter XVI (p. 249)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

Briefly, chaos is all that science can logically assert of the supersensuous.

In Ernest Samuels (ed.)

*The Education of Henry Adams*

Chapter XXXI (p. 451)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

... Chaos was the law of nature; Order was the dream of man.

In Ernest Samuels (ed.)

*The Education of Henry Adams*

Chapter XXXI (p. 451)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1974

**Blackie, John Stuart** 1809–95

Scottish scholar

Chaos, Chaos, infinite wonder!

Wheeling and reeling on wavering wings....

*Musa Burschicosa: A Book of Songs for Students and University Men*

A Song of Geology, Second stanza

Edmonston & Douglas. Edinburgh, Scotland. 1869

**Bradley, Jr., John Hodgdon** 1898–1962

American geologist

From the smallest satellite slave of the smallest star to the largest super-galaxy of worlds in space, everything bows to the first law of nature. Chaos and caprice do not exist.

*Parade of the Living*

Part I, Chapter I (p. 3)

Coward-McCann, Inc. New York, New York, USA. 1930

**Clerke, Agnes Mary** 1842–1907

Irish astronomer

There is no such thing as chaos, it tacitly asserts, in the sidereal world or outside of it. For chaos is the negation of law, and law is the expression of the will of God.

*Problems in Astrophysics*

Introduction (p. 10)

Adam & Charles Black. London, England. 1903

### **Devaney, Robert L.**

No biographical data available

It has been said that the three great developments in twentieth century science are relativity, quantum mechanics, and chaos. That strikes me the same as saying that the three great developments in twentieth century engineering are the airplane, the computer, and the pop-top aluminum can. Chaos and fractals are not even twentieth century ideas: chaos was first observed by Poincaré and fractals were familiar to Cantor a century ago, although neither man had the computer at his disposal to show the rest of the world the beauty he was seeing.

Introduction: Special Issue on Dynamical Systems

*College Mathematics Journal*, Volume 22, Number 1, January, 1991 (p. 2)

### **Dylan, Bob** 1941–

American pop-folk singer, composer, and musician

Chaos is a friend of mine.

The Two Lives of Bob Dylan

*Newsweek*, 9 December, 1985 (p. 93)

### **Figenbaum, Mitchell** 1944–

American mathematical physicist

What will prove altogether remarkable is that some very simple schemes to produce erratic numbers behave identically to some of the erratic aspects of natural phenomena.

Universal Behavior in Nonlinear Systems

*Los Alamos Science*, Summer, 1980 (p. 4)

### **Ford, Joseph**

No biographical data available

Unfortunately, non-chaotic systems are very nearly as scarce as hen's teeth, despite the fact that our physical understanding of nature is largely based upon their study.

How Random Is a Coin Toss?

*Physics Today*, Volume 36, Number 4, April, 1983 (p. 40)

### **Frost, Robert** 1874–1963

American poet

Let chaos storm!

Let cloud shapes swarm!

I wait for form.

*Complete Poems of Robert Frost*

Pertinax

Henry Holt & Company. New York, New York, USA. 1949

### **George, William H.**

No biographical data available

One man's explanation may be another man's chaos.

*The Scientist in Action: A Scientific Study of His Methods*

Personal Basis (p. 331)

William & Norgate. London, England. 1936

### **Gleick, James** 1954–

American author, journalist, and essayist

Where chaos begins, classical science stops. For as long as the world has had physicists inquiring into the laws of nature, it has suffered a special ignorance about disorder in the atmosphere, in the fluctuations of the wildlife populations, in the oscillations of the heart and the brain. The irregular side of nature, the discontinuous and erratic side these have been puzzles to science, or worse, monstrosities.

*Chaos: Making a New Science*

Prologue (p. 3)

The Viking Press. New York, New York, USA. 1987

### **Gould, Stephen Jay** 1941–2002

American paleontologist, evolutionary biologist, and historian of science

History includes too much chaos, or extremely sensitive dependence on minute and unmeasurable differences in initial conditions, leading to massively divergent outcomes based on tiny and unknowable disparities in starting points. And history includes too much contingency, or shaping of present results by long chains of unpredictable antecedent states, rather than immediate determination by timeless laws of nature. *Homo sapiens* did not appear on the earth, just a geologic second ago, because evolutionary theory predicts such an outcome based on themes of progress and increasing neural complexity. Humans arose, rather, as a fortuitous and contingent outcome of thousands of linked events, any one of which could have occurred differently and sent history on an alternative pathway that would not have led to consciousness.

The Evolution of Life on Earth

*Scientific American*, Volume 271, Number 4, October, 1994 (pp. 85–86)

### **Grassé, Pierre P.** 1895–1985

French zoologist

Although everything is not as it should be, the living world is not at all chaotic and life results from a very well-defined order. As soon as some disorder, even slight, appears in an organized being, sickness, then death follow. There is no possible compromise between the phenomenon of life and anarchy.

*Evolution of Living Organisms: Evidence for a New Theory of Transformation*

Chapter IV (p. 9)

Academic Press. New York, New York, USA. 1977

### **Harrison, Edward Robert** 1919–2007

English-born American cosmologist

Perhaps, in the ultimate and unimaginable chaos of a big bang, there lurks the cosmogenic genie who conjures and launches multitudes of universes, each equipped with its own unique laws and fundamental constants...

*Cosmology, the Science of the Universe*

Chapter 15 (p. 300)

Cambridge University Press. Cambridge, England. 1981

Chaos engenders order.

*Annual Report of the Board of Regents of the Smithsonian Institution, 1896*

The Biologic Relations Between Plants and Ants (p. 454)

Government Printing Office. Washington, D.C. 1898

### Hofstadter, Douglas R. 1945–

American academic

It turns out that an eerie type of chaos can lurk just behind a facade of order – and yet, deep inside the chaos lurks an even eerier type of order.

In James Gleick

*Chaos: Making a New Science*

Back cover

Penguin Books. New York, New York, USA. 1988

### Hugo, Victor 1802–85

French author, lyric poet, and dramatist

In disorder there can be no fecundation. Chaos is a celibate.

Translated by Isabel F. Hapgood

*The Toilers of the Sea*

Part II, Book Third, Chapter III (p. 406)

The Heritage Press. New York, New York, USA. 1961

### Keats, John 1795–1821

English Romantic lyric poet

There is nothing stable in the world; uproar's your only music.

*The Complete Poetical Works and Letters of John Keats*

Letter to George and Thomas Keats

13 January, 1818 (p. 280)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

### Kettering, Charles Franklin 1876–1958

American engineer and inventor

Developmental work is always a slightly organized chaos.

In T.A. Boyd

*Professional Amateur*

Part II Chapter IX (p. 71)

E.P. Dutton & Company, Inc. New York, New York, USA. 1957

### Maxim, Hiram S.

No biographical data available

...the grandest words ever uttered by any man on this planet were spoken by Lord Kelvin when he said that if all the matter in the Universe were reduced to its ultimate atoms and equally divided through all space, the disturbance caused by the beating of the wing of one mosquito

would bring about everything we find in the material Universe today.

Matter and Motion in Space

*Nature*, Volume 66, Number 1705, July 3, 1902 (p. 223)

### Millay, Edna St. Vincent 1892–1950

Poet and playwright

I will put Chaos into fourteen lines  
And keep him there; and let him thence escape  
If he be lucky; let him twist and ape  
Flood, fire, and demon – his adroit designs  
Will strain to nothing in the strict confines  
Of this sweet Order, where, in pious rape,  
I hold his essence and amorphous shape,  
Till he with Order mingles and combines.  
Past are the hours, the years, of our duress,  
His arrogance, our awful servitude:  
I have him. He is nothing more nor less  
Than something simple not yet understood;  
I shall not even force him to confess;  
Or answer. I will only make him good.

*Mine the Harvest: A Collection of New Poems*

I Will Put Chaos into Fourteen Lines 130

Harper. New York, New York, USA. 1954

### Miller, Henry 1891–1980

American writer

The world is what it is and I am what I am.... This out there and this in me, all this, everything, the resultant of inexplicable forces. A Chaos whose order is beyond comprehension. Beyond human comprehension.

*Black Spring*

Third or Fourth Day of Spring (p. 25)

Grove Press. New York, New York, USA. 1963

...chaos is the score upon which reality is written.

*Tropic of Cancer* (p. 2)

Grove Press. New York, New York, USA. 1961

 The Duncaid, Book IV, l. 13–14  
 Houghton Mifflin Company. New York, New York, USA. 1903

Lo! thy dread empire, Chaos! is restor'd;  
 Light dies before thy uncreating word;  
 Thy hand great Anarch! lets the curtain fall;

And universal Darkness buries all.  
*The Complete Poetical Works* (Volume 4)  
 The Duncaid, Book IV, l. 653–656  
 Houghton Mifflin Company. New York, New York, USA. 1903

Not chaos-like, together crust'd and bruise'd,  
 But, as the world, harmoniously confused:

Where order in variety we see,  
 And where, tho' all things differ, all agree.

*The Complete Poetical Works*  
 Windsor Forest, l. 13–16  
 Houghton Mifflin Company. New York, New York, USA. 1903

**Prigogine, Ilya** 1917–2003  
 Russian-born Belgian physical chemist

**Stengers, Isabelle** 1949–  
 Belgian philosopher

Curiously, the unexpected complexity that has been discovered in nature has not led to a slowdown in the progress of science, but on the contrary to the emergence of new conceptual structures that now appear as essential to our understanding of the physical world – the world that includes us.

*Order Out of Chaos*  
 Introduction (p. 2)  
 Shambhala Publications. Boulder, Colorado, USA. 1984

**Santayana, George (Jorge Agustín Nicolás Ruiz de Santillana)** 1863–1952  
 Spanish-born American philosopher

Chaos is a name for any order that produces confusion in our minds...

Chaos is perhaps at the bottom of everything: which would explain why perfect order is so rare and precarious.  
*Dominations and Powers: Reflections on Liberty, Society, and Government*

Book First, Part One, Chapter 1 (p. 33)  
Charles Scribner's Sons. New York, New York, USA. 1951

**Shakespeare, William** 1564–1616

English poet, playwright, and actor

Chaos is come, again.

In *Great Books of the Western World* (Volume 27)  
*The Plays and Sonnets of William Shakespeare* (Volume 2)  
*Othello, The Moor of Venice*  
Act III, Scene iii, l. 92  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Shapley, Harlow** 1885–1972

American astronomer

Chaos is but unperceived order; it is a word indicating the limitations of the human mind and the paucity of observational facts. The words “chaos,” “accidental,” “chance,” “unpredictable” are conveniences behind which we hide our ignorance.

*Of Stars and Men: Human Response to an Expanding Universe*  
Chapter 4 (fn, p. 63)  
Beacon Press. Boston, Massachusetts, USA. 1958

**Stoppard, Tom** 1937–

Czech-born English playwright

The ordinary-sized stuff which is our lives, the things people write poetry about – the clouds – daffodils – waterfalls – and what happens in a cup of coffee when the cream goes in – these things are full of mystery, as mysterious to us as the heavens were to the Greeks. We're better at predicting events at the edge of the galaxy or inside the nucleus of an atom than whether it'll rain on auntie's garden party three Sundays from now.... We can't even predict the next drip from a dripping tap when it gets irregular.

*Arcadia*  
Act One (p. 48)  
Samuel French, Inc. New York, New York, USA. 1993

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Do you see O my brothers and sisters? It is not chaos or death – it is form, union, plan – it is eternal life – it is Happiness.

*Complete Poetry and Collected Prose*  
Leaves of Grass  
Song of Myself  
The Library of America. New York, New York, USA. 1982

**Wilde, Oscar** 1854–1900

Irish wit, poet, and dramatist

Is this the end of all that primal force  
Which, in its changes being still the same,  
From eyeless Chaos cleft its upward course,  
Through ravenous seas and whirling rocks and flame,  
Till the suns met in heaven and began  
Their cycles, and the morning stars sang, and the Word  
was Man!

*Poems*  
Humanitad, Stanza 72  
George Munro's Sons. New York, New York, USA. 1896

**Yorke, James**

American mathematician

The first message is that there is disorder... People say what use is disorder. But people have to know about disorder if they are going to deal with it. The auto mechanic who doesn't know about sludge in valves is not a good mechanic.

In James Gleick  
*Chaos: Making a New Science*  
Life's Ups and Downs (p. 68)  
The Viking Press. New York, New York, USA. 1987

## CHARACTER

**Young, Thomas** 1773–1829

English polymath

A man who has a proper regard for the dignity of his own character, although his sensibility may sometimes be awakened by the unjust attacks of interested malevolence, will esteem it in general more advisable to bear, in silence, the temporary effects of a short-lived injury, than to suffer his own pursuits to be interrupted, in making an effort to repel the invective, and to punish the aggressor.

In George Peacock  
*Miscellaneous Works of the Late Thomas Young*  
Number X (p. 192)  
John Murray. London, England. 1855

## CHARACTERISTIC

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

That is the aim of that great science which I am used to calling Characteristic, of which what we call Algebra, or Analysis, is only a very small branch since it is this Characteristic which gives words to languages, letters to words, numbers to Arithmetic, notes to Music. It teaches us how to fix our reasoning, and to require it to leave, as it were, visible traces on the paper of a notebook for inspection at leisure. Finally, it enables us to reason with economy, by substituting characters in the place of things in order to relieve the imagination...

*On the Method of Universality* (p. 4)  
Charles Scribner's Sons. New York, New York, USA. 1951

## CHARM

**Ellis, John** 1946–  
English theoretical physicist

Charm was the lever that turned the world.  
Quoted in Michael Riordan  
*The Hunting of the Quark*

Chapter 14 (p. 322)  
Simon & Schuster. New York, New York, USA. 1987

### Yabsley, D. B.

No biographical data available

The awkwardness of the charm mass thus puts limits on both symmetry- and quark-based thinking as guides to charm physics. If light hadron work is like swimming in the ocean, and b-physics is like flying through the air, then in charm studies one is wading knee-deep through the brown muck.

In Harry W.K. Chueng and Tracy S. Pratt  
*Lepton and Photon Interactions at High Energies*  
Experimental Physics on New Physics from Charm Decay (p. 168)  
World Scientific Publishing Co. River Edge, New Jersey, USA. 2004

## CHEMICAL

### Author undetermined

Chemical: A substance that:  
An organic chemist turns into a foul odor;  
An analytical chemist turns into a procedure;  
A physical chemist turns into a straight line;  
A biochemist turns into a helix;  
A chemical engineer turns into a profit.  
Source undetermined

What are mortals made of?  
By analization  
I've tried all the nation,  
Defined each gradation,  
And prov'd every station,  
With Sir Humphry's best  
New chemical test,  
And found what mortals are made of.  
Source undetermined  
*Analization*

Unless the evils resulting from every person who deems that he has made an improvement introducing new-fangled combinations be remedied...chemical science would soon become a perfect chaos.

*Athenaeum*  
Fourth Meeting of the British Association for the Advancement of Science, 20 September, 1834 (p. 698)

### Berzelius, Jöns Jacob 1779–1848

Swedish chemist

The devil may write chemical textbooks...because every few years the whole thing changes.  
In Bernard Jaffe  
*Crucibles: The Story of Chemistry*  
Chapter IX (p. 116)  
Dover Publications. New York, New York, USA. 1976

It is easier to write an abbreviated word than to draw a figure. The chemical signs ought to be letters for the greater ease of writing and not to disfigure a printed

book. I shall therefore take for the chemical sign the initial letter of the Latin name of each chemical element, thus, C, H, N, O, S, and P. If the first letter be common to two metals, I shall use both the initial letter and another letter they have not in common...

In Bernard Jaffe  
*New World of Chemistry*  
Chapter 6 (p. 66)  
Silver, Burdett & Company. New York, New York, USA. 1935

### Callen, Charles Lane

No biographical data available

"Does accident often play a part in chemical discoveries?" I inquired. "At times it does, but not as rule," Dr. Stine replied. "Even when it does, the circumstance is not, strictly speaking, accidental...the chemist invariably has to put in some mighty hard work in order to bring about fortunate accidents."

If the Chemist Stepped Out of Your Life  
*The American Magazine*, May, 1926. (p. 189)

### Carson, Rachel 1907–64

American marine biologist and author

The chemicals to which life is asked to make its adjustment are no longer merely the calcium and silica and copper and all the rest of the minerals washed out of the rocks and carried in rivers to the sea; they are the synthetic creations of man's inventive mind, brewed in his laboratories, and having no counterparts in nature.

*Silent Spring*  
Chapter 2 (p. 17)  
Fawcett Publications. Greenwich, Connecticut, USA. 1962

For the first time in the history of the world, every human being is now subjected to contact with dangerous chemicals, from the moment of conception until death.

*Silent Spring*  
Chapter 3 (p. 24)  
Fawcett Publications. Greenwich, Connecticut, USA. 1962

### Cook, Joseph

No biographical data available

Oh, sing a song of phosphates,  
Fibrine in a line,  
Four-and-twenty follicles  
In the van of time.  
When the phosphorescence  
Evolved brain,  
Superstition ended,  
Men began to reign.

In Sara and John E. Brewton and John Brewton Blackburn  
*Of Quarks, Quasars, and Other Quirks: Quizzical Poems for the Supersonic Age*  
Boston Nursery Rhymes, Rhyme for a Chemical Baby (p. 41)  
Crowell. New York, New York, USA. 1977

### Davy, Sir Humphry 1778–1829

English chemist

Whilst chemical pursuits exalt the understanding, they do not depress the imagination or weaken genuine feeling; whilst they give the mind habits of accuracy, by obliging it to attend to facts, they likewise extend its analogies; and, though conversant with the minute forms of things, they have for their ultimate end the great and magnificent objects of nature.

*Consolations in Travel, or the Last Days of a Philosopher*

Dialogue V (p. 245)

John Murray. London, England. 1830

[The chemical philosopher's mind] should always be awake to devotional feeling, and in contemplating the variety and the beauty of the external world, and developing its scientific wonders, he will always refer to that infinite wisdom through whose beneficence he is permitted to enjoy knowledge; and, in becoming wiser, he will become better, he will rise at once in the scale of intellectual and moral existence, his increased sagacity will be subservient to a more exalted faith, and in proportion as the veil becomes thinner through which he sees the causes of things, he will admire more the brightness of the divine light by which they are rendered visible.

*Consolations in Travel; or the Last Days of a Philosopher*

Dialogue V (p. 255)

John Murray. London, England. 1830

The foundations of chemical philosophy, are observation, experiment, and analogy. By observation, facts are distinctly and minutely impressed on the mind. By analogy, similar facts are connected. By experiment, new facts are discovered; and, in the progression of knowledge, observation, guided by analogy, lends to experiment, and analogy confirmed by experiment, becomes scientific truth.

*Elements of Chemical Philosophy* (Volume 4)

Part I, Volume I, Introduction (p. 2)

Printed for J. Johnson & Company. London, England. 1812

**Dickinson, Emily** 1830–86

American lyric poet

The Chemical conviction

That Nought be lost

Enable in Disaster

My fractured Trust –

No. 954 (p. 446)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

## Editorial

Our chemical heritage – the record of our achievements and our shortcomings – has a vital role to play in developing a more adequate public understanding of science. The past must be preserved, deployed, and made known. We all – whether Chief Executive officers, chemical scientists, school teachers, or representatives of the media – need a better understanding of the human dimensions of the chemical sciences. Chemical history,

our chemical heritage, can help inform our decision making. A positive view of the past chemical achievements will lend a modest but firm realism to our plans for the future.

*Beckman Center for the History of Science*, Volume 9, Spring 1992

**Eiseley, Loren C.** 1907–77

American anthropologist, educator, and author

The ingredients are known; they can be had on any drug-store shelf. You can take them yourself and pour them and wait hopefully for the resulting slime to crawl. It will not. The beautiful pulse of streaming protoplasm, that unknown organization of an unstable chemistry which makes up the life process, will not begin. Carbon, nitrogen, hydrogen, and oxygen you have mixed, and the same dead chemicals they remain.

*The Immense Journey* (p. 1)

Victor Gollancz. London, England. 1958

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

'Tis a superstition to insist on a special diet. All is made at last of the same chemical atoms.

Culture (p. 1027)

The Library of America. New York, New York, USA. 1983

**Fischer, Emil Hermann** 1852–1919

German chemist

To use a picture, I will say that enzyme and glucoside must join one another as lock and key, in order to be able to exert a chemical effect.

*Berichte der Deutschen Chemischen Gesellschaft*, Column 27, 1894 (p. 2992)

**Frederick the Great** 1712–86

King of Prussia

Is it not true that the doctrine of attraction and gravity has done nothing but astonish our imagination? Is it not true that all the chemical discoveries have done only the same?

Letter to Jean le Rond D'Alembert, January 7, 1768

**Haldane, John Burdon Sanderson** 1892–1964

English biologist

Shelly and Keats were the last English poets who were at all up to date in their chemical knowledge.

Paper read to the Heretics, Cambridge, England

*Daedalus, or Science and the Future*, February 4th, 1923

**Hinshelwood, Sir Cyril** 1897–1967

English chemist

Nobody, I suppose, could devote many years to the study of chemical kinetics without being deeply conscious of the fascination of time and change: this is something that goes outside science into poetry; but science, subject to

the rigid necessity of always seeking closer approximations to the truth, itself contains many poetical elements.

*Nobel Lectures, Chemistry 1942–1962*

Nobel lecture for award received in 1956

Chemical Kinetics in the Past Few Decades (p. 474)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

**Hoffmann, Roald** 1937–

Polish-born American chemist

The chemical article is an artistic creation.... It is not a laboratory notebook, and one knows that that notebook in turn is only a partially reliable guide to what took place. It is a more or less (one wishes more) carefully constructed, man- or woman-made text.... If one is lucky, it creates an emotional or aesthetic response in its readers.

Under the Surface of the Chemical Article

*Angewandte Chemie International Edition in English*, Volume 27, 1988

**Kornberg, Arthur** 1918–

American biochemist

Life is a chemical process.

*Biochemistry*, Volume 26, 1987 (p. 6888)

**Lavoisier, Antoine Laurent** 1743–94

French chemist

The principle object of chemical experiments is to decompose natural bodies, so as separately to examine the different substances which enter into their composition. By consulting chemical systems, it will be found that this science of chemical analysis has made rapid progress in our own times.... Thus, as chemistry advances towards perfection, by dividing and subdividing, it is impossible to say where it is to end; and these things we at present suppose simple may soon be found quite otherwise. All we dare venture to affirm of any substance is, that it must be considered as simple in the present state of our knowledge, and so far as chemical analysis has hitherto been able to show.

*Elements of Chemistry in a New Systematic Order*

Part II, Section 1 (p. 176)

W. Creech. Edinburgh, Scotland. 1790

...one day the precision of the data might be brought to such perfection that the mathematician in his study would be able to calculate any phenomenon of chemical combination in the same way...as he calculates the movement of the heavenly bodies.

*Mémoires de l'Académie Royale des Sciences*

Mémoire sur l'affototé du principe oxygène (p. 534)

1782 [Published 1785]

**Lehn, Jean-Marie** 1939–

French chemist

The essence of chemical science thus finds its full expression in the words of Leonardo da Vinci: "Where nature finishes producing its own species, man begins, using natural things and in harmony with this very nature, to create an infinity of species."

Perspectives in Supramolecular Chemistry

*Angewandte Chemie International Edition in English*, Volume 29, Number 11, 1990 (p. 1337)

**Ostwald, Friedrich Wilhelm** 1853–1932

Latvian-born German chemist

Thus, there was for him nothing small or great in Nature. Every phenomenon embraced for him an endless diversity of factors, and in the yellow flame of an ordinary alcohol lamp whose wick was sprinkled with salt, he saw the possibility of accomplishing the chemical analysis of the most distant stars.

In Mary Elvira Weeks

The Discovery of the Elements

*Journal of Chemical Education*. Easton Pennsylvania, USA. 1956 (p. 363)

**Peirce, Charles Sanders** 1839–1914

American scientist, logician, and philosopher

A chemical compound might be expected to be quite as much a proposition as like an algebraic invariant.

The Logic of Relations

*Monist*, Volume 7, 1896 (p. 169)

**Shoemaker, Sydney** 1931–

American philosopher

If what I want when I drink fine wine is information about its chemical properties, why don't I just read the label?

In Daniel C. Dennett

*Consciousness Explained*

Chapter 12 (p. 383)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

**Süskind, Patrick** 1931–

German writer and screenwriter

There's jasmine! Alcohol there! Bergamot there! Grenouille went on crowing, and at each name he pointed to a different spot in the room, although it was so dark that at best you could only surmise the shadows of the cupboards filled with bottles.

Translated by John E. Woods

*Perfume: The Story of a Murder*

Chapter 14 (p. 75)

Alfred A. Knopf. New York, New York, USA. 1986

**Teeple, John E.** 1874–1931

American chemist

The manufacturer of chemicals has all the griefs of a maker of shoes, or bolts and nuts, or ready-to-wear clothes, and has just one more grief in addition – i.e., troubles occurring in chemical transformations.

Is the Practice of Chemistry a Profession, a Trade, or a Tool?

*The Journal of Industrial and Engineering Chemistry*, Volume 17, Number 7, July, 1925 (p. 666)

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Warned by such errors as that of Comte, who declared that Man could never know anything as to the chemical

composition of the heavenly bodies, we have learned to be cautious in not putting in “full stops”.

*The System of Animate Nature* (Volume 1)

Lecture I (p. 15)

William & Norgate. London, England. 1920

### **Winkler, C.**

No biographical data available

The world of chemical reaction is like a stage, on which scene after scene is ceaselessly played. The actors on it are the elements.

In Mary Elvira Weeks

*The Discovery of the Elements* (p. 2)

Journal of Chemical Education. Easton Pennsylvania, USA. 1956

### **Wittgenstein, Ludwig Josef Johann** 1889–1951

Austrian-born English philosopher

Getting hold of the difficulty deep down is what is hard. Because if it is grasped near the surface it simply remains the difficulty it was. It has to be pulled out by the roots; and that involves our beginning to think about these things in a new way. The change is as decisive as, for example, that from the alchemical to the chemical way of thinking. The new way of thinking is what is so hard to establish.

Translated by Peter Winch

*Culture and Value* (p. 48e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

## CHEMICAL AFFINITIES

### **Aesop** ca. 620 BCE–560 BCE

Greek fabulist and author

There can be little liking where there is no likeness.

*Fables*

The Collier and the Fuller

The University of Chicago Press. Chicago, Illinois, USA. 1960

### **Berthollet, C. L.** 1748–1822

French chemist

A theory of chemical affinities solidly established, and serving as a basis for the explanation of all chemical questions, ought to be a collection of, or contain, all the principles from which the causes of chemical phenomena can proceed, in every possible variety of circumstances; because observation has proved that all these phenomena are only the various effects of that affinity, to which all the various chemical powers of bodies may be attributed.

Translated by M. Farrell

*Researches into the Laws of Chemical Affinity*

Researches

Article I (pp. 1–2)

Philip H. Nicklin & Company. 1809

### **Duckham, Sir Arthur**

No biographical data available

Many times in the short existence of the Institution have the Council endeavored to describe a chemical engineer.... We have come to the conclusion that a chemical engineer as such does not in reality exist today.

Presidential Address

*Transactions of the Institute for Chemical Engineering*, Volume 2, 1924 (p. 15)

### **Macquer, Pierre Joseph** 1718–84

French chemist

...perhaps time, experience, the increase of chemical knowledge, lastly, the zeal of persons skilled in mathematics and chemistry, will hereafter throw much more light upon these subjects, of which now we have but confused notions. However, I cannot but consider them as the true key of the most hidden phenomena of chemistry, and consequently of all natural philosophy.

In D.S.L. Cardwell (ed.)

*John Dalton & the Progress of Science*

Quoted by Arnold Thackeray

*Quantified Chemistry – The Newtonian Dream* (p. 102)

Manchester University Press. Manchester, England. 1968

### **McGee, Jr., H. A.**

No biographical data available

As a profession we are justly proud of our great breadth, for we are the only applied science profession with in-depth training in chemistry as well as in physics and mathematics. Our background and perspective as scientist-engineers make for flexibility and adaptability that is the envy of our sister disciplines.

*Chemical Engineering Education*, Volume 9, Number 2, 1974( (p. 94)

### **Pigford, R. L.**

No biographical data available

The chemical engineer...needs to understand chemistry, physics, and mathematics in approximately equal proportion in order that he, apparently better than those from other backgrounds, can assemble and evaluate whatever knowledge is required to “bring things together.”

*Chemical Engineering Technology: The Past 100 Years*

*Chemical Engineering News*, Volume 54, Number 15, 1976 (p. 190)

### **Reese, C. L.**

No biographical data available

Our friends from the Massachusetts Institute of Technology have, perhaps, done more to establish the idea of what a chemical engineer is than anyone else, and there idea is that a chemical engineer is one who understands and knows and has learned the fundamentals of the elementary processes such as distillation, filtration, precipitation, flow of gases and liquids, heat transmission, and so on.

Presidential Address

*Transactions of the Institute of Chemical Engineering*, Volume 2, 1924 (p. 16)

## CHEMICAL ANALYSIS

### Author undetermined

A qualitative chemical analysis is like a judicial inquiry: It is a rigorous examination and confrontation of witnesses – of witnesses who can be compelled to answer truly only by the strictest candor and painstaking on the part of the interrogator, but who thus interrogated will not fail to give reliable evidence.

Experimental Science as the Basis of General Education  
*The London Lancet*, 1868 (p. 316)

### Dalton, John 1766–1844

English chemist and physicist

Chemical analysis and synthesis go no farther than to the separation of particles one from another, and to their reunion. No new creation or destruction of matter is within the reach of chemical agency. We might as well try to introduce a new planet into the solar system, or to annihilate one already in existence, as to create or destroy a particle of hydrogen.

*John Dalton*

Chapter VII

J.M. Dent & Co. London, England. 1906

### Doyle, Sir Arthur Conan 1859–1930

Scottish writer

I found Sherlock Holmes alone, however, half asleep, with his long, thin form curled up in the recesses of his armchair. A formidable array of bottles and test-tubes, with the pungent cleanly smell of hydrochloric acid, told me that he had spent his day in the chemical work which was so dear to him.

“Well, have you solved it?” I asked, as I entered.

“Yes. It was the bisulphate of baryta.”

“No, no, the mystery!” I cried.

*The Adventures of Sherlock Holmes*

*A Case of Identity* (pp. 69–70)

Harper & Brothers Publishers. New York, New York, USA. 1892

### Hugo, Victor 1802–85

French author, lyric poet, and dramatist

Supposing the entity of the poet to be expressed by the number ten, it is certain that a chemist in analyzing... would find it to be composed of one part self-interest to nine parts of self-esteem.... Gringoire’s nine parts of self-esteem, swollen and inflated by the breath of popular admiration, were in a state of prodigious enlargement, obliterating that almost imperceptible molecule of self-interest ...

Translated by Jessie Haynes

*Notre Dame de Paris*

Chapter 3 (pp. 28–29)

P.F. Collier & Son. New York, New York, USA. 1902

### von Liebig, Justus 1803–73

German organic chemist

The chemist, by his questions, compels a mineral to speak, to disclose its composition; it tells him that it contains sulphur, iron, chromium, silica, alumina, or any other word of the chemical language of phenomena, arranged in a certain order. This is CHEMICAL ANALYSIS.

In John Blyth

*Familiar Letters on Chemistry* (4th edition)

Letter I (p. 10)

Walton & Maberly. London, England. 1859

## CHEMICAL BOND

### Boyle, Robert 1627–91

English natural philosopher and theological writer

But there may be some clusters of particles, wherein the particles are so minute, and the coherence so strict, or both, that when bodies of differing denominations, and consisting of such durable clusters, happen to be mingl’d, though the compound body made up of them may be very differing from either of the ingredients, yet each of the little masses or clusters may so retain its own nature, as to be again separable, such as it were before.

*The Sceptical Chymist*

The Second Part (p. 87)

J.M. Dent & Sons. London, England. 1911

### Brown, I. David

No biographical data available

It is unlikely that, left to themselves, theoretical chemists in the twentieth century would have ever created the idea of a chemical bond had not the concept already been central to the language of structural chemistry. To this day, the chemical bond remains largely an empirical concept.

*The Chemical Bond in Inorganic Chemistry: The Bond Valence Model*

Chapter 1 (p. 30)

Oxford University Press, Inc. Oxford, England. 2002

## CHEMICAL CHANGE

### Author undetermined

The difference between a physical and a chemical change is that a chemical change evaporates and a physical change remains the same.

Classroom Emanations

*Journal of Chemical Education*, Volume 2, Number 7, July, 1925

(p. 611)

### Mendeleev, Dmitry Ivanovich 1834–1907

Russian chemist

...the unseen world of chemical changes is closely analogous to the visible world of the heavenly bodies, since our atoms form distinct portions of an invisible world,

as planets, satellites, and comets form distinct portions of the astronomer's universe; our atoms may therefore be compared to the solar systems, or to the systems of double or of single stars: for example, ammonia (NH<sub>3</sub>) may be represented in the simplest manner by supposing the sun, nitrogen, surrounded by its planets of hydrogen; and common salt (NaCl) may be looked on as a double star formed of sodium and chlorine.

*The Principles of Chemistry* Part IV

Appendix I (p. 454)

P.F. Collier & Son. New York, New York, USA. 1902

## CHEMICAL COMBINATION

**Mendeleev, Dmitry Ivanovich** 1834–1907

Russian chemist

Thanks to the genius of Lavoisier and of Dalton, man has been able, in the unseen world of chemical combinations, to recognise laws of the same simple order as those which Copernicus and Kepler proved to exist in the planetary universe. Man discovered, and continues every hour to discover, what remains unchanged in chemical evolution, and how changes take place in combinations of the unchangeable.

*The Principles of Chemistry* Part IV

Appendix I (p. 455)

P.F. Collier & Son. New York, New York, USA. 1902

## CHEMICAL COMPOUND

### ACETYL-CHOLINE

**Dale, Sir Henry Hallett** 1875–1968

English physiologist

The question of a possible physiological significance, in the resemblance between the action of choline esters and the effects of certain divisions of the involuntary nervous system, is one of great interest, but one for the discussion of which little evidence is available. Acetyl-choline is, of all the substances examined, the one whose action is most suggestive in this direction. The fact that its action surpasses even that of adrenaline, both in intensity and evanescence, when considered in conjunction with the fact that each of these two bases reproduces those effects of involuntary nerves which are absent from the action of the other, so that the two actions are in many directions at once complementary and antagonistic, gives plenty of scope for speculation. The Action of Certain Esters and Ethers of Choline, and Their Relation to Muscarine

## CARBON DIOXIDE

### Author undetermined

When you smell an odorless gas, it is probably carbon dioxide.

Source undetermined

## CHLORACETENE

**Schorlemmer, Carl** 1834–92

German chemist

They [Kekule and Zincke] found, as the result of their research, that Kegnault's statements were perfectly correct, and that chloracetene possessed, besides other remarkable properties, that of non-existence!

*The Rise and Development of Organic Chemistry* (p. 152)

Macmillan & Co Ltd. London, England. 1894

## CHLOROPHYLL

**Peattie, Donald Culross** 1898–1964

American botanist, naturalist, and author

For inert and inorganic elements – water and carbon dioxide of the air, the same that we breathe out as a waste – chlorophyll can synthesize with the energy of sunlight. Every day, every hour of all the ages, as each continent and, equally important, each ocean rolls into sunlight, chlorophyll ceaselessly creates. Not figuratively, but literally, in the grand First Chapter Genesis style. One instant there are a gas and water, as lifeless as the core of earth or the chill of space; and the next they are become living tissue-mortal yet genitive, progenitive, resilient with all the dewy adaptability of flesh, ever changing in order to stabilize some unchanging ideal of form.

*Flowering Earth*

Chapter 3 (pp. 24–25)

G.P. Putnam's Sons. New York, New York, USA. 1939

**NITRE****Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

It is easy for sugar to be sweet and for nitre to be salt.

*Representative Men*

Uses of Great Men (p. 12)

Houghton, Mifflin & Co. Boston, Massachusetts, USA. 1883

**Poe, Edgar Allan** 1809–49

American short story writer

“The nitre!” I said; “see, it increases. It hangs like moss upon the vaults. We are below the river’s bed.”

Translated by Jessie Haynes

*The Fall of the House of Usher*

The Cask of Amontillado (p. 81)

Walter Scott. London, England. 1889

**SODA****Alcott, Louisa May** 1832–88

American author

“Ask Asia for a cup of sour cream, then your cakes will be light without much soda, which I don’t like,” was the first order.

Demi tore down-stairs, and returned with the cream, also a puckered-up face, for he had tasted it on his way, and found it so sour that he predicted the cakes would be uneatable. Mrs. Jo took this occasion to deliver a short lecture from the step-ladder on the chemical properties of soda, to which Daisy did not listen, but Demi did, and understood it, as he proved by the brief but comprehensive reply \_\_\_

“Yes, I see, soda turns sour things sweet, and the fizzling up makes them light.”

*Little Men*

Chapter V (p. 85)

Bernhard Tauchnitz

Leipzig, Germany. 1879

**CHEMICAL ELEMENT****Muller, Herbert Joseph** 1905–80

American historian and educator

To say, for example, that a man is made up of certain chemical elements is a satisfactory description only for those who intend to use him as a fertilizer.

*Science and Criticism* (p. 107)

Yale University Press. New Haven, Connecticut, USA. 1943

**CHEMICAL ENGINEERING****Davis, George E.**

No biographical data available

Chemical Engineering must not be confounded with either Applied Chemistry or with Chemical Technology, as the three studies are distinct. Chemical Engineering runs through the whole range of manufacturing chemistry, while Applied Chemistry simply touches the fringes of it and does not deal with the engineering difficulties even in the slightest degree, while Chemical Technology results from the fusion of the studies of Applied Chemistry and Chemical Engineering, and becomes specialised as the history and details of certain manufactured products.

*A Handbook of Chemical Engineering* (Volume 1)

Chapter I (p. 4)

Davis Brothers. Manchester, England. 1904

**Whitney, Willis Rodney** 1868–1958

American chemical and electrical engineer

Chemistry was the plaything of magicians, monks and pure-science teachers centuries before chemical engineering became a comprehensible term.

The Stimulation of Research in Pure Science Which Has Resulted from the Needs of Engineers and of Industry

*Science*, Volume 65, Number 1862, March 25, 1927 (p. 288)

**CHEMICAL EQUILIBRIUM****La Chatelier, Heuri** 1850–1936

No biographical data available

Every system in chemical equilibrium undergoes, in consequence of a variation of one of the factors of equilibrium, a transformation in such a sense as to produce a variation of sign opposite to that of the factor in question.

## CHEMICAL OPERATIONS

**Marcet, Mrs. (Jane Haldimand)** 1769–1858  
 English expository author in chemistry, botany, religion, and economics

Nature also has her laboratory which is the universe, and there she is incessantly employed in chemical operations. *Conversations on Chemistry In Which the Elements of that Science Are Familiarly Explained and Illustrated by Experiments* Conversation X (pp. 1–2)  
 Oliver D. Cooke  
 Hartford, Connecticut, USA. 1822

## CHEMICAL PHILOSOPHY

**Davy, Sir Humphry** 1778–1829  
 English chemist

The foundations of chemical philosophy are, observation, experiment, and analogy. By observation, facts are distinctly and minutely impressed on the mind. By analogy, similar facts are connected. By experiment, new facts are discovered; and, in the progression of knowledge, observation, guided by analogy, leads to experiment, and analogy confirmed by experiment, becomes scientific truth.  
 In J. Davy  
*The Collected Works of Sir Humphry Davy* (Volume 4)  
 Historical View of the Progress of Chemistry (p. 2)  
 Smith, Elder & Co. London, England. 1840

## CHEMICAL PROCESS

**Nicholson, William**  
 No biographical data available

The beginning and end of every exact chemical process consists in weighing.  
*A Dictionary of Practical and Theoretical Chemistry*  
 Balance  
 Printed for Richard Phillips. 1808

**von Helmholtz, Hermann** 1821–94  
 German scientist and philosopher

Accurate experiments have shown that the quantity of heat which is developed by a chemical process – for instance, in burning a pound of pure carbon into carbonic acid – is perfectly constant, whether the combustion is slow or rapid, whether it takes place all at once or by intermediate stages.  
 Translated by E. Atkinson  
*Popular Lectures on Scientific Subjects*, First Series  
 On the Conservation of Force (p. 343)  
 D. Appleton & Co. New York, New York, USA. 1897

## CHEMICAL PROPORTIONS

**Berzelius, Jöns Jacob** 1779–1848  
 Swedish chemist

The fact that bodies combine in definite proportions when other forces do not oppose their re-union, added to the observation that when two bodies, A and B, combine in different proportions, the additional portions of the one are always multiples by whole numbers, 1, 2, 3, 4, &c. lead us to conclude the existence of a cause in consequence of which all other combinations become impossible. Now what is that cause? It is obvious that the answer to this question must constitute the principal basis of chemical theory.

II. On the Cause of Chemical Proportions

*Annals of Philosophy*

Essay on the Cause of Chemical Proportions, and on Some Circumstances Relating to Them: Together with a Short and Easy Method of Expressing Them  
 Volume 2 1813

## CHEMICAL TABLE

**Emerson, Ralph Waldo** 1803–82  
 American lecturer, poet, and essayist

Every substance is negatively electric to that which stands above it in the chemical tables, positively to that which stands below it.

*Essays*

Intellect (p. 303)

Houghton Mifflin & Co. Boston, Massachusetts, USA. 1873

## CHEMIST

**Adams, John**  
 No biographical data available

Chymists! Pursue your experiments with indefatigable ardour and perseverance. Give us the best possible Bread, Butter, and Cheese, Wine, Beer and Cider, Houses, Ships and Steamboats, Gardens, Orchards, Fields, not to mention Clothiers or Cooks. If your investigations lead accidentally to any deep discovery, rejoice and cry “Eureka!” But never institute any experiment with a view or a hope of discovering the first and smallest particles of matter.

In Paul R. Heyl

*Annual Report of the Board of Regents of the Smithsonian Institution* (1933)

Romance or Science? (p. 285)

Government Printing Office. Washington, D.C. 1934

**Armstrong, Henry Edward** 1848–1937  
 English chemist

The fact is, there has been a split of chemistry into two schools since the intrusion of the Arrhenic faith, rather it should be said, the addition of a new class of worker into our profession – people without knowledge of the laboratory arts and with sufficient mathematics at their

command to be led astray by curvilinear agreements; without the ability to criticize, still less of giving any chemical interpretation.

The fact is, the physical chemists never use their eyes and are most lamentably lacking in chemical culture. It is essential to cast out from our midst, root, and branch, this physical element and return to our laboratories.

*Historical Studies in the Physical Sciences* (Volume 7)

In R.G.A. Dolby

Debates Over the Theory of Solution

Volume 7, 1976 (p. 389)

Princeton University Press. Princeton, New Jersey, USA. 1976

### **Arnheim, Rudolf** 1904–2007

German-born author, film theorist, and psychologist

Just as chemists “isolate” a substance from contaminations that distort his view of nature and effects, so the work of art purifies significant appearance. It presents abstract themes in their generality, but not reduced to diagrams.

*Visual Thinking*

Chapter 14 (p. 273)

Faber & Faber Ltd. London, England. 1969

### **Atkins, Peter William** 1940–

English physical chemist and writer

Chemists currently strive to achieve the fine control exercised by nature. To do so, they stir, pour, heat, and distill, just as they have done ever since their intellectual ancestors vainly sought a reaction that would produce gold from lead. These crude processes seem to be ways of bending matter to our will and forcing it to undergo specific change. Modern chemists, though, use these techniques to direct reactions more precisely and rationally than alchemists, cooks, and Faraday’s contemporaries. They may seek to build complex molecules, and to do so proceed by stealth and subtlety.... They have found ways to emulate (and sometimes improve on) nature by mixing, stirring, and heating in such a way that they do not break asunder what they have already joined – even though they cannot manipulate the atoms directly.

Atoms, Electrons, and Change

*Scientific American Series*, Number 36, 1991 (p. 11)

### **Author undetermined**

A microchemist is a man who does microanalysis or microsynthesis. He studies microreactions in microtest-tubes. He collects microprecipitates on microfilters and weighs them on a microbalance, or makes microtitrations with microburets, and records the results in a micronote-book. Then he writes Macropapers for the microjournals.

A Microtreatise on Microchemistry

*Industrial and Engineering Chemistry: News Edition*, Volume 13, Number 14, July 20, 1935 (p. 312)

The Chemist’s rule: Never take more than three data points. There will always be some kind of graph paper on which they fall in a straight line.

The Chemist’s rule, first corollary: if you have only one kind of graph paper, never take more than two data points.

Source undetermined

To the optimist, the glass is half full.

To the pessimist, the glass is half empty.

To the chemist, the glass is twice as big as it needs to be.

Source undetermined

A chemist, a physicist, and a geologist were walking along a beach when the physicist suddenly said that he wanted to measure the depth of the sea, and then he jumped into the sea. The geologist said that he wanted to see the seabed and he followed suit. The chemist waited for a while for them to reappear and then concluded, physicists and geologists are soluble in sea water.

Source undetermined

It’s amino world without chemists.

Source undetermined

### **Ball, Philip** 1962–

English science writer

Geologists brave the awesome fury of volcanoes and earthquakes; oceanographers plumb the hidden depths of the world. What do chemists do? Well, they make paint, among other things.

*Designing the Molecular World: Chemistry at the Frontier*

Introduction (p. 4)

Princeton University Press. Princeton, New Jersey, USA. 1994

### **Becher, Johann Joachim** 1635–82

German physician, alchemist, and early chemist

The chymists are a strange class of mortals impelled by an almost insane impulse to seek their pleasure among smoke and vapour, soot and flame, poisons and poverty; yet among all these evils I seem to live so sweetly, that may I die if I would change places with the Persian King.

In H.E. Howe (ed.)

*Chemistry in Industry* (Volume 1)

Frontispiece

The Chemical Foundation, Inc. New York, New York, USA. 1924

### **Black, Joseph** 1728–99

Scottish chemist and physician

The chemist studies the effects produced by heat and by mixture, in all bodies, or mixtures of bodies, natural or artificial, and studies them with a view to the improvement of arts and the knowledge of nature.

*Lectures on the Elements of Chemistry* (Volume 1)

Lectures on the Elements of Chemistry (11)  
Volume II (p. 415)

Kisses, l. 11–12  
Harper & Brothers. New York, New York, USA. 1884

**Collins, Wilkie** 1824–89  
English novelist

Mind, they say, rules the world. But what rules the mind? The body. The body (follow me closely here) lies at the mercy of the most omnipotent of all potentates – the Chemist. Give me – Fosco – chemistry; and when Shakespeare has conceived Hamlet, and sits down to execute the conception – with a few grains of powder dropped into his daily food, I will reduce his mind, by the action of his body, till his pen pours out the most abject drivel that has ever degraded paper. Under similar circumstances, revive me the illustrious Newton. I guarantee that, when he sees the apple fall, he shall eat it, instead

of discovering the principle of gravitation. Nero's dinner shall transform Nero into the mildest of me before he has done digesting it; and the morning draught of Alexander the Great shall make Alexander run for his life, at the first sight of the enemy, the same afternoon. On my sacred word of honor, it is lucky for society that modern chemists are, by incomprehensible good fortune, the most harmless of mankind. The mass are worthy fathers of families who keep shops. The few are philosophers besotted with admiration for the sound of their own lecturing voices; visionaries who waste their lives on fantastic impossibilities; or quacks whose ambition soars no higher than our corns. Thus Society escapes; and the illimitable power of chemistry remains the slave of the most superficial and the most insignificant ends.

### Crookes, Sir William 1832–1919

English chemist and physicist

Chemists do not usually stutter. It would be very awkward if they did, seeing that they have at times to get out such words as methylethylamylophenylium.

In William H. Brock

*The Norton History of Chemistry*

Introduction (p. xxvi)

W.W. Norton & Company, Inc. New York, New York, USA. 1933

It is the chemist who must come to the rescue of the threatened communities. It is through the laboratory that starvation may ultimately be turned to plenty.

*Report of the British Association for the Advancement of Science* (p. 4)

1898

### Crowther, Greg

American biologist

Mamas don't let your babies grow up to be chemists.  
Don't let 'em teach or go or work at the Hutch;  
Make 'em be bankers and lawyers and such.  
Mamas don't let your babies grow up to be chemists.  
With every involvement, they end up in solvent,  
Smelling bad and inhaling too much.

*Mamas Don't Let Your Babies Grow Up to Be Chemists*

Sung to the tune of "Mamas Don't Let Your Babies Grow Up To Be Cowboys"

### Curie, Eve 1904–

French concert pianist and journalist

By definition, a chemist only believes in the existence of a new substance when he has seen the substance, touched it, weighed and examined it, confronted it with acids, bottled it, and when he has determined its "atomic weight."

*Madame Curie*

Chapter XIII (p. 165)

The Literary Guild of America, Inc. New York, New York, USA. 1937

### Davy, Sir Humphry 1778–1829

English chemist

The person who wishes to understand the higher departments of chemistry, or to pursue them in their most interesting relations to the economy of Nature, ought to be well-grounded in elementary mathematics; he will oftener have to refer to arithmetic than algebra, and to algebra than to geometry. But all these sciences lend their aid to chemistry ...

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 172)

Cassell & Co., Ltd. London, England. 1889

I will say a few words of the intellectual qualities necessary for discovery or for the advancement of the science. Amongst them patience, industry, and neatness in manipulation, and accuracy and minuteness in observing and registering the phenomena which occur, are essential. A steady hand and a quick eye are most useful auxiliaries ...

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 174)

Cassell & Co., Ltd. London, England. 1889

A steady hand and a quick eye are most useful auxiliaries; but there have been very few great chemists who have preserved these advantages throughout life; for the business of the laboratory is often a service of danger and the elements, like the refractory spirits of romance, through the obedient slave of the magician, yet sometimes escape the influence of his talisman and endanger his person. Both the hands and the eyes of others however may sometimes advantageously [be] made use of.

*Consolations in Travel; or The Last Days of a Philosopher*

Dialogue V (pp. 251–252)

 Polish-born American chemist

I had written three pages on how insects are such good chemists, citing the silkworm sex attractant, and the bombardier beetle, spraying out hot hydrogen peroxide when threatened.

*Gaps and Verges*

Evolution (p. 3)  
 University of Central Florida Press. Orlando, Florida, USA. 1990

**Holmes, Harry N.**  
 No biographical data available

The chemist deals with a very material world, even though philosophers assure him that he doesn't really know matter, that he only perceives its attributes or properties. However, he is not to be argued out of his dinner by mere words.

*Out of the Test Tube*

Chapter II (p. 24)  
 Emerson Books, Inc. New York, New York, USA. 1941

**Ihde, Aaron J.**  
 No biographical data available

The person who is merely trained to carry out analyses or syntheses can do his job quite satisfactorily without knowing any history of chemistry. On the other hand, the chemist who is in a position where he has significant

responsibility for the planning of investigations needs to know something about the past history of chemical investigation and the development of chemical thought. Without such knowledge, he is merely a chemical technologist.

Let's Teach History of Chemistry to Chemists!

*Journal of Chemical Education*, Volume 48, 1971 (pp. 686–687)

**Kiernan, James G.**  
 No biographical data available

Chemists are like mathematicians, peculiarly liable to a dogmatic cast of mind, which precludes them from seeing the forest for the trees.

Mental Advance in Women and Race Suicide

*Alienist and Neurologist*, Volume 30 (p. 594)

**Laitinen, H. A.**  
 No biographical data available

The analytical chemist properly serves his role as a chemical measurements specialist only if he is a full partner in the interdisciplinary team concerned with solving the problem.

*Annals of Chemistry*, Volume 47, 1975 (p. 2073)

**Lavoisier, Antoine Laurent** 1743–94  
 French chemist

It ought likewise to be considered, that very little of chemistry can be learned in a first course, which is hardly sufficient to make the language of the science familiar to the ears, or the apparatus familiar to the eyes. It is almost impossible to become a chemist in less than three or four years of constant application.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xix)

Printed for William Creech. Edinburgh, Scotland. 1790

**Lehn, Jean-Marie** 1939–  
 French chemist

Like the artist, the chemist engraves into matter the products of creative imagination. The stone, the sounds, the words do not contain the works that the sculptor, the composer, the writer express from them. Similarly, the chemist creates original molecules, new materials, and novel properties from the elements produced by nature, indeed entire new worlds, that did not exist before they were shaped at the hands of the chemist, like matter is shaped by the hands of the artist, as so powerfully rendered by August Rodin.

*Supramolecular Chemistry: Concepts and Perspectives: A Personal Account Built upon the George Fisher Baker Lectures in Chemistry at Cornell University (and the) Lezione Lincee, Accademia Nazionale dei Lincei, Roma*

Chapter 10.3 (p. 206)

VCH. Weinheim, Germany. 1995

**Leonard, Jonathan Norton** 1903–75  
 American writer

It isn't the fault of the chemists that this change of pace has occurred. It is because chemistry, more than other sciences, is limited by definition. Its province is the molecule and its transformations. It does not penetrate into the atom. That is physics. It does not pry into the living cell. That is biology. There's an invisible line beyond which a modern chemist cannot go without becoming a physicist or a biologist. The chemists are like a group of settlers on a large and fertile island who have pushed their frontier to the sea on all sides and are left with the choice of migrating to other lands or staying at home to develop the ground they have won.

*Crusaders of Chemistry: Six Makers of the Modern World*  
The Harvest of Peaceful Middle Age  
Doubleday, Doran. Garden City, New York, USA. 1930

**Levi, Primo** 1919–87  
Italian writer and chemist

A chemist cannot find, already in his mind, the laws and the phenomena which govern matter.

Chapter XXI (p. 171)

John Murray. London, England. 1847

**Minsk, Louis M.**  
No biographical data available

Here's to the chemist – a most extraordinary guy.  
Who does lots of things, he doesn't know why.  
The number of errors he throws down the sink,  
Lends one to believe that he seldom does think.  
His words are so blunt, his manner so rough  
Five minutes with him is more than enough.  
But don't pity him, he leads a great life,  
Rather pity the woman he chose for a wife.  
God bless her and keep her and please make her brave

To share with her husband all cares slight and grave.  
But, too, make her thankful – to this hark and list,  
She might have done worse – with some physicist.

Ode to a Chemist and his Wife

*Industrial and Engineering Chemistry: News Edition*, Volume 15,  
Number 22, December, 1937

**Moore, Jared Sparks** 1879–1951  
American psychologist

...the chemist cares for the constitution of the deadly poison as much as for that of the helpful drug.

*The Foundations of Psychology*

Book II, Chapter IV (p. 100)

Princeton University Press. Princeton, New Jersey, USA. 1921

**Mukaiyama, Teruaki** 1927–  
Japanese chemist and scientific statesman

In studies of new synthetic reactions, a detailed study of the observed phenomenon will provide you with a hint that could be a 'seed' to open an entirely new area of promising development. To cherish the 'seed' that is picked up by your own hands, and to let its roots spread deep into the soil, will surely lead you to further interesting possibilities. Chemists should always bear in mind that to realize their goals they need to practice their bench work daily. It will surely make your dreams come true.

*Challenges in Synthetic Organic Chemistry*

Chapter 13 (pp. 210–211)

**Nickon, Alex**  
Organic chemist

**Silversmith, Ernest E.**  
No biographical data available

Organic chemists need to keep a great many facts and concepts in their heads. Not surprising, therefore, they sometimes name compounds after head coverings, protecting, as it were, this storehouse of knowledge.

*Organic Chemistry: The Name Game*

Chapter 2 (p. 20)

Chemists spend a good deal of time inside buildings, so it is natural for them to relate the shapes of molecules to the ubiquitous structures.

*Organic Chemistry: The Name Game*

Chapter 4 (p. 50)

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932  
Latvian-born German chemist

All these sticky, mucilaginous, resinous, tarry masses which refuse to crystallize, and which are the abomination of the normal organic chemist; those substances which he carefully sets toward the back of his cupboard and marks "not fit for further use," just these are the substances which are the delight of the colloid chemist.

*An Introduction to Theoretical and Applied Colloid Chemistry*  
*The World of Neglected Dimensions*  
 Fourth Lecture (p. 134)

**Playfair, John** 1748–1819

Scottish geologist, physicist, and mathematician

The chemist, indeed, is flattered more than anyone else with the hopes of discovering in what the essence of matter consists; and Nature, while she keeps the astronomer and the mechanic at a great distance seems to admit him to a more intimate acquaintance with her secrets. The vast powers which he has acquired over matter, the astonishing transformations which he effects, his success in analysing almost all bodies, and in reproducing so many, seem to promise that he shall one day discover the essence of a substance which he has so thoroughly subdued ...

Biographical account of the Late James Hutton

**Pope, Alexander** 1688–1744

English poet

The starving chemist in his golden views

Supremely blest.

*The Complete Poetical Works of Pope*

*An Essay on Man*

Epistle II

**Primo, Levi** 1919–87

Italian writer and chemist

I thought of another moral, more down to earth and concrete, and I believe that every militant chemist can confirm it: that one must distrust the almost-the-same (sodium is almost the same as potassium, but with sodium nothing would have happened), the practically identical, the approximate, all surrogates, and all patchwork. The differences can be small, but they can lead to radically different consequences, like a railroad's switch points: the chemist's trade consists in good part of being aware of these differences, knowing them close up and foreseeing their effects. And not only the chemist's trade.

Translated by Raymond Rosenthal

*The Periodic Table*

Potassium (p. 60)

New York, New York, USA. 1984

We chemists...are here for this – to make mistakes and to correct ourselves, to stand the blows and hand them out. We must never feel disarmed: nature is immense and complex, but it is not impermeable to the intelligence; we must circle around it, pierce and probe it, looking for the opening or making it.

Translated by Raymond Rosenthal

*The Periodic Table*

Nickel (p. 75)

New York, New York, USA. 1984

The trade of chemist (fortified, in my case, by the experience of Auschwitz), teaches you to overcome, indeed to ignore, certain revulsions that are neither necessary or congenital: matter is matter, neither noble nor vile, infinitely transformable, and its proximate origin is of no importance whatsoever. Nitrogen is nitrogen, it passes miraculously from the air into plants, from these into animals, and from animals into us; when its function in our body is exhausted, we eliminate it, but it still remains nitrogen, aseptic, innocent.

Translated by Raymond Rosenthal

*The Periodic Table*

Nitrogen (pp. 180–181)

New York, New York, USA. 1984

...to see if I could convey to the layman the strong and bitter flavor of our trade, which is only a particular instance, a more strenuous version of the business of living. I told him that it did not seem fair to me that the world should know everything about how the doctor, prostitute, sailor, assassin, countess, ancient Roman, conspirator, and Polynesian lives and nothing about how we [the chemist] transformers of matter live....

Translated by Raymond Rosenthal

*The Periodic Table*

Silver (p. 203)

New York, New York, USA. 1984

**Prudhomme, Sully** 1839–1907

French poet

Surrounded by beakers, by strange coils,  
 By ovens and flasks with twisted necks,  
 The chemist, fathoming the whims of attractions,  
 Artfully imposes on them their precise meetings.

In Helen Plotz

*Imagination's Other Place*

The Naked World

Thomas Y. Crowell Company. New York, New York, USA. 1955

Chemistry is the central subject in a liberal arts curriculum. It stands between the traditional humanities on the one hand and modern physics on the other hand.

*Chemical and Engineering News*, March 12, 1984 (p. 44)

**Bernal, John Desmond** 1901–71

Irish-born physicist and X-ray crystallographer

Chemistry, far more than physics, was the dominant science of the nineteenth century. This is so, in spite of the fact that the major physical discoveries found their development and application in the steam engine at the beginning and electric power at the end of the century. With chemistry, however, there was a far larger number of new processes that could be turned more immediately to profitable use, and this afforded directly and indirectly for the training and employment of an ever-increasing number of chemists. Indeed from the beginning of the century and increasingly till its end the chemists were the most numerous of the newly differentiated groups of scientists.

*Science and Industry in the Nineteenth Century* (pp. 70–72)

Indiana University Press. Bloomington, Indiana, USA. 1953

...the old chemistry was largely a matter of memory, a set of cookery recipes that had, for no apparent reason but to worry the student, to be learnt by heart.

*Supramolecular Chemistry: Concepts and Perspectives: A Personal Account Built upon the George Fisher Baker Lectures in Chemistry at Cornell University (and the) Lezione Lincee, Accademia Nazionale dei Lincei, Roma*

Chapter 10.3 (p. 206)

VCH. Weinheim, Germany. 1995

Chemistry is not a primitive science, like geometry or astronomy; it is constructed from the debris of a previous scientific formation; a formation half chimerical and half positive, itself founded on the treasure slowly amassed by the practical discoveries of metallurgy, medicine, industry, and domestic economy. It has to do with alchemy, which pretended to enrich its adepts by teaching them to manufacture gold and silver, to shield them from diseases by the preparation of the panacea, and finally to obtain for them perfect felicity by identifying them with the soul of the world and the universal spirit.

Quoted in Matthew Moncrieff Pattison Muir

*A History of Chemical Theories and Laws*

Part I, Chapter I (p. 2)

John Wiley & Sons. New York, New York, USA. 1907

**Berzelius, Jöns Jacob** 1779–1848

Swedish chemist

Of all the sciences contributing to medicine, chemistry is the primary one, and, apart from the general light it throws on the entire art of healing, it will soon bestow on some of its branches a perfection such as one never could have anticipated.

In J. Erik Jorpes

*Jac. Berzelius* (p. 7)

University of California Press. Berkeley, California, USA. 1970

**Biggs, Noah** fl. 1651

English medical practitioner

I praise God who hath been so bountiful to me as to call me to the practise of Chymistry, out of the dregs of other Professions: Since Chymistry hath principles not drawn from fallacious reasonings, but such as are known by nature, and conspicuous by fire; and she prepared the Intellect to penetrate, not the upper deck or surface of things, but the deep hold, the concentric and hidden things of nature, and makes an investigation into the America of nature...

*The Vanity of the Craft of Physick* (p. 57)

Printed for Edward Blackmore. London, England. 1651

**Black, Joseph** 1728–99

Scottish chemist and physician

Chemistry is not yet a science. We are very far from the knowledge of first principles. We should avoid everything that has the pretensions of a full system. The whole of chemical science should, as yet, be analytical, like Newton's Optics, in the form of a general law, at the very end of our induction, as the reward of our labour.

I think that I shall never see  
A test as hard as Chemistry,  
A test that makes you stir and squirm  
And wonder if you'll pass this term,  
A test that makes you tear your hair  
And wish you were not sitting there,  
A test that turns your hair to snow  
Because it asks you what you don't know.  
Tests are flunked by fools like me  
Especially when in Chemistry.

Elsevier Publishing Company, Amsterdam, Netherlands. 1966

### **Dana, James Dwight** 1813–95

American geologist

Science has no explanation for the origin of Life. The living organism instead of being a product of physical or chemical forces, controls these forces for its highest forms.

*Manual of Geology, Treating of the Principles of the Science with Special Reference to American Geological History*

Iverson, Blakeman, Taylor & Co. New York, New York, USA. 1880

### **Davy, Sir Humphry** 1778–1829

English chemist

The higher mathematics and pure physics appear to me to offer much more noble objects of contemplation and fields of discovery, and, practically considered, the results of the chemist are much more humble, belonging principally to the apothecary's shop and the kitchen.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 158)

Cassell & Co., Ltd. London, England. 1889

...in general, both the principles of chemistry are followed, and series of experiments performed without any view to utility; and a great noise is made if a new metal or a new substance is discovered, or if some abstracted law is made known relating to the phenomena of nature; yet, amongst the variety of new substances, few have been applied to any trifling use even, and the greater number have had no application at all.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 166)

Cassell & Co., Ltd. London, England. 1889

The results of this science [chemistry] are not like the temples of the ancients, in which statues of the gods were placed, where incense was offered and sacrifices were performed, and which were presented to the adoration of the multitude founded upon superstitious feelings; but they are rather like the palaces of the moderns, to be admired and used, and where the statues, which in the ancients raised feelings of adoration and awe, now produce only feelings of pleasure, and gratify a refined taste.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 169)

Cassell & Co., Ltd. London, England. 1889

Chemistry relates to those operations by which the intimate nature of bodies is changed, or by which they acquire new properties.

*Consolations in Travel: Or, The Last Days of a Philosopher*

Dialogue the Fifth (p. 171)

Cassell & Co., Ltd. London, England. 1889

Chemistry relates to those operations by which the intimate nature of bodies is changed, or by which they acquire new properties. This definition will not only apply to the effects of mixture, but to the phenomena of electricity, and in short to all the changes which do not merely depend upon the motion or division of masses of matter.

*Consolations in Travel; or the Last Days of a Philosopher*

Dialogue V (pp. 247–248)

John Murray. London, England. 1830

It may be said of modern chemistry, that its beginning is pleasure, its progress knowledge and its object truth and utility.

*Consolations in Travel; or The Last Days of a Philosopher*

Dialogue V (p. 251)

John Murray. London, England. 1830

Chemistry is that part of Natural Philosophy which relates to those intimate actions of bodies upon each other, by which their appearances are altered, and their individuality destroyed.

*A Discourse, Introductory to a Course of Lectures on Chemistry* (p. 5)

Press of the Royal Institution of Great Britain. London. 1802

...at no very distant period the whole science [chemistry] will be capable of elucidation by mathematical principles.

The evolution of chemistry is a drama written and enacted by the great chemists.

*Great Chemists*

Preface (p. ix)

Interscience. New York, New York, USA. 1961

**Findlay, Alexander**

No biographical data available

...the end and aim of chemistry is not merely material. Chemistry offers its contribution also to the deeper interests of the human mind. Occupied as he is with the study of material substances and of the marvelous transformations which he is able to bring about in them, the thinking chemist is forced to look below the surface of things and to seek an answer to the fundamental questions relating to the ultimate constitution and structure of matter, and to the forces which govern the changes and transformations which he observes in his laboratory, or which are wrought out in the larger laboratory of Nature.

*Chemistry in the Service of Man*

Chapter I (p. 2)

Longmans, Green & Co. London, England. 1916

**Flory, Paul J.** 1910–85

American physical chemist

...to hold that all chemistry follows deductively from physics and dismiss the matter therewith is to overlook the central role of science in erecting constructs for representation of physical reality in terms rational to the human mind...to present chemistry as a deductive science is to conceal the historical foundations and conceptual framework of the science of molecules and molecular behavior. This viewpoint could conceivably lead ultimately to denial of the rightful existence of chemistry as a separate discipline.

*The Science of Molecules*

*Chemical Engineering News*, Volume 52, Number 30, 1974 (p. 25)

**Fownes, George** 1815–49

English chemist

The Science of Chemistry has for its object the study of the nature and the properties of all the materials which enter into the composition or structure of the earth, the sea, and the air...The highest efforts of Chemistry are constantly directed to the discovery of the general laws or rules which regulate the formation of chemical compounds, and determine the action of one substance upon another. These laws are deduced from careful observation and comparison of the properties and relations of vast numbers of individual substances; – and by this method alone. The science is entirely experimental, and all its conclusions the result of skilful and systematic experimental investigations.

*A Manual of Elementary Chemistry, Theoretical and Practical*

Introduction (p. 37)

Henry C. Lea. Philadelphia, Pennsylvania, USA. 1870

**Glaser, Christophe** 1615–78

Swiss chemist

They that have any true knowledge of this Noble Art, are without doubt fully persuaded of the usefulness of it; for

it is the key which alone can unlock to all Naturalists the door of Nature's secrets...

*The Compleat Chymist; or a New Treatise of Chymistry*

Chapter II (p. 3)

I think that I shall never see

A study as muddled as chemistry,

A study hidden in ponderous books,

Where only a chemist ever looks!

A study written in secret code –

Just numerous equations by the load!

Chemistry was and is and will be –

But I'll never know what it means to me!

Sentiment of a Would-Be Chemistry Student

*Industrial and Engineering Chemistry: News Edition*, Volume 10, Number 20, 20 October, 1932 (p. 257)

### **Haldane, John Burdon Sanderson** 1892–1964

English biologist

Chemistry is not haunted by the phlogiston theory as Christianity is haunted by the theory of a God with a craving for bloody sacrifices.

*Possible Worlds and Other Papers*

Chapter XXXI (p. 243)

Harper & Brothers Publishers. New York, New York, USA. 1928

### **Hamor, William Allan**

No biographical data available

To many intelligent and cultivated persons not specifically instructed in Chemistry, this word recalls confused memories of colored liquids, glistening crystals, dazzling flames, suffocating fumes, intolerable odors, startling explosions, and a chaos of mystifying experiments, the interest in which is proportional to the danger supposed to attend their exhibition.

*The Science-history of the Universe* (Volume 4)

Chapter I (p. 1)

The Current Literature Publishing Co. New York, New York, USA. 1909

### **Heaviside, Oliver** 1850–1925

English electrical engineer, mathematician, and physicist

Chemistry is, so far, eminently unmathematical (and therefore a suitable study for men of large capacity, who may be nearly destitute of mathematical talent – but this by the way), and it appears to communicate a part of its complexity and vagueness to electrical science whenever electrical phenomena which we can study are accompanied by chemical changes.

*Electromagnetic Theory* (Volume 1)

Chapter I (p. 12)

D. van Nostrand Co. New York, New York, USA. 1893

### **Hendrick, Ellwood**

American chemical engineer

Unless a man can have a good tune by himself, just wondering, and thinking about things, and guessing out, as best he can, how they happen, he can have no joy in chemistry.

*Opportunities in Chemistry*

Introduction (p. vii)

Harper & Brothers Publishers. New York, New York, USA. 1919

A knowledge of chemistry is something like a good wife.

It will help a man along in his work, but he must not count on it to support him.

*Opportunities in Chemistry*

Introduction (p. x)

Harper & Brothers Publishers. New York, New York, USA. 1919

There is a kind of cousinship between chemistry and astronomy, but their eyes are pointed in different directions – astronomy has to do with the ways of great masses of matter in their movements throughout illimitable space, while chemistry reasons about and tries out theories in regard to the ways of particles infinitely small.

*Everyman's Chemistry*

Chapter II (p. 16)

Harper & Brothers Publishers. New York, New York, USA. 1917

...chemistry is a study accompanied by constant surprises, and the only authority who "knows all about chemistry" is a poor creature, bereft of imagination.

*Everyman's Chemistry*

Chapter II

Harper & Brothers Publishers. New York, New York, USA. 1917

### **Hinshelwood, Sir Cyril** 1897–1967

English chemist

What the Society is and must continue above all else to be is a fellowship of those who share the love of chemistry, that most splendid child of intellect and art. Chemistry provides not only a mental discipline, but an adventure and an aesthetic experience. Its followers seek to know the hidden causes which underlie the transformations of our changing world, to learn the essence of the rose's colour, the lilac's fragrance, and the oak's tenacity, and

to understand the secret paths by which the sunlight and the air create these wonders.

Centenary Celebration of the Chemical Society  
*Journal of the Chemical Society of London*, 1947 (p. 1277)

### Hoblyn, Richard Dennis

No biographical data available

It will be found that there is no science so intimately connected with the arts of life, with the very life itself of man, as chemistry.

*A Manual of Chemistry* (p. 11)  
Printed for Scott, Webster & Geary  
London, England. 1841

### Hoffer, Eric 1902–83

American longshoreman and philosopher

The chemistry of dissatisfaction is as the chemistry of some marvelously potent tar. In it are the building stones of explosives, stimulants, poisons, opiates, perfumes, and stench.

*The Passionate State of Mind, and Other Aphorisms*  
No. 14  
Harper and Brothers. New York, New York, USA. 1955

### Hoffmann, Roald 1937–

Polish-born American chemist

These chemicals we desire and fear (chemists call them compounds or molecules, once they are reasonably pure) are not the largest (the realm of astronomy), nor the smallest (part of physics). They are squarely, nicely in the middle, on our human scale. Which is why we care about them, not as distanced, hypothetical constructs, but in this world. Those molecules, of pharmaceutical or pollutant, are of just the right size to interact, for better or for worse, with the molecules of our bodies.

*The Same and Not the Same*  
Preface (p. xiv)  
Columbia University Press. New York, New York, USA. 1995

Chemistry, the molecular way of knowing the natural and unnatural, is a remarkable science, prodigal in the way it has changed our world.

*The Same and Not the Same*  
Part One (p. 4)  
Columbia University Press. New York, New York, USA. 1995

Atoms are nice, atoms are fundamental, but they're not chemistry. Chemistry is about molecules, the fixed but transformable way in which atoms get together for a while.

*Chemistry Imagined: Reflections on Science*  
Smithsonian Institution Press. 1993

Chemistry is positioned between the simple world of atoms and the complex nature of biological molecules and real materials.

Tapeworm Quadrilles (p. 20)  
Oxford University Press. Oxford, England. 1997

### Hofmann, A. W.

No biographical data available

Organic chemistry before Kekulé spread his wings was like a merrily splashing torrent; there were so many stones in the water that one could still cross it without getting wet. Today, the torrent has become a deep and massive stream; the eye can hardly see the opposite bank, and proud, richly loaded fleets rock gently on its broad surface.

In W.H. Brock, O.T. Benfey and S. Stark  
Hofmann's Benzene Tree at the Kekulé Festivities  
*Journal of Chemical Education*, Volume 68, 1991

### Holmes, Harry N.

No biographical data available

While you yawn comfortably in your easy chair, chemistry wages desperate battles on many fronts – against man's insect enemies, yet dominant on earth; against disease bacteria that have from time to time threatened to exterminate the race of men; against the frowns and mysteries of Nature.

*Out of the Test Tube*  
Preface (p. ix)  
Emerson Books, Inc. New York, New York, USA. 1941

### Horne, R. A.

No biographical data available

If you bemoan technological compartmentalization, take hope! Consider environmental chemistry. Man is a chemical mote aswim in a chemical soup. All the changes about him, all the changes within him are chemical. Everything he sees and touches, everything he does, and the effect of what he does are chemical. If there is anything in the real world that does not fit under the rubric of environmental chemistry, then I am at a loss to find it.

*The Chemistry of Our Environment*  
Preface (p. vii)  
John Wiley & Sons, Inc. New York, New York, USA. 1978

### Huxley, Thomas Henry 1825–95

English biologist

Looking back through the prodigious vista of the past, I find no record of the commencement of life, and therefore I am devoid of any means of forming a definite conclusion as to the conditions of its appearance. Belief, in the scientific sense of the word, is a serious matter, and needs strong foundations. To say, therefore, in the admitted absence of evidence, that I have any belief as to the mode in which existing forms of life originated, would be using words in a wrong sense. But expectation is permissible where belief is not; and if it were given to me to look beyond the abyss of geologically recorded time to the still more remote period when the Earth was passing through physical and chemical conditions which it can no more see again than a man can recall his infancy,

I should expect to be a witness of the evolution of living protoplasm from not-living matter.

*Collected Essays* (Volume 8)

Biogenesis and Abiogenesis (p. 256)

Macmillan & Company Ltd. London, England. 1904

Medicine was the foster-mother of Chemistry, because it has to do with the preparation of drugs and the detection of poisons; of Botany, because it enabled the physician to recognise medicinal herbs; of Comparative Anatomy and Physiology, because the man who studied Human Anatomy and Physiology for purely medical purposes was led to extend his studies to the rest of the animal world.

Plenum Press. New York, New York, USA. 1972

**King George the Fifth** 1865–1936

First British monarch belonging to the House of Windsor

I fully appreciate the important part which chemistry plays in almost every branch of our modern industry. We all recognise that without a scientific foundation no permanent superstructure can be raised. Does not experience warn us that the rule of thumb is dead, and that the rule of science has taken its place, that today we cannot be satisfied with the crude methods which were sufficient for our forefathers, and that those great industries which do not keep abreast of the advance of science must surely and rapidly decline?

Quoted in Richard Arman Gregory

**Lavoisier, Antoine Laurent** 1743–94

French chemist

I have been obliged to depart from the usual order of courses of lectures and of treatises upon chemistry, which always assume the first principles of the science, as known, when the pupil or the reader should never be supposed to know them till they have been explained in subsequent lessons. In almost every instance, these begin by treating of the elements of matter, and by explaining the table of affinities, without considering, that, in so doing, they must bring the principal phenomena of chemistry into view at the very outset: They make use of terms which have not been defined, and suppose the science to be understood by the very persons they are only beginning to teach.

*Elements of Chemistry*

Preface (pp. xvii–xviii)

Publisher undetermined

Edinburgh, Scotland. 1799

This science [chemistry] still has many chasms, which interrupt the series of facts, and often render it extremely difficult to reconcile them with each other: It has not, like the elements of geometry, the advantage of being a complete science, the parts of which are all closely connected together: Its present progress, however, is so rapid, and the facts, under the modern doctrine, have assumed so happy an arrangement, that we have ground to hope, even in our own times, to see it approach near to the highest state of perfection of which it is susceptible.

*Elements of Chemistry in a New Systematic Order*

Preface of the Author (p. xx)

Printed for William Creech. Edinburgh, Scotland. 1790

I have been obliged to depart from the usual order of courses of lectures and of treatises upon chemistry, which always assume the first principles of the science, as known, when the pupil or the reader should never be supposed to know them till they have been explained in subsequent lessons. In almost every instance, these begin by treating of the elements of matter, and by explaining the table of affinities, without considering, that, in so doing, they must bring the principal phenomena of chemistry into view at the very outset: They make use of terms which have not been defined, and suppose the science to be understood by the very persons they are only beginning to teach. It ought likewise to be considered, that very little of chemistry can be learned in a first course, which is hardly sufficient to make the language of the science familiar to the ears, or the apparatus familiar to the eyes. It is almost impossible to become a chemist in less than three or four years of constant application.

Translated by Robert Kerr  
*Elements of Chemistry* (Volume 1) (5th edition)  
 Preface (pp. xxii–xxiii)  
 Printed for W. Creech. Edinburgh, Scotland. 1802

In submitting to experiments the different substances found in nature, chemistry seeks to decompose them, and to bring them into a condition such that their components can be examined separately.... Chemistry advances towards its goal, and towards its perfection, by dividing, subdividing, and again subdividing, and we do not know what will be the limit of its victories. We cannot be certain that what we think to-day to be simple is indeed simple; all we can say is, that such or such a substance is the actual term whereat chemical analysis has arrived, and that with our present knowledge we are unable to subdivide further.

Quoted in Matthew Moncrieff Pattison Muir  
*A History of Chemical Theories and Laws*  
 Part I, Chapter II (p. 69)  
 John Wiley & Sons. New York, New York, USA. 1907

...as chemistry advances towards perfection by dividing and subdividing, it is impossible to say where it will end; and these things we at present suppose simple may soon be found quite otherwise.

*Elements of Chemistry in a New Systematic Order*  
 Part II, Section I (p. 177)

Chymistry is the true Key of Nature.

In Allen G. Debus  
*The French Paracelsians*  
 Chapter 4 (p. 126)  
 Cambridge University Press. Cambridge, England. 1991

Chymistry is nothing else but the Art and Knowledge of Nature itself; that it is by her means we examine the Principles out of which natural bodies do consist and are compounded; and by her are discovered unto us the causes and sources of their generations and corruptions, and of all the changes and alterations to which they are liable:.... [Further] it is known, that the ancient Sages have taken from Chymistry, the occasions and true motives of reasoning upon natural things, and that their monuments and writings do testify this Art to be of no fresher date than Nature itself.

*A Compleat Body of Chymistry*  
 The Preface (p. 1)  
 Printed for O. Pully. London, England. 1640

### Le Noble, William J.

No biographical data available

It may sound like a lot of work to keep up with organic chemistry, and it is; however, those who haven't the time to do it become subject to decay in the ability to

teach and contribute to the Science – a sort of first-order process the half-life of which can't be much more than a year or so.

Italian writer and chemist

To botch an analysis was worse: perhaps because unconsciously one realized that the judgment of men (in this case the professors) is arbitrary and debatable, while the judgment of things is always inexorable and just: this law is the same for all.

*Other People's Trades*  
 The Mark of the Chemist (p. 99)  
 Summit Books. New York, New York, USA. 1989

It [the fact the fossils of wooden tools are rare] should remind us that wood, like all organic substances, is stable only in appearance. Its mechanical virtues go hand in

hand with an intrinsic chemical weakness. In our atmosphere rich in oxygen, wood is stable more or less like a billiard ball placed on a horizontal shelf edged by a border no thicker than a sheet of tissue paper. It can remain there for a long time, but the tiniest push, or even a faint breath of air, will be enough to make it go past the barrier and drop to the ground. In short, wood is anxious to oxidize, that is, to destroy itself.

*Other People's Trades*

Stable/Unstable

Summit Books. New York, New York, USA. 1989

...for me chemistry represented an indefinite cloud of future potentialities which enveloped my life to come in black volutes torn by fiery flashes, like those which had hidden Mount Sinai. Like Moses, from that cloud I expected my law, the principle of order in me, around me, and in the world...I would watch the buds swell in spring, the mica glint in the granite, my own hands, and I would say to myself:

 In Thomas Atkinson Lawson  
*The Principles of Chemistry* (Volume 1)  
 Author's Preface to the Fifth Edition (p. viii)  
 Longmans, Green & Co. London, England. 1891

Chemistry, like every other science, is at once a means and an end. It is a means of attaining certain practicable aspirations. Thus, by its assistance, the obtaining of matter in its various forms is facilitated: it shows new possibilities of availing ourselves of the forces of nature, indicates the methods of preparing many substances, points out their properties, etc. In this sense chemistry is closely connected with the work of the manufacturer and the artisan, its sphere is active, and is a means of promoting general welfare.

Translated by George Kamensky

**Pauling, Linus** 1901–94

American chemist

There is more to chemistry than an understanding of general principles. The chemist is also, perhaps even more, interested in the characteristics of individual substances – that is, of individual molecules.

In Mary Jo Nye

*Before Big Science*

Chapter 6 (p. 188)

Prentice-Hall International. London, England. 1996

Every aspect of the world today – even politics and international relations – is affected by chemistry.

*Chemical Engineering News*, April 16, 1984

Chemistry is wonderful! I feel sorry for people who don't know anything about chemistry. They are missing an important source of happiness.

In Barbara Marinacci (ed.)

*Linus Pauling in His Own Words*

Chapter 2 (p. 43)

Simon & Schuster. New York, New York, USA. 1985

**Percival, James Gates** 1795–1856

American poet

To tell you the truth, I hate chemistry, and the very thought of it gives me an ague. I have no notion of stifling myself with the stench and poison of a laboratory.

In Julius H. Ward

*The Life and Letters of James Gates Percival*

Chapter XI (p. 192)

Ticknor & Fields. Boston, Massachusetts, USA. 1866

**Plath, Sylvia** 1932–63

American poet and novelist

I knew chemistry would be worse, because I'd seen a big chart of the ninety-odd elements hung up in the chemistry lab, and all the perfectly good words like gold and silver and cobalt and aluminum were shortened to ugly abbreviations with difficult decimal numbers after them. If I had to strain my brain with any more of that stuff I would go mad.

*The Bell Jar*

Chapter Three (p. 37)

Faber & Faber Ltd. London, England. 1966

**Plummer, Andrew**

Scottish chemist

Chemistry is an art that has furnished the world with a great number of useful facts, and has thereby contributed to the improvement of many arts; but these facts lie scattered in many different books, involved in obscure terms, mixed with many falsehoods, and joined to a great deal of false philosophy; so that it is no great wonder that chemistry has not been so much studied as might have been expected with regard to so useful a branch of knowledge, and that many professors are themselves but very superficially acquainted with.

In A.L. Donovan

*Philosophical Chemistry in the Scottish Enlightenment*

Chapter 3 (p. 39)

At The University Press. Edinburgh, Scotland. 1975

**Popper, Karl R.** 1902–94

Austrian/British philosopher of science

Physics and chemistry are not very different, and there seems to be no great difference in the kind of things to which they apply, except that chemistry, as it is usually understood, becomes inapplicable, at very high temperatures and also, perhaps, at very low ones. It therefore would not be very surprising if the hopes, held for a long time, that chemistry can be reduced to physics, were to come true, as indeed they seem to be doing...by a reduction I mean, of course, that all the findings of chemistry can be fully explained by (that is to say, deduced from) the principles of physics.

*Objective Knowledge: An Evolutionary Approach*

Chapter 8 (p. 290)

Clarendon Press. Oxford, England. 1972

**Prelog, V.**

No biographical data available

Chemistry takes a unique position among the natural sciences for it deals not only with material from natural sources but creates the major parts of its objects by synthesis. In this respect, as stated many years ago by Macelin Bertholt, chemistry resembles the arts; the potential of creativity is terrifying.

Chirality in Chemistry

*Science*, Volume 193, Number 4247, 2 July, 1976 (p. 18)**Primas, Hans** 1928–

No biographical data available

The most important task of contemporary theoretical chemistry is to stimulate the mutual understanding of the various branches of chemistry and its neighboring sciences.

*Chemistry, Quantum Mechanics and Reductionism*

Chapter 1, Section 1.2 (p. 2)

Springer-Verlag, Berlin, Germany. 1983

**Protheroe, Chester F.**

No biographical data available

I sing to you of chemistry,  
Of test tubes and of stinks;  
Of things that burn and those that don't,  
And those that clog up sinks;  
Oh hydrogen and oxygen,  
The water that they make,  
And hydrogen peroxide –  
Unstable – do not shake;  
Of chemical equations,  
Of valence and other joys:  
How are your mathematics?  
Oh, bright-faced girls and boys!

Reader's Column

*Chemistry*, Volume 40, Number 3, March, 1967 (p. 42)**Prout, William** 1785–1850

English physician and chemist

Chemistry forms the connecting link between that kind of knowledge which is founded on quantity, and those kinds of knowledge which rest solely on experience. Now so far as the logic of quantity is applicable, so far are we certain of our conclusions. But when this logic cannot be applied, our conclusions are no longer such as must be, but are only for the most part such as may be.

In Ida Freund

*The Study of Chemical Composition*

Chapter XIX (p. 592)

At The University Press, Cambridge, England. 1904

**Raine, Kathleen Jessie** 1908–2003

English poet and critic

Chemistry dissolves the goddess in the alembic,  
Venus, the white queen, the universal matrix,  
Down to the molecular hexagons and carbon-chains.

*The Collected Poems of Kathleen Raine*

The Human Form Divine (p. 86)

Counterpoint. Washington, D.C. 2001

**Ramsay, Sir William** 1852–1916

English chemist

...I am leaving the regions of fact, which are difficult to penetrate, but which bring in their train rich rewards, and entering the regions of speculation, where many roads lie open, but where a few lead to a definite goal.

*Nobel Lectures, Chemistry 1901–1921*

Nobel lecture for award received in 1904

The Rare Gases of the Atmosphere (p. 77)

Elsevier Publishing Company. Amsterdam, Netherlands. 1966

**Redgrove, H. Stanley** 1887–1943

No biographical data available

The science of chemistry has invaded almost every department of daily life, without the man in the street being at all cognizant of the debt he owes to it. Nor is it realized how many common domestic operations... really consist in causing a number of more or less complicated chemical reactions to take place in the materials employed. By the man in the street and the housewife in the kitchen, "chemicals" are thought to be substances of a nature quite distinct from the things they daily handle and to be chiefly characterized by the possession of a "nasty smell."

*Annual Report of the Board of Regents of the Smithsonian Institution (1929)*

Synthetic Perfumes (p. 253)

Government Printing Office. Washington, D.C. 1930

**Reis, Johann Philipp** 1834–74

German physicist

Chemistry is the dirty part of physics.

Quoted in R. Oesper

*The Human Side of Scientists* (p. 116)

University of Cincinnati. Cincinnati, Ohio, USA. 1975

**Richards, Ellen Henrietta Swallow** 1842–1911

American environmental chemist

...some sort of false logic has crept into our schools, for the people whom I have seen doing housework or cooking know nothing of botany or chemistry, and the people who know botany and chemistry do not cook or sweep. The conclusion seems to be, if one knows chemistry she must not cook or do housework.

In Caroline L. Hunt  
*The Life of Ellen H. Richards*  
 Chapter 10 (p. 179)  
 Whitcomb & Barrow. Boston, Massachusetts, USA. 1912

**Richards, Theodore William** 1868–1928  
 American chemist

The importance of accurate knowledge in a case of this sort was foreseen long ago by Plato, who perhaps drew his inspiration from yet more ancient knowledge, coming from wise men of the Far East. As I have often quoted, he said: "If from any art that which concerns weighing and measuring and arithmetic is taken away, how little is left of that art!" The implication of this wise saying as regards the study of atomic weights is clear; any increase in the accuracy of the determination of these quantities must of necessity add greatly to our insight into the profound mysteries with which chemistry has to deal.

*Nobel Lectures, Chemistry 1901–1921*  
 Nobel lecture for award received in 1914  
 Atomic Weights (p. 282)  
 Elsevier Publishing Company. Amsterdam, Netherlands. 1966

Chemistry has not grown spontaneously to its present state; it is a product of human mentality. The science which we know today is but an echo of the eternal and incomprehensible "music of the spheres" as heard and recorded by the minds of individual men.

In Bernard Jaffe  
*New World of Chemistry*  
 Preface (p. vi)  
 Silver, Burdett & Company. New York, New York, USA. 1935

**Richet, Charles** 1850–1935  
 French physiologist

If the progress of chemistry consisted only in producing still more noxious gases capable of destroying a regiment in a few minutes, then chemistry would be an accursed science.

*The Natural History of a Savant*  
 Chapter II (p. 13)  
 J.M. Dent & Sons Ltd. London, England. 1927

**Roberts, Mary** 1788–1864  
 English botanist and author

...the operations of chemistry resemble the moving of a magic wand.

*The Sea-side Companion; or, Marine Natural History*  
 Letter II (p. 17)  
 Printed for Whittaker & Co. London, England. 1835

**Rush, Benjamin** 1746–1813  
 American physician, teacher, and man of affairs

Chemistry by unfolding to us the effects of heat and mixture, enlarges our acquaintance with the wonders of nature, and the mysteries of art hence it has become, in most of the universities of Europe, a necessary branch

of a gentleman's education. In a young country, where improvements in agriculture and manufactures are so much to be desired, the cultivation of this science, which explains the principles of both of them, should be considered as an object of the utmost importance.

*Essays, Literary, Moral and Philosophical*  
 On The Mode of Education Proper in a Republic (pp. 17–18)  
 Printed by Thomas & Wilford Bradford. Philadelphia, Pennsylvania, USA. 1806

**Sabatier, Paul** 1854–1941  
 French chemist

Theories cannot claim to be indestructible. They are only the plough which the ploughman uses to draw his furrow and which he has every right to discard for another one, of improved design, after the harvest.

*Nobel Lectures, Chemistry 1901–1921*  
 Nobel lecture for award received in 1912  
 The Method of Direct Hydrogenation by Catalysis (pp. 230–231)  
 Elsevier Publishing Company. Amsterdam, Netherlands. 1966

**Sarton, George** 1884–1956  
 Belgian-born American scholar and writer

...any branch of science may be completely revolutionized at any time by a discovery necessitating a radically new approach to the subject. Chemistry today is essentially different from chemistry in the eighteenth century. The fundamental notions are different, the methods are different, the scope is indescribably larger, and the contents are infinitely more varied. We may safely assume that the chemistry of the twenty-fifth century will be as unlike that of the present as that, in turn, is unlike that of the fifteenth century.

*The Study of the History of Science* (pp. 7–8)  
 Harvard University Press. Cambridge, Massachusetts, USA. 1936

**Scheele, Carl Wilhelm** 1742–1786  
 Swedish chemist

It is the object and chief business of chemistry to skillfully separate substances into their constituents, to discover their properties, and to compound them in different ways.

How difficult it is, however, to carry out such operations with the greatest accuracy, can only be unknown to one who either has never undertaken this occupation, or at least has not done so with sufficient attention.

*The Discovery of Oxygen*  
 Part II, Chemical Treatise on Air and Fire, Section 1

...there is only one science of chemistry, there are many opinions on the teaching of it.

*The Teaching of Chemistry and Physics in the Secondary School*

Prefatory Note (p. 3)

Longmans, Green & Co. London, England. 1902

**Smith, Betty** 1896–1972

American writer

Francie came away from her first chemistry lecture in a glow. In one hour she found out that everything was made up of atoms which were in continual motion. She grasped the idea that nothing was ever lost or destroyed. Even if something was burned up or rot away, it did not disappear from the face of the earth; it changed into something else – gases, liquids, and powders. Everything, decided Francie after that first lecture, was vibrant with life and there was no death in chemistry. She was puzzled as to why learned people didn't adopt chemistry as a religion.

*A Tree Grows in Brooklyn*

Chapter XLIX (p. 389)

Everybody's Vacation Publishing Company, Inc. New York, New York, USA. 1943 (Harper & Brothers)

**Smith, Walter Chalmers** 1824–1908

Scottish poet and preacher

But women who have lost their Faith  
Are angels who have lost their wings,  
And always have a nasty breath  
Of chemistry, and horrid things  
That go off when a lecturer rings  
His bell.

*Obrig Grange*

Book Third, Editorial, Loquitur Mater Domina, I. 185–190

James Maclehose. Glasgow, Scotland. 1933

**Snow, Charles Percy** 1905–80

English writer and government administrator

The future of chemistry rests and must rest, with physics.

In H. Wright

*University Studies* (p. 125)

I. Nicholson & Watson. London, England. 1933

**Teeple, John E.** 1874–1931

American chemist

Chemistry is a science, a branch of knowledge, and there is no law to prevent anyone who has the least bit of chemical information – such, for instance, as the chemical symbol for water – from calling himself a chemist.

*Journal of Industrial and Engineering Chemistry*, Volume 17, Number 7

**Thomson, Sir John Arthur** 1861–1933

Scottish naturalist

Chemistry is mainly the science of the different kinds of matter, their transformations, affinities, and interactions. It is par excellence the science of molecules and atoms.

*Introduction to Science*

Chapter IV (p. 106)

William & Norgate. London, England. 1916

**Thomson, Thomas**

No biographical data available

Chemistry, unlike other sciences, sprang originally from delusions and superstition, and was at its commencement exactly on a level with magic and astrology.

*The History of Chemistry*

Introduction (p. 1)

Henry Colburn & Richard Benrley. London, England. 1830

Chemistry is a science, the object of which is to ascertain the ingredients that enter into the composition of bodies, to examine the nature of these ingredients, the manner in which they combine, and the properties resulting from their combination.

*A New System of Chemistry*

Definition (p. 1)

Printed for Thomas Dobson. Philadelphia, Pennsylvania, USA. 1800

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Verily, chemistry is not a splitting of hairs when you have got half a dozen raw Irishmen in the laboratory.

*The Writings of Henry David Thoreau* (Volume 4)

Cape Cod

Chapter X (p. 264)

Houghton Mifflin Company, Boston, Massachusetts, USA. 1893

**Townson, Robert** 1763–1827

Australian scholar and scientist

Chemistry of late years has made a most rapid progress and every branch of knowledge within its reach has been advanced by it. Mineralogy should be the first to speak its eulogium as the small tribute of gratitude for great favours.... Chemistry has done much for Mineralogy: it has raised it from a frivolous amusement to a sublime science; and still continuing its enlightening aid, will in time, with the progress of science, bring to light many things that now lie concealed, and unveil of the hidden mysteries of nature.

*Philosophy of Mineralogy*

Chapter IX (p. 114)

Printed for the author. London, England. 1798

**Trevor, J. E.**

No biographical data available

If chemistry be in its ultimate nature, an energy science, chemists obviously must study those energy transformations which constitute its phenomena.

*The Achievements and Aims of Physical Chemistry*, Volume XVI, Number 8, August, 1894 (p. 519)

**van Helmont, Jean-Baptista** 1579–1644

Flemish chemist

I praise my bountiful God, who hath called me into the Art of the fire, out of the dregs of other professions. For truly Chymistry...prepares the understanding to pierce the secrets of nature, and causeth a further searching out in nature, than all other Sciences being put together: and it pierceth even unto the utmost of real truth.

*Oriatrike or Physick Refined* (p. 462)

Printed for L. Loyd. London, England. 1662

**van't Hoff, Jacobus Henricus** 1852–1911

Dutch physical and organic chemist

This is physical chemistry, formerly a colony, now a great, free land.

In Diana Kormos Barkan

*Walther Nernst and the Transition to Modern Physical Science*

Chapter I (p. 1)

Cambridge University Press. Cambridge, England. 1999

**Venable, F. P.**

The ovum from which chemistry has been slowly evolved seems to have been sorcery and magic.

*A Short History of Chemistry*

Part First (p. 2)

D.C. Heath & Co. Boston, Massachusetts, USA. 1894

**von Euler, Hans** 1873–1964

Swedish biochemist

Any scientific problem must be attacked by research into detail; the natural scientist did not win his victories until he left meditation on the great riddles of the world and began a careful study of special problems; our knowledge – of more general associations and of far-reaching laws – has grown out of the results of such research.

*Nobel Lectures, Chemistry 1922–1941*

Nobel lecture for award received in 1929

Fermentation of Sugars and Fermentative Enzymes (p. 144)

Elsevier Publishing Company. Amsterdam, Netherlands. 1966

**von Liebig, Justus** 1803–73

German organic chemist

It is an indisputable requirement in organic chemistry that we refrain from stripping the phenomena, not yet clarified, of the charm that lies precisely in their obscurity.

In Rolf Huisgen

*The Adventure Playground of Mechanisms and Novel Reactions* (p. xx)

American Chemical Society, Washington, D.C. 1994

...Chemistry, as an independent science, offers one of the most powerful means towards the attainment of a higher mental cultivation; that the study of Chemistry is profitable, not only inasmuch as it promotes the material interests of mankind, but also because it furnishes us with insight into those wonders of creation which immediately surround us, and with which our existence, life, and development, are most closely connected.

In John Blyth

*Familiar Letters on Chemistry* (4th edition)

Letter I (p. 1)

Walton & Maberly. London, England. 1859

Chemistry is so often alluded to in modern writings, that it may perhaps be regarded as a problem of some importance to indicate more specially the influence of this science on the useful arts and on industry, as well as its relations to agriculture, physiology, and medicine.

In John Blyth (ed.)

*Familiar Letters on Chemistry*

Letter I (p. 1)

Walton & Maberly. London, England. 1859

Chemistry leads man into the domain of those latent forces, whose power controls the whole material world, and on whose operation is dependent the production of the most important necessities of life and of society.

In John Blyth

*Familiar Letters on Chemistry* (4th edition)

Letter I (p. 2)

Walton & Maberly. London, England. 1859

No science like Chemistry offers to man such a multitude of subjects for thought and reflection, and such stores of knowledge imbued with the charms of never-ending

freshness; none is more calculated to awaken the talent for observation, or to sharpen the intellect in the strict method of applying proof for the establishment of a truth, or in the inquiry into the cause and effect of a phenomenon.

In John Blyth

*Familiar Letters on Chemistry* (4th edition)

Letter I (p. 2)

Walton & Maberly. London, England. 1859

Many well-informed people still regard chemistry as the art of making experiments according to certain rules, very useful in the manufacture of soda and soap, in fixing good and permanent colours upon silk and cotton fabrics; but as an investigation of nature, or as an universal guide to its study, it is to most persons altogether unknown.

In John Gardner

*Familiar Letters on Chemistry* (2nd edition)

Letter I (p. 5)

Taylor & Walton. London, England. 1844

Chemistry, in its application to animals and vegetables, endeavors jointly with physiology to enlighten us respecting the mysterious processes and sources of organic life.

*Familiar Letters on Chemistry*

Letter IX (p. 128)

Walton & Maberly. London, England. 1859

### von Meyer, Ernst

German chemist

The main problem of chemistry, the investigation of the true composition of compounds, necessarily carries along with itself the constant endeavor to elaborate and perfect the means employed for arriving at this end.

*A History of Chemistry from Earliest Times to the Present Day*

Chapter VI (p. 358)

Macmillan & Company Ltd. London, England. 1891

### von Schelling, Friedrich Wilhelm

**Joseph** 1775–1854

German philosopher

Chemistry itself is a science which advances securely upon the beaten path of experience, even when it does not turn back to first principles. But a science which in itself is so rich, and which has lately made such great progress towards system, surely deserves to be led back to such principles.

Translated by Errol E. Harris and Peter Heath

*Ideas for a Philosophy of Nature as Introduction to the Study of this Science*

Chapter 8 (p. 237)

Cambridge University Press. Cambridge, England. 1988

### Webster, Jean

1876–1916

American writer

I am beginning chemistry, a most unusual study. I've never seen anything like it before. Molecules and Atoms are the material employed, but I'll be in a position to discuss them more definitely next month.

*Daddy-Long-Legs*

September 25th (p. 110)

The Century Co. New York, New York, USA. 1913

### Wells, H. G. (Herbert George)

1866–1946

English novelist, historian, and sociologist

He was a practical electrician but fond of whiskey, a heavy, red-haired brute with irregular teeth. He doubted the existence of the Deity but accepted Carnot's cycle, and he had read Shakespeare and found him weak in chemistry.

*The Door in the Wall, and Other Stories*

Lord of the Dynamos

Chapter 7

M. Kennerley. New York, New York, USA. 1911

### Werner, Alfred

1866–1919

German chemist

Chemistry must become the astronomy of the molecular world.

In George B. Kauffman

*Alfred Werner: Founder of Coordination Chemistry* (p. iii)

Springer-Verlag. Berlin, Germany. 1966

### Whewell, William

1794–1866

English philosopher and historian

The common operations of chemistry give rise in almost every instance to products which bear no resemblance to the materials employed. Nothing can be so false as to expect that the qualities of the elements shall be still discoverable in an unaltered form in the compound.

*The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 1)

Part I, Book VI (p. 399)

John W. Parker. London, England. 1847

### Wieland, Heinrich O.

1877–1957

German chemist

The problem is not very attractive from the experimental viewpoint. There is no nitrogen, which adds interest and variety to the treatment of alkaloids. Only carbon, hydrogen and a little oxygen, all in the traditional combination, which does not lead us to expect any surprising results. The task would appear to be a long and unspeakably wearisome trek through an arid desert of structure. True, the wanderer in this apparently so unattractive region finds friendly landscapes at all stages of his journey, and the large quantity of substances bringing him nearer his goal accumulates around him like dear companions, although, clothed in the plain garment of colourlessness, they do not stand out either in their appearance or in their properties.

*Nobel Lectures, Chemistry 1922–1941*

Nobel lecture for award received in 1927

The Chemistry of the Bile Acids (p. 96)

Elsevier Publishing Company. Amsterdam, Netherlands. 1966

### Wiley, Harvey W.

No biographical data available

There is no branch of our science which is to be crowned king and leader. Chemistry is a pure democracy, and all are equal therein.

Address of Welcome, World's Chemical Congress

*The Journal of the American Chemical Society*, Volume XV, Number 6, June, 1893 (p. 304)

**Wurtz, Charles Adolphe** 1817–84

French organic chemist

Chemistry is a French science; it was founded by Lavoisier of immortal memory.

Translated by Henry Watts

*History of Chemical Theory from the Age of Lavoisier to the Present*

Introduction (p. 1)

Macmillan & Company Ltd. London, England. 1869

## CHEMISTRY, HISTORY OF

**Bergman, Torbern Olaf** 1735–84

Swedish chemist and naturalist

The history of chemistry is properly divided into the mythological, the obscure, and the certain.

Quoted in Joseph William Mellor

*A Comprehensive Treatise on Inorganic and Theoretical Chemistry*

(Volume 1)

Chapter I (p. 1)

Longman, Green, & Co. London, England. 1922

## CHEMISTRY, INORGANIC

**Schulman, Max**

Screenwriter and humorist

Organic chemistry is the study of organs; inorganic chemistry is the study of the insides of organs.

*Barefoot Boy With Cheek* (p. 129)

Garden City Books. Garden City, New York, USA. 1943

## CHEMISTRY, INSTRUMENTATION

**Glaser, Christophe** 1615–78

Swiss chemist

To perform Chymical Operations, one must be very well provided with necessary Instruments and Vessels; for there being but few things that can be prepared in an open naked fire, one is obliged to put ones matter into some convenient Vessel, which is to be placed with dexterity upon the fire, and that is to be governed differently, according to the Artist's skill and intention.

*The Compleat Chymist; or a New Treatise of Chymistry*

Chapter VII (pp. 19–20)

Printed for John Starkey. London, England. 1677

## CHEMISTRY, ORGANIC

**Author undetermined**

Organic Chemistry: The practice of transmuting vile substances into publications.

Source undetermined

**Collie, John Norman** 1859–1942

English chemist

Deluged as we are with unnumbered facts that have often neither explanation nor obvious connection with one another, Organic Chemistry has become a vast rubbish heap of puzzling and bewildering compounds.

In Alfred Walter Stewart

*Recent Advances in Organic Chemistry*

Introduction (p. xiii)

Longmans, Green & Co. London, England. 1908

**Kekule, August** 1829–96

German organic chemist

We define, therefore, Organic Chemistry as the Chemistry of the Carbon Compounds. But this does not imply any real difference between inorganic and organic bodies. That part of our science to which the time-honoured name Organic Chemistry is given, and which we more conveniently call the Chemistry of the Carbon Compounds, is only a special part of pure chemistry treated separately, the large number and importance of the carbon compounds rendering such a special study of them necessary.

In Carl Schorlemmer

*The Rise and Development of Organic Chemistry* (pp. 84–85)

Macmillan & Co Ltd. London, England. 1894

**London, Jack** 1876–1916

American author

It was in their undergraduate days, however, in the midst of their profoundest plunges into the mysteries of organic chemistry, that Doris van Benschoten entered into their lives.

*Moon-face, and Other Stories*

The Shadow and the Flash (p. 121)

The Macmillan Co. New York, New York, USA. 1906

## CHEMISTRY, PHYSICAL

**Author undetermined**

Physics is the taking of very accurate measurements on impure and poorly defined materials. Chemistry is characterized by sloppy measurements on very pure

materials. Thus, Physical Chemistry is sloppy measurements on impure materials.

Source undetermined

## CHEMISTRY, STUDENT OF

**Tilden, Sir William Augustus** 1842–1926

English chemist

The study of nature requires the employment of two distinct processes: the first is the observation or discovery of facts, and the second is the deduction of inferences from those facts. It is of the utmost importance to the student of chemistry to keep these processes apart from each other in his mind, and endeavor clearly to apprehend the proper functions of observation and experiment on the one hand and those of hypothesis and theory on the other.

*Introduction to the Study of Chemical Philosophy*

10th Introduction (p. 3)

Longmans, Green & Co. London, England. 1901

## CHEMISTRY, STUDY OF

**von Liebig, Justus** 1803–73

German organic chemist

...the study of Chemistry is profitable, not only inasmuch as it promotes the material interests of mankind, but also because it furnishes us with insight into those wonders of creation which immediately surround us, and with which our existence, life, and development, are most closely connected.

In John Blyth (ed.)

*Familiar Letters on Chemistry*

Letter I (p. 1)

Walton & Maberly. London, England. 1859

## CHEMISTRY, SYSTEM OF

**Jones, Harry Clary** 1865–1916

American physical chemist and educator

It will, however, be easily recognized by any thinking man of science that a system of chemistry is one thing and a science of chemistry is another; just as the making of brick is one thing and the building of the brick into a piece of architecture is another. The making of the brick is, however, a necessary forerunner to the construction of the building.

*A New Era in Chemistry*

Chapter I (p. 17)

D. van Nostrand Co. New York, New York, USA. 1913

## CHEMISTRY, STUDY OF

**von Liebig, Justus** 1803–73

German organic chemist

...the study of Chemistry is profitable, not only inasmuch as it promotes the material interests of mankind, but also because it furnishes us with insight into those wonders of creation which immediately surround us, and with which our existence, life, and development, are most closely connected.

In John Blyth (ed.)

*Familiar Letters on Chemistry*

Letter I (p. 1)

Walton & Maberly. London, England. 1859

## CHEMOTHERAPY

**Domagk, Gerhard** 1895–1964

German bacteriologist and pathologist

I consider it my first duty in the development of chemotherapy to cure those diseases which have hitherto been incurable, so that in the first place those patients are helped who can be helped in no other way.

*Nobel Lectures, Physiology or Medicine 1922–1941*

Nobel lecture for award received in 1939

Further Progress in Chemotherapy of Bacterial Infections (p. 525)

Elsevier Publishing Company. Amsterdam, Netherlands. 1965

## CHEYNE–STOKES RESPIRATION

**Hippocrates** 460 BCE–377 BCE

Greek physician

Philiscus...too to bed on the first day of acute fever....

About the middle of the sixth day he died. The respiration throughout, like that of a person recollecting himself.

## CHILD

### Advertisement

A child is an island of curiosity surrounded by a sea of question marks.

Advertisement by Shell

*Scientific American*, Volume 2, Number 2, February, 1961 (p. 93)

## CHILDREN

**von Liebig, Justus** 1803–73

German organic chemist

Our children have more correct notions of nature and natural phenomena than had Plato! they may treat with ridicule the errors!

*Familiar Letters on Chemistry*

Letter I (p. 4)

Walton & Maberly. London, England. 1859

**CHILDBIRTH****Mitchell, Margaret** 1900–49

American author

Death and taxes and childbirth! There's never any convenient time for any of them!

*Gone With the Wind*

Part Four, Chapter XXXVIII (p. 668)

The Macmillan Company. New York, New York, USA. 1936

**CHIMERA****Shelley, Mary Wollstonecraft** 1797–1851

English Romantic writer

The ambition of the inquirer seemed to limit itself to the annihilation of those visions on which my interest in science was chiefly founded. I was required to exchange chimeras of boundless grandeur for realities of little worth.

*Frankenstein: Or, The Modern Prometheus*

Chapter III (p. 63)

George Routledge &amp; Sons. London, England. 1888

**CHITIN****Peattie, Donald Culross** 1898–1964

American botanist, naturalist and author

Not blood nor flesh nor hair nor feathers, not the chlorophyll or cellulose of the plants, is stranger than the stuff called chitin.

*An Almanac for Moderns*

August 21 (p. 165)

G.P. Putnam's Sons. New York, New York, USA. 1935

**CHOICE****Huxley, Thomas Henry** 1825–95

English biologist

The choice lay between two absurdities and a middle condition of uneasy scepticism; which last, however unpleasant and unsatisfactory, was obviously the only justifiable state of mind under the circumstances.

*Lay Sermons, Addresses and Reviews*

Chapter XII (p. 291)

D. Appleton &amp; Co. New York, New York, USA. 1903

**Juster, Norton** 1929–

American architect and author

Just because you have a choice, it doesn't mean that any of them has to be right.

*The Phantom Tollbooth*

Chapter 14 (pp. 175–176)

Alfred A. Knopf. New York, New York, USA. 1989

**Poynting, John Henry** 1852–1914

English physicist

If our mental experience convinces us that we have freedom of choice, we are obliged to believe that in mind there is territory which the physicist can never annex. Some of his laws may still hold good, but somewhere or other his scheme must cease to give a true account.

*Collected Scientific Papers*

Physical Law and Life, 1903 (p. 698)

At The University Press. Cambridge. 1920

**CHRONOLOGY****Borel, Félix Edouard Justin Emile** 1871–1956

French mathematician

...we find that the difficulties of measuring time are as great as – if not greater than – the difficulties of measuring space; chronology, in the absolute sense of the word, is as difficult as geometry.

*Space and Time*

Introduction (p. 27)

Dover Publications. New York, New York, USA. 1960

**Lamb, Charles** 1775–1834

English essayist and critic

Your now is not my now; and again, your then is not my then; but my now may be your then, and vice versa.

Whose head is competent to these things?

In E.V. Lucas (ed.)

Letter 236

To Barron Field, August 31, 1817

G.P. Putnam's Sons. New York, New York, USA. 1905

**CIRCLE****Browne, Sir Thomas** 1605–82

English author and physician

Circles and right lines limit and close all bodies, and the mortal right-lined circle must conclude and shut up all.

*Hydriotaphia*

Chapter V (p. 74)

Printed for Hen. Brome. London, England. 1658

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English writer

A small circle is quite as infinite as a large circle.

*Orthodoxy*

Chapter II (p. 33)

John Lane Company. New York, New York, USA. 1918

**Davis, John**

No biographical data available

The circle is one of the noblest representations of Deity, in his noble works of human nature. It bounds, determines, governs, and dictates space, bounds latitude and longitude, refers to the sun, moon, and all the planets,

in direction, brings to the mind thoughts of eternity, and concentrates the mind to imagine for itself the distance and space it comprehends. It rectifies all boundaries; it is the key to information of the knowledge of God ...

*The Measure of the Circle*

The Circle (p. 12)

Published for the Author

1854

**Emerson, Ralph Waldo** 1803–82

American lecturer, poet, and essayist

The eye is the first circle; the horizon which it forms is the second; and throughout nature this primary figure is repeated without end. It is the highest emblem in the cipher of the world.

*Ralph Waldo Emerson: Essays and Lectures*

*Essays: First Series*

Circles (p. 403)

The Library of America. New York, New York, USA. 1983

**Frankland, William Barrett**

No biographical data available

To call the circle a beautiful curve would be an insipid commonplace, for from the dawn of geometry, ever since Thales and Pythagoras, mathematicians have been captivated by its absolute perfection of form.

*The Story of Euclid*

Chapter VII (p. 70)

George Newnes, Ltd. London, England. 1902

**Pope, Alexander** 1688–1744

English poet

As the small pebble stirs the peaceful lake;  
The centre mov'd, a circle straight succeeds,  
Another still, and still another spreads.

*The Complete Poetical Works* (Volume 2)

An Essay on Man, Epistle IV, l. 364

Houghton Mifflin Company. New York, New York, USA. 1903

**Rablagiliati, Andrea Carlo Francisco**

No biographical data available

A circle has neither beginning nor end; or it is all beginning and all end.

*Aphorisms, Definitions, Reflections, and Paradoxes, Medical, Surgical and Dietetic*

Number 2 (p. 1)

William Wood & Co. New York, New York, USA. 1901

**Shaw, George Bernard** 1856–1950

Irish comic dramatist and literary critic

KNELLER: Just what such blockheads would believe. The circle is a dead thing like a straight line: no living hand can draw it: you make it by twirling a pair of dividers.

*The Complete Plays of Bernard Shaw*

In Good King Charles's Golden Days, Act I (p. 1358)

Odhams Press. London, England. 1950

**Soddy, Frederick** 1877–1956

English chemist

Four circles to the kissing come,  
The smaller are the benter.  
The bend is just the inverse of  
The distance from the centre.  
Though their intrigue left Euclid dumb  
There's now no need for rule of thumb.  
Since zero bend's a dead straight line  
And concave bends have minus sign,  
The sum of squares of all four bends  
Is half the square of their sum.

The Kiss Precise

*Nature*, Volume 137, Number 3477, June 20, 1936 (p. 1021)

**Swift, Jonathan** 1667–1745

Irish-born English writer

I'm up and down, and roundabout, Yet all the world can't  
find me out; Though hundreds have employ'd their lei-  
sure, They never yet could find my measure. I'm found  
almost in every garden, Nay, in the compass of a farthing.  
There's neither chariot, coach, nor mill, Can move an  
inch except I will.

*The Poetical Works of Jonathan Swift* (Volume 1)

On A Circle

Houghton, Osgood & Co. Boston, Massachusetts, USA. 1879

## CIRCULATION

**Harvey, William** 1578–1657

English physician

...I frequently and seriously bethought me, and long  
revolved in my mind, what might be the quantity of  
blood which was transmitted, in how short a time its  
passage might be effected, and the like; and not finding  
it possible that this could be supplied by the juices of  
the ingested aliment without the veins on the one hand  
becoming drained, and the arteries on the other getting  
ruptured through the excessive charge of blood, unless  
the blood should somehow find its way from the arteries  
into the veins, and so return to the right side of the heart;  
I began to think there might not be a MOTION, AS IT  
WERE, IN A CIRCLE.

In *Great Books of the Western World* (Volume 28)

*An Anatomical Disquisition on the Motion of the Heart and Blood in Animals*

Chapter 8 (p. 285)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...since all living things are warm, all dying things cold,  
there must be a...seat and fountain, a kind of home and  
hearth, where the cherisher of nature, the original of the  
native fire, is stored and preserved; whence heat and life  
are dispensed to all parts as from a fountain head; whence

sustenance may be derived; and upon which concoction and nutrition, and all vegetative energy may depend. Now, that the heart is this place, that the heart is the principle of life...I trust no one will deny.

In *Great Books of the Western World* (Volume 28)

*An Anatomical Disquisition on the Motion of the Heart and Blood in Animals*

Chapter 15 (p. 296)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

## CIRCUMCISION

### Freeland, E. Harding

No biographical data available

It has been urged as an argument against the universal adoption of circumcision that the removal of the protective covering of the glans tends to dull the sensitivity of that exquisitely sensitive structure and thereby diminishes sexual appetite and the pleasurable effects of coitus. Granted that this be true, my answer is that, whatever may have been the case in days gone by, sensuality in our time needs neither whip nor spur, but would be all the better for a little more judicious use of curb and bearing-rein.

Circumcision as a Preventative of Syphilis and Other Disorders

*The Lancet*, Volume 2, 29 December, 1900 (pp. 1869–1871)

### Johnson, Athol A. W.

No biographical data available

In cases of masturbation we must, I believe, break the habit by inducing such a condition of the parts as will cause too much local suffering to allow of the practice to be continued. For this purpose, if the prepuce is long, we may circumcise the male patient with present and probably with future advantages; the operation, too, should not be performed under chloroform, so that the pain experienced may be associated with the habit we wish to eradicate.

On an Injurious Habit Occasionally Met with in Infancy and Early Childhood

*The Lancet*, Volume 1, 7 April, 1860 (pp. 344–345)

### Sayer, Lewis L.

No biographical data available

Hip trouble is from falling down, an accident that children with tight foreskins are specially liable to, owing to the weakening of the muscles produced by the condition of the genitals.

Circumcision for the Cure of Enuresis

*Journal of the American Medical Association*, Volume 7, 1887 (pp. 631–633)

### Taylor, A. W.

No biographical data available

Not infrequently marital unhappiness would be better relieved by circumcising the husband than by suing for divorce.

Circumcision – Its Moral and Physical Necessities and Advantages

*Medical Record*, Volume 56, 1899 (p. 174)

## CIRCUMFERENCE

### de Morgan, Augustus 1806–71

English mathematician and logician

Let him also say what this mysterious 3.14159...really is, which comes in at every door and window, and down every chimney, calling itself the circumference to a unit of diameter.

*A Budget of Paradoxes* (Volume 2) (2nd edition) (p. 214)

The Open Court Publishing Co. Chicago, Illinois, USA. 1915

### Pascal, Blaise 1623–62

French mathematician and physicist

We...believe we are far more capable of reaching the center of things than of embracing their circumference.

*Pensees*

Transitions from the Knowledge of Man to that of God (p. 61)

Hackett. Indianapolis, Indiana, USA. 2004

## CIRCUMSTANCE

### Disraeli, Benjamin, First Earl

of Beaconsfield 1804–81

English prime minister, founder of Conservative Party, and novelist

Man is not the creature of circumstances. Circumstances are the creatures of men.

*Vivian Grey*

Chapter VII (p. 369)

Longmans, Green & Co. London, England. 1878

## CIRQUE

### Hobbs, William Herbert 1864–1952

American geologist

It is safe to say that no topographic feature is more characteristic of the mountains which have been occupied by glaciers than is the cirque. Approaching a range from a considerable distance, there is certainly no feature which so quickly forces itself upon the attention.

*Characteristics of Existing Glaciers*

Part I, Chapter 1 (p. 12)

The Macmillan Co. New York, New York, USA. 1911

## CITY

### Abbey, Edward 1927–89

American nature writer

We must save the city. It is essence and substance of us all—we cannot lose it without diminishing our stature as a nation, without a fatal wound.

*The Journey Home: Some Words in Defense of the American West*

Chapter 9 (p. 101)  
E.P. Dutton & Company. New York, New York, USA. 1977

**Bronowski, Jacob** 1908–74  
Polish-born British mathematician and polymath

Stones make a wall, walls make a house, houses make streets, and streets make a city. A city is stones and a city is people; but it is not a heap of stones, and it is not a just a jostle of people.

*The Ascent of Man*  
The Grain in the Stone (p. 96)  
Little, Brown & Co. Boston, Massachusetts, USA. 1973

## CIVILIZATION

**Beston, Henry** 1888–1968  
American writer

Our fantastic civilization has fallen out of touch with many aspects of nature, and with none more completely than with night.

Canadian physician and professor of medicine

Civilization is but a filmy fringe on the history of man.

*The Evolution of Modern Medicine*  
Chapter I (p. 2)  
Yale University Press. New Haven Connecticut, USA. 1921

**Page, David**  
No biographical data available

Man cannot make progress in civilisation without drawing from the mineral and metallic stores of the earth’s crust. He may lead a savage or a nomadic life, and subsist on roots and fruits, by hunting, by fishing, or on the produce of his herds and flocks; but he cannot settle down in civilised communities, or combat successfully with the forces of nature, till he has learned to arm himself with tools and implements.

*Economic Geology; Or, Geology in Its Relations to the Arts and Manufactures*  
Introduction (p. 2)  
William Blackwood & Sons. Edinburgh, Scotland. 1874

**Shklovskii, Josef Samuelovich** 1916–  
Russian astrophysicist

**Sagan, Carl** 1934–96  
American astronomer and author

The assumption that technical civilizations must *necessarily* make an appearance, even after many billions of years of biological evolution, implies that the ultimate purpose, or goal, in the formation of stars and planets is

the production of intelligent beings and technical civilizations – an idealistic and teleological view.

*Intelligent Life in the Universe* (p. 379)  
1966

## CLARITY

**Bronk, Detlev W.** 1897–1975

American biologist

Science, like art, music and poetry, tries to reduce chaos to the clarity and order of pure beauty.

In Max Levin

Our Debt to Hughlings Jackson

*Journal of the American Medical Association*, Volume 191, Number 12,  
March 22, 1965 (p. 996)

**Einstein, Albert** 1879–1955

German-born physicist

In the interest of clearness, it appeared to me inevitable that I should repeat myself frequently, without paying the slightest attention to the elegance of the presentation.

Translated by Robert W. Lawson

*Relativity: The Special and General Theory*

Preface (p. 3)

Pi Press. New York, New York, USA. 2005

**Sober, Elliott** 1948–

American philosopher of science and evolutionary theorist

A science may fall short of perfect clarity in different ways. One is relatively benign. A science may move forward, sideways, and backwards as if in a fog that sometimes lifts a little then resettles.... But a science enveloped by fog has at least one consolation. A fog does not foster the illusion of clarity; the lack of visibility is patent. More insidious than the fog is the mirage. Fogs are seen for what they are. Mirages are trickier, engendering the mistaken conviction that things are as they seem.

*The Nature of Selection: Evolutionary Theory in Philosophical Focus*

Introduction (p. 1)

The MIT Press. Cambridge, Massachusetts, USA. 1984

## CLASSIFICATION

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

Are our systems the inventions of naturalists, or only their reading of the Book of Nature? and can that book have more than one reading? If these classifications are not mere inventions, if they are not an attempt to classify for our own convenience the objects we study, then they are thoughts which, whether we detect them or not, are expressed in Nature, – then Nature is the work of thought, the production of intelligence carried out according to plan, therefore premeditated, – and in our study of natural objects we are approaching the thoughts

of the Creator, reading His conceptions, interpreting a system that is His and not ours.

*Methods of Study in Natural History*

Chapter I (pp. 13–14)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

...believing, as I do, that classification, rightly understood, means simply the creative plan of God as expressed in organic forms, I feel the importance of attempting at least to present it in a popular guise, divested, as far as possible, of technicalities. I would therefore ask the indulgence of my readers for such scientific terms and details cannot well be dispensed with, begging them to remember that a long and tedious road may bring us suddenly upon a glorious prospect, and that a clearer mental atmosphere and a new intellectual sensation may well reward us for a little weariness in the outset.

*Methods of Study in Natural History*

Chapter IV (p. 42)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

Modern classifications of animals and plants are based upon the peculiarities of their structure; and this is generally considered as the most important, if not the only safe guide in our attempts to determine the natural relations which exist between animals. This view of the subject seems to me, however, to circumscribe the foundation of a natural system of Zoology and Botany within too narrow limits, to exclude from our consideration some of the most striking characteristics of the two organic kingdoms of nature, and to leave it doubtful how far the arrangement thus obtained is founded in reality ...

*An Essay on Classification*

Chapter First (p. viii)

Longman, Brown, Green, Longmans & Roberts. London, England. 1859

Are these divisions artificial or natural? Are they the devices of the human mind to classify and arrange our knowledge in such a manner as to bring it more readily within our grasp and facilitate further investigations, or have they been instituted by the Divine Intelligence as the categories of his mode of thinking?

*Essay on Classification*

Chapter I, Section I (p. 8)

Harvard University Press. Cambridge, Massachusetts, USA. 1962

**Aristotle** 384 BCE–322 BCE

Greek philosopher

Ought we, for instance (to give an illustration of what I mean), to begin by discussing each separate species – man, lion, ox, and the like – taking each kind in hand independently of the rest, or ought we rather to deal first with the attributes which they have in common in virtue of some common element of their nature, and proceed from this as a basis for the consideration of them separately?

In *Great Books of the Western World* (Volume 8)

*On the Parts of Animals*

Book I, Chapter 1 (p. 161)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Bain, Alexander** 1818–1903

Scottish philosopher and psychologist

The number of trials necessary to arrive at a new construction, is commonly so great, that, without something of an affection, or fascination, for the subject, one grows weary of the task. The patient thought of the naturalist desirous of rising to new classifications, grows out of his liking for the subject, which makes it to him a sweet morsel rolled under the tongue, and gives an enjoyment even to fruitless endeavors.

*The Sense and the Intellect* (3rd edition) (p. 593)

D. Appleton & Company. New York, New York, USA. 1868

**Batten, Roger L.**

No biographical data available

One of mankind's earliest intellectual endeavors was the attempt to gather together the seemingly overwhelming variety presented by nature into an orderly pattern. The desire to classify – to impose order on chaos and then to form patterns out of this order on which to base ideas and conclusions – remains one of our strongest urges.

*Annual Report of the Board of Regents of the Smithsonian Institution* (1959)

The Need to Classify (p. 509)

Government Printing Office. Washington, D.C. 1960

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

It is not obviously silly to classify flowers by their colors; after all, the blue flowers do tend to be associated with the colder climates and greater heights. There is nothing wrong with the system in advance. It simply does not work as conveniently and as instructively as Linnaeus's classification by family likenesses.

*The Common Sense of Science*

Chapter IV, Section 4 (p. 48)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Childe, V. Gordon** 1892–1957

Australian-English archaeologist

To interpret the objects he collects, to classify them and even to describe them correctly, an archaeologist ought ideally to be able to make them.

*A Short Introduction to Archaeology*

Chapter Five (p. 105)

Frederick Muller Ltd. London, England. 1956

**Darwin, Charles Robert** 1809–82

English naturalist

From the most remote period in the history of the world, organic beings have been found to resemble each other in descending degrees, so that they can be classed in groups under groups. This classification is not arbitrary like the grouping of the stars in constellations. The existence of groups would have been of simple significance, if one group had been exclusively fitted to inhabit the land, and

another the water; one to feed on flesh, another on vegetable matter, and so on; but the case is widely different, for it is notorious how commonly members of even the same subgroup have different habits.

*Volcanoes of the Earth*

Chapter 4 (p. 30)

University Texas Press. Austin, Texas, USA. 1984

**Hopwood, Arthur Tindell** 1897–1969

English scientist

The urge to classify is a fundamental human instinct; like the predisposition to sin, it accompanies us into the world at birth and stays with us to the end.

The Development of Pre-Linnaean Taxonomy

*Proceedings of the Linnaean Society of London*, Volume 170, 1959 (p. 230)

**Hull, David L.**

No biographical data available

If contemporary philosophers of science agree on anything, it is that scientific classification cannot be theoretically neutral. Nor can there be any prescribed order in which theoretical combinations are introduced into a classification. One cannot begin by producing a theoretically neutral classification, and then only later add theoretical interpretations.

*Philosophy of Science Association 1978*

The Principles of Biological Classification: The Use and Abuse of Philosophy, Volume 2

**James, William** 1842–1910  
American philosopher and psychologist

The first steps in most of the sciences are purely classificatory. Where facts fall easily into rich and intricate series (as plants and animals and chemical compounds do), the mere sight of the series fill the mind with a satisfaction *sui generis*; and a world whose real materials naturally lend themselves to serial classification is *pro tanto* a more rational world, a world with which the mind will feel more intimate, than with a world in which they do not. By the pre-evolutionary naturalists, whose generation has hardly passed away, classifications were supposed to be ultimate insights into God's mind, filling us with adoration of his ways. The fact that Nature lets us make them was a proof of the presence of his Thought in her bosom.

**Antoine** 1744–1829  
French biologist

Throughout nature, wherever man strives to acquire knowledge he finds himself under the necessity of using special methods, first, to bring order among the infinitely numerous and varied objects which he has before him; second, to distinguish, without danger of confusion, among this immense multitude of objects, either groups or those in which he is interested, or particular individuals among them; third, to pass on to his fellows all what he has learnt, seen and thought on the subject. Now the methods which he uses for this purpose are what I call the artificial devices in natural science, – devices which we must beware of confusing with the laws and acts of nature herself.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter I (p. 19)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

It was no doubt indispensable to break up the productions of nature into groups, and to establish different kinds of divisions among them such as classes, orders, families and genera. It was, moreover, necessary to fix what are called species, and to assign special names to these various sorts of objects. This is required on account of the limitations of our faculties; some such means are necessary for helping us to fix the knowledge which we gain from that prodigious multitude of natural bodies which we can observe in their infinite diversity.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter I (p. 20)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

Thus, among living bodies, nature, as I have already said, definitely contains nothing but individuals which succeed one another by reproduction and spring from one another; but the species among them have only a relative constancy and are only invariable temporarily.

Nevertheless, to facilitate the study and knowledge of so many different bodies it is useful to give the name of species to any collection of like individuals perpetuated by reproduction without change, so long as their environment does not alter enough to cause variations in their habits, character and shape.

Translated by Hugh Elliot  
*Zoological Philosophy: An Exposition with Regard to the Natural History of Animals*  
Chapter III (p. 44)  
The University of Chicago Press. Chicago, Illinois, USA. 1984

**Lankester, Edwin Ray** 1847–1929  
English zoologist

The fact that we are able to classify organisms at all in accordance with the structural characteristics which they present, is due to the fact of their being related by descent.

*American Museum of Natural History*, Volume XI, Number 4, 1873 (p. 321)

**Macculloch, John** 1800–50  
English historian and writer

...no arrangement can pretend to define and separate those objects which the hand of nature has neither defined nor separated.

*A Geological Classification of Rocks*  
Chapter XII (p. 180)  
Longman, Hurst, Reese, Orme & Brown. London, England. 1821

**Marshall, Charles E.**  
Microbiologist

Assignment to either animal or plant life is precarious and unnecessary, for in making such an attempt the scientist really does nothing more than prescribe for Nature restrictions rather than follow Nature as she exists.

In Charles E. Marshall  
*Microbiology: A Text-book of Microorganisms, General and Applied*  
(3rd edition)  
Part I (p. 12)  
P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1921

**Morris, Henry** 1918–2006  
American creationist

If an evolutionary continuum existed, as the evolution model should predict, there would be no gaps, and thus it would be impossible to demark specific categories of life. Classification requires not only similarities, but differences and gaps as well, and these are much more amenable to the creation model.

*Scientific Creationism*  
Chapter IV (p. 72)  
Creation-Life Publishers. San Diego, California, USA. 1974

**Olson, S. L.**

And Adam gave names to all cattle, and to the fowl of the air, and to every beast of the field...

Genesis 2:20

**Washington, Henry S.** 1867–1934

American petrologist, geologist, and geochemist

We can classify rocks, for petrological purposes, exactly, definitely, and strictly only by creating arbitrary divisions, cutting them up by sharp planes and putting them into man-devised pigeon-holes, as was done in the quantitative classification or as seems necessary in any modification of it. Such a classification is a pis-aller, a makeshift, a classification of convenience; it may or may not correspond to the evolution of igneous rocks as it really is.

Matter & Its Physical Properties (p. 20)

Greeley & McElrath. New York, New York, USA. 1846

**Leibniz, Gottfried Wilhelm** 1646–1716

German philosopher and mathematician

The art of classifying things into genera and species is of no little importance and of much use both to the judgment and the memory. You know how important this is in botany, not to speak of animals and other substances, and without mentioning also beings moral and notional, as some call them. Order largely depends upon it, and many good authors so write that their entire discourse can be reduced to divisions and subdivisions, according to a method which has some relation to genera and species, and is of use not only in retaining things, but also in finding them.

The Modern Publisher. New York, New York, USA. 1912

**CLINICAL TRIAL**

**Bartlett, Elisha** 1804–55  
American physician

The first condition, in the establishment of any therapeutical principle, or law, is this – that the facts, or phenomena, the relationships of which are to be investigated, shall be sufficiently fixed and definite to be comparable.... The subjects of the disease...ought to be taken from the same locality, and from the same classes of population.... [The disease, to be studied, should be susceptible of a clear and positive diagnosis.... [E]very case of the disease that presents itself, should be taken into account, whatever may be its stage, its degree of severity, or its complications. There should be no selection of case.

In William E. Stempsey

Springer-Verlag. Dordrecht, The Netherlands. 2005

**Cochrane, Archibald Leman**

No biographical data available

It appears in general it is Catholicism, Communism, and underdevelopment that appear to be against RCTs [randomized clinical trials]. In underdeveloped countries this can be understood, but what have Communism and Catholicism against RCTs?

*Effectiveness And Efficiency: Random Reflections on Health Services*

Evaluation of Evidence (p. 24)

Nuffield Provincial Hospitals Trust. London, England. 1972

An RCT [randomized clinical trials] is great fun for the co-ordinator but can be very boring for the scattered physicians filling in the forms.

*Effectiveness And Efficiency: Random Reflections on Health Services*  
Evaluation of Evidence (p. 24)  
Nuffield Provincial Hospitals Trust. London, England. 1972

**CLINICIAN**

**Addis, Thomas** 1881–1949  
English-born American physician

A clinician is complex. He is part craftsman, part practical scientist, and part historian; so his several classifications involve, in varying degree, all these elements. It is only if we look at him when he is working with his patients that we find him pragmatic and utilitarian. His only design is to bring relief, and he is not at all scrupulous about how he does it.

*Glomerular Nephritis: Diagnosis and Treatment*

Chapter 5 (p. 120)

The Macmillan Company. New York, New York, USA. 1948

**Feinstein, Alvin R.**

No biographical data available

Unlike other types of scientific equipment, a clinician is not easily tested, compared, or calibrated in the act of getting clinical evidence. He can markedly improve the scientific quality of his performance, however, if he is willing to recognize the importance of what he does, to acknowledge himself as the apparatus to be improved, and to revise many minor and some major aspects of the way he works.

*Clinical Judgment* (p. 308)

Williams & Wilkins. Baltimore. 1967

**Peabody, Francis Weld** 1881–1927

American physician

One of the essential qualities of the clinician is interest in humanity, for the secret of the care of the patient is in caring for the patient.

*The Care of the Patient*

The Care of the Patient (p. 48)

Harvard University Press. Cambridge, Massachusetts, USA. 1928

**CLONE**

**Ehlers, Vernon** 1934–  
American politician

Human life is sacred. The good Lord ordained a time-honored method of creating human life, commensurate with substantial responsibility on the part of the parents, the responsibility to raise a child appropriately. Creating life in the laboratory is totally inappropriate and so far removed from the process of marriage and parenting that has been instituted upon this planet that we must rebel against the very concept of human cloning. It is simply wrong to experiment with the creation of human life in this way.

Human Cloning

*Congressional Record-House*, Volume 143, Number 26, 4 March, 1997 (p. H 713)

**Clifford, William Kingdon** 1845–79  
English mathematician

*Skeptics and True Believers: The Exhilarating Connection Between Science and Religion*  
Chapter Six (p. 107)  
Walker & Company. New York, New York, USA. 1998

## COLD

**Bacon, Sir Francis** 1561–1626  
English lawyer, statesman, and essayist

...heat and cold are nature's two hands, whereby she chiefly worketh; and heat we have in readiness, in respect of the fire; but for cold we must stay till it cometh, or seek it in deep caves, or high mountains: and when all is done, we cannot obtain it in any great degree: for furnaces of fire are far hotter than a summer's sun; but vaults or hills are not much colder than a winter's frost.

*The Works of Francis Bacon* (Volume 1)  
*Sylva Sylvarum, Of Production of Cold* (p. 270)  
Reprinted for C. & J. Rivington. London, England. 1826

## COLD FUSION

**Beam, Alex**  
No biographical data available

Cold fusion, the most delectable scientific nonevent since Kohoutek's Comet, is fizzling fast. As reports debunking the improbable breakthrough pour in from labs around the country, "fusion in a jar" is looking like a latter-day Veg-O-Matic, the kitchen appliance that works when you see it on TV but not when you get it home.

Cold Fusion, We Hardly Knew Ye  
*The Boston Globe*, May 3, 1989 (p. 77)

## COLEOPTERIST

**Crowson, Roy Albert** 1914–99  
 English biologist

If and when the day comes when pure science is once again generally appreciated as a self-justifying intellectual adventure of mankind, then the coleopterists should be able to step forward and claim their share of its glory.

*The Biology of the Coleoptera*  
 Chapter 21 (p. 691)  
 Academic Press. London, England. 1981

## COLLAGEN

**Gross, Jerome**  
 American physician

Collagen is perhaps the most abundant protein in the animal kingdom. It is the major fibrous constituent of skin, tendon, ligament, cartilage and bone. Its properties are diverse and remarkable. In tendon it has a tensile strength equal to that of light steel wire; in the cornea it is as transparent as water. It accounts for the toughness of leather, the tenacity of glue and the viscousness of gelatin.

Collagen  
*Scientific American*, Volume 204, Number 5, May, 1961 (p. 121)

## COLLECTING

**Darwin, Charles Robert** 1809–82  
 English naturalist

The passion for collecting which leads a man to be a systematic naturalist, a virtuoso, or a miser, was very strong in me, and was clearly innate, as none of my sisters or brothers ever had this taste.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
 Chapter II (p. 26)  
 D. Appleton & Company. New York, New York, USA. 1896

I was very fond of collecting eggs, but I never took more than a single egg out of a bird's nest, except on one single occasion, when I took all, not for their value, but from a sort of bravado.

In Francis Darwin (ed.)  
*The Life and Letters of Charles Darwin* (Volume 1)  
 Chapter II (p. 28)  
 D. Appleton & Company. New York, New York, USA. 1896

**Durrell, Gerald M.** 1925–95  
 British naturalist, zookeeper, and author

One of the chief charms of collecting is its uncertainty. One day you will go out loaded down with nets and bags for the sole purpose of catching bats, and you will arrive back in camp with a python in the nets, your bags full of birds, and your pockets full of giant millipedes.

*The Overloaded Ark*  
 Chapter 5 (p. 92)  
 The Viking Press. New York, New York, USA. 1953

## COLONIZATION

**Bernal, John Desmond** 1901–71  
 Irish-born physicist and x-ray crystallographer

...once acclimatized to space living, it is unlikely that man will stop until he has roamed over and colonized most of the sidereal universe, or that even this will be the end. Man will not ultimately be content to be parasitic on the stars but will invade them and organize them for his own purposes.

*The World, the Flesh and the Devil: An Enquiry into the Future of the Three Enemies of the Rational Soul*  
 Chapter II (pp. 27–28)  
 Indiana University Press. Bloomington, Indiana, USA. 1969

**Hoyle, Sir Fred** 1915–2001  
 English mathematician, astronomer, and writer

Colonization of the galaxy is impossible because it was deliberately arranged to be so.

*The Intelligent Universe*  
 Chapter 6 (p. 155)  
 Holt, Rinehart & Winston. New York, New York, USA. 1983

**Moore, Patrick** 1923–  
 English amateur astronomer

I cannot believe that it will ever be feasible to send a manned space-ship out beyond the Solar System; my lack of faith in space-warps, time-warps, freezing techniques, and cosmical Noah's Arks is profound, though I am well aware that others do not agree.

*The Next Fifty Years In Space*  
 Chapter 10 (p. 129)  
 William Luscombe Publisher Ltd. London, England. 1976

**Wiley, Jr., John P.**  
 No biographical data available

With the rest of our solar system inhospitable to life as we know it and with travel to the stars problematical, man must lie in the bed he is making on Earth for the foreseeable future.

Space: A Barrier to the Species  
*Natural History*, Volume 79, Number 1, January, 1970 (p. 73)

## COLOR

### Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

The world is not made up to the eye of figures, that is, only half; it is also made of color. How that element washes the universe with its enchanting waves!.... It is the last stroke of Nature; beyond color she cannot go.

*The Complete Works of Ralph Waldo Emerson* (Volume 7)

*Society and Solitude*

Success

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

### Hunt, Leigh 1784–1859

English author, poet, and editor

Colors are the smiles of Nature. When they are extremely smiling, and break forth into other beauty besides, they are her laughs; as in the flowers.

*The Seer: Or, Common-places Refreshed* (Volume 1)

Color (pp. 36–37)

Roberts Brothers, Publishers. Boston, Massachusetts, USA. 1864

Nature at all events, humanly speaking, is manifestly very fond of color; for she has made nothing without it. Her skies are blue; her fields green; her waters vary with her skies; her animals, minerals, vegetables, are all colored. She paints a great many of them in apparently superfluous hues, as if to show the dullest eye how she loves colour.

*The Seer: Or, Common-places Refreshed* (Volume 1)

Color (p. 37)

Robert Brothers, Publishers. Boston, Massachusetts, USA. 1864

### Ruskin, John 1819–1900

English writer, art critic, and social reformer

What the colours of flowers, or of birds, or of precious stones, or of the sea and air, and the blue mountains, and the evening and the morning, and the clouds of Heaven, were given for – they only know who can see them and can feel, and who pray that the sight and the love of them may be prolonged, where cheeks will not fade, nor sunsets die.

*Proserpina: Studies of Wayside Flowers* (Volume 2)

Part VII, Chapter I (p. 40)

George Allen. London, England. 1882

All good color is in some degree pensive, tho loveliest is melancholy, and the purest and most thoughtful minds are those which love color the most.

*The Stones of Venice*

Chapter 5 (p. 146)

John R. Alden, Publisher. New York, New York, USA. 1885

...of all God's gifts to the sight of man, color is the holiest, the most divine, the most solemn.

*The Stones of Venice*

Chapter 5 (p. 146)

John R. Alden, Publisher. New York, New York, USA. 1885

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

To understand the phenomena of colour nothing is required but unbiased observation and a sound head, but these are scarcer than folks imagine.

*Conversations of Goethe With Eckermann and Soret*

Wednesday, December 20 (p. 181)

George Bell & Sons. London, England. 1883

## COMBINATORICS

### Chadwick, John 1920–98

English linguist

This method of deduction...is often called “combinatory”. Its usefulness is not exhausted at this stage, but it does even at the outset lead to some valuable conclusions...

*The Decipherment of Linear B*

Cambridge University Press. Cambridge, England. 1958

### Dieudonné, Jean 1906–92

French mathematician and educator

We have not begun to understand the relationship between combinatorics and conceptual mathematics.

*A Panorama of Pure Mathematics: As Seen by N. Bourbaki*

Academic Press. New York, New York, USA. 1982

### Hoban, Russell

American fantasy writer

More and more I'm aware that the permutations are not unlimited.

*Turtle Diary*

Jonathan Cape. London, England. 1975

### Jones, Richard G.

No biographical data available

...Lord of sequence and design.

God of Concrete, God of Steel.

Anglican Church of Canada and the United Church of Canada. Toronto, Ontario, Canada. 1971

### Kanigel, Robert 1946–

Scientific journalist

...combinatorics, a sort of glorified dice-throwing...

*The Man Who Knew Infinity: A Life of the Genius Ramanujan*

Chapter Seven (p. 250)

Charles Scribner's Sons. New York, New York, USA. 1991

### Pinker, Steven 1954–

Canadian-born American cognitive scientist and author

Journalists say that when a dog bites a man, that is not news, but when a man bites a dog, that is news.... Thanks

to the mathematics of combinatorics, we will never run out of news.

*How the Mind Works*

Chapter 2 (p. 118)

W.W. Norton & Company, Inc. New York, New York, USA. 1997

**Segerstrale, Ullica** 1952–

Finish-born American sociologist and author

While [Maynard Smith] believed that a Marxist in science could take a lot of different positions, he saw the need for “some kind of substitute for Hegelian dialectics...some kind of concept that in dynamical systems there are going to be sudden breaks and thresholds and transformations, and so on”. He added that, in his opinion, “today we really do have a mathematics for thinking about complex systems and things which undergo transformations from quantity into quality”. Here he saw Hopf bifurcations and catastrophe theory as really nothing other than a change of quantity into quality in a dialectical sense.

*Defenders of the Truth: The Battle for Science in the Sociobiology Debate and Beyond*

Oxford University Press, Inc. Oxford 2000

**von Neumann, John** 1903–57

Hungarian-born mathematician

**Morgenstern, Oskar** 1902–77

German-born American economist

The emphasis on mathematical methods seems to be shifted more towards combinatorics and set theory – and away from the algorithm of differential equations which dominates mathematical physics.

*Theory of Games and Economic Behavior*

Chapter 4.8.3 (p. 45)

Princeton University Press. Princeton, New Jersey, USA. 1947

## COMET

### Author undetermined

...obviously, then, comet Kohoutek promises to be the celestial extravaganza of the century.

A Comet for Christmas

*Newsweek*, November 5, 1973 (p. 109)

We have reason to know that many weak people have been alarmed, and many still weaker people made positively ill, by an announcement which has appeared in almost all the newspapers, to the effect that Prof. Plan-tamour, of Geneva, has discovered a comet of immense size, which is to ‘collide,’ as our American friends would say, with our planet on the 12th of August next. We fear that there is no foundation whatever for the rumor. In the present state of science nothing could be more acceptable than the appearance of a good large comet, and the nearer it comes to us the better, for the spectroscope has

a long account to settle with the whole genus, which up to this present time has fairly eluded our grasp. But it is not too much to suppose that the laymen in these matters might imagine that discovery would be too dearly bought by the ruin of our planet. Doubtless, if such ruin were possible, or indeed probable – but let us discuss this point. Kepler, who was wont to say that there are as many comets in the sky as fishes in the ocean, has had his opinion endorsed in later times by Arago, who has estimated the number of these bodies which traverse the solar system as 17,500,000. But what follows from this? Surely that comets are very harmless bodies or the planetary system, the earth included, would have suffered from them long before this, even if we do not admit that the earth is as old as geologists would make it. But this is not all. It is well known that some among their number which have withal put on a very portentous appearance are merely the celestial equivalents of our terrestrial ‘wind-bags’...

Notes

*Nature*, Volume 5, February 15, 1872 (p. 310)

### Babylonian Inscription

A comet arose whose body was bright like the day, while from its luminous body a tail extended, like the sting of a scorpion.

Chapter 1 (p. 4)

Cambridge University Press. Cambridge, England. 1981

**Byron, George Gordon, 6th Baron Byron** 1788–1824

English Romantic poet and satirist

The angels all were singing out of tune,  
And hoarse with having little else to do,  
Excepting to wind up the sun and moon,  
Or curb a runaway young star or two,  
Or wild colt of a comet, which too soon  
Broke out of bounds o’er the ethereal blue,  
Splitting some planet with its beautiful tail,  
As boats are sometimes by a wanton whale.

*The Complete Poetical Works of Byron*

The Vision of Judgment

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

**Coleridge, Samuel Taylor** 1772–1834

English lyrical poet, critic, and philosopher

Guardian and friend of the moon, O Earth, whom the comets forget not,

Yea, in the measureless distance wheel around and again they behold thee!

*The Complete Poetical Works of Samuel Taylor Coleridge* (Volume 1)

Hymn to the Earth

The Clarendon Press. Oxford, England. 1912

**de Fontenelle, Bernard le Bovier** 1657–1757

French author

These foreign planets, with their tails and their beards, have a terrible menacing countenance, it may be they are sent to affront us...

*Conversations on the Plurality of Worlds*

The Fifth Evening (p. 173)

Printed for Peter Wilson. Dublin, Ireland. 1761

We think ourselves unhappy when a comet appears; but it is the comet itself which is unfortunate.

*Conversations on the Plurality of Worlds*

The Fifth Evening (p. 175)

Printed for Peter Wilson. Dublin, Ireland. 1761

French mathematician and astronomer

Kepler...thought it but reasonable, that as the sea has its whales and monsters, the air should have them likewise. These monsters are Comets ...

*An Essay Towards a History of the Principal Comets Since 1742*

A Letter Upon Comets (pp. 10–11)

Printed for T. Becket & P.A. de Hondt. London, England. 1769

...we have seen...how dangerous the shock of a Comet might prove, yet the mischief may be so inconsiderable, as to be fatal only to that part of the globe which receives the blow; we might perhaps escape with the crush only of one kingdom, while the rest of the earth would enjoy those rare productions with which so great a traveller would present them. We should be greatly surprised, perhaps, to find the fragments of these so much despised masses composed of gold and

*An Essay Towards a History of the Principal Comets Since 1742*

A Letter Upon Comets (p. 32)

Printed for T. Becket & P.A. de Hondt. London, England. 1769

**Dick, Thomas** 1600–80

Scottish theologian and philosopher

Whatever opinions we may adopt as to the physical constitution of comets, we must admit that they serve some grand and important purpose in the economy of the universe; for we cannot suppose that the Almighty has created such an immense number of bodies, and set them in rapid motion according to established laws, without an end worthy of his perfection, and, on the whole, beneficial to the inhabitants of the system through which they move.

*The Sidereal Heavens and Other Subjects Connected with Astronomy, as Illustrative of the Character of the Deity and of an Infinity of Worlds*

Chapter XX (p. 342)

Worthington. New York, New York, USA. 1884

...what I conceive to be one of the main designs of the Creator in the formation of such a vast number of splendid bodies is, that they may serve as habitations for myriads of intelligent beings.... If this position be admitted, then

we ought to contemplate the approach of a comet, not as an object of terror or harbinger of evil, but as a splendid world, of a different construction from ours, conveying millions of happy beings to survey a new region of the Divine empire...

*The Sidereal Heavens and Other Subjects Connected with Astronomy, as Illustrative of the Character of the Deity and of an Infinity of Worlds*

Chapter XX (p. 345)

Worthington. New York, New York, USA. 1884

**Donne, John** 1572–1631

English poet and divine

Who vagrant transitory comets sees,  
Wonders because they're rare; but a new star  
Whose motion with the firmament agrees,  
Is miracle; for there no new things are.

In A.J. Smith (ed.)

*The Complete English Poems*

To the Countess of Huntingdon (p. 169)

St. Martin's Press. New York, New York, USA. 1971

**Editor of the Louisville Journal**

That comet is a gay deceiver! He promised to jostle the earth, but has only jilted her. The rogue has told a tale instead of showing one.

*Prenticeana* (p. 213)

Derby & Jackson. New York, New York, USA. 1859

**Flammarion, Camille** 1842–1925

French astronomer and author

Between the solar world and the stars strange forms rush disheveled through celestial space, appearing to throw a bridge for our mind across the fathomless abyss, and to place us in communication with other universes. Let us observe these comets in passing, but let us take care not to be delayed too long by these fantastic creatures, the sirens of the sidereal ocean, whose revelations concerning immensity are full of charms, and whose hands, extended towards the inaccessible horizons, seem to show us from afar the mysterious dreams of Infinitude.

*Popular Astronomy: A General Description of the Heavens*

Book IV, Chapter IX (p. 474)

Chatto & Windus. London, England. 1894

It had been shown that if such a comet in its flight, instead of falling into the sun, should collide with...Jupiter it would raise the temperature of that globe to such a point as to restore to it its lost light, and to make it for a time a sun again, so that the earth would be lighted by two suns, Jupiter becoming a sort of minor night-sun, far brighter than the moon, and shining by its own light – of a ruby-red or garnet color, revolving about the earth in twelve years. A nocturnal sun!

*Omega: the Last Days of the World*

Chapter II (p. 37)

The Cosmopolitan Publishing Co. New York, New York, USA. 1894

**Fort, Charles** 1874–1932  
American writer

Throughout the history of astronomy, every comet that has come back upon predicted time – not that, essentially, there was anything more abstruse about it than is a prediction that you can make of a postman’s periodicities to-morrow – was advertised for all it was worth. It’s the way reputations are worked up for fortunetellers by the fortunetellers by the faithful.

*The Book of the Damned*

Chapter X (p. 133)

Boni & Liveright, New York, New York, USA. 1919

If a comet have not the orbit that astronomers have predicted – perturbed. If – like Halley’s comet – it be late – even a year late – perturbed. When a train is an hour late, we have small opinion of the predictions of time tables. When a comet’s a year late, all we ask is – that it be explained.

*The Book of the Damned*

Chapter X (p. 134)

Boni & Liveright, New York, New York, USA. 1919

...there never is a moment when there is not some comet in the sky. Virtually there is no year in which several new comets are not discovered, so plentiful are they. Luminous fleas on a vast black dog – in popular impressions, there is no realization of the extent to which this solar system is flea-bitten.

*The Book of the Damned*

Chapter X (p. 134)

Boni & Liveright, New York, New York, USA. 1919

**Guillemin, Amédée** 1826–93  
French journalist and scientific writer

In all countries and in all times, the apparition of a comet has been considered as a presage: a presage fortunate or unfortunate according to the circumstances, the popular state of mind, the prevailing degree of superstition, the imbecility of princes, or the calculation of courtiers.

Translated by James Glaisher

*The World of Comets*

Chapter I, Section I (p. 3)

Sampson Low, Marston, Searle & Rivington, London, England. 1877

**Grassi, Horatio** 1583–1654  
Jesuit astronomer

The vain comet which by its light has disturbed the earth and the heavens begins its harmless journey. With that light bestowed upon it by the creator it shrewdly propitiates the adverse celestial torches by its equal fire. May this comet which alters the heavens with its ready advantage teach me the nature of the stars.

*On the Three Comets of the Year MDCXVIII* (p. 2)

Rome. 1619

Have you seen the fleeting comet with its terrifying tail? Behold how with its fearsome beard it is carried

sky-high. But no longer need you fear that stellar body with its menacing rays, nor is there harm in those stars which delight us by their appearance. Tell me, does this phantom glitter as a better and more favorable omen and does its false light surpass that true fire of the stars?

*On the Three Comets of the Year MDCXVIII* (p. 2)

Rome. 1619

**Halley, Edmond** 1656–1742  
English astronomer and mathematician

We have reason to suspect that there are a great many more comets, which being at remote distances from the Sun, and being obscure and without a tail, may for that reason escape our observation.

*Transactions of the Royal Society of London*, Volume 24, 1706 (p. 882)

Now we know

The sharply veering ways of comets, once

A source of dread, no longer do we quail

Beneath appearances of bearded stars.

In Florian Cajori

*Sir Isaac Newton’s Mathematical Principles of Natural Philosophy and His System of the World* (p. xiv)

University of California Press, Berkeley, California, USA. 1934

Aristotle’s opinion...that comets were nothing else than sublunary vapors or airy meteors...prevailed so far amongst the Greeks, that this sublimest part of astronomy lay altogether neglected; since none could think it worthwhile to observe, and to give an account of the wandering and uncertain paths of vapours floating in the Aether.

In David Gregory

*The Elements of Astronomy, Physical and Geometrical*

A Synopsis of the Astronomy of Comets, Volume 2, 1715

Printed for John Morphew, London, England. 1715

Hitherto I have consider’d the Orbits of Comets as exactly Parabolic; upon which supposition it wou’d follow, that Comets being impell’d towards the Sun by Centripetal Force, would descend as from space infinitely distant, and by their so falling acquire such a Velocity, as that they may again fly off into the remotest parts of the Universe, moving upwards with a perpetual tendency, so as never to return again to the Sun. But since they appear frequently enough, and since some of them can be found to move in a Hyperbolic Motion, or a Motions swifter than what a Comet might acquire by its Gravity to the Sun, ‘tis highly probable they rather move in a very Excentric Elliptic Orbits, and make their returns after long periods of Time: For so their number will be determinate, and perhaps, not so very great.

In David Gregory

*The Elements of Astronomy, Physical and Geometrical*

A Synopsis of the Astronomy of Comets, Volume 2, 1715

Printed for John Morphew, London, England. 1715

...wherefore if according to what we have already said, it [the comet] should return again about the year 1758, candid posterity will not refuse to acknowledge that this was first discovered by an Englishman.

 Translator and editor

I cannot think a comet is a sudden fire, but I rank it among  
 Nature's permanent creations.  
*The Comet of 1577: Its Place in the History of Astronomy* (p. 31)  
 Columbia University Press. New York, New York, USA. 1944

**Herschel, Sir John Frederick William** 1792–1871  
 English astronomer and chemist

There is, beyond question, some profound secret and  
 mystery of nature concerned in the phenomenon of their  
 [comets] tails. Perhaps it is not too much to hope that  
 future observation, borrowing every aid from rational  
 speculation, grounded on the progress of physical sci-  
 ence generally, (especially those branches of it which  
 relate to the aethereal or imponderable elements), may  
 ere long enable us to penetrate this mystery, and to  
 declare whether it is really matter, in the ordinary accep-  
 tation of the term, which is projected from their heads  
 with such extravagant velocity, and if not impelled, at  
 least directed in its course by a reference to the sun, as its  
 point of avoidance.

*Outlines of Astronomy*  
 Section 599 (p. 323)  
 Blanchard & Lea. Philadelphia, Pennsylvania, USA. 1853

The great number of comets which appear to move in  
 parabolic orbits, or orbits at least undistinguishable from  
 parabolas during their description of that comparatively  
 small part within the range of their visibility to us, has  
 given rise to an impression that they are bodies extrane-  
 ous to our system, wandering through space, and merely  
 yielding a local and temporary obedience to its laws dur-  
 ing their sojourn. What truth there may be in this view,  
 we may never have satisfactory grounds for deciding.

*Outlines of Astronomy*  
 Section 600 (p. 324)  
 Blanchard & Lea. Philadelphia, Pennsylvania, USA. 1853

It is for the most part after thus passing the sun that  
 they shine forth in all their splendor, and that their tails  
 acquire their greatest length and development, thus indi-  
 cating plainly the action of the sun's rays as the exciting  
 cause of that extraordinary emanation.

*Outlines of Astronomy*

Part I, Chapter XI (561) (p. 346)  
 Longman, Brown, Green & Longmans. London, England. 1849

There is beyond question some profound secret and mys-  
 tery of nature concerned in the phenomenon of their tails.  
 In no respect is the question as to the materiality of the  
 tail more forcibly pressed on us for consideration than  
 in that of the enormous sweep which it makes round the  
 sun in perihelion, in the manner of a straight and rigid  
 rod, in defiance of the law of gravitation, nay, even of the  
 received laws of motion...

*Outlines of Astronomy*  
 Part I, Chapter XI (599) (p. 375)  
 Longman, Brown, Green & Longmans. London, England. 1849

By far the most wonderful and mysterious bodies of our  
 system are the comets. Their number is immense, their  
 variety of aspect infinite, their magnitude astounding.

*Essays from the Edinburgh and Quarterly Reviews with Addresses and  
 Other Pieces*  
 Humbolt's Kosmos (p. 298)  
 Longman, Brown, Green, Longmans & Roberts. London, England. 1857

Many of the operations of nature are carried on in her  
 great laboratory which we cannot comprehend, but now  
 and then we see some of the tools with which she is at  
 work. [The many telescopic comets may restore to the  
 sun what is lost by the emission of light.]

On the Nature and Contraction of the Sun and Fixed Stars  
*Philosophical Transactions of the Royal Society of London*, Volume 85  
 1795 (p. 60)

When we look through nature and observe the manifest  
 indications of design which every point of it exhibits, it  
 would be very presumptuous in us to assert that comets  
 are of no use, and serve no purpose in our system.

**Hooke, Robert** 1635–1703

English physician

Tho' the Frequency of *Comets*, and some of them very considerable, has excited the Lovers of Astronomical Learning to search and find out what they are; yet I have not hitherto met with any (tho' I have seen and perused the *Theorys* published by very many Ingenious Men) that has given such an account of them, as to me seems natural and satisfactory. For tho' these Bodies seem very heterogeneous, singular, and of a distinct Nature from all the rest of the Celestial Bosies we contemplate; yet I am very apt to believe, that whenever we attain a true Knowledge of them, we shall find them to be the Product of the same regular Course of Nature.

In Harry Woolf (ed.)

Johnson Reprint Corporation, New York, New York, USA. 1969

**Hopkins, Gerard Manley** 1844–89

English poet and Jesuit priest

I am like a slip of comet,  
Scarce worth discovery, in some corner seen  
Bridging the slender difference of two stars,  
Come out of space, or suddenly engender'd  
By heady elements, for no man knows:  
But there she sights the sun she grows and sizes  
And spins her skirts out, while her central star  
Shakes its cocooning mists; and so she comes  
To fields of light; millions of traveling rays  
Pierce her; she hangs upon the flame-cased sun,  
And sucks the light as full as Gideon's fleece:  
But then her tether calls her; she falls off,  
And as she dwindles shreds her smock of gold  
Amidst the sisting planets, till she comes  
To single Saturn, last and solitary;  
And then goes out into the cavernous dark.

Printed for Timothy Childe, London, England. 1698

**Joyce, James** 1882–1941

Irish-born author

Would the departed never nowhere nohow reappear? Ever he would wander, self-compelled, to the extreme limit of his cometary orbit, beyond the fixed stars and variable suns and telescopic planets, astronomical waifs and strays, to the extreme boundary of space, passing from land to land, among peoples, amid events. Somewhere imperceptibly he would hear and somehow reluctantly, uncompelled, obey the summons of recall. Whence, disappearing from the constellation of the Northern Crown he would somehow reappear reborn above delta in the constellation of Cassiopeia and after incalculable eons of peregrination return an estranged avenger, a wrecker of justice on malefactors, a dark crusader, a sleeper awakened, with financial resources (by supposition) surpassing those of Rothschild or the silver king.

Whence Came the Comets?

Volume 29, Number 111, May, 1886 (p. 692)

**Rexroth, Kenneth** 1905–82

American poet, translator, and critical essayist

When in your middle years  
The great comet comes again  
Remember me, a child,  
Awake in the summer night,  
Standing in my crib and  
Watching that long-haired star  
So many years ago.  
Go out in the dark and see  
Its plume over water  
Dribbling on the liquid night,  
And think that life and glory  
Flickered on the rushing  
Bloodstream for me once, and for  
All who have gone before me,  
Vessels of the billion-year-long  
River that flows now in your veins.

**Tasso, Torquato** 1544–95  
Italian poet

As shaking terrors from his blazing hair,  
A sanguine comet gleams through dusky air.

Translated by Edward Fairfax  
*Jerusalem Delivered*, l. 581  
The Colonial Press. New York, New York, USA. 1901

**Taylor, Bert Leston** 1866–1921  
American Poet

He can route the sun Arcturus,  
He can map Orion's bands;  
He can lure us and assure us,  
For we know he understands.  
Scarcely anything to speak of  
'Scapes his trusty spectroscope;  
But a hairy, scary streak of  
Gas defies his deepest dope. A comet always gets him,  
Always frets him and upsets him;  
For he can't make head or tail of it at all.

*A Penny Whistle*  
The Astronomer (p. 23)  
Alfred A. Knopf. New York, New York, USA. 1921

**Thomson, James** 1700–48  
Scottish poet

Lo! from the dread immensity of space  
Returning, with accelerated course,  
The rushing comet to the sun descends;  
And as he shrinks below the shading earth,  
With awful train projected o'er the heavens,  
The guilty nations tremble.

*Seasons*  
Summer, l. 1705–1710  
Printed by John Mycall. Newburyport, Massachusetts, USA. 1790

**Tolstoy, Leo** 1828–1910  
Russian writer

...this bright comet which, having traveled in its orbit  
with inconceivable velocity through immeasurable space,  
seemed suddenly – like an arrow piercing the earth – to  
remain fixed in a chosen spot, vigorously holding its tail  
erect, shining and displaying its white light amid count-  
less other scintillating stars.

**Turner, H. H. (Herbert Hall)** 1861–1930  
English astronomer

Of all the meteors in the sky  
There's none like Comet Halley.  
We see it with the naked eye  
And periodically.

Halley's Comet  
*The Mathematical Gazette*, Volume VI, Number 91, March, 1911 (p. 53)

**Twain, Mark (Samuel Langhorne  
Clemens)** 1835–1910  
American author and humorist

I came in with Halley's Comet in 1835. It is coming  
again next year (1910), and I expect to go out with it. It  
will be the greatest disappointment of my life if I don't  
go out with Halley's Comet. The Almighty has said, no  
doubt: "Now here are these two unaccountable freaks;  
they came in together, they must go out together."

In Albert Bigelow Paine  
*Mark Twain: A Biography* (Volume 4)  
Chapter CCLXXXII (p. 1511)  
Harper & Brothers Publishers. New York, New York, USA. 1912

If you want to see comets that are comets, you've got to  
go outside of our solar system – where there's room for  
them, you understand.

*Extract from Captain Stormfield's Visit to Heaven* (p. 8)  
Harper & Brothers Publishers. New York, New York, USA. 1909

**Virgil** 70 BCE– 19 BCE  
Roman epic, didactic, and idyllic poet

Of, too, when wind is toward, the stars thou'lt see

From heaven shoot headlong, and through murky night  
Long trails of fire white-glistening in their wake...

In *Great Books of the Western World* (Volume 13)

In the Days of the Comet

Book I, Chapter 5 (pp. 774–775)

Alfred A. Knopf. New York, New York, USA. 1934

**Whitman, Walt** 1819–92

American poet, journalist, and essayist

Year of comets and meteors transient and strange – lo!  
even here one equally transient and strange!

As I flit through you hastily, soon to fall and be gone,  
what is this chant?

What am I but one of you meteors?

*Complete Poetry and Collected Prose*

Year of the Meteor

The Library of America. New York, New York, USA. 1982

**Winchell, Alexander** 1824–91

American geologist

Comets are facts of observation; there is no mistake as to the real existence of such bodies, whatever they may be. They always excite our admiration. They are full of wonder. They come from the unsearchable depths of space, and after shining in our heavens a few weeks, disappear in the unsearchable depths.

*Walks and Talks in the Geological Field*

Chapter XXXVI (p. 208)

Chautauqua Press. New York, New York, USA. 1890

**Winthrop, John** 1714–79

American educator and scientist

It may not seem unreasonable to remark, for a conclusion, that as, on the one hand, it argues a temerity unworthy a

philosophic mind, to explode every apprehension of danger from comets, as if it were impossible that any damage could ever be occasioned by any of them, because some idle and superstitious fancies have in times of ignorance prevailed concerning them; so on the other, to be thrown into a panic whenever a comet appears, on account of the ill effects which some few of these bodies might produce, if they were not under a proper direction, betrays a weakness equally unbecoming a reasonable being.

In William Jay Youmans

*Pioneers of Science in America: Sketches of their Lives and Scientific Work*

D. Appleton & Co. New York, New York, USA. 1896

**Young, Edward** 1683–1765

English poet and dramatist

Hast thou n'er seen the Comet's flaming Flight?

Th' illustrious Stranger passing, Terror sheds

On gazing Nations, from his fiery Train

Of length enormous; takes his ample Round

Thro' Depths of Ether; coasts unnumber'd Worlds,

Of more than solar Glory; doubles wide

Heavens's mighty Cape; and then revisits Earth,

From the long Travel of a thousand Years.

## COMMON SENSE

**Ackoff, Russell Lincoln** 1919–

American operations research and systems scientist

...common sense...has the very curious property of being more correct retrospectively than prospectively. It seems to me that one of the principal criteria to be applied to successful science is that its results are almost always obvious retrospectively; unfortunately they seldom are prospectively. Common sense provides a kind of ultimate validation after science has completed its work; it seldom anticipates what science is going to discover.

In Anthony de Reuck, Maurice Goldsmith and Julie Knight (eds.)

*Decision Making in National Science Policy*

Operational Research and National Science Policy, Discussion (p. 96)

**Arnould, Antoine** 1612–94

French philosopher, lawyer, and mathematician

Common sense is not really so common.

*The Art of Thinking: Port-Royal Logic*

First Discourse (p. 9)

The Bobbs-Merrill Company. Indianapolis, Indiana, USA. 1964

**Atkins, Peter William** 1940–

English physical chemist and writer

...common sense drives us to accept quantum theory in place of classical physics as more consistent with common sense.... When they are inspected, the explanations of classical physics fall apart, and they are seen to be mere superficial delusions, like film-sets.

*Creation Revisited: The Origin of Space, Time and the Universe*  
Chapter Three (p. 53)  
W.H. Freeman & Company. Oxford, England. 1992

**Barfield, Owen** 1898–1997  
British philosopher, critic, and anthroposophist

And common sense today assumes that it is the outer world that is real and permanent, while the inner experience we call consciousness, or subjectivity, or our own or our self, is a fleeting unreality to which it somehow gives birth from time to time.

*History, Guilt, and Habit*

Chapter 2 (p. 47)

Wesleyan University Press. Middletown, Connecticut, USA. 1979

**Bell, E. T. (Eric Temple)** 1883–1960  
Scottish-American mathematician and educator

This is precisely what common sense is for, to be jarred into uncommon sense. One of the chief services which mathematics has rendered the human race in the past century is to put “common sense” where it belongs, on the topmost shelf next to the dusty canister labeled “discarded nonsense.”

*Mathematics: Queen and Servant of Science*

Mathematical Truth (pp. 17–18)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

**Belloc, Hilaire** 1870–1953  
French-born poet and historian

The double analysis kills the single analysis, and the treble kills the double, until at last a sufficiency of statistics comes very near to common sense.

*The Silence of the Sea*

On Statistics (p. 174)

Sheed & Ward. New York, New York, USA. 1940

**Bennett, Arnold** 1867–1931  
English novelist and playwright

And then he knew that something within him more powerful than his common-sense would force him to stake that five-franc piece. He glanced furtively at the crowd to see whether anyone was observing him. Number Well, it having been decided to bet, the next question was, how to bet? Now, Henry had read a magazine article concerning the tables at Monte Carlo, and, being of a mathematical turn, had clearly grasped the principles of the game. He said to himself, with his characteristic caution: “I’ll wait till red wins four times running, and then I’ll stake on the black.”

(“But surely,” remarked the logical superior person in him, “you don’t mean to argue that a spin of the ball is affected by the spins that have preceded it? You don’t mean to argue that, because red wins four times, or forty times, running, black is any the more likely to win at the next spin?”

“You shut up!” retorted the human side of him crossly....)

*A Great Man*

Chapter XXV (pp. 245–246)

George H. Doran Company. New York, New York, USA. 1911

**Bialac, Richard N.**

No biographical data available

Statistics are no substitute for common sense.

*The Official Explanations* (p. B–14)

Delacorte Press. New York, New York, USA. 1980

**Bragdon, Claude Fayette** 1866–1945

American architect, writer, and stage designer

Common sense neither leads nor lags, but is ever limited to the passing moment: the common knowledge of to-day was the mystery and enchantment of the day before yesterday, and will be the mere commonplace of the day after to-morrow.

*Four Dimensional Vistas*

Chapter I (p. 18)

Alfred A. Knopf. New York, New York, USA. 1923

**Bronowski, Jacob** 1908–74

Polish-born English mathematician and polymath

The world makes sense all right; it makes common sense.... But common sense is not what we put into the world. It is what we find there.

*The Common Sense of Science*

Chapter V, Section 7 (p. 78)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

**Chatfield, Christopher**

English statistician

“Common sense” is not common but needs to [be] learnt systematically.... A “simple analysis” can be harder than it looks.... All statistical techniques, however sophisticated, should be subordinate to subjective judgment.

The Initial Examination of Data

*Journal of The Royal Statistical Society*, Series A, Volume 148, 1985

**Compton, Karl Taylor** 1887–1954

American educator and physicist

We cannot get far by trying to impose an engineering education, however excellent it may be, on a young man of mediocre ability or one temperamentally unfitted for technical or administrative work. The idea reminds me of an experience which my sister had...in India. She had engaged a native electrician to install some new fixtures in her house, but he seemed particularly stupid and kept coming to her for instructions. Finally, in exasperation she said to him: “Why do you come asking questions all the time? Why don’t you use your common sense?” “Madam,” he replied gravely, “common sense is a rare

gift of God. I have only a technical education.”

*A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949* (p. 51)  
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

### Crofton, M. W.

British mathematician

There is no more remarkable feature in the mathematical theory of probability than the manner in which it has been found to harmonize with, and justify, the conclusions to which mankind have been led, not by reasoning, but by instinct and experience, both of the individual and of the race. At the same time it has corrected, extended, and invested them with a definiteness and precision of which these crude, though sound, appreciations of common sense were till then devoid.

*Encyclopædia Britannica* (9th edition)

Probability

J.M. Stoddart & Co. Philadelphia, Pennsylvania, USA. 1911

### Cross, Hardy 1885–1959

American professor of civil and structural engineering

Common sense is only the application of theories which have grown and been formulated unconsciously as a result of experience.

*Engineers and Ivory Towers*

For Man's Use of God's Gifts (p. 107)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1952

Former American Assistant Secretary of Agriculture

...to be a scientist is to be a man of affairs, a man gifted with that most uncommon of all things – common sense.

The Twentieth Century Botany

*Science*, N.S. Volume 19, January 1, 1904 (p. 13)

### Goldenweiser, Alexander 1880–1940

American anthropologist

...the physician would be even worse off than he is, if not for the occasional emergence of common sense which breaks through dogmas with intuitive freshness, or those flashes of insight for which talented diagnosticians are noted, or finally, an opportunity to make a biographical study of a patient, a luxury few physicians can enjoy and few patients can afford.

With the subject of the uniqueness of particulars, is ushered in intuitive mind as it functions in religion, art, and other forms of imaginative creativeness.

*Robots or Gods*

Chapter IV (p. 62)

Alfred A. Knopf. New York, New York, USA. 1931

### Gull, Sir William Withey 1816–90

English physician

Science and common sense differ as cultivated fruits differ from wild fruits.

Science sows its seeds of inquiry, and gathers the fruit. Common sense picks the fruit, such as it, is by the way-side. Common sense has no fields or orchards of knowledge.

*A Collection of the Published Writings of William Withey Gull* (Volume 2)

Notes and Aphorisms (p. lvi)

The New Sydenham Society. London, England. 1896

### Heinlein, Robert A. 1907–88

American science fiction writer

Son, that phrase is self-contradictory; “sense” is never “common”.

*Time Enough for Love*

Prelude, Chapter II (p. 47)

G.P. Putnam's Sons. New York, New York, USA. 1973

### Henderson, Lawrence 1878–1942

American biochemist

It is a strange irony that the principles of science should seem to deny the necessary conviction of common sense.

*The Order of Nature*

Chapter V (p. 92)

Harvard University Press. Cambridge, Massachusetts, USA. 1917

### Hofstadter, Douglas R. 1945–

American academic

...consider the very roots of our ability to discern truth. Above all (or perhaps I should say “underneath all”), common sense is what we depend on – that crazily elusive, ubiquitous faculty we all have, to some degree or other.... If we apply common sense to itself over and over again, we wind up building a skyscraper. The ground floor of this structure is the ordinary common sense we all have, and the rules for building new floors are implicit in the ground floor itself. However, working it all out is a gigantic task, and the result is a structure that transcends mere common sense.

Pretty soon, even though it has all been built up from common ingredients, the structure of this extended common sense is quite arcane and elusive. We might call the quality represented by the upper floors of this skyscraper “rare sense”; but it is usually called “science”. And some of the ideas and discoveries that have come out of this originally simple and everyday ability defy the ground floor totally.

*Metamagical Themas: Questing for the Essence of Mind and Pattern*

Section II, Chapter 5 (pp. 93, 94)

Basic Books, Inc. New York, New York, USA. 1985

**Holmes, Oliver Wendell** 1809–94

American physician, poet, and humorist

Science is a first-rate piece of furniture for a man’s upper chamber, if he has common sense on the ground-floor.

*The Poet at the Breakfast-Table*

Chapter V (p. 120)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

**Howe, E. W.** 1853–1937

American novelist and newspaper and magazine editor

What is common sense? That which attracts the least opposition: that which brings most agreeable and worthy results.

*Sinner Sermons: A Selection of the Best Paragraphs of E. W. Howe* (p. 7)

Girard, Kansas, USA. 1926

**Huxley, Thomas Henry** 1825–95

English biologist

Science is, I believe, nothing but trained and organized common sense, differing from the latter only as a veteran may differ from a raw recruit: and its methods differ from those of common sense only as far as the guardsman’s cut and thrust differ from the manner in which a savage wields a club.

*Collected Essays* (Volume 3)

*Science and Education*

On the Educational Value of the Natural History of Science (p. 45)

Macmillan & Company Ltd. London, England. 1904

Common sense is science exactly in so far as it fulfils the ideal of common sense; that is, sees facts as they are, or, at any rate, without the distortion of prejudice, and

reasons from them in accordance with the dictates of sound judgment. And science is simply common sense at its best; that is, rigidly accurate in observation, and merciless to fallacy in logic.

*The Crayfish: An Introduction to the Study of Zoology* (p. 2)

C. Kegan Paul & Co. London, England. 1880

Whoso will question the validity of the conclusions of sound science, must be prepared to carry his scepticism a long way; for it may be safely affirmed, that there is hardly any of those decisions of common sense on which men stake their all in practical life, which can justify itself so thoroughly on common sense principles, as the broad truths of science can be justified.

*The Crayfish: An Introduction to the Study of Zoology* (p. 2)

C. Kegan Paul & Co. London, England. 1880

No man...who is endowed with a fair share of common sense, and not more than a fair share of vanity, will identify either contemporary or posthumous fame with the highest good ...

*Science and Culture, and Other Essays*

Chapter I (p. 1)

Macmillan & Company Ltd. London, England. 1881

**James, William** 1842–1910

American philosopher and psychologist

Common-sense contents itself with the unreconciled contradiction, laughs when it can, and weeps when it must, and makes, in short, a practical compromise, without trying a theoretical solution.

*Collected Essays and Reviews*

German Pessimism (p. 17)

Longmans, Green & Company. New York, New York, USA. 1920

**Keynes, John Maynard** 1883–1946

British economist

We know that the probability of a well-established induction is great, but, when we are asked to name its degree, we cannot. Common sense tells us that some inductive arguments are stronger than others, and that some are very strong. But how much stronger or how strong we cannot express.

*A Treatise on Probability*

Chapter XXI (p. 259)

Harper & Row, Publishers. New York, New York, USA. 1962

**Laplace, Pierre Simon** 1749–1827

French mathematician, astronomer, and physicist

One sees in this essay that the theory of probabilities is at bottom only common sense reduced to a calculus; it makes us appreciate with exactitude that which exact minds feel by a sort of instinct without being able oft-times to give a reason for it.

*A Philosophical Essay on Probabilities*

Chapter XVIII (p. 196)

Dover Publications, Inc. New York, New York, USA. 1951

**Latham, Peter Mere** 1789–1875  
English physician

A small overweight of knowledge is often a sore impediment to the movement of common sense.

In William B. Bean

*Aphorisms from Latham* (p. 37)

Prairie Press. Iowa City, Iowa, USA. 1962

**Lehrer, Keith** 1936–  
American philosopher

The overthrow of accepted opinion and the dictates of common sense are often essential to epistemic advance. Moreover, an epistemic adventurer may arrive at beliefs that are not only new and revelatory, but also better justified than those more comfortably held by others. The principle of the conservation of accepted opinion is a roadblock to inquiry, and, consequently, it must be removed.

*Knowledge*

Chapter 7 (p. 184)

Clarendon Press. Oxford, England. 1974

**Luria, Salvador Edward** 1912–91  
Italian-American microbiologist

Significant advances in science often have a peculiar quality: they contradict obvious, commonsense opinions.

The Science Path: IV, Looking Back (p. 116)

Harper & Row, Publishers. New York, New York, USA. 1984

**Oppenheimer, James Robert** 1904–67  
American theoretical physicist

Common sense is not wrong in the view that it is meaningful, appropriate and necessary to talk about the large objects of our daily experience.... Common sense is wrong only if it insists that what is familiar must reappear in what is unfamiliar.

*Science and the Common Understanding*

Chapter 5 (pp. 74–75)

Simon & Schuster. New York, New York, USA. 1953

...distrust all the philosophers who claim that by examining science they come to the results in contradiction with common sense. Science is based on common sense; it cannot contradict it.

In University of Denver

*Foundations for World Order*

The Scientific Foundations for World Order (p. 51)

**Osler, Sir William** 1849–1919  
Canadian physician and professor of medicine

Common-sense nerve fibers are seldom medullated before forty – they are never seen even with a microscope before twenty.

*Sir William Osler: Aphorisms from His Bedside Teachings and Writings* (p. 283)

Charles C. Thomas. Springfield. 1961

**Pope, Alexander** 1688–1744  
English poet

Good sense, which only is the gift of Heaven,  
And through no science, fairly worth the seven.

*The Complete Poetical Works*

Moral Essays, Ep. IV, l. 43

Houghton Mifflin & Company. New York, New York, USA. 1903

**Roosevelt, Franklin Delano** 1882–1945  
32nd president of the USA

It is common sense to take a method and try it. If it fails, admit it frankly and try another. But above all, try something.

Speech

Oglethorpe University, May 22, 1932

**Russell, Bertrand Arthur William** 1872–1970  
English philosopher, logician, and social reformer

Common sense starts with the notion that there is matter where we can get sensations of touch, but not elsewhere. Then it gets puzzled by wind, breath, clouds, etc., whence it is led to the conception of “spirit” – I speak etymologically. After “spirit” has been replaced by “gas,” there is a further stage, that of the aether.

*The Analysis of Matter*

Chapter XIII (p. 121)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

The supposition of common sense and naive realism, that we see the actual physical object, is very hard to reconcile with the scientific view that our perception occurs somewhat later than the emission of light by the object; and this difficulty is not overcome by the fact that the time involved, like the notorious baby, is a very little one.

*The Analysis of Matter*

Chapter XV (p. 155)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

Common sense, however it tries, cannot avoid being surprised from time to time. The aim of science is to save it from such surprises.

In Jean-Pierre Luminet

*Black Holes* (p. 182)

Cambridge University Press. New York, New York, USA. 1992

It used to be supposed by empiricists that the justification of such inference rests upon induction. Unfortunately, it can be proved that induction by simple enumeration, if conducted without regard to common sense, leads very much more often to error than the truth. And if a principle needs common sense before it can be safely used, it is not the sort of principle than can satisfy a logician. We must, therefore, look for a principle other than induction if we are to accept the broad outlines of science, and of common sense in so far as it is not refutable. This is a very large problem.

*My Philosophical Development*

Chapter 1 (p. 11)

George Allen & Unwin Ltd. London, England. 1975

### Stitt, Edward Rhodes

Physician

For the laboratory worker the most valuable asset is common sense and he must be able to bring to mind the possibilities of the production of various artifacts and results from trivial errors in technique.

*Practical Bacteriology, Blood Work and Animal Parasitology* (4th edition)

Preface to the First Edition (p. xi)

P. Blackiston's Sons & Co. Philadelphia, Pennsylvania, USA. 1916

### Thomson, Sir John Arthur 1861–1933

Scottish naturalist

...one of the most marked characteristics of science is its critical quality, which is just what common-sense lacks. By common-sense is usually meant either the consensus of public opinion, of unsystematic everyday thinking, the untrustworthiness of which is notorious, or the verdict of uncritical sensory experience, which has so often proved fallacious. It was “common-sense” that kept the planets circling around the earth; it was “common-sense” that refused to accept Harvey’s demonstration of the circulation of the blood.

*Introduction to Science*

Chapter II (p. 39)

Williams & Norgate Ltd. London, England. 1916

### Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

There is absolutely no common sense; it is common non-sense.

*The Writings of Henry David Thoreau* (Volume 4)

The Place of Science in Modern Civilisation (p. 4)

The Viking Press. New York, New York, USA. 1942

### von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Man finds himself in the midst of a multitude of effects, and cannot refrain from searching out their causes. As an easy-going creature, he grasps at what is nearest to him, and rests satisfied with that. This procedure is that known in philosophical books as the common-sense method.

In John Stuart Blackie

*The Wisdom of Goethe*

Philosophy, Metaphysics, Logic, Truth and Science (p. 154)

William Blackwood & Sons. Edinburgh, Scotland. 1883

### Whitehead, Alfred North 1861–1947

English mathematician and philosopher

...the anxious precision of modern mathematics is necessary for accuracy...it is necessary for research. It makes for clearness of thought and for fertility in trying new combinations of ideas. When the initial statements are vague and slipshod, at every subsequent stage of thought, common sense has to step in to limit applications and to explain meanings. Now in creative thought common sense is a bad master. Its sole criterion for judgment is that the new ideas shall look like the old ones, in other words it can only act by suppressing originality.

*An Introduction to Mathematics*

Chapter 11 (p. 116)

Oxford University Press, Inc. New York, New York, USA. 1958

### Wolpert, Lewis 1929–

American biologist

...one of the strongest arguments for the distance between common sense and science is that the whole of science is totally irrelevant to people’s day-to-day lives.

*The Unnatural Nature of Science*

Chapter I (p. 16)

Harvard University Press. Cambridge, Massachusetts, USA. 1992

## COMMONPLACE

### Doyle, Sir Arthur Conan 1859–1930

Scottish writer

...there is nothing so unnatural as the commonplace.

*The Adventures of Sherlock Holmes*

*A Case of Identity* (p. 56)

Harper & Brothers Publishers. New York, New York, USA. 1892

## COMMUNICATE

### Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

If we are to explain the workings of an organization or a machine in a comprehensible way, we must speak to our listeners in a language they understand, and in terms of ideas with which they are familiar – otherwise our explanation will mean nothing to them. It is no, good telling a crowd of savages that the time-differential of

the electric displacement is the rotation of the magnetic force multiplied by the velocity of light.

*Physics and Philosophy*

Chapter I (p. 10)

Dover Publication. New York, New York, USA. 1981

**Lavoisier, Antoine Laurent** 1743–94

French chemist

However certain the facts of any science may be, and, however just the ideas we may have formed of these facts, we can only communicate false impressions to others, while we want words by which these may be properly expressed.

Translated by Robert Kerr

*Elements of Chemistry* (Volume 1) (5th edition)

Preface of the Author (p. xviii)

Printed for W. Creech. Edinburgh, Scotland. 1802

**Pascal, Blaise** 1623–62

French mathematician and physicist

I have spent much time in the study of the abstract sciences; but the paucity of persons with whom you can communicate on such subjects, disgusted me with them. When I began to study man, I saw that these abstract sciences are not suited to him, and that in diving into them, I wandered further from my real object, than those who knew them not, and I forgave them for not having attended to these things. I expected then, however, that I should find some companions in the study of man, since it was so specifically a duty. I was in error. There are fewer students of man, than of geometry.

*Thoughts on Religion, and Other Subjects*

Chapter XXVII (p. 269)

J.S. & C. Adams. Amherst, Massachusetts, USA. 1829

## COMMUNICATION

**Abbot, Charles Greeley** 1872–1973

American astrophysicist

Every large scientific institution or observatory has almost daily communications from persons of very moderate attainments who presume to question, nay rather to spurn, the most well-attested facts of human knowledge. Such persons seem to prefer especially to direct their attacks on the following facts: the Copernican system; the law of universal gravitation; the first and second laws of energy; and, finally, the high temperature of the sun. No argument can refute them, because they have not the requisite learning to comprehend it, which is no disgrace, but which should make men modest enough to have faith in those who excel them immeasurably. Hence it is the policy of most scientific institutions to avoid entirely discussions of these subjects with such correspondents.

*The Sun*

Chapter I (p. 8)

D. Appleton & Co. New York, New York, USA. 1911

**Babbage, Charles** 1792–1871

English mathematician

He who can see portions of matter beyond the ken of the rest of his species, confers an obligation on them, by recording what he sees; but their knowledge depends both on his testimony and on his judgment. He who contrives a method of rendering such atoms visible to ordinary observers, communicates to mankind an instrument of discovery, and stamps his own observations with a character, alike independent of testimony or of judgment.

*Reflections on the Decline of Science in England, And on Some of Its Causes*

Chapter V (p. 169)

Printed for B. Fellowes. London, England. 1830

**Bohr, Niels Henrik David** 1886–1962

Danish physicist

As the goal of science is to augment and order our experience, every analysis of the conditions of human knowledge must rest on considerations of the character and scope of our means of communication.

*Atomic Physics and Human Knowledge* (p. 88)

Wiley. New York, New York, USA. 1958

**Chesterton, G. K. (Gilbert Keith)** 1874–1936

English author

The following words are written over the signature of a man whose intelligence I respect, and I cannot make head or tail of them –

“When modern science declared that the cosmic process knew nothing of a historical event corresponding to a Fall, but told, on the contrary, the story of an incessant rise in the scale of being, it was quite plain that the Pauline scheme – I mean the argumentative processes of Paul’s scheme of salvation – had lost its very foundation; for was not that foundation the total depravity of the human race inherited from their first parents? ... But now there was no Fall; there was no total depravity, or imminent danger of endless doom; and, the basis gone, the superstructure followed.”

It is written with earnestness and in excellent English; it must mean something. But what can it mean?

*All Things Considered*

Science and Religion (p. 189)

John Lane Co. New York, New York, USA. 1910

**Feynman, Richard P.** 1918–88

American theoretical physicist

There is always another way to say the same thing that doesn’t look at all like the way you said it before.

*Nobel Lectures, Physics 1963–1970*

The Development of the Space-Time View of Quantum Electrodynamics  
Elsevier Publishing Co. Amsterdam, The Netherlands. 1972

**Guyot, Arnold** 1807–84

Swiss-born American geologist, geographer, and educator

In the communion of mind with mind, in the mutual interchange of ideas, the first condition necessary for establishing between him who speaks and those that hear, the sympathetic harmony which makes its charm, is, that the word shall reach the understanding without obstacle and without effort.

*The Earth and Man*

Lecture I (p. 19)

Gould & Lincoln. Boston, Massachusetts, USA. 1860

**Herschel, Friedrich Wilhelm (Sir William)** 1738–1822

English astronomer

As an apology for this prematurity it may be said that the end of all discoveries being communication, we can never be too ready in giving facts and observations, whatever we may be, in reasoning upon them.

Account of Some Observations Tending to Investigate the Construction of the Heavens

*Philosophical Transactions of the Royal Society of London*, Volume 74, 1784 (p. 438)

...it may be said that, the end of all discoveries being communication, we can never be too ready in giving facts and observations, whatever we may be in reasoning upon them.

*Sir William Herschel*

Chapter III (p. 88)

Charles Scribner's Sons. New York, New York, USA. 1881

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

The communication of knowledge and the necessity which everyone feels of managing his stock of experience with the least expenditure of thought, compel us to put our knowledge in economical forms.

Translated by Thomas J. McCormack

*Popular Scientific Lectures* (2nd edition)

On the Economical Nature of Physical Inquiry (p. 197)

The Open Court Publishing Co. Chicago, Illinois, USA. 1897

**Michaelson, Albert Abraham** 1852–1931

Prussian-born American physicist

Science when it has to communicate the results of its labor, is under the disadvantage that its language is but little understood. Hence it is that circumlocution is inevitable and repetitions are difficult to avoid.

*Light Waves and Their Uses* (Volume 3) (2nd series)

Lecture I (p. 1)

The University of Chicago Press. Cambridge, England. 1903

**Nichols, Ernest Fox** 1869–1924

American physicist

In the upbuilding of all the great and diverse departments of thought, characteristic methods have arisen which the human reason has found best suited to the pursuit of the many phases of truth which it seeks. In the perfection of methods and resourcefulness in applying them, no age

has been more fertile than our own. Yet one ever present danger to the orderly and symmetrical development of modern thought, is that those working in different fields for its advancement may lose touch with one another, and the interchange of methods and results so essential to balanced growth, be neglected.

*Physics*

Physics (p. 5)

The Columbia University Press. New York, New York, USA. 1907

**Scientist (Fictional character)**

If everything is ready on the dark side of the moon play the five tones...

*Close Encounters of the Third Kind*

Film (1977)

**Smith, George Otis** 1871–1944

American geologist

It takes years for some geologists to break the fetters of this scholastic habit of using big words for small ideas. Probably every one of us has been guilty of sentences like the following, which appeared in a Survey manuscript. "The argillaceous character of the formation is very prominent in some localities, although it is usually subsidiary to the arenaceous phase." On being translated this means: At some places the formation includes considerable clay, but generally it is made up chiefly of sand.

Paper presented to the Society of Economic Geologists at the Amherst Meeting

December 28, 1921

**COMMUNITY**

**Greenspoon, David Harry**

No biographical data available

We are community, within and without – that is, our bodies are, in a sense, communities of microorganisms, and our biosphere is an intricate mesh of interacting communities. It's only natural to want to extend this and create an interplanetary community. There is beauty and inspiration in the vision of humanity's spreading into the galaxy, leaving the cradle, becoming who-knows-what.

*Venus Revealed*

Chapter 6 (p. 337)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1997

**COMPARISON**

**Bramah, Ernest** 1869–1942

English author

How is it possible to suspend topaz in one cup of the balance and weigh it against amethyst in the other; or who in a single language can compare the tranquilizing grace

of a maiden with the invigorating pleasure of witnessing a well-contested rat-fight.

*Kai Lung's Golden Hours*  
258

G.H. Doran Company. New York, New York, USA. 1923

**Levy, Matthys**

No biographical data available

**Salvadori, Mario**

No biographical data available

When we compare our tiny corner of the universe to the infinite majesty of the whole, our innate, unjustified pride should naturally vanish. Yet, if we realize that, small as we are, we have been able to penetrate the mystery of the universe, establish its history, analyze its composition and draw its map; and that, moreover, we might even soon be able to predict its behavior to the end of time; and finally that, unfazed by our smallness, we have explored our little home, discovering in the process the origin of earthquakes and volcanoes, we are entitled to a complacent smile, a smile wisely tempered by the comparison of our mortality to the apparent never-ending life of the universe.

*Why the Earth Quakes*

Chapter 15 (pp. 191–192)

W.W. Norton & Company, Inc. New York, New York, USA. 1995

**COMPETITION**

**Kropotkin, Peter Alekseyevich** 1842–1921

Russian revolutionary and geographer

Don't compete! – competition is always injurious to the species, and you have plenty of resources to avoid it! That is the *tendency* of nature, not always realised in full, but always present. That is the watchword which comes to us from the bush, the forest, the river, the ocean. Therefore combine – practice mutual aid! That is the surest means of giving to each and to all the greatest safety, the best guarantee of existence and progress, bodily, intellectual, and moral.

Mutual Aid Among Animals

*The Eclectic Magazine of Foreign Literature, Science, and Art*, Volume LII, Number 6, December, 1890 (p. 848)

**COMPLEX**

**Perry, J.**

No biographical data available

I am afraid that what seem to you simple is to him [the average school boy] complex, and what seems to you complex is to him quite simple.

The Correlation of Teaching Mathematics and Science

*The School World*, Number 120, December, 1908 (p. 461)

**COMPLEXITY**

**Dawkins, Richard** 1941–

British ethologist, evolutionary biologist, and popular science writer

The physicist's problem is the problem of ultimate origins and ultimate natural laws. The biologist's problem is the problem of complexity.

*The Blind Watchmaker*

Chapter I (p. 15)

W.W. Norton & Co. New York, New York, USA. 1986

**Forrester, Jay Wright** 1918–

American computer engineer and systems theorist

...complex systems are counterintuitive. That is, they give indications that suggest corrective action which will often be ineffective or even adverse in its results.

*Urban Dynamics*

Chapter I (p. 9)

MIT Press. Cambridge, Massachusetts, USA. 1969

**Pagels, Heinz R.** 1939–88

American physicist and science writer

Science has explored the microcosmos and the macrocosmos; we have a good sense of the lay of the land. The great unexplored frontier is complexity.

*The Dreams of Reason*

Preface (p. 12) S

Simon & Schuster. New York, New York, USA. 1988

**Ptolemy** 85–165

Greek astronomer

We must not be repelled...by the complexity of the hypotheses, but explain the phenomena as well as we can. If the hypotheses satisfy each apparent inequality separately, the combination of them will represent the truth; and why should it appear wonderful to any that such a complexity should exist in the heavens, when we know nothing of their nature which entitles us to suppose that any inconsistency will result?

Quoted in William Whewell

*History of the Inductive Sciences from the Earliest to the Present Time*

Book III, Chapter III (p. 142)

John W. Parker & Son. London, England. 1857

**Reeves, Hubert** 1932–

Canadian astrophysicist

But shouldn't the simple have already potentially encompassed the complex? Where were the seeds of complexity during the first three minutes of the universe?

*Atoms of Silence*

Chapter 4 (p. 46)

The MIT Press. Cambridge, Massachusetts. USA. 1984

**Teilhard de Chardin, Pierre** 1881–1955

French Jesuit, paleontologist, and biologist

A more complete study of the movements of the world will oblige us, little by little, to turn it upside down; in other words, to discover that if things hold and hold together, it is only by reason of complexity, from above.

*The Phenomenon of Man*

Book One, Chapter I, Section 1 (p. 43)

Harper & Brothers Publishers. New York, New York, USA. 1959

**Watts, Alan Wilson** 1915–73

American philosopher

The natural world seems a marvel of complexity, requiring a vastly intricate intelligence to create and govern it, just because we have represented it to ourselves in the clumsy “notation” of thought.

*Nature, Man, and Woman*

Part I, Chapter 2 (p. 62)

Vintage Books. New York, New York, USA. 1970

## COMPOST

**Burroughs, John** 1837–1921

American naturalist and essayist

Nature does not care whether the hunter slay the beast or the beast the hunter; she will make good compost of them both, and her ends are prospered whichever succeed.

*Birds and Poets With Other Papers*

Touches of Nature (p. 62)

David Douglas Edinburgh, Scotland. 1884

## COMPOUND

**Baeyer, Adolf von** 1835–1917

German research chemist

I have never stuck stubbornly to a particular point of view if it could no longer be reconciled with the facts.... I went for a ride, so to speak, through a pleasant countryside among the compounds and enjoyed the view. One day it looked this way, and perhaps the next day it looked different. So why should one stick stubbornly to one particular point of view.

In Richard Willstätter

*From My Life: The Memoirs of Richard Willstätter*

Chapter 6 (p. 141)

W.A. Benjamin. New York, New York, USA. 1965

**Fittag, R.**

No biographical data available

We are now forced to increase the number of compounds, not merely in order to prepare new substances, but to discover natural laws.

In W. Mansfield Clark

*The Determination of Hydrogen Ions*

Chapter IV (p. 67)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1928

**Ostwald, Carl Wilhelm Wolfgang** 1853–1932

Latvian-born German chemist

...the only difference between elements and compounds consists in the supposed impossibility of proving the so-called elements to be compounds.

Faraday Lecture: Elements and Compounds

*Journal of the Chemical Society*, Volume 85 1904 (p. 520)

**Pirsig, Robert M.** 1928–

American writer

Why, for example, should a group of simple, stable compounds of carbon, hydrogen, oxygen and nitrogen struggle for billions of years to organize themselves into a professor of chemistry?

*Lila: An Inquiry into Morals*

Chapter 11 (p. 140)

Bantam Books. New York, New York, USA. 1991

**Proust, J. L.** 1755–1826

French chemist

We must recognize an invisible hand which holds the balance in the formation of compounds. A compound is a substance to which Nature assigns fixed ratios, it is, in short, a being which Nature never creates other than balance in hand, *pondere et mensurd.*

*Annales of Chimie*, Volume 32, 1799 (p. 26)

## COMPREHEND

**Weyl, Hermann** 1885–1955

German mathematician

Beyond the knowledge gained from the individual sciences, there remains the task of comprehending. In spite of the fact that the views of philosophy sway from one system to another, we cannot dispense with it unless we are to convert knowledge into a meaningless chaos.

*Space – Time – Matter*

Introduction (p. 10)

Dover Publications. 1922

**Wedgwood, Josiah**

I have got beyond my depth – These wonderful works of Nature are too vast for my narrow microscopic comprehension.

In Eliza Meteyard

*The Life of Josiah Wedgwood* (Volume 1)

Chapter XII (p. 502)

Hurst & Blackett. London, England. 1865

## COMPREHENSION

**Atkins, Peter William** 1940–

English physical chemist and writer

Comprehension is moving across the face of the Earth, like the sunrise.

*Creation Revisited: The Origin of Space, Time and the Universe*  
Chapter Seven (p. 157)  
W.H. Freeman & Company. Oxford, England. 1992

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

...for objective description and harmonious comprehension it is necessary in almost every field of knowledge to pay attention to the circumstances under which evidence is obtained.

*Atomic Physics and Human Knowledge*  
Introduction (p. 2)  
John Wiley & Sons. New York, New York, USA. 1958

**D'Alembert, Jean Le Rond** 1717–83  
French mathematician

To someone who could grasp the universe from one unified viewpoint, the entire creation would appear as a unique fact and a great truth.

In Cornelius Lanczos  
*Albert Einstein and the Cosmic World Order*  
Chapter 6 (p. 107)  
Interscience Publishers. New York, New York, USA. 1965

**Eddington, Sir Arthur Stanley** 1882–1944  
English astronomer, physicist, and mathematician

In the end what we comprehend about the universe is precisely that which we put into the universe to make it comprehensible.

*The Relativity Theory of Protons and Electrons* (p. 328)  
Cambridge University Press. Cambridge, England. 1936

**Einstein, Albert** 1879–1955  
German-born physicist

There exists a passion for comprehension, just as there exists a passion for music.

On the Generalized Theory of Gravitation  
*Scientific American*, Volume 182, Number 4, April, 1950 (p. 13)

**Medawar, Sir Peter Brian** 1915–87  
Brazilian-born English zoologist

A strong sense of unease and dissatisfaction always goes with lack of comprehension. Laymen feel it too; how can we otherwise account for the relief they feel when they learn that some odd and disturbing phenomenon can be explained? It cannot be the explanation itself that brings relief, for it may easily be too technical to be widely understood. It is not the knowledge itself, but the satisfaction of knowing that something is known.

*Advice to a Young Scientist*  
Chapter 2 (p. 7)  
Basic Books, Inc. New York, New York, USA. 1979

## COMPUTATION

**Peirce, Benjamin** 1809–80  
American mathematician

Computation is not barren when it supplies subsistence; it ceases to be an unmitigated evil when it is dignified by ministering to the necessities of material life and comfort. But the computation of the geometer, however tedious it may be, has a loftier aspiration. It provides spiritual nourishment: hence it is life itself, and is the worthy occupation of an immortal soul.

*Ideality in the Physical Sciences*  
Lecture I (p. 10)  
Little, Brown & Co. Boston, Massachusetts, USA. 1881

## COMPUTER

**Babbage, Charles** 1792–1871  
English mathematician

The whole of the developments and operations of analysis are now capable of being executed by machinery.... As soon as an Analytical Engine exists, it will necessarily guide the future course of science.

*Passages from the Life of a Philosopher*  
Chapter VIII (pp. 136, 137)  
Longman, Green, Longman, Roberts & Green. London, England 1864

**Crichton, Michael** 1942–  
American novelist

This fascination with computer models is something I understand very well. Richard Feynman called it a disease. I fear he is right.

Lecture  
Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

**Hawking, Stephen William** 1942–  
English theoretical physicist

At present, computers are a useful aid in research, but they have to be directed by human minds. If one extrapolates their recent rapid rate of development, however, it would seem quite possible that they will take over altogether in theoretical physics. So maybe the end is in sight for theoretical physicists, if not for theoretical physics.

*Black Holes and Baby Universes and Other Essays*  
Chapter Seven (p. 68)  
Bantam Books. New York, New York, USA. 1987

**Holmes, Oliver Wendell** 1809–94  
American physician, poet, and humorist

What a satire, by the way, is that machine [Babbage's engine] on the mere mathematician! A Frankenstein-monster, a thing without brains and without heart, too stupid to make a blunder; that turns out results like a corn-sheller, and never grows any wiser or better, though it grind a thousand bushels of them!

*The Autocrat of the Breakfast-Table*  
Chapter I (p. 9)  
Houghton Mifflin Company. Boston, Massachusetts, USA. 1891

**Klein, Felix** 1849–1925  
German mathematician

If the activity of a science can be supplied by a machine, that science cannot amount to much, so it is said; and hence it deserves a subordinate place. The answer to such arguments, however, is that the mathematician, even when he is himself operating with numbers and formulas, is by no means an inferior counterpart of the errorless machine...

Translated by E.R. Hedrick and C.A. Noble  
*Elementary Mathematics from an Advanced Standpoint*  
Part First, Chapter II (p. 22)  
Dover Publications. New York, New York, USA. 1939

### Mathematical Sciences Education Board

Calculators and computers should be used in ways that anticipate continuing rapid change due to technological developments. Technology should be used not because it is seductive, but because it can enhance mathematical learning by extending each student's mathematical power.

*Everybody Counts: A Report to the Nation on the Future of Mathematics Education*  
Change (p. 84)  
National Academy Press. Washington, D.C. 1989

### COMPUTER SCIENCE

**Kac, Mark** 1914–84  
Polish mathematician

**Rota, Gian-Carlo** 1932–99  
Italian-born American mathematician

**Schwartz, Jacob T.** 1930–  
American mathematician

Computer science, a new addition to the fraternity of sciences, confronts its older brothers, mathematics and engineering, with an adolescent brashness born of rapid, confident growth and perhaps also of enthusiastic inexperience.

*Discrete Thoughts: Essays on Mathematics, Science, and Philosophy*  
Chapter Seven (p. 63)  
Springer-Verlag. New York, New York, USA. 1992

### COMPUTING

**Hamming, Wesley Richard** 1915–98  
American mathematician

The purpose of computing is insight, not numbers.  
*Numerical Methods for Scientists and Engineers* (p. v)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1962

### CONCEPT

**Adair, Robert K.**  
American physicist

...basic concepts [in physics] are almost never – perhaps never – overturned, although grand designs take different courses. It is rather as if physicists are laborers building a cathedral, who have constructed the foundation and many rows of stone. As common workers, masons, and carpenters, they never see the architect's design, but during lunch hour they talk about their conception of the design on the basis of the work they have done. As time goes on and a buttress grows here, a nave takes form there, they change our idea of the final building. But the foundation they have dug and the stones they have placed remain unchanged.

*The Great Design: Particles, Fields, and Creation*  
Chapter I (p. 8)  
Oxford University Press. Oxford, England. 1989

### Advertisement

A mind is filled and enriched by a new concept only if the concept is fully understood.

Advertisement by Great Books of the Western World  
*Scientific American*, Volume 204, Number 1, January, 1961 (p. 157)

**Beveridge, William Ian Beardmore** 1908–  
Australian zoologist

It is more important to have a clear understanding of general principles, without, however, thinking of them as fixed laws, than to load the mind with a mass of detailed technical information which can readily be found in reference books or card indexes.

*The Art of Scientific Investigation*  
Chapter One (p. 4)  
W.W. Norton & Company, Inc. New York, New York, USA. 1957

**Bohr, Niels Henrik David** 1886–1962  
Danish physicist

Due to the contrast between the principles underlying the ordinary description of natural phenomena and the element of discontinuity characteristic for the quantum theory, we must be prepared that every concept used in accounting for the experimental evidence will have only restricted validity when dealing with atomic phenomena. In E. Rudinger (ed.)

*Niels Bohr: Collected Works* (Volume 6) (p. 69)  
North-Holland. Amsterdam, Netherlands. 1985

**Bridgman, Percy Williams** 1882–1961  
American physicist

...the concept is synonymous with the corresponding set of operations.

*The Logic of Modern Physics*

Chapter I (p. 5)

The Macmillan Company. New York, New York, USA. 1928

**Cassirer, Ernst** 1874–1945

German philosopher

But what are concepts save formulation and creations of thought, which, instead of giving us the true forms of objects, show us rather the forms of thought itself? Consequently all schemata which science evolves in order to classify, organize and summarize phenomena of the real world turn out to be nothing but arbitrary schemes – dry fabrics of the mind, which express not the nature of things, but the nature of mind.

Translated by Susanne K. Langer

*Language and Myth*

Chapter 1 (p. 7)

Harper & Brothers Publishers. New York, New York, USA. 1946

**Chargaff, Erwin** 1905–2002

Austrian biochemist

The initial incommunicability of truth, scientific or otherwise, shows that we think in grooves, and that it is painful for us to be torn away from the womblike security of accepted concepts.

*Heraclitean Fire: Sketches from a Life Before Nature*

Part II

Harper & Row, Publishers. New York, New York, USA. 1958

**Hertzberger, Herman** 1932–

Dutch architect

To find new concepts as an answer to new challenges you first have to unmask the existing clichés.

*Space and the Architect: Lessons in Architecture 2*

Chapter 2 (p. 30)

Publishers. Rotterdam, The Netherlands. 2000

**Hoffmann, Roald** 1927–

Polish-born American chemist

...even in two “hard natural science” fields as close to each other as chemistry and physics, even *there* there are concepts in chemistry which are not reducible to physics. Or if they are reduced they lose much that is interesting in them.

*The Same and Not the Same*

Part One (p. 20)

Columbia University Press. New York, New York, USA. 1995

**Kierkegaard, Søren Aabye** 1813–1855  
Danish philosopher and theologian

Concepts, like individuals, have their histories and are just as incapable of withstanding the ravages of time as are individuals. But in and through all this they retain a kind of homesickness for the scenes of their childhood.

Translated by Lee M. Capel

*The Concept of Irony, With Constant Reference to Socrates* (p. 47)  
Indiana State University Press. Bloomington, Indiana, USA. 1965

**Riemann, Bernhard** 1826–66  
German mathematician

Science is the attempt to comprehend nature by means of concepts.

In C.J. Keyser

*The Hibbert Journal*, Volume 3, 1904–1905 (pp. 312–313)

**Talbot, Michael** 1953–92  
American physicist

We have dreamed the world. Our concepts of time and space, the very structure of the universe, are more intimately related to the problems and phenomenon of consciousness than we have seriously suspected.

*Mysticism and the New Physics* (p. 2)

Routledge & Kegan Paul. London, England & Henley. 1981

**Taylor, E. S.** 1903–91  
American aircraft engine pioneer

It is necessary to have a concept before it can be analyzed.

Report on Engineering Design

*Journal of Engineering Education*, Volume 51, Number 8, April, 1961 (p. 649)

**von Bertalanffy, Ludwig** 1901–72  
Austrian biologist

Behind the logical thesis that all concepts in science are reducible to physical concepts, there lies a metaphysical motive, although this would be sternly denied by the representatives of logical positivism. This motive is that the world, as pictured in physics, is the ultimate reality. The world consists of those elementary particles called atoms, electrons, protons, neutrons, and the like; and the things observed, whether stars and crystals, plants and animals, or brains and mental life, are aggregates or the outcome of those ultimate realities.

*The Scientific Monthly*, November, 1953 (p. 236)

**Wheeler, John Archibald** 1911–  
American theoretical physicist and educator

I have great hesitation in trying to formulate some unifying concepts out of my own field, and still more reluctance in speaking about their application to other fields of human knowledge.

*At Home in the Universe*

A Septet of Sibyls: Aids in the Search for Truth (p. 3)

The American Institute of Physics. Woodbury, New York, USA. 1994

## CONCEPTION

**Merz, John Theodore** 1840–1922  
German-born British chemist, historian, and industrialist

The introduction...into geometrical work of conceptions such as the infinite, the imaginary, and the relations of hyperspace, none of which can be directly imagined, has a psychological significance well worthy of examination. It gives a deep insight into the resources and working of the human mind. We arrive at the borderland of mathematics and psychology.

*A History of European Thought in the Nineteenth Century* (Volume 2)

Chapter XIII (p. 716)

William Blackwood & Sons. Edinburgh, Scotland. 1903

**Millikan, Robert Andrews** 1868–1953  
American physicist

We can still look with a sense of wonder and mystery and reverence upon the fundamental elements of the physical world as they have been partially revealed to us in this century. The childish mechanical conceptions of the nineteenth century are now grotesquely inadequate.

*Evolution in Science and Religion*

Chapter I (p. 27)

Yale University Press. New Haven, Connecticut, USA. 1927

**Richards, Herbert Maul** 1871–1928  
No biographical data available

The conception formed in ignorance is continued in ignorance.

Lecture delivered at Columbia University, December 4, 1907

*Botany* (p. 4)

The Columbia University Press. New York, New York, USA. 1908

**Whewell, William** 1794–1866  
English philosopher and historian

When men merely repeat the terms of science, without attaching to them any clear conceptions; – when their apprehensions become vague and dim; – when they assent to scientific doctrines as a matter of tradition, rather than of conviction, on trust rather than on sight; – when science is considered as a collection of opinions, rather than a record of laws by which the universe is really governed; – it must inevitably happen, that men will lose their hold on the knowledge which the great discoverers who preceded them have brought to light.

*History of the Inductive Sciences from the Earliest to the Present Time* (3rd edition)

Book IV, Chapter I (pp. 183–184)

John W. Parker & Son. London, England. 1857

To discover a Conception of the mind which will justly represent a train of observed facts is, in some measure, a

process of conjecture, as I have stated already; and as I then observed, the business of conjecture is commonly conducted by calling up before our minds several suppositions, and selecting that one which most agrees with what we know of the observed facts.

*The Philosophy of the Inductive Sciences, Founded Upon Their History* (2nd edition)

Book XI, Chapter V (p. 54)

John W. Parker. London, England. 1867

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

It is the large generalisation, limited by a happy particularity, which is the fruitful conception.

*Science and the Modern World*

Chapter II (p. 30)

Simon and Schuster. New York, New York, USA. 1997

## CONCHOLOGY

**Garstang, Walter** 1868–1949

English embryologist and amateur poet

Echinospira sets this riddle to the students of Conchology  
To make them pay attention to the doctrines of Morphology:  
And this is how he poses it: “The Ammonite’s old shell  
From time to time was portioned off, to make it fit him  
well.

“The smaller shell around his hump was “visceral,” like mine;

His outer shell also agrees: it’s “pallial” in fine.

We differ in this: his inner shell was fixed by suture,

While mine is truly portable, and useful for the future!

So let us sing in fitting terms an entente cordiale,

Observing in its proper place the torsion viscerales:

My outer shell’s a “relic” of my Ammonitic traits,

My inner is a tribute to my clever modern ways!

*Larval Forms, and Other Zoological Verses*

Echinospira’s Double Shell, Stanzas 2–4 (p. 42)

The University of Chicago Press. Chicago, Illinois, USA. 1985

**Warren, John**

No biographical data available

Conchology, indeed is a study peculiarly adapted to  
recreate the senses, and insensibly to lead us to the con-  
templation of the glory and order of the great God, in  
creation.

*The Conchologist*

Introduction (p. 3)

Russell, Odiorn & Metcalf. Boston, Massachusetts, USA. 1834

## CONCISE

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Conciseness may produce aridity, whilst too great a multiplicity of objects kept in view at the same time leads to a want of clearness and precision in the sequence of ideas.

*Cosmos: A Sketch of a Physical Description of the Universe*

Introduction (p. 3)

Longman, Brown, Green & Longmans. London, England. 1849

## CONCLUSION

**Agassiz, Jean Louis Rodolphe** 1807–73

Swiss-born American naturalist, geologist, and teacher

These practical results – for so we venture to call the general conclusions last presented – although they are purely scientific deductions from general principles, may satisfy the most obstinate supporters of the matter-of-fact side of all questions, of the advantages of scientific illustrations in the daily walks of life, and also justify the course which has been followed with so much success by the Coast Survey, in combining the strictest scientific methods with its practical operation.

*Annual Report of the Superintendent of the Coast Survey, Showing the Progress of that Work During the Year Ending November, 1851*

Extracts from the Report of Professor Agassiz to the Superintendent of the Coast Survey, on the Examination of the Florida Reefs, Keys, and Coast (pp. 159–160)

Printed by Robert Armstrong. Washington, D.C. 1852

**Borel, Félix Edouard Justin Emile** 1871–1956

French mathematician

It may seem rash indeed to draw conclusions valid for the whole universe from what we can see from the small corner to which we are confined. Who knows that the whole visible universe is not like a drop of water at the surface of the earth? Inhabitants of that drop of water, as small relative to it as we are relative to the Milky Way, could not possibly imagine that beside the drop of water there might be a piece of iron or a living tissue, in which the properties of matter are entirely different.

*Space and Time*

Note IV (p. 227)

Dover Publications, Inc. New York, New York, USA. 1960

## Charlie Chan (Fictional character)

Hasty conclusion like gunpowder. Easy to explode.

*Charlie Chan in Paris*

Film (1935)

Hasty conclusion easy to make, like hole in water.

*Charlie Chan in Egypt*

Film (1935)

Hasty conclusion like toy balloon. Easy to blow up, easy to pop.

*Charlie Chan at the Race Track*

Film (1936)

**de Luc, Jean André** 1773–1817

Swiss naturalist

The mind is at all times so eager to draw inferences, that it will not stop to collect all the data necessary for deducing legitimate conclusions, respecting the objects on which it is employed, but is not unfrequently rash in proportion to the importance of the subject, while this very circumstance ought to preclude all precipitate decisions.

Translated by Henry de La Fite

*An Elementary Treatise on Geology*

Preliminary Discourse on Geology (p. 1)

F.C. &amp; J. Rivington. London, England. 1809

**Eddington, Sir Arthur Stanley** 1882–1944

English astronomer, physicist, and mathematician

However experienced the observer, I do not think we ought to put implicit trust in a result which strains his skill to the utmost until it has been verified by others working independently. Therefore you should for the present make the usual reservations in accepting these conclusions. But science is not just a catalogue of ascertained facts about the universe; it is a mode of progress, sometimes tortuous, sometimes uncertain. And our interest in science is not merely a desire to hear the latest facts added to the collection; we like to discuss our hopes and fears, probabilities and expectations.

*Stars and Atoms*

Lecture II (p. 53)

Yale University Press. London, England. 1927

**Edgeworth, Francis Ysidro** 1845–1926

Irish economist and statistician

He that will not verify his conclusions as far as possible by mathematics, as it were bringing the ingots of common sense to be assayed and coined at the mint of sovereign science, will hardly realize the full value of what he holds, will want a measure of what it will be worth in however slightly altered circumstances, a means of conveying and making it current.

*Mathematical Psychics*

Part I (p. 3)

C. Kegan Paul &amp; Company. London, England. 1881

**Faraday, Michael** 1791–1867

English physicist and chemist

It may be very distasteful, and great fatigue, to suspend a conclusion; but as we are not infallible, so we ought to be cautious; we shall eventually find our advantage, for the man who rests in his position is not so far from right as he who, proceeding in a wrong direction, is ever increasing his distance.

*Experimental Researches in Chemistry and Physics*

Lecture on Mental Education (p. 483)

Richard Taylor &amp; William Francis. London, England. 1859

**Gregory, Sir Richard Arman** 1864–1952

Scientific writer and journalist

There is a common impression that the conclusions arrived at by men of science are of the nature of beliefs, and have, therefore, no firmer basis than that of conviction. Nothing could be farther from the truth.

*Discovery: The Spirit and Service of Science*

Chapter V (p. 92)

Macmillan &amp; Company Ltd. London, England. 1918

**Hooke, Robert** 1635–1703

English physician

For as in pure Geometry nothing is let pass for a Truth, whose Cause and Principles are not clearly shown by the Progress of Reasoning, and the Process of Demonstration: So in Physicks Geometrically handled, nothing is to be taken for granted, nor any thing admitted for a true Conclusion, that is not plainly deduced from self-evident Principles, and those founded upon the immediate Objects of Sense disintangled from all the Fallacies of the Medium and Organ.

In Harry Woolf (ed.)

*The Posthumous Works of Robert Hooke*

Lectures of Light, Section I (p. 73)

Johnson Reprint Corporation. New York, New York, USA. 1969

**Hume, David** 1711–76

Scottish philosopher and historian

The principal difficulty in the mathematics is the length of inferences and compass of thought, requisite to the forming of any conclusion.

In *Great Books of the Western World* (Volume 35)*An Enquiry Concerning Human Understanding*

Section VII, Part I (p. 471)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Strutt, John William (Lord Rayleigh)** 1842–1919

English physicist

Scientific men should not rush to conclusions, but keep their minds open for such time as may be necessary.

*The Search for Truth*

Chapter XVIII (p. 277)

George Allen &amp; Unwin Ltd. London, England. 1935

**Somerville, Mary** 1780–1872

English mathematician

Great discoveries generally lead to a variety of conclusions...

*The Connexion of the Physical Sciences* (9th edition)

Section IV (p. 32)

John Murray. London, England. 1858

English poet

A large number of incorrect conclusions are drawn because the possibility of chance occurrences is not fully considered. This usually arises through lack of proper controls and insufficient repetitions. There is the story of the research worker in nutrition who had published a rather surprising conclusion concerning rats. A visitor asked

him if he could see more of the evidence. The researcher replied, "Sure, there's the rat."

*An Introduction to Scientific Research*

Chapter 3 (p. 34)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

**von Humboldt, Alexander** 1769–1859

German naturalist and explorer

Conclusions based upon analogies may fill up a portion of the vast chasm which separates the certain results of a mathematical natural philosophy from conjectures verging on the extreme, and therefore obscure and barren confines of all scientific development of mind.

Translated by E.C. Otte

*Cosmos: A Sketch of a Physical Description of the Universe* (Volume 3)

Special Results of OBSERVATION IN THE DOMAIN OF COSMICAL PHENOMENA (p. 29)

Harper & Brothers Publishers. New York, New York, USA. 1851

## CONDUCTION

**Faraday, Michael** 1791–1867

English physicist and chemist

All these considerations impress my mind strongly with the conviction, that insulation and ordinary conduction cannot be properly separated when we are examining into their nature; that is, into the general law or laws under which their phenomena are produced.

*Experimental Researches in Electricity* (Volume 3)

On electric induction (p. 513, fn 1)

Bernard Quaritch. London, England. 1855

Everybody appears to discharge; but the possession of this capability in a greater or smaller degree in different bodies, makes them better or worse conductors, worse or better insulators: and both induction and conduction appear to be the same in their principle and action, except that in the latter, an effect common to both is raised to the higher degree, whereas in the former it occur, in the best cases, in only an almost insensible quantity.

*Experimental Researches in Electricity* (Volume 3)

On Electric Induction (p. 513, fn 1)

Bernard Quaritch. London, England. 1855

## CONDUCTOR

**Rudberg, Eric Gustaf**

Swedish physicist

If the Easter pilgrims in Piazza San Pietro were to represent the carriers in a metal, then an insulator would resemble the Antarctic with one solitary traveler. In the abundance of carriers there is an enormous gap between conductors and insulators.

*Nobel Lectures, Physics 1942–1962*

Presentation speech for Nobel Prize for physics in 1956

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

## CONFIDENCE

**Burroughs, Edgar Rice** 1875–1950

American writer

I do not think that I am ever overconfident. I am merely wholly confident, and I maintain that there is all the difference in the world there.

*Llana of Gathol*

Book IV, Chapter 9

Ballantine Books. Tarzana, California, USA. 1948

**Curie, Marie Skłodowska** 1867–1934

Polish-born French physicist and chemist

Life is not easy for any of us. But what of that? We must have perseverance and above all confidence in ourselves.

We must believe that we are gifted for something and that this thing, at whatever cost, must be attained.

In *Eve Curie*

*Madame Curie*

Chapter XII (p. 158)

The Literary Guild of America, Inc. New York, New York, USA. 1937

## CONFUSION

**Darwin, Charles Robert** 1809–82

English naturalist

I am in thick mud; the orthodox would say in fetid abominable mud. I believe I am in much the same frame of mind as an old gorilla would be in if set to learn the first book of Euclid...yet I cannot keep out of the question.

*The Correspondence of Charles Darwin*

Letter to Asa Grey (p. 369)

Cambridge University Press. Cambridge, England. 1994

**Galilei, Galileo** 1564–1642

Italian physicist and astronomer

At times also I have been put to confusion and driven to despair of ever explaining something for which I could not account, but which my senses told me to be true.

In *Great Books of the Western World* (Volume 28)

*Dialogues Concerning the Two New Sciences*

First Day (p. 131)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hammer, P. C.**

American science editor

...the filling of minds with technical concepts without establishing their relationships is a form of pollution.

*Mind Pollution*

*Cybernetics*, Volume 14, 1971

**Hutton, James** 1726–97

Scottish geologist, chemist, and naturalist

Chaos and confusion are not to be introduced into the order of nature, because certain things appear to our

partial views as being in some disorder. Nor are we to proceed in feigning causes when those seem insufficient which occur in our experience.

*The Theory of the Earth* (Volume 2)

Part II, Chapter XIV (p. 547)

Messrs. Cadwell, Junior, and Davies. London, England. 1795

### Marriott, R. A. (Reginald Adams)

No biographical data available

...in...sailing without a chronometer Science cannot fix her [pre-glacial] position, and is obliged to allow great freedom of speculation, and to give equal weight to very diverse opinions on the subject, thus creating a confusion of tongues very detrimental to progress.

English mathematician and philosopher

...leaving the vast darkness of the subject unobscured.

In J. Robert Oppenheimer

*The Open Mind*

Chapter V (p. 102)

Simon & Schuster. New York, New York, USA. 1955

## CONIC SECTION

### Fabre, Jean-Henri 1823–1915

French entomologist and author

Take this or that term, place the + sign before it and forthwith you have the ellipse, the trajectory of the planets, with its two friendly foci, transmitting pairs of vectors whose sum is constant; substitute the – sign and you have the hyperbola with the antagonistic foci, the desperate curve that dives into space with infinite tentacles, approaching nearer and nearer to straight lines, the asymptotes, but never succeeding in meeting them. Suppress that term and you have the parabola, which vainly seeks in infinity its lost second focus; you have the trajectory of the bombshell; you have the path of certain comets which come one day to visit our sun and then flee to depths whence they never return. Is it not wonderful thus to formulate the orbit of the worlds?

Translated by Alexander Teixeira de Mattos

*The Life of the Fly*

Chapter XIII (p. 303)

Dodd, Mead & Co. New York, New York, USA. 1925

### Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

The history of science abundantly proves that a body of abstract propositions – even if, as in the case of conic sections, it remains two thousand years without effect upon daily life – may yet, at any moment, be used to cause a revolution in the habitual thoughts and occupations of every citizen.

*Mysticism and Logic: And Other Essays*

Chapter IV (p. 72)

Longmans, Green & Co. London, England. 1919

**Sylvester, James Joseph** 1814–97

English mathematician

The discovery of the conic sections, attributed to Plato, first threw open the higher species of form to the contemplation of geometers. But for this discovery, which was probably regarded in Plato's time and long after him, as the unprofitable amusement of a speculative brain, the whole course of practical philosophy of the present day, of the science of astronomy, of the theory of projectiles, of the art of navigation, might have run a different channel; and the greatest discovery that has ever been made in the history of the world, the law of universal gravitation, with its innumerable direct and indirect consequences and applications to every department of human research and industry, might never to this hour have been elicited.

*The Collected Mathematical Papers of James Joseph Sylvester* (Volume 2)

Gresham Committee and the Members of the Common Council of the City of London

4 December, 1854 (p. 7)

University Press. Cambridge, England. 1904–1912

**Whewell, William** 1794–1866

English philosopher and historian

If the Greeks had not cultivated Conic Sections, Kepler could not have superseded Ptolemy; if the Greeks had cultivated Dynamics, Kepler might have anticipated Newton.

*History of the Inductive Sciences, from the Earliest to the Present Time*

(Volume 2)

Book VI, Introduction (p. 7)

John W. Parker. London, England. 1837

**Whitehead, Alfred North** 1861–1947

English mathematician and philosopher

No more impressive warning can be given to those who would confine knowledge and research to what is apparently useful, than the reflection that conic sections were studied for eighteen hundred years merely as an abstract science, without regard to any utility other than to satisfy the craving for knowledge.

*An Introduction to Mathematics*

Chapter 10 (p. 100)

Oxford University Press, Inc. New York, New York, USA. 1958

## CONJECTURE

**Adams, George** 1750–95

English instrument maker

Conjecture may lead you to form opinions, but it cannot produce knowledge. Natural philosophy must be built upon the phenomena of nature discovered by observation and experiment.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture II (p. 59)

Printed by R. Hindmarsh. London, England. 1794

Conjectures in philosophy are termed hypotheses or theories; and the investigation of an hypothesis founded on some slight probability, which accounts for many appearances in nature, has too often been considered as the highest attainment of a philosopher. If the hypothesis (sic) hangs well together, is embellished with a lively imagination, and serves to account for common appearances – it is considered by many, as having all the qualities that should recommend it to our belief, and all that ought to be required in a philosophical system.

*Lectures on Natural and Experimental Philosophy* (Volume 1)

Lecture II (p. 59)

Printed by R. Hindmarsh. London, England. 1794

**Aeschylus** 525 BCE–456 BCE

Greek playwright

To know and to conjecture differ widely.

Note-Book of 1837 (p. 368)

D. Appleton & Company. New York, New York, USA. 1896

**Davy, Sir Humphry** 1778–1829

English chemist

Upon all occasions, when I venture upon a conjecture, you will, I trust, have the goodness to consider it has brought forward, not as an opinion which it would be painful to relinquish, but as a hint which may lead to inquiry.

In John Davy (ed.)

*Memoirs of the Life of Sir Humphry Davy* (Volume 1)

Chapter III (p. 216)

Longman, Rees, Orme, Brown, Green & Longman London, England. 1836

**Holbach, Paul Henri Thiry** 1723–89

French philosopher

Man unfortunately for himself, wishes to exceed the limits of his sphere, and to transport himself beyond the visible world. He neglects experience, and feeds himself with conjectures.

Translated by H.D. Robinson

*The System of Nature, Or, Laws of the Moral and Physical World*

(Volume 1)

*The True Meaning of the System of Nature*

Introduction (p. 339)

J.P. Mendum. Boston, Massachusetts, USA. 1889

**Mach, Ernst** 1838–1916

Austrian physicist and philosopher

An ancient philosopher once remarked that people who cudged their brains about the nature of the moon reminded him of men who discussed the laws and institutions of a distant city of which they had heard no more than the name.

*Popular Scientific Lectures*

On Symmetry (p. 89)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

**Quinton, Anthony M.**

No biographical data available

The conjectures of the scientific intelligence are genuine creative novelties, inherently unpredictable and not determined by the character of the scientist's physical environment. The thinking mind is not a causal mechanism.

In D.J. O'Connor (ed.)

*A Critical History of Western Philosophy* (p. 551)

The Free Press of Glencoe. London, England. 1964

**Shelah, Saharon** 1945–

Israeli mathematician

Given a conjecture, the best thing is to prove it. The second best thing is to disprove it. The third best thing is to prove that it is not possible to disprove it, since it will tell you not to waste your time trying to disprove it. That's what Gödel did for the Continuum Hypothesis.

Rutgers University Colloquium, October 26, 2001

## CONNECTIONS

**de Maupertuis, Pierre Louis Moreau** 1678–1759

French mathematician and astronomer

To endeavor at discovering the connections that subsist in nature, is no way inconsistent with prudence; but it is downright folly to push these researches too far; as it is the lot only of superior Beings to see the dependence of events, from one end to the other, of the chain which supports them.

*An Essay Towards a History of the Principal Comets Since 1742*

A Letter Upon Comets (p. 10)

Printed for T. Becket & P.A. de Hondt. London, England. 1769

## CONQUEST

**Massey, Raymond**

American actor

Rest enough for the individual man. Too much and too soon and we call it death. But for Man no rest and no

ending. He must go on, conquest beyond conquest. First, this little planet and its winds and ways. And then all laws of mind and matter that restrain him. Then the planets about him. And at last, out across immensity to the stars. And when he has conquered all the deeps of space and all the mysteries of time, still he will be beginning.... Little animals. And if we're no more than animals we must snatch each little scrap of happiness, and live and suffer and pass, mattering no more than all the other animals do or have done. It is this, or that. All the universe or nothing. Which shall it be, Passworthy? Which shall it be?

*Things to Come*

Film (1936)

**Slossin, Edwin Emery** 1865–1919

Chemist and author

The conquest of nature, not the imitation of nature, is the whole duty of man.

*Creative Chemistry*

Chapter I (pp. 9–10)

The Century Co. New York, New York, USA. 1919

## CONSCIOUSNESS

**Jung, Carl G.** 1875–1961

Swiss psychologist and psychiatrist

...nowadays most people identify themselves almost exclusively with their consciousness, and imagine that they are only what they know about themselves.

*Memories, Dreams, Reflections*

Chapter XI (p. 300)

Vintage Books. New York, New York, USA. 1970

**Shaw, James Byrnie**

American mathematician

After the unconscious power has led us to our eldorado, it has done all it can. The deductions, the demonstrations, the applications, must be carried out at the expense of prolonged effort again. The intuition cannot do this kind of work. Its region is the nebulous part of thought where the mental ions unite, dissolve, and whirl away, – or we may say that it is found where the breakers surge against the shores of the unknown. But in the consciousness, the stable, the crystallized, the permanent combinations are formed; the new world is organized, surveyed, mapped, and the frontier is widened. Here everything proceeds under hard supervision.

Henri Poincare as An Investigator

*Popular Science Monthly*, March, 1913 (pp. 223–224)

**Tyndall, John** 1820–93

Irish-born English physicist

Between molecular mechanics and consciousness is interposed a fissure over which the ladder of physical reasoning is incompetent to carry us.

*Fragments of Science: A Series of Detached Essays, Addresses, and Reviews* (Volume 2)  
Chapter 15 (p. 388)  
D. Appleton & Co. New York, New York, USA. 1896

**Watts, Alan Wilson** 1915–73  
American philosopher

Consciousness recurs in every newborn creature, and wherever it recurs it is “I.” And in so far as it is only this “I,” it struggles again and again in hundreds of millions of beings against the dissolution which would set it free. To see this is to feel the most peculiar solidarity – almost identity – with other creatures, and to begin to understand the meaning of compassion.

*Nature, Man, and Woman*  
Part I, Chapter 4 (p. 117)  
Vintage Books. New York, New York, USA. 1970

In this light it will be clear that consciousness is no mere phosphorescent scum upon the foundations of fire and rock – a late addition to a world which is essentially unfeeling and mineral. Consciousness is rather the unfolding, the “evolution,” of what has always been hidden in the heart of the primordial universe of stars.

*Nature, Man, and Woman*  
Part II, Chapter 8 (p. 186)  
Vintage Books. New York, New York, USA. 1970

## CONSEQUENCE

**Huxley, Thomas Henry** 1825–95  
English biologist

...logical consequences are the scarecrows of fools and the beacons of wise men.

*Science and Culture and Other Essays*  
Chapter IX (p. 240)  
Macmillan & Company Ltd. London, England. 1881

**Ingersoll, Robert Green** 1833–99  
American lawyer, public official, and orator

We must remember that in nature there are neither rewards nor punishments – there are consequences.

*The Works of Robert G. Ingersoll* (Volume 2)  
Some Reasons Why (p. 315)  
The Dresden Publishing Co. New York, New York, USA. 1915

**Stallo, John Bernhard** 1823–1900  
German-American academic, jurist, philosopher, and ambassador

The blindness of eminent physicists to some of the most obvious consequences of their own theories is marvellous.

*The Concepts and Theories of Modern Physics*  
Introduction to the Second Edition (p. xxxiii)  
D. Appleton & Co. New York, New York, USA. 1885

## CONSERVATION

**Arrhenius, Svante August** 1859–1927  
Swedish scientist

Humanity stands... before a great problem of finding new raw materials and new sources of energy that shall never become exhausted. In the meantime we must not waste what we have, but must leave as much as possible for coming generations.

Translated by Clifford Shattuck Leonard  
*Chemistry in Modern Life* (p. vii)  
D. van Nostrand Co. Princeton, New Jersey, USA. 1925

**Bates, Marston** 1906–74  
American zoologist

We remain important, you and I and all mankind. But so is the butterfly – not because it is good for food or good for making medicine or bad because it eats our orange trees. It is important in itself, as a part of the economy of nature.

*The Forest and the Sea: A Look at the Economy of Nature and the Ecology of Man*  
Chapter 1 (p. 5)  
Random House, Inc. New York, New York, USA. 1960

In defying nature, in destroying nature, in building an arrogantly selfish, man-centered, artificial world, I do not see how man can gain peace or freedom or joy.

*The Forest and the Sea: A Look at the Economy of Nature and the Ecology of Man*  
Chapter 16 (p. 262)  
Random House, Inc. New York, New York, USA. 1960

**Bergman, Charles**  
No biographical data available

I have a fantasy: I imagine myself sitting in my living room, on my sofa. Outside my house – outside our house – animals are gathering. Lost animals, endangered animals. Peering in the windows, with strange expressions on their gaunt faces. Murmuring indistinctly of Something Else. Murmuring in wild echoes.

*Wild Echoes: Encounters with the Most Endangered Animals in North America*  
Introduction (p. 1)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1990

We have inherited, and created, impoverished seas. The spouting is more sporadic, gone totally from some areas of the oceans, and the whales that remain are mere relics of the swarms our ancestors wrote off with such awe.

*Wild Echoes: Encounters with the Most Endangered Animals in North America*  
Chapter IV (p. 201)  
McGraw-Hill Book Company, Inc. New York, New York, USA. 1990

**Berry, Wendell** 1934–

American essayist, poet, critic, and farmer

Man...is the center of the universe only in the sense that wherever he is it seems to him that he is at the center of his own horizon; the truth is that he is only a part of a vast complex of life, on the totality and the order of which he is blandly dependent.

*The Hudson Review*, Autumn, 1970

**Brower, David** 1912–2000

American environmentalist

Let us begin. Let us restore the Earth. Let the mountains talk, and the rivers run.

*Let the Mountains Talk, Let the Rivers Run*

Chapter 24 (p. 196)

HarperCollins Publishers. New York, New York, USA. 1995

I started out as a boy bent over a spring. Then I climbed mountains. I became a conservationist. Then I saw what we all were doing, and I wanted to stop us from doing worse. Now I want to restore what once was, not for an old man's memories, but for a baby's smile.

*Let the Mountains Talk, Let the Rivers Run*

Chapter 11 (p. 98)

HarperCollins Publishers. New York, New York, USA. 1995

When you understand how recent an arrival we are, in comparison with a forest or a mountain, and you begin to understand how much wildness contributed to making us as a successful evolutionary project, you acquire some humility.

*Let the Mountains Talk, Let the Rivers Run*

Chapter 16 (pp. 131–132)

HarperCollins Publishers. New York, New York, USA. 1995

Nature recycles everything.

*Let the Mountains Talk, Let the Rivers Run*

Chapter 19 (p. 149)

HarperCollins Publishers. New York, New York, USA. 1995

Although Thomas Jefferson argued that no one generation has a right to encroach upon another generation's freedom, the future's right to know the freedom of wilderness is going fast.

*This Is the American Earth*

Foreword

Sierra Club. San Francisco, California, USA. 1968

**Carson, Rachel** 1907–64

American marine biologist and author

Our attitudes toward plants is a singularly narrow one. If we see any immediate utility in a plant we foster it. If for any reason we find its presence undesirable or merely a matter of indifference, we may condemn it to destruction forthwith.

*Silent Spring*

Chapter 6 (p. 63)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

**Hudson, William Henry**

Argentinean/English ornithologist, naturalist, and author

And above all others, we should protect and hold sacred those types, Nature's masterpieces, which were first singled out for destruction on account of their size, or splendor, or rarity, and that false detestable glory which is accorded to their most successful slayers. In ancient times the spirit of life shone brightest in these; and when others that shared the earth with them were taken by death they were left, being more worthy of perpetuation. Like immortal flowers they have drifted down to us on the ocean of time, and their strangeness and beauty bring to our imagination a dream and a picture of that unknown world, immeasurable far removed, where man was not: and when they perish, something of gladness goes out from nature, and the sunshine loses something of its brightness.

*The Naturalist in La Plata*

Chapter I (p. 29)

Chapman & Hall, Ltd. London, England. 1892

**Leopold, Aldo** 1886–1948

American naturalist

Conservation is getting nowhere because it is incompatible with our Abrahamic concept of land. We abuse land because we regard it as a commodity belonging to us. When we see land as a community to which we belong, we may begin to use it with love and respect.

*A Sand County Almanac, with Essays on Conservation from Round River*

Foreword (p. xix)

Sierra Club. San Francisco, California, USA. 1970

To keep every cog and wheel is the first precaution of intelligent tinkering.

*A Sand County Almanac, with Essays on Conservation from Round River*

Part III, Round River (p. 190)

Sierra Club. San Francisco, California, USA. 1970

Conservation is a state of harmony between men and land.

*A Sand County Almanac, with Essays on Conservation from Round River*

Part IV, The Land Ethic (p. 243)

Sierra Club. San Francisco, California, USA. 1970

Need we always await the willy nilly pressure of wrecked resources before professional cooperation begins?

In Susan L. Flader and J. Baird Callicott

*The River of the Mother of God*

Engineering and Conservation (p. 253)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1991

**Lovejoy, Thomas E.** 1941–

American tropical biologist

In the last analysis, even when we have learned to manage other aspects of the global environment, even if population reaches a stable level, even if we reach a time when environmental crises have become history, even if most

wastes have gone except the most long lived, even if global cycles have settled back into more normal modes, then the best measurement of how we have managed the global environment will be how much biological diversity has survived.

In D.B. Botkin, M.F. Caswell, J.E. Estes, and A.A. Orio (eds.)  
*Changing the Global Environment: Perspectives on Human Involvement*  
Deforestation and Extinction of Species (p. 97)  
Academic Press. Boston, Massachusetts, USA. 1989

Conservation is sometimes perceived as stopping everything cold, as holding whooping cranes in higher esteem than people. It is up to science to spread the understanding that the choice is not between wild places or people. Rather, it is between a rich or an impoverished existence for Man.

In Yvonne Baskin  
*The Work of Nature: How the Diversity of Life Sustains Us* (p. ii)  
Island Press. Washington, D.C. 1997

**Osborn, Henry Fairfield** 1857–1935  
American paleontologist and geologist

[The] great battle for preservation and conservation cannot be won by gentle tones, nor by appeals to the aesthetic instincts of those who have no sense of beauty, or enjoyment of Nature.

In William T. Hornaday  
*Our Vanishing Wild Life*  
Preface (p. vii)  
Charles Scribner's Sons. New York, New York, USA. 1913

**Pinchot, Gifford** 1865–1946  
American forester

The vast possibilities of our great future will become realities only if we make ourselves responsible for that future.

In James Rudolph Garfield  
*Public Service* (Volume 6)  
The Conservation of Natural Resources (p. 177)  
Hall & Locke Co. Boston, Massachusetts, USA. 1911

**Roosevelt, Franklin Delano** 1882–1945  
32nd president of the USA

During the three or four centuries of white men on the American continent, we find a continuous striving of civilization against Nature. It is only in recent years that we have learned how greatly by these processes we have harmed Nature and Nature in turn has harmed us.

*A Message to the Congress on the Use of Our National Resources*  
January 25, 1935

Men and Nature must work hand in hand. The throwing out of balance of the resources of Nature throws out of balance also the lives of men.

*A Message to the Congress on the Use of Our National Resources*  
January 25, 1935

**Sheldrick, Daphne** 1934–  
Kenyan-born wildlife expert

With amazing arrogance we presume omniscience and an understanding of the complexities of Nature, and with amazing impertinence we firmly believe that we can better it.... [W]e have forgotten that we, ourselves, are just a part of nature, an animal which seems to have taken the wrong turning bent on total destruction.

*The Tsavo Story*  
Chapter 15 (p. 190)  
Collins & Harvill Press. London, England. 1973

### The Bible (King James Version)

... Hurt not the earth, neither the sea, nor the trees...  
Revelation 7:3

**Thoreau, Henry David** 1817–62  
American essayist, poet, and practical philosopher

Can he who has discovered only some of the values of whale-bone and whale oil be said to have discovered the true use of the whale? Can he who slays the elephant for his ivory be said to have "seen the elephant"? These are pretty and accidental uses; just as if a stronger race were to kill us in order to make buttons and flageolets of our bones.

*The Maine Woods* (pp. 158–159)  
Thomas Y. Crowell & Co. New York, New York, USA. 1909

**Wilson, Edward O.** 1929–  
American biologist and author

A civilization able to envision God and to embark on the colonization of space will surely find the way to save the integrity of this planet and the magnificent life it harbors.

*The Future of Life*  
Chapter 7 (p. 189)  
Alfred A. Knopf. New York, New York, USA. 2002

## CONSERVATIONIST

**Leopold, Aldo** 1886–1948  
American naturalist

A conservationist is one who is humbly aware that with each stroke he is writing his signature on the face of his land. Signatures of course differ, whether written with axe or pen, and this is as it should be.

*A Sand County Almanac, with Essays on Conservation from Round River*  
Part I, November (p. 73)  
Sierra Club. San Francisco, California, USA. 1970

## CONSERVATION, LAW OF

**Tyndall, John** 1820–93  
Irish-born English physicist

The law of conservation rigidly excludes both creation and annihilation. Waves may change to ripples, and

ripples to waves – magnitude may be substituted for number, and number for magnitude – asteroids may aggregate to suns, suns may invest their energy in floras and faunas, and flora and faunas may melt in air – the flux of power is eternally the same. It rolls in music through the ages, while the manifestations of physical life as well as the display of physical phenomena are but the modulations of its rhythm.

*Heat Considered as a Mode of Motion*

Chapter XIV (p. 467)

D. Appleton & Company. New York, New York, USA. 1875

## CONSERVATION OF ENERGY

**Joule, James Prescott** 1818–89

English physicist

...the most convincing proof of the conversion of heat into living force [*vis viva*] has been derived from my experiments with the electro-magnetic engine, a machine composed of magnets and bars of iron set in motion by an electrical battery. I have proved by actual experiment that, in exact proportion to the force with which this machine works, heat is abstracted from the electrical battery. You see, therefore, that living force may be converted into heat, and that heat may be converted into living force, or its equivalent attraction through space.

*Scientific Papers* (Volume 1)

On Matter, Living Force, and Heat (pp. 270–271)

Dawsons of Pall Mall. London, England. 1963

**Levi, Primo** 1919–87

Italian writer and chemist

It is the destiny of wine to be drunk, and it is the destiny of glucose to be oxidized. But it was not oxidized immediately: its drinker kept it in his liver for more than a week, well curled up and tranquil, as a reserve aliment for a sudden effort; an effort that he was forced to make the following Sunday, pursuing a bolting horse. Farewell to the hexagonal structure: in the space of a few instants the skein was unwound and became glucose again, and this was dragged by the bloodstream all the way to a minute muscle fiber in the thigh, and here brutally split into two molecules of lactic acid, the grim harbinger of fatigue: only later, some minutes after, the panting of the lungs was able to supply the oxygen necessary to quietly oxidize the latter. So a new molecule of carbon dioxide returned to the atmosphere, and a parcel of the energy that the sun had handed to the vine-shoot passed from the state of chemical energy to that of mechanical energy, and thereafter settled down in the slothful condition of heat, warming up imperceptibly the air moved by the running and the blood of the runner. "Such is life," although rarely is it described in this manner: an inserting itself, a drawing off to its advantage, a parasitizing of the

downward course of energy, from its noble solar form to the degraded one of low-temperature heat. In this downward course, which leads to equilibrium and thus death, life draws a bend and nests in it.

Translated by Raymond Rosenthal

*The Periodic Table*

Carbon (pp. 229–230)

Shocken Books. New York, New York, USA. 1984

**von Helmholtz, Hermann** 1821–94

German scientist and philosopher

...Nature as a whole possesses a store of energy 1 that cannot be in any way either increased or diminished...

The quantity of energy in nature is eternal and unalterable... I have named this general law "The Principle of the Conservation of Energy.

Translated by Edmund Atkinson

*Popular Lectures on Scientific Subjects*

On the Interaction of Natural Forces p. 170)

D. Appleton & Co. New York, New York, USA. 1883

## CONSISTENCY

**Davy, Sir Humphry** 1778–1829

English chemist

Consistency in regard to opinions is the slow poison of the intellectual life, the destroyer of its vividness and its energy.

In Sir Richard Arman Gregory

*Discovery: The Spirit and Service of Science*

Chapter VII (p. 165)

Macmillan & Company Ltd. London, England. 1918

## CONSTELLATION

**Aeschylus** 525 BCE–456 BCE

Greek playwright

I know the nightly concourse of the stars  
And which of the sky's bright regents brings us storm,  
Which summer; when they set, and their uprisings.

In *Great Books of the Western World* (Volume 5)

*The Plays of Aeschylus*

Agamemnon, l. 4–6

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Aratus** 271 BCE–213 BCE

Greek statesman

So thought he good to make the stellar groups,  
That each by other lying orderly,  
They might display their forms.

And thus the stars

At once took names and rise familiar now.

In William Tyler Olcott

*Star Lore of All Ages* (p. 3)

G.P. Putnam's Sons. New York, New York, USA. 1911

Some man of ages past  
 Observed their goings; and devised their titles,  
 Forming the constellations. For the name  
 Of each star singly none could tell or learn; –  
 So numerous are they everywhere, and many  
 Of the same size and color, as they roll.  
 Thus he bethought him to combine them so,  
 That, ranged in neighborhood, they might present  
 Images, – each taking his proper name,  
 And henceforth none rising to doubt or guess at.

In N.L. Frothing

*Metrical Pieces*

The Appearances of the Stars (pp. 39–40)

Crosby, Nichols. Boston, Massachusetts, USA. 1855

Below Orion's feet the Hare  
 Is chased eternally; behind him  
 Sirius ever speeds as in pursuit,  
 And rises after, and eyes him as he sets.

In Garrett P. Serviss

*Astronomy with the Naked Eye*

Chapter III (p. 40)

Harper & Brothers Publishers. New York, New York, USA. 1908

The tiny Dolphin floats o'er Capricorn,  
 His middle dusky, but he has four eyes,  
 Two parallel to two.

In Garrett P. Serviss

*Astronomy with the Naked Eye*

Chapter X (p. 125)

Harper & Brothers Publishers. New York, New York, USA. 1908

### Babylonian Sun-God Marduk

Then Marduk created places for the great gods.  
 He set up their likeness in the constellations.  
 He fixed the year and defined its divisions;  
 Setting up three constellations for each of the twelve  
 months.  
 When he had defined the days of the year by the constel-  
 lations,  
 He set up the station of the zodiac band as a measure of  
 them all,  
 That none might be too long or too short.

In John D. Barrow

*The World Within the World* (p. 34)

Clarendon Press. Oxford, England. 1988

### Barton, Samuel G.

No biographical data available

A constellation is an area on the sky. Somewhat as the  
 USA is divided into forty-eight states with irregular  
 boundaries, varying greatly in shape, size, and impor-  
 tance, so the whole expanse of the sky is divided into  
 constellations of varied shape, size, and importance ...

*A Guide to the Constellations*

Part I (p. 4)

Whittlesey House. New York, New York, USA. 1935

### Brainard, John 1796–1828

American poet

O! How calm and how beautiful – look at the night!  
 The planets are wheeling in pathways of light;  
 And the lover, or poet, with heart, or with eye,  
 Sends his gaze with a tear, or his soul with a sigh.  
 But from Fesole's summit the Tuscan looked forth,  
 To eastward and westward, to south and to north;  
 Neither planet nor star could his vision delight,  
 'Till his own bright Pleiades should rise to his sight.  
 They rose, and he numbered their glittering train –  
 They shone bright as he counted them over again;  
 But the star of his love, the bright gem of the cluster,  
 Arose not to lend the Pleiades its lustre.

*Occasional Pieces of Poetry*

The Lost Pleiad

E. Bliss and E. White. New York, New York, USA. 1825

### Bryant, William Cullen 1794–1878

American poet

The sad and solemn night Hath yet her multitude of  
 cheerful fires;  
 The glorious host of light Walk the dark hemisphere till  
 she retires;  
 All through her silent watches, gliding slow, Her constel-  
 lations come, and climb the heavens, and go.

*Thanatopsis and Other Poems*

Hymn to the North Star

Clark & Maynard. New York, New York, USA. 1884

### Burns, Robert 1759–96

Scottish poet

...O, had I power like inclination,  
 I'd heeze thee up a constellation!  
 To canter with the Sagitarre,  
 Or loop the Ecliptic like a bar,  
 Or turn the Pole like any arrow...

*The Complete Poetical Works of Robert Burns*

Epistle to Hugh Parker

Houghton Mifflin Company. Boston, Massachusetts, USA. 1897

### Carlyle, Thomas 1795–1881

English historian and essayist

Why did not somebody teach me the constellations, and  
 make me at home in the starry heavens, which are always  
 overhead, and which I don't half know to this day?

In Richard Hinckley Allen

*Star Names* (p. v)

G.E. Stechert. New York, New York, USA. 1899

### de Cervantes, Miguel 1547–1616

Spanish novelist, playwright, and poet

...the lore I learned when I was a shepherd tells me it  
 cannot want three hours of dawn now, because the mouth

of the Horn is overhead and makes midnight in the line of the left arm.

In *Great Books of the Western World* (Volume 29)  
*The History of Don Quixote de la Mancha*  
Part I, Chapter 20 (p. 58)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Donne, John** 1572–1631

English poet and divine

And in these Constellations then arise  
New Starres, and old doe vanish from our eyes.

*The Complete Poetry and Selected Prose of John Donne*  
First Anniversary  
Random House, Inc. New York, New York, USA. 1941

**Enoch**

When I saw them [the constellations], I praised, every time I praised the Lord of glory, who had made these great and splendid signs, that they might display the magnificence of his works to angels and to the souls of men, that they may glorify all his works and deeds, might see the working of his power, might glorify the great labour of his hands, and praise him forever.

Translated by Andrew Gotlieb Hoffmann  
*The Book of Enoch the Prophet*  
Chapter XI (p. 24)  
Hathard & Son. London, England. 1839

**Escher, M. C.** 1898–1972

Dutch graphic artist

It has always irked me as improper that there are still so many people for whom the sky is no more than a mass of random points of light. I do not see why we should recognize a house, a tree, or a flower here below and not, for example, the red Arcturus up there in the heavens as it hangs from its constellation Bootes, like a basket hanging from a balloon.

*M.C. Escher, His Life and Complete Graphic Work* (Volume 1982) Part I (p. 113)  
H.N. Abrahams. 1982

**Frost, Robert** 1874–1963

American poet

You know Orion always comes up sideways.

*Complete Poems of Robert Frost*  
The Star Splitter  
Henry Holt & Company. New York, New York, USA. 1949

You'll wait a long, long time for anything much  
To happen in heaven.

*Complete Poems of Robert Frost*  
On Looking Up by Chance at the Constellations  
Henry Holt & Company. New York, New York, USA. 1949

**Glasgow, Ellen** 1874–1945

American writer

Last night the stars were magnificent – Pegasus and Andromeda faced me brilliantly when I lifted my shade,

so I went down and had a friendly reunion with the constellations –

*Letters of Ellen Glasgow*  
Letter to Mary Johnson, August 15, 1906 (pp. 53–54)  
Harcourt Brace & Company. New York, New York, USA. 1958

**Guion, Haywood Williams**

No biographical data available

The astronomer's map presents us with a motley group of bulls and bears and lions, harmoniously dwelling with kids and goats and little twins.

*The Comet* (p. 122)  
E.J. Hale & Son. New York, New York, USA. 1869

**Herschel, Sir John Frederick William** 1792–1871

English astronomer and chemist

The constellations seem to have been almost purposely named and delineated to cause as much confusion and inconvenience as possible. Innumerable snakes twine through long and contorted areas of the heavens, where no memory can follow them; bears, lions and fishes, large and small, northern and southern, confuse all nomenclature.

*Outlines of Astronomy: By Sir John F. W. Herschel*  
Part I, Chapter V (p. 253, fn 2)  
American Home Library Co. New York, New York, USA. 1901

**Homer (Smyrns of Chios)** fl. 750 BCE

Greek poet

He wrought the earth, the heavens, and the sea; the moon also at her full and the untiring sun, with all the signs that glorify the face of heaven – the Pleiades, the Hyads, huge Orion, and the Bear, which men also call the Wain and which turns around ever in one place, facing Orion, and alone never dips into the stream of Oceanus.

In *Great Books of the Western World* (Volume 4)  
*The Iliad of Homer*  
Book XVIII, l. 483–489 (p. 135)  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

He never closed his eyes, but kept them fixed on the Pleiades, on late-setting Bootes, and on the Bear – which men also call the wain, and which turns round and round where it is, facing Orion, and alone never dipping into the stream of Oceanus – for Calypso had told him to keep this to his left.

In *Great Books of the Western World* (Volume 4)  
*The Odyssey*  
Book V, l. 271–276  
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

**Hopkins, Frederick Gowland** 1844–89

English biochemist

Now Time's Andromeda on this rock rude,  
With not her either beauty's equal or  
Her injury's, looks of by both horns of shore  
Her flower, her piece of being, doomed dragon's food.

In Norman H. MacKenzie (ed.)  
*The Poetical Works of Gerard Manley Hopkins*  
 Andromeda, l. 1–4  
 Clarendon Press. Oxford, England. 1990

**Jacoby, Harold** 1865–1932  
 American astronomer

The stars are here marshalled before us in a new and engaging manner; not as austere unchanging beacons of the universe; not as mere material for vivifying the results of profound mathematical analysis; but rather as they must have seemed to the herdsmen of old, and as they should appear to all who love the open air – rising constellation after constellation, nature’s kindly reminders of the seasons as they come and go.

In Martha Evans Martin  
*The Friendly Stars*  
 Introductory Note  
 Harper & Brothers Publishers. New York, New York, USA. 1907

**Jeans, Sir James Hopwood** 1877–1946  
 English physicist and mathematician

The division of the stars into constellations tells us very little about the stars, but a great deal about the minds of the earliest civilizations and of the mediaeval astronomers.

*Physics and Philosophy*  
 Chapter II (p. 54)  
 Dover Publications. Mineola, New York, USA. 1981

### The Bible (King James Version)

Canst thou bind the sweet influences of the Pleiades, or loose the bands of Orion ?

*Job 38:31*

**Joyce, James** 1882–1941  
 Expatriate Irish writer and poet

...the appearance of a star (first magnitude) of exceeding brilliancy dominating by night and day (a new luminous sun generated by the collision and amalgamation in incandescence of two nonluminous exsuns) about the period of the birth of William Shakespeare over delta in the recumbent never setting constellation of Cassiopeia and of a star (second magnitude) of similar origin but of lesser brilliancy which had appeared in and disappeared from the constellation of the Corona Septentrionalis about the period of the birth of Leopold Bloom and of other stars of (presumably) similar origin which had (effectively or presumably) appeared in and disappeared from the constellation of Andromeda about the period of the birth of Stephen Dedalus, and in and from the constellation of Auriga some years after the birth and death of Rudolph Bloom, junior, and in and from other constellations some years before or after the birth or death of other persons...

*Ulysses* (p. 685)  
 Random House, Inc. New York, New York, USA. 1946

**Kirkup, James** 1923–  
 Poet and journalist

Slung between the homely poplars at the end of the familiar avenue, the Great Bear in its lighted hammock swings, like a neglected gate that neither bars admission nor invites, hangs on the sagging pole its seven-pointed shape.

*Omens of Disaster*  
 Collected Shorter Poems, Volume I, Ursa Major  
 University of Salzburg. Salzburg, Austria. 1996

**Longfellow, Henry Wadsworth** 1807–82  
 American poet

Begirt with many a blazing star,  
 Stood the great giant Algebar,  
 Orion, the hunter of the beast!

*The Poetical Works of Henry Wadsworth Longfellow*  
 The Occultation of Orion  
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

**Manilius, Marcus** fl. 10 AD  
 Roman poet

First next the Twins, see great Orion rise,  
 His arms extended stretch o’er half the skies;  
 His stride as large, and with a steady pace  
 He marches on, and measures a vast space;  
 On each broad shoulder a bright star display’d,  
 And three obliquely grace his hanging blade.

In Elijah H. Burritt  
*The Geography of the Heavens*  
 Chapter III, Orion (p. 56)  
 Huntington & Savage, Mason & Law. New York, New York, USA. 1850

Near to Bootes the bright Crown is view’d  
 And shines with stars of different magnitude:  
 Or placed in front above the rest displays  
 A vigorous light, and dwarfs surprising rays.  
 This shone, since Theseus first his faith betray’d,  
 The monument of the forsaken maid.

In Elijah H. Burritt  
*The Geography of the Heavens* (p. 95)  
 Sheldon & Company. New York, New York, USA. 1873

And next Bootes comes, whose order’d beams  
 Present a figure driving of his teams.  
 Below his girdle, near his knees, he bears  
 The bright Arcturus, fairest of the stars.  
 In Elijah H. Burritt  
*The Geography of the Heavens*  
 Chapter VIII, Bootes (p. 97)  
 Huntington and Savage, Mason and Law. New York, New York, USA. 1850

First Aries, glorious in his golden wool,  
 Looks back and wonders at the mighty Bull.  
 In Mrs. Jesse B. Holman  
*The Zodiac, the Constellations and the Heavens* (p. 11)  
 Printed by E. L. Steck Co. Austin, Texas. 1924

Close by the Kneeling Bull behold  
 The Charioteer, who gained by skill of old

His name and heaven, as first his steeds he drove  
With flying wheels, seen and installed by Jove.

In Garrett P. Serviss  
*Astronomy with the Naked Eye*  
Chapter II (p. 20)  
Harper & Brothers Publishers. New York, New York, USA. 1908

Bright Scorpio, armed with poisonous tail, prepares  
Men's martial minds for violence and wars.  
His venom heats and boils their blood to rage  
And rapine spreads o'er the unlucky age.

In Garrett P. Serviss  
*Astronomy with the Naked Eye*  
Chapter VIII (p. 103)  
Harper & Brothers Publishers. New York, New York, USA. 1908

### Maunder, Walter Edward

No biographical data available

We stand out under the stars on some clear moonless  
night, and looking upward, though no forms are visible,  
though it is only here and there that the natural grouping  
can by the utmost legitimate effort of fancy be made to  
fit some preconceived shape, yet we still seem to see the  
whole vast dome covered with mysterious frescoes.

The Oldest Picture-Book of All  
*The Twentieth Century*, Volume XLVIII, September, 1900 (p. 451)

### Melville, Herman 1819–91

American novelist

Wondrous worlds on worlds! Lo, round and round me,
