First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is potential for exposure to chloral:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Chloral all handlers should be trained on its proper handling and storage. Protect from light, moisture, air, and acids. DEA regulations require storage in a locked storage area. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include hydrogen chloride. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration after mixing with another combustible fuel; care must be taken to assure complete combustion to prevent phosgene formation; an acid scrubber is necessary to remove the halo acids produced.

Chloramben C:0600

Formula: $C_7H_5Cl_2NO_2$

Synonyms: ACP-M-728; Amben; Ambiben; Amiben; Amibin; 3-Amino-2,5-dichlorobenzoic acid; 3-Amino-2, 6-dichlorobenzoic acid; Amoben; Benzoic acid, 3-amino-2,5-dichloro-; Chlorambed; Chloramben, aromatic carboxylic acid; Chloramben benzoic acid herbicide; Chlorambene; 2,5-Dichloro-3-aminobenzoic acid; NCI-C00055; Ornamental weeder; Vegaben; Vegiben; Weedone garden weeder

CAS Registry Number: 133-90-4

HSDB Number: 564 as amiben

RTECS Number: DG1925000

UN/NA & ERG Number: UN2588 (Pesticides, solid, toxic, n.o.s.)/151

EC Number: 205-123-5

Regulatory Authority and Advisory Information

Carcinogenicity: NTP: Carcinogenesis Studies; positive evidence: mouse; NCI: Results negative, rat.

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn; risk phrases: R36/37/38; R34; R40; R45; R50; safety phrases: S22; S26; S36/37/39; S45; S53; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Chloramben is a colorless, odorless, crystalline solid. Molecular weight = 206.03; freezing/melting point = 200−201°C; vapor pressure = 6.8×10^{-3} mmHg @ 100°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 0. Soluble in water; solubility = 690 ppm @ 25°C.

Potential Exposure: A General Use Pesticide (GUP) that is no longer produced or sold in the United States. It is used as an herbicide for grasses, broadleaf weeds, soybeans, beans, and some vegetables. Workers involved in the manufacture, formulation, or application of this reemergence herbicide.

Incompatibilities: Rapidly decomposed by light. Strong acids and acid fumes.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 11 milligram per cubic meter

PAC-2: 120 milligram per cubic meter

PAC-3: 690 milligram per cubic meter

Russia set a MAC in ambient air in residential areas of 0.01 milligram per cubic meter on a momentary basis and 0.006 milligram per cubic meter on an average daily basis.

Pennsylvania[60] set a guideline for chloramben in ambient air of 1.3333 milligram per cubic meter.

Permissible Concentration in Water: The USSR[35] set a MAC of 0.5 mg/L in surface water. A lifetime Health advisory: of 0.105 mg/L has been determined by EPA (see "References" below).

Routes of Entry: Inhalation, passes through the skin.

Harmful Effects and Symptoms

The available data on Chloramben are very sparse. Much additional information is needed regarding its chronic toxicity, teratogenicity, and carcinogenicity before limits can be confidently set. No-observed-adverse-effect doses for chloramben were 15 mg/kg/day. Based on these data an ADI was calculated at 0.015 mg/kg/day. The LD_{50} rat is 3500 mg/kg (slightly toxic).

Short-Term Exposure: Skin or eye contact may cause irritation.

Long-Term Exposure: There is evidence that this chemical causes cancer in animals. It may cause cancer of the liver. Repeated exposure may cause skin rash with itching. Human toxicity (long term)[77]: Very low—100.00 ppb, Health advisory.

Points of Attack: Skin, liver.

Medical Surveillance: Liver function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions,

including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: When thresholds for carcinogens that would protect 100% of the population had not been identified, NIOSH usually recommended that occupational exposures to carcinogens be limited to the lowest feasible concentration. To ensure maximum protection from carcinogens through the use of respiratory protection, NIOSH also recommended that only the most reliable and protective respirators be used. *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter ck-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chloramben all handlers should be trained on its proper handling and storage. Store in a cool, dry place or a refrigerator, and avoid contact with strong acids; acid fumes and light. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2588 Pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include toxic chloride fumes and nitrous oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Chloramben is stable to heat, oxidation, and hydrolysis in acidic or basic media. The stability is comparable to that of benzoic acid. Wet oxidation or incineration are recommended disposal methods[22].

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Known to be a human carcinogen; IARC: Human, Sufficient Evidence; Animal, Sufficient Evidence, *carcinogenic to humans*, Group 1, 1998.

California Proposition 65 Chemical[102]: Cancer 2/27/1987; Developmental/Reproductive toxin 1/1/1989.

Hazard Alert: Poison, Combustible, Reproductive toxin, Drug.

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): U035

RCRA, 40CFR261, Appendix 8 Hazardous Constituents

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 10 lb (4.54 kg)

Hazard symbols, risk, & safety statements: Hazard symbol: T; risk phrases: R25; R36/37/38; R45; R50/53; safety phrases: S13; S26; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chlorambucil is a crystalline solid. Molecular weight = 304.24; freezing/melting point = 64−66°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0. Insoluble in water.

Potential Exposure: Chlorambucil, an anticancer drug, is a derivative of nitrogen mustard. This drug is primarily used as an antineoplastic agent for treating lymphocytic leukemia; malignant lymphomas; follicular lymphoma; and Hodgkin's disease. The treatments are not curative but do produce some marked remissions. Chlorambucil has also been tested for treatment of chronic hepatitis, rheumatoid arthritis; and as an insect chemosterilant. All of the chemical used in this country is imported from the United Kingdom. Work exposure in the United States would be limited to workers formulating the tablets, or to those patients receiving the drug.

Incompatibilities: Moisture. Chlorambucil is an alkylating agent. Reacts with proteins and a variety of nucleophilic compounds[101]. Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur).

Permissible Exposure Limits in Air

No standards or PAC available.

Harmful Effects and Symptoms

Short-Term Exposure: Chlorambucil irritates the eyes, and respiratory tract. Exposure can cause dizziness; loss of coordination; numbness, weakness; muscle twitching; convulsions and unconsciousness. Symptoms of exposure to this compound include leukemia, dyspnea, cough, interstitial fibrosis, and menstrual cycle changes or disorders. It may cause keratitis epithelialis in association with exfoliative dermatitis and reversible *pseudotumor cerebri* with papilledema. It may also cause vomiting, lethargy, and unconsciousness with grand mal seizures. Other symptoms include convulsions, infertility, reversible and permanent sterility, lymphopenia, neutropenia, bone marrow suppression, gastrointestinal disturbances such as nausea, diarrhea and oral ulceration, hepatotoxicity, jaundice, drug fever, skin hypersensitivity, peripheral neuropathy, sterile cystitis, fibrosis, vasculitis and depletion of primordial follicles, skin rash, bleeding, unusual lumps, agitated behavior, and ataxia. LD_{50} (oral-rat) = 76 mg/kg (moderately toxic)[101].

Long-Term Exposure: This chemical is a carcinogen in humans. It has been shown to cause lung cancer and leukemia. It is a probable teratogen in humans and may damage the testes in males and decrease fertility in females. Causes nausea and vomiting and CNS excitation in humans. It may cause hyperuricemia, which may lead to acute renal failure, reversible pancytopenia, sideroblastic anemia, and myeloblastic leukemia. Exposure may cause erythroleukemia, reticulum-cell sarcoma, lymphosarcoma, myelosuppression, viral, fungal and bacterial infections, chromosomal damage and oligospermia, azoospermia, and disappearance of testicular germinal cells in males. It may cause irreversible bone marrow depression, central nervous excitation, and jerky movements. It may also cause thrombocytopenia, leucopenia and hemorrhage of the skin and mucous membranes. Other symptoms of exposure include coma, irritation to the skin and mucous membranes, lymphocytopenia, cutaneous pigmentation, adrenal cortical insufficiency, and neurotoxicity. It may cause amenorrhea and dermatitis. When administered to a pregnant woman, the offspring may develop unilateral renal agenesis. It may be injurious to the developing retina[101].

Points of Attack: Lung, kidney, liver, blood.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Liver and kidney function tests, lung function tests, CBC.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear or dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Based on potential carcinogenicity the following is recommended by NIOSH: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full-facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorambucil all handlers should be trained on its proper handling and storage. Store in cool, dry place. Store in sealed ampules or in amber screw-capped bottles or vials with Teflon cap liners. Solutions may be stored in bottles or vials with a silicone system having a Teflon liner and sampled with needle and syringe. Prevent exposure to light. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: *Isolation Distance, Spill*: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. (When used as a weapon) As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Absorb or cover with dry earth, sand, or other noncombustible material and transfer to containers. Do not get water inside containers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is inappropriate and possibly dangerous to the environment to dispose of expired or waste drugs and pharmaceuticals by flushing them down the toilet or discarding them to the trash. Household quantities of expired or waste pharmaceuticals may be mixed with wet cat litter or coffee grounds, double-bagged in plastic, discard in trash. Larger quantities shall carefully take into consideration applicable DEA, EPA, and FDA regulations. If possible return the pharmaceutical to the manufacturer for proper disposal being careful to properly label and securely package the material. Alternatively, the waste pharmaceutical shall be labeled, securely packaged, and transported by a state licensed medical waste contractor to dispose by burial in a licensed hazardous or toxic waste landfill or incinerator. Permanganate oxidation, high temperature incineration with scrubbing equipment, or microwave plasma treatment.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chloramphenicol is a white to grayish-white or yellowish-white crystalline solid. Molecular weight = 323.13; freezing/melting point = 151°C; vapor pressure = 1.7×10^{-13} mmHg @ 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 0. Slightly soluble in water.

Potential Exposure: An antibiotic derived from *streptomyces venezuelae*. A potential danger to those involved in the manufacture, formulation, and application of this antibiotic and antifungal agent.

Incompatibilities: Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines), releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur).

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 1.5 milligram per cubic meter

PAC-2: 10 milligram per cubic meter

PAC-3: 500 milligram per cubic meter

The FDA has set standards for *Good Manufacturing Practices for Drugs and Pharmaceuticals*. These should be followed for personal protection as well as product quality. See the FDA regulation 21 CFR 210. Also, there may be no safe level of exposure to a carcinogen, so all contact should be reduced to the lowest possible level. It should be recognized that this chemical can be absorbed through the skin, thereby increasing exposure.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Chloramphenicol can affect you when breathed in and by passing through your skin. Skin or eye contact can cause irritation. Exposure can damage the bone marrow's ability to make blood cells and/or platelets (for blood clotting). This can lead to severe illness or death.

Long-Term Exposure: High or repeated exposure can damage the liver. Effects on the nervous system may also occur, such as numbness and tingling in the fingers or toes and blurred vision. Chloramphenicol is a carcinogen, mutagen, and teratogen. LD_{50} (oral-rat) = 2500 mg/kg (slightly toxic).

Points of Attack: Liver, nervous system; blood.

Medical Surveillance: Before beginning employment and monthly after that, the following is recommended: CBC with platelet count. If symptoms develop or overexposure is suspected, the following may be useful: liver function tests; exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: When thresholds for carcinogens that would protect 100% of the population had not been identified, NIOSH usually recommended that occupational exposures to carcinogens be limited to the lowest feasible concentration. To ensure maximum protection from carcinogens through the use of respiratory protection, NIOSH also recommended that only the most reliable and protective respirators be used. *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter ck-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Chloramphenicol all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: *Isolation Distance, Spill*: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include chlorine and nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is inappropriate and possibly dangerous to the environment to dispose of expired or waste pharmaceuticals by flushing them down the toilet or discarding them to the trash. Household quantities of expired or waste pharmaceuticals may be mixed with wet cat litter or coffee grounds, double-bagged in plastic, discard in trash. Larger quantities shall carefully take into consideration applicable DEA, EPA, and FDA regulations. If possible return the pharmaceutical to the manufacturer for proper disposal being careful to properly label and securely package the material. Alternatively, the waste pharmaceutical shall be labeled, securely packaged, and transported by a state licensed medical waste contractor to dispose by burial in a licensed hazardous or toxic waste landfill or incinerator.

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Chlordane is a colorless, or light-yellow or amber, thick liquid. Pungent, chlorine-like odor. It may occur as a crystalline solid. Molecular weight = 409.76; specific gravity (H_2O:1) = 1.6 @ 25°C; boiling point = 175°C; freezing/melting point = 104−107°C; vapor pressure = 0.00001 mmHg; Practically insoluble in water; solubility = 0.0001%. The *commercial grade* of chlordane is a noncombustible liquid, but may be utilized in flammable solutions: Flash point = 56°C has been found in the literature, but his may vary depending on the carrier. Hazard identification (based on NFPA-704 M Rating System): (*in a flammable solution such as n-hexane*) Health 3, flammability 3, reactivity 0; (*dry*) Health 3; flammability 1; reactivity 0. Practically insoluble in water.

Potential Exposure: Chlordane is a broad spectrum insecticide of the group of polycyclic chlorinated hydrocarbons called cyclodiene insecticides. Chlordane has been used extensively since the 1950s for termite control; as an insecticide for homes and gardens; and as a control for soil insects during the production of crops, such as corn. Both the uses and the production volume of chlordane have decreased extensively since the issuance of a registration suspension notice for all food crops and home and garden uses of chlordane by the United States Environmental Protection Agency. However, significant commercial use of chlordane for termite control continues. Special groups at risk include children as a result of milk consumed; fishermen and their families because of the high consumption of fish and shellfish, especially freshwater fish; persons living downwind from treated fields; and persons living in houses treated with chlordane pesticide control agents.

Incompatibilities: Contact with strong oxidizers may cause fire and explosions. High heat and contact with alkaline solutions cause decomposition with the production of toxic fumes including chlorine, phosgene, hydrogen chloride. Attacks iron, zinc, plastics, rubber, and coatings.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 milligram per cubic meter

OSHA PEL: 0.5 milligram per cubic meter TWA [skin]

NIOSH REL: 0.5 milligram per cubic meter TWA [skin]. NIOSH considers this chemical to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990]. See *NIOSH Pocket Guide*, Appendix A.

ACGIH TLV[1]: 0.5 milligram per cubic meter TWA [skin]; confirmed animal carcinogen with unknown relevance to humans

PAC Ver. 29[138]

57-74-9

PAC-1: 4.5 milligram per cubic meter

PAC-2: 50 milligram per cubic meter

PAC-3: 500 milligram per cubic meter

DFG MAK: 0.5 milligram per cubic meter, inhalable fraction [skin]; Peak limitation II(8); Carcinogen Category 3B

Arab Republic of Egypt: TWA 0.5 milligram per cubic meter [skin], 1993; Australia: TWA 0.5 milligram per cubic meter; STEL 2 milligram per cubic meter [skin], Carcinogen 1993; Austria: MAK 0.5 milligram per cubic meter [skin], Suspected: carcinogen, 1999; Belgium: TWA 0.5 milligram per cubic meter; STEL 2 milligram per cubic meter [skin], 1993; Denmark: TWA 0.5 milligram per cubic meter [skin], 1999; Finland: carcinogen, 1999; France: VME 0.5 milligram per cubic meter [skin], carcinogen, 1999; the Netherlands: MAC-TGG 0.5 milligram per cubic meter [skin], 2003; Norway: TWA 0.5 milligram per cubic meter, 1999; the Philippines: TWA 0.5 milligram per cubic meter [skin], 1993; Russia: STEL 0.01 milligram per cubic meter [skin], 1993; Switzerland: MAK-W 0.5 milligram per cubic meter [skin], 1999; Thailand: TWA 0.5 milligram per cubic meter, 1993; Turkey: TWA 0.5 milligram per cubic meter [skin], 1993; United Kingdom: LTEL 0.5 milligram per cubic meter; STEL 2 milligram per cubic meter [skin], 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: confirmed animal carcinogen with unknown relevance to humans. Several states have set guidelines or standards for chlordane in ambient air[60] ranging from 0.068 μ/m^3 (Massachusetts) to 0.36 μ/m^3 (Pennsylvania) to 1.19 μ/m^3 (Kansas) to 1.7 μ/m^3 (New York) to 2.5 μ/m^3 (Connecticut and South Carolina) to 5.0 μ/m^3 (Florida) to 5−20 μ/m^3 (North Dakota) to 8.0 μ/m^3 (Virginia) to 12.0 μ/m^3 (Nevada).

Determination in Air: Filter/Chromosorb tube-102; Toluene; GC/Electrochemical detection; NIOSH Analytical Method (IV) #5510 or OSHA Analytical Method 67.

Permissible Concentration in Water: Safe Drinking Water Act (47FR 9352): MCLG, zero; MCL, 0.002 mg/L. Federal Drinking Water Standards: EPA 2 μg/L; State Drinking Water Standards: California 0.1 μg/L; New Jersey 0.5 μg/L; State Drinking Water Guidelines: Arizona 0.022 μg/L; Connecticut 0.3 μg/L; Maine 0.3 μg/L.

Determination in Water: Filter/Chromosorb tube-102; Toluene; GC/Electrochemical detection; NIOSH Analytical Method (IV) #5510. GC (EPA Method 608) or GC plus mass spectrometry (EPA Method 625). Octanol−water coefficient: Log K_{ow} = 2.8. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[77]: Extra high—0.04936 ppb, MATC.

Routes of Entry: Inhalation, skin absorption; ingestion and skin and eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chlordane can irritate the eyes and skin and can cause burns on contact. Skin rash or acne may develop. The vapor can irritate the respiratory tract. Exposure can cause blurred vision, nausea, headache, abdominal pain, and vomiting. Exposure at high levels may result in disorientation, tremors, convulsions, respiratory failure, and death. Medical observation is indicated. Symptoms include increased sensitivity to stimuli, tremors; muscular a lack of coordination; and convulsions with or without coma. Fatal oral dose to adult humans is between 6 and 60 g with onset of symptoms within 45 minutes to several hours after ingestion, although symptoms have occurred following very small doses either orally or by skin exposure. Some reports of delayed development of liver disease, blood disorders, and upset stomach. Chlordane is considered to be borderline between a moderately and highly toxic substance. The oral LD_{50} for rats is 283 mg/kg.

Long-Term Exposure: This chemical has been shown to cause liver cancer in animals and may be a human carcinogen. It may damage the developing fetus. Chlordane may damage the kidneys, liver and affect the immune system. May cause an acne-like rash following skin contact. Human toxicity (long term)[77]: High—2.00 ppb, MCL.

Points of Attack: Central nervous system; eyes, lungs, liver, kidneys, skin.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. CBC.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): CPF3 suits, Trellchem HPS suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Teflon gloves, suits, boots. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquid, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Chlordane all handlers should be trained on its proper handling and storage. Chlordane must be stored to avoid contact with strong oxidizers (such as perchlorates, peroxides, permanganates, chlorates, and nitrates), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2996 Organochlorine pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Do not touch spilled material. Use water spray to reduce vapors. Stay upwind. Avoid breathing vapors. Wear positive pressure breathing apparatus and full protective clothing. Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. *Small spills*: absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. *Large spills*: dike far ahead of spill for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible liquid but it may be dissolved in flammable or combustible liquids for commercial application. Thermal decomposition products may include chlorine, phosgene, hydrogen chloride. If the flammable or combustible commercial material catches fire, use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Chlordane is dehydrochlorinated in alkali to form "nontoxic" products, a reaction catalyzed by traces of iron, but the reaction is slow. The environmental hazards of the products are uncertain. Chlordane is completely dechlorinated by sodium in isopropyl alcohol. The UN Recommends incineration methods for disposal of chlordane[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

EC Number: 205-601-3 [*Annex I Index No.:* 606-019-00-6]

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen; IARC[9]: Animal Sufficient Evidence; Human No Adequate Data, *possibly carcinogenic to humans*, Group 2B; NTP[10]; DFG[3]: (Animal Positive, Human Suspected); EPA (*oral*): Likely to produce cancer in humans.

California Proposition 65 Chemical[102]: Cancer 1/1/1988; Developmental/Reproductive toxin 1/1/1989.

Hazard Alert: Poison, Combustible, Possible risk of forming tumors, Endocrine disruptor (high), Reproductive toxin: possible risk of gene damage/impaired fertility; Suspected reprotoxic hazard.

Banned or Severely Restricted (many countries) (UN)[13,35]

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): U142

RCRA, 40CFR261, Appendix 8 Hazardous Constituents

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.0011; Nonwastewater (mg/kg), 0.13

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8270 (10)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1 lb (0.454 kg)

List of Stockholm Convention POPs: Annex A (Elimination)

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R24/25; R40; R50/53; R62; R63; safety phrases: S1/2; S22; S36/37; S45; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Kepone is a tan to white, odorless crystalline solid. Molecular weight = 490.60; freezing/melting point = 360°C (sublimes); vapor pressure = 3×10^{-7} mmHg @ 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 1, reactivity 0. Soluble in water; solubility = 0.5 @ 100°C.

Potential Exposure: Kepone was registered for the control of rootborers on bananas with a residue tolerance of 0.01 ppm. This constituted the only food or feed use of Kepone. Nonfood uses included wireworm control in tobacco fields and bait to control ants and other insects in indoor and outdoor areas. A rebuttable presumption against registration of chlordecone was issued by the United States Environmental Protection Agency on March 25, 1976 on the basis of oncogenicity. The trademarked Kepone and products of six formulations were the subject of voluntary cancellation according to a United States Environmental Protection Agency notice dated July 27, 1977. In a series of decisions, the first of which was issued on June 17, 1976, the EPA effectively canceled all registered products containing Kepone as of May 1, 1978.

Incompatibilities: Acids, acid fumes.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: Carcinogen, 0.001 milligram per cubic meter TWA. Limit exposure to lowest feasible concentration. NIOSH considers this chemical to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990]. See *NIOSH Pocket Guide*, Appendix A.

PAC Ver. 29[138]

PAC-1: 1.6 milligram per cubic meter

PAC-2: 17 milligram per cubic meter

PAC-3: 100 milligram per cubic meter

DFG MAK: Carcinogen Category 3B

Austria: Suspected: carcinogen, 1999; France: carcinogen, 1993. Guidelines or standards for Kepone in ambient air have been set[60] ranging from 0 (South Carolina) to 0.03 μ/m^3 (New York) to 0.88 μg/L (Pennsylvania).

Determination in Air: Collection by membrane filter and backup impinger containing NaOH solution, workup with benzene, analysis by GC with electron capture detector. Use NIOSH Analytical Method #5508.

Routes of Entry: Inhalation of dust, ingestion, skin absorption.

Harmful Effects and Symptoms

In July 1975, a private physician submitted a blood sample to the Center for Disease Control (CDC) to be analyzed for Kepone, a chlorinated hydrocarbon pesticide. The sample had been obtained from a Kepone production worker who suffered from weight loss; nystagmus, and tremors. CDC notified the state epidemiologist that high levels of Kepone were present in the blood sample, and he initiated an epidemiologic investigation which revealed other employees suffering with similar symptoms. It was evident to the state official after visiting the plant that the employees had been exposed to kepone at extremely high concentrations through inhalation, ingestion, and skin absorption. He recommended that the plant be closed, and company management complied. Of the 113 current and former employees of this Kepone-manufacturing plant examined, more than half exhibited clinical symptoms of kepone poisoning. Medical histories of tremors (called "kepone shakes" by employees), visual disturbances; loss of weight; nervousness, insomnia, pain in the chest and abdomen and; in some cases, infertility and loss of libido were reported. The employees also complained of vertigo and lack of muscular coordination. The intervals between exposure and onset of the signs and symptoms varied between patients but appeared to be dose related. NIOSH has received a report on a carcinogenesis bioassay of technical grade Kepone which was conducted by the National Cancer Institute using Osborne-Mendel rats and B6C3F1 mice, Kepone was administered in the diet at two tolerated dosages. In addition to the clinical signs of toxicity, which were seen in both species, a significant increase ($P < 0.05$) of hepatocellular carcinoma in rats given large dosages of Kepone and in mice at both dosages was found. Rats and mice also had extensive hyperplasia of the liver. In view of these findings, NIOSH must assume that Kepone is a potential human carcinogen. LD_{50} (oral-rat) = 95 mg/kg (moderately toxic).

Short-Term Exposure: May be poisonous if absorbed through the skin. Skin or eye contact may cause irritation and rash. Poisonous if swallowed. Exposure can cause headache, nervousness, tremor; liver, kidney damage; visual disturbance; ataxia, chest pain; skin erythema (skin redness).

Long-Term Exposure: Has been shown to cause liver cancer in animals; potential human carcinogen. May cause testicular atrophy; low sperm count; damage to the developing fetus; reproductive damage; sterility, breast enlargement; skin changes; liver and kidney damage; brain and nervous system damage with hyperactivity; hyperexcitability; muscle spasms, tremors.

Points of Attack: Eyes, skin, respiratory system; central nervous system; liver, kidneys, reproductive system. Cancer site in animal: liver cancer.

Medical Surveillance: Employers shall make medical surveillance available to all workers occupationally exposed to kepone, including personnel periodically exposed during routine maintenance or emergency operations. Periodic examinations shall be made available at least on an annual basis.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Qualified medical personnel may consider the administration of cholestyramine resin (QUESTRAN). Medical personnel should wear Neoprene gloves as protection against contamination (Dreisbach).

Personal Protective Methods: *Protective Clothing:* (1) Coveralls or other full-body protective clothing shall be worn in areas where there is occupational exposure to Kepone. Protective clothing shall be changed at least daily at the end of the shift and more frequently if it should become grossly contaminated. (2) Impervious gloves, aprons, and footwear shall be worn at operations where solutions of Kepone may contact the skin. Protective gloves shall be worn at operations where dry Kepone or materials containing Kepone are handled and may contact the skin. (3) Eye protective devices shall be provided by the employer and used by the employees where contact of Kepone with eyes is likely. Selection, use, and maintenance of eye protective equipment shall be in accordance with the provisions of the American National Standard Practice for Occupational and Educational Eye and Face Protection, aNSI Z87.1-1968. Unless eye protection is afforded by a respirator hood or facepiece, protective goggles or a face shield shall be worn at operations where there is danger of contact of the eyes with dry or wet materials containing Kepone because of spills, splashes, or excessive dust or mists in the air. (4) The employer shall ensure that all personal protective devices are inspected regularly and maintained in clean and satisfactory working condition. (5) Work clothing may not be taken home be employees. The employer shall provide for maintenance and laundering of protective clothing. (6) The employer shall ensure that precautions necessary to protect laundry personnel are taken while soiled protective clothing is being laundered. (7) The employer shall ensure that Kepone is not discharged into municipal waste treatment systems or the community air.

Respiratory Protection from Kepone: Engineering controls shall be used wherever feasible to maintain airborne Kepone concentrations at or below that recommended. Compliance with the environmental exposure limit by the use of respirators is allowed only when airborne Kepone concentrations are in excess of the work-place environmental limit because required engineering controls are being installed or tested when nonroutine maintenance or repair is being accomplished, or during emergencies. When a respirator is thus permitted, it shall be selected and used in accordance with NIOSH requirements.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure location in a cool, dry place, or refrigerator under inert atmosphere[52]. Keep away from acids and acid fumes. Prior to working with kepone all handlers should be trained on its proper handling and storage. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2761 Organochlorine pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Do not touch spilled material. Use water spray to reduce vapors. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. For larger spills, dike far ahead of spill for later disposal. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; halon, water spray, or standard foam. Thermal decomposition products may include toxic chlorides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: A process has been developed which effects chlordecone degradation by treatment of aqueous wastes with UV radiation in the presence of hydrogen in aqueous sodium hydroxide solution. Up to 95% decomposition was effected by this process. Chlordecone previously presented serious disposal problems because of its great resistance to bio- and photo degradation in the environment. It is highly toxic to normally occur in degrading microorganisms. Although it can undergo some photodecomposition when exposed to sunlight to the dihydro compound (leaving a compound with 8 chloro substituents) that degradation product does not significantly reduce toxicity. Disposal by incineration with HCl scrubbing is recommended[22].

UN/NA & ERG Number: UN2928/154

EC Number: 204-078-9

Regulatory Authority and Advisory Information

Carcinogenicty: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen see cameo; IARC[9]: Animal Sufficient Evidence; Human No Adequate Data, *possibly carcinogenic to humans*, Group 2B

California Proposition 65 Chemical[102]: Cancer, 7/9/1989

Hazard Alert: Poison, Possible risk of forming tumors, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction).

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.

TSCA (40 CFR 716.120) Section 8(d) Health and Safety Data Reporting Rule. This rule requires manufacturers, importers, and processors of listed chemical substances and mixtures to submit to EPA copies and lists of unpublished health and safety studies.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xi; risk phrases: R45; R36/37/38; R40. R41; R51; R62; safety phrases: S16; S22; S26; S36/37/39; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)]

Description: Chlorendic acid is a colorless crystalline solid. Molecular weight = 388.9; freezing/melting point = 209°C; specific gravity (H_2O:1) = 0.95 @ 20°C; vapor pressure = 1.4×10 mmHg @ 25°C; Henry's Law constant = 3×10^{-4} atm m^3/mol @ 25°C (est)[72]. Low solubility in water; solubility = < 0.5 g/100 g @ 25°C; <1 mg/L @ 21°C.

Potential Exposure: Chlorendic acid is used to make other chemicals, polyester resins; in fiberglass reinforced resins; used for anticorrosion equipment and flame retardant applications of fabrics.

Incompatibilities: Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur).

Permissible Exposure Limits in Air: No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

Determination in Water: Octanol−water coefficient: $\text{Log } K_{\text{ow}} = 2.3$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, skin contact

Harmful Effects and Symptoms

Short-Term Exposure: Causes irritation of the eyes, skin and respiratory tract.

Long-Term Exposure: May cause cancer.

Medical Surveillance: Chlorendic acid is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA)

Storage: (1) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location; keep acids away from bases and red, yellow and blue-coded chemicals. (2) Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. Store in tightly closed containers is a cool, well-ventilated area away from potentially high heat sources. Prior to working with butyl acid phosphate you should be trained on its proper handling and storage.

Shipping: UN2928 Toxic solids, corrosive, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chlorendic acid is combustible when exposed to direct flame, but is self-extinguishing when the flame is removed[193]. Thermal decomposition products may include hydrogen chloride and oxides of carbon. To extinguish fire, use dry chemical, carbon dioxide, or Halon.

Disposal Method Suggested: Dispose of contents and container to an approved waste disposal plant. All federal, state, and local environmental regulations must be observed.

Chlorethoxyfos C:0645

Formula: $C_6H_{11}Cl_4O_3PS$

Synonyms: *O,O*-Diethyl *O*-(1,2,2,2-tetrachloro ethyl) phosphorothioate; *O,O*-Diethyl *O*-(1,2,2,2-tetrachloro ethyl) thionophosphate; Phosphorothioic acid, *O,O*-diethyl *O*-(1,2,2,2-tetrachloroethyl)ester; DPX-43898; Fortress 2.5 G; fortress 5 G; SD 208304

CAS Registry Number: 54593-83-8

HSDB Number: 7131

RTE CS Number: TF6150000

UN/NA & ERG Number: (PIH) UN2783 (organophosphorus pesticide, solid, n.o.s.)/152; UN3018 (organophosphorus pesticide, liquid, n.o.s.)/152

EC Number: Not assigned

Regulatory Authority and Advisory Information

Carcinogenicity: EPA Group D, Not classifiable as a human carcinogen.

Hazard Alert: Poison inhalation hazard: exposure can be lethal, Combustible, Poison, Neurotoxin (cumulative), Environmental hazard.

United States DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Marine pollutant (in bulk by water)

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T +, Xi, N; risk phrases: R26/27/28; R33; R36; R50; safety phrases: S26, S28; S36/37, S38, S39; S35; S41; S45, S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Gray to reddish-brown granular solid or colorless liquid. Mild sulfur-like odor. Molecular weight = 335.89; 235.06 (P-); specific gravity (H_2O:1) = 1.41; boiling point = 110°C; freezing/melting point = (decomposes) 112°C; flash point = 127.6°C; vapor pressure = 8×10^{-4} mmHg @ 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 1, reactivity 0. Very low solubility in water; solubility <1 mg/L @ 20°C; (technical) 3 ppm. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Potential Exposure: An organophosphate insecticide, chlorethoxyfos is a restricted use organophosphate insecticide registered for use in the United States on field corn, seed corn, sweet corn, and popcorn for the control of corn rootworms, wireworms, cutworms, seed corn maggots, white grubs, and symphylans. A United States Environmental Protection Agency Restricted Use Pesticide (RUP). Not currently listed for use in EU countries.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: No standards have been set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; GC/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].

Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by GC. Detection limit = 6.0 ηg/L. Octanol−water coefficient: Log K_{ow} = > 4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold): Extra high—0.40299 ppb, MATC.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils, and nonpolar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short-Term Exposure: Highly dangerous; can be fatal if inhaled, swallowed, or absorbed through the skin. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 2 mg/kg.

Long-Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May be a neurotoxin; may cause liver damage. Chronic exposure may cause respiratory paralysis and death. Human toxicity (long term)[101]: High—4.20 ppb, Health advisory.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally ac curate only if done within about 2 hours of exposure. If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont Tychem suit fabrics[88] All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in nonroutine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN2783 Organophosphorus pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. May be fatal if inhaled, ingested, or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. May also be mixed with flammable solvent and sprayed into an incinerator equipped with after burner and scrubber. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Afterburner

Chlorfenvinphos C:0650

Formula: $C_{12}H_{14}Cl_3O_4P$

Synonyms: Apachlor; Benzyl alcohol,2,4-dichloro-α-(chloromethylene)-, diethyl phosphate; Birlane; Birlane liquid; C-10015; C8949; CFV; CGA 26351; *O*-2-Chlor-1-(2,4-dichlor-phenyl)-vinyl-*O*,*O*-diaethylphosphat (German); Chlorfenvinphos; β-2-Chloro-1-(2′,4′-dichlorophenyl) vinyl diethylphosphate; 2-Chloro-1-(2,4-dichlorophenyl)vinyl diethyl phosphate; Chlorofenvinphos; Chlorp henvinfos; Chlorp henvinphos; Clofenvinfos; Clorfenvinfos (Spanish); Compound 4072; CVP; Diethyl1-(2,4-dichlorophenyl)-2-chlorovinyl phosphate; *O,O*-Diethyl *O*-[2-chloro-1-(2′,4′-dichlorophenyl)vinyl] phosphate; ENT 24969; GC 4072; OMS 1328; Phosphate de *O,O*-diethyle etdeo-2-chloro-1-(2,4-dichlorophenyl) vinyle (French); Phosphoric acid, 2-chloro-1-(2,4-dichlorophenyl)ethenyldiethyl ester; Sapecron; Sapecron 10FGEC; Sapecron 240; Saprecon C; SD 4072; SD 7859; Shell 4072; Supona; Supone; Unitox; Vinylphare; Vinylphate

CAS Registry Number: 470-90-6

HSDB Number: 1540

RTECS Number: TB8750000

UN/NA & ERG Number: (PIH) UN3018 (organophosphorus pesticide, liquid, toxic)/152

EC Number: 207-432-0 [*Annex I Index No.:* 015-071-00-3]

Regulatory Authority and Advisory Information

Hazard Alert: Poison inhalation hazard: exposure can be lethal, Neurotoxin (cumulative), Combustible, Suspected of causing genetic defects, Environmental hazard.

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 500 lb (227 kg)

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

United States DOT 49CFR172.101, Inhalation Hazardous Chemical, as organic phosphate, Substance ID: EDF-041.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R24; R28; R33; R50/53; R62; safety phrases: S1/2; S28; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chlorfenvinphos is a nonflammable, yellow or amber liquid with a mild odor. Molecular weight = 359.58; boiling point = 110°C @ 0.001 mmHg; 168−170°C @ 0.5 mmHg; freezing/melting point = −23 − 19°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 1, reactivity 0. Very slightly soluble in water.

Potential Exposure: Used as a soil insecticide for root maggots, rootworms, and cutworms. Those engaged in the production, formulation, and application of this insecticide.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Strong oxidizers may cause release of toxic phosphorus oxides. Organophosphates, in the presence of strong reducing agents such as hydrides, may form highly toxic and flammable phosphine gas. Keep away from alkaline materials. May be corrosive to metals in the presence of moisture.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.91 milligram per cubic meter

PAC-2: 10 milligram per cubic meter

PAC-3: 500 milligram per cubic meter

Poland: MAC (TWA) 0.01 milligram per cubic meter, MAC (STEL) 0.1 milligram per cubic meter

However, it should be recognized that this chemical can be absorbed through the skin, thereby increasing exposure.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; GC/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method IV # 5600, Organophosphorus Pesticides.

Permissible Concentration in Water: 0.1 mg/L in drinking water is a recommended drinking water limit.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = > 3.5$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, passes through the unbroken skin.

Harmful Effects and Symptoms

Short-Term Exposure: Highly toxic (LD_{50} for rats is 10 mg/kg). Symptoms exhibited on chlorfenvinphos exposure are typical of cholinesterase poisoning. Nausea is often first symptom, with vomiting; abdominal cramps; diarrhea; and excessive salivation. Headache, giddiness, weakness, tightness in chest; blurring of vision; pinpoint pupils; loss of muscle coordination; and difficulty breathing. Convulsions and coma precede death. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Chlorfenvinphos can cause the heart to beat slower (bradycardia) or irregularly (arrhythmia).

Long-Term Exposure: There is limited evidence that this chemical may damage the developing fetus. Symptoms resembling influenza with headache, nausea; and weakness have been reported. Cholinesterase inhibitor; cumulative effect is possible. Chlorfenvinphos may damage the nervous system with repeated exposure, resulting in impaired memory; depression, anxiety, or irritability, convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system; cardiovascular system, skin, eyes, plasma, and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When cholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC. Consider chest X-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organic phosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24−48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorfenvinphos all handlers should be trained on its proper handling and storage. Should be protected from moisture and stored in glass-lined or polyethylene-lined containers. Keep away from strong bases. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Organophosphorus compounds

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: The state of New Jersey has assigned a flammability rating of "2" to chlorfenvinphos. This chemical may burn, but does not readily ignite. Thermal decomposition products may include hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. Move container from fire area if you can do it without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. Wear positive-pressure breathing apparatus and special protective clothing. Use dry chemical, carbon dioxide; water spray; or alcohol resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorinated Diphenyl Oxide C:0655

Formula: $C_{12}H_4Cl_6O$; $C_{12}H_{10-n}Cl_nO$ (general, for chlorinated diphenyl oxides)

Synonyms: Benzene, 1,1′-Oxybis, hexachloro derivatives; Chlorinated biphenyl oxide; *o*-Chlorinated diphenyl oxide; Ether, hexachlorophenyl; Hexachlorodiphenyl ether; Hexachlorodiphenyl oxide; Phenyl ether, hexachloro derivative; Trichloro diphenyl ether; Trichloro diphenyl oxide
hexachloro-isomer: see PC Bs.

CAS Registry Number: 31242-93-0; 55720-99-5 (obsolete); 57321-63-8 (trichloro-)

HSDB Number: 7111

RTECS Number: KO4200000 (trichloro-); KO0875000 (hexachloro-)

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171; UN3082 (environmentally hazardous substances, liquid, n.o.s.)/171

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Combustible (*hexachloro diphenyl oxide*), Sensitization hazard (skin).

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: Xi, Xn; risk phrases: R20; R22; R43; safety phrases: S36/37; S41; S45 (see Appendix 4)

Description: Chlorinated diphenyl oxide is a white or yellowish waxy solid or very viscous liquid. Molecular weight = 376.88; boiling point = 230–260°C @ 8 mm Hg; 361.2°C @ 760 mmHg; vapor pressure = 4.37^{-5} mmHg @ 25°C; flash point = 123°C. *Hexachloro Diphenyl Oxide:* autoignition temperature = 620°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0.

Potential Exposure: These materials are used as dielectric fluids in the electrical industry; they may be used as organic intermediates to make drugs and other chemicals; and in dry cleaning detergents. Used in the manufacture of flame-inhibiting polymers, as corrosion inhibitors, dry-cleaning detergents, thermal lubricants, additives for soaps and lotions, and in the manufacture of hydraulic fluids, pesticides, wood preservatives, and electric insulators[101].

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. May be able to form unstable peroxides. Reacts with aluminum.

Permissible Exposure Limits in Air

NIOSH IDLH = 5 milligram per cubic meter
OSHA PEL: 0.5 milligram per cubic meter TWA
NIOSH REL: 0.5 milligram per cubic meter TWA
ACGIH TLV[1]: 0.5 milligram per cubic meter TWA
No PAC available.
DFG MAK: [skin], *as chlorinated biphenyl oxide*

Australia: TWA 0.5 milligram per cubic meter; STEL 2 milligram per cubic meter, 1993; Austria: MAK 0.5 milligram per cubic meter [skin], 1999; Belgium: TWA 0.5 milligram per cubic meter; STEL 2 milligram per cubic meter, 1993; Finland: TWA 0.5 milligram per cubic meter; STEL 1.5 milligram per cubic meter [skin], 1999; France: CME 0.5 milligram per cubic meter, 1999; Norway: TWA 0.5 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 0.5 milligram per cubic meter, 2003; Switzerland: MAK-W 0.5 milligram per cubic meter [skin], 1999; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 0.5 milligram per cubic meter

Several states have set guidelines or standards for Chlorinated Diphenyl Oxide in ambient air[60] ranging from 5−20 μ/m^3 (North Dakota) to 8 μ/m^3 (Virginia) to 10 μ/m^3 (Connecticut) to 12 μ/m^3 (Nevada).

Determination in Air: Collect on filter, work up with isooctane, analyze by GC. Use NIOSH Analytical Method IV #5025[18].

Permissible Concentration in Water: Because of the lack of data on both toxicologic effects and environmental contamination, the hazard posed by these compounds cannot be estimated according to the Environmental Protection Agency[6].

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Acne-form dermatitis and liver damage.

Short-Term Exposure: Contact can cause skin irritation, rash, burning sensation; chloracne. LD_{50} (oral-rat) => 500 mg/kg. Moderately toxic by ingestion, inhalation, and skin absorption.

Long-Term Exposure: May cause acne-form dermatitis and liver damage. More than light alcohol consumption may increase the liver damage.

Points of Attack: Skin, liver.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: OSHA: *5 milligram per cubic meter:* Sa(APF = 10) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); SCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive pressure mode in combination with an auxiliary self-contained positive pressure breathing apparatus). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOvAg100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor and acid gas canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorfenvinphos all handlers should be trained on its proper handling and storage. Should be protected from moisture and stored in glass-lined or polyethylene-lined containers. Keep away from strong bases. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required. UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of carbon. Use dry chemical or carbon dioxide extinguishers. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify

downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: For trichloro phenyl ether, solution in a flammable solvent and incineration in a furnace with afterburner and scrubber is recommended[22].

United States Environmental Protection Agency, Haloethers: Ambient Water Quality Criteria, Washington, DC (1980).

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* Chlorinated Diphenyl Oxide, Trenton, NJ (August 2000).

Chlorimuron-ethyl C:0658

Formula: $C_{13}H_{11}ClN_4O_6S$

Synonyms: Benzoic acid,2-[((((4-chloro-6-methoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-,ethyl ester; Caswell No. 193B; Chlorimuronethyl ester; Chlorimuronethyl [Ethyl-2-[(((4-chloro-6-methoxyprimidin-2-yl)-carbonyl)-amino)sulfonyl]benzoate]; 2-[((((4-Chloro-6-methoxy-2-pyrimidinyl)amino)carbonyl)amino) sulfonyl] benzoic acid, ethyl ester; Ethyl-2-[(((4-chloro-6-methoxy-primidin-2-yl)-carbonyl)-amino)sulfonyl]benzoate; Ethyl 2-[((4-chloro-6-methoxypyrimidine-2-yl)aminocarbonyl)aminosulfonyl]benzoate; Ethyl 2-((((4-chloro-6-methoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]benzoate; Authority; Canopy (chlorimuron-ethyl + metribuzin); Classic; Concert, canceled; DPX-F6025; Gemini; Lorox; Preview; Reliance; Skermish, canceled; Synchroncy; Synchrony

CAS Registry Number: 90982-32-4

HSDB Number: 6850

RTECS Number: DG5095000

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171

EC Number: Not assigned

Regulatory Authority and Advisory Information

Carcinogenicity: Sulfonylurea herbicides were not mutagenic in vitro and most were not carcinogenic in animals. IARC and NTP have not classified the sulfonylurea herbicides with respect to human carcinogenicity. United States Environmental Protection Agency considers the sulfonylureas not classifiable, not rated, or noncarcinogenic, *with the exception of* sulfosulfuron (CAS: 141776-32-1), a likely human carcinogen, and triflusulfuron-methyl (CAS: 126535-15-7) a possible human carcinogen[96].

Hazard Alert: Agricultural chemical.

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless to off white or pale yellow crystals or powder. Some formulations are listed as "flammable" in the literature. Odorless. Molecular weight = 414.83; specific gravity (H_2O:1) = 1.51 @25°C; freezing/melting point = 181°C; vapor pressure = 4.0×10^{-12} mmHg @25°C[83,USDA]. Henry's Law constant = 4.27×10^{-11} atm m^3/mol @ 25°C (est)[83]. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Potential Exposure: A sulfonylurea/pyrimidine derivative herbicide used to control broadleaf weeds and annual morning glory in soybeans and peanuts. Not listed as registered for use in EU countries. Registered for use in the United States and available from more than 25 global suppliers[97].

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, nitrates.

Determination in Water: Method: USGS-NWQL O-2060-01; Procedure: graphitized carbon-based solid-phase extraction and high performance liquid chromatography/mass spectrometry; Analyte: chlorimuron-ethyl; Matrix: water; Detection Limit: 0.0048. Octanol–water coefficient: Log K_{ow} = ranges from 2.50[83] to >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold): Very low—1308.29960 ppb, MATC.

Routes of Entry: Inhalation, dermal contact, ingestion

Harmful Effects and Symptoms

Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short-Term Exposure: May cause skin and eye irritation. Dermal contact may cause allergic reaction Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = > 4000 mg/kg[83]; LD_{50} (dermal, rabbit) = > 2000 mg/kg.

Long-Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies. May be a liver toxin. Human toxicity (long term): Very low—140.00 ppb, Health advisory.

Points of Attack: Skin, liver.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of Central nervous system, liver, heart, kidneys, lung, and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin, and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose lung allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSIZ88.2, or European Standard EN 149.

Storage: Color code—Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. *Flammable Formula*: Color code—Red Stripe: Flammability Hazard: Store separately from all other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents; and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where the chemical is handled, used, or stored, Use only nonsparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen, sulfur, carbon, and hydrogen chloride gas. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA

1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to waters (1-chloro-isomer); 3-Severe hazard to water. (*polychlorinated naphthalenes*).

Description: The chlorinated naphthalenes in which one or more hydrogen atoms have been replaced by chlorine to form wax-like substances, beginning with monochloronaphthalene and going on to the octachlor derivatives. Their physical states vary from mobile liquids to waxy-solids depending on the degree of chlorination; freezing/melting points of the pure compounds range from 17°C for 1-chloronaphthalene to 198°C for 1,2,3,4-tetrachloronaphthalene.

1-Chloro-isomer: Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0.

2-Chloro-isomer*:* Molecular weight = 162.62; specific gravity (H_2O:1) = 1.138 @ 71°C; boiling point = 259°; freezing/melting point = 58°. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Insoluble in water.

Hexa-isomer*:* White to light-yellow solid with an aromatic odor. Molecular weight = 334.82; specific gravity

(H_2O:1) = 1.78; boiling point = 343−388°C; freezing/melting point = 137°C. Insoluble in water.

Octa-isomer*:* Waxy, pale yellow solid with an aromatic odor. Molecular weight = 403.73; specific gravity (H_2O:1) = 1.97; boiling point = 410−440°C; freezing/melting point = 197.5°C. Insoluble in water.

Penta-isomer*:* Colorless to white crystalline solid with a benzene-like odor. Molecular weight = 300.40; boiling point = 336°C; freezing/melting point = 120°C. Slightly soluble in water.

Tetra-isomer*:* Colorless to pale yellow solid with an aromatic odor. Molecular weight = 265.96; boiling point = 315−360°C; freezing/melting point = 182°C; flash point = 210°C (oc). Insoluble in water.

Tri-isomer: Colorless to pale-yellow solid with an aromatic odor. Molecular weight = 231.51; specific gravity (H_2O:1) = 1.58; boiling point = 92.78°C; freezing/melting point = 93°C; flash point: 198°C (oc). Insoluble in water.

Potential Exposure: Industrial exposure from individual chlorinated naphthalenes is rarely encountered; rather it usually occurs from mixtures of two or more Chlorinated naphthalenes. Due to their stability, thermoplasticity, and nonflammability, these compounds enjoy wide industrial application. These compounds are used in the production of electric condensers; in the insulation of electric cables and wires; as additives to extreme pressure lubricants; as supports for storage batteries; and as a coating in foundry use. *octachloro-*: Used as a fireproof and waterproof additive and lubricant additive. *Pentachloro-:* Used in electric wire insulation and in additives to special lubricants. *tetrachloro-:* Used in electrical insulating materials and as an additive in cutting oils. *trichloro-:* Used in lubricants and in the manufacture of insulation for electrical wire.

Because of the possible potentiation of the toxicity of higher Chlorinated naphthalenes by ethanol and carbon tetrachloride, individuals who ingest enough alcohol to result in liver dysfunction would be a special group at risk. Individuals, e.g., analytical and synthetic chemists, mechanics and cleaners, who are routinely exposed to carbon tetrachloride or other hepatotoxic chemicals would also be at a greater risk than a population without such exposure. Individuals involved in the manufacture, utilization, or disposal of polychlorinated naphthalenes would be expected to have higher levels of exposure than the general population.

Incompatibilities: All are incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Keep away from heat. Penta- is also incompatible with acids, alkalis.

Tri-isomer: Filter/Bubbler; none; GC/Flame ionization detection; NIOSH II(2) Method #S128.

Permissible Concentration in Water: Toxic pollutant designated pursuant to section 307(a)(1) of the Federal Water Pollution Control Act and is subject to effluent limitations. State Drinking Water Guidelines (2-isomer): Florida 560 μg/L.

Determination in Water: 2-Chloronaphthalene may be determined by GC (EPA Method 612) or by GC plus mass spectrometry (EPA Method 625). Octanol−water coefficient: Log K_{ow} = *Tetra-isomer:* about 6.1; *Tri*-isomer: 5.12-7.56; *Penta-isomer:* 8.73-9.13, Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Naphthalenes and naphthenic acids are listed as United States DOT marine pollutants and may persist in the environment.

Routes of Entry: Inhalation of fumes and percutaneous absorption of liquid, ingestion; eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact can irritate eyes and skin. Cases of systemic poisoning are few in number and they may occur without the development of chloracne. It is believed that chloracne develops from skin contact and inhalation of fumes, while systemic effects result primarily from inhalation of fumes. Symptoms of poisoning may include headaches, fatigue, vertigo, and anorexia. Jaundice may occur from liver damage. Highly chlorinated naphthalenes seem to be more toxic than those chlorinated naphthalenes with a lower degree of substitution.

Long-Term Exposure: May cause acne-like dermatitis. May affect the liver, resulting in jaundice. Can affect the nervous system. Chronic exposure to chlorinated naphthalenes can cause chloracne, which consists of simple erythematous eruptions with pustules, papules, and comedones. Cysts may develop due to plugging of the sebaceous gland orifices.

Points of Attack: Skin, liver, nervous system, reproductive system.

Medical Surveillance: Preplacement and periodic examinations should be concerned particularly with skin lesions, such as chloracne and with liver function. Liver function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Examination of the nervous system. More than light consumption of alcohol may increase liver damage. May be mutagenic.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *hexa-isomer: up to 2 milligram per cubic meter:* SA*: (any supplied-air respirator); or SCBAF: (any SCBA with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).*May require eye protection.

Octa-isomer: up to 1 milligram per cubic meter: SA*: (any supplied-air respirator); or SCBAF: (any SCBA with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10, 000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Penta-isomer: up to 5 milligram per cubic meter: SA*: (any supplied-air respirator); or SCBAF: (any SCBA with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).*May require eye protection.

tetra-isomer: up to 20 milligram per cubic meter: SCBAF: (any SCBA with a full facepiece); or SAF: (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

tri-isomer: up to 50 milligram per cubic meter: SCB AF: (any SCBA with a full facepiece); or SAF: (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorfenvinphos all handlers should be trained on its proper handling and storage. Should be protected from moisture and stored in glass-lined or polyethylene-lined containers. Keep away from strong bases. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Dampen material with toluene. Collect material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: These chemicals are noncombustible solids. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include hydrogen chloride and phosgene. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: High-temperature incineration with flue gas scrubbing. Incineration, preferably after mixing with another combustible fuel. Care must be exercised to assure complete combustion to prevent the formation of phosgene. An acid scrubber is necessary to remove the halo acids produced[22].

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chlorine is a greenish-yellow gas. Pungent, irritating odor. Shipped as a liquefied compressed gas. It is the commonest of the four halogens which are among the most chemically reactive of all the elements. It is not flammable; but it is a strong oxidizer, and contact with other materials may cause fire. Molecular weight = 70.91; specific gravity (H_2O:1) 1.4 @ 20°C, 6.86 atm (liquid); boiling point = −34.6°C; freezing/melting point = −101°C; relative vapor density (air = 1) = 2.47; vapor pressure = 6.8 atm; 5168 mmHg @ 20°C. Slightly soluble in water; solubility = 0.7%. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 0, oxidizer.

Potential Exposure: Environmental danger. Chlorine is a toxic gas with corrosive properties. Gaseous chlorine is widely used as a bleaching agent in the paper, pulp, and textile industries for bleaching cellulose for artificial fibers. It is used in the manufacture of chlorinated lime; inorganic and organic compounds, such as metallic chlorides; chlorinated solvents; refrigerants, pesticides; and polymers, e.g., synthetic rubber and plastics; it is used as a disinfectant, particularly for water and refuse; and in detinning and dezincing iron. CL has been used as a warfare choking/pulmonary agent. *Note*: The lowest level at which humans can detect chlorine through smell and become alert to its irritant properties generally provides sufficient warning of exposure. However, chronic exposure to chlorine causes olfactory fatigue and tolerance to its irritant effects. Those with a history of prolonged exposure to chlorine, may eventually lose their ability to identify incidents of exposure.

Incompatibilities: A powerful oxidizer. Reacts explosively or forms explosive compounds with many organic compounds and common substances, such as acetylene, ether, turpentine, ammonia, fuel gas, hydrogen, and finely divided metals. Keep away from combustible substances and reducing agents. Corrosive to some plastic, rubber, and coating materials. Reacts with water to form hypochlorous acid. Corrosive to many metals in presence of water.

Permissible Exposure Limits in Air

NIOSH IDLH = 10 ppm

Odor threshold = 0.01 ppm in air.

Conversion factor: 1 ppm = 2.90 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: 1 ppm/3 milligram per cubic meter Ceiling Concentration

NIOSH REL: 0.5 ppm/1.45 milligram per cubic meter [15 minutes] Ceiling Concentration

ACGIH TLV[1]: 0.5 ppm/1.5 milligram per cubic meter TWA; 1 ppm/2.9 milligram per cubic meter STEL, not classifiable as a human carcinogen

PAC Chlorine*

PAC-1: $\mathbf{0.5_A}$ ppm

PAC-2: $\mathbf{2_A}$ ppm

PAC-3: $\mathbf{20_A}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

DFG MAK: 0.5 ppm/1.5 milligram per cubic meter TWA; Peak Limitation Category I(1); Pregnancy Risk Group C

Arab Republic of Egypt: TWA 1 ppm (3 milligram per cubic meter), 1993; Australia: TWA 1 ppm (3 milligram per cubic meter), 1993; Austria: MAK 0.5 ppm (1.5 milligram per cubic meter), 1999; Belgium: TWA 0.5 ppm (1.5 milligram per cubic meter); STEL 1 ppm, 1993; Denmark: TWA 0.5 ppm (1.5 milligram per cubic meter), 1999; Finland: TWA 0.5 ppm (1.5 milligram per cubic meter); STEL 1 ppm (3 milligram per cubic meter), 1999; France: VLE 1 ppm (3 milligram per cubic meter), 1999; the Netherlands: MAC 3 milligram per cubic meter, 2003; India: TWA 1 ppm (3 milligram per cubic meter); STEL 3 ppm (9 milligram per cubic meter), 1993; Japan: 1 ppm (2.9 milligram per cubic meter), 1999; Norway: TWA 0.5 ppm (1.5 milligram per cubic meter), 1999; the Philippines: TWA 1 ppm (3 milligram per cubic meter), 1993; Poland: MAC (TWA) 1.5 milligram per cubic meter; STEL 9 milligram per cubic meter, 1999; Russia: TWA 1 ppm; STEL 1 milligram per cubic meter, 1993; Sweden: NGV 0.5 ppm (1.5 milligram per cubic meter), TGV 1 ppm (3 milligram per cubic meter), 1999; Switzerland: MAK-W 0.5 ppm (1.5 milligram per cubic meter), KZG-W 1 ppm (3 milligram per cubic meter), 1999; Thailand: TWA 1 ppm (3 milligram per cubic meter), 1993; Turkey: TWA 1 ppm (3 milligram per cubic meter), 1993; United Kingdom: TWA 0.5 ppm (1.5 milligram per cubic meter); STEL 1 ppm (2.9 milligram per cubic meter), 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: STEL 1 ppm.

Russia set a MAC in work-place air of 1.0 milligram per cubic meter and values for ambient air in residential areas of 0.1 milligram per cubic meter on a momentary basis and 0.03 milligram per cubic meter on an average daily basis. Several states have set guidelines or standards for chlorine in ambient air[60] ranging from 0 (North Carolina) to 7.143 μ/m^3 (Kansas) to 10.0 μ/m^3 (New York) to 30.0 μ/m^3 (Florida) to 30−90 μ/m^3 (North Dakota) to 39 μ/m^3 (Massachusetts) to 50 μ/m^3 (Virginia) to 60 μ/m^3 (Connecticut) to 71 μ/m^3 (Nevada) to 75 μ/m^3 (South Carolina).

Determination in Air: Use NIOSH Analytical Method (IV) #6011, OSHA Analytical Method ID-101, ID-126SGX.

Permissible Concentration in Water: EPA has suggested the following limits: Total residual chlorine: 2.0 μg/L for salmonid fish; 10.0 μg/L for other freshwater and marine organisms. Russia[43] recommends an absence of active chlorine (taking into account the absorbing capacity of water) in domestic water supplies and a MAC of zero in water for fishery purposes.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = < 1$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, eye and skin contact.

Harmful Effects and Symptoms

Chlorine reacts with body moisture to form acids. It is itself extremely irritating to skin, eyes, and mucous membranes; and it may cause corrosion of teeth. Prolonged exposure to low concentrations may produce chloracne.

Chlorine in high concentrations acts as an asphyxiant by causing cramps in the muscles of the larynx (choking), swelling of the mucous membranes; nausea, vomiting, anxiety, and syncope. Acute respiratory distress including cough, hemoptysis, chest pain; dyspnea, and cyanosis develop; and later tracheobronchitis, pulmonary edema; and pneumonia may supervene. Exposure to 1.0 ppm may produce irritation of the nose, mouth, and throat; @ 1.3 ppm and above, irritation may be more pronounced with coughing and labored breathing; high concentrations may cause throat muscle spasm leading to suffocation and death; delayed effects may include accumulation of fluid in the lungs, bronchitis, and pneumonia. Death may occur after a few breaths @ 1000 ppm.

Short-Term Exposure: A lacramator. Chlorine is corrosive to the eyes, skin, and respiratory tract. Eye contact can cause permanent damage. Inhalation of the gas can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Rapid evaporation of the liquid may cause frostbite.

Long-Term Exposure: Repeated exposure may permanently damage the lungs, or cause chronic bronchitis. Chlorine may affect the teeth, resulting in erosion; and cause skin rash. A single high exposure may cause similar health effects.

Points of Attack: Lungs, respiratory system.

Medical Surveillance: Special emphasis should be given to the skin, eyes, teeth, and cardiovascular status in placement and periodic examinations. Chest X-rays should be taken and pulmonary function followed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Personal Protective Methods: *General information*: first responders should use a NIOSH-certified chemical, biological, radio logical, nuclear (CBRN) SCBA with a level a protective suit when entering an area with an unknown contaminant or when entering an area where the concentration of the contaminant is unknown. Level a protection should be used until monitoring results confirm the contaminant and the concentration of the contaminant. *Note:* safe use of protective clothing and equipment requires specific skills developed through training and experience.

LEVEL A: (*RED ZONE*): select when the greatest level of skin, respiratory, and eye protection is required. This is the maximum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than the AEGL-2. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A totally encapsulating chemical protective (TECP) suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, and a hard hat worn under the TECP suit are optional items.

LEVEL B: (RED ZONE): Select when the highest level of respiratory protection is necessary but a lesser level of skin protection is required. This is the minimum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than AEGL-2. It differs from Level A in that it incorporates a nonencapsulating, splash-protective, chemical-resistant splash suit that provides Level A protection against liquids but is not airtight. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL C: (YELLOW ZONE): Select when the contaminant and concentration of the contaminant are known and the respiratory protection criteria factors for using APRs (APR) or PAPRs are met. This level is appropriate when decontaminating patient/victims. A NIOSH-certified CBRN tight-fitting APR with a canister-type gas mask or CBRN PAPR for air levels greater than AEGL-2. A NIOSH-certified CBRN PAPR with a loose-fitting facepiece, hood, or helmet and a filter or a combination organic vapor, acid gas, and particulate cartridge/filter combination or a continuous flow respirator for air levels greater than AEGL-1. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Escape mask, face shield, coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL D: (GREEN ZONE): Select when the contaminant and concentration of the contaminant are known and the concentration is below the appropriate occupational exposure limit or less than AEGL-1 for the stated duration times. Limited to coveralls or other work clothes, boots, and gloves.

Notes: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. Whenever there is likelihood of excessive gas levels, workers should use respiratory protection in the form of full-face gas masks with proper canisters or supplied-air respirators. The skin effects of chlorine can generally be controlled by good personal hygiene practices. Where very high gas concentrations or liquid chlorine may be present, full protective clothing, gloves, and eye protection should be used. Saranex, Butyl rubber/Neoprene, Viton, Neoprene, butyl rubber; and Viton/Neoprene are among the recommended protective materials. Changing work clothes daily and showering following each shift where exposures exist are recommended.

Respirator Selection: *5 ppm:* CcrS (APF = 10) [any chemical cartridge respirator with cartridge(s) providing protection against the compound of concern]; or Sa (APF = 10) (any supplied-air respirator). *12.5 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprS (APF = 25) (any powered, APR with cartridge(s) providing protection against the compound of concern); or CcrFS (APF = 50) [any chemical cartridge respirator with a full facepiece and cartridge(s) providing protection against the compound of concern]; or GmFS (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Check oxygen content prior to entering storage area. Poison gas. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially organic materials, flammables and combustibles, and other incompatible materials. Oxidizers should be isolated from acids, metals, organic materials, and ammonium nitrate. Oxidizers, including oxidizing gases, should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. (3) Color code—White stripe: Contact Hazard; Store separately; not compatible with materials in solid white category. This gas is toxic and/or corrosive, nonflammable. Outside or detached storage is preferred in an area that is roofed, shaded with the cylinders stored off the ground on nonwooden floors, and away from radiant heat sources and all possible sources of ignition. If indoors or outdoors, store in a well-ventilated noncombustible location temperatures not to exceed 50°C. Automatic monitoring systems are also preferred. Prior to working with chlorine all handlers should be trained on its proper handling and storage. Protect containers against physical damage. Store cylinders and containers in a cool, dry, relatively isolated area, protected from weather and extreme temperature changes. Store in a cool, well-ventilated area away from incompatible materials listed above. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage.

Shipping: UN1017 Chlorine, Hazard Class: 2.3; Labels: 2.3-Poisonous gas, 5.1-Oxidizer, 8-Corrosive material, Inhalation Hazard Zone B. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner. Military driver shall be given full and complete information regarding shipment and conditions in case of emergency. AR 50-6 deals specifically with the shipment of chemical agents. Shipments of agent will be escorted in accordance with AR 740-32.

Spill Handling:.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

UN1017 Chlorine

*Small spills (From a small package or a small leak from a large package)**

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 1.0/1.5

*Large spills (From a large package or from many small packages)**

First: Isolate in all directions (ft/m) 1500/500
Then: Protect persons downwind (mi/km)
Day 1.9/3.1
Night 4.9/8.0

***Attention:** If dealing with a large spill from the following containers: (1) Rail tank car, (2) Highway tank truck or trailer, (3) Multiple ton cylinders, or (4) Multiple small cylinders or single ton cylinder see the following: "ERG Table 3: Initial Isolation and Protective Action Distances for Different Quantities of Six Common Toxic-by-Inhalation Gases." This chart shows isolation protective distances for the transport containers listed above (numbers 1 through 4) and various wind conditions: Low wind (<6 mph); Moderate wind (6 to 12 mph); High wind (>12 mph).

CL, when used as a weapon

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 1.0/1.5

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 2000/600
Then: Protect persons downwind (mi/km)
Day 2.2/3.6
Night 5.0/8.0

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. If the gas is leaked, stop the flow of gas if it can be done safely. If the source of the leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place in the open air, and, repair the leak or allow the cylinder to empty. If the leak can be stopped in place, bubble chlorine through a sodium sulfide and excess sodium bicarbonate solution including a trap in the line. For liquid spills, ventilate area and wash down spill with water. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chlorine is a noncombustible solid, but it will increase the intensity of a fire and cause fire upon contact with combustible materials. Thermal decomposition products may include chlorine. Firefighting gear (including SCBA) does not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Vapors are heavier than air and will collect in low areas. Hydrogen and chlorine mixtures (5%–95%) are exploded by almost any form of energy (heat, sunlight, sparks, etc.). May combine with water or steam to produce toxic and corrosive fumes of hydrochloric acid. Use any extinguishing agent suitable for surrounding fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier. Introduce into large volume and solution of reducing agent (bisulfite, ferrous salts, or hypo), neutralize and flush to sewer with water. Recovery is an option to disposal for chlorine in the case of gases from aluminum chloride electrolysis and chlorine in waste waters. See also "Spill Handling." Nonrefillable cylinders should be disposed of in accordance with local, state, and federal regulations. Allow remaining gas to vent slowly into atmosphere in an unconfined area or exhaust hood. Refillable-type cylinders should be returned to original supplier with any valve caps and outlet plugs secured and valve protection caps in place.

Regulatory Authority and Advisory Information

Department of Homeland Security Screening Threshold Quantity (pounds): *Release hazard* 1000 (≥1.00% concentration).

Carcinogenicity: EPA: Cannot be Determined; Not Classifiable as to human carcinogenicity.

Hazard Alert: Poison inhalation hazard, High acute toxicity, Highly flammable, Suspected reprotoxic hazard, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction).

United States Environmental Protection Agency, FIFRA 1998 Status of Pesticides: Supported

Clean Air Act: Accidental Release Prevention/Flammable Substances (Section 112 [r], Table 3), TQ = 1000 lb (454 kg)

Safe Drinking Water Act (47FR 9352): Priority List (55 FR 1470)

United States National Primary Drinking Water Regulations: MRDL = 0.8 mg/L; MRDLG = 0.8 mg/L

In 1998 EPA set an MCL for TTHM (total trihalomethane) at MCLs to 0.80 mg/L (down from 0.100 mg/L set in 1976), MRDG for chlorine dioxide was set at 0.8 mg/L

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; C (Oxidizing Material); D1B (Toxic); E (Corrosive Material); F (Dangerously Reactive); NPRI.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, F, O, N; risk phrases: R6; R8; R11; R26; R34; R50; R62; safety phrases: S1/2; S21; S23; S26; S28; S36/37/39; S38; S41; S45; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Chlorine dioxide is a flammable, reddish-yellow gas, or reddish-brown liquid (below 11°C/52°F) with an irritating odor like chlorine or nitric acid. Molecular weight = 67.45; specific gravity (H_2O:1) = 1.6 (liquid @ 0°C); 3.09 @ 11°C; boiling point = 11°C; freezing/melting point = −59°C; relative vapor density (air = 1) = 2.3; vapor pressure = > 1 atm @ 20°C. Explosive Limits in air: >10%. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 3, reactivity 3 (Shock; Oxidizer). Soluble in water (reactive); solubility = 0.3% @ 25°C.

Potential Exposure: Chlorine dioxide is used in bleaching cellulose pulp; bleaching flour; water purification; as a liquid sterilizer in an ultrasonic cleaner.

Incompatibilities: Unstable in light. A powerful oxidizer. Chlorine dioxide gas is explosive at concentrations over 10% and can be ignited by almost any form of energy, including sunlight, heat (explosions can occur in air in temperature above 130°C), or sparks, shock, friction, or concussion. This chemical reacts violently with dust, combustible materials; and reducing agents. Reacts violently with mercury, phosphorus, sulfur, and many compounds, causing fire and explosion hazard. Contact with water forms perchloric and hydrochloric acid. Corrosive to metals.

Permissible Exposure Limits in Air

NIOSH IDLH = 5 ppm

OSHA PEL: 0.1 ppm/0.3 milligram per cubic meter TWA

NIOSH REL: 0.1 ppm/0.3 milligram per cubic meter TWA; 0.3 ppm/0.9 milligram per cubic meter STEL

ACGIH TLV[1]: 0.1 ppm/0.28 milligram per cubic meter TWA; 0.3 ppm/0.83 milligram per cubic meter STEL

PAC* Ver. 29[138]
PAC-1: **0.15**$_{\mathbf{A}}$ ppm
PAC-2: **1.1**$_{\mathbf{A}}$ ppm
PAC-3: **2.4**$_{\mathbf{A}}$ ppm
*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.
Emergency Response Planning Guidelines
ERPG-1: inappropriate
ERPG-2: 50 ppm
ERPG-3: 5000 ppm
DFG MAK: 0.1 ppm/0.28 milligram per cubic meter TWA; Peak Limitation Category I(1); Pregnancy Risk Group D
Australia: TWA 0.1 ppm (0.3 milligram per cubic meter); STEL 0.3 ppm, 1993; Austria: MAK 0.1 ppm (0.3 milligram per cubic meter), 1999; Belgium: TWA 0.1 ppm (0.28 milligram per cubic meter); STEL 0.3 ppm, 1993; Denmark: TWA 0.1 ppm (0.3 milligram per cubic meter), 1999; Finland: TWA 0.1 ppm (0.3 milligram per cubic meter); STEL 0.3 ppm (0.9 milligram per cubic meter), 1999; France: VME 0.1 ppm (0.3 milligram per cubic meter), VLE 0.3 ppm (0.8 milligram per cubic meter), 1999; Norway: TWA 0.1 ppm (0.3 milligram per cubic meter), 1999; the Philippines: TWA 0.1 ppm (0.3 milligram per cubic meter), 1993; Poland: MAC (TWA) 0.3 milligram per cubic meter, MAC (STEL) 0.9 milligram per cubic meter, 1999; Russia: STEL 0.1 milligram per cubic meter, 1993; Sweden: NGV 0.1 ppm (0.3 milligram per cubic meter), KTV 0.3 ppm (0.8 milligram per cubic meter), 1999; Switzerland: MAK-W 0.1 ppm (0.3 milligram per cubic meter), KZG-W 0.2 ppm (0.6 milligram per cubic meter), 1999; Thailand: TWA 0.1 ppm (0.3 milligram per cubic meter), 1993; Turkey: TWA 0.1 ppm (0.3 milligram per cubic meter), 1993; United Kingdom: TWA 0.1 ppm (0.28 milligram per cubic meter); STEL 0.3 ppm, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: STEL 0.3 ppm. Several states have set guidelines or standards for ClO_2 in ambient air[60] ranging from 1.0 μ/m^3 (New York) to 3.0 μ/m^3 (Florida) to 3.0–9.0 μ/m^3 (North Dakota) to 5.0 μ/m^3 (Virginia) to 6.0 μ/m^3 (Connecticut) to 7.0 μ/m^3 (Nevada).

Determination in Air: Collection by bubbler; Potassium iodide; Ion chromatography; OSHA Analytical Method #ID202.

Permissible Concentration in Water: Values in guidelines or standards for chlorine in drinking water[61] have been set by Maine @ 110 μg/L and by the United States Environmental Protection Agency @ 1000 μg/L.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: A lacramator. Chlorine dioxide is corrosive to the eyes, skin, and respiratory tract. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Inhalation at levels above 0.25 ppm may cause slight irritation to the nose, throat, and mouth. Levels above 5 ppm may cause severe irritation to the nose, throat, and mouth. 19 ppm for an unspecified time has caused death.

Long-Term Exposure: Chlorine dioxide may affect the lungs, causing chronic bronchitis to develop with cough, phlegm, and/or shortness of breath. This chemical may affect the teeth, causing erosion. There is limited evidence that Chlorine dioxide may damage the developing fetus.

Points of Attack: Respiratory system, lungs, eyes.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Consider X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquid, wear splash-proof chemical goggles and face shield when there is a potential for exposure to gas, unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *1 ppm:* CcrS (APF = 10) (any chemical cartridge respirator with cartridge(s) providing protection against the compound of concern); or Sa (APF = 10) (any supplied-air respirator). *2.5 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprS (APF = 25) [any powered, APR with cartridge(s) providing protection against the compound of concern]. *5 ppm:* CcrFS (APF = 50) [any chemical cartridge respirator with a full facepiece and cartridge(s) providing protection against the compound of concern]; or GmFS (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection. Only nonoxidizable sorbents allowed (not charcoal).

Storage: Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially organic materials, flammables and combustibles, and other incompatible materials. Oxidizers, including oxidizing gases, should have a boundary separation of 8–10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with chlorine dioxide all handlers should be trained on its proper handling and storage. This chemical is a powerful oxidizer, and is shock-, light-, and heat-sensitive. It is violently explosive in air at concentrations over 10%. Keep frozen when not in use. Store in tightly closed containers in a cool, dark, well-ventilated area at temperatures well below 130°C. Gas explosions may occur above 130°C. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Use explosion-proof electrical equipment and fittings in storage area. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage regulations.

Shipping: UN/NA 9191 Chlorine dioxide, hydrate, frozen, Hazard class: 5.1; Labels: 5.1-Oxidizer, 6.1-Poison Inhalation. Explosive: It may only be shipped in the frozen state and then only by private or contract motor carrier.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

Chlorine dioxide, hydrate, frozen
when spilled in water

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.4/0.6

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of leak or spill. If the gas is leaked, stop the flow of gas if it can be done safely. If the source of the leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place in the open air, and, repair the leak or allow the cylinder to empty. If the leak can be stopped in place, bubble chlorine dioxide through a solution made up of reducing agent sodium bisulfide and sodium bicarbonate with a trap in the line. For liquid spills, allow chlorine dioxide to evaporate with all available ventilation. Keep chlorine dioxide out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include chlorine gas. A powerful oxidizer, this chemical will increase the intensity of a fire, and can cause fire upon contact with combustibles. This chemical is an explosive at concentrations over 10% and can be ignited by almost any form of energy. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Use water only. *Do not* use dry chemical or carbon dioxide extinguishers. Use water with caution as chlorine dioxide reacts with water, forming hydrogen chloride gas.

Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Use large volume of concentrated solution of ferrous salt or bisulfite solution as reducing agent. Then neutralize and flush to sewer with abundant water[24].

Formula: ClF_3

Synonyms: Chlorine fluoride; Chlorine trifluoride; Chlorotrifluoride; Trifluorure de chlore (French); Trifluoruro de cloro (Spanish)

CAS Registry Number: 7790-91-2

HSDB Number: 970

RTECS Number: FO2800000

UN/NA & ERG Number: (PIH) UN1749/124

EC Number: 232-230-4

Regulatory Authority and Advisory Information

Department of Home land Security Screening Threshold Quantity (pounds): *Theft hazard* 45 (≥9.97% concentration)

Hazard Alert: Poison inhalation hazard (extremely toxic gas with inadequate warning properties), Corrosive, Powerful oxidizer, Frostbite/Cryogenic burn hazard, Asphyxiation hazard, Contains gas under pressure; may explode if heated, Primary irritant (w/o allergic reaction), Environmental hazard.

United States National Primary Drinking Water Regulations: MCLG = 4 mg[F]/L; MCL = 4 mg[F]/L; SMCL = 2.0 mg[F]/L, as Fluoride.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical (PIH).

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, O, N; risk phrases: R5; R8; R20; R21; R35; safety phrases: S1; S9; S17; S29/35; S33; S38; S41; S45; S61 (see Appendix 4)

Description: Chlorine trifluoride is a greenish yellow, almost colorless, liquid (below 12°C/53°F), or colorless gas with a sweet, irritating odor. Shipped as a liquefied compressed gas. Molecular weight = 92.45; specific gravity (H_2O:1) = 3.78; boiling point = 11.8°C; freezing/melting point = −76.3°C; vapor pressure = 750 mmHg @ 11.4°C; relative vapor density (air = 1) = 3.21. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 3 (Oxidizer). Reacts with water.

Potential Exposure: Chlorine trifluoride is used as a fluorinating agent. It may be used as an igniter and propellant in rockets. It is used in nuclear fuel processing.

Incompatibilities: A powerful oxidizer. Keep away from acids. Most combustible materials ignite spontaneously on contact with chlorine trifluoride. Explodes on contact with organic materials. The liquid can explode if mixed with halocarbons or hydrocarbons. It reacts violently with oxidizable materials, finely divided metals and metal oxides; sand, glass, asbestos, silicon-containing compounds. Emits highly toxic fumes on contact with acids. Chlorine trifluoride decomposes above 220°C, forming Thermal decomposition products may include hydrogen chloride and HF. Reacts violently with water, forming chlorine gas and hydrofluoric acid. Reacts with most forms of plastics, rubber, coatings, and resins; except the highly fluorinated polymers, such as Teflon and "K el-F."

Some states have set guidelines or standards for ClF_3 in ambient[60] air, ranging from 3.0 μ/m^3 (Virginia) to 4.0 μ/m^3 (North Dakota) to 10.0 μ/m^3 (Nevada).

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[F]/L; Federal Drinking Water Guidelines: EPA 2000 μg[F]/L; State Drinking Water Standards: California 2000 μg[F]/L; Delaware 2000 μg[Fl]/L; Pennsylvania 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[F]/L; Maine 1680 μg [F]/L. Safe Drinking Water Act: MCL = 4 mg[F]/L; MCLG = 4 mg[F]/L; SMCL = 2 mg/F/L, as Fluoride.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chlorine trifluoride is corrosive to the eyes, skin, and respiratory tract. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Contact with the liquefied gas can cause frostbite.

Long-Term Exposure: Can cause lung irritation; bronchitis may develop with cough, phlegm, and shortness of breath.

Points of Attack: Skin, eyes, respiratory tract.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Personal Protective Methods: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles if working with the liquid and face shield when working with gas, unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *2.5 ppm:* Sa:Cf[£] (APF = 25) (any supplied-air respirator operated in a continuous-flow mode). *5 ppm:* SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *20 ppm:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; or SCBAE (any appropriate escape-type, SCBA). *Note*[£]*:* Substance causes eye irritation or damage; eye protection needed.

Storage: Check oxygen content prior to entering storage area. Poison gas. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. This gas is highly toxic. Even slight exposure to these gasses can cause death. Store outdoors in a secure, restricted area that containing warning signs. This area must be roofed and shaded with the cylinders stored off the ground and away from radiant heat sources on nonwooden floors. If indoors, store in a well-ventilated areas in temperatures not to exceed 50°C. (2) Color code—Yellow Stripe: Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. (3) Color code—White stripe: Contact Hazard; Store separately; not compatible with materials in solid white category. Prior to working with chlorine trifluoride all handlers should be trained on its proper handling and storage. Chlorine trifluoride must be stored to avoid contact with water, sand, glass, silicon-containing compounds, asbestos, and combustible materials, since violent reactions occur. See Incompatibilities.

Store in tightly closed containers in a cool, well-ventilated area away from heat. Store in a cool, well-ventilated area away from incompatible materials listed above. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage.

Shipping: UN1749 Chlorine trifluoride, Hazard class: 2.3; Labels: 2.3-Poisonous gas, 5.1-Oxidizer, 8-Corrosive material, Inhalation Hazard Zone B. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.8/1.3

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 1000/300
Then: Protect persons downwind (mi/km)
Day 0.9/1.5
Night 2.9/4.6

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. If in a building, shut down HVAC systems. Remove all ignition sources. Collect solid chlorine trifluoride in the most convenient and safe manner and deposit in sealed containers. If the gas has leaked, stop the flow of gas if it can be done safely. Ventilate area of leak or spill. If the source of the leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place in the open air, and, repair the leak or allow the cylinder to empty. Keep chlorine trifluoride out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include HF and hydrogen chloride. This chemical does not burn but it will increase the activity of fire and will cause combustibles to ignite. This gas is under pressure; containers may rupture and explode when heated. *Do not use water* or foam. Use dry chemical, carbon dioxide. Firefighting gear (including SCBA) does not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Vapors are heavier than air and will collect in low areas. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier.

Regulatory Authority and Advisory Information

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

Superfund/EPCRA 40 CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

Hazard symbols, risk, & safety statements: Hazard symbol: Xn; risk phrases: R21/22; R51; safety phrases: S2; S36/37; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chlormequat chloride is a white to yellowish crystalline solid with a fish-like odor. Molecular weight = 158.1; freezing/melting point = 245°C (decomposes); vapor pressure = 7.5×10^{-8} @ 20°C; hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 0. Highly soluble in water. Carrier solvents used in commercial products may alter physical and toxicological properties.

Potential Exposure: People engaged in the manufacture, formulation, and application of this plant growth regulator said to be effective for cereal grains, tomatoes, and peppers.

Incompatibilities: Chlormequat chloride decomposes on heating or in fire forming nitrogen oxides, carbon monoxide, and hydrogen chloride fumes. This chemical decomposes on heating with strong aqueous alkali solutions forming trimethylamine and other gaseous products. Contact with strong oxidizers may cause fire and explosions. Attacks many metals in presence of water.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.64 milligram per cubic meter

PAC-2: 7 milligram per cubic meter

PAC-3: 65 milligram per cubic meter

Permissible Concentration in Water: Russia set a MAC in surface water of 0.2 mg/L.

Routes of Entry: Inhalation, passing through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: The LD_{low} oral (human) is 10 mg/kg. It is an irritant and can be absorbed through the skin. Irritates the eyes and the respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Exposure can cause nausea and vomiting. Higher levels can cause slow or irregular heartbeat; tremors, seizures, and coma. This can be fatal. Chlormequat chloride may affect the nervous system.

Long-Term Exposure: May cause liver damage.

Points of Attack: Lungs, liver, nervous system.

Medical Surveillance: Liver function tests. Consider chest X-ray following acute overexposure. EKG examination of the nervous system.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Permeation data indicate that Neoprene gloves may provide protection from exposure to this compound. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: W*here there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlormequat chloride all handlers should be trained on its proper handling and storage. Keep away from strong oxidizers. Store in a cool, dry place and protect from heat and moisture. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/ 75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; or water extinguishers. Thermal decomposition products may include oxides of carbon, nitrogen oxide, and hydrogen chloride. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit with effluent gas scrubbing[22].

Carcinogenicity: IARC: Human Sufficient Evidence; Animal Limited Evidence, *carcinogenic to humans*, Group 1, 1998

California Proposition 65 Chemical[102]: Cancer 2/27/1987.

Hazard Alert: Poison, Combustible, Explosive[101], Poison, Possible risk of forming tumors, Suspected of causing genetic defects, Environmental hazard; Drug.

Banned or Severely Restricted (Israel) (UN)[13]

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): U026

RCRA, 40CFR261, Appendix 8 Hazardous Constituents

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

United States DOT Regulated marine pollutant (49CFR172.101, Appendix B) as naphthalenes

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, E, F; risk phrases: R45; R10; R26/27/28; R51; R62; safety phrases: S1/2; S7/9; S27; S29/35; S36/37; S45, S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Chlornaphazine is composed of clear, colorless plates or may be a brown solid. Molecular weight = 268.2; boiling point = 210°C; freezing/melting point = 54–56°C. Slightly soluble in water; solubility =< 1 mg/mL @ 22°C.

Potential Exposure: May be combustible and possibly explosive. Not produced or used commercially in the United States, Chlornaphazine has been used in other countries in the treatment of leukemia and related cancers. Currently, this drug does not have wide therapeutic usage.

Incompatibilities: Keep away from oxidizers, nucleophiles[193], and nitromethanes. Amines may react violently with nitric acid; cellulose nitrate (of high surface area); 1-chloro-2,3-epoxypropane (exothermic reaction may occur). Incompatible with acids, acid halides; alcohols, aldehydes, alkylene oxides; anhydrides, cresols, caprolactam solution; epichlorohydrin, epoxides, isocyanates, glycols, peroxides, phenols. Contact with strong reducing agents may generate flammable hydrogen gas. May attack copper and copper alloys.

Permissible Exposure Limits in Air: No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

Determination in Air: Use NIOSH Analytical Method #5518, Naphthylamines; OSHA Analytical method 93

Determination in Water: Log K_{ow} = >4. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, inhalation, skin absorption.

Harmful Effects and Symptoms

Short-Term Exposure: This compound is a skin, eye, and mucous membrane irritant. It is toxic by ingestion, inhalation, and skin absorption[101].

Long-Term Exposure: Naphthylamines can affect you when breathed in and by passing through your skin. 1-Naphthylamine should be handled as a carcinogen, with extreme caution. High exposure can cause the skin and lips to turn blue. This reduces the ability of the blood cells to carry oxygen to body organs (methemoglobinemia). Higher levels can cause breathing difficulties, collapse, and possible death.

2-Naphthylamine is a known human bladder carcinogen with a latent period of about 16 years. The symptoms are frequent urination, dysuria, and hematuria. Acute poisoning leads to methemoglobinemia or acute hemorrhagic cystitis. 2-Naphthylamine is carcinogenic, producing urinary bladder carcinomas in hamsters, dogs, and nonhuman primates; and hepatomas in mice, after oral administration. Epidemiological studies have shown that occupational exposure to 2-naphthylamine, either alone or when present as an impurity in other compounds, is causally associated with bladder cancer.

Points of Attack: Bladder, skin. *Cancer site:* bladder cancer.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. OSHA mandates the following tests or information for 1- and 2-naphthylamine which are related to this chemical: *Increased Risk:* reduced immunologic competence; steroid treatment; pregnancy; cigarette smoking. NIOSH lists the following tests: *Increased Risk:* reduced immunologic competence; steroid treatment; pregnancy; cigarette smoking; cystoscopy; UA (routine).

First Aid: *Eye Contact:* Remove any contact lenses at once. Immediately flush eyes well with copious quantities of water or normal saline for at least 20−30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing, or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* Contact a physician, hospital, or poison center at once. If the victim is unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that the patient's airway is open and lay him on his side with his head lower than his body and transport immediately to a medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. Vomiting should not be induced without a physician's advice.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2810 Toxic liquids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN2588 Pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Dampen spilled material with 60%−70% ethanol to avoid airborne dust, then transfer material to a suitable container. Ventilate the spill area and use absorbent paper dampened with 60%−70% ethanol to pick up remaining material. Wash surfaces well with soap and water. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Disposal of unused product must be undertaken by qualified personnel who are knowledgeable in all applicable regulations and follow all pertinent safety precautions including the use of appropriate protective equipment. For proper handling and disposal, always comply with federal, state, and local regulations.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chloroacetaldehyde is a combustible, colorless liquid with a very sharp, irritating odor. Molecular weight = 78.50; specific gravity (H_2O:1) = 1.19 (40% solution); boiling point = 85−100°C; freezing/melting point = 16°C (40% solution); vapor pressure = 100 mmHg @ 20°C; flash point = 87.7°C (40% solutions). Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 2, reactivity 0 (able to polymerize on standing). Soluble in water.

Potential Exposure: Chloroacetaldehyde is used as a fungicide; as an intermediate in 2-aminothiazole manufacture; and in bark removal from tree trunks.

Incompatibilities: Heat and water sensitive; concentrations of >50% form insoluble hemihydrate material on contact with water. Reacts with oxidizers, acids. On heating, chloroacetaldehyde releases chlorine fumes. Polymerizable upon standing.

Permissible Exposure Limits in Air

NIOSH IDLH = 45 ppm

Conversion factor: 1 ppm = 3.21 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: 1 ppm/3 milligram per cubic meter Ceiling Concentration

NIOSH REL: 1 ppm/3 milligram per cubic meter Ceiling Concentration

ACGIH TLV[1]: 1 ppm/3.2 milligram per cubic meter Ceiling Concentration

PAC Ver. 29[138]

Several states have set guidelines or standards for chloroacetaldehyde in ambient air[60] ranging from 1.0 μ/m^3 (New York) to 25 μ/m^3 (Virginia) to 30 μ/m^3 (North Dakota) to 60 μ/m^3 (Connecticut) to 71 μ/m^3 (Nevada).

Determination in Air: See NIOSH Analytical Method (IV) #2015 and OSHA Analytical Method 76.

Permissible Concentration in Water: No criteria set.

Determination in Water: Octanol−water coefficient: Log K_{ow} = < 0.3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Irritation of skin, eyes, and mucous membrane; skin burns; eye damage; pulmonary edema; sensitization of skin and respiratory system. Does have a mutagenic effect. LD_{50} (oral-mouse) = 21 mg/kg.

Short-Term Exposure: Corrosive to the eyes, skin, and respiratory tract Contact can cause burns and permanent damage. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort.

Long-Term Exposure: This chemical may cause mutations. It can cause skin allergy and an asthma-like lung allergy.

Points of Attack: Eyes, skin, respiratory system; lungs.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Lung function tests, Evaluation by a qualified allergist. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin contact with liquids of $>0.1\%$ content or repeated or prolonged contact with liquids of $<0.1\%$ content. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *10 ppm:* CcrOv (APF = 10) [any chemical cartridge respirator with organic vapor cartridge(s)]; or Sa (APF = 10) (any supplied-air respirator). *25 ppm:* Sa: Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]. *45 ppm:* CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv[any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or PaprTOv (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s)]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. Polymerizable upon standing. Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chloracetaldehyde all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, dry, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN22322-Chloroethanal, Hazard class: 6.1; Labels: 6.1-Poison Inhalation Hazard, Inhalation Hazard Zone B.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.2/0.3

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)

Day 0.5/0.8
Night 0.8/1.3
Avoid inhalation of vapors. Do not touch spilled material; stop leak; use water spray to reduce vapors. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. *Large spills*: dike far ahead of spill for later disposal Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include hydrogen chloride and oxides of carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel; care must be exercised to assure complete combustion to prevent the formation of phosgene; an acid scrubber is necessary to remove the halo acids produced.

Regulatory Authority and Advisory Information

Hazard Alert: Poison inhalation hazard, Combustible, Possible risk of forming tumors, Suspected reprotoxic hazard.

United States National Primary Drinking Water Regulations: MCLG = n/a; MCL = 0.060 mg/L, monochloroacetic acid, as a haloacetic acid.

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R23/24/25; R34; R51; safety phrases: S1/2; S26; S36/37/39; S41; S45; S61; S63 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chloroacetic acid is a colorless to white crystalline solid. It has a strong vinegar-like odor and an Odor Threshold of 0.15 milligram per cubic meter. Molecular weight = 94.50; boiling point = 188°C; freezing/melting point = 63°C; flash point = 126°C; autoignition temperature => 500°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 2, reactivity 0. Soluble in water.

Potential Exposure: This haloacetic acid can be a byproduct of drinking water disinfection and may increase the risk of cancer. Monochloracetic acid is used primarily as a chemical intermediate in the synthesis of sodium carboxymethyl cellulose; and such other diverse substances as ethyl chloroacetate, glycine, synthetic caffeine, sarcosine, thioglycolic acid, and various dyes. Hence, workers in these areas are affected. It is also used as an herbicide. Therefore, formulators and applicators of such herbicides are affected.

Incompatibilities: Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur). The solution in water is a strong acid. Contact with strong oxidizers, strong bases; and strong reducing agents such as hydrides can cause violent reactions. Chloracetic acid decomposes on heating, producing toxic and corrosive hydrogen chloride, phosgene, and carbon monoxide gases. Attacks metals in the presence of moisture.

Permissible Exposure Limits in Air

ACGIH TLV[1]: 0.05 ppm/2 milligram per cubic meter inhalable fraction and vapor.

PAC* Ver. 29[138]

PAC-1: 1.5 ppm

PAC-2: **6.6$_{\mathbf{A}}$** ppm

PAC-3: 15 ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

Poland: MAC (TWA) 2 milligram per cubic meter, MAC (STEL) 4 milligram per cubic meter, 1999; Russia: STEL 1 milligram per cubic meter, 1993; Sweden: TWA 1 ppm (4 milligram per cubic meter); STEL 2 ppm (8 milligram per cubic meter) [skin], 1999; United Kingdom: TWA 0.3 ppm (1.2 milligram per cubic meter) [skin], 2000; the Netherlands: MAC-TGG 4 milligram per cubic meter [skin], 2003. This chemical can be absorbed through the skin, thereby increasing exposure.

Routes of Entry: Inhalation, ingestion, and skin contact. This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Corrosive to the eyes, skin, and respiratory tract. Contact can cause severe irritation and burns. Inhaling this chemical can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Chloracetic acid can cause a feeling of anxiety, restlessness; blurred vision; a feeling of "pins and needles" in the limbs; muscle twitching; and/or hallucinations; may affect the cardiovascular system; central nervous system; and kidneys, resulting in heart problems; convulsions; and kidney damage. These effects may be delayed. Symptoms of exposure include irritation and pain in skin. If chloroacetic acid is inhaled the patient may exhibit difficulty in breathing. Vomiting may occur if the material is ingested. It can burn the skin, cornea, and respiratory tract. This material is very toxic. The probable lethal oral dose is 50−500 mg/kg of body weight, between one teaspoon and 1 oz, for a 150-lb person. Chloroacetic acid is irritating to the skin, cornea, and respiratory tract and causes burns. It may severely damage skin and mucous membranes. Ingestion may interfere with essential enzyme systems and cause perforation and peritonitis. Burns to skin result in marked fluid and electrolyte loss. Death may follow if more than 3% of the skin is exposed to this material. Other health hazards include central nervous system depression, and respiratory system depression.

Long-Term Exposure: Increased risk of cancer. Repeated exposure may cause kidney damage and affect the lungs.

Points of Attack: Lungs, kidneys, central nervous system.

Medical Surveillance: This chemical may increase the risk of cancer. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Lung function tests, kidney function tests. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Saranex is among the recommended protective materials. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. If you are working with dry material wear dust-proof chemical goggles and face shield if you are working with the liquid, unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: W*here there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with chloroacetic acid all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from metal, combustibles, strong oxidizers; strong bases; and reducing agents. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1750 (liquid) & UN1751 (solid) Chloroacetic acid, solid or liquid, Hazard class: 6.1; Labels: 6.1-Poison Inhalation Hazard, 8-Corrosive material.

Spill Handling: Stay upwind; keep out of low areas. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Neutralize spilled materials with crushed limestone, soda ash; or lime. Waste water containing chloro acetic acid can be treated with ammonia, ammonium salts; or amines followed by separation of suspended solids. Collect spilled powdered material in the most convenient and safe manner and deposit in sealed containers. Dike *large spills* far ahead of spill for later disposal. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Poisonous decomposition products may include, phosgene, hydrogen chloride, and carbon monoxide. This material is extremely hazardous to health, but fire fighters may enter areas with extreme care. Full protective clothing including a SCBA, coat, pants, gloves, boots and bands around legs, arms, and waist should be provided. No skin surface should be exposed. Move container from fire area if you can do so without risk. Spray cooling water on containers that are exposed to flames until well after fire is out. This chemical may burn but does not readily ignite. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel; care must be exercised to assure complete combustion to prevent the formation of phosgene; an acid scrubber is necessary to remove the halo acids produced.

EC Number: 203-467-0
Regulatory Authority and Advisory Information

Carcinogenicity: IARC, Group 3 not classifiable as to its carcinogenicity in humans

Hazard Alert: Poison inhalation hazard, Highly flammable, Water reactive, Possible polymerization hazard (as nitriles), Lacrimator, Possible risk of forming tumors, Suspected of causing genetic defects[138], Suspected reprotoxic hazard, Environmental hazard.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical

Hazardous to aquatic life or environment, with possible long-lasting effects[293]. Toxic to aquatic life with long-lasting effects. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, F, N; risk phrases: R10; R20; R23/24/25; R26; R51/53; R61; R63; safety phrases: S1/2; S28; S29/35; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to waters (est.)]

Description: A clear, colorless liquid. Pungent odor. Molecular weight = 75.5; specific gravity (H_2O:1) = 1.193 @ 20°C; boiling point = 126.5°C; freezing/melting point = 38°C; vapor pressure = 15 mmHg @ 30°C; 8 mmHg @ 20°C; flash point = 48°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 2, reactivity 0 ₩. Henry's Law constant = 1.08×10^{-5} atm m^3/mol @ 25°C (est)[72]. Slightly soluble in water; solubility = 50 to 100 mg/mL @ 21.5°C. Water reactive, releasing hydrogen chloride.

Potential Exposure: A chlorinated haloacetonitrile used as a fumigant and as a manufacturing chemical intermediate for making other chemicals.

Incompatibilities: Highly flammable, forms explosive mixture with air. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Reacts with water and steam, releasing toxic and corrosive vapors of hydrogen chloride. Nitriles may polymerize in the presence of metals and some metal compounds. They are incompatible with acids; mixing nitriles with strong oxidizing acids can lead to extremely violent reactions. Nitriles are generally incompatible with other oxidizing agents such as peroxides and epoxides. The combination of bases and nitriles can produce hydrogen cyanide. Nitriles are hydrolyzed in both aqueous acid and base to give carboxylic acids (or salts of carboxylic acids). These reactions generate heat. Peroxides convert nitriles to amides. Nitriles can react vigorously with reducing agents. Acetonitrile and propionitrile are soluble in water, but nitriles higher than propionitrile have low aqueous solubility. They are also insoluble in aqueous acids[101].

Permissible Exposure Limits in Air:

NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

PAC* Ver. 29[138]
PAC-1: 0.45 ppm
PAC-2: $\mathbf{5_A}$ ppm
PAC-3: $\mathbf{15_A}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

Determination in Air: #2549 Volatile Organic Compounds[18] (screening), and OSHA Analytical Method 7 Organic Vapors. See NIOSH Criteria Document 78-212 *NITRILES*[18]

Permissible Concentration in Water:

Determination in Water: EPA Method 1624. Isotope dilution purge and trap GC/mass spectrometry. Octanol–water coefficient: Log $K_{\mathrm{ow}} = < 1$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, eye, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Very toxic by ingestion, inhalation, and skin absorption. A lacrimator; severe respiratory irritant LD_{50} (oral-rat) = 220 mg/kg[AIHA].

Long-Term Exposure: Possible risk of forming tumors. Mutagen Respiratory toxin-acute effects other than severe or moderate irritation[138].

Points of Attack: Reproductive system.

Medical Surveillance: Pregnant women should avoid contact. Employees should be notified by a physician that this chemical may affect the reproductive system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genitourinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH) may be indicated.

First Aid: *Eyes*: First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. *Skin: Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *Immediately* call a physician and be prepared to transport the victim to a hospital for treatment. *Inhalation*: *Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, SCBA should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. Ingestion: *do not induce vomiting*. If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *Immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting*. *Immediately* transport the victim to a hospital.

Personal Protective Methods: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear gas-proof or splash-proof chemical goggles and face shield when working with liquid unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Nitriles*: NIOSH, *10 ppm:* Sa (APF = 10) (any supplied-air respirator); *25 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); *50 ppm:* SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); *250 ppm:* SaF: Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: GmFOv (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister) or SCBAE (any appropriate escape-type, SCBA).

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. (1) Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. (2) Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Store in a cool, dry place, or in a refrigerator.

Shipping: UN2668 Chloroaceto nitrile Hazard class: 6.1, Labels: 6.1-Poison Inhalation Hazard, 3-Flammable liquid Inhalation Hazard Zone B.

Spill Handling:

Chloroacetonitrile

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

As an immediate precautionary measure, isolate spill or leak area for at least 50 m/150 ft in all directions. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources and dampen spilled material with toluene to avoid airborne dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Fully encapsulating, vapor protective clothing should be worn for spills and leaks with no fire. *Eliminate* all ignition sources (no smoking, flares, sparks, or flames in immediate area). All equipment used when handling the product must be grounded. Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. A vapor suppressing foam may be used to reduce vapors. *Small spill*: Absorb with earth, sand, or other noncombustible material and transfer to containers for later disposal. Use clean nonsparking tools to collect absorbed material. *Large spill*: Dike far ahead of liquid spill for later disposal. Water spray may reduce vapor; but may not prevent ignition in closed spaces.

Fire Extinguishing: Thermal decomposition products may include fumes of poisonous hydrogen cyanide and hydrogen chloride. Highly flammable: Easily ignited by heat, sparks or flames. Vapors may form explosive mixture with air. Vapors may travel to source of ignition and flashback. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapor explosion and poison hazard indoors, outdoors, or in sewers. Those substances designated with a (P) may polymerize explosively when heated or involved in a fire. Runoff to sewer may create fire or explosion hazard. Containers may explode when heated. Liquid is denser than water.

Disposal Method Suggested: Use a licensed professional waste disposal service to dispose of this material. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: 2-Chloroacetophenone (CN) is a combustible, colorless-to-gray solid. CN has a sharp, irritating odor, has been described as smelling like "apple blossoms." It may be dissolved in a solvent. Molecular weight = 154.60; boiling point = 247°C; specific gravity (H_2O:1) = 1.32; freezing/melting point = 56.5°C; vapor pressure = 0.0054 mmHg @ 20°C; flash point = 117.7°C (cc). Hazard identification (based on NFPA-704 M Rating System): Health 3[101]; 2,[77] flammability 1, reactivity 0 ₩. Insoluble in water; reacts forming hydrogen chloride fumes.

Potential Exposure: Chloroacetophenone is used as a chemical warfare agent (Agent CN) and as a principal ingredient in the riot control agent Mace. It is also used as a pharmaceutical intermediate. The United States considers agent CN and its mixtures with various chemicals to be obsolete for military deployment.

Incompatibilities: Keep away from water, steam, strong oxidizers. CN reacts with water, forming hydrochloric acid. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. CN reacts slowly with metals, causing mild corrosion and may evolve flammable hydrogen gas.

Permissible Exposure Limits in Air

NIOSH IDLH; 15 milligram per cubic meter

Odor threshold = 0.015 ppm.

OSHA PEL: 0.05 ppm/0.3 milligram per cubic meter TWA

NIO SH REL: 0.05 ppm/0.3 milligram per cubic meter TWA

ACGIH TLV[1]: 0.05 ppm/0.32 milligram per cubic meter TWA, not classifiable as a human carcinogen

No PAC available

Australia: TWA 0.05 ppm (0.3 milligram per cubic meter), 1993; Austria: MAK 0.05 ppm (0.3 milligram per cubic meter), 1999; Belgium: TWA 0.05 ppm (0.32 milligram per cubic meter), 1993; Denmark: TWA 0.05 ppm (0.3 milligram per cubic meter), 1999; Finland: STEL 0.05 ppm

(0.3 milligram per cubic meter) [skin] 1993; France: VME 0.05 ppm (0.4 milligram per cubic meter), 1999; Norway: TWA 0.05 ppm (0.3 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 0.3 milligram per cubic meter, 2003; Switzerland: MAK-W 0.05 ppm (0.3 milligram per cubic meter), 1999; United Kingdom: TWA 0.05 ppm (0.32 milligram per cubic meter), 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards[60] for chloroacetophenone in ambient air ranging from 1.0 μ/m^3 (New York) to 3.0 μ/m^3 (Florida and North Dakota) to 6.0 μ/m^3 (Connecticut) to 7.0 μ/m^3 (Nevada) to 7.5 μ/m^3 (South Carolina).

Determination in Air: Tenax GC[2]; Thermal desorption; GC/Flame ionization detection; NIOSH II(5) P&CAM Method #291.

Permissible Concentration in Water: No criteria set.

Determination in Water: Octanol–water coefficient: Log $K_{ow} = 1.9$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption; ingestion; skin and eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: A lacramator (a "tear gas"). This chemical can be absorbed through the skin, thereby increasing exposure. This chemical irritates the eyes, skin, and respiratory tract. Eye contact can cause severe irritation, burns, and permanent damage. Breathing the vapor can cause lung irritation, coughing, and shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort.

Long-Term Exposure: Repeated or prolonged contact with skin may cause skin sensitization and skin allergy with itching and rash.

Points of Attack: Eyes, skin, respiratory system; lungs.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Consider X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Decontamination: Decontaminate as soon as possible. This is extremely important. If you don't have the equipment and training, don't enter the hot zone to rescue and/or decontaminate victims. If the victim can't move, begin the decontamination process without touching and without entering the hot zone. Use clean water from any source; if possible, use a hose (spray or fog to prevent injury to the victim) or other system so that you won't have to touch the victim; don't even wait for soap or for the victim to remove clothing, begin washing immediately. Immediately flush the eyes with water for at least 15 minutes. Wash—strip—wash—evacuate upwind and uphill: The approach is to immediately wash with water; then have the victim (not the first responder) remove all the victim's clothing; then wash again (with soap if available); and subsequently move away from the hot zone in an upwind and uphill direction. Wash the victim with warm water and soap. Decontaminate with diluted household bleach (10%, or one part bleach to nine parts water), but don't let any of the bleach solution get in the victim's eyes, open wounds, or mouth. Rinse off the diluted bleach solution after 15 minutes. In order to prevent spreading the agent, be certain the victims have been decontaminated as much as possible before they leave the decontamination area. If you get any amount of the agent on yourself, decontaminate immediately. Even if you think you are not contaminated, be sure to thoroughly shower and change clothes as soon as you can after the incident.

Personal Protective Methods:

General information: First responders should use a NIOSH-certified chemical, biological, radiological, nuclear (CBRN) SCBA with a level a protective suit when entering an area with an unknown contaminant or when entering an area where the concentration of the contaminant is unknown. Level a protection should be used until monitoring results confirm the contaminant and the concentration of the contaminant. *Note:* Safe use of protective clothing and equipment requires specific skills developed through training and experience.

LEVEL A: (*RED ZONE*): Select when the greatest level of skin, respiratory, and eye protection is required. This is the maximum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than the AEGL-2. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A TECP suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, and a hard hat worn under the TECP suit are optional items.

LEVEL B: (RED ZONE): Select when the highest level of respiratory protection is necessary but a lesser level of skin protection is required. This is the minimum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than AEGL-2. It differs from Level A in that it incorporates a nonencapsulating, splash-protective, chemical-resistant splash suit that provides Level A protection against liquids but is not airtight. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL C: (YELLOW ZONE): Select when the contaminant and concentration of the contaminant are known and the respiratory protection criteria factors for using APRs (APR) or PAPRs are met. This level is appropriate when decontaminating patient/victims. A NIOSH-certified CBRN tight-fitting APR with a canister-type gas mask or CBRN PAPR for air levels greater than AEGL-2. A NIOSH-certified CBRN PAPR with a loose-fitting facepiece, hood, or helmet and a filter or a combination organic vapor, acid gas, and particulate cartridge/filter combination or a continuous flow respirator for air levels greater than AEGL-1. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Escape mask, face shield, coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL D: (GREEN ZONE): Select when the contaminant and concentration of the contaminant are known and the concentration is below the appropriate occupational exposure limit or less than AEGL-1 for the stated duration times. Limited to coveralls or other work clothes, boots, and gloves.

Notes: Take all necessary precautions to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Responder suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear indirect vent, impact and splash-proof chemical goggles, and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *3 milligram per cubic meter:* Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100. *7.5 milligram per cubic meter*: Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *15 milligram per cubic meter:* Any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter; or any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a refrigerator or cool, well-ventilated area away from oxidizers, heat, water, and steam. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1697 Chloroacetophenone, solid, (CN), Hazard Class: 6.1; Labels: 6.1-Poison Inhalation. UN3416 Chloroacetophenone, liquid, (CN), Hazard Class: 6.1;

Labels: 6.1-Poisonous materials. Hazard. Military driver shall be given full and complete information regarding shipment and conditions in case of emergency. AR 50-6 deals specifically with the shipment of chemical agents. Shipments of agent will be escorted in accordance with AR 740-32.

Spill Handling:

CN, when used as a weapon

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30

Then: Protect persons downwind (mi/km)

Day 0.1/0.2

Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60

Then: Protect persons downwind (mi/km)

Day 0.2/0.3

Night 0.8/1.3

Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources and dampen spilled material with toluene to avoid airborne dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of carbon. This chemical is a combustible solid but does not readily ignite. In case of fire, *do not put out the fire*. CN vapor is so bad that the fire is safer than the unburned CN. If there is some reason that you have to put out the fire—for example, there are things you can't let burn nearby—use water or ordinary foam. It's always best to use a spray or fog pattern rather than a solid stream, to avoid spreading the burning liquid around. In the unlikely situation where there is a pile of CN canisters adjacent to a fire, cool the canisters with large amounts of water, but first evacuate the area—if the canisters rupture from heating, toxic gases could kill. CN can give off toxic hydrogen chloride in a fire or when heated. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Tear gas-containing waste is dissolved in an organic solvent and sprayed into an incinerator equipped with an afterburner and alkaline scrubber utilizing reaction with sodium sulfide in an alcohol−water solution. Hydrogen sulfide is liberated and collected by an alkaline scrubber.

Regulatory Authority and Advisory Information

Department of Homeland Security Screening Threshold Quantity (pounds): Sabotage/Contamination Hazard: A placarded amount (commercial grade).

Hazard Alert: Poison inhalation hazard, Combustible, Violently water reactive, Environmental hazard.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, C, N; risk phrases: R14; R23/24/25; R29; R35; R48/23; R50; safety phrases: S1/2; S7/8; S9; S26; S28; S29/35; S36/37/39; S41; S45; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chloroacetyl chloride is a colorless to yellowish liquid with a very pungent, extremely irritating, odor. Molecular weight = 112.94; specific gravity (H_2O:1) = 1.42 @ 20°C; boiling point = 106°C; freezing/melting point =

−22°C; vapor pressure = 19 mmHg @ 20°C; 7.5 mmHg @ 5.6°C (NFPA-704 M Rating System): Health 3, flammability 1, reactivity 1 ₩. Reacts violently with water.

Potential Exposure: Highly toxic by inhalation. Chloroacetyl chloride is used in the manufacture of acetophenone. It is used in the manufacture of a number of pesticides including: alachlor, allidochlor, butachlor, dimethachlor, formothion, mecarbam, metolachlor, propachlor. It is also used in the manufacture of pharmaceuticals, such as chlordiazepoxide hydrochloride, diazepam, lidocaine, mianserin.

Incompatibilities: Reacts violently with water, steam-forming chloroacetic acid and hydrogen chloride gas. Reacts with alcohols, powdered metals; sodium amide; combustibles; and many organics, causing toxic fumes, fire, and explosion hazard. On contact with air it emits corrosive gas. Decomposes when heated forming phosgene gas. Corrosive to metals.

Permissible Exposure Limits in Air

Conversion factor: 1 ppm = 4.62 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: None

NIOSH REL: 0.05 ppm/0.2 milligram per cubic meter TWA

ACGIH TLV[1]: 0.05 ppm/0.23 milligram per cubic meter TWA; 0.15 ppm/0.69 milligram per cubic meter STEL [skin]

PAC* Ver. 29[138]

PAC-1: **$0.040_{\mathbf{A}}$** ppm

PAC-2: **$1.6_{\mathbf{A}}$** ppm

PAC-3: **$52_{\mathbf{A}}$** ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

DFG MAK: No numerical value established. Data may be available.

Australia: TWA 0.05 ppm (0.2 milligram per cubic meter), 1993; Austria: MAK 0.05 ppm (0.2 milligram per cubic meter), 1999; Belgium: TWA 0.05 ppm (0.23 milligram per cubic meter), 1993; Denmark: TWA 0.05 ppm (0.2 milligram per cubic meter), 1999; France: VME 0.05 ppm (0.2 milligram per cubic meter), 1999; Norway: TWA 0.05 ppm (0.2 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 0.2 milligram per cubic meter, 2003; Switzerland: MAK-W 0.05 ppm (0.24 milligram per cubic meter), 1999; United Kingdom: LTEL 0.05 ppm (0.2 milligram per cubic meter), 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: STEL 0.15 ppm [skin]. Some states have set guidelines or standards for chloroacetyl chloride in ambient air[60] ranging from 3.0 μ/m^3 (Virginia) to 4.0 μ/m^3 (Connecticut) to 5.0 μ/m^3 (Nevada).

Determination in Air:

No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

Permissible Concentration in Water: No criteria set. Chloroacetyl chloride decomposes in water.

Routes of Entry: Skin absorption, skin and eye contact, inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: A tissue corrosive and a lacramator (causes discharge of tears). Chloroacetyl chloride can severely irritate the eyes and cause permanent damage. It is corrosive to the skin and respiratory tract. Corrosive on ingestion. Inhalation of vapor or aerosol can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. The substance may affect the cardiovascular system. Exposure far above the PEL may cause death. Medical reports of the effects of acute exposures include: mild-to-moderate skin burns and erythema; lachrymation and mild eye burns; mild-to-moderate respiratory effects with cough, dyspnea, cyanosis, and mild gastrointestinal effects.

Long-Term Exposure: Repeated or prolonged contact with skin may cause dermatitis. Lungs may be affected by repeated or prolonged exposure.

Points of Attack: Skin, eyes, respiratory system.

Medical Surveillance: Should include attention to skin, eyes, and respiratory system in preplacement and regular physical examinations. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 $\mu g/cm^2/min$): Teflon gloves, suits, boots. Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, steam, heat, and combustibles. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1752 Chloroacetyl chloride, Hazard class: 6.1; Labels: 6.1-Poison Inhalation Hazard, 8-Corrosive material, Inhalation Hazard Zone B.

Spill Handling:

Chloroacetyl chloride

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

when spilled on land

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.4/0.6

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 300/90
Then: Protect persons downwind (mi/km)
Day 0.8/1.2
Night 1.4/2.3

When spilled in water

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.6/1.0

Stay upwind and uphill. Isolate the area of release or fire and deny entry. Remove all ignition sources. Stop there lease if it can be done safely from a distance. All equipment used to handle this material must be grounded. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. *Small spill*: Cover with *dry* earth, *dry* sand, or other noncombustible material followed with plastic sheet to minimize spreading or contact with water or rain. Use clean nonsparking tools to collect material and place material into loosely covered plastic containers for later disposal. Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release. Use vapor suppressing foam to disperse vapors−contain runoff. Water spray may reduce vapor, but may not prevent ignition in enclosed spaces. Ventilate confined area if it can be done without placing personnel at risk. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a nonflammable liquid. *Do not use water* or water-based extinguishers. This chemical decomposes in heat, producing phosgene, chlorine, and hydrogen chloride. *Small fire*: use *dry* chemical, CO_2, *dry* sand, or alcohol-resistant foam. May react with foams releasing corrosive/toxic gases. *Large fire*: use water spray or alcohol-resistant foam if it is available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning liquid. Combustible material: may burn but does not ignite readily. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapors may travel to source of ignition and flashback. Containers may explode when heated or if contaminated with water. Keep exposures cool long after fire is out to protect against reignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. *Do not get water on spilled substance or inside containers*. If cooling streams are ineffective (*venting sound increases in volume and pitch, tank discolors, or shows signs of deforming*), withdraw immediately to a secure location. Always stay away from ends of tanks, especially when engulfed in flames. If material or contaminated runoff from fire control enters waterways, notify downstream users of potentially contaminated water. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: It may be discharged into sodium bicarbonate solution, then flushed to the sewer with water.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: (*p-isomer*) Hazard symbol: T, N, Xi; risk phrases: R45; R23/34/25; R43; R50/53; safety phrases: S29; S41; S45; S53; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to waters (*o-*, *m-*, *isomer*); 3-Severe hazard to water. (*p-isomer*)

Description: The chloroanilines have the following properties:

m-isomer: Colorless to yellow liquid that may turn brown on exposure to air. Molecular weight = 127.57; specific gravity (H_2O:1) = 1.216; boiling point (decomposes) = 230°C; freezing/melting point = −11°C; vapor pressure = < 0.1 mmHg @ 20°C; flash point = 118°C (cc); autoignition temperature = > 540°C. Slight solubility in water; solubility = 0.6%.

o-isomer; Colorless to yellow liquid that may turn brown on exposure to air. Molecular weight = 127.57; specific gravity (H_2O:1) = 1.21; boiling point = 208.7°C; freezing/melting point = −2°C; flash point = 108°C; autoignition temperature = >500°C; solubility in water = 0.5% @ 20°C.

p-isomer see also record No. P:0400

The *p*-isomer is a colorless to pale-yellow crystalline solid. Molecular weight = 127.6; specific gravity (H_2O:1) = 1.43; boiling point = 232°C; freezing/melting point = 69.5−72.5°C; vapor pressure = 0.015 mm Hg @ 20°C; flash point = 120−123°C (oc); autoignition temperature = 685°C. Hazard identification (based on NFPA-704 M Rating System): *p-isomer* Health 3, flammability 1, reactivity 0. Soluble in hot water; solubility (cold) = 0.4% @ 20°C.

Potential Exposure: (*m*- and *o*-isomers): Possible risk of forming tumors, Suspected of causing genetic defects (*p*-isomer): Possible risk of forming tumors, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction). Chloroanilines are used to make dyes, other chemicals; insecticides and many other industrial products.

Incompatibilities: Contact with strong oxidizers may cause fire and explosions. The aqueous solution of the *m*-isomer is a weak base. Incompatible with strong acids; organic anhydrides; isocyanates, aldehydes.

Permissible Exposure Limits in Air

m- and o-isomers

ACGIH TLV[1]: 01 ppm TWA

DFG MAK: [skin]; (*m*- and *p*-isomers) Danger of skin sensitization.

p-isomer see also P:0400

OSHA PEL: 0.1 milligram per cubic meter TWA[skin]

NIOSH REL: 0.1 milligram per cubic meter TWA [skin]

ACGIH TLV[1]: 0.1 milligram per cubic meter TWA; not classifiable as a human carcinogen

PAC Ver. 29[138]

106-47-8

PAC-1: 6.1 ppm

PAC-2: 68 ppm

PAC-3: 100 ppm

DFG MAK: 0.1 milligram per cubic meter, measured as the, inhalable fraction TWA; Peak Limitation Category II (2); [skin], danger of skin sensitization; Carcinogen Category 3; Pregnancy Risk Group C

Austria: [skin], carcinogen, 1999; Poland: TWA 3 milligram per cubic meter; STEL 10 milligram per cubic meter, 1999; Switzerland: [skin], carcinogen, 1999

DFG MAK: [skin] Carcinogen Category 2

The former USSR-UNEP/IRPTC joint project[43] has set MAC limits in work-place air of 0.05 milligram per cubic meter for the *m*-isomer and 0.3 milligram per cubic meter for the *p*-isomer, the MAC is 0.04 milligram per cubic meter on a temporary basis; 0.01 on an average daily basis. No standards were set for the *o*-isomer. This chemical can be absorbed through the skin, thereby increasing exposure. States which have set guidelines or standards for *p*-chloro aniline in ambient air[60] include Connecticut at 0.06 μ/m^3 and New York @ 6.0 μ/m^3.

Permissible Concentration in Water: State Drinking Water Guidelines (106-47-8): Florida 28 μg/L.

Determination in Water: Octanol−water coefficient: Log K_{ow} (all isomers) = range 1.83 to 1.92. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation of vapor, skin absorption; ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Chloroanilines can affect you when breathed in and by passing through your skin. Exposure can lower the ability of the blood to carry oxygen (a condition called methemoglobinemia). This can cause headaches, trouble breathing; weakness; a bluish color to the nose and lips; collapse and death. Contact can severely irritate and may burn the eyes. *o-isomer:* Irritates the eyes, skin, and respiratory tract. *m-isomer:* May affect the liver and kidneys. Exposure may result in death. The effects may be delayed. *p-isomer:* Irritates the eyes, skin, and respiratory tract. May affect the red blood cells, resulting in formation of methemoglobin and hemolysis. Exposure could cause headaches, trouble breathing, weakness, a bluish color to the nose and lips, loss of consciousness; and possible death.

Long-Term Exposure: *o*-isomer: Repeated or prolonged contact with skin may cause dermatitis. The substance may have effects on the liver and kidneys and also the blood system, resulting in forming of methemoglobin. *m*-isomer: The substance may have effects on the blood system, resulting in forming of methemoglobin. *p-isomer:* Repeated or prolonged contact may cause skin sensitization. The substance may have effects on the spleen, liver and kidneys, resulting in organ damage. Tumors have been detected in experimental animals but may not be relevant to humans. The methemoglobinemia described above can occur gradually over weeks instead of all at once.

Points of Attack: Blood, skin.

Medical Surveillance: These chemicals (*m & p isomers*) are suspected human carcinogens. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. If symptoms develop or overexposure is suspected, the following may be useful: methemoglobin level.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get

medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended.

Note to Physician: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: *Clothing:* Avoid skin contact with chloroaniline. Wear solvent-resistant gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove, clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day and put on before work. *Eye Protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full-facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA). *Where there is potential exists for exposures to chloroanilines*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Color code—Blue: Health Hazard/Poison (*p-isomer*): Store in a secure poison location. Prior to working with chloroaniline all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from Oxidizers (such as perchlorates, peroxides, permanganates, chlorates, and nitrates), since violent reactions occur. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2018 Chloroanilines, solid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN2019 Chloroanilines, liquid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: *Ortho- and metaiomers:* Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *p-isomer:* Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: *p-isomer:* This chemical is a combustible solid. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. *o*- and *m*-isomers: These chemicals are combustible liquids. Thermal decomposition products may include nitrous oxides and hydrogen chloride. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve in a combustible solvent, such as alcohol or benzene and spray into a furnace equipped with afterburner and scrubber[22]. Alternatively, pour into a mixture of sand and soda ash and burn in a furnace with paper as a fuel. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chlorobenzene is a colorless liquid with an almond-like odor. The Odor Threshold is between 0.1 and 3.0 μg/L[35]. Also reported in the literature at 0.68 ppm and 0.741 ppm. Molecular weight = 112.56; specific gravity (H_2O:1) = 1.106 @ 20°C; boiling point = 131−132°C; freezing/melting point = −45.3°C; flash point = 28°C; autoignition temperature = 593°C. Flammable limits are: LEL: 1.3%; UEL: 9.6%. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 3, reactivity 1. Insoluble in water.

Potential Exposure: Chlorobenzene is used in the manufacture of aniline, phenol, and chloronitrobenzene; as an intermediate in the manufacture of dyestuffs and many pesticides, as a solvent; and emulsifier.

Incompatibilities: Reacts violently with strong oxidizers; dimethyl sulfoxide; sodium powder; silver perchlorate; causing fire and explosion hazard. Attacks some plastics, rubber, and coatings. Decomposes on heating, producing phosgene and hydrogen chloride fumes.

Permissible Exposure Limits in Air

NIOSH IDLH = 1000 ppm

OSHA PEL: 75 ppm/350 milligram per cubic meter TWA

NIOSH REL: None

ACGIH TLV[1]: 10 ppm/46 milligram per cubic meter TWA; confirmed animal carcinogen with unknown relevance to humans; BEI: 150 mg [total 4-chlorocatechol]/g creatinine in urine/end-of-shift; 25 mg[total *p*-chloro phenol]/g creatinine in urine/end-of-shift

DFG MAK: 10 ppm/47 milligram per cubic meter TWA; Peak Limitation Category II(2); Pregnancy Rislk Group C; BAT: 70 mg/g [total 4-chlorocatecho l] creatinine in urine at the beginning of the next shift; BAT: 300 mg/g [total 4-chlorocatechol] creatinine in urine at end-of-shift.

PAC* Ver. 29[138]

PAC-1: $\mathbf{10_A}$ ppm

PAC-2: $\mathbf{150_A}$ ppm

PAC-3: $\mathbf{400_A}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

Arab Republic of Egypt: TWA 1 ppm, 1993; Australia: TWA 75 ppm (350 milligram per cubic meter), 1993; Austria: MAK 50 ppm (230 milligram per cubic meter), 1999; Belgium: TWA 75 ppm (345 milligram per cubic meter), 1993; Denmark: TWA 10 ppm (46 milligram per cubic meter), 1999; Finland: TWA 50 ppm (230 milligram per cubic meter); STEL 75 ppm (345 milligram per cubic meter), 1999; France: VME 10 ppm, 1999; the Netherlands: MAC-TGG 46 milligram per cubic meter, 2003; Japan: 10 ppm (46 milligram per cubic meter), 1999; Norway: TWA 25 ppm (115 milligram per cubic meter), 1999; Poland: MAC (TWA) 50 milligram per cubic meter; STEL 150 milligram per cubic meter, 1999; Switzerland: MAK-W 50 ppm (230 milligram per cubic meter), KZG-W 100 ppm (460 milligram per cubic meter), 1999; Turkey: TWA 75 ppm (350 milligram per cubic meter), 1993; United Kingdom: LTEL 50 ppm (230 milligram per cubic meter), 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: confirmed animal carcinogen with unknown relevance to humans. Several states have set guidelines or standards for Chlorobenzene in ambient air[60] ranging from $6.3\ \mu/m^3$ (Massachusetts) to $1167\ \mu/m^3$ (New York) to $2200\ \mu/m^3$ (New York) to $3500\ \mu/m^3$ (Florida and North Dakota) to $6000\ \mu/m^3$ (Virginia) to $7000\ \mu/m^3$ (Connecticut) to $8333\ \mu/m^3$ (Nevada).

Determination in Air: Charcoal absorption followed by workup with CS_2 and analysis by GC. Use NIOSH Analytical Method #1003 for hydrocarbons, halogenated.

Permissible Concentration in Water: Safe Drinking Water Act (47FR 9352): MCL, 0.1 mg/L; MCLG, 0.1 mg/L State Drinking Water Standards: California 70 μg/L; New Jersey 50 μg/L; State Drinking Water Guidelines: Arizona 60 μg/L; Maine 140 μg/L; Minnesota 100 μg/L.

Determination in Water: GC (EPA Methods 601 and 602) or GC plus mass spectrometry (EPA Method 624).

Routes of Entry: Inhalation, ingestion, eye and skin contact. This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: The liquid can irritate and burn the skin. The vapor can irritate the eyes, nose, and throat. Chlorobenzene can affect you when breathed in and by passing through your skin. Exposure to high concentrations can cause you to become dizzy, lightheaded, and to pass out. Swallowing the liquid may cause aspiration into the lungs with the risk of chemical pneumonitis. The effects may be delayed. Medical observation is indicated.

Long-Term Exposure: Liver and kidney problems. May cause damage to the lungs, blood, nervous system. Repeated exposure to the liquid may cause skin burns. Similar petroleum-based solvents cause brain damage, with reduced memory and concentration; personality changes; fatigue; sleep disturbances; reduced coordination.

Points of Attack: Respiratory system, eyes, skin, central nervous system; liver.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater, or significant skin contact) the following are recommended before beginning work and at regular times after that: Liver function tests. If symptoms develop or overexposure has occurred, the following may be useful: lung and kidney function tests. Interview for brain effects.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): Viton gloves, suits, Barricade-coated suits; Responder suits, Trellchem HPS suits; Trychem 1000 suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): polyvinyl alcohol gloves; Teflon gloves, suits, boots. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: OSHA: *1000 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or CcrFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* PD,PP (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance causes eye irritation or damage; eye protection needed.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with chlorobenzene all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Chlorobenzene must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat, sparks, or flames. Sources of ignition, such as smoking and open flames are prohibited where Chlorobenzene is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gal or more of Chlorobenzene should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of Chlorobenzene.

Shipping: UN1134 Chlorobenzene, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. Keep Chlorobenzene out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to cleanup spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include phosgene and hydrogen chloride. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel; care must be exercised to assure complete combustion to prevent the formation of phosgene; an acid scrubber is necessary to remove the halo acids produced[22].

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Ethyl 4,4′-dichlorobenzilate is a yellow solid when pure. The technical product is a brownish liquid. Molecular weight = 235.19; specific gravity (water = 1) = 1.282 @ 20°C; boiling point = 146−148°C; freezing/melting point = 35−37.3°C (pure); vapor pressure = 2.2×10^{-6} mmHg @ 20°C; flash point = 40°C. Practically insoluble in water; solubility = <0.1 mg/mL @ 22°C.

Potential Exposure: It is a buffer in many chemical intermediates; an organochlorine miticide; to kill mites, ticks, and other insects; as a synergist for DDT.

Incompatibilities: Strong acids, strong bases; lime.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 8.4 milligram per cubic meter

PAC-2: 92 milligram per cubic meter

PAC-3: 550 milligram per cubic meter

Routes of Entry: Inhalation, ingestion, passing through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: Contact irritates the skin causing rash or burning sensation. Exposure can cause headache, loss of appetite; nausea, vomiting, and diarrhea.

Long-Term Exposure: This chemical may damage the male reproductive glands. May cause liver and kidney damage. Repeated or prolonged exposure may affect the nervous system; causing a loss of coordination; muscle weakness; tremors, convulsions, dizziness, and possible coma. This chemical may be a human carcinogen.

Points of Attack: Liver, kidneys, nervous system.

Medical Surveillance: Examination of the nervous system. Liver and kidney function tests. More than light alcohol consumption may exacerbate liver damage.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece

respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Use a NIOSH/MSHA (US) or EN149 (Europe)-approved respirator such as a supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong acids, strong bases. Where possible, automatically pump liquid from drums or other storage containers to process containers. Sources of ignition are prohibited where this chemical is used, handled, or stored. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2996 Organochlorine pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.UN2761 Organochlorine pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical may burn but does not easily ignite. Thermal decomposition products may include chlorine. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant ($\geq$100 kg/mo) must conform to EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

p-Chlorobenzotrichloride C:0790

Formula: C_7H_4Cl4; $Cl_3C\text{-}C_6H_4\text{-}Cl$

Synonyms: Benzene, 1-chloro-4-(trichloromethyl)-; 4-Chlorobenzotrichloride; *p*-Chlorophenyltrichloromethane; 1-Chloro-4-(trichloromethyl)benzene; PC TC; *p*-α,α,α-Tetrachlorotoluene; *p*-Trichloromethylchlorobenzene

CAS Registry Number: 5216-25-1

RTECS Number: XT8580000

UN/NA & ERG Number: UN1760 (corrosive liquids, n.o.s.)/154

EC Number: 226-009-1 [*Annex I Index No.:* 602-093-00-9]

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: (α,α,α-tetrachlorotoluene) Human Limited Evidence; Animal Sufficient Evidence, *probably carcinogenic to humans*, Group 2A; DFG, Carcinogen Category 2.

California Proposition 65 Chemical[102]: Cancer (*as p-a,a, a*-Tetrachlorotoluene) 1/1/1990

Hazard Alert: Combustible, Toxic liquid, Suspected of causing genetic defects, Dangerously water reactive, Possible sensitization hazard (skin).

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xi; risk phrases: R45; R21/22; R37/38; R43; R50/53; R48/23; R62; safety phrases: S1; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: *p*-Chlorobenzotrichloride, an organochloride, is a flammable, water-white liquid. Molecular weight = 229.91; specific gravity (H_2O:1) = 1.49; boiling point = 254°C; melting/freezing point = 5 to 6°C; flash point = > 110°C; autoignition temperature = 500−505°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 1₩, reactivity 0. Decomposes in water releasing hydrogen chloride and benzoic acid.

Potential Exposure: Used in agrochemicals manufacture as an intermediate; reaction with HF yields chlorobenzotrifluoride as a major intermediate for several pesticides; for making pharmaceuticals; UV absorbers, and dyestuffs. This chemical is manufactured in high volume (exceeds 1 million pounds per annum) in the United States.

Incompatibilities: A halogenated aromatic compound. Hydrolyzes to hydrochloric acid and benzoic acid in all forms of moisture. Incompatible with strong oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from reducing agents, alkaline materials, strong acids, strong bases, amines, nitrides, azo/diazo compounds, alkali metals, and epoxides.

Permissible Exposure Limits in Air

No PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

DFG MAK: [skin] Carcinogen Category 2

No numerical limits set. However, this chemical can be absorbed through the skin, thereby increasing exposure. Toxic by inhalation. A potential carcinogen: exposure should be kept to lowest feasible level.

Determination in Air: No test listed.

Routes of Entry: Inhalation, ingestion; absorbed through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: A corrosive and lacrimator. May cause irritation by any route of exposure. Poisonous by inhalation. LD_{50} (oral-rat) = 820 mg/kg.

Long-Term Exposure: A skin sensitizer; may cause rash. A suspected human carcinogen, neuro-, and respiratory toxicant[129].

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: (1) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location; keep acids away from bases and red, yellow, and blue-coded chemicals. (2) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Store in tightly closed containers in a refrigerator. Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN1760 Corrosive liquids, n.o.s., Hazard class: 8; Labels: 8-Corrosive material, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include hydrogen chloride and oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Regulatory Authority and Advisory Bodies

Hazard Alert: Flammable, Possible risk of forming tumors, Suspected of causing genetic defects.

United States National Primary Drinking Water Regulations: MCLG = 4 mg[F]/L; MCL = 4 mg[F]/L; SMCL = 2.0 mg[F]/L, as Fluoride.

Hazard symbols, risk, & safety statements: Hazard symbol: F, Xi, N; risk phrases: R10; R36/37/38; R51; R62; safety phrases: S16; S24/25; S36/37/39; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): (98-56-6) 2-Hazard to waters

Description: Chlorobenzotrifluoride is a colorless, highly flammable liquid. Molecular weight = 180.6; boiling point = 139°C; melting/freezing point = −36°C; flash point = 43°C (cc); autoignition temp => 500°C; flammable limits are: LEL: 0.9%; UEL: 10.5%. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 0. The pure *o*-isomer: boiling point = 152°C; flash point = 59°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 1. Slightly soluble in water; solubility =< 1 mg/mL @ 20°C.

Potential Exposure: This material is used in the manufacture of pharmaceuticals; dyes, dielectrics, and insecticides.

Incompatibilities: Vapors may form explosive mixture with air. Violent reaction with strong oxidizers, such as permanganates and dichromates, chlorates, nitrates, peroxides, perchlorates, chlorine, bromine, fluorine, etc.; contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Mixture with sodium dimethyl 5-sulphonatoisophthalate (3965-55-7) may cause explosion.

Permissible Exposure Limits in Air

No standards or PAC available.

Determination in Air: No tests available.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[F]/L; Federal Drinking Water Guide lines: EPA 2000 μg[F]/L; State Drinking Water Standards: California 2000 μg[F]/L; Delaware 2000 μg[Fl]/L; Pennsylvania 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[F]/L; Maine 1680 μg[F]/L. Safe Drinking Water Act: MCL = 4 mg[F]/L; MCLG = 4 mg[F]/L; SMCL = 2 mg/F/L, as Fluoride.

Determination in Water: Octanol−water coefficient: Log K_{ow} => 3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Harmful Effects and Symptoms

Short-Term Exposure: Causes local irritation to skin, eyes, and mucous membranes. May cause irritation by any route of exposure. The LD_{50} rat is 13 g/kg (13,000 mg/kg) (insignificantly toxic).

Long-Term Exposure: There is evidence that this chemical is a mutagen.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek

medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in nonroutine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. NIOSH: *(fluorides) 12.5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *25 milligram per cubic meter:* 95XQ (APF = 10) (any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators). The following filters may also be used: [N99, R99, P99, N100, R100, P100]; or SA* (any supplied-air respirator). *62.5 milligram per cubic meter:* Sa:Cf (APF = 25)* (any supplied-air respirator operated in a continuous-flow mode); or*$^+$ *if not present as a fume* PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *125 milligram per cubic meter:* HieF$^+$ (any air-purifying, full facepiece respirator with a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *250 milligram per cubic meter:* Sa:Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* HieF$^+$ (any air-purifying, full facepiece respirator with a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA). *Substance reported to cause eye irritation or damage; may require eye protection. *May need acid gas sorbent.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with chlorobenzotrifluoride all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2234 Chlorobenzotrifluorides, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include fluorine and chlorine. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA

1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165 recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

UN/NA & ERG Number: (PIH) UN2810 (toxic liquid, organic, n.o.s.)/153

EC Number: 220-278-9

Regulatory Authority and Advisory Information

Hazard Alert: Poison inhalation hazard, Possible risk of forming tumors, Suspected of causing genetic defects, Suspected reprotoxic hazard, Primary irritant (w/o allergic reaction), Environmental hazard.

As a cyanide compound:

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: 40CFR423, Appendix A, Priority Pollutants as cyanide, total

United States DOT 49CFR172.101, Inhalation Hazardous Chemical

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as cyanide mixtures.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R28; R32; R50/53; R62; R63; safety phrases: S1/2; S7/8; S23; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: *o*-Chlorobenzylidene malonitrile is a combustible, white crystalline solid. Pepper-like odor. Molecular weight = 188.62; boiling point = 310−315°C; freezing/melting point = 95°C; vapor pressure = 3×10^{-6} mmHg @ 20°C. Insoluble in water.

Potential Exposure: CS tear gas is used as a riot control agent and is also used as an agent in CS1, CS2, and CSX riot control, and tear gases.

Incompatibilities: Contact with strong oxidizers may cause fire and explosion. May be explosive if dust mixes with air.

Permissible Exposure Limits in Air

NIOSH IDLH = 2 milligram per cubic meter

OSHA PEL: 0.05 ppm/0.4 milligram per cubic meter TWA

NIOSH REL: 0.05 ppm/0.4 milligram per cubic meter Ceiling Concentration [skin]

ACGIH TLV[1]: 0.05 ppm/0.39 milligram per cubic meter Ceiling Concentration [skin]; not classifiable as a human carcinogen

PAC* Ver. 29[138]

PAC-1: **0.005**$_{\mathbf{A}}$ milligram per cubic meter

PAC-2: **0.083**$_{\mathbf{A}}$ milligram per cubic meter

PAC-3: **11**$_{\mathbf{A}}$ milligram per cubic meter

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

Australia: TWA 0.05 ppm (0.4 milligram per cubic meter) [skin], 1993; Belgium: STEL 0.05 ppm (0.4 milligram per cubic meter) [skin], 1993; Denmark: TWA 0.05 ppm (0.4 milligram per cubic meter) [skin], 1999; France: STEL 0.05 ppm (0.4 milligram per cubic meter) [skin], 1999; Norway: TWA 0.05 ppm (0.4 milligram per cubic meter), 1999; the Philippines: TWA 05 ppm (0.4 milligram per cubic meter), 1993; Switzerland: MAK-W 0.05 ppm (0.4 milligram per cubic meter) [skin], 1999; the Netherlands: MAC 0.4 milligram per cubic meter [skin], 2003; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam; ACGIH TLV: Ceiling Concentration 0.05 ppm [skin]. Several states have set guidelines or standards for OCBM in ambient air[60] ranging from 3.0 μ/m^3 (Virginia) to 4.0 μ/m^3 (North Dakota) to 8.0 μ/m^3 (Connecticut) to 10.0 μ/m^3 (Nevada).

Determination in Air: Use NIOSH Analytical Method #7904; #6010, cyanides.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 μg[CN]/L; State Drinking Water Standards: California 150 μg[CN]/L; State Drinking Water Guidelines: Arizona 220 μg[CN]/L; Maine. 140 μg[CN]/L; Minnesota 100 μg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg [CN]/L; Short-term consumption; Raw water constituents (maximum) 20 mg[CN]/L.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: A lacramator. Irritates the eyes, skin, and respiratory tract. OCBM is extremely irritating and acts on exposed sensory nerve endings (primarily in the eyes and upper respiratory tract). The signs and symptoms from exposure to the vapor are conjunctivitis and pain in the eyes, lacrimation; erythema of the eyelids; blepharospasms; irritation and running of the nose; burning in the throat; coughing and constricted feeling in the chest; and excessive salivation. Vomiting may occur if saliva is swallowed. Most of the symptoms subside after exposure ceases. Burning on the exposed skin is increased by moisture. With heavy exposure, vesiculation and erythema occur. Photophobia has been reported. LD_{50} = (oral-rat).

Long-Term Exposure: Repeated or prolonged contact may cause skin sensitization. Animal experiments indicate that OCBM has a relatively low toxicity. The systemic changes observed in human experiments are nonspecific reactions to stress. OCBM is capable of sensitizing guinea pigs; there also appears to be a cross-reaction in guinea pigs previously sensitized to 1-chloroacetophenone. See NIOSH Criteria Document 212 *Nitriles*.

Points of Attack: Respiratory system, skin, and eyes.

Medical Surveillance: Consideration should be given to the eyes, skin, and respiratory tract in any placement or periodic evaluations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Decontamination: Decontaminate as soon as possible. This is extremely important. If you don't have the equipment and training, don't enter the hot zone to rescue and/or decontaminate victims. If the victim can't move, begin the decontamination process without touching and without entering the hot zone. Use clean water from any source; if possible, use a hose (spray or fog to prevent injury to the victim) or other system so that you won't have to touch the victim; don't even wait for soap or for the victim to remove clothing, begin washing immediately. Immediately flush the eyes with water for at least 15 minutes. Wash—strip—wash—evacuate upwind and uphill: The approach is to immediately wash with water, then have the victim (not the first responder) remove all the victim's clothing, then wash again (with soap if available); and subsequently move away from the hot zone in an upwind and uphill direction. Wash the victim with warm water and soap. Decontaminate with diluted household bleach (10%, or one part bleach to nine parts water), but don't let any of the bleach solution get in the victim's eyes, open wounds, or mouth. Rinse off the diluted bleach solution after 15 minutes. In order to prevent spreading the agent, be certain the victims have been decontaminated as much as possible before they leave the decontamination area. If you get any amount of the agent on yourself, decontaminate immediately. Even if you think you are not contaminated, be sure to thoroughly shower and change clothes as soon as you can after the incident.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH Criteria Document 212 *Nitriles*.

Respirator Selection: OSHA: *2 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a refrigerator or cool, well-ventilated area. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2810 Toxic liquids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. Military driver shall be given full and complete information regarding shipment and conditions in case of emergency. AR 50-6 deals specifically with the shipment of chemical agents. Shipments of agent will be escorted in accordance with AR 740-32.

Spill Handling:
UN2810 Toxic liquids, organic, n.o.s.
Initial isolation and protective action distances
Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).
Small spills (From a small package or a small leak from a large package)
First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.7/1.2
Large spills (From a large package or from many small packages)
First: Isolate in all directions (ft/m) 1000/300
Then: Protect persons downwind (mi/km)
Day 1.1/1.8
Night 2.8/4.5
CS when used as a weapon
First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.4/0.6
Large spills (From a large package or from many small packages)
First: Isolate in all directions (ft/m) 300/90
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 1.2/1.9
Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Dampen spilled material with 60%−70% acetone to avoid airborne dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. In case of fire, *do not put out the fire*. CS vapor is so deadly that the fire is safer than the unburned CS. If there is some reason that you have to put out the fire (e.g., there are things you can't let burn nearby) use water or ordinary foam. It's always best to use a spray or fog pattern rather than a solid stream, to avoid spreading the burning liquid around. In the unlikely situation where there is a pile of CS canisters adjacent to a fire, cool the canisters with large amounts of water, but first evacuate the area—if the canisters rupture from heating, toxic gases could kill. CS can give of toxic hydrogen cyanide, chlorine, and nitrogen oxides in a fire or when heated. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Chlorobromomethane C:0820

Formula: CH_2BrCl
Synonyms: Bromochloromethane; Bromoclorometano (Spanish); CB; CBM; Halon 1011; Metane, bromochloro-; Methylene chlorobromide; Mil-B-4394-B; Mono-chloro-mono-bromo-methane
CAS Registry Number: 74-97-5
HSDB Number: 2520
RTECS Number: PA5250000
UN/NA & ERG Number: UN1887/160
EC Number: 200-826-3
Regulatory Authority and Advisory Information
Carcinogenicity: EPA: Not Classifiable as to human carcinogenicity.
Hazard Alert: Poison, Suspected reprotoxic hazard.
Hazard symbols, risk, & safety statements: Hazard symbol: T, F, N, Xi, Xn; risk phrases: R11; R20; R23/24/25; R36/37/38; R39; R41; R51; R59; safety phrases: S7; S16; S26; S36/37; S39; S45; S59; S41 (see Appendix 4).
WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chlorobromomethane is a clear, colorless, to pale-yellow liquid with a chloroform-like odor. Molecular weight = 129.39; specific gravity (H_2O:1) = 1.93; boiling point = 67.8°C; freezing/melting point = −88°C; vapor pressure = 115 mmHg @ 20°C. Flammable limits are: LEL:120, 000. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Insoluble in water.

Potential Exposure: This compound is used in brominated flame retardants; a fire-extinguishing agent; and in organic synthesis.

Incompatibilities: Incompatible with strong oxidizers (possible explosion), reducing agents, bases, carbonates, furyl alcohol, chemically active metals, such as calcium; base metals in the presence of moisture, powdered aluminum; zinc, magnesium. Liquid attacks some plastics, rubber, and coatings.

Permissible Exposure Limits in Air

NIOSH IDLH = 2000 ppm

Odor threshold = 400 ppm.

OSHA PEL: 200 ppm/1050 milligram per cubic meter TWA

NIOSH REL: 200 ppm/1050 milligram per cubic meter TWA

Several states have set guidelines or standards for CBM in ambient air[60] ranging from 10.5−13 milligram per cubic meter (North Dakota) to 17.5 milligram per cubic meter (Virginia) to 21.0 milligram per cubic meter (Connecticut) to 25.0 milligram per cubic meter (Nevada).

Determination in Air: Charcoal adsorption, workup with CS_2, followed by GC. Use NIOSH Analytical Method #1003 for hydrocarbons, halogenated.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact can irritate and burn the skin and eyes. This chemical can irritate the lungs. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Symptoms include disorientation, dizziness; irritation of eyes, throat and skin; headaches, anorexia, nausea, vomiting; abdominal pain; weakness, tremors and convulsions; narcosis. LD_{50} (oral-rat) = 5000 mg/kg (slightly toxic).

Long-Term Exposure: May cause liver and kidney damage, which may be progressive; skin irritation and cracking. May affect the lungs and cause bronchitis to develop. May cause weight loss; memory impairment; paralysis. Skin contact can cause drying and cracking.

Points of Attack: Skin, liver, kidneys, respiratory system; lungs, central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Serum bromine level. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): Teflon gloves, suits, boots; Responder suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *2000 ppm:* Sa:Cf (APF = 25)* (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; CcrFOv* [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

*Substance can cause eye irritation or damage; eye protection needed.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Chlorobromomethane must be stored to avoid contact with chemically active metals, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat.

Shipping: UN1887 Bromochloromethane, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible liquid. Use any extinguishers suitable for surrounding fire. Thermal decomposition products may include hydrogen chloride and hydrogen bromide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate together with flammable solvent in furnace equipped with afterburner and alkali scrubber.

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* Chlorobromomethane, Trenton, NJ (November 1998).

p-Chloro-*m*-Cresol C:0824

Formula: C_7H_7ClO; $C_6H_3OHCH_3Cl$

Synonyms: Aptal; Baktol; Baktolan; Candaseptic; Chlorocresol; *p*-Chlorocresol; 4-Chloro-*m*-cresol; 6-Chloro-*m*-cresol; 2-Chloro-hydroxytoluene; 6-Chloro-3-hydroxytoluene; 4-Chloro-3-methylphenol; Clariant (Switzerland); 4-Cloro-3-metilfenol (Spanish); CMK; 3-Methyl-4-chlorophenol; Nipacide PCMC; Parachlorometacresol; PCMC; Ottafact; Parmetol; Parsol; Preventol; Raschit; Raschit K; Rasen-anicon

CAS Registry Number: 59-50-7

HSDB Number: 5198

RTE CS Number: GO7100000

UN/NA & ERG Number: UN2669 (solution)/152; UN3437 (solid)/152

EC Number: 200-431-6 [*Annex I Index No.:* 604-014-00-3]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA Group D, Not classifiable as a human carcinogen.

Hazard Alert: Poison, Combustible, Suspected of causing genetic defects, Environmental hazard, Sensitization hazard (skin).

Clean Water Act: Section 307 Priority Pollutants; Section 313 Priority Chemicals

RCRA Section 261 Hazardous Constituents, U039

RCRA Universal Treatment Standards: Wastewater (mg/L), 0.018; Nonwastewater (mg/kg), 14

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8040(5); 8270(20)

EPCRA Section 304 RQ: CERCLA, 5000 lb (2270 kg)

California EPA AB2588-Air Toxics “Hot Spots” Chemicals (CAL)

The “Director’s List” (CAL/OSHA) as chlorophenols

List of priority pollutants (United States Environmental Protection Agency)

EPCRA Section 313 (as chlorophenols) Form R *de minimis* concentration reporting level: 1.0%

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: Xi, Xn, N; risk phrases: R21/22; R41; R43; R51; safety phrases: S2; S26; S29/35; S36/37/39; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: White (pure) or pink crystalline solid. Crystals turn pink on exposure to air and light. Phenolic odor. Molecular weight = 142.59; specific gravity (H_2O:1) = 1.37; boiling point = 235°C; freezing/melting point = 56°C; 67°C; vapor pressure 5×10^{-2} @25°C. Hygroscopic. Soluble in water; solubility = 3830 mg/L @ 25°C. May be shipped dissolved in a liquid carrier. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Potential Exposure: Chlorinated phenol fungicide, microbiocide, and germicide used to control bacteria, yeasts, and fungi.

Incompatibilities: Chlorocresols react with boranes, alkalies, aliphatic amines, amides, nitric acid, sulfuric acid. Contact with oxidizing agents may cause a fire and explosion hazard. Heat produces phosgene, hydrogen chloride and chlorine gases. Corrosive to aluminum, copper, tin, and other chemically active metals[101].

Permissible Exposure Limits in Air:

PAC Ver. 29[138]

PAC-1: 5.5 milligram per cubic meter

PAC-2: 60 milligram per cubic meter

PAC-3: 360 milligram per cubic meter

Permissible Concentration in Water: No criteria set for this chemical; however, EPA recommends that drinking water contain not >0.04 mg/L of 2-chlorophenol for a lifetime exposure for an adult, and 0.05 mg/L for a 1-day, 10-day, or longer exposure for a child

Determination in Water: GC (EPA Method 604) or GC plus mass spectrometry (EPA Method 625). Octanol−water coefficient: Log $K_{ow} = > 3$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Skin absorption, inhalation, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short-Term Exposure: Inhalation can cause severe irritation, burns to the nose and throat, headache, dizziness, vomiting, lung damage, muscle twitchings, spasms, tremors, weakness, staggering, and collapse. Dermal contact can cause severe irritation and burns. Can be absorbed through the skin to cause or increase the severity of symptoms listed above. Eye contact causes severe irritation. May cause burns. Ingestion can cause irritation, burns to the mouth and throat, low blood pressure, profuse sweating, intense thirst, nausea, abdominal pain, stupor, vomiting, red blood cell damage, and accumulation of fluid in the lungs followed by pneumonia. May also cause restlessness and increased breathing rate followed by rapidly developing muscle weakness. Tremors, convulsions, and coma can promptly set in and will continue until death. Based on animal studies, the estimated lethal dose is between one teaspoon and 1 oz for a 150-lb adult. *p*-isomer: The substance irritates the eyes, the skin and the respiratory tract. The substance may cause effects on the central nervous system and bladder.

Long-Term Exposure: Skin sensitivity may develop. May have effects on the blood, heart, liver, lung, kidney. The state of New Jersey lists the 2-chloro-isomer as probable carcinogen in humans, and that it causes leukemia and soft tissue cancers in humans. Chlorophenols leave the body quickly, so they are not likely to accumulate in the mother's tissues or breast milk. There are no human studies on the effects of chlorophenols on developing fetuses. Studies in rats showed that chlorophenols can pass through the placenta and produce toxic effects to the developing fetuses. The most common problems in children are delayed hardening of the bones of the breastbone, spine, and skull.

Points of Attack: Liver, kidneys. An allergen, may cause skin irritation and sensitization.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver function tests. Kidney function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. EKG. If skin or lung sensitization is suspected, consider evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >5.5 milligram per cubic meter. Use a NIOSH/MSHA (US) or EN149 (Europe)-approved respirator such as a supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a refrigerator or cool, well-ventilated area. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2669 Chlorocresols solution, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3437 Chlorocresols solid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include phosgene, hydrogen chloride, and oxides of carbon. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: A good candidate for rotary kiln incineration at a temperature range of 820 to 1600°C and residence times of seconds for liquids and gases, and hours for solids[179].

Chlorodifluorobromomethane C:0830

Formula: $CBrClF_2$

Synonyms: Bromochloro difluoromethane; Chloro difluorobromomethane; Flugex 12 B1; Fluorocarbon 1211; Freon 12B1; Halon 1211; R12B1

CAS Registry Number: 353-59-3

HSDB Number: 6784 as bromochlorodifluoromethane

RTECS Number: PA5270000

UN/NA & ERG Number: UN1974/126

EC Number: 206-537-9

Regulatory Authority and Advisory Information

Hazard Alert: Frostbite/Cryogenic burn hazard, Asphyxiation hazard, Contains gas under pressure; may explode if heated, Suspected of causing genetic defects, Environmental hazard (ozone layer).

Clean Air Act: Stratospheric ozone protection (Title VI, Subpart A, Appendix A), Class I, Ozone Depletion Potential (ODP) = 3.0

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, CEPA Schedule I Toxic Substances (import/export, manufacturing, and processing restrictions).

Harms public health and the environment by destroying ozone in the upper atmosphere.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xi; risk phrases: R5; R21; R36/37/38; R58/59; R62; safety phrases: S9; S23; S33; S36/37; S38; S39, S57; S59; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): Nonhazard to water.

Description: Chlorodifluorobromomethane is a colorless gas or liquid under pressure. Molecular weight = 165.4; boiling point = −4°C; freezing/melting point = −160.5°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Insoluble in water. The liquefied gas poured into water can be violently explosive.

Potential Exposure: Used as a refrigerant and fire extinguishing agent.

Incompatibilities: The liquefied gas poured into water may be violently explosive. This is due to the phase transition from superheated liquid to vapor[101]. Chlorodifluorobromomethane is generally chemically inert; however, it can react violently with strong reducing agents such as hydrides and highly active metals. It will react with strong oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides strong oxidizing agents. It can also react with weak oxidizers under extreme temperatures[101].

Permissible Exposure Limits in Air

PAC Ver. 29[138]
PAC-1: 13 ppm
PAC-2: 140 ppm
PAC-3: 1400 ppm

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[F]/L; Federal Drinking Water Guide lines: EPA 2000 μg[F]/L; State Drinking Water Standards: California 2000 μg[F]/L; Delaware 2000 μg[Fl]/L; Pennsylvania 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[F]/L; Maine 1680 μg [F]/L. Safe Drinking Water Act: MCL = 4 mg[F]/L; MCLG = 4 mg[F]/L; SMCL = 2 mg/F/L, as Fluoride.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = 2.1$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Chlorodifluorobromomethane can asphyxiate by displacing air. Irritates the eyes and respiratory tract. Contact with the liquid can cause burns and frostbite. Inhalation can cause irregular heartbeat. High exposure can cause dizziness, lightheadedness, and unconsciousness.

Long-Term Exposure: Can affect the heartbeat causing irregular rhythms and skipped beats.

Points of Attack: Heart.

Medical Surveillance: Special 24-hour EKG (Holter monitor) for irregular heartbeat.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/ manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is a potential for overexposure*:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Check oxygen content prior to entering storage area. Nonflammable gas. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure sufficient oxygen (19%) exists. Store in tightly closed containers in a cool, well-ventilated area away from heat and sparks. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN1974 Chlorodifluorobromomethane or Refrigerant gas R-12B1, Hazard Class: 2.2; Labels: 2.2-Nonflammable compressed gas. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: *Gas:* If in a building, evacuate building and confine vapors by closing doors and shutting down HVAC systems. Restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak to disperse the gas. Stop the flow of gas, if it can be done safely from a distance. If source is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place; and repair leak or allow cylinder to empty. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *Liquid:* Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical may burn, but does not readily ignite. Thermal decomposition products may include bromine, chlorine, and fluoride compounds and oxides of carbon; this may include highly dangerous fumes of hydrogen chloride, hydrogen bromide, and HF. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Container may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier.

UN/NA & ERG Number: UN2517/115

EC Number: 200-891-8

Regulatory Authority and Advisory Information

Hazard Alert: Extremely flammable gas, Frostbite/Cryogenic burn hazard, Asphyxiation hazard, Contains gas under pressure; may explode if heated, Possible, axphyxiant, Suspected reprotoxic hazard, Suspected of causing genetic defects; Environmental hazard (ozone layer).

Banned or Severely Restricted in aerosol sprays (UN)[13]

Clean Air Act: Stratospheric ozone protection (Title VI, Subpart A, Appendix B), Class II, Ozone Depletion Potential (ODP) = 0.06

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Harms public health and the environment by destroying ozone in the upper atmosphere.

Hazard symbols, risk, & safety statements: Hazard symbol: F+, T, N, Xi; risk phrases: R5; R12; R21; R58/59; R62; 63; safety phrases: S9; S33; S35; S38; S41; S578; S59; 61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chlorodifluoroethane is a flammable, colorless gas. Nearly odorless. Molecular weight = 100.5; specific gravity (H_2O:1) = 1.21; boiling point = −9.5°C; freezing/melting point = −131°C; flash point = flammable gas; autoignition temperature = 632°C. The explosive limits are: LEL: 6.2%; UEL: 17.9%. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 4, reactivity 0. Practically insoluble in water; solubility = 0.2% @ 5°C. The liquefied gas poured into water can be violently explosive.

Potential Exposure: Chlorodifluoroethane is used in refrigerants; solvents; as a propellant in aerosol sprays; and as an intermediate in the production of highly specialized fluoropolymers[129].

Incompatibilities: The liquefied gas poured into water may be violently explosive. This is due to the phase transition from superheated liquid to vapor[101]. Chlorodifluoroethane is generally chemically inert; however, it can react violently with strong reducing agents such as hydrides and highly active metals. It will react with strong oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides strong oxidizing agents. It can also react with weak oxidizers under extreme temperatures[101]. Decomposes in heat to form phosgene; HF and hydrogen chloride.

Permissible Exposure Limits in Air

PAC* Ver. 29[138]

PAC-1: $\mathbf{10{,}000_E}$ ppm

PAC-2: $\mathbf{15{,}000_E}$ ppm

PAC-3: $\mathbf{25{,}000_E}$ ppm

*ERPG [Emergency Response Planning Guidelines (AIHA)] are marked with a subscript "**E**."

DFG MAK: 1000 ppm/4200 milligram per cubic meter TWA; Peak Limitation II(8); Pregnancy Risk Group D, as 1-Chloro-1,1-difluoroethane (FC-142-b)

Austria: MAK 1000 ppm (4170 milligram per cubic meter), 1999; Hungary: TWA 100 milligram per cubic meter; STEL 200 milligram per cubic meter, 1993; Russia: STEL 3000 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 8380 milligram per cubic meter, 2003

Permissible Concentration in Water: No criteria set.

Determination in Water: Octanol–water coefficient: Log $K_{ow} = 1.6$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Chlorodifluoroethane can affect you when breathed in. Skin contact may cause frostbite. High levels can cause you to feel dizzy, lightheaded, and to pass out. Very high levels could cause death. High exposure could cause irregular heartbeat, which could lead to death.

Short-Term Exposure: Chlorodifluoroethane can affect you when breathed in. High levels can cause you to feel dizzy, lightheaded, and to pass out. Very high levels could cause death. High exposure could cause irregular heartbeat, which could lead to death. Contact with the liquid may cause frostbite.

Long-Term Exposure: Inhalation, rat, lowest published toxic concentration: 1000 ppm/6 hour (3–15 day pregnant) Reproductive: Effects on fertility: Preimplantation mortality (e.g., reduction in number of implants per female; total number of implants per corpora lutea)[165].

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Special 24 hour EKG (halter monitor) to look for irregular heartbeat. Evaluation by a qualified allergist, including careful exposure history and special testing may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash affected parts in warm water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Personal Protective Methods: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear nonvented, impact resistant chemical goggles when working with gas Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in nonroutine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. NIOSH: *(fluorides) 12.5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *25 milligram per cubic meter:* 95XQ (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or SA* (any supplied-air respirator). *62.5 milligram per cubic meter:* Sa:Cf (APF = 25)* (any supplied-air respirator operated in a continuous-flow mode); or*$^{+}$ *if not present as a fume* PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *125 milligram per cubic meter:* HieF^{+} (any air-purifying, full facepiece respirator with a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *250 milligram per cubic meter:* Sa:Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* HieF^{+} (any air-purifying, full facepiece respirator with a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

*Substance reported to cause eye irritation or damage; may require eye protection. *May need acid gas sorbent.

Storage: Check oxygen content prior to entering storage area. Flammable gas. Color code—Red Stripe: Flammability Hazard: Store separately from all other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with Chlorodifluoroethane all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Detached or outside storage is preferred. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN25171-Chloro-1,1-difluoroethane or Refrigerant gas R-142b, Hazard Class: 2.1; Labels: 2.1-Flammable gas. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area for leak until clean-up is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Stop flow of gas. If source of leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place in the open air, and repair leak or allow cylinder to empty. Keep Chlorodifluoroethane out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable gas. Thermal decomposition products may include phosgene, HF, hydrogen chloride, chlorine, and oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier.

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Harms public health and the environment by destroying ozone in the upper atmosphere.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R40; R5; R21; R59; R62; R63; safety phrases: S9; S23; S33; S38; S57; S59; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chlorodifluoromethane is a nonflammable, colorless, nearly odorless gas. Molecular weight = 86.47; specific gravity (H_2O:1) = 1.49; boiling point = −40.7°C; freezing/melting point = −157.42°C; vapor pressure = 9.4 atm @ 20°C; 750 mmHg @ −41.1°C; autoignition temperature = 632°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Soluble in water; solubility = 0.3% @ 25°C. The liquefied gas poured into water can be violently explosive.

Potential Exposure: Chlorodifluoromethane is used as an aerosol propellant, refrigerant, and low-temperature solvent. It is used in the synthesis of polytetrafluoroethylene (PTFE).

Incompatibilities: The liquefied gas poured into water can be violently explosive. This is due to the phase transition from superheated liquid to vapor[101]. Chlorodifluoromethane reacts violently with alkalies and alkaline earth metals; powdered aluminum; sodium, potassium, and zinc; causing fire and explosion hazard. Moisture and rust cause slow decomposition, forming toxic gases. Attacks some plastics, rubber, and coatings. Decomposes in heat forming fumes of chlorine, hydrogen chloride, HF, and phosgene. Attacks magnesium and its alloys.

Permissible Exposure Limits in Air

Conversion factor: 1 ppm = 3.54 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: None

NIO SH REL: 1000 ppm/3500 milligram per cubic meter TWA; 1250 ppm/4375 milligram per cubic meter STEL.

ACGIH TLV[1]: 1000 ppm/3540 milligram per cubic meter TWA, not classifiable as a human carcinogen

PAC Ver. 29[138]

PAC-1: 1250 ppm

PAC-2: 2400 ppm

PAC-3: 14,000 ppm

DFG MAK: 500 ppm/1800 milligram per cubic meter TWA; Peak Limitation Category II(8); Pregnancy Risk Group C

Australia: TWA 1000 ppm (3500 milligram per cubic meter); STEL 1250 ppm, 1993; Austria: MAK 500 ppm (1800 milligram per cubic meter), 1999; Belgium: TWA 1000 ppm (3540 milligram per cubic meter); STEL 1250 ppm, 1993; Denmark: TWA 500 ppm (1770 milligram per cubic meter), 1999; Finland: TWA 1000 ppm (3500 milligram per cubic meter); STEL 1250 ppm, 1999; France: VME 1000 ppm (3500 milligram per cubic meter), 1999; Hungary: TWA 100 milligram per cubic meter; STEL 200 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 3600 milligram per cubic meter, 2003; Norway: TWA 500 ppm (1750 milligram per cubic meter), 1999; Russia: TWA 1000 ppm; STEL 3000 milligram per cubic meter, 1993; Sweden: NGV 500 ppm (1800 milligram per cubic meter), KTV 750 ppm (2500 milligram per cubic meter), 1999; Switzerland: MAK-W 500 ppm (1800 milligram per cubic meter), 1999; United Kingdom: TWA 1000 ppm (3590 milligram per cubic meter), 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for FC-22 in ambient air[60] ranging from 35.0−43.75 milligram per cubic meter (North Dakota) to 58 milligram per cubic meter (Virginia) to 70.0 milligram per cubic meter (Connecticut) to 83.3 milligram per cubic meter (Nevada).

Determination in Air: Charcoal tube[2]; Methylene chloride; GC/Flame ionization detection; NIOSH Analytical Method (IV) #1018.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[F]/L; Federal Drinking Water Guidelines: EPA 2000 μg[F]/L; State Drinking Water Standards: California 2000 μg[F]/L; Delaware 2000 μg[Fl]/L; Pennsylvania 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[F]/L; Maine 1680 μg [F]/L. Safe Drinking Water Act: MCL = 4 mg[F]/L; MCLG = 4 mg[F]/L; SMCL = 2 mg/F/L, as Fluoride.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = 1$. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short-Term Exposure: Chlorodifluoromethane can affect you when breathed in. Inhalation can irritate the respiratory tract causing tightness in the chest and trouble breathing. Exposure can cause headache; nausea; dizziness and weakness; sleepiness; tremors; loss of coordination; cardiac arrythmia (irregular heartbeat); coma, and asphyxiation, which could lead to death. Chlorodifluoromethane can irritate the nose, throat, and skin. It can also cause tightening in the chest and trouble breathing. Skin contact with the liquid can cause frostbite.

Long-Term Exposure: Liver, kidney, spleen injury.

Points of Attack: Respiratory system; cardiovascular system; central nervous system; liver, kidneys, spleen.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Special 24 hour EKG (Holter monitor) to look for irregular heartbeat. Lung, liver, and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Note to physicians: Adrenergic agents are contraindicated.

Personal Protective Methods: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposures over 1000 ppm; Use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Check oxygen content prior to entering storage area. Nonflammable gas. Keep cylinders cool. Prior to working with chlorodifluoromethane all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN1018 Chlorodifluoromethane, Hazard Class: 2.2; Labels: 2.2-Non-flammable compressed gas. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. *Liquid:* allow to evaporate. *Gas:* Stop flow of gas. If source of leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place in the open air, and repair leak or allow cylinder to empty. If liquid or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is nonflammable. The liquefied gas poured into water can be violently explosive. This is due to the phase transition from superheated liquid to vapor[101]. Thermal decomposition products may include HF, hydrogen chloride, phosgene, carbonyl fluoride, chloride and fluoride fumes, and oxides of carbon. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. On contact with fire, this chemical decomposes forming if material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier. Return to vendor or send to licensed waste disposal company[22].

CERCLA: Persons in charge of vessels or facilities are required to notify the National Response Center (NRC) immediately, when there is a release of this designated hazardous substance, in an amount equal to or greater than its RQ of 1000 lb (454 kg).

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1000 lb (454 kg)

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, F, Xn; risk phrases: R11; R19; R20/22; R23/24/25; R36/37/38; R39; R41; R50; safety phrases: S7; S16; S21; S26; S36/37/39; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: 2-Chloroethyl vinyl ether is a highly flammable, colorless liquid. Molecular weight = 106.56; specific gravity (H_2O:1) = 1.05 @ 20°C; boiling point = 108.7°C; freezing/melting point = −70.3°C; vapor pressure = 30 mmHg @ 20°C; flash point = 27°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 3, reactivity 2. Slightly soluble in water.

Potential Exposure: 2-Chloroethyl vinyl ether is used in the manufacture of anesthetics, sedatives, and cellulose ethers. The number of potentially exposed individuals is greatest for the following areas: fabricated metal products; wholesale trade; leather, rubber and plastic; and chemical products.

Incompatibilities: Peroxidizable Compound; may form unstable peroxides that can cause explosive polymerization. Stabilizer: 300 ppm triethanolamine and 50 ppm MEHQ (monomethyl ether of hydroquinone). 2-Chloroethyl vinyl ether forms explosive mixture with air. May accumulate static electrical charges, and may cause ignition of its vapors. Contact with oxidizing materials may cause fire or explosion hazard. Stabilizer: 300 ppm triethanolamine & 50 ppm MEHQ (monomethyl ether of hydroquinone).

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.16 ppm

PAC-2: 1.8 ppm

PAC-3: 11 ppm

Permissible Concentration in Water: State Drinking Water Standards: Florida 1 μg/L. See also CERCLA RQ above.

Determination in Water: Inert gas purge followed by GC with halide specific detection (EPA Method 601) or GC plus mass spectrometry (EPA Method 624).

Routes of Entry: Eye, skin.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with skin or eyes may cause severe irritation. The oral LD_{50} for 2-Chloroethyl vinyl ether in rats is 250 mg/kg (moderately toxic). Primary skin irritation and eye irritation studies have also been conducted for 2-Chloroethyl vinyl ether. Dermal exposure to undiluted 2-chloroethyl vinyl ether did not cause even slight erythema. Application of undiluted 2-Chloroethyl vinyl ether to the eyes of rabbits resulted in severe eye injury.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working

with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where *there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Stabilizer: 300 ppm triethanolamine & 50 ppm MEHQ (monomethyl ether of hydroquinone). Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where 2-chloroethylvinyl ether may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1992 Flammable liquids, toxic, n.o.s., Hazard Class: 3; Labels: 3-Flammable liquid, 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include hydrogen chloride and oxides of carbon. Use dry chemical or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Residues may be packaged in epoxy-lined drums and disposed of by high temperature incineration with HCl scrubbing of effluent gases.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chloroform is a noncombustible, clear, colorless liquid with a pleasant, sweet odor. The Odor Threshold is 12 ppm. Molecular weight = 119.38; specific gravity (H_2O:1) = 1.47; boiling point = 61.1°C; freezing/melting point = −63.4°C; vapor pressure = 75 mmHg @ 4.3°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 1. Soluble in water; solubility 0.5% @ 25°C.

Potential Exposure: Chloroform was one of the earliest general anesthetics, but its use for this purpose has been abandoned because of toxic effects. Chloroform is widely used as a solvent (especially in the lacquer industry); in the extraction and purification of penicillin and other pharmaceuticals; in the manufacture of artificial silk, propellents, plastics, floor polishes, and fluorocarbons (R-22); and in sterilization of catgut. Chemists and support workers as well as hospital workers are believed to be at a higher risk than the general population. Chloroform is widely distributed in the atmosphere and water (including municipal drinking water primarily as a consequence of chlorination). A survey of 80 American cities by EPA found chloroform in every water system in levels ranging from <0.3 to 311 ppb.

Incompatibilities: Though nonflammable, chloroform decomposes to form hydrogen chloride, phosgene, and chlorine upon contact with a flame. Chloroform decomposes slowly in air and light. Reacts violently with strong caustics (bases), strong oxidants, chemically active metals (especially powders), such as aluminum, lithium, magnesium, potassium, and sodium, causing fire and explosion hazard. Attacks plastic, rubber, and coatings. Corrodes iron and other metals in the presence of moisture.

Permissible Exposure Limits in Air

NIOSH IDLH = 500 ppm

OSHA PEL: 50 ppm/240 milligram per cubic meter Ceiling Concentration

NIOSH REL: Carcinogen 2 ppm/9.78 milligram per cubic meter [60 minutes] STEL. NIOSH considers chloroform to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990]. Limit exposure to lowest feasible concentration. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV[1]: 10 ppm/49 milligram per cubic meter TWA; confirmed animal carcinogen with unknown relevance to humans.

PAC* Ver. 29[138]

PAC-1: 2 ppm

PAC-2: $\mathbf{64_A}$ ppm

PAC-3: $\mathbf{3200_A}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

Emergency Response Planning Guidelines (AIHA)

ERPG-1: Inappropriate

ERPG-2: 50 ppm

ERPG-3: 5000 ppm

DFG MAK: 0.5 ppm/2.5 milligram per cubic meter Peak Limitation Category II(2) [skin]; Carcinogen Category 4; Pregnancy Risk Group C

Arab Republic of Egypt: TWA 10 ppm (50 milligram per cubic meter), 1993; Australia: TWA 10 ppm (50 milligram per cubic meter), carcinogen, 1993; Austria: MAK 10 ppm (50 milligram per cubic meter), Suspected: carcinogen, 1999; Belgium: TWA 10 ppm (49 milligram per cubic meter), Carcinogen 1993; Denmark: TWA 2 ppm (10 milligram per cubic meter), 1999; Finland: TWA 10 ppm (50 milligram per cubic meter); STEL 20 ppm [skin] carcinogen, 1999; France: VME 5 ppm (25 milligram per cubic meter), VLE 50 ppm (250 milligram per cubic meter), carcinogen, 1999; the Netherlands: MAC-TGG 5 milligram per cubic meter, 2003; India: TWA 10 ppm (50 milligram per cubic meter), carcinogen, 1993; Japan: Occupational Exposure Limit 10 ppm (49 milligram per cubic meter), 2B carcinogen, 1999; Norway: TWA 2 ppm (10 milligram per cubic meter), 1999; the Philippines: TWA 50 ppm (240 milligram per cubic meter), 1993; Poland: MAC (TWA) 50 milligram per cubic meter, MAC (STEL) 225 milligram per cubic meter, 1999; Russia: TWA 50 ppm, 1993; Sweden: NGV 2 ppm (10 milligram per cubic meter), KTV 5 ppm (25 milligram per cubic meter), carcinogen, 1999; Switzerland: MAK-W 10 ppm (50 milligram per cubic meter), KZG-W 20 ppm (100 milligram per cubic meter), 1999; Thailand: TWA 50 ppm (240 milligram per cubic meter), 1993; Turkey: TWA 50 ppm (240 milligram per cubic meter), 1993; United Kingdom: TWA 2 ppm (9.9 milligram per cubic meter) [skin] 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea: ACGIH TLV: confirmed animal carcinogen with unknown relevance to humans.

Russia set a MAC for ambient air in residential areas of 0.3 milligram per cubic meter. Several states have set guidelines or standards for chloroform in ambient air[60] ranging from 0 (North Dakota) to 0.04 μ/m^3 (Michigan and Rhode Island) to 0.43 μ/m^3 (Massachusetts and North Carolina) to 120 μ/m^3 (Pennsylvania) to 167 μ/m^3 (New York) to 250 μ/m^3 (Connecticut and South Carolina) to 500 μ/m^3 (Virginia) to 1190 μ/m^3 (Nevada) to 1200 μ/m^3 (Indiana).

Determination in Air: Charcoal adsorption, workup with CS_2, analysis by GC. See OSHA Analytical Method 5 and NIOSH Analytical Method #1003 for Hydrocarbons, halogenated, or OSHA Analytical Method 7.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 80 μg/L; Federal Drinking Water Guide lines: 70 μg/L; State Drinking Water Guidelines: Arizona 0.49 μg/L; Florida 6 μg/L; Massachusetts 70 μg/L; Maine 70 μg/L; Minnesota 30 μg/L; New Hampshire 70 μg/L; Wisconsin 6 μg/L.

Determination in Water: GC (EPA Method 601) or GC plus mass spectrometry (EPA Method 624). Octanol–water coefficient: Log $K_{ow} = 2.1$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation of vapors, ingestion; skin and eye contact. This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Chloroform irritates the eyes and contact can cause tearing, conjunctivitis, and permanent eye damage. Symptoms of acute chloroform exposure include fainting sensation; vomiting, dizziness, salivation, nausea, fatigue, and headache. Other symptoms are respiratory depression, coma, kidney damage, and liver damage. Chloroform is classified as moderately toxic. Probable oral lethal dose for humans is 0.5–5 g/kg (between 1 oz and 1 pt) for a 150-lb person. The mean lethal dose is probably near 1 fluid oz (44 g). It is a human suspected carcinogen. Also, it is a central nervous system depressant and a gastrointestinal irritant. It has caused rapid death attributable to cardiac arrest and delayed death from liver and kidney damage. A delayed reaction to high levels of chloroform or from administration of anesthetic to some individuals can develop in 3–5 days, causing drowsiness, nausea, and vomiting; kidney and liver damage; urine may contain acetone and bile pigmentation.

Long-Term Exposure: Symptoms of chronic exposure include loss of appetite; hallucinations, moodiness, and physical and mental sluggishness. Repeated or prolonged contact with skin may cause skin drying, cracking and dermatitis. May cause heart, thyroid, liver, and kidney damage. This substance is possibly carcinogenic to humans. It has been shown to cause liver, kidney, and thyroid cancer in animals. There is evidence that chloroform is a teratogen in animals.

Points of Attack: Liver, kidneys, heart, eyes, skin, central nervous system.

Medical Surveillance: Preplacement and periodic examinations should include appropriate tests for thyroid, liver, and kidney functions, and special attention should be given to the nervous system; the skin, and to any history of alcoholism. Expired air and blood levels may be useful in estimating levels of acute exposure. Special 24 hour (Holter monitor) to detect irregular heartbeat.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): polyvinyl alcohol gloves; Viton gloves, suits; 4H and Silver Shield gloves; Barricade-coated suits; Responder suits, Trellchem HPS suits; Trychem 1000 suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Teflon gloves, suits, boots safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Polyvinyl chloride, Teflon, polyurethane and VITON/chlorobutyl have been recommended as protective materials in the literature. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chloroform, all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed dark bottles or cans in a cool, well-ventilated area.

Shipping: UN1888 Chloroform, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Stay upwind; keep out of low areas. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. *Small spills*: absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. *Large spills*: dike far ahead of spill for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible liquid. Use any extinguishing agents. Thermal decomposition products may include hydrogen chloride, phosgene, and chlorine. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel. Care must be exercised to assure complete combustion to prevent the formation of phosgene. An acid scrubber is necessary to remove the halo acids produced[22].

Where possible it should be recovered, purified by distillation, and returned to the supplier.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to waters (*87-60-5 and 95-74-9 & 95-69-2*)

Description: The chloromethylanilines are colorless or white crystalline solids or liquids, some have a mild fishy odor. Molecular weight (all isomers) = 141.61. Hazard identification (based on NFPA-704 M Rating System): *(87-60-5)* Health 2, flammability 1, reactivity 0. All are soluble in water; and include the following data:

Isomer	***Melting Point (°C)***	***Boiling Point (°C)***	***Flash Point (°C)***
3-chloro-o-	245	>113	
4-chloro-o-	29	241	100
5-chloro-o-	26	237	160
6-chloro-o-	–	–	99
2-chloro-p-(liq.)	7	257	99
3-chloro-p-	26	238	100
2-chloro-5-	–	–	107

Potential Exposure: Most of the isomers are used in dyestuff manufacture. The 3-chloro-*para* isomer is used to kill birds. It is marketed as pelleted bait for control of bird populations.

Incompatibilities: Incompatible with oxidizers, strong acids; chloroformates, and acid anhydrides, isocyanates, aldehydes forming fire and explosive hazards.

Permissible Exposure Limits in Air

4-chloro-o-toluidine [95-69-2]

No PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

DFG MAK: [skin] Carcinogen Category 1; Germ Cell Mutation Category 3A

5-chloro-o-toluidine [95-79-4]

No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

DFG MAK: Carcinogen Category 3B

Routes of Entry: Inhalation, skin contact, ingestion. These chemicals can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Chloromethyl anilines can affect you when breathed in and by passing through your skin. Eye contact causes irritation and can lead to permanent damage. Skin contact can cause a rash and produce a burning feeling. Exposure can lower the ability of the blood to carry oxygen (methemoglobinemia) causing a bluish color of the skin, headaches, dizziness, nausea, and even death. They can damage the kidneys and bladder; causing painful, bloody urine.

Long-Term Exposure: The methemoglobinemia condition described above may occur gradually from repeated exposure or all at once. Some of these chemicals like 4-chloro-2-methyl aniline and 5-chloro-2-methyl aniline are probable carcinogens in humans; they cause bladder and liver cancer in animals.

Points of Attack: Eyes, skin, kidneys, bladder, liver.

Medical Surveillance: If symptoms develop or overexposure has occurred, the following may be useful: Blood tests for methemoglobin levels. Kidney function tests. Urine tests for blood, and for *n*-acetyl *p*-amino phenol.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to Physician: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids or solids wear indirect-vent, impact-resistant chemical goggles, and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposure to chloromethyl anilines, use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with a high-efficiency particulate filter. Greater protection is provided by a PAPR.

Where there is potential for high exposure to 3-chloro-2-methyl Aniline exists, or to liquid form use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chloromethyl anilines all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Sources of ignition, such as smoking and open flames, are prohibited where Choromethyl Anilines are handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2239 Chlorotoluidines, solid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3429 Chlorotoluidines, liquid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials

Spill Handling: *Liquid:* Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to cleanup spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Solid: Evacuate persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: These chemicals may burn, but according the state of New Jersey, do not readily ignite. Use dry chemical or carbon dioxide extinguishers. Thermal decomposition products may include chlorine, hydrogen chloride, nitrogen oxides; and carbon monoxide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazard symbols, risk, & safety statements: Hazard symbol: F+, T; risk phrases: R45; R11; R19; R20/21/22; R50/53; R63; safety phrases: S1; S21; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Chloromethyl methyl ether is a volatile, highly flammable, corrosive liquid with an ethereal odor. Molecular weight = 80.50; specific gravity (H_2O:1) = 1.06; boiling point = 58.8°C; freezing/melting point = −103.3°C; vapor pressure = 192 mmHg @ 20°C; flash point = −17.8°C[ICSC]. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 3, reactivity 2₩. Reacts with water, forming corrosive and toxic hydrochloric acid and formaldehyde. Commercial chloromethyl methyl ether contains from 1% to 7% *bis(chloromethyl)ether*, a known cause of lung cancer in humans.

Potential Exposure: Chloromethyl. methyl ether is a highly reactive methylating agent and is used in the chemical industry for synthesis of organic chemicals. Most industrial operations are carried out in closed process vessels so that exposure is minimized.

Incompatibilities: May form explosive mixture with air. May be able to form unstable and explosive peroxides on contact with oxygen. Contact with (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Decomposes on contact with water, forming hydrochloric acid and formaldehyde. Attacks various metals in presence of water.

Permissible Exposure Limits in Air

OSHA PEL: One of the thirteen OSHA-Regulated Carcinogens. A full OSHA Standard [1910.1006] has been adopted for this substance. See Code of Federal Regulations (CFR) 29,1926.1108

NIOSH REL: Potential Occupational Carcinogen

ACGIH TLV[1]: A2, Suspected Human Carcinogen.

PAC* Ver. 29[138]

PAC-1: 0.043 ppm

PAC-2: $\mathbf{0.47_A}$ ppm

PAC-3: $\mathbf{2.0_A}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

DFG MAK: Carcinogen Category 1, Confirmed Human Carcinogen

Australia: carcinogen, 1993; Austria: carcinogen, 1999; Belgium: carcinogen, 1993; Finland: carcinogen, 1999; France: carcinogen, 1993; Russia: STEL 0.5 milligram per cubic meter [skin], 1993; Sweden: carcinogen, 1999; Switzerland: carcinogen, 1999; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: Suspected Human Carcinogen. the Czech Republic has set a TWA of 0.003 milligram per cubic meter[35]. Alberta, Canada set an airborne exposure limit of 0.005 ppm TWA and STEL of 0.015 ppm. Several states have set guidelines or standards for CMME in ambient air[60] ranging from 0 (North Dakota) to 0.02 ppb (Pennsylvania) to 0.03 μ/m^3 (New York) to 3.0 μ/m^3 (Virginia).

Determination in Air: See NIOSH II[1] P&CAM Method #220 or OSHA Analytical Method 10.

Permissible Concentration in Water: No criteria have been set for the protection of freshwater or saltwater aquatic life due to lack of data. For the protection of human health: preferably zero[6].

Routes of Entry: Inhalation of vapor and possibly percutaneous absorption; and ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Corrosive to the eyes, skin, and respiratory tract. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Symptoms of exposure include sore throat, coughing; shortness of breath; fever; chills, difficulty in breathing; bronchial secretions from pulmonary edema. The liquid causes severe irritation of eyes and skin; and vapor exposure of 100 ppm is severely irritating to eyes and nose. This level is dangerous to life in 4 hours. Due to an increased death rate from respiratory cancer among exposed victims, it is a regulated carcinogen.

Long-Term Exposure: There is evidence that this chemical caused lung cancer in humans, and has caused skin and lung cancer in animals. Lungs may be affected by repeated or prolonged exposure causing bronchitis with cough, phlegm, and/or shortness of breath.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: Preplacement and periodic medical examinations should include an examination of the skin and respiratory tract, including lung function tests and chest X-ray. Sputum cytology has been suggested as helpful in detecting early malignant changes; and in this connection a detailed smoking history is of importance. Possible effects on the fetus should be considered. Factors of increased risk: reduced immunologic competence, steroid treatment, pregnancy, cigarette smoking.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Those designed to supplement engineering controls and to prevent all skin or respiratory contact. Prevent skin contact. **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm²/min): Teflon gloves, suits, boots. Full body protective clothing and gloves should be used on entering areas of partial exposure. Those employed in handling operations should be provided with full-face, supplied-air respirators of continuous-flow or pressure-demand type. On exit from a regulated area, employees should be required to remove and leave protective clothing and equipment at the point of exit, to be placed in impervious containers as the end of the work-shift for decontamination or disposal. Showers should be taken prior to dressing in street clothes.

Respirator Selection: NIOSH: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with chloromethyl methyl ether, all handlers should be trained on its proper handling and storage. Before entering confined space where chloromethyl methyl ether may be present, check to make sure that an explosive concentration does not exist. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1239 Methyl chloromethyl ether, Hazard class: 6.1; Labels: 6.1-Poison Inhalation Hazard, 3-Flammable liquid, Inhalation Hazard Zone A. PGI.

Spill Handling:

Methyl chloromethyl ether

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.7/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.9/4.6

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Small spill: absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Large spill: dike far ahead of *large spills* for later disposal. Flood with water. Rinse with sodium bicarbonate or lime solution. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chloromethyl methyl ether is a highly flammable liquid. Thermal decomposition products may include hydrogen chloride. *Do not use water* or water based extinguishers. Use dry chemical, carbon dioxide; aFFF. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel. Care must be exercised to assure complete combustion to prevent the formation of phosgene. An acid scrubber is necessary to remove the halo acids produced[22].

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Human Limited Evidence, animal Inadequate Evidence, possibly carcinogenic to humans, *possibly carcinogenic to humans*, Group 2B, 1987.

Hazard Alert: Poison, Possible risk of forming tumors, Suspected of causing genetic defects, Suspected reprotoxic hazard.

United States Environmental Protection Agency, FIFRA 1998 Status of Pesticides: Unsupported

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N; risk phrases: R22; R38; R41; R50/53; R62; R63; safety phrases: S2; S13; S26; S37/39; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Mecoprop is a colorless, crystalline solid. Odorless. Molecular weight = 214.64. melting/freezing point = 93–95°C. Vapor pressure = $< 9.9 \times 10^{-6}$ mmHg @ 20°C. Slightly soluble in water; solubility = < 650 ppm @ 20°C.

Potential Exposure: It is a chlorophenoxy-herbicide, used to control many broadleaf weeds. A derivative of phenoxy aryloxyalkanoic acid.

Incompatibilities: A weak acid. Incompatible with strong bases and oxidizers.

Permissible Exposure Limits in Air This chemical can be absorbed through the skin, thereby increasing exposure.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Contact irritates the eyes and skin. Irritates the respiratory tract. Exposure can cause headache, weakness, convulsions, muscle cramps; loss of coordination; unconsciousness, and death.

Long-Term Exposure: There is limited evidence that the chemical affects human reproduction. Exposure may damage blood cells, causing anemia, and damage the kidneys. Although this chemical has not been identified as a carcinogen, several related compounds have shown limited evidence of cancer.

Points of Attack: Blood, kidney, nervous system.

Medical Surveillance: Examination of the nervous system. CBC. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is a potential for overexposure: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and strong bases.

Shipping: UN3345 Phenoxyacetic acid derivative pesticide, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; alcohol, or polymer foam extinguishers. Thermal decomposition products may include oxides of carbon and hydrogen chloride. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chloromethyl Phenyl Isocyanate C:0910

Formula: C_8H_6ClNO; $OCN\text{-}C_6H_3AClACH_3$

Synonyms: 3-Chloro-4-methylphenyl isocyanate; Isocyanic acid, 3-chloro-*p*-tolyl ester

CAS Registry Number: 28479-22-3; *(alt.)* 51488-20-1

RTECS Number: NQ8585000

UN/NA & ERG Number: UN2236/156

EC No: 249-050-7

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Water reactive (may be violent), Sensitization hazard (skin, resp.).

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, Xi; risk phrases: R14/15; R20/21/22; R36/37/38; R42/43; safety phrases: S23; S26; S27; S36/37/39; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chloromethyl phenyl isocyanate is a colorless to yellow liquid or beige, low-melting solid. Acrid odor. Molecular weight = 167.59; freezing/melting point = 143°C; vapor pressure = very low; flash point = > 93°C. Soluble in water; solubility = 33 mg/L @ 25°C. ₩ Insoluble in water, may release flammable gases.

Potential Exposure: This material is used in organic synthesis.

Incompatibilities: May form explosive mixture with air. Isocyanates are highly flammable and reactive with many compounds, even with themselves. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Reaction with moist air, water or alcohols may form amines and insoluble polyureas and react exothermically, releasing toxic, corrosive, or flammable gases, including carbon dioxide; and, at the same time, may generate a violent release of heat increasing the concentration of fumes in the air. Incompatible with amines, aldehydes, alkali metals, ammonia, carboxylic acids, caprolactum, alkaline materials, glycols, ketones, mercaptans, hydrides, organotin catalysts, phenols, strong acids, strong bases, strong reducing agents such as hydrides, urethanes, ureas. Elevated temperatures or contact with acids, bases, tertiary amines, and acyl-chlorides may cause explosive polymerization. Attacks some plastics, rubber, and coatings. Contact with metals may evolve flammable hydrogen gas. May accumulate static electrical charges, and may cause ignition of its vapors. Do not store in temperatures above 30°C/86°F.

Permissible Exposure Limits in Air

PAC Ver. 28, no values in Ver. 29[138]

Isocyanate-bearing waste (as CNs, n.o.s.)

PAC-1: 6 milligram per cubic meter

PAC-2: 8.3 milligram per cubic meter

PAC-3: 50 milligram per cubic meter

cyanate-bearing waste (as CNs, n.o.s.)

PAC-1: 8.3 milligram per cubic meter

PAC-2: 8.3 milligram per cubic meter

PAC-3: 50 milligram per cubic meter

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: 3-Chloro-4-methylphenyl isocyanate can affect you when breathed in. Organic isocyanates can irritate the eyes, skin, and respiratory tract and may cause lung allergies. May cause respiratory irritation. Isocyanate-bearing waste can cause chronic skin effects, including dermatitis and sensitization.

Long-Term Exposure: Although the long-term effects of this chemical are unknown, many isocyanates cause allergic reactions and asthma-like allergy.

Points of Attack: Respiratory system.

Medical Surveillance: For those with frequent or potentially high exposure, the following are recommended before beginning work and at regular times after that. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. These may be normal if the person is not having an attack at the time of the test.

First Aid: If 3-Chloro-4-methylphenyl isocyanate gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure to 3-Chloro-4-methylphenyl isocyanate, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Do not store in temperatures above 30°C/86°F. Prior to working with 3-chloro-4-methylphenyl isocyanate all handlers should be trained on its proper handling and storage. 3-Chloro-4-methylphenyl isocyanate must be stored to avoid contact with acids (such as hydrochloric and nitric); alkalis (such as sodium hydroxide and potassium hydroxide); and amines (like ammonia), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat, light and moisture. Do not store at temperatures above 30°C/86/F. Sources of ignition, such as smoking and open flames are prohibited where 3-Chloro-4-Methyl Phenyl Isocyanate is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN22363-Chloro-4-methylphenyl isocyanate, liquid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Stay upwind and uphill. Isolate the area of release or fire and deny entry. Remove all ignition sources. Stop the release if it can be done safely from a distance. All equipment used to handle this material must be grounded. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. *Small spill*: Cover with *dry* earth, *dry* sand, or other noncombustible material followed with plastic sheet to minimize spreading or contact with water or rain. Use clean nonsparking tools to collect material and place material into loosely covered plastic containers for later disposal. Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release. Use vapor suppressing foam to disperse vapors—contain runoff. Water spray may reduce vapor, but may not prevent ignition in enclosed spaces. Ventilate confined area if it can be done without placing personnel at risk. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen cyanide, nitrogen oxides, and hydrogen chloride. *Small fire*: use *dry* chemical, CO_2, *dry* sand, or alcohol-resistant foam. May react with foams releasing corrosive/toxic gases. *Large fire*: use water spray or alcohol-resistant foam if it is available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning liquid. Combustible material: may burn but does not ignite readily. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapors may travel to source of ignition and flashback. Containers may explode when heated or if contaminated with water. Keep exposures cool long after fire is out to protect against re ignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. *Do not get water on spilled substance or inside containers*. If cooling streams are ineffective (*venting sound increases in volume and pitch, tank discolors, or shows signs of deforming*), withdraw immediately to a secure location. Always stay away from ends of tanks, especially when engulfed in flames. If material or contaminated runoff from fire control enters waterways, notify downstream users of potentially contaminated water. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* 3-Chloro-4-Methyl Phenyl Isocyanate, Trenton, NJ (April 1997).

Chloroneb C:0915

Formula: $C_8H_8Cl_2O_2$

Synonyms: Benzene, 1,4-dichloro-2,5-dimethoxy-; 1,4-Dichloro-2,5-dimethoxybenzene;Chloraxyl seed treater; Delta-coat II; Demosan; Soil fungicide-1823; Tersan SP; Terraneb SP

CAS Number: 2675-77-6

HSDB Number: 1542

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171; UN2761/151 (organochlorine pesticide, solid, toxic)

RTECS Number: CZ4750000

EC Number: 220-222-3

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Suspected reprotoxic hazard, Agricultural chemical.

Description: Colorless crystalline solid. Musty odor. Molecular weight = 207.06; specific gravity (H_2O:1) = 1.66; boiling point = 268°C; freezing/melting point = 133−135°C; vapor pressure = 3×10^{-3} mmHg. @ 20°C. Low solubility in water.

Potential Exposure: An organochlorine/substituted benzene systemic fungicide used to control snow mold on turf grass; used on cotton, sugar beets and bean seeds to control seedling disease. Not approved for use in EU countries.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Exposure Limits in Air: No standards established.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 91 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = > 3.4$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Very low—530.91122 ppb, MATC.

Harmful Effects and Symptoms

Short-Term Exposure: Overexposure symptoms include apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death. LD_{50} (oral, rat) $= >$ 11 g/kg; LD_{50} (dermal, rat) $= >$ 5 g/kg.

Long-Term Exposure: May cause reproductive and fetal effects. Human toxicity (long term)[101]: Low—91.00 ppb, Health advisory.

Points of Attack: Reproductive system/cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a drug or other inhalation therapy. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. **Do not scrub skin or hair**, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do not induce vomiting.* * In cases of ingestion, the patient is at risk of central nervous system depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and able to swallow, *administer an aqueous slurry of activated charcoal at 1 g/kg (usual adult dose 60−90 g, child dose 25−50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organo chlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by Poison Control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do not give activated charcoal before or with ipecac syrup. Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. At minimum, use Tyvek-type disposable material. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149. Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e., organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color code—Blue: Health Hazard/Poison. Store under ambient temperatures in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Keep away from all mineral acids and bases. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72].

Shipping: UN2761 Organochlorine pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 m/75 ft. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. This chemical is probably combustible. Should a spill occur while you are handling this chemical, *first remove all sources of ignition*, then you should dampen the solid spill material with 60–70% ethanol and transfer the dampened material to a suitable container. Use absorbent paper dampened with 60%–70% ethanol to pick up any remaining material. Seal the absorbent paper, and any of your clothes, which may be contaminated, in a vapor-tight plastic bag for eventual disposal. Solvent wash all contaminated surfaces with 60%–70% ethanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Thermal decomposition products may include toxic hydrogen chloride gas. Fires involving this material can be controlled with a dry chemical, carbon dioxide or alcohol-resistant foam extinguisher. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks: Isolate* for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

1-Chloro-1-Nitropropane C:0920

Formula: $C_3H_6ClNO_2$: $C_2H_5CHClNO_2$

Synonyms: 1,1-Chloronitropropane; Chloronitropropane; 1-Chloro-1-nitropropano (Spanish); Korax; Korax 6; Lanstan; Propane, 1-chloro-1-nitro-

CAS Registry Number: 600-25-9

HSDB Number: 1543

RTECS Number: TX5075000

UN/NA & ERG Number: UN2810 (toxic liquid, organic, n.o.s.)/153

EC Number: 209-990-0 [*Annex I Index No.*: 610-007-00-6]

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Highly flammable, Suspected reprotoxic hazard.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, F, Xn; risk phrases: R11; R22; R23/24/25; R36/37/38; R39; safety phrases: S7; S16; S21; S26; S36/37; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)]

Description: Chloronitroproane is a flammable, colorless liquid with an unpleasant odor that causes tears (lachrymator). Molecular weight = 123.5; specific gravity (H_2O:1) = 1.2; boiling point = 142.7°C; vapor pressure = 6 mmHg @ 25°C; flash point = 62°C (oc). Hazard identification (based on NFPA-704 M Rating System): Health (unknown), flammability 3, reactivity 2. Slightly soluble in water; solubility = 0.6% @ 20°C.

Potential Exposure: This compound is used in the synthetic rubber industry; as a component in rubber cements; and as a fungicide.

Incompatibilities: May form explosive mixture with air. Strong oxidizers may cause a fire and explosion hazard. May explode when exposed to heat.

Permissible Exposure Limits in Air
NIOSH IDLH = 100 ppm
OSHA PEL: 20 ppm/100 milligram per cubic meter TWA
NIOSH REL: 2 ppm/10 milligram per cubic meter TWA
ACGIH TLV[1]: 2 ppm/10 milligram per cubic meter TWA
No PAC available.

Australia: TWA 2 ppm (10 milligram per cubic meter), 1993; Austria: MAK 20 ppm (100 milligram per cubic meter), 1999; Belgium: TWA 2 ppm (10 milligram per cubic meter), 1993; Denmark: TWA 2 ppm (10 milligram per cubic meter), 1999; Finland: TWA 20 ppm (100 milligram per cubic meter); STEL 30 ppm (150 milligram per cubic meter), 1999; France: VME 2 ppm (10 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 10 milligram per cubic meter, 2003; the Philippines: TWA 20 ppm (100 milligram per cubic meter), 1993; Poland: MAC (TWA) 50 milligram per cubic meter, 1999; Switzerland: MAK-W 2 ppm (10 milligram per cubic meter), 1999; Turkey: TWA 20 ppm (100 milligram per cubic meter), 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 2 ppm. Several states have set guidelines or standards for chloronitropropane in ambient air[60] ranging from 10 μ/m^3 (North Dakota) to 150 μ/m^3 (Virginia) to 200 μ/m^3 (Connecticut) to 238 μ/m^3 (Nevada).

Determination in Air: Chromosorb tube-108; Ethyl acetate; GC/Flame ionization detection; See NIOSH II(5) Method #S-211.

Routes of Entry: Inhalation, ingestion; skin and eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: 1-Chloro-1-nitropropane can affect you when breathed in. Exposure can irritate and burn the eyes, skin, and cause respiratory tract irritation with coughing and/or shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort.

Long-Term Exposure: May cause damage to the heart, liver, and kidneys. Similar irritating substances can cause lung injury and bronchitis.

Points of Attack: In animals: respiratory system, lungs, liver, kidneys, cardiovascular system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. EKG. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Liver and kidney function tests. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: *20 ppm:* Sa* (APF = 10) (any supplied-air respirator); *50 ppm:* Sa:Cf* (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv* (APF = 25) [any powered, APR with organic vapor cartridge(s)].* *100 ppm:* CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or PaprTOv* (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s)]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

* Substance reported to cause eye irritation or damage; requires eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with 1-chloro-1-nitropropane all handlers should be trained on its proper handling and storage. Before entering confined space where 1-chloro-1-nitropropane may be present, check to make sure that an explosive concentration does not exist. Store to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2810 Toxic liquids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling:

Toxic liquids, organic, n.o.s.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.7/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 1000/300
Then: Protect persons downwind (mi/km)
Day 1.1/1.8
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is flammable. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration (816°C, 0.5-second minimum for primary combustion; 1204°C, 1.0 second for secondary combustion) after mixing with other fuel. The formation of elemental chlorine may be prevented by injection of steam or using methane as a fuel in the process. Alternatively it may be poured over soda ash, neutralized and flushed into the sewer with large volumes of water.

RTECS Number: KH7877500

UN/NA & ERG Number: UN1020/126

EC Number: 200-938-2

Regulatory Authority and Advisory Information

Hazard Alert: Frostbite/Cryogenic burn hazard, Asphyxiation hazard, Contains gas under pressure; may explode if heated, Environmental hazard (atmospheric).

Clean Air Act: Stratospheric ozone protection (Title VI, Subpart A, Appendix A), Class I, Ozone Depletion Potential (ODP) = 0.6

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Harms public health and the environment by destroying ozone in the upper atmosphere.

Hazard symbols, risk, & safety statements: Hazard symbol: Xi, N; risk phrases: R5; R21; R36/37/38; safety phrases: S9; S33; S38; S57; S59; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chloropentafluoroethane is a colorless, odorless, nonflammable gas. Ethereal odor. Shipped as a liquefied compressed gas. Molecular weight = 154.47; specific gravity (H_2O:1) = 1.57 @ −42°C; boiling point = −37.7°C; freezing/melting point = −106°C; vapor pressure = 7.9 atm @ 21°C; 6035 mmHg @ 21°C; relative vapor density (air = 1) = 5.28. Practically insoluble in water; solubility 0.006% @ 20°C.

Potential Exposure: This material is used as a refrigerant; as a dielectric gas; and as a propellant in aerosol food preparations.

Incompatibilities: Keep away from strong oxidizers, strong bases (alkalis), alkaline earth metals (e.g., aluminum powder, sodium, potassium, zinc), and beryllium. Keep away from open flames; decomposes forming toxic fumes including hydrogen chloride and HF.

Permissible Exposure Limits in Air

Conversion factor: 1 ppm = 6.32 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: None

NIOSH REL: 1000 ppm/6320 milligram per cubic meter TWA

ACGIH TLV[1]: 1000 ppm/6320 milligram per cubic meter TWA

PAC Ver. 29[138]

PAC-1: 3000 ppm

PAC-2: 5700 ppm

PAC-3: 34,000 ppm

Australia: TWA 1000 ppm (6320 milligram per cubic meter), 1993; Belgium: TWA 1000 ppm (6320 milligram per cubic meter), 1993; Denmark: TWA 1000 ppm (6300 milligram per cubic meter), 1999; France: VME 1000 ppm (6320 milligram per cubic meter), 1999; Hungary: TWA 100 milligram per cubic meter; STEL 200 milligram per cubic meter, 1993; Russia: STEL 3000 milligram per cubic meter, 1993; Switzerland: MAK-W 1000 ppm (6400 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 6460 milligram per cubic meter, 2003; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 1000 ppm. The former USSR-UNEP/IRPTC joint project[43] set a MAC in work-place air of 3000 milligram per cubic meter. Several states have set guidelines or standards for FC-115 in ambient air[60] ranging from 0.1264 μ/m^3 (Connecticut) to 9999 μ/m^3 (Virginia) to 63,200 μ/m^3 (North Dakota) to 151,000 μ/m^3 (Nevada).

Determination in Air: No method available.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[F]/L; Federal Drinking Water Guide lines: EPA 2000 μg[F]/L; State Drinking Water Standards: California 2000 μg[F]/L; Delaware 2000 μg[Fl]/L; Pennsylvania 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[F]/L; Maine 1680 μg [F]/L. SafeDrinking Water Act: MCL = 4 mg[F]/L; MCLG = 4 mg[F]/L; SMCL = 2 mg/F/L, as Fluoride.

Determination in Water: Octanol−water coefficient: Log K_{ow} = 2.4. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Chloropentafluoroethane can affect you when breathed in. Irritates the nose, throat, and lungs, causing coughing, chest tightness, wheezing, and shortness of breath. High levels can cause you to feel dizzy, lightheaded, and to pass out. Very high levels can cause death. Chloropentafluoroethane may irritate the skin causing a rash or burning feeling on contact. Exposure may affect the heart, causing irregular heartbeat, which could lead to death. Rapid evaporation of liquid chloropentafluoroethane may cause frostbite of the eyes and skin.

Long-Term Exposure: Similar very irritating substances can cause lung damage.

Points of Attack: Skin, central nervous system; cardiovascular system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Special 24 hour EKG (Holter monitor) to look for irregular heartbeat. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Personal Protective Methods: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposures over 1000 ppm; Use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Check oxygen content prior to entering storage area. Prior to working with chloropentafluoroethane all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from metals, including aluminum, zinc, and beryllium; and from open flames or temperatures above 52°C/125°F. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN1020 Chloropentafluoroethane or Refrigerant gas R-115, Hazard Class: 2.2; Labels: 2.2-Nonflammable compressed gas. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak to disperse the gas. Stop the flow of gas if it can be done safely. If source is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place; and repair leak or allow cylinder to empty. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. If employees are required to cleanup spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include fluorides, chlorides, phosgene, and acid gases. Use dry chemical or carbon dioxide extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier.

EC Number: 223-003-0 [*Annex I Index No.:* 606-014-00-9]

Regulatory Authority and Advisory Information

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R23; R27/28; R48/24/25; R50/53; safety phrases: S1/2; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Chlorophacinone is a highly toxic crystalline solid. Molecular weight = 374.83; freezing/melting point = 140°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0.

Potential Exposure: Agricultural Chemical. This material is an anticoagulant rodenticide. A potential danger to those involved in its manufacture, formulation, and application are at risk.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.0047 milligram per cubic meter

PAC-2: 0.051 milligram per cubic meter

PAC-3: 0.31 milligram per cubic meter

Permissible Concentration in Water: No criteria set. Fish Tox (ppb): 27.64016000 MATC.

Routes of Entry: Ingestion and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact may cause burns to skin and eyes. Symptoms of exposure are similar to those of warfarin. Symptoms develop after a few days or a few weeks of repeated ingestion and include nosebleed and bleeding gums; pallor and sometimes a rash; massive bruises, especially of the elbow, knees, and buttocks; blood in urine and feces; occasionally paralysis from cerebral hemorrhage; and hemorrhagic shock and death. Chlorophacinone is highly toxicorally and by skin adsorption. The probable oral lethal dose for humans is less than 5 mg/kg to 50 mg/kg, or between a taste (less than 7 drops) and 1 teaspoonful for a 150-lb (70 kg) person. LD_{50} (oral-rat) ≥ 5000 mg/kg; (oral-mouse) 1.06 mg/kg. Human Tox (ppb): 0.03500 (extra high).

Long-Term Exposure: See above.

Points of Attack: Blood, cardiovascular system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3027 Coumarin derivative pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Small fires: dry chemicals, carbon dioxide; water spray or foam. *Large fires:* water spray, fog, or foam. Move container form fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. Thermal decomposition products may include hydrogen chloride and oxides of carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration at high temperature with effluent gas scrubbing[22].

Description: All isomers have a characteristic odor. Molecular weight (all isomers) = 128.56

m-isomer

Colorless (in pure state) to pink or amber (technical grade, due to impurities) crystalline solid or liquid. Specific gravity (H_2O:1) = 1.245; boiling point = 214°C; freezing/melting point = 32.8°C; vapor pressure = 5 mmHg @ 70°C; 1 mmHg @ 44.2°C; flash point = > 112°C. Solubility in water = 2.6%−2.8.5% @ 20°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0.

o-isomer

White crystalline (needle-like) solid. Specific gravity (H_2O:1) = 1.26 @ 20°C; boiling point = 175.6°C; freezing/melting point = 9.4°C; vapor pressure = 7.5 mmHg @ 45.8°C; relative vapor density (air = 1) = 4.4; flash point = 64°C (cc). The explosive limit(s) are: LEL: 17,000 ppm[138]; UEL: unknown. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 2, reactivity 0. Solubility in water = 2.7% @ 20°C.

p-isomer

White to straw-colored, needle-like crystalline solid. Specific gravity (H_2O:1) = 1.27 @ 40°C; boiling point = 218°C; freezing/melting point = 43°C; vapor pressure = 0.75 mmHg @ 45°C; vapor density (air = 1) = 4.44; flash point = 121°C (cc). Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 1, reactivity 0. Solubility in water = 2.71% @ 20°C.

Potential Exposure: Monochlorophenols are used in the manufacture of fungicides, slimicides, bactericides, pesticides, herbicides, disinfectants, wood and glue preservatives; in the production of phenolic resins; in the extraction of certain minerals from coal; as a denaturant for ethanol; as an antiseptic; as a disinfectant, and others.

Incompatibilities: May form explosive mixture with air. Contact with oxidizing agents can cause fire and explosion hazard. Heat produces hydrogen chloride and chlorine. Corrosive to aluminum, copper and other chemically active metals.

Permissible Exposure Limits in Air

Odor threshold = 1.24 ppm (pure), all isomers.

95-57-8, o-isomer

PAC Ver. 29[138]

PAC-1: 2.3 ppm

PAC-2: 25 ppm

PAC-3: 150 ppm

108-43-0, m-isomer

PAC-1: 2.1 milligram per cubic meter

PAC-2: 23 milligram per cubic meter

PAC-3: 140 milligram per cubic meter

o- and m-isomers

Denmark: TWA 0.5 milligram per cubic meter [skin], 1999; Sweden: TWA 0.5 milligram per cubic meter; STEL 1.5 milligram per cubic meter [skin], 1999.

106-48-9, p-isomer

PAC Ver. 29[138]

PAC-1: 1.5 milligram per cubic meter

PAC-2: 17 milligram per cubic meter

PAC-3: 99 milligram per cubic meter

Denmark: TWA 0.5 milligram per cubic meter [skin], 1999; Poland: MAC (TWA) 1 milligram per cubic meter; STEL 3 milligram per cubic meter, 1999; Russia: STEL 1 milligram per cubic meter [skin] 1993; Sweden TWA 0.5 milligram per cubic meter; STEL 1.5 milligram per cubic meter [skin] 1999.

These chemicals can be absorbed through the skin, thereby increasing exposure. Russia set limits in ambient air in residential areas of 0.01 milligram per cubic meter for the *m*- and *p*-chlorphenols and 0.02 milligram per cubic meter for 2-chloro phenol.

Determination in Air: Use NIOSH: (*o*-chlorophenol) P&CAM Method #337.

Permissible Concentration in Water: Federal Drinking Water Guidelines (o-isomer): 40 μg/L; State Drinking Water Guidelines: Florida 35 μg/L; Maine 35 μg/L; Minnesota 30 μg/L. State Drinking Water Guidelines (*p*-isomer): Florida 5.5 μg/L.

Determination in Water: GC (EPA Method 604) or GC plus mass spectrometry (EPA Method 625). Octanol−water coefficient: Log K_{ow} = (*m*-isomer) 2.51; (*o*-isomer) 2.2; (*p*-isomer) 2.4

Routes of Entry: Skin absorption, inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Inhalation can cause severe irritation, burns to the nose and throat; headache, dizziness, vomiting, lung damage; muscle twitchings; spasms, tremors, weakness, staggering, and collapse. Skin contact can cause severe irritation and burns. Can be absorbed through the skin to cause or increase the severity of symptoms listed above. Eye contact causes severe irritation. May cause burns. Ingestion can cause irritation, burns to the mouth and throat; low blood pressure; profuse sweating; intense thirst; nausea, abdominal pain; stupor, vomiting, red blood cell damage, and accumulation of fluid in the lungs followed by pneumonia. May also cause restlessness and increased breathing rate followed by rapidly developing muscle weakness. Tremors, convulsions, and coma can promptly set in and will continue until death. Based on animal studies, the estimated lethal dose is between one teaspoon and 1 oz for a 150-lb adult. *p*-isomer: The substance irritates the eyes, skin, and the respiratory tract. The substance may cause effects on the central nervous system and bladder.

Long-Term Exposure: Skin sensitivity may develop. May have effects on the blood, heart, liver, lung, kidney. The state of New Jersey lists 2-chloro-a probable carcinogen in humans; and that it causes leukemia and soft tissue cancers in humans.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: liver function tests. Kidney function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. EKG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles when working with powders or dust, unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposure to chlorophenols, use a NIOSH/MSHA (US) or

EN149 (Europe)-approved full facepiece respirator with a high-efficiency particulate filter. Greater protection is provided by a PAPR. Where there is potential for high exposure to chlorophenols exists, or to liquid form, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorophenols all handlers should be trained on its proper handling and storage. Before entering confined space where chlorophenols may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN 2020 (solid); UN2021 (liquid) Chlorophenols, solid and liquid, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: *o*-Chlorophenol is a combustible liquid/solid. *m*- and *p*-chlorophenols may burn, but do not readily ignite. Thermal decomposition products may include phenols and chlorides. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors from 2-chloro-may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in admixture with flammable solvent in furnace equipped with afterburner and scrubber[22].

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen; IARC: Animal Sufficient Evidence, Human Limited Evidence, *possibly carcinogenic to humans*, Group 2B, 1998; NCI: Clear evidence: mouse, rat[9]; a related chemical, 4-Chloro-*m*-phenylenediamine (5131-60-2)

California Proposition 65 Chemical[102]: Cancer 1/1/1988.

Hazard Alert: Poison, Combustible.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn; risk phrases: R45; R36/37/38; R34; R40; R50/53; safety phrases: S22; S26; S36/37/39; S45; S53; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: 4-Chloro-*o*-phenylenediamine is a brown crystalline powder or leaflets from water; freezing/melting point = 67−73°C; also reported in lit. @ 76°C. Slightly soluble in water.

Potential Exposure: This organochlorine material has been patented as a hair dye component. It is believed to be used in production of photographic chemicals. In varying degrees, organochlorines are absorbed from the gut and also by the lung and across the skin[72].

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Light sensitive. It reacts with *alpha*-ketoacids to form quinoxalones or benzopyrazines[101].

Permissible Exposure Limits in Air

No standards or PAC available.

North Dakota has set a guideline for ambient air of zero concentration[60].

Determination in Air: NIOSH Analytical Method #5013, Dyes.

Harmful Effects and Symptoms

Short-Term Exposure: Can cause irritation of eyes, nose, skin, and mucous membranes. In varying degrees, organochlorines are absorbed from the gut and also by the lung and across the skin[72].

Long-Term Exposure: There is sufficient evidence that 4-chloro-*o*-phenylenediamine is carcinogenic in experimental animals. In long-term feeding bioassays with technical grade 4-chloro-*o*-phenylenediamine, rats developed tumors of the urinary bladder and fore-stomach. In mice, the compound induced hepatocellular carcinomas.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 20 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv 100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed containers in a cool, well-ventilated place or a refrigerator.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN3143 Dyes, solid, toxic, n.o.s. or Dye intermediates, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/ 75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill. Dampen spilled material with alcohol to avoid dust, then transfer material to a suitable container. Use absorbent paper dampened with alcohol to pick up remaining material. Wash surfaces well with soap and water. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Disposal of unused product must be undertaken by qualified personnel who are knowledgeable in all applicable regulations and follow all pertinent safety precautions including the use of appropriate protective equipment. For proper handling and disposal, always comply with federal, state, and local regulations.

Chlorophenyltrichlorosilane C:0970

Formula: $C_6H_4Cl_4Si$; $ClC_6H_4SiCl_3$

Synonyms: Chlorofeniltriclorosilano (Spanish); Chlorophenyl trichlorosilane; Trichloro (chlorophenyl)silane

CAS Registry Number: 26571-79-9

HSDB Number: 7803

RTECS Number: VV2650000

UN/NA & ERG Number: UN1753/156

EC Number: 247-817-0

Regulatory Authority and Advisory Information

Hazard Alert: Violently water reactive, Corrosive, Environmental hazard.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Canada, WHMIS, Ingredients Disclosure List Concentration 1%.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, C, Xn; risk phrases: R14; R36/37/38; R34; R40; R51; safety phrases: S22; S26; S36/37/39; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)]

Description: Chlorophenyltrichlorosilane is a combustible, colorless to pale yellow liquid. Molecular weight = 245.99; boiling point = 230°C; flash point = 123.8°C. ₩ Reacts violently with water, rapidly releasing corrosive hydrogen chloride gas.

Potential Exposure: Chlorophenyltrichlorosilane is used as an intermediate for silicones manufacture.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Chlorosilanes react vigorously with bases and both organic and inorganic acids generating toxic and/or flammable gases. Chlorosilanes react with water, moist air, or steam to produce heat and toxic, corrosive fumes of hydrogen chloride. They may also produce flammable gaseous hydrogen. Attacks metals in the presence of moisture. Keep chlorophenyltrichlorosilane away from combustible materials, such as wood, paper, and oil. Chlorophenyltrichlorosilane reacts with α-ketoacids, forming heterocyclic compounds of quinoxalones[101].

Permissible Exposure Limits in Air

PAC Ver. 29[138]

based on 15 other trichlorosilanes with identical PACs (for reference only)

PAC-1: $\mathbf{0.6}_{\mathbf{A}}$ ppm

PAC-2: $\mathbf{7.3}_{\mathbf{A}}$ ppm

PAC-3: $\mathbf{33}_{\mathbf{A}}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

Routes of Entry: Skin contact, inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Chlorophenyltrichlorosilane inhalation, ingestion or skin/eye contact may cause severe injury, burns, or death. Chlorophenyltrichlorosilane is a corrosive chemical. Contact with molten substance may cause severe burns and possibly permanent damage to skin and eyes. Inhalation can cause severe irritation of the lungs, causing coughing and/or shortness of breath. High exposures can cause pulmonary edema, a medical emergency which can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort.

Long-Term Exposure: Can cause lung irritation; bronchitis may develop.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42CFR84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with chlorophenyltrichlorosilane all handlers should be trained on its proper handling and storage. Chlorophenyltrichlorosilane should be stored to avoid contact with combustible materials, such as wood, paper, and oil. Store in tightly closed containers in a cool, well-ventilated area away from water, steam, and moisture because toxic and corrosive gases, including Hydrogen Chloride can be produced.

Shipping: UN1753 Chlorophenyltrichlorosilane, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling:

Chlorophenyltrichlorosilane when spilled in water

Initial isolation and protective action distances Chlorosilanes, corrosive, n.o.s.

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.7/1.2

Stay upwind and uphill. Isolate the area of release or fire and deny entry. Remove all ignition sources. Stop the release if it can be done safely from a distance. All equipment used to handle this material must be grounded. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. *Small spill*: Cover with *dry* earth, *dry* sand, or other noncombustible material followed with plastic sheet to minimize spreading or contact with water or rain. Use clean nonsparking tools to collect material and place material into loosely covered plastic containers for later disposal. Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release. Use vapor suppressing foam to disperse vapors—contain runoff. Water spray may reduce vapor, but may not prevent ignition in enclosed spaces. Ventilate confined area if it can be done without placing personnel at risk. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chlorophenyltrichlorosilane may burn, but does not readily ignite. *Do not use water*. Thermal decomposition products may include hydrogen chloride and oxides of carbon and metal. *FOR CHLOROSILANES DO NOT USE WATER. USE AFFF ALCOHOL-RESISTANT, MEDIUM EXPANSION FOAM. Small fire*: use *dry* chemical, CO_2, *dry* sand, or alcohol-resistant foam. May react with foams releasing corrosive/toxic gases. *Large fire*: use water spray or alcohol-resistant foam if it is available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning liquid. Combustible material: may burn but does not ignite readily. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapors may travel to source of ignition and flashback. Containers may explode when heated or if contaminated with water. Keep exposures cool long after fire is out to protect against reignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. *Do not get water on spilled substance or inside containers*. If cooling streams are ineffective (*venting sound increases in volume and pitch, tank discolors, or shows signs of deforming*), withdraw immediately to a secure location. Always stay away from ends of tanks, especially when engulfed in flames. If material or contaminated runoff from fire control enters waterways, notify downstream users of potentially contaminated water. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Disposal of unused product must be undertaken by qualified personnel who are knowledgeable in all applicable regulations and follow all pertinent safety precautions including the use of appropriate protective equipment. For proper handling and disposal, always comply with federal, state, and local regulations.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, E; risk phrases: R22; R26; R36/37/38; R50; R62; safety phrases: S1/2; S36/37; S38; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Chloropicrin is a highly reactive, colorless, oily liquid with a sharp, penetrating odor that causes tears. Molecular weight = 164.38; specific gravity (H_2O:1) = 1.66; boiling point = 112.2°C; freezing/melting point = −69.2°; vapor pressure = 1 mmHg @ 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 3. Slightly soluble in water; solubility = 0.17% @ 25°C.

Potential Exposure: Chloropicrin is an important insecticide and is used in the manufacture of the dye-stuff methyl violet and in other organic syntheses. It is used as a fumigant insecticide. It is a riot control and tear agent and has been used as a military poison gas. Some forms of tear gas also contain chloropicrin. Since tank trucks, tank cars, and tank vessels carry this throughout the world in large quantities, it is a potential problem.

Incompatibilities: Chloropicrin decomposes explosively when heated above 112°C. It can be dangerously self-reactive; and, may explode when heated under confinement or if shocked. Chloropicrin is stable except when it's heated to a high temperature; it explosively breaks down, releasing other poison gases including nitrogen oxides, nitrosyl chloride, chlorine, phosgene, and carbon monoxide. Liquid chloropicrin (PS) is unstable with high temperatures or severe shock, particularly when involving containers of greater than 30 gal capacity. Chloropicrin reacts violently with aniline, sodium methoxide, and propargyl bromide; 2-bromopropyne and strong oxidizers. Violent reaction with reducing agents; aniline (especially in presence of heat), alcoholic sodium hydroxide. Quickly elevated temperatures, shock, contact with alkali metals or alkaline earth may cause explosions. It is a strong acid and will react violently with bases and alkali materials. Liquid attacks some plastics, rubber, and coatings. Chloropicrin reacts with iron, zinc, light metals including aluminum, magnesium, and alloys containing these metals. It reacts, sometimes violently, with some types of rubbers and plastics, as well as some chemicals including common sulfuric acid; and bases. Contact with metals may evolve explosive hydrogen gas.

Permissible Exposure Limits in Air

NIOSH IDLH = 2 ppm

Conversion factor: 1 ppm = 6.72 milligram per cubic meter @ 25°C & 1 atm

Odor threshold = 1.1 ppm.

OSHA PEL: 0.1 ppm/0.7 milligram per cubic meter TWA

NIOSH REL: 0.1 ppm/0.7 milligram per cubic meter TWA

ACGIH TLV[1]: 0.1 ppm/0.67 milligram per cubic meter TWA; not classifiable as a human carcinogen

PAC PS*

PAC Ver. 29[138]

PAC-1: **0.050**$_{\mathbf{A}}$ ppm

PAC-2: **0.15**$_{\mathbf{A}}$ ppm

PAC-3: **1.4**$_{\mathbf{A}}$ ppm

Emergency Response Planning Guidelines

ERPG-1: 0.1 ppm

ERPG-2: 0.3 ppm

ERPG-3: 1.5 ppm

DFG MAK: 0.1 ppm/0.68 milligram per cubic meter TWA; Peak Limitation Category I(1)

Australia: TWA 0.1 ppm (0.7 milligram per cubic meter); STEL 0.3 ppm (2 milligram per cubic meter), 1993; Austria: MAK 0.1 ppm (0.7 milligram per cubic meter), 1999; Belgium: TWA 0.1 ppm (0.67 milligram per cubic meter); STEL 0.3 ppm, 1993; Denmark: TWA 0.1 ppm (0.7 milligram per cubic meter), 1999; Finland: TWA 0.1 ppm (0.7 milligram per cubic meter); STEL 0.3 ppm (2.1 milligram per cubic meter), 1999; France: VME 0.1 ppm (0.7 milligram per cubic meter), 1999; Japan: 0.1 ppm (0.67 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 0.7 milligram per cubic meter, 2003; Norway: TWA 0.1 ppm (0.7 milligram per cubic meter), 1999; the Philippines: TWA 0.1 ppm (0.7 milligram per cubic meter), 1993; Poland: MAC (TWA) 0.5 milligram per cubic meter, MAC (STEL) 1.5 milligram per cubic meter, 1999; Russia: TWA 0.1 ppm, 1993; Switzerland: MAK-W 0.1 ppm (0.7 milligram per cubic meter), KZG-W 0.2 ppm, 1999; Turkey: TWA 0.1 ppm (0.7 milligram per cubic meter), 1993; United Kingdom: TWA 0.1 ppm (0.68 milligram per cubic meter); STEL 0.3 ppm, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for chloropicrin in ambient air[60] ranging from 7–20 μ/m^3 (North Dakota) to 11.7 μ/m^3 (Virginia) to 14 μ/m^3 (Connecticut) to 17 μ/m^3 (Nevada).

Permissible Concentration in Water: California[61] has set guidelines for Chloropicrin in drinking water of 50 μg/L on a taste basis and 37 μg/L on an odor basis. When liquid chloropicrin enters water, it mixes very slowly, falling to the bottom, where it breaks down in less than 24 hours. Chloropicrin may be very poisonous to fish. Warn pollution control authorities and advise shutting water intakes.

Determination in Water: Octanol–water coefficient: $\log K_{ow} = 2.1$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chlorpicrin was used as poison gas in WW 1. Exposure causes intense tearing of the eyes, headache, nausea and vomiting, diarrhea, and cough. Contact can severely irritate the skin causing rash or burning sensation. Higher exposures can irritate and burn the lungs, causing a build-up of fluid (pulmonary edema); a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. LD_{50} (oral-rat) = 250 mg/kg (moderately toxic).

Long-Term Exposure: Repeated exposure can damage the lungs, causing bronchitis. It may also damage the liver and kidneys.

Points of Attack: Eyes, skin, respiratory system; liver, kidneys.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. If symptoms develop or overexposure has occurred, the following may be useful: liver and kidney function tests. Consider chest X-ray following acute overexposure. NIOSH suggests the following tests: electrocardiogram, expired air, pulmonary function tests: forced vital capacity and forced expiratory volume (1 second), sputum cytology, and white blood cell count/differential.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not Use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Decontamination: Decontaminate as soon as possible. This is extremely important. If you don't have the equipment and training, don't enter the hot zone to rescue and/or decontaminate victims. If the victim can't move, begin the decontamination process without touching and without entering the hot zone. Use clean water from any source; if possible, use a hose (spray or fog to prevent injury to the victim) or other system so that you won't have to touch the victim; don't even wait for soap or for the victim to remove clothing, begin washing immediately. Immediately flush the eyes with water for at least 15 minutes. Wash—strip—wash—evacuate upwind and uphill: The approach is to immediately wash with water, then have the victim (not the first responder) remove all the victim's clothing, then wash again (with soap if available); and subsequently move away from the hot zone in an upwind and uphill direction. Wash the victim with warm water and soap. Decontaminate with diluted household bleach (10%, or one part bleach to nine parts water), but don't let any of the bleach solution get in the victim's eyes, open wounds, or mouth. Rinse off the diluted bleach solution after 15 minutes. In order to prevent spreading the agent, be certain the victims have been decontaminated as much as possible before they leave the decontamination area. If you get any amount of the agent on yourself, decontaminate immediately. Even if you think you are not contaminated, be sure to thoroughly shower and change clothes as soon as you can after the incident.

Personal Protective Methods:

General information: First responders should use a NIOSH-certified chemical, biological, radiological, nuclear (CBRN) SCBA with a level a protective suit when entering an area with an unknown contaminant or when entering an area where the concentration of the contaminant is unknown. Level a protection should be used until monitoring results confirm the contaminant and the concentration of the contaminant. *Note:* safe use of protective clothing and equipment requires specific skills developed through training and experience.

LEVEL A: (*RED ZONE*): Select when the greatest level of skin, respiratory, and eye protection is required. This is the maximum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than the AEGL-2. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A TECP suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, and a hard hat worn under the TECP suit are optional items.

LEVEL B: (RED ZONE): Select when the highest level of respiratory protection is necessary but a lesser level of skin protection is required. This is the minimum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than AEGL-2. It differs from Level A in that it incorporates a nonencapsulating, splash-protective, chemical-resistant splash suit that provides Level A protection against liquids but is not airtight. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL C: (YELLOW ZONE): Select when the contaminant and concentration of the contaminant are known and the respiratory protection criteria factors for using APR or PAPRs are met. This level is appropriate when decontaminating patient/victims. A NIOSH-certified CBRN tight-fitting APR with a canister-type gas mask or CBRN PAPR for air levels greater than AEGL-2. A NIOSH-certified CBRN PAPR with a loose-fitting facepiece, hood, or helmet and a filter or a combination organic vapor, acid gas, and particulate cartridge/filter combination or a continuous flow respirator for air levels greater than AEGL-1. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Escape mask, face shield, coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL D: (GREEN ZONE): Select when the contaminant and concentration of the contaminant are known and the concentration is below the appropriate occupational exposure limit or less than AEGL-1 for the stated duration times. Limited to coveralls or other work clothes, boots, and gloves.

Notes: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. The International Technical Information Institute recommends wearing Neoprene gloves. All protective clothing (suits, gloves, footwear, head gear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *2 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance causes eye irritation or damage; eye protection needed.

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. Poison gas. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. This gas is highly toxic. Even slight exposure to these gasses can cause death. Store outdoors in a secure, restricted area that containing warning signs. This area must be roofed and shaded with the cylinders stored off the ground and separated from all other products assigned to other hazard categories and radiant heat sources on non-wooden floors. If indoors, store in a well-ventilated areas in temperatures not to exceed 50°C. (2) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with chloropicrin all handlers should be trained on its proper handling and storage. Before entering confined space where chloropicrin may be present, check to make sure that an explosive concentration does not exist. Chloropicrin must be stored to avoid contact with strong oxidizers, such as chlorine or chlorine dioxide, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat. High temperatures or severe shock may cause an explosion, particularly with containers having capacities of greater than 30 gal. Where possible, automatically pump liquid from drums or other storage containers to process containers. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1580 Chloropicrin, Hazard Class: 6.1; Labels: 6.1-Poison Inhalation Hazard, Inhalation Hazard Zone B.

Spill Handling:

Chloropicrin

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package) Note: there is no specific information for "PS" Chloropicrin, used as a weapon in the current DOT tables.

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.6/1.0

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 500/150
Then: Protect persons downwind (mi/km)
Day 1.0/1.5
Night 1.9/3.1

Restrict persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Ventilate the area of spill or leak. Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chloropicrin is a noncombustible liquid. However, in the case where a chloropicrin tank is adjacent to a fire, the tank will heat causing extremely high pressurization, rupture, and explosion. Evacuate area. Even if the tank doesn't fail, the safety valve may open releasing chloropicrin, so evacuate. If necessary, fight fire from an explosion-resistant location. When heated, chloropicrin breaks down to poison gases like phosgene (another good reason to evacuate); and, at high temperature it can violently break down into several Thermal decomposition products may include hydrogen chloride and nitrous vapors. The danger from a heated chloropicrin tank is too great to risk a manned firefighting effort; if possible, an unattended fire monitor aimed at the upper part of the chloropicrin tank will cool the tank and may prevent tank failure. In general, it's best to use a spray or fog pattern rather than a solid stream, to avoid spreading the burning fuel around. If there is a reason that you have to extinguish a fire near a chloropicrin tank, use a firefighting agent (water, ordinary foam, alcohol foam, or dry chemical) appropriate for that fuel. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. When liquid chloropicrin enters water, it mixes very slowly, falling to the bottom, where it breaks down in less than 24 hours. Nevertheless, warn pollution control authorities and advise shutting water intakes. Chloropicrin is very poisonous to fish. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration (816°C, 0.5 seconds minimum for primary combustion; 1204°C, 1.0 second for secondary combustion) after mixing with other fuel. The formation of elemental chlorine may be prevented by injection of steam or using methane as a fuel in the process. Chloropicrin reacts readily with alcoholic sodium sulfite solutions to produce methanetrisulfonic acid (which is relatively nonvolatile and less harmful). This reaction has been recommended for treating spills and cleaning equipment. Although not specifically suggested as a decontamination procedure, the rapid reaction of chloropicrin with ammonia to produce guanidine ($LD_{50} = 500$ mg/kg) could be used for detoxification. The Chemical Manufacturers' Association has suggested two procedures for disposal of Chloropicrin: (1) Pour or sift over soda ash. Mix and wash slowly into large tank. Neutralize and pass to sewer with excess water. (2) Absorb on vermiculite. Mix and shovel into paper boxes. Drop into incinerator with afterburner and scrubber[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chloroplatinic Acid C:0990

Formula: Cl_6H_2Pt; H_2PtCl_6

Synonyms: Dihydrogen hexachloroplatinate; Dihydrogenhexachloroplatinate (2−); Hexachloro dyhydrogen platinate; Hexachloroplatinic acid; Hexachloroplatinic(IV) acid; Hexachloro platinic(4+) acid, hydrogen-; Hydrogen hexachloroplatinate(4+); Platinate, hexachloro-; Platinic chloride

CAS Registry Number: 16941-12-1

RTECS Number: TP1500000

UN/NA & ERG Number: UN2507/154

EC Number: 241-010-7 [*Annex I Index No.*: 078-009-00-4]

Regulatory Authority and Advisory Information

Hazard Alert: Oxidizing acid, Corrosive, Sensitization hazard (skin, resp.), Suspected of causing genetic defects, Environmental hazard

Canada, WHMIS, Ingredients Disclosure List concentration Reporting Level: 0.1%.

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, C, N; risk phrases: R8; R25; R34; R35; R42/43; R62; safety phrases: S1/2; S17; S22; S26; S29/35; S36/37/39; S41; S45; S61 (see Appendix 4).

Description: Chloroplatinic acid is a reddish-brown deliquescent solid. Molecular weight = 409.8; specific gravity (H_2O:1) = 2.43; freezing/melting point = 60°C. The explosive limit(s) are: LEL: 14,000 ppm; hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Soluble in water; aqueous solution is a strong acid.

Potential Exposure: Chloroplatinic acid has many uses, among them are platinum plating, photography, and catalysis.

Incompatibilities: Oxidizing acids are generally soluble in water with the release of hydrogen ions. The resulting solutions have pH's of <7.0. Materials in this group react with chemical bases (e.g., amines and inorganic hydroxides) to form salts. These neutralization reactions occur as the base accepts hydrogen ions that the acid donates. Neutralizations can generate dangerously large amounts of heat in small spaces. The dissolution of acids in water or the dilution of their concentrated solutions with water may generate significant heat. The addition of water acids often generates sufficient heat in the small region of mixing to boil some of the water explosively. The resulting "bumping" spatters acid widely. These materials have significant ability as oxidizing agents. but that ability varies (e.g., from high for nitric acid to low for sulfuric acid and most sulfonic acids). They can react with active metals, including iron and aluminum, and also many less active metals, to dissolve the metal and liberate hydrogen and/or toxic gases. Like other acids, materials in this group can initiate polymerization in certain classes of organic compounds. Their reactions with cyanide salts and compounds release gaseous hydrogen cyanide. Flammable and/or toxic gases are also often generated by their reactions with dithiocarbamates, isocyanates, mercaptans, nitrides, nitriles, sulfides, and weak or strong reducing agents. Additional gas-generating reactions occur with sulfites, nitrites, thiosulfates (to give H_2S and SO_3), dithionites (SO_2), and even carbonates: the carbon dioxide gas from the last is nontoxic but the heat and spattering from the reaction can be troublesome. Acids often catalyze (increase the rate) of chemical reactions[101].

Permissible Exposure Limits in Air

NIOSH IDLH = 4 mg [Pt]/m^3

ACGIH TLV[1]: 0.002 mg[Pt]/m^3 TWA, soluble salts

OSHA PEL: 0.002 mg[Pt]/m^3 TWA, soluble salts

NIOSH REL: 0.002 mg[Pt]/m^3 TWA, soluble salts

PAC Ver. 29[138]

PAC-1: 0.013 milligram per cubic meter

PAC-2: 3.2 milligram per cubic meter

PAC-3: 19 milligram per cubic meter

DFG MAK: No numerical value established. Data may be available; however, 2 μg[Pt]/m^3 peak should not be exceeded; danger of skin and airway sensitization, as chloroplatinates

Determination in Air: Use NIOSH II(7) Method #S-19 (soluble salts)

Routes of Entry: Skin contact, inhalation of vapors, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Chloroplatinic acid can affect you when breathed in. It is a highly corrosive chemical; contact can severely irritate and burn the eyes. In halation can irritate the respiratory tract. Exposure can cause severe allergies affecting the nose, skin, and lungs. Symptoms include sneezing, coughing, nose and throat irritation, and nasal discharge. Irritation and even ulcers can develop in the nose. Once lung allergy develops, even very small future exposures cause cough, wheezing, chest tightness, and shortness of breath. Skin allergy with a rash and itching can also develop.

Long-Term Exposure: Repeated exposure may lead to permanent lung damage (pulmonary fibrosis), skin and asthma-like allergy.

Points of Attack: Skin, respiratory system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. These may be normal if the person is not having an attack at the time of the test. If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *up to 0.05 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode), *up to 0.1 milligram per cubic meter:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 4 milligram per cubic meter:* Sa:Pd,Pp (APF = 1000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter).

Storage: Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN2507 Chloroplatinic acid, solid, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of metal. Use dry chemical, CO_2, water spray; or foam extinguishers. Chloroplatinic acid may burn, but does not readily ignite. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazard symbols, risk, & safety statements: Hazard symbol: T, F, Xn, T; risk phrases: R45; R11; R19; R20/22; R36/37/38; R48/20; R62; R63; safety phrases: S21; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chloroprene is a colorless, flammable liquid possessing a pungent odor. The Odor Threshold is 0.4 milligram per cubic meter[41]. Molecular weight = 88.54; specific gravity (H_2O:1) = 0.96 @ 20°C; boiling point = 59.4°C; freezing/melting point = −130°C; vapor pressure = 188 mmHg @ 20°C; 75 mmHg @ 0.3°C; flash point = −20°C (oc). The explosive limits are: LEL: 1.9%; UEL: 11.3%[17]. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 3, reactivity 1. Slightly soluble in water; solubility = 0.03% @ 20°C.

Potential Exposure: The major use of chloroprene is in the production of artificial rubber (Neoprene, duprene); polychloroprene elastomers. Chloroprene is extremely reactive, e.g., it can polymerize spontaneously at room temperatures; the process being catalyzed by light, peroxides, and other free radical initiators. It can also react with oxygen to form polymeric peroxides and because of its instability, flammability, and toxicity, chloroprene has no end-product uses as such.

Incompatibilities: Can form unstable peroxides; chloroprene may polymerize on standing with fire or explosion hazard. May form explosive mixture with air. Reacts with liquid or gaseous fluorine, alkali metals; metal powders, oxidizers, creating a fire or explosion hazard. Attacks some plastics, rubber, and coatings. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air

NIOSH IDLH = 300 ppm, *beta*-chloroprene

Conversion factor: 1 ppm = 3.62 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: 25 ppm/90 milligram per cubic meter TWA [skin]

NIOSH REL: 1 ppm/3.6 milligram per cubic meter [15-minute] Ceiling Concentration; Limit exposure to lowest feasible concentration. NIOSH considers this chemical to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990]. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV[1]: 10 ppm/36 milligram per cubic meter TWA [skin]

PAC Ver. 29[138]

PAC-1: 30 ppm

PAC-2: 67 ppm

PAC-3: 400 ppm

DFG MAK: [skin] Carcinogen Category 2

Australia: TWA 10 ppm (35 milligram per cubic meter) [skin], 1993; Austria: MAK 10 ppm (36 milligram per cubic meter), 1999; Belgium: TWA 10 ppm (36 milligram per cubic meter) [skin], 1993; Denmark: TWA 1 ppm (3.6 milligram per cubic meter) [skin], 1999; Finland: TWA 10 ppm (36 milligram per cubic meter); STEL 20 ppm (72 milligram per cubic meter) [skin], 1999; France: VME 10 ppm (36 milligram per cubic meter), 1999; Hungary: TWA 10 milligram per cubic meter; STEL 30 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 18 milligram per cubic meter [skin], 2003; Norway: TWA 1 ppm (3.6 milligram per cubic meter), 1999; Poland: MAC (TWA) 2 milligram per cubic meter; STEL, 16 milligram per cubic meter, 1999; Russia: STEL 0.05 milligram per cubic meter, 1993; Sweden: NGV 10 ppm (35 milligram per cubic meter), KTV 15 ppm (60 milligram per cubic meter) [skin], 1999; Switzerland: MAK-W 10 ppm (36 milligram per cubic meter), KZG-W 20 ppm (72 milligram per cubic meter) [skin], 1999; United Kingdom: TWA 10 ppm (37 milligram per cubic meter) [skin], 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 10 ppm [skin]. Russia set a MAC in ambient air in residential areas of 0.02 milligram per cubic meter on a momentary basis and 0.002 milligram per cubic meter on a daily average basis[35]. Several states have set guidelines or standards for chloroprene in ambient air[60] ranging from 2.5 μ/m^3 (Massachusetts) to 175 μ/m^3 (South Carolina) to 350 μ/m^3 (North Dakota) to 420−3500 μ/m^3 (North Carolina) to 800 μ/m^3 (Virginia) to 900 μ/m^3 (Connecticut) to 1070 μ/m^3 (Nevada).

Determination in Air: Charcoal adsorption, workup with CS_2 and analysis by GC. Use NIOSH Analytical Method #1002 or OSHA Analytical Method 112[18].

Permissible Concentration in Water: A MAC in water bodies used for domestic purposes of 0.01 mg/L has been set by Russia[35].

Determination in Water: Octanol−water coefficient: Log K_{ow} = 2.1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation of vapor, skin absorption; ingestion, and eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chloroprene irritates the eyes, skin, and respiratory tract. Chloroprene acts as a Primary irritant (w/o allergic reaction) on contact with skin, conjunctiva, and mucous membranes; and may result in dermatitis, conjunctivitis, and circumscribed necrosis of the cornea. Inhalation of high concentrations may result in dizziness, lightheadedness and unconsciousness; anesthesia and respiratory paralysis. Chloroprene may affect the central nervous system; kidneys and liver. The LD_{50} oral rat is only 900 mg/kg (slightly toxic).

Long-Term Exposure: Chronic exposure may produce damage to the lungs, nervous system; liver, kidneys, spleen, and myocardium. Because this is a potential mutagen, handle it as a possible cancer-causing substance-with extreme caution. It may also damage the developing fetus, cause spontaneous abortions; and interfere with sperm production. Repeated or prolonged contact with skin may cause dermatitis. Chronic exposure may cause alopecia. Chloroprene is a potential occupational carcinogen. Temporary hair loss has been reported during the manufacture of polymers.

Points of Attack: Eyes, skin, respiratory system; liver, kidneys.

Medical Surveillance: Preplacement and periodic examinations should include an evaluation of the skin, eyes, respiratory tract, and central nervous system. Liver and kidney function should be evaluated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Prevent skin contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): polyvinyl alcohol gloves; Viton gloves, suits; Responder suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should Wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Engineering controls are recommended in NIOSH Criteria Document: 77-1210.

Respirator Selection: NIOSH *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with chloroprene all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Chloroprene must be stored to avoid contact with peroxides and other oxidizers, such as permanganates, nitrates, chlorates, and perchlorates, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area at temperatures below 10°C/50°F. Sources of ignition, such as smoking and open flames are prohibited where chloroprene is handled, used, or stored. Metal containers involving the transfer of 5 gal or more of chloroprene should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of chloroprene. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN1991 Chloroprene, stabilized, Hazard Class: 3; Labels: 3-Flammable liquid, 6.1-Poisonous material.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chloroprene is a flammable liquid. Thermal decomposition products may include hydrogen chloride and phosgene. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. May react with itself without warning, blocking relief valves, and leading to container explosions. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel. Care must be exercised to assure complete combustion to prevent the formation of phosgene. An acid scrubber is necessary to remove the halo acids produced[22].

Hazard symbols, risk, & safety statements: Hazard symbol: T+; risk phrases: R10; R23; R27/28; R50; safety phrases: S13; S28; S36/37/39; S41; S45 (see Appendix 4).
WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]
Description: 3-Chloropropionitrile is a combustible, colorless liquid with an acrid odor. Molecular weight = 89.53; specific gravity (H_2O:1) = 1.136 @ 25°C; boiling point = (decomposes) 175–176°C; freezing/melting point = −51°C; vapor pressure = 2.5 mmHg @ 25°C; flash point = 76°C. The explosive limits are: LEL: 19,000; UEL: unknown. Hazard identification (based on NFPA-704 M Rating System): Flammability 2, reactivity 1.
Potential Exposure: This material is used in pharmaceutical manufacture and in polymer synthesis.
Incompatibilities: Contact with strong oxidizers may cause a fire and explosion hazard.
Permissible Exposure Limits in Air
NIOSH REL: (nitriles) 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.
PAC Ver. 29[138]
PAC-1: 0.23 ppm
PAC-2: 2.5 ppm
PAC-3: 5.4 ppm
Determination in Air: See NIOSH Criteria Document 78-212 *NITRILES*[18]
Permissible Concentration in Water:
Determination in Water: Octanol–water coefficient: Log $K_{ow} = < 2$. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, skin contact. This chemical can be absorbed through the skin, thereby increasing exposure.
Harmful Effects and Symptoms
Short-Term Exposure: Symptoms of exposure include rapid and irregular breathing; anxiety, confusion; odor of bitter almonds (on breath or vomitus), nausea; vomiting (if oral exposure), irregular heartbeat; a feeling of tightness in the chest; bright pink coloration of the skin; sweating, protruding eyeballs; dilated pupils; unconsciousness followed by convulsions; involuntary urination and defecation; paralysis and respiratory arrest (heart will beat after breathing stops).

Toxic effects are a result of systemic cyanide poisoning. Few poisons are more rapidly lethal. Average oral lethal dose for hydrogen cyanide is approximately 60–90 mg (corresponds to 200 mg of potassium cyanide). Cause of death is lack of oxygen to the body's cells (especially the brain and heart) as a result of the chemical inhibiting cell enzymes.
Medical Surveillance: Blood cyanide level.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1–2 years to ensure freshness. Persons trained in the use of this kit; oxygen use, and CPR must be quickly available.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH Criteria Document 212 *Nitriles*.

Respirator Selection: *up to 25 milligram per cubic meter:* Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any SCBA with full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where 3-Chloropropionitrile may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3276 Nitriles, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required, Potential Inhalation Hazard (Special Provision 5).

Spill Handling:

Nitrile spill

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Stay upwind. Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Dike far ahead of spill for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include cyanides. Use alcohol foam extinguishers and water spray. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full

facepieces and are operated in a pressure-demand or other positive-pressure mode.

EC Number: 218-026-8

Regulatory Authority and Advisory Information

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xi; risk phrases: R20/22; R36/37/38; R45; R50; safety phrases: S23; S36/37/39; S45; R53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: *o*-Chlorostyrene is a flammable, colorless liquid. Molecular weight = 138.60; specific gravity (H_2O:1) = 1.1; boiling point = 188.8°C; freezing/melting point = −63.3°C; vapor pressure = 0.96 mmHg @ 25°C; flash point = 58.8°C. Practically insoluble in water.

Potential Exposure: In organic synthesis; in the preparation of specialty polymers.

Incompatibilities: Contact with elevated temperatures, strong oxidizers, strong bases; or acids may cause fire or explosion. May form peroxides; explosive polymerization may occur.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: 50 ppm/285 milligram per cubic meter TWA; 75 ppm/428 milligram per cubic meter STEL

ACGIH TLV[1]: 50 ppm/283 milligram per cubic meter TWA; 75 ppm/425 milligram per cubic meter STEL

No PAC available

Australia: TWA 50 ppm (285 milligram per cubic meter); STEL 75 ppm (430 milligram per cubic meter), 1993; Austria: MAK 50 ppm (285 milligram per cubic meter), 1999; Belgium: TWA 50 ppm; STEL 75 ppm, 1993; France: VME 50 ppm (285 milligram per cubic meter), 1999; Norway: TWA 25 ppm (140 milligram per cubic meter), 1999; Switzerland: MAK-W 50 ppm (215 milligram per cubic meter), KZG-W 100 ppm (430 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 285 milligram per cubic meter, 2003; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: STEL 75 ppm. Several states have set guidelines or standards for chlorostyrene in ambient air[60] ranging from 2.85−4.30 milligram per cubic meter (North Dakota) to 4.8 milligram per cubic meter (Virginia) to 5.7 milligram per cubic meter (Connecticut) to 6.79 milligram per cubic meter (Nevada).

Determination in Air: No Method listed by NIOSH.

Permissible Concentration in Water: No criteria set.

Determination in Water: Octanol−water coefficient: Log K_{ow} = > 3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: *o*-Chlorostyrene can affect you when breathed in and by passing through your skin. Exposure can irritate the eyes and skin. LD_{50} (50% kill) = 3810 μL/kg, oral, rat.

Long-Term Exposure: Repeated exposures may damage the liver and kidneys. Animal studies show hematuria (blood in the urine), proteinuria, acidosis; enlarged liver, jaundice.

Points of Attack: Eyes, skin, liver, kidneys, central nervous system; peripheral nervous system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: liver and kidney function tests. Nervous system tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece

respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposures *over 50* ppm; Use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with *o*-chlorostyrene all handlers should be trained on its proper handling and storage. Before entering confined space where *o*-chlorostyrene may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1993 Flammable liquids, n.o.s., Hazard Class: 3; Labels: 3-Flammable liquid, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. The heat of fire produces Thermal decomposition products may include hydrogen chloride, chlorine, and phosgene. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Regulatory Authority and Advisory Information

Department of Homeland Security Screening Threshold Quantity (pounds): Sabotage/Contamination Hazard: A placarded amount (commercial grade).

Hazard Alert: Poison inhalation hazard: exposure can be lethal, Violently water reactive, Corrosive, Strong oxidizer, Known catalytic activity.

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1000 lb (454 kg)

United States DOT 49CFR172.101, Inhalation Hazardous Chemical

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, C, O, risk phrases: R8; R14; R26; R34; R35; R37; safety phrases: S1/2; S17; S26; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chlorosulfonic acid is a highly corrosive, colorless to yellow, slightly cloudy, fuming liquid with a sharp odor. Molecular weight = 115.52; boiling point = 155°C;

freezing/melting point = −80°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 2 ₩, OX. Reactive with water releasing dense fumes and producing corrosive sulfuric and hydrochloric acid.

Potential Exposure: Used to make pesticides, detergents, pharmaceuticals, dyes, resins, sulfonated oils; intermediate for dyes and pharmaceuticals; and pesticides. Although no military designation has been assigned chlorosulfonic acid may have been used as a choking/pulmonary agent.

Incompatibilities: Explosively reacts with water, forming sulfuric and hydrochloric acid and dense fumes. Dangerously reactive, avoid contact with all other material. Violent reaction with many compounds, including reducing agents; alcohols, chemically active metals; combustible materials, strong acids, alkaline earth sulfides, aluminum carbides, aluminum, amines, calcium sulfide, carbides, chlorine trifluoride, glycerin, hydrides, hydrochloric acid, hydrogen peroxide, hydrogen sulfide, hydroxylamine, magnesium, metal powders, metal sulfides, molybdenum, phenylhydrazine, phosphorous red/friction, phosphorous trichloride, silicon, sulfides, sulfur, sulfur dioxide, sulfur/friction, sulfuric acid, tungsten, hydrogen trisulfide, diphenyl ether, finely divided metals, silver nitrate. Contact with phosphorous may cause fire and explosions. Forms explosive material with ethyl alcohol. Attacks many metals; reaction with steel drums forms explosive hydrogen gas, which must be periodically relieved.

Permissible Exposure Limits in Air

PAC* Ver. 29[138]

PAC-1: **0.10**$_{\mathrm{A}}$ milligram per cubic meter

PAC-2: **4.4**$_{\mathrm{A}}$ milligram per cubic meter

PAC-3: **25**$_{\mathrm{A}}$ milligram per cubic meter

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

United Kingdom: 1 milligram per cubic meter TWA, 2000. Due to its highly corrosive nature, all contact with this material should be reduced to the lowest possible level.

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Skin or eye contact can cause severe irritation, burns, and permanent eye damage. Irritates the respiratory tract causing coughing, wheezing, and/or shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. LD$_{50}$ (50% kill): 4779 milligram per cubic meter/4 hour, inhalation, rat.

Long-Term Exposure: Can cause bronchitis with cough, phlegm, and/or shortness of breath.

Points of Attack: Lungs.

Medical Surveillance. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Consider X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Saranex and polyethylene are among the recommended protective materials. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is a potential for overexposure: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. (1) Color code—White stripe: Contact Hazard; Store separately; not compatible with materials in solid white category. (2) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location; keep acids away from bases and red, yellow, and blue-coded chemicals. (3) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorosulphonic acid all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, acids, bases, alcohols, metal powders; and organic combustible materials. It is preferable to store this chemical under nitrogen.

Where possible, automatically pump liquid from drums or other storage containers to process containers.

Shipping: UN1754 Chlorosulfonic acid (with or without sulfur trioxide), Hazard class: 8; Labels: 8-Corrosive material, 6.1-Poison Inhalation Hazard, Inhalation Hazard Zone B.

Spill Handling:

Chlorosulfonic acid (with or without sulfur trioxide) when spilled on land

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.2/0.3

when spilled in water

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.2/0.3

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.5/0.8
Night 1.5/2.4

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chlorosulphonic acid does not burn but can readily ignite combustible materials on contact and will increase fire activity. Thermal decomposition products may include hydrogen chloride and oxides of sulfur. Decomposes explosively on contact with water. Use dry chemical, carbon dioxide; or foam extinguishers. *Do not use water*. Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chlorothalonil is a combustible, white, odorless, crystalline solid. Molecular weight = 265.9; specific gravity (H_2O:1) = 1.8; boiling point = 350°C; freezing/melting point = 260°C; vapor pressure = 1×10^{-3} mmHg @ 20°C. Based on the NFPA-704 M Rating System: Health 3, flammability 1, reactivity 0. Insoluble in water.

Potential Exposure: Chlorothalonil is a broad spectrum fungicide; used as fungicide in coatings; caulk, wood preservative, and antifouling systems. Therefore, people involved in its manufacture, formulation, and application can be exposed.

Incompatibilities: Contact with strong oxidizers may cause a fire and explosion hazard. Thermal decomposition may include fumes of hydrogen cyanide. Nitriles may polymerize in the presence of metals and some metal compounds. They are incompatible with acids; mixing nitriles with strong oxidizing acids can lead to extremely violent reactions. Nitriles are generally incompatible with other oxidizing agents such as peroxides and epoxides. The combination of bases and nitriles can produce hydrogen cyanide. Nitriles are hydrolyzed in both aqueous acid and base to give carboxylic acids (or salts of carboxylic acids). These reactions generate heat. Peroxides convert nitriles to amides. Nitriles can react vigorously with reducing agents. Acetonitrile and propionitrile are soluble in water, but nitriles higher than propionitrile have low aqueous solubility. They are also insoluble in aqueous acids[101].

Permissible Exposure Limits in Air

NIOSH REL: Danger of sensitization of the skin; Carcinogen level 3B

NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

PAC Ver. 29[138]

PAC-1: 0.13 milligram per cubic meter

PAC-2: 1.4 milligram per cubic meter

PAC-3: 8.6 milligram per cubic meter

DFG MAK: Danger of sensitization of the skin; Carcinogen level 3B

Austria: Suspected: carcinogen, 1999

Determination in Air: See NIOSH Criteria Document 78-212 *Nitriles*[18]

Permissible Concentration in Water: Because nitriles do not release cyanide ions, they are generally less toxic.

Determination in Water: Analysis of chlorothalonil is by a GC method applicable to the determination of certain chlorinated pesticides in water samples. In this method, approximately 1 L of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using an electron capture detector. The method detection limit has not been determined for chlorothalonil, but it is estimated that the detection limits for analytes included in this method are in the range of 0.01−0.1 μg/L. Octanol−water coefficient: Log K_{ow} = > 4. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish Tox = 4.41591000 ppb MATC (HIGH).

Routes of Entry: Inhalation, skin contact.

Harmful Effects and Symptoms

Wilson et al. (1985) gave chlorothalonil (98.1% pure with less than 0.03% hexachlorobenzene) to Fischer 344 rats (60/sex/dose) in their diet at dose levels of 0, 40, 80 or 175 mg/kg/day. Males were treated for 116 weeks, while females received the chemical for 129 weeks. Survival among the various groups was comparable. In both sexes, at the high dose level, there were significant decreases in body weights. In addition, there were also significant increases in blood urea nitrogen and creatinine, while there were decreases in serum glucose and albumin levels. In both sexes, there were dose-dependent increases in kidney carcinomas and adenomas at doses above 40 mg/kg/day. In the high-dose females, there was also a significant increase in stomach papillomas. The data show that, in the Fischer 344 rat, chlorothalonil is a carcinogen[208]. The oral LD_{50} (oral-rat) = 10 g/kg. LC_{50} (inhal-rat) = 310 milligram per cubic meter/1 hour.

Short-Term Exposure: Irritates the eyes, skin, respiratory tract. Inhalation can cause coughing, phlegm, and/or tightness in the chest. Human Tox = 45.69190 ppb CHCL (Chronic Human Carcinogen Level) (INTERMEDIATE).

Long-Term Exposure: Repeated or prolonged contact with skin may cause nose bleeding, skin sensitization, and dermatitis with skin rash. May affect the kidneys and gastrointestinal tract. This chemical causes cancer of the kidneys in animals. See NIOSH Criteria Document 212 *Nitriles*.

Points of Attack: Skin, lungs, kidneys.

Medical Surveillance: CBC. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 20−30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH Criteria Document 212 *Nitriles*.

Respirator Selection: *Where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorothalonil all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping:. UN3276 Nitriles, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required, Potential Inhalation Hazard (Special Provision 5). UN2588 Pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required

Spill Handling:

Nitriles spill

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Dampen spilled material with toluene to avoid dust collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 1380.

Fire Extinguishing: This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include hydrogen cyanide, hydrogen chloride, and nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters.

Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration in a unit operating @ 850°C equipped with off-gas scrubbing equipment.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: *o*-Chlorotoluene is a flammable, colorless liquid with an aromatic odor. Molecular weight = 126.59; boiling point = 160°C; freezing/melting point = −35°C; vapor pressure = 4 mmHg @ 25°C; flash point = 52°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 1. Practically insoluble in water; solubility = 0.009% @ 25°C.

Potential Exposure: *o*-Chlorotoluene is widely used as a solvent and intermediate in the synthesis of dyes, synthetic rubber; pharmaceuticals; and other organic chemicals. Used as an insecticide, bactericide.

Incompatibilities: Incompatible with acids, alkalis, oxidizers, reducing materials; water.

Permissible Exposure Limits in Air

Conversion factor: 1 ppm = 5.18 milligram per cubic meter @ 25°C & 1 atm

Odor Threshold = 0.32 ppm.

OSHA PEL: None

NIOSH REL: 50 ppm/250 milligram per cubic meter TWA; 75 ppm/375 milligram per cubic meter STEL

ACGIH TLV[1]: 50 ppm TWA

(o-)

PAC Ver. 29[138]

PAC-1: 75 ppm

PAC-2: 310 ppm

PAC-3: 1800 ppm

This chemical can be absorbed through the skin, thereby increasing exposure.

Australia: TWA 50 ppm (250 milligram per cubic meter); STEL 75 ppm, 1993; Austria: MAK 50 ppm (250 milligram per cubic meter), 1999; Belgium: TWA 50 ppm (259 milligram per cubic meter); STEL 75 ppm (388 milligram per cubic meter), 1993; Denmark: TWA 50 ppm (285 milligram per cubic meter) [skin], 1999; Finland: TWA 50 ppm (260 milligram per cubic meter); STEL 75 ppm (390 milligram per cubic meter) [skin], 1999; France: VME 50 ppm (250 milligram per cubic meter), 1999; Norway: TWA 25 ppm (125 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 250 milligram per cubic meter [skin], 2003; Russia: STEL 10 milligram per cubic meter [skin], 1993; Sweden: carcinogen, 1999; Switzerland: MAK-W 50 ppm (250 milligram per cubic meter) [skin], 1999; United Kingdom: TWA 50 ppm (264 milligram per cubic meter), 2000; Argentina, Bulgaria, Columbia, Jordan, KORE, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 50 ppm. Several states have set guidelines or standards for chlorotoluene in ambient air[60] ranging from 2.5−3.75 milligram per cubic meter (North Dakota) to 4.0 milligram per cubic meter (Virginia) to 5.0 milligram per cubic meter (Connecticut) to 5.95 milligram per cubic meter (Nevada).

106-43-4, (*p*-)

PAC Ver. 29[138]
PAC-1: 1.2 ppm
PAC-2: 13 ppm
PAC-3: 80 ppm

Determination in Air: No Methods listed by NIOSH or OSHA.

Permissible Concentration in Water: No criteria set, but EPA[32] has suggested a permissible ambient goal of 3450 μg/L based on health effects.

Routes of Entry: Inhalation, skin absorption; ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact can irritate and burn the eyes and skin. Inhalation can irritate the respiratory tract, causing coughing, and/or shortness of breath. High exposure can cause dizziness, loss of coordination; convulsions and coma. Vasodilatation, labored respiration; and narcosis have been observed in test animals.

Long-Term Exposure: May affect the liver and kidneys.

Points of Attack: Eyes, skin, respiratory system; central nervous system; liver, kidneys. Prolonged or repeated contact may cause dermatitis.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: liver function tests. Kidney function tests. Examination by a dermatologist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. Prevent skin contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Barricade-coated suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Viton gloves, suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposures *over 50* ppm; Use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with an organic vapor cartridge/canister. Increased protection is obtained from full facepiece PAPRs.

Where there is potential for high exposures exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with *o*-Chlorotoluene all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2238 Chlorotoluenes, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include chlorine. Use dry chemical, carbon dioxide; alcohol foam; or polymer foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify

downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165 recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Chloroxuron is a combustible, colorless crystalline solid. Molecular weight = 290.77; freezing/melting point = 15.5°C; vapor pressure = 3.9×10^{-9} mmHg @ 20°C. Practically insoluble in water.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of chloroxuron for use as a selective pre- and early postemergency herbicide in soybeans, strawberries; various vegetable crops, and ornamentals. It is a root- and foliage-absorbed herbicide selective in leek, celery, onion, carrot, and strawberry.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.91 milligram per cubic meter

PAC-2: 10 milligram per cubic meter

PAC-3: 68 milligram per cubic meter

Determination in Water: Octanol−water coefficient: Log K_{ow} = ~4. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish Tox: 49.75254000 ppb MATC (INTERMEDIATE).

Routes of Entry: Ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Slightly irritating to eyes and skin. The LD_{50} oral (dog) is 10 mg/kg (highly toxic). The LD_{50} oral (rat) is 3700 mg/kg. Chloroxuron is stated to be highly toxic to humans by ingestion and under certain conditions, it can form carcinogenic dimethylnitrosamine. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Long-Term Exposure: No data available. Human Tox: 35.00000 ppb Health advisory: (INTERMEDIATE).

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and

face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator:

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Chloroxuron all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN2767 Phenylurea pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 3000.

Fire Extinguishing: This chemical is a combustible solid. Thermal decomposition products may include oxides of nitrogen and carbon, and corrosive fumes of hydrogen chloride (HCl). Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit with effluent gas scrubbing[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Regulatory Authority and Advisory Information

Hazard Alert: Poison inhalation hazard, Neurotoxin (cumulative), Suspected of causing genetic defects, Suspected reprotoxic hazard, Environmental hazard.

United States Environmental Protection Agency, FIFRA 1998 Status of Pesticides: Supported

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1 lb (0.454 kg)

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

United States DOT 49CFR172.101, Inhalation Hazardous Chemical, as organic phosphate, Substance ID: EDF-041

Canada, Drinking Water Quality MAC = 0.09 mg/L.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R24/25; R33; R50/53; R62; R63; safety phrases: S1/2; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chlorpyrifos is a colorless crystalline compound (liquid @ 43°C and commercial formulations may be combined with combustible liquids) with a mild mercaptan odor. The odor is also described as like natural gas. Boiling point = (decomposes) 160°C; molecular weight = 350.59; specific gravity (H_2O:1) = 1.40 (liquid @ 43°C); freezing/melting point = 42.2°C; vapor pressure = 0.00003 mmHg @ 25°C. Insoluble in water. Reacts with water and most reactive hydrogen compounds.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of this insecticide.

Incompatibilities: Above 130°C this chemical may undergo violent exothermic decomposition. The substance decomposes on heating at approximately 160°C and on burning, producing toxic and corrosive fumes including hydrogen chloride, nitrogen oxides; phosphorous oxides, sulfur oxides. Reacts with strong acids; strong bases; causing hydrolysis. Attacks copper and brass. Contact with oxidizers may cause the release of phosphorous oxides. Contact with strong reducing agents, such as hydrides, may cause the formation of flammable and toxic phosphine gas.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: 0.2 milligram per cubic meter TWA; 0.6 milligram per cubic meter STEL

ACGIH TLV[1]: 0.1 milligram per cubic meter TWA inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI issued. (2000)

PAC Ver. 29[138]

PAC-1: 0.6 milligram per cubic meter

PAC-2: 15 milligram per cubic meter

PAC-3: 44 milligram per cubic meter

Australia: TWA 0.2 milligram per cubic meter; STEL 0.6 milligram per cubic meter [skin], 1993; Belgium: TWA 0.2 milligram per cubic meter; STEL 0.6 milligram per cubic meter [skin], 1993; Denmark: TWA 0.2 milligram per cubic meter [skin], 1999; Finland: TWA 0.2 milligram per cubic meter; STEL 0.6 milligram per cubic meter [skin], 1999; France: VME 0.2 milligram per cubic meter [skin], 1999; Norway: TWA 0.2 milligram per cubic meter, 1999; Poland: TWA 0.2 milligram per cubic meter; STEL 0.6 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 0.2 milligram per cubic meter [skin], 2003; United Kingdom: TWA 0.2 milligram per cubic meter; STEL 0.6 milligram per cubic meter [skin], 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for chlorpyrifos in ambient air[60] ranging from 2−6 μ/m^3 (North Dakota) to 3.0 μ/m^3 (Virginia) to 4.0 μ/m^3 (Connecticut) to 5 μ/m^3 (Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; GC/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method (IV) #5600, Organophosphorus Pesticides, or OSHA Analytical Method 62.

Permissible Concentration in Water: Mexico[35] has set a limit of 3.0 μg/L in coastal waters and 0.03 mg/L in estuaries. Russia set a MAC in water bodies used for fishery purposes of 5.0 μg/L.

Determination in Water: Fish Tox = 0.3666 ppb MATC (Low); Octanol−water coefficient: Log $K_{ow} = \sim 5$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Skin absorption, inhalation of dust, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: May cause eye and skin irritation. Cholinesterase inhibitor. Exposure at high levels may result in death. The effects may be delayed. The LD_{50} rat is 82 mg/kg (moderately toxic). Chlorpyrifos can affect you when breathed in and quickly enters the body be passing through the skin. Severe poisoning can occur from skin contact. It is a moderately toxic organophosphate chemical. Exposure can cause rapid severe poisoning with headache, sweating, nausea and vomiting, diarrhea, loss of coordination; and possible death.

Long-Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Chlorpyrifos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Human Tox = 20 ppb; Health advisory: (INTERMEDIATE).

Points of Attack: Respiratory system; central nervous system; peripheral nervous system; plasma cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When Cholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC. Consider chest X-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organic phosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended.

Personal Protective Methods: *Clothing:* Avoid skin contact with chlorpyrifos. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. *Eye Protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: Where there is potential exists for Exposures over *0.2 milligram per cubic meter*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered-APR. *Where there is potential for high exposures exists*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chlorpyrifos all handlers should be trained on its proper handling and storage. Chlorpyrifos must be stored to avoid contact with strong bases; or acids, or acid fumes, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat.

Shipping: UN2783 Organo phosphorus pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chlorpyrifos may burn, but does not readily ignite. Thermal decomposition products may include oxides of phosphorus, sulfur, nitrogen, and carbon. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Heat above 130°C may cause violent exothermic reaction. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This compound is 50% hydrolyzed in aqueous MeOH solution at pH 6 in 1930 days; and in 7.2 days at pH 9.96. Spray mixtures of $<1\%$ concentration are destroyed with an excess of 5.25% sodium hypochlorite in <30 minutes @ 100°C; and in 24 hours @ 30°C. Concentrated (61.5%) mixtures are essentially destroyed by treatment with 100:1 volumes of the above sodium hypochlorite solution and steam in 10 minutes[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Regulatory Authority and Advisory Information
Hazard Alert: Poison inhalation hazard, Neurotoxin (cumulative), Possible sensitization hazard (skin).
United States DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Hazard symbols, risk, & safety statements: Hazard symbol: Xi, N; risk phrases: R33; R43; R50/53; safety phrases: S2; S36/37; S60; S61; S41 (see Appendix 4).
WGK[100] (Germ an Aquatic Hazard Class): 3-Severe hazard to waters *as Chlorpyrifos*
Description: White or amber crystalline solid. May be dissolved in a flammable or combustible carrier solvent. Molecular weight = 327.5; specific gravity (H_2O:1) = 1.64; freezing/melting point = 46°C; vapor pressure = 4.2×10^{-5} mmHg @ 25°C; specific gravity (H_2O:1) = 1.39 @ 50°C. Low solubility in water; solubility = 5 mg/L. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.
Potential Exposure: Chlorpyrifos-methyl is a general use organophosphate insecticide for use on stored grain (for protection of stored food, feed oil, and seed grains against injury from stored grain weevils, moths, borers, beetles, and mealworms including granary weevil, rice weevil, red flour beetle, confused flour beetle, saw-toothed grain beetle, Indian meal moth, and Angoumois grain moth, lessor grain borers), seed treatment, grain bin, and warehouse[14].
Incompatibilities: Strong oxidizers, strong acids, and alkalies. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Corrosive to copper, brass, iron, and tin plate[88].
Permissible Exposure Limits in Air: No standards established.
Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; GC/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].
Determination in Water: Octanol–water coefficient: Log K_{ow} = > 4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: High—1.02425 ppb, MATC.
Harmful Effects and Symptoms
Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils, and nonpolar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.
Short-Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 1500–18508 mg/kg; LD_{50} (dermal, rat) = > 3500 mg/kg.
Long-Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver, cardiovascular, and blood damage. Skin sensitizer. Some studies findings support the hypothesis that organophosphates, including chlorpyrifos and its metabolites may contribute to ADHD and learning disabilities in children. Human toxicity (long term)[101]: Low—70.00 ppb, Health advisory.
Points of Attack: Skin. Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.
Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about 2 hours of exposure. If Exposure stops, plasma levels return

to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: *Clothing:* Avoid dermal contact with chlorpyrifos. Wear protective gloves and clothing.

Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. *Eye Protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: Where there is potential exists for Exposures over *0.2 milligram per cubic meter*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered-APR. *Where there is potential for high exposures exists*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with chlorpyrifos all handlers should be trained on its proper handling and storage. Chlorpyrifos must be stored to avoid contact with strong bases; or acids, or acid fumes, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat.

Shipping: UN2783 Organophosphorus pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. This chemical may burn, but does not readily ignite. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Heat above 130°C may cause violent exothermic reaction. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This compound is 50% hydrolyzed in aqueous methanol solution @ pH 6 in 1930 days; and in 7.2 days at pH 9.96. Spray mixtures of $<1\%$ concentration are destroyed with an excess of 5.25% sodium hypochlorite in <30 minutes @ 100°C; and in 24 hours @ 30°C. Concentrated (61.5%) mixtures are essentially destroyed by treatment with 100:1 volumes of the above sodium hypochlorite solution and steam in 10 minutes. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorsulfuron C:1077

Formula: $C_{12}H_{12}ClN_5O_4S$

Synonyms: Benzenesulfonamide, 2-Chloro-*N*-[((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl]-; **Chlorsulfuron**; 2-Chloro-*N*-[((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino) carbonyl]benzenesulfonamide; 2-Chloro-*N*-[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)aminocarbonyl]-benzenesulfonamide; 1-[(*O*-Chlorophenyl)sulfonyl]-3-(4-methoxy-6-methyl-*S*-triazin-2-yl)urea; DPX 4189; Finesse; Glean; Glean 20df; Landmark MP; Lasher; Riverdale Corsair; Telar DF; Urea, 1-[(O-chlorophenyl)sulfonyl]-3-(4-methoxy-6-methyl-*S*-triazin-2-yl)-

CAS Registry Number: 64902-72-3

HSDB Number: 6847

RTECS Number: YS6640000

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171

EC Number: 265-268-5 [*Annex I Index No.:* 613-121-00-4]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA Group E, Evidence of noncarcinogenicity for humans.

California Proposition 65 Chemical[102]: Developmental, male, female, 5/14/1999; *delisted 6/6/2014*

Hazard Alert: Environmental hazard, Agricultural chemical.

Potential Ground water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: N; risk phrases: R50/53; safety phrases: S29/35; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Colorless, odorless crystals. Molecular weight = 357.79; freezing/melting point = 176°C; decomposes @ 192°C; vapor pressure = 4.6×10^{-6} mmHg @ 20°C Soluble in water; solubility = 113 mg/L @ 25°C. Slowly hydrolyzes in water, releasing ammonia fumes and forming acetate salts.

Potential Exposure: A selective systemic sulfonylurea herbicide used to control most broadleaf weeds and some annual grasses in wheat, barley, oats, duram, rye, triticale, and flax. Applied to noncrop sites such as rights-of-way, fence rows, and roadsides.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. May bencompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air:

PAC Ver. 29[138]

PAC-1: 3.9 milligram per cubic meter

PAC-2: 43 milligram per cubic meter

PAC-3: 260 milligram per cubic meter

Determination in Water: Fish toxicity (threshold)[101]: Very low—45107.62902 ppb, MATC.

Routes of Entry: Inhalation, dermal contact, ingestion

Harmful Effects and Symptoms

Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short-Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = > 5000 mg/kg; LD_{50} (dermal, rabbit) = > 3000 mg/kg.

Long-Term Exposure: May cause developmental problems. Human toxicity (long term)[101]: Very low—350.00 ppb, Health advisory.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of Central nervous system, liver, heart, kidneys, lung, and skin, as well as endocrinological, or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin, and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated. Urinary levels of the sulfonylurea herbicides reflect recent exposure. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation of dust should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. May be harmful if swallowed. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = > 5 g/kg; LD_{50} (dermal, rabbit) = > 3 g/kg.

Long-Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. Thermal decomposition products may include sulfur oxides. Prevent water from entering containers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. United States Environmental Protection Agency guidelines for the classification determination are listed in 40 CFR Parts 261.3. In addition, waste generators must consult and follow all regional, national, state, and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Chlorthiophos C:1080

Formula: $C_{11}H_{15}Cl_2O_3PS_2$

Synonyms: Celamerck S-2957; Cela S-2957; Celathion; CMS 2957; *O*-[Dichloro(methylthio)phenyl] *O*,*O*-diethyl phosphorothioate (3 isomers); *O*,*O*-[Diethyl-*O*-2,4,5-

dichloro(methylthio)phenyl]thionophosphate; ENT 27,635; NSC 195164; OMS 1342

CAS Registry Number: 21923-23-9; 60238-56-4

HSDB Number: 6452

RTECS Number: TF1590000

UN/NA & ERG Number: (PIH) UN3018 (organophosphorus pesticides, liquid, toxic)/152

EC Number: 244-663-6 [015-115-00-1]

Regulatory Authority and Advisory Information

Hazard Alert: Poison inhalation hazard, Neurotoxin (cumulative), Combustible, Environmental hazard, Agricultural chemical.

Banned or Severely Restricted (in agriculture: Germany, Malaysia) (UN)[13]

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

United States DOT 49CFR172.101, Inhalation Hazardous Chemical, as organic phosphate, Substance ID: EDF-041.

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R27/28; R33; R50; safety phrases: S1/2; S28; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to waters (CAS: 21923-23-9).

Description: Chlorthiophos is a yellowish-brown liquid. boiling point = 153−158°C @ 13 mmHg, and crystallizes at less than 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 1, reactivity 0.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of this insecticide and acaricide.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Strong oxidizers may cause release of toxic phosphorus oxides. Organophosphates, in the presence of strong reducing agents such as hydrides, may form highly toxic and flammable phosphine gas. Keep away from alkaline materials.

Permissible Exposure Limits in Air:

21923-23-9

PAC Ver. 29[138]

PAC-1: 0.71 milligram per cubic meter

PAC-2: 7.8 milligram per cubic meter

PAC-3: 9.9 milligram per cubic meter

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; GC/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method (IV) Method #5600, Organophosphorus Pesticides.

Routes of Entry: Inhalation, ingestion, skin contact. This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Symptoms of chlorthiophos exposure include headache, giddiness; blurred vision; nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes, and loss of sphincter control. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. The LD_{50} oral (rabbit) is 20 mg/kg which is in the highly toxic class.

Long-Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Chlorthiophos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system; central nervous system; peripheral nervous system; plasma cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When cholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC. Consider chest X-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organic phosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; keep victim under observation.

Personal Protective Methods: *Clothing:* Avoid skin contact with this chemical. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection: Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: Where there is potential exists for exposures, use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered-APR. *Where there is potential for high exposures exists*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Chlorthiophos all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72].

Shipping: UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Organophosphorus compounds

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This material may burn, but does not ignite readily. Thermal decomposition products may include hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. For small fires, use dry chemical, carbon dioxide; water spray; or foam. For large fires, use water spray, fog, or foam. Stay upwind; keep out of low areas. Move containers from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165 recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Cholecalciferol C:1086

Formula: $C_{27}H_{44}O$
Synonyms: Colecalciferol; 7-Dehydrochloesterol; Delsterol; Deparal; D3-Vigantol; Oleovitamin D_3; Quintox; Rampage; Ricketon; 9,10-Secocholesta-5,7,10(19)-trien-3-β-ol; 9,10-Secocholesta-5,7,10(19)-trien-3-ol, (3.β,5Z,7E)-; Trivitan; Vigorsan; Vitamin D_3; Vitinc DAN-DEE-3
CAS Registry Number: 67-97-0
HSDB Number: 820
RTE CS Number: VS2900000
UN/NA & ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154
EC Number: 200-673-2 [*Annex I Index No.:* 604-140-00-4]
Regulatory Authority and Advisory Information
Hazard symbols, risk, & safety statements: Hazard symbol: T + ; risk phrases: R24/25; R26; R48/25; safety phrases: S1/2; S28; S36/37; S45 (see Appendix 4).
WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.
Description: White or colorless crystalline solid. Odorless; molecular weight = 384.62; specific gravity (H_2O:1) = 0.963; freezing/melting point = 84−85°C; 87°C; vapor pressure = 2.4×10^{-9} mmHg @ 25°C (est.)[83]; Henry's Law constant = 2.3×10^{-4} atm m^3/mole @ 25° (est.)[83]. Practically insoluble in water.
Potential Exposure: Sterol rodenticide used in bait for vermin control. Vitamin D is a steroid hormone that has an important role in regulating body levels of calcium and phosphorus, and in mineralization of bone. Not approved for use in EU countries.
Incompatibilities: Sensitive to air, light, and moisture. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.
Permissible Exposure Limits in Air: No standards established.
Determination in Air: Liquid chromatography with ultraviolet detection.
Determination in Water: Octanol−water coefficient: Log K_{ow} = 10.2 (est.)[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.
Routes of Entry: Inhalation, ingestion, dermal contact.
Harmful Effects and Symptoms
Short-Term Exposure: Massive doses are highly toxic to humans; may cause irritability, weakness, fatigue, sleepiness, headache, dry mouth, nausea, abdominal cramps, vomiting, constipation, diarrhea. LD_{50} (oral, rat) = 1426 mg/kg.
Long-Term Exposure: May cause hypertension, kidney effects, anorexia, tinnitus.
Medical Surveillance: Tests for urinary calcium, phosphate, and albumin; Blood urea nitrogen (BUN) levels; serum cholesterol. There may be a decrease in serum alkaline phosphatase concentrations[83].
First Aid Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color code—Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.
Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.
Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. As

an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Absorb or cover with dry earth, sand, or other noncombustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Thermal decomposition products may include oxides of carbon. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. *Small fire:* Dry chemical, carbon dioxide, or water spray. *Large fire:* Dry chemical, carbon dioxide, alcohol-resistant foam, or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: Xi; risk phrases: R36/37/38; R51; safety phrases: S16; S26; S36/37/39; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chromic acetate is a gray-green powder or blue-green pasty mass. Molecular weight = 229.15 (anhydrous), 247.16 (hydrate); specific gravity (H_2O:1) = 1.30; boiling point = 100°C (aqueous solution). Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 0. Soluble in water.

Potential Exposure: Chromic acetate is used to fix certain textile dyes; to harden photographic emulsions in tanning, and as a catalyst.

Incompatibilities: Contact with strong oxidizers may cause fire and explosion hazard.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[Cr(III)]/m^3

OSHA PEL: 0.5 mg[Cr]/m^3 TWA

NIOSH REL: 0.5 mg[Cr]/m^3 TWA limit exposures to lowest feasible concentration.

ACGIH TLV[1]: 0.5 mg[Cr]/m^3 TWA; not classifiable as a human carcinogen

PAC Ver. 29[138]
PAC-1: 6.6 milligram per cubic meter
PAC-2: 78 milligram per cubic meter
PAC-3: 470 milligram per cubic meter
DFG MAK: [skin] danger of skin sensitization

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: EPA ADI:125 mg[Cr (III)]/day/man, as chromium(III). The states of Maine and Minnesota have set guidelines for chromium in drinking water[61] of 50 μg/L for Maine and 120 μg/L for Minnesota.

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, ingestion; skin and/or eye contact

Harmful Effects and Symptoms

Short-Term Exposure: Inhalation may cause irritation of the eyes, nose, and throat. Eye contact may cause irritation, redness, and tearing. Skin contact may cause irritation, redness, and tearing. Skin allergy sometimes occurs, with itching, redness, and/or an eczema-like rash. If this happens, future contact can trigger symptoms.

Long-Term Exposure: Repeated or prolonged skin contact may cause skin sensitization, irritation, and dermatitis. Some chromium compounds can cause a sore or hole in the septum dividing the nose. Chromic acetate is a carcinogen-handle with extreme caution. May cause lung or throat cancer; birth defects; miscarriage; skin allergy with redness, itching, and rash.

Points of Attack: Eyes, skin.

Medical Surveillance: If illness occurs or overexposure is suspected, medical attention is recommended. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [pre- & postshift].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *up to 2.5 milligram per cubic meter*: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (any SCBA with a full facepiece); or SaF (any supplied-air respirator with a full facepiece) *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Chromic Acetate all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. A regulated, marked area should be established where Chromic Acetate is handled, used, or stored. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3288 Toxic solids, inorganic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromic acetate may burn, but does not readily ignite. Use dry chemical, CO_2, water spray; or foam extinguishers. Thermal decomposition products may include oxides of metal and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested:

Dilute and stir in excess soda ash. Let stand, neutralize liquid and flush to sewer. Dispose of sludge in landfill.

Canada, WHMIS, Ingredients Disclosure List concentration Reporting Level: 0.1%.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, C, O, N, Xi; risk phrases: R45; R8; R9; R43; R48/24/25; R50/53; R62; safety phrases: S8; S16; S17; S23; S26; S29; 36/37/39; S41; S43; S45; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water. (est.)

Description: Chromic acid is a dark purplish-red odorless flakes or crystalline powder. Molecular weight = 100.00 mg[CrO_3]; boiling point = 250°C (decomposes); freezing/melting point = 197°C (decomposes). Often used in aqueous solution. Hazard identification (based on NFPA-

704 M Rating System): Health 3, flammability 0, reactivity 0, oxidizer. Highly soluble in water. It may also be formulated as $H_2CrO_4(CrO_3 \cdot H_2O)$.

Potential Exposure: Chromic acid is used in chromium plating; medicine, ceramic glazers, and paints.

Incompatibilities: A strong oxidizer. Aqueous solution is strongly acidic. Reacts with acetic acid, acetic anhydride, acetone, anthracene, chromous sulfide; diethyl ether; dimethyl formamide; ethanol, hydrogen sulfide; methanol, naphthalene, camphor, glycerol, potassium ferricyanide, pyridine, turpentine, combustibles; organics, and other easily oxidized materials (such as paper, wood, sulfur, aluminum, and plastics). Attacks metals in presence of moisture.

Permissible Exposure Limits in Air

NIOSH IDLH = 15 mg[Cr(VI)]/m^3, potential human carcinogen

as chromium(VI) inorganic soluble compounds

OSHA PEL: 0.005 mg[Cr(VI)]/m^3 TWA Concentration. See 29CFR1910.1026

NIOSH REL: 0.001 mg[Cr]/m^3 TWA, potential carcinogen, limit exposure to lowest feasible level. NIOSH considers all Cr(VI) compounds (including chromic acid, *tert*-butyl chromate, zinc chromate, and chromyl chloride) to be potential occupational carcinogens. See *NIOSH Pocket Guide*, Appendices A and C.

ACGIH TLV[1]: 0.05 mg[Cr]/m^3 TWA, Confirmed Human Carcinogen; BEI issued

DFG MAK: [skin] Danger of skin sensitization; Carcinogen Category 1; TRK: 0.05 mg[Cr]/m^3; 20 μg/L [Cr] in urine at end-of-shift

Several states have set guidelines or standards for chromic acid in ambient air[60] ranging from 0 (North Carolina) to 0.001 μ/m^3 (Massachusetts) to 1.0 μ/m^3 (Nevada).

Determination in Air: Use NIOSH Analytical Methods #7600, 7604, 7605, 7703, 9101 and OSHA Analytical Methods ID-103, ID-215, W-4001.

Permissible Concentration in Water: State Drinking Water Guidelines: California 10 μg[Cr(VI)]/L; Maine 35 μg[Cr (VI)]/L. United States National Primary Drinking Water Regulations: MCLG = 0.01 mg[Cr]/L; MCL = 0.1 mg[Cr]/L as chromium. Chromium may cause allergic dermatitis. For the protection of freshwater aquatic life: Hexavalent chromium: 0.29 μg/L as a 24-hour average, never to exceed 21.0 μg/L. for the protection of saltwater aquatic life: Hexavalent chromium: 18 μg/L as a 24-hour average, never to exceed 1260 μg/L. To protect human health: hexavalent chromium 50 μg/L according to EPA[6].

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Chromium(VI) may be determined by extraction and AA, or colorimetry (using diphenylhydrazide). Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chromic acid can affect you when breathed in. It can also pass into inner layers of the skin. Chromic acid should be handled as a carcinogen with extreme caution. *Inhalation:* May be poisonous. Dust may cause severe irritation to the nose, throat, and lungs, causing coughing; shortness of breath. May cause flu-like symptoms including chills, muscle ache; headache, fever. High exposure may cause nausea, salivation, vomiting, cramps, diarrhea, chest pains; cough; a build-up of fluids in the lungs (pulmonary edema), and possible death. Pulmonary edema is a medical emergency and may be delayed from 1 to 2 days following exposure. *Skin:* May cause severe irritation and thermal and acid burns, especially if skin is wet. *Eyes:* May cause severe irritation, burns, pain, and possible blindness. *Swallowed:* May be poisonous. May cause severe burns of the mouth, throat, and stomach; vomiting; watery or bloody diarrhea. Damage to kidneys and liver; collapse and convulsions can result.

Long-Term Exposure: May cause lung cancer; birth defects; miscarriage, kidney and liver damage; skin allergy and ulcers; injury to the nasal septum (may cause a hole in the nose); discoloration of teeth; bronchitis, lung allergy.

Points of Attack: Blood, respiratory system; liver, kidneys, eyes, skin.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. NIOSH lists the following tests: Blood gas analysis, CBC; chest X-ray, electrocardiogram, liver function tests; pulmonary function tests, sputum cytology, urine (chemical/metabolite), UA (routine), white blood cell count/differential. Before beginning employment and at regular times after that, the following are recommended: exam of the mouth and larynx. If symptoms develop or overexposure is suspected, the following may also be useful: kidney function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Specific engineering controls are recommended in NIOSH criteria documents: #73-11021 (chromic acid) and #76-129 [chromium(VI)].

First Aid: Move victim to fresh air. Call 911 or emergency Medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, Avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. (chromic acid) **8 hours** (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): polyethylene gloves, suits, boots; polyvinyl chloride gloves, suits, boots; Saranex-coated suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): butyl rubber gloves, suits, boots; Viton gloves, suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH, as chromates: *at any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Check oxygen content prior to entering storage area. Oxidizers should be isolated from acids, metals, organic materials, and ammonium nitrate. (1) Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially organic materials, flammables and combustibles, and other incompatible materials. Oxidizers, including oxidizing gases, should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. *Note:* Store corrosives in this group in chemical resistant secondary containers and/or in corrosion proof cabinets. (2) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chromic acid all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from acetone, combustible, organic, or other readily oxidizable material (such as paper, wood, sulfur, aluminum, and plastics). Sources of ignition, such as smoking and open flames, are prohibited where Chromic acid is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A storage hazard; sealed containers may burst from carbon dioxide release. Store in tightly closed containers in a dry, cool, well-ventilated place with nonwood floors. Keep away from combustible materials; alcohols and acetone. Where possible, automatically transfer chromic acid from drums or other storage containers to process containers. Containers may explode in fire. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage.

Shipping: UN1463 Chromium trioxide, anhydrous, Hazard Class: 5.1; Labels: 5.1-Oxidizer, 6.1-Poisonous materials, 8-Corrosive material. UN1755 (solution) Chromic acid, solid, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of metal. Use dry chemical, soda ash; CO_2, water spray; or foam extinguishers. Chromic acid may ignite other combustible materials, such as paper and wood. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Chemical reduction to chromium(III) can be followed by land fill disposal of the sludge[22].

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chromic chloride is a highly corrosive, Blue or greenish to black crystalline solid. Molecular weight = 158.35; specific gravity (H_2O:1) = 1.76; boiling point = (decomposes) 1300°C; freezing/melting point = 1152°C (dissociates above 1300°C). Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 0. Insoluble in water (reaction).

Potential Exposure: Chromic chloride is used for production of solutions of basic chlorides and as a catalyst for polymerization of olefins and other organic reactions; in chromizing; in the manufacture of chromium metal and compounds; as a textile mordant; in tanning; in corrosion inhibitors; and as a waterproofing agent. A nutritional supplement.

Incompatibilities: Reacts with water and strong oxidizers. Contact with strong acids or acid fumes may produce highly toxic chloride fumes. May attack certain steels, causing pitting attack and stress corrosion.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[Cr(III)]/m^3

OSHA PEL: 0.5 mg[Cr]/m^3 TWA

NIOSH REL: 0.5 mg[Cr]/m^3 TWA limit exposures to lowest feasible concentration.

ACGIH TLV[1]: 0.5 mg[Cr]/m^3 TWA; not classifiable as a human carcinogen

PAC Ver. 29[138]

PAC-1: 4.6 milligram per cubic meter

PAC-2: 15 milligram per cubic meter

PAC-3: 87 milligram per cubic meter

DFG MAK: [skin] danger of skin sensitization

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L.

For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48] μg/L. For the protection of saltwater aquatic life: Trivalent chromium: 10,300 μg/L on an acute toxicity basis. *To protect human health:* Trivalent chromium: 170 μg/L[6].

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chromic chloride is highly corrosive. Irritates and burns the eyes and skin. Inhalation can irritate the respiratory tract, causing coughing and wheezing. It displays high dermal toxicity, and moderate oral toxicity. The oral toxicity-rat is given as 1870 mg/kg.

Long-Term Exposure: Chromium may cause allergic dermatitis. This chemical may cause histologic fibrosis of the lungs. Signs for exposure to chromic chloride as for other chromium compounds include dermatitis; ulcers of the upper respiratory tract and inflammation of the larynx, lungs, gastrointestinal tract; and nasal passages. Repeated skin contact can cause sensitization and dermatitis.

Points of Attack: Eyes, skin, lungs.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [pre- & postshift].

First Aid: Move victim to fresh air. Call 911 or emergency Medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Up to 2.5 milligram per cubic meter*: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (any SCBA with a full facepiece); or SaF (any supplied-air respirator with a full facepiece) *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizing agents and water.

Shipping: UN1759 Corrosive solids, n.o.s., Hazard class: 8; Labels: 8-Corrosive material, Technical Name Required. UN1760 Corrosive liquids, n.o.s., Hazard class: 8; Labels: 8-Corrosive material, Technical Name Required.

Spill Handling: Do not touch spilled material. Avoid inhalation. Wear full protective clothing and proper respiratory protection. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromic chloride itself does not burn. It reacts with water, so use in flooding quantities only. Thermal decomposition products may include hydrogen chloride and oxides of metal. Use extinguishing agents suitable for surrounding fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Precipitate as chromium hydroxide. Dewater the sludge and dispose of the compacted sludge in single-purpose dumps[22].

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Chromic sulfate is a peach colored solid or red to violet, odorless powder. Molecular weight = 392.18. Specific gravity (H_2O:1) = 3.01; hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 0. Insoluble in water.

Potential Exposure: This compound is used in green paints, inks, dyes, and ceramics.

Incompatibilities: This chemical has weak oxidizing and reducing properties. Keep away from strong oxidizers (perchlorates, peroxides, permanganates, chlorates, nitrates, chlorine, bromine, and fluorine). When heated this chemical decomposes to chromic acid.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[Cr(III)]/m^3

OSHA PEL: 0.5 mg[Cr]/m^3 TWA

NIOSH REL: 0.5 mg[Cr]/m^3 TWA limit exposures to lowest feasible concentration.

ACGIH TLV[1]: 0.5 mg[Cr]/m^3 TWA; not classifiable as a human carcinogen

PAC Ver. 29[138]

PAC-1: 5.7 milligram per cubic meter

PAC-2: 6.3 milligram per cubic meter

PAC-3: 380 milligram per cubic meter

DFG MAK: [skin] danger of skin sensitization

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L. For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48]μg/L. For the protection of saltwater aquatic life: Trivalent chromium: 10,300 μg/L on an acute toxicity basis. *To protect human health:* Trivalent chromium: 170 μg/L.

Determination in Water: Total chromium may be determined by digestion followed by AA; or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation of dust or mist, skin; contact, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Chromic Sulfate can affect you when breathed in. Skin contact may cause irritation, especially if repeated or prolonged. Skin allergy sometimes occurs with itching, redness, and/or an eczema-like rash. If this happens future contact can trigger symptoms. Eye contact may cause irritation and burns.

Long-Term Exposure: Chromium may cause allergic dermatitis. Some chromium compounds can cause an ulcer in the septum separating the nose. It is uncertain whether this chemical has this effect.

Points of Attack: Eyes, skin.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [Pre- & postshift].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Up to 2.5 milligram per cubic meter*: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (any SCBA with a full facepiece); or SaF (any supplied-air respirator with a full facepiece) *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection. *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chromic acid all handlers should be trained on its proper handling and storage. Prior to working with chromic sulfate all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers and sources of heat.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromic sulfate may burn, but does not readily ignite. Thermal decomposition products may include oxides of metal and sulfur. Use dry chemical, CO_2, water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return to supplier where possible. Where this is not practical, the material should be encapsulated and buried in a specially designated chemical landfill.

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 0.1% (chromium, elemental, chromic acid, chromium(VI) oxide, and chromium(III) chromate, carcinogen). NPRI; CEPA Priority Substance List; Drinking Water Quality, 0.05 mg/L MAC.

Hazard symbols, risk, & safety statements: Hazard symbol: F, C, Xi, Xn, N (dust/powder); risk phrases: R45; R10; R17; R20/21/22; R23; R34; R36; R40; R67; safety phrases: S16; S26; S27; S29/35 (dust); S36/37/39; S45; S61 (dust); S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): Nonhazard to water, solid particles, size >1 mm.

Description: Chromium may exist in one of three valence states in compounds, [II (+2)], [III (+3)], and [VI (+6)]. The most stable oxidation state is trivalent chromium; Hexavalent chromium is a less stable state. Chromium (element) blue-white to steel-gray, lustrous, brittle, hard, odorless solid. Elemental: Molecular weight = 52.00; specific gravity (H_2O:1) = 7.15; boiling point = 2642°C; freezing/melting point = 1907°C. Hazard identification (based on Ignition temperature of dust cloud = unknown; minimum explosive concentration = 0.23 oz/ft^3[209]. NFPA-704 M Rating System): [dust] Health 0, flammability 1, reactivity 0. Insoluble in water. Noncombustible Solid in bulk form, but finely divided dust burns rapidly if heated in a flame. Relative explosion hazard of dust: Strong.

Potential Exposure: Chromium metal is used in stainless and other alloy steels to impart resistance to corrosion, oxidation, and for greatly increasing the durability of metals; for chrome plating of other metals.

Incompatibilities: Dust may be pyrophoric in air. Chromium metal (especially in finely divided or powder form) and insoluble salts reacts violently with strong oxidants, such as hydrogen peroxide, causing fire and explosion hazard. Reacts with diluted hydrochloric and sulfuric acids. Incompatible with alkalis and alkali carbonates.

Permissible Exposure Limits in Air

Chromium metal

NIOSH IDLH = 250 mg[Cr]/m^3

OSHA PEL: 1 mg[Cr]/m^3 TWA

NIOSH REL: 0.5 mg[Cr]/m^3 TWA

ACGIH TLV[1]: 0.5 mg[Cr]/m^3 TWA; not classifiable as a human carcinogen

PAC Ver. 29[138]

PAC-1: 1.5 milligram per cubic meter

PAC-2: 17 milligram per cubic meter

PAC-3: 99 milligram per cubic meter

Arab Republic of Egypt: TWA 0.05 milligram per cubic meter, 1993; Australia: TWA 0.05 milligram per cubic meter, 1993; Belgium: TWA 0.5 milligram per cubic meter, 1993; Denmark: TWA 0.5 mg[Cr]/m^3, 1999; Finland: TWA 0.01 milligram per cubic meter, 1999; France: VME 0.5 milligram per cubic meter, 1999; Japan: 0.5 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 0.5 milligram per cubic meter, 2003; the Philippines: TWA 1 milligram per cubic meter, 1993; Poland: TWA 0.5 milligram per cubic meter, 1999; Sweden: NGV 0.5 milligram per cubic meter, 1999; United Kingdom: TWA 0.5 milligram per cubic meter, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for chromium in ambient air[60] ranging from 0 (North Carolina) to 0.00009 μ/m^3 (Rhode Island) to 0.068 μ/m^3 (Massachusetts) to 0.07−0.39 μ/m^3 (Montana) to 0.12 μ/m^3 (Pennsylvania) to 0.167 μ/m^3 (Virginia) to 2.5 μ/m^3 (Connecticut) to 5.0 μ/m^3 (North Dakota) to 12.0 μ/m^3 (Nevada).

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: State Drinking Water Guidelines: California 10 μg[Cr(VI)]/L; Maine 35 μg [Cr(VI)]/L. Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L. Safe Drinking Water Act (47FR 9352): MCL, 0.1 mg/L; MCLG, 0.1 mg/L. For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48] μg/L. Hexavalent chromium: 0.29 μg/L as a 24-hour average, never to exceed 21.0 μg/L. For the protection of saltwater aquatic life: Trivalent chromium: 10,300 μg/L on an acute toxicity basis. Hexavalent chromium: 18 μg/L as a 24-hour average, never to exceed 1260 μg/L. *To protect human health:* Trivalent chromium: 170 μg/L; Hexavalent chromium 50 μg/L according to EPA[6]. EPA[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA's maximum drinking water level (MCL) is 0.1 mg/L[62]. The states of Maine and Minnesota have set guidelines for chromium in drinking water[61] of 50 [Cr]:g/L for Maine and 120 [Cr] μg/L for Minnesota.

Determination in Water: Total chromium may be determined by digestion followed by AA; or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Chromium(VI) may be determined by extraction and AA or colorimetry (using diphenylhydrazide). Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Chromium can affect you when breathed in. Chromium metal ore has been reported to cause lung allergy. Chromium fumes can cause "metal fume fever," a flu-like illness lasting about 24 hours with chills, aches, cough, and fever. Chromium particles can irritate the eyes. The above cautions apply to chromium metal. Since chromium is a reasonably reactive metal, thought must be given to the actions of combined chromium and particularly to the presence or absence of carcinogenic effects in various chromium compounds. A table of differentiation between noncarcinogenic and carcinogenic chromium(VI) compounds has been presented by NIOSH as shown below. NIOSH has not conducted an in-depth study of the toxicity of chromium metal or compounds containing chromium in an oxidation state other than chromium(VI) compounds be reduced to 0.001 milligram per cubic meter, and that these compounds be regulated as occupational carcinogens. NIOSH also recommends that the permissible exposure limit for noncarcinogenic chromium(VI) be reduced to 0.025 milligram per cubic meter averaged over a work-shift of up to 10 hours per day, 40 hours per week, with a ceiling level of 0.05 milligram per cubic meter averaged over a 15-minute period. It is recommended further that chromium (VI) in the work-place be considered carcinogenic, unless it has been demonstrated that only the noncarcinogenic chromium(VI) compounds mentioned below are present. The NIOSH Criteria Documents for Chromic acid and Chromium(VI) should be consulted for more detailed information.

Short-Term Exposure: Chromium particles can irritate the eyes. Chromium fumes can cause “metal fume fever” a flu-like illness, lasting about 24−36 hours with chills, aches, cough, and fever.

Long-Term Exposure: Repeated or prolonged contact may cause skin sensitization. Chromium metal ore has been reported to cause lung allergy.

Points of Attack: Chromium metal and insoluble salts: respiratory system and lungs.

Medical Surveillance: Preemployment physical examinations should include: a work history to determine past exposure to chromic acid and hexavalent chromium compounds; exposure to other carcinogens; smoking history; history of skin or pulmonary sensitization to chromium, history, or presence of dermatitis; skin ulcers; or lesions of the nasal mucosa and/or perforation of the septum; and a chest X-ray. Periodic examinations and evaluation should be made of skin and respiratory complaints especially in workers who demonstrate allergic reactions. Chest X-rays should be taken yearly for workers over age 40, and every 5 years for younger workers. Blood, liver, lungs, and kidney function should be evaluated periodically. Urine test for chromates. This test is most accurate shortly after exposure. Regulatory exams are required for carcinogens by OSHA 1910.1002-1016.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Note to Physician: In case of fume inhalation, treat for pulmonary edema. Give prednisone or other corticosteroid orally to reduce tissue response to fume. Positive-pressure ventilation may be necessary. Treat metal fume fever with bed rest, analgesics, and antipyretics. The symptoms of metal fume fever may be delayed for 4−12 hours following exposure: it may last less than 36 hours.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Respirators should be used in areas where dust, fumes, or mist exposure exceeds Federal standards of where brief concentrations exceed the TWA, and for emergencies. Dust, fumes, and mist filter-type respirators or supplied-air respirators should be supplied all workers exposed, depending on concentration of exposure. Specific engineering controls are recommended in NIOSH criteria document #76-129, chromium(VI).

Respirator Selection: *Up to 2.5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator) *up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (APF = 25) (any powered, APR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter*; or any SCBA with a full facepiece; or any supplied-air respirator with a full facepiece. *Up to 250 milligram per cubic meter:* Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode. *Emergency or planned entry into un known concentrations or IDLH conditions:* Any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode; or any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive pressure breathing apparatus. *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—White: Corrosive or Contact Hazard (powder); Store separately in a corrosion resistant location. Store in tightly closed containers in a cool, well-ventilated area. Prior to working with chromium all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed containers in a cool, well-ventilated area. Chromium must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. Sources of ignition, such as smoking and open flames are prohibited where chromium is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3089 Metal powders, flammable, n.o.s., Hazard Class: 4.1; Labels: 4.1-Flammable solid. UN1759 Corrosive solids, n.o.s., Hazard class: 8; Labels: 8-Corrosive material, Technical Name required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromium metal as dust/powder is combustible and may explode in air. Thermal decomposition products may include metal oxides. Use special mixtures of dry chemicals appropriate for extinguishing metal fires. *Do not use water*. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recovery and recycling is a viable alternative to disposal for chromium in plating wastes; tannery wastes; cooling tower blowdown water and chemical plant wastes.

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: [chromium(VI)], *carcinogenic to humans*, Group 1; NTP: [chromium(VI) compounds] Known to be a human carcinogen; The German MAK value is 3B. This value is for In vitro animal studies yielding evidence of carcinogenic effects. These effects are not sufficient for classification if this material in one of the other categories.

California Proposition 65 Chemical[102]: (*hexavalent chromium*) Cancer 2/27/1987

Hazard Alert: Combustible, Explosive when heated, Possible risk of forming tumors, Suspected of causing genetic defects.

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

United States National Primary Drinking Water Regulations: MCLG = 0.01 mg[Cr]/L; MCL = 0.1 mg[Cr]/L as Chromium

Clean Water Act: Toxic Pollutant (Section 401.15); 40CFR401.15 Section 307 Toxic Pollutants as chromium and compounds.

EPA ADI: Chromium(VI) = 0.175 mg/day/man. EPA EASI levels for chromium: **Infants:** age 0.0−0.5 year: 0.01−0.04 mg/day; age 0.5−1.0 year: 0.02−0.06 mg/day. **Children**: age 1−3 years: 0.02−0.08 mg/day; age 4−6 years: 0.03−0.12 mg/day; age 7−10 years: 0.05−0.20 mg/day; age > or = 11 years: 0.05−0.20 mg/day.

Adults: 0.05−0.20 mg/day.

RCRA, 40CFR261, Appendix 8 Hazardous Constituents, D007 (chromium compounds)

EPCRA (Section 313): Includes any unique chemical substance that contains chromium as part of that chemical's infrastructure.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xn; risk phrases: R45; R5; R20/21/22; R44; R49; R50/53; R62; safety phrases: S36/37/39; S41; S45; S53; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chromium carbonyl is a colorless crystalline substance which sinters (forms a coherent mass without melting) @ 90°C. Molecular weight = 220.06; freezing/melting point = (decomposes) 110°C. boiling point = explodes in lieu of boiling @ 210°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0. Insoluble in water; possible reaction.

Potential Exposure: Chromium carbonyl is used as a catalyst for hydrogenation, isomerization, water−gas shift reaction and alkylation of aromatic hydrocarbons; gasoline additive to increase octane number; preparation of chromous oxide, CrO.

Incompatibilities: Violent reaction on contact with oxidizers. Decomposed by chlorine and fuming nitric acid; sensitive to heat and light (undergoes photochemical decomposition). Many carbonyls react with water, forming toxic and flammable vapors.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: None

ACGIH TLV[1]: None for *organic* chromium compounds. However, based on its formula and synonym (chromium *hexa*carbonyl): 0.01 mg(Cr)/m^3 TWA [listed under "certain water insoluble forms" hexavalent chromium inorganic compounds]. A1: Confirmed Human Carcinogen *as hexavalent chromium compounds* (*certain water insoluble forms*).

DFG MAK: Carcinogen Category 3B

PAC Ver. 29[138]

PAC-1: 0.13 milligram per cubic meter

PAC-2: 11 milligram per cubic meter

PAC-3: 66 milligram per cubic meter

Determination in Air: Use NIOSH Analytical Methods #7600, 7604, 7605, 7703, 9101 and OSHA Analytical Methods ID-103, ID-215, W-4001.

Permissible Concentration in Water: State Drinking Water Guidelines: California 10μg[Cr(VI)]/L; Maine 35 μg [Cr(VI)]/L.

For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48] μg/L. Hexavalent chromium: 0.29 μg/L as a 24-hour average, never to exceed 21.0 μg/L. For the protection of saltwater aquatic life: Hexavalent chromium: 18 μg/L as a 24-hour average, never to exceed 1260 μg/L. *To protect human health:* hexavalent chromium 50 μg/L (United States Environmental Protection Agency)[6]. EPA[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA has recently proposed a maximum drinking water level of 0.1 mg/L[62]. The states of Maine and Minnesota have set guidelines for chromium in drinking water[61] of 50 μg/L for Maine and 120 μg/L for Minnesota.

Determination in Water: Total chromium may be determined by digestion followed by AA; or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Chromium(VI) may be determined by extraction and AA or colorimetry (using diphenylhydrazide). Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Highly toxic. Emits toxic fumes of CO when heated. Thought to be carcinogenic.

Short-Term Exposure: Poisonous if ingested; tiny amounts may also cause digestive tract irritation. May cause eye and skin irritation. May cause skin sensitization. May cause chrome ulcers, deep lesions of the skin, usually on breaks in the skin, often found hand and lower forearm. Inhalation may cause irritation of the respiratory tract. LD_{50} (oral-rat) = 230 mg/kg (moderately toxic).

Long-Term Exposure: Chromium may cause allergic dermatitis. May cause cancer in humans. May cause lung damage. Chronic exposure to water insoluble hexavalent chromium compounds has been shown to be associated with lung cancer and gastrointestinal tract tumors.

Medical Surveillance: Preemployment physical examinations should include: a work history to determine past exposure to chromic acid and hexavalent chromium compounds; exposure to other carcinogens; smoking history; history of skin or pulmonary sensitization to chromium, history or presence of dermatitis; skin ulcers; or lesions of the nasal mucosa and/or perforation of the septum; and a chest X-ray. Periodic examinations and evaluation should be made of skin and respiratory complaints especially in workers who demonstrate allergic reactions. Chest X-rays should be taken yearly for workers over age 40, and every 5 years for younger workers. Blood, liver, lungs, and kidney function should be evaluated periodically. Urine test for chromates. This test is most accurate shortly after exposure. Regulatory exams are required for carcinogens by OSHA 1910.1002-1016.

First Aid: *Skin Contact:* Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye Contact:* Remove any contact lenses at once. Immediately flush eyes well with copious quantities of water or normal saline for at least 20−30 minutes. Seek Medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing, or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* Contact a physician, hospital, or poison center at once. If the victim is unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that the patient's airway is open and lay him on his side with his head lower than his body and transport immediately to a medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. Vomiting should not be induced without a physician's advice.

Respirator Selection: NIOSH, as chromates: *at any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure, locked, poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area or in a refrigerator. Protect from light. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3466 Metal carbonyls, solid n.o.s. Hazard class 6.1. Technical name required. UN3281 Metal carbonyls, liquid n.o.s. Hazard class 6.1. Technical name required, Potential Inhalation Hazard (Special Provision 5). UN3466 Metal carbonyls, solid n.o.s. Hazard class 6.1. Technical name required.

Spill Handling:

Metal carbonyls, liquid n.o.s.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 300/90
Then: Protect persons downwind (mi/km)
Day 0.9/1.5
Night 3.4/5.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 3000/900
Then: Protect persons downwind (mi/km)
Day 7.1 + /11 +
Night 7.0 + /11 + *

" + " means distance can be larger in certain atmospheric conditions.

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Large spills can be cleaned up using JP-4L or JP-5 (jet engine fuels). Isopropyl alcohol may be used to cleanup moderate spills, while methyl ethyl ketone should be used for cleaning *small spills* and quick disconnects. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromium carbonyl is a flammable compound and extreme care should be used in firefighting both due to the carcinogenic nature of the material and the emission of CO as a decomposition product. Thermal decomposition products may include oxides of metal and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Use a licensed professional waste disposal service to dispose of this material. All federal, state, and local environmental regulations must be observed. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform to EPA regulations governing storage, transportation, treatment, and waste disposal.

Nonahydrate: Chromium nitrate nonahydrate; Chromic nitrate nonahydrate; Chromium trinitrate nonahydrate; Nitric acid, chromium (3+) salt, nonahydrate

CAS Registry Number: 10103-47-6; 13548-38-4 (III); 7789-02-8 (nonahydrate); 17135-66-9

RTECS Number: GB6280000; GB3600000

UN/NA & ERG Number: UN2720/141

EC Number: 236-921-1 (trinitrate)

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Human Inadequate Evidence; Animal Inadequate Evidence, *not classifiable as carcinogenic to humans*, Group 3, 1997.

Hazard Alert: Strong oxidizer, Unstable, possibly shock-sensitive, Suspected reprotoxic hazard, as nonhydrate (CAS: 7789-02-8); Environmental hazard.

United States National Primary Drinking Water Regulations: MCLG = 0.01 mg[Cr]/L; MCL = 0.1 mg[Cr]/L as Chromium: 0.01 mg/L; MCL = 0.1 mg/L as chromium; 10 mg[N]/L; MCL = 10 mg/L as nitrates

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Toxic Pollutant (Section 401.15); 40CFR401.15 Section 307 Toxic Pollutants as chromium and compounds

EPA ADI: Chromium(III) = 125 mg/day/man. EPA EASI levels for chromium: **Infants:** age 0.0−0.5 year: 0.01−0.04 mg/day; age 0.5−1.0 year: 0.02−0.06 mg/day. **Children:** age 1−3 years: 0.02−0.08 mg/day; age 4−6 years: 0.03−0.12 mg/day; age 7−10 years: 0.05−0.20 mg/day; age > or = 11 years: 0.05−0.20 mg/day.

Adults: 0.05−0.20 mg/day.

RCRA, 40CFR261, Appendix 8 Hazardous Constituents, D007 (chromium compounds)

EPCRA (Section 313): Includes any unique chemical substance that contains chromium as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: Chromium(III) compounds: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%. as Chromium(III) compounds, NPRI; CEPA Priority Substance List (as chromium compounds).

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

European/International Regulations: Hazard symbol: T, O, Xi, N; risk phrases: R45; R8; R38; R41; R43; R49; R50/53; S63; safety phrases: S8; S17; S29/25; S36/38; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Chromium nitrate is a crystalline substance, variously stated to be green brown or purple and existing in various hydrated forms. Molecular weight = 238.03; 400.21 (nonahydrate); freezing/melting point = 60−100°C, depending on the degree of hydration. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 0. Soluble in water.

Potential Exposure: Chromium nitrate is used in the preparation of chrome catalysts, in textile printing operations; and as a corrosion inhibitor. Used to make other chemicals.

Incompatibilities: This chemical is a strong oxidizer. Contact with reducing agents; fuels, ethers, and other flammable and combustible materials cause a fire and explosion hazard. Violent reaction with many compounds, including reducing agents; alcohols, chemically active metals; combustible materials, strong acids, alkaline earth sulfides, aluminum carbides, aluminum, amines, calcium sulfide, carbides, chlorine trifluoride, glycerin, hydrides, hydrochloric acid, hydrogen peroxide, hydrogen sulfide, hydroxylamine, magnesium, metal powders, metal sulfides, molybdenum, phenylhydrazine, phosphorous red/friction, phosphorous trichloride, silicon, sulfides, sulfur, sulfur dioxide, sulfur/friction, sulfuric acid, tungsten, hydrogen trisulfide.

Permissible Exposure Limits in Air
NIOSH IDLH = 25 mg[Cr(III)]/m^3
OSHA PEL: 0.5 mg[Cr]/m^3 TWA
NIOSH REL: 0.5 mg[Cr]/m^3 TWA limit exposures to lowest feasible concentration.
ACGIH TLV[1]: 0.5 mg[Cr]/m^3 TWA; not classifiable as a human carcinogen
DFG MAK: [skin] danger of skin sensitization
PAC Ver. 29[138]
10103-47-6
PAC-1: 33 milligram per cubic meter
PAC-2: 36 milligram per cubic meter
PAC-3: 220 milligram per cubic meter
13548-38-4
PAC-1: 6.9 milligram per cubic meter
PAC-2: 110 milligram per cubic meter
PAC-3: 640 milligram per cubic meter

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L. For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48]μg/L. Trivalent chromium: 10,300 μg/L on an acute toxicity basis. *To protect human health:* Trivalent chromium: 170 μg/L; Hexavalent chromium 50 μg/L according to EPA[6]. EPA[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA has recently proposed a maximum drinking water level of 0.1 mg/L.

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry; (diphenylcarbazide); or by ICP optical emission spectrometry. Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Skin contact, inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Chromium nitrate can affect you when breathed in. Chromium nitrate may cause mutations. Handle with extreme caution. Skin contact may cause irritation, especially if repeated or prolonged. Skin allergy sometimes occurs, with itching, redness, and/or an eczema-like rash. If this happens, future contact can trigger symptoms. Eye contact may cause irritation.

Long-Term Exposure: Chromium may cause allergic dermatitis. May cause genetic changes; birth defects; skin allergy with rash and itching.

Points of Attack: Irritation of eyes; sensitization dermatitis.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [pre- & postshift].

First Aid: If chromium nitrate gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear-splash or dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Up to 2.5 milligram per cubic meter*: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (any SCBA with a full facepiece); or SaF (any supplied-air respirator with a full facepiece) *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Oxidizers should be isolated from acids, metals, organic materials, and ammonium nitrate. (1) Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially organic materials, flammables and combustibles, and other incompatible materials. Oxidizers, including oxidizing gases, should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. (2) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Chromium Nitrate must be stored to avoid contact with strong reducing agents such as hydrides; fuels, and ether, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from flammable and combustible materials. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage regulations.

Shipping: UN2720 Chromium nitrate, Hazard Class: 5.1; Labels: 5.1-Oxidizer.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. Keep chromium nitrate out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Extinguish fire using an agent suitable for type of surrounding fire. Chromium nitrate itself does not burn but it will increase the intensity of a fire since it is an oxidizer. Thermal decomposition products may include nitrogen oxides and chromium oxide fumes. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Precipitate chromium as the hydroxide. Dewater the sludge and dispose of in single-purpose dumps[22].

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48]μg/L. For the protection of saltwater aquatic life: Trivalent chromium: 10,300 μg/L on an acute toxicity basis. *To protect human health:* Trivalent chromium: 170 μg/L (EPA)[6]. EPA[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA's maximum drinking water level (MCL) is 0.1 mg/L[62]. The states of Maine and Minnesota have set guidelines for chromium in drinking water[61] of 50 g/L for Maine and 120 μg/L for Minnesota.

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L.

Routes of Entry: Inhalation of dust or mist, skin contact, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Eye contact can cause irritation. Skin allergy may occur with itching, redness, and/or an eczema-like rash. Persons allergic to other chromium compounds may be more likely to develop skin allergy to this chemical.

Long-Term Exposure: Chromium may cause allergic dermatitis. There is limited evidence that chromium(III) oxide is a teratogen in animals, and until further testing is done, it should be treated as a possible teratogen in humans. Chromium(III) oxide has been tested and has *not* been shown to cause cancer in animals (NJ Department of Health, 5/1988). Skin allergy may develop from repeated exposure to this chemical.

Points of Attack: Irritation of eyes; sensitization dermatitis.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [pre- & postshift].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: *Clothing:* Avoid skin contact with Chromium(III) oxide. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day and put on before work. *Eye Protection:* Eye protection is included in the recommended respiratory protection.

Respirator Selection: *Up to 2.5 milligram per cubic meter*: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (any SCBA with a full facepiece); or SaF (any supplied-air respirator with a full facepiece) *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially flammables and combustibles. Oxidizers should be isolated from acids, metals, organic materials, and ammonium nitrate. Chromium(III) oxide must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), glycerol and oxygen difluoride, since violent reactions occur. A regulated, marked area should be established where chromium(III) oxide is handled, used, or stored. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3086 Toxic solids, oxidizing, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, 5.1-Oxidizer. Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Extinguish fire using an agent suitable for type of surrounding fire. Chromium(III) oxide itself does not burn. Thermal decomposition products may include oxides of chromium metal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Permissible Concentration in Water: For the protection of freshwater aquatic life: Trivalent chromium: not to exceed [1.08 In (hardness) + 3.48]μg/L. For the protection of saltwater aquatic life: Trivalent chromium: 10,300 μg/L on an acute toxicity basis. *To protect human health:* Trivalent chromium: 170 μg/L; Hexavalent chromium 50 μg/L according to EPA[6]. United States Environmental Protection Agency[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA's maximum drinking water level (MCL) is 0.1 mg/L[62]. The states of Maine and Minnesota have set guidelines for chromium in drinking water[61] of 50 μg/L for Maine and 120 μg/L for Minnesota.

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L.

Routes of Entry: Inhalation, eyes, skin.

Harmful Effects and Symptoms

Short-Term Exposure: *Inhalation:* May cause irritation to mouth, nose, throat, and lungs. *Skin:* May cause irritation, redness, and sores. Allergic reaction may occur in sensitive individuals. *Eyes:* May cause irritation. *Ingestion:* Large quantities may cause stomach irritation and nausea.

Long-Term Exposure: Chromium may cause allergic dermatitis.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [pre- & postshift].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash or dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *up to 2.5 milligram per cubic meter*: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa*

(APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Keep away from heat.

Shipping: UN3288 Toxic solids, inorganic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This material is not flammable. Use extinguisher appropriate for surrounding fire. Thermal decomposition products may include oxides of chromium metal and potassium sulfate. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: O, T+, N; risk phrases: R45; R8; R9; R24/25; R26; R35; R42/43; R50/53; R62; R63; safety phrases: S17; S29/35; S41; S45; S53; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chromium trioxide is a dark-red crystalline substance. It is odorless. Molecular weight = 100.00; specific gravity (H_2O:1) = 2.70; boiling point = (decomposes below BP) @ 250°C; freezing/melting point = 197°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 3 (Oxidizer). It is deliquescent. Soluble in water.

Potential Exposure: Chromium trioxide is used in plating and metal treatment, as a corrosion inhibitor; and as an oxidant; in aluminum anodizing, dye; ink, and paint manufacturing, tanning, engraving; and photography.

Incompatibilities: Chromium trioxide is a strong oxidizer. The solution in water is a strong acid. Reacts violently with bases and is corrosive. Contact with reducing agents; fuels, organic chemicals, flammable and combustible materials, causing fire and explosion hazard. This chemical decomposes above 250°C to chromic oxide and oxygen with increased fire hazard. Attacks metals in the presence of moisture.

Permissible Exposure Limits in Air

as chromium(VI) inorganic soluble compounds

NIOSH IDLH = 15 mg[Cr(VI)]/m^3

OSHA PEL: 0.005 mg[Cr(VI)]/m^3 TWA Concentration. See 29CFR1910.1026

NIOSH REL: 0.001 mg[Cr]/m^3 TWA, potential carcinogen, limit exposure to lowest feasible level. NIOSH considers all Cr(VI) compounds (including chromic acid, *tert*-butyl chromate, zinc chromate, and chromyl chloride) to be potential occupational carcinogens. See *NIOSH Pocket Guide*, Appendices A and C.

ACGIH TLV[1]: 0.05 mg[Cr]/m^3 TWA, Confirmed Human Carcinogen; BEI issued

PAC Ver. 29[138]

PAC-1: 0.29 milligram per cubic meter

PAC-2: 5 milligram per cubic meter

PAC-3: 30 milligram per cubic meter

DFG MAK: [skin] Danger of skin sensitization; Carcinogen Category 1; TRK: 0.05 mg[Cr]/m^3; 20 μg/L [Cr] in urine at end-of-shift

Austria: carcinogen, 1999; Denmark: TWA 0.02 mg[Cr]/m^3, 1999; Finland: carcinogen, 1993; France: VME 0.05 milligram per cubic meter, VLE 0.1 milligram per cubic meter, carcinogen, 1999; Japan: EOL 0.05 mg[Cr]/m^3, 1999; Norway: TWA 0.02 milligram per cubic meter, 1999; Poland: TWA 0.1 mg[Cr]/m^3; STEL 0.3 mg[Cr]/m^3, 1999; Russia: STEL 0.01 milligram per cubic meter [skin] 1993; Switzerland: TWA 0.02 milligram per cubic meter, carcinogen, 1999; United Kingdom: TWA 0.05 mg[Cr]/m^3, carcinogen, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: Confirmed human carcinogen. Connecticut[60] has set a guideline for chromium trioxide in ambient air of 0.25 μ/m^3.

Determination in Air: Use NIOSH Analytical Methods #7600, 7604, 7605, 7703, 9101 and OSHA Analytical Methods ID-103, ID-215, W-4001.

Permissible Concentration in Water: Permissible concentration in Water: State Drinking Water Guidelines: California 10 μg[Cr(VI)]/L; Maine 35 μg[Cr(VI)]/L. For the protection of freshwater aquatic life: Hexavalent chromium: 0.29 μg/L as a 24-hour average, never to exceed 21.0 μg/L. For the protection of saltwater aquatic life: Hexavalent chromium: 18 μg/L as a 24-hour average, never to exceed 1260 μg/L. *To protect human health:* hexavalent chromium 50 μg/L according to EPA[6]. EPA[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA's maximum drinking water level (MCL) is 0.1 mg/L[62]. The states of Maine and Minnesota have set guidelines for chromium in drinking water[61] of 50 μg/L for Maine and 120 μg/L for Minnesota.

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Chromium(VI) may be determined by extraction and AA or colorimetry (using diphenylhydrazide). Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, skin contact, ingestion.

Harmful Effects and Symptoms

Extremely corrosive to skin.

Short-Term Exposure: *Inhalation:* Human exposure to concentrations between 0.18−1.4 milligram per cubic meter of acid mist for 2 weeks produced irritation of the nose; after 4 weeks, ulcers of the nose developed; and after 8 weeks, holes formed in the tissue separating the nostrils with bleeding, discharge or formation of a crust in the inner nose. Additional effects noted in humans exposed to unknown concentrations are irritation of the throat, voicebox, lungs; asthmatic attacks, headache, wheezing, coughing, shortness of breath; and painful breathing. Chromic trioxide can cause severe allergic lung reaction. *Skin:* Direct contact will produce severe irritation of the skin. Sensitization from such contact can occur and result in severe dermatitis from very small exposures at a later time. *Eyes:* Can cause severe irritation, burns, and possible loss of vision. *Ingestion:* Swallowing of chromic acid solutions can result in severe irritation and damage to the mouth, throat, and stomach.

Long-Term Exposure: Chromium may cause allergic dermatitis. Prolonged Exposure to chromic acid mist can result in perorations (holes) of the nasal septum (tissue separating the nostrils); lung irritation with symptoms similar to asthma and liver damage. Repeated or prolonged contact with skin may cause dermatitis and chrome ulcers, or "chrome holes." May cause skin sensitization, allergy, irritation, and rashes. Repeated or prolonged inhalation exposure may cause asthma-like reactions. Wearing away of the surfaces of teeth has been noted in workers exposed to chromic acid mist for a prolonged time. This substance is carcinogenic to humans. It has been shown to cause lung and throat cancers. There is limited evidence that this chemical is a teratogen in animals. May cause kidney and liver damage.

Points of Attack: Skin, lungs, kidney, liver.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for Medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. NIOSH lists the following tests: Blood gas analysis, CBC; chest X-ray, electrocardiogram, liver function tests; pulmonary Function tests, sputum cytology, urine (chemical/metabolite), UA (routine), white blood cell count/differential. Before first exposure and every 6−12 months, a medical history and exam is recommended, with very careful attention to the nose, skin, lungs, and voice box. If you notice skin, nose, or lung effects, seek prompt medical attention. Also check your skin daily for little bumps or blisters, the first sign of "chrome ulcers." If not treated early, these can last for years after exposure. If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear acid resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. (as chromic acid and chromates) **8 hours** (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): polyethylene gloves, suits, boots; polyvinyl chloride gloves, suits, boots; Saranex-coated suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): butyl rubber gloves, suits, boots; Viton gloves, suits Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. AIHA recommends polyvinyl chloride for solutions of Chromium(VI) oxide in water as a protective material. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Specific engineering controls are recommended in NIOSH criteria document #76-129, chromium(VI).

Respirator Selection: NIOSH, as chromates: *at any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Check oxygen content prior to entering storage area. UN1463 (1) Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially organic materials, flammables and combustibles, and other incompatible materials. Oxidizers, including oxidizing gases, should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. *Note*: Store corrosives in this group in chemical resistant secondary containers or in corrosion proof cabinets. UN1755 (2) Color code—White: Corrosive or contact Hazard; Store separately in a corrosion resistant location. *Note:* Store corrosives in this group in chemical resistant secondary containers and/or in corrosion proof cabinets. (3) Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. Prior to working with chromium(VI) oxide all handlers should be trained on its proper handling and storage. Chromium(VI) oxide must be stored to avoid contact with reducing agents and organic chemicals, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from fuels and other flammable and combustible materials. Do not store chromium(VI) oxide on wood floors, because prolonged contact with wood can produce a fire hazard. Protect from excess moisture to minimize rusting of containers. A regulated, marked area should be established where chromium(VI) oxide is handled, used, or stored. Store in a cool, well-ventilated area away from incompatible materials listed above. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN1463 (anhydrous), Chromium trioxide, anhydrous, Chromium trioxide, anhydrous, Hazard Class: 5.1; Labels: 5.1-Oxidizer, 6.1-Poisonous materials, 8-Corrosive material. UN1755 (solution), Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. Keep chromium(VI) oxide out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of metal. Extinguish fire using an agent suitable for type of surrounding fire. Chromium(VI) oxide itself does not burn but it will increase the intensity of a fire since it is an oxidizer. The substance decomposes above 250°C to chromic oxide and oxygen with increased fire hazard. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Reduce to Cr(III). If material cannot be recovered and recycled, dispose of sludge in a chemical waste landfill[22].

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Chromous chloride is a white-to-bluish solid or lustrous needles which turn Blue in water. Molecular weight = 122.90; specific gravity (H_2O:1) = 2.75 @ 14°C; boiling point = 1300°C; freezing/melting point = 824°C. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 0. Soluble in water.

Potential Exposure: It is used in metal alloys and metal finishing; textile treatment including mothproofing, waterproofing, printing; and dying, leather tanning; making photographic chemicals; and green pigments for various uses.

Incompatibilities: Very hygroscopic. The substance is a strong reducing agent. Reacts with oxidizers. Reacts with water, forming flammable hydrogen gas.

Permissible Exposure Limits in Air

Chromous chloride may reduce the oxygen content of air in confined spaces.

OSHA PEL: 0.5 mg[Cr]/m^3 TWA

NIOSH: 0.5 mg[Cr]/m^3 TWA; Limit exposures to lowest feasible concentration; See *NIOSH Pocket Guide*, Appendix C

PAC Ver. 29[138]

PAC-1: 3.5 milligram per cubic meter

PAC-2: 62 milligram per cubic meter

PAC-3: 370 milligram per cubic meter

Determination in Air: Use NIOSH Analytical Methods #7024, 7300, 7301, 7303, 9102 and OSHA Analytical Methods ID-121 and ID-125G[58].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 100 μg[Cr]/L.

Routes of Entry: Inhalation, eyes and/or skin.

Harmful Effects and Symptoms

Short-Term Exposure: Irritates the eyes, skin, and respiratory tract. Eye contact may cause damage. Inhalation can cause coughing and/or shortness of breath. May cause pulmonary irritation. Moderately toxic to humans. Between 1 oz, and 1 lb may be fatal. LD_{50} (oral-rat) = 1870 mg/kg.

Long-Term Exposure: Chromium may cause allergic dermatitis. Chrome ulcers or sores of the skin or nasal septum; hole in the nasal septum, sometimes with bleeding may result. May cause lung damage.

Points of Attack: Skin, lungs.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to Physician: In case of fume inhalation, treat pulmonary edema. Consider administering prednisone or other corticosteroid to reduce tissue response to fume. Positive-pressure ventilation may be necessary. Treat metal fume fever with bed rest, analgesics, and antipyretics.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Up to 2.5 milligram per cubic meter: Qm* (APF = 25) (any quarter-mask respirator). *Up to 5 milligram per cubic meter:* 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *Up to 12.5 milligram per cubic meter:* Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (any PAPR with a high-efficiency particulate filter). *Up to 25 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie* (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. Prior to working with chromous chloride all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water and moisture. Where possible, automatically pump liquid from drums or other storage containers to process containers.

Shipping: UN3260 Corrosive solid, acidic, inorganic, n.o.s., Hazard class: 8; Labels: 8-Corrosive material, Technical Name Required.

Spill Handling: *Solid:* Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Liquid solution: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromous chloride may burn, but does not readily ignite. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include chromous salts, chromic salts; and fumes of chromium. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

EPCRA (Section 313): Includes any unique chemical substance that contains chromium as part of that chemical's infrastructure.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: O, T, C, N, Xi; risk phrases: R8; R14/15; R29; R34; R35; R43; R46; R49; R50/53; safety phrases: S1; S17; S29/35; S45; S53; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Chromyl chloride is a dark red fuming liquid with a musty, burning odor. Molecular weight = 154.90; specific gravity (H_2O:1) = 1.91 @ 25°C; boiling point = 117°C; freezing/melting point = −96.5°C; vapor pressure = 20 mmHg @ 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 2 ₩. Soluble in water; violent reaction, releasing hydrochloric and chromic acids and chlorine gas.

Potential Exposure: Chromium oxychloride is used in making chromium complexes and dyes; and used in various organic oxidation and chlorination reactions.

Incompatibilities: Contact with water is violent and forms hydrochloric and chromic acids, and chlorine gas. A powerful oxidizer. Reacts violently with acetone, alcohol, ammonia, ether, fuels, organic solvents, moist phosphorus, phosphorus trichloride; sodium azide; sulfur, reducing agents; turpentine. Contact with nonmetal halides, such as disulfur dichloride, phosphorus trichloride; and phosphorus tribromide; nonmetal hydrides, such as hydrogen sulfide; hydrogen phosphide, and urea, causes a danger fire and explosion hazard.

Permissible Exposure Limits in Air

as chromium(VI) inorganic soluble compounds

NIOSH IDLH = 15 mg[Cr(VI)]/m^3

OSHA PEL: 0.005 mg[Cr(VI)]/m^3 TWA Concentration. See 29CFR1910.1026

NIOSH REL: 0.001 mg[Cr]/m^3 TWA, potential carcinogen, limit exposure to lowest feasible level. NIOSH considers all Cr(VI) compounds (including chromic acid, *tert*-butyl chromate, zinc chromate, and chromyl chloride) to be potential occupational carcinogens. See *NIOSH Pocket Guide*, Appendices A and C.

ACGIH TLV[1]: 0.05 mg[Cr]/m^3 TWA, Confirmed Human Carcinogen; BEI issued

DFG MAK: [skin] Danger of skin sensitization; Carcinogen Category 1; TRK: 0.05 mg[Cr]/m^3; 20 μg/L [Cr] in urine at end-of-shift

Austria: carcinogen, 1999; Denmark: TWA 0.02 mg[Cr]/m^3, 1999; Finland: carcinogen, 1993; France: VME 0.05 milligram per cubic meter, VLE 0.1 milligram per cubic meter, carcinogen, 1999; Japan: EOL 0.05 mg[Cr]/m^3, 1999; Norway: TWA 0.02 milligram per cubic meter, 1999; Poland: TWA 0.1 mg[Cr]/m^3; STEL 0.3 mg[Cr]/m^3, 1999; Russia: STEL 0.01 milligram per cubic meter [skin] 1993; Switzerland: TWA 0.02 milligram per cubic meter, carcinogen, 1999; United Kingdom: TWA 0.05 mg [Cr]/m^3, carcinogen, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: Confirmed human carcinogen. Connecticut[60] has set a guideline for chromium trioxide in ambient air of 0.25 μ/m^3.

Determination in Air: Use NIOSH Analytical Methods #7600, 7604, 7605, 7703, 9101 and OSHA Analytical Methods ID-103, ID-215, W-4001.

Permissible Concentration in Water: State Drinking Water Guidelines: California 10 μg[Cr(VI)]/L; Maine 35 μg[Cr(VI)]/L. For the protection of freshwater aquatic life: Hexavalent chromium: 0.29 μg/L as a 24-hour average, never to exceed 21.0 μg/L. For the protection of saltwater aquatic life: Hexavalent chromium: 18 μg/L as a 24-hour average, never to exceed 1260 μg/L. *To protect human health:* hexavalent chromium 50 μg/L according to EPA[6]. EPA[49] has set a long-term Health advisory: for adults of 0.84 mg/L and a lifetime Health advisory: of 0.12 mg/L (120 μg/L) for chromium. EPA's maximum drinking water level (MCL) is 0.1 mg/L[62].

Determination in Water: Total chromium may be determined by digestion followed by AA, or by colorimetry (diphenylcarbazide); or by ICP optical emission spectrometry. Chromium(VI) may be determined by extraction and AA or colorimetry (using diphenylhydrazide). Dissolved total Cr or Cr(VI) may be determined by 0.45 μ filtration followed by the above-cited methods[49].

Routes of Entry: Inhalation, skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Chromium oxychloride can affect you when breathed in and by passing through your skin. Chromium oxychloride should be handled as a carcinogen, with extreme caution. Eye contact can cause severe damage with this corrosive chemical. Skin contact can cause deep ulcers or an allergic rash or severe irritation.

Long-Term Exposure: Chromium may cause allergic dermatitis. May cause cancer of the lungs and throat; birth defects, fetus damage, possible miscarriage; skin allergy, with itching and rash; lung allergy with cough, wheezing, and difficult breathing; kidney damage; damage to the bone (septum) in the nose.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended:

urine test for chromates. This test is most accurate shortly after exposure. Exam of the nose and skin. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Kidney function tests. If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. If any skin bumps or blisters develop, seek medical attention promptly. If not treated early, "chrome ulcers" can develop which can last for years. NIOSH lists the following tests [chromium(III) compounds]: whole blood (chemical/metabolite); biologic tissue/biopsy; chest X-ray; pulmonary function tests; red blood cells/count; urine (chemical/metabolite) [end-of-shift] [end-of-shift at end-of-work-week] [end-of-work-week] [pre- & postshift].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. (as chromic acid and chromates) **8 hours** (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): polyethylene gloves, suits, boots; polyvinyl chloride gloves, suits, boots; Saranex-coated suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): butyl rubber gloves, suits, boots; Viton gloves, suits Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Specific engineering controls are recommended in NIOSH criteria document #76-129, chromium(VI).

Respirator Selection: NIOSH, as chromates: *at any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—White: Corrosive or contact Hazard; Store separately in a corrosion resistant location. Prior to working with Chromium Oxychloride all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Chromium Oxychloride must be stored to avoid contact with water, since violent reactions occur, releasing poisonous materials including chromic acid, hydrogen chloride, chromic chloride, and chlorine. Store in tightly closed containers in a cool, well-ventilated area away from flammable and combustible materials; ammonia, alcohol and turpentine, and other incompatible materials listed above.

Shipping: UN1758 Chromium oxychloride, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling:

Chromium oxychloride when spilled in water.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.5/0.8

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of confined spaces, such as a sewer, because of the potential for an explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Chromium oxychloride does not burn, but it will increase the intensity of a fire since it is an oxidizer. Extinguish surrounding fire with dry chemicals or CO_2. *Do not use water* to control a small fire. Thermal decomposition products may include chromic acid, hydrogen chloride, chromic chloride, chlorine. Vapors may travel to a source of ignition and flashback. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire especially if water gets in them. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 0.1%. as chrysene and coal tar pitch volatiles

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, F, N, Xn; risk phrases: R45; R11; R40; R36/37/38; R50/53; R62; R68; R66; R67; safety phrases: S16; S23; S24/25; S26; S29; S36/37/39; S53; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Chrysene is a combustible, white[2] (when pure), red, or blue, fluorescent crystalline solid. Odorless.

Polycyclic aromatic hydrocarbons (PAHs) are compounds containing multiple benzene rings and are also called polynuclear aromatic hydrocarbons. Molecular weight = 228.29[2]; specific gravity (H_2O:1) = 1.27 @ 24°C; boiling point = 448°C @ 760 mmHg[2]; freezing/melting point = 254°C[2]. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 1, reactivity 0. Insoluble in water.

Potential Exposure: Almost never found by itself, chrysene is found in gasoline and diesel exhaust as well as in cigarette smoke; and in coal tar; coal tar pitch; creosote. It is used in organic synthesis.

Incompatibilities: Contact with strong oxidizers may cause fire and explosion hazard.

Permissible Exposure Limits in Air: As coal tar pitch volatiles

NIOSH IDLH = 80 milligram per cubic meter as coal tar pitch volatiles

OSHA PEL: 0.2 milligram per cubic meter TWA [1910.1002] (benzene-soluble fraction). OSHA defines "coal tar pitch volatiles" in 29 CFR 1910.1002 as the fused polycyclic hydrocarbons that volatilize from the distillation residues of coal, petroleum (excluding asphalt), wood, and other organic matter.

NIOSH REL: 0.1 milligram per cubic meter (cyclohexane-extractable fraction). NIOSH considers coal tar products (i.e., coal tar, coal tar pitch, or creosote) to be potential occupational carcinogens

ACGIH TLV[1]: 0.2 milligram per cubic meter TWA (as benzene soluble aerosol); Confirmed Human Carcinogen

PAC Ver. 29[138]

PAC-1: 0.6 milligram per cubic meter

PAC-2: 12 milligram per cubic meter

PAC-3: 69 milligram per cubic meter

DFG MAK: Category 1, human carcinogen

Guidelines for chrysene concentration in ambient air[60] have been set at zero by North Dakota and @ 3.0 μ/m^3 by Virginia.

Determination in Air: Use NIOSH Analytical Method #5506 polycyclic aromatic hydrocarbons by HPLC; NIOSH Analytical Method #5515, Polycyclic aromatic hydrocarbons by GC; OSHA Analytical Method ID-58.

Permissible Concentration in Water: For the maximum protection of human health from the potential carcinogenic effects due to exposure of polynuclear aromatic hydrocarbons through ingestion of contaminated water and contaminated aquatic organisms, therefore, the levels which may result in incremental increase of cancer risk over the lifetime are estimated at 1×10^{-5}, 1×10^{-6}, and 1×10^{-7}. The corresponding criteria are 28.0, 2.8, and 0.28 ng/L, respectively. If the above estimates are made for consumption of aquatic organisms only, excluding consumption of water, the levels are 311.0, 31.1, and 3.11 ng/L, respectively.

Determination in Water: Extraction with methylene chloride may be followed by measurement by ultraviolet or by HPLC/flame spectrometry or by GC and mass spectrometry as reviewed in the ATSDR document referenced below. Octanol−water coefficient: Log $K_{ow} = -6$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, skin contact, ingestion. This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Chrysene can affect you when breathed in and by passing through your skin. Chrysene should be handled as a carcinogen-with extreme caution. Skin contact may cause a rash. If skin in exposed to sunlight, a "sunburn" can occur. Sunlight Exposure on skin contaminated with coal tar chemicals, such as Chrysene can cause rash and later, pigment changes. Persons who smoke cigarettes may be at increased lung cancer risk with this chemical. This can be significantly reduced by stopping smoking, as well as by reducing exposures.

Long-Term Exposure: May cause cancer of the skin and kidneys; birth defects; miscarriage; dermatitis, changes in skin pigment. May cause bronchitis with phlegm and/or shortness of breath. The DFG[3] states that PAHs are present at particularly high levels in coal tar oils and related pyrolysis products of organic materials; and are carcinogenic (category 1) in animal studies.

Points of Attack: Skin, respiratory system; bladder, liver, kidneys.

Medical Surveillance: NIOSH lists the following tests: CBC; chest X-ray; pulmonary function tests: forced vital capacity; forced expiratory volume (1 second); photopatch testing; sputum cytology; UA (routine); cytology, hematuria; liver, kidney, and bladder function tests recommended for coal tar pitch volatiles[2]. Monthly, carefully look at any skin areas that are exposed. Any growth (like a mole) that increases in size or shows changes in color should be examined by a physician. Skin cancer is curable when detected early. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable

probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with chrysene all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3077 Environmentally Hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Coal tar pitch volatiles are combustible, but may not readily ignite. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include oxides of carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Chrysene may be destroyed by permanganate oxidation, by high-temperature incinerator with scrubbing equipment; or by microwave plasma treatment.

Regulatory Authority and Advisory Information

Hazard symbols, risk, & safety statements: Hazard symbol: N; risk phrases: R20/21/22; 22; R36/37/38; R51/53; safety phrases: S16; S26; S36/37/39; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: C.I. Basic Green 1 is a metallic green, odorless crystal or powder. Molecular weight = 482.69; freezing/melting point = 210°C. Soluble in water.

Potential Exposure: C.I. Basic Green 1 is used in dyeing silk, wool, leather, jute, and cotton yellowish-green; manufacturing green ink; as staining constituent of bacteriological media; indicator, an intestinal anthelmintic; a wound antiseptic; treatment of mycotic infections; agricultural fungicide (Not registered as a pesticide in the United States).

Incompatibilities: Oxidizing agents, reducing agents; anionics, and aqueous solutions of bentonite. Keep away from moisture.

Permissible Exposure Limits in Air

No standards or PAC available.

Routes of Entry: Ingestion.

Harmful Effects and Symptoms

It is classified as very toxic; probable lethal dose is 50−500 mg/kg in humans (between 1 teaspoon and 1 oz for a 150-lb person). It is a skin irritant. Ingestion causes diarrhea and abdominal pain.

Short-Term Exposure: C.I. Basic green can irritate and burn the skin and eyes. Ingestion causes nausea, vomiting, diarrhea, and abdominal pain. It is classified as very toxic; probable lethal dose is 50−500 mg/kg in humans (between 1 teaspoon and 1 oz for a 150-lb person).

Long-Term Exposure: Skin contact can cause drying and cracking.

Points of Attack: Skin.

Medical Surveillance: There is no special tests for this substance.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is a potential for overexposure: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3143 Dyes, solid, toxic, n.o.s. or Dye intermediates, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen, sulfur, and carbon. This chemical may burn but does not easily ignite. For small fires use dry chemical, carbon dioxide; water spray; or foam. For large fires use water spray, fog, or foam. Keep unnecessary people away; isolate hazard area and deny entry. Stay upwind; keep out of low areas. Wear self-contained (positive pressure if available) breathing apparatus and full protective clothing. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.
Description: C.I. Direct red 28(Congo Red) is an odorless, brownish-red powder. Molecular weight = 698.72. Melting point = 359°C. Soluble in water; solubility = 25 g/L @ 25°C.
Potential Exposure: It is used as an indicator dye, a biological stain; a diagnostic aid in medicine; and a dye for fabric and paper.
Incompatibilities: Contact with oxidizers may cause fire and explosion hazard. Incompatible with strong acids; reducing agents.
Permissible Exposure Limits in Air
No standards or PAC available.
Determination in Air: Use NIOSH Analytical Method #5013, Dyes.
Routes of Entry: Inhalation.
Harmful Effects and Symptoms
Short-Term Exposure: Skin and eye contact may cause irritation. Exposure can cause nausea, vomiting, and diarrhea; and increase the formation of platelets; and increasing the ability of the blood to clot.
Long-Term Exposure: While this chemical has not been designated a carcinogen, the parent compound, benzidine, causes bladder cancer. May decrease the fertility in males. May cause skin allergy with itching and rash. *EC Labeling:* Restricted to professionals. Toxic; (R45) May cause cancer; (R63) Suspected reprotoxic hazard; (S53) Avoid exposure: obtain special instructions before use; (S45) In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).
Points of Attack: Skin, blood.
Medical Surveillance: CBC. Evaluation by a qualified allergist.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting.
Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
Respirator Selection: Where there is a potential for overexposure: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).
Storage: (1) Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. (2) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong acids; reducing agents and heat. Where possible, automatically pump liquid from drums or other storage containers to process containers.
Shipping: UN3143 Dyes, solid, toxic, n.o.s. or Dye intermediates, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.
Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or

federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical may burn, but does not easily ignite. Use dry chemical, carbon dioxide; water spray; alcohol foam or polymer foam extinguishers. Thermal decomposition products may include ammonia, carbon monoxide, nitrogen, and sulfur oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazardous to aquatic life or environment, with possible long-lasting effects[194]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: F, Xn, Xi; risk phrases: R45; R11; R20/21/22; R36; R40; R51/53; R62; R63; R67; R68; safety phrases: S7; S16; S22; S24/25; S/36/37/39; S/45; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: C.I. Food red 15 is a green crystalline or red-violet powdered solid. Molecular weight = 479.1. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 1, reactivity 0. Highly soluble in water.

Potential Exposure: It is used as a color additive in drugs, foods, cosmetics, and fabric dyes. It is also used as a tracing agent in water pollution studies. May be used as an agricultural chemical.

Incompatibilities: Dust may form explosive mixture with air. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, strong reducing agents.

Permissible Exposure Limits in Air

PAC Ver. 26; No data in Ver. 29[138]

989-38-8 (Basic Red 1)

PAC-1: 0.0081 milligram per cubic meter

PAC-2: 0.089 milligram per cubic meter

PAC-3: 1.3 milligram per cubic meter

Determination in Air: Use NIOSH Analytical Method #5013, Dyes.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Irritates the skin, eyes, and respiratory tract. Eye or skin contact can cause burns and permanent damage. Can cause headaches, difficult breathing and chest tightness.

Long-Term Exposure: May cause liver damage.

Points of Attack: Liver.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for Medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full-facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with C.I. Food dye 15 all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and reducing agents. Where possible, automatically pump liquid from drums or other storage containers to process containers.

Shipping: UN3143 Dyes, solid, toxic, n.o.s. or Dye intermediates, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; water spray; alcohol foam, or polymer foam extinguishers. Thermal decomposition products may include oxides of carbon, nitrogen oxides; hydrogen chloride; and ammonia. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

UN/NA & ERG Number: UN1989 (aldehydes, n.o.s)/ 129 (P)

EC Number: 203-213-9

Regulatory Authority and Advisory Information

Hazard Alert: Combustible, Polymerization hazard, Possible risk of forming tumors, Suspected of causing genetic defects, Sensitization hazard.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 0.1%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xi; risk phrases: R19; R36/37/38; R43; R62; safety phrases: S26; S36/37; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water. (104-55-2)

Description: Combustible, yellowish, oily liquid (thickens on exposure to air). Strong pungent, spicy, cinnamon odor. Molecular weight = 132.15; 132.17 (*trans*); specific gravity (H_2O:1) = 1.048−1.052 @ 25°C; freezing/melting point = −7.5°C; boiling point = 253°C; 252°C (*trans*); flash point = 120°C (cc); vapor pressure = 1 mmHg @ 76.1°C, 40 mmHg @ 152°C. Soluble in water.

Potential Exposure: Botanical fungicide and insecticide. Used as an antifungal agent, corn rootworm attractant, and dog and cat repellent. Can be used on soil casing for mushrooms, row crops, turf, and all food commodities. Not listed for use in EU countries.

Incompatibilities: Aldehydes are frequently involved in self-condensation or polymerization reactions. These reactions are exothermic; they are often catalyzed by acid. Aldehydes are readily oxidized to give carboxylic acids. Flammable and/or toxic gases are generated by the combination of aldehydes with azo, diazo compounds, dithiocarbamates, nitrides, and strong reducing agents. Aldehydes can react with air to give first peroxo acids, and ultimately carboxylic acids. These autoxidation reactions are activated by light, catalyzed by salts of transition metals, and are autocatalytic (catalyzed by the products of the reaction). The addition of stabilizers (antioxidants) to shipments of aldehydes retards autoxidation[101].

Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, ketones, azo dyes, caustics, boranes, hydrazines.

Permissible Exposure Limits in Air:

PAC Ver. 27; No values found in Ver. 29[138]

PAC-3: 670 milligram per cubic meter

14371-10-9, trans-isomer

PAC-1: 5.5 ppm (30 milligram per cubic meter)

PAC-2: 60 ppm (330 milligram per cubic meter)

PAC-3: 120 ppm (660 milligram per cubic meter)

Determination in Water: Octanol−water coefficient: Log K_{ow} (CAS: 104-55-2) = 1.9. Unlikely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause severe irritation or injury. Skin sensitization may occur. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed. Has anesthetic properties. Fatal dose is between 1 oz and 1 lb/pt for a 150-lb person. LD_{50} (oral, rat) => 3000 mg/kg; LD_{50} (dermal, rat) => 1200 mg/kg.

Long-Term Exposure: May cause tumors. Potential mutagen, may cause reproductive and fetal effects.

Points of Attack: Inhalation, dermal contact, ingestion. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: SCBA >14 milligram per cubic meter (CAS: 104-55-2); 5.5 ppm (30 milligram per cubic meter) [14371-10-9 (*trans*-isomer)]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Red: Flammability Hazard: Store in a flammable (liquid or solid materials) storage area or approved cabinet away from sources if ignition.

Shipping: UN1989 Aldehydes, n.o.s., Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Wastewater from contaminant suppression, cleaning of protective clothing/equipment, or contaminated sites should be contained and evaluated for subject chemical or decomposition product concentrations. Concentrations shall be lower than applicable environmental discharge or disposal criteria. Alternatively, pretreatment and/or discharge to a POTW is acceptable only after review by the governing authority. Due consideration shall be given to remediation worker exposure (inhalation, dermal, and ingestion) as well as fate during treatment, transfer and disposal. If it is not practicable to manage the chemical in this fashion, it must meet Hazardous Material Criteria for disposal.

Fire Extinguishing: Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Cisplatin C:1260

Formula: $Cl_2H_6N_2Pt$; $Pt(NH_3)_2Cl_2$

Synonyms: CDDP; DDP; *cis*-Diamminedichloro platinum; *cis*-Diamminedichloro platinum (II); *cis*-Platinous diaminodichloride; *cis*-Platinum

CAS Registry Number: 15663-27-1

HSDB Number: 3939 as *cis*-diamminedichloroplatinum

RTECS Number: TP2450000

UN/NA & ERG Number: UN2928 (Toxic solids, corrosive, organic, n.o.s.)/154; UN3290 (toxic solid, corrosive, inorganic, n.o.s.),/154; UN3249 (Medicine, solid, toxic, n.o.s.)/151; UN3288 (Toxic solid, inorganic, n.o.s.)/151

EC Number: 239-733-8

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen; IARC: Animal Sufficient Evidence; Human Inadequate Evidence, probably carcinogenic to humans, *probably carcinogenic to humans*, Group 2A, 1998

California Proposition 65 Chemical[102]: Cancer 10/1/1988

Hazard Alert: Poison, Combustible, Corrosive, Sensitization hazard (skin).

Canada, WHMIS, Ingredients Disclosure List concentration Reporting Level: 0.1%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, C; risk phrases: R45; R25; R36/37/38; R41; R42/43; R50/53; safety phrases: S22; S26; S36/37/39; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Cisplatin is a white powder or yellow crystalline solid; freezing/melting point = 270°C (decomposes). Soluble in water.

Potential Exposure: A potential danger to those involved in the manufacture, formulation and administration of this anticancer chemotherapy agent. Contact with water causes decomposition.

Incompatibilities: Aluminum reacts with cisplatin and decreases the drug's effectiveness. Do not use any aluminum equipment to prepare or administer cisplatin.

Permissible Exposure Limits in Air

platinum, soluble salts

NIOSH IDLH = 4 mg [Pt]/m^3

ACGIH TLV[1]: 1 milligram per cubic meter (metal); 0.002 mg[Pt]/m^3 TWA, soluble salts, as Pt

OSHA PEL: None (metal); 0.002 mg[Pt]/m^3 TWA, soluble salts, as Pt

NIOSH REL: 1 milligram per cubic meter (metal); 0.002 mg[Pt]/m^3 TWA, soluble salts, as Pt

No PAC available.

DFG MAK: No numerical value established. Data may be available; however, 2 μg[Pt]/m^3 peak should not be exceeded; danger of skin and airway sensitization, as chloroplatinates

Determination in Air: Use NIOSH II[72] Method #S191, (IV) #7300, Elements.

Routes of Entry: Inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with the skin or eyes can cause irritation with possible loss of vision. Inhalation can irritate the nose and throat. Exposure to high levels can cause tintinus (ringing in the ears) and possible hearing loss. LD_{50} (oral-rat) = 25.8 mg/kg (highly toxic).

Long-Term Exposure: Cisplatin is a probable carcinogen in humans-handle with extreme caution. It has been shown to cause lung and skin cancer in animals. It may damage the developing fetus and may damage the testes (male reproductive glands). Repeated exposure to high levels can cause the same side effects seen in patients. These include kidney damage, hearing loss; low blood cell count and nausea and committing. Exposure may cause anemia. May damage the nervous system causing numbness and weakness in the hands and feet. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Points of Attack: Skin, lungs, nervous system; bone marrow, kidneys.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended: examination of the nervous system. Audiogram (hearing test). CBC. Kidney function tests. If symptoms develop or overexposure is suspected, the following may be useful: blood levels of cisplatin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Based on potential carcinogenicity the following is recommended by NIOSH: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full-facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: (1) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. (2) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cisplatin all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where cisplatin is handled, used, or stored in manufacturing and packaging operations. Store cisplatin in sealed vials or tightly closed containers in a cool, well-ventilated area away from aluminum.

Shipping: UN2928 Toxic solids, corrosive, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material, Technical Name Required. UN3290 Toxic solid, corrosive, inorganic, n.o.s., Hazard class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material. UN3288 Toxic solids, inorganic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of nitrogen, metal, and carbon. If tank, rail car, or tank truck is involved in a fire, *isolate* for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. *Small Fire*: Dry chemical, CO_2, or water spray. *Large Fire*: Dry chemical, CO_2, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Fire involving Tanks or Car/Trailer Loads Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. *Do not get water inside containers*. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. Keep exposures cool to protect against reignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Disposal of unused product must be undertaken by qualified personnel who are knowledgeable in all applicable regulations and follow all pertinent safety precautions including the use of appropriate protective equipment. For proper handling and disposal, always comply with federal, state, and local regulations.

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* Cisplatin, Trenton, NJ (October 1998).

Clethodim C:1263

Formula: $C_{17}H_{26}ClNO_3S$

Synonyms: 2-Cyclohexen-1-one, 2-[1-(((3-chloro-2-propenyl)oxy)imino)propyl]-5-[2-(ethylthio)propyl]-3-hydroxy-; *(E)*-2-[1-(((3-Chloro-2-propenyl)oxy)imino)propyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexen-1-one; Cletodime; Prism; RE45601; Select

CAS Registry Number: 110429-62-4; 104233-53-6; 99129-21-2

HSDB Number: 7960

RTECS Number: GW7184000

UN/NA & ERG Number: UN3082 (environmentally hazardous substances, liquid, n.o.s.)/171

Regulatory Authority and Advisory Information

Hazard Alert: Combustible, Agricultural chemical. Listed for Tier 1 screening as an endocrine disruptor[88].

WGK[100] (German Aquatic Hazard Class): No value found.

Description: Depending on purity, clethodim can range from amber to green-yellow viscous liquid. Commercial product may be in a flammable solvent*. Molecular weight = 359.94; specific gravity (H_2O:1) = 0.965; boiling point = (decomposes); freezing/melting point = −80°C; vapor pressure = 3×10^{-9} mmHg @ 25°C (est); flash point = >60°C; 72°C*. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0. Soluble in water; solubility = 12 mg/L @ 25°C (est.). *Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Potential Exposure: A selective postemergence cyclohexanedione/cyclohexanone derivative herbicide used to control annual and perennial grasses to a range of crops including cotton, flax, peanuts, soybeans, sugarbeets, potatoes, alfalfa, sunflowers, and most vegetables. Not approved for use in EU countries.

Incompatibilities: A weak acid, keep away from bases and alkalies. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Decomposes at about 100°C.

Determination in Air: Use high performance liquid chromotography (HPLC).

Permissible Concentration in Water:

Determination in Water: Octanol−water coefficient: Log K_{ow} = >4. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Very low—3210.91612 ppb, MATC.

Routes of Entry: Inhalation, dermal contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = > 1100 mg/kg;1630 mg/kg.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of Central nervous system, liver, heart, kidneys, lung, and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin, and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required

Spill Handling: Wearing protective equipment, cleanup with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Thermal decomposition products in fire include toxic hydrogen chloride gas and oxides of nitrogen, sulfur, and carbon. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Clofentezine C:1265

Formula: $C_{14}H_8Cl_2N_4$

Synonyms: 3,6-Bis(2-chlorophenyl)-1,2,4,5-tetrazine; Bisclofentezin; NC-21314; 1,2,4,5-Tetrazine, 3,6-bis(2-chlorophenyl)-; NC; APOLLO; OVATION

CAS Registry Number: 74115-24-5

RTECS Number: XF6860000

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171

EC Number: 277-228-2

Regulatory Authority and Advisory Information

Hazard Alert: Environmental hazard, Agricultural chemical. Listed for Tier 1 screening as an endocrine disruptor[88].

SARA 311/312: Acute & Chronic health hazard

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: N; risk phrases: R52; R53; safety phrases: S22; S24/25; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Magenta crystalline solid. Molecular weight = 303.15; boiling point = (decomposes); freezing/melting point = 180°C; vapor pressure = 1×10^{-9} mmHg @ 20°C. Low solubility in water.

Potential Exposure: Tetrazine miticide used on a wide variety of crops—fruit, cereals, rangeland, ornamentals, etc. An EPA Restricted Use Pesticide (RUP).

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); strong acids. Decomposes above 185°C.

Determination in Water: Octanol—water coefficient: Log $K_{ow} = > 3$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: High—7.00003 ppb, MATC.

Routes of Entry: Inhalation, ingested, dermal contact.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Can be absorbed by the skin. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = > 3 g/kg; LD_{50} (dermal, rat) = > 1 g/kg.

Long-Term Exposure: May cause liver and/or thyroid damage. Human toxicity (long term)[101]: Low—70.00 ppb, Health advisory. Human toxicity (long term)[101]: High −9.10 ppb, Health advisory.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72].

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 m/75 ft. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand, or other noncombustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: On small fire, use alcohol-resistant foam, dry chemical powder, carbon dioxide, or water spray. On a large fire: use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks: Isolate* for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Clomazone C:1266

Formula: $C_{12}H_{14}ClNO_2$

Synonyms: Cerano; Clomazone; 2-[(2-Chlorophenyl) methyl]-4,4-dimethyl-3-isoxazolidinone; 2-(2-Chlorobenzyl)-4,4-dimethyl-1,2-oxazolidin-3-one; Colzor trio; Command; Commence; Dibel; Dimethazone; FMC 57020; Gambit; Magister; Merit; Strategy

CAS Registry Number: 81777-89-1

HSDB Number: 6614 as Dimethazone

RTECS Number: NY2977000

UN/NA & ERG Number: UN2902 (Pesticides, liquid, toxic, n.o.s)/151

Regulatory Authority and Advisory Information

Carcinogenicity: EPA: Not likely to be carcinogenic to humans.

Hazard Alert: Poison, Agricultural chemical, Environmental hazard. Listed for Tier 1 screening as an endocrine disruptor[88].

Potential Ground water Pollutant [California FAC Section 13145(d)/12811, active]

Hazard symbols, risk, & safety statements: Hazard symbol: N, Xn; risk phrases: R20/22; R36/38; R50; safety phrases: S16; S26; S29/35; S36; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Depending purity, it may be clear and colorless to pale yellow or brownish liquid. Commercially available as emulsifiable concentrates that can be dissolved in water. Molecular weight = 239.71; specific gravity (H_2O:1) = 1.19; boiling point = 275−282°C; freezing/melting point = 25−34°C; flash point = 105°C; vapor pressure = 1×10^{-4} mmHg @ 20. Highly soluble in water; solubility = >1000 mg/L. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Potential Exposure: Clomazone is a oxazolidione broad-spectrum herbicide used on rice, peas, pumpkins, soybeans, sweet potatoes, winter squash, cotton, tobacco, and fallow wheat fields to control annual grasses and broadleaf weeds.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air: No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

Determination in Water: Octanol−water coefficient: Log K_{ow} = 2.5. Unlikely to bioaccumulate in marine organisms. Fish toxicity (threshold)[101]: Very low—3156.16718 ppb, MATC

Routes of Entry: Dermal contact, ingestion, inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Highly toxic, may be fatal if inhaled, swallowed or absorbed through skin. Avoid any skin contact or eye. Contact with eyes or skin may cause irritation or injury. Effects of contact or inhalation may be delayed. Inhalation should be avoided. Human toxicity (long term)[101]: Very low—301.00 ppb, Health advisory. LD_{50} (oral, rat) = <1500 mg/kg; LD_{50} (dermal, rat) = > 2 g/kg.

Points of Attack: Central nervous system, liver, heart, kidneys, lung, and skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of Central nervous system, liver, heart, kidneys, lung, and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin, and eyes are important to Avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method* if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN2902 Pesticide, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. Keep unauthorized personnel away. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Stay upwind. Keep out of low areas. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Cover with plastic sheet to prevent spreading. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Noncombustible, substance itself does not burn. Thermal decomposition products may include hydrogen chloride, and oxides of nitrogen and carbon. Containers may explode when heated. Runoff from fire control or dilution water may be corrosive and/or toxic and may cause pollution. Runoff may pollute waterways. If tank, rail car, or tank truck is involved in a fire, Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. *Small Fire*: Use dry chemical, CO_2, or water spray. *Large Fire*: Water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving Tanks or Car/Trailer Loads:* Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. *Do not* get water inside containers.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Clonitralid C:1268

Formula: $C_{15}H_{15}Cl_2N_3O_5$

Synonyms: 2-Aminoethanol salt of 5-chloro-*N*-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide; 2-Aminoethanol salt of 2′,5-dichloro-4′-nitrosalicylanilide; BAY 73; BAY 6076; Bayer 73; Bayer 25648; Bayluscid; BaylucideM 73; 5-Chloro-*N*-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide with 2-aminoethanol (1:1); 5-Chloro-*N*-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide, 2-aminoethanol salt; 2′,5-Dichloro-4′-nitrosalicylanilide, 2-aminoethanol salt; 5,2′-Dichloro-4′-nitrosalicylanilide ethanolamine salt; 5,2-Dichloro-4-nitrosalicylicanilide-2-aminoethanol salt; 2′,5-Dichloro-4′-nitrosalicyloylanilide ethanolamine salt; Ethanolamine salt of 5,2′-dichloro-4′-nitrosalicyclicanilide; Molluscicide Bayer 73; NCI-C00431; Niclosamide; SR 73

CAS Registry Number: 1420-04-8

HSDB Number: 4045

RTECS Number: VN8575000

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

EC Number: 215-811-7; Not classified in Annex I

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Possible risk of forming tumors, Suspected reprotoxic hazard, Environmental hazard.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N; risk phrases: R22; R33; R50/53; R63; safety phrases: S29/35; S41; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Depending on purity, a bright yellow or brownish-yellow crystalline solid or powder. Odorless. Soluble in water. Molecular weight = 388.23; freezing/melting point = 191°C; 216°C; vapor pressure = 8×10^{-8} mmHg @ 20°C; 3×10^{-4} mmHg @ 20°C. Practically insoluble in water; solubility = 0.2 mg/L @ 20°C.

Potential Exposure: Niclosamide, the parent chemical, is a relatively selective, noncumulative chlorinated aromatic amide pesticide. Clonitralid (ethanolamine salt of niclosamide) is used principally against molluscs, especially fresh water snails and to control sea lamprey larvae and also as an antiparasitic drug in human, pets, and livestock. Niclosamide is toxic to all fish species at 0.5 mg/L (48 hours). A restricted use pesticide in the United States. Limited to use by a certified applicator [40 CFR 152.175 (a) (7/1/94)]. Not listed for use in EU countries.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Hydrolyzed by strong acids, and alkalies. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Decomposes at ~200−205°C.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = 1$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact, ingestion

Harmful Effects and Symptoms

Short-Term Exposure: May cause severe eye irritation. Ingestion may result in nausea and abdominal pain. May be absorbed through the mucous membrane. LD_{50} (oral, rat) $= > 5000$ mg/kg; LD_{50} (dermal, rat) $= > 2000$ mg/kg.

Long-Term Exposure: May cause reproductive and fetal effects. May cause tumors, gastrointestinal discomfort, anorexia, and hair loss.

Points of Attack: Gastrointestinal system. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN2588 Pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN2902 Pesticides, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Wearing protective clothing, dampen the spilled material with water. Cleanup with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen and carbon, hydrogen chloride gas, and possibly hydrogen cyanide. *On a small fire:* use dry chemical, CO_2, or water spray. On a large fire, use water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Burn in incinerator specifically designed for pesticide disposal or dispose as a hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Clopidol C:1270

Formula: $C_7H_7Cl_2NO$

Synonyms: Clopindol; Coccidiostat C; Coyden; 3,5-Dichloro-2,6-dimethyl-4-pyridinol; 3,5-Dichloro-4-pyridnol;

Farmcoccid; Lerbek; Methylchloropindol; Methylchlorpindol; Metilchlorpindol
CAS Registry Number: 2971-90-6
HSDB Number: 7907
RTECS Number: UU7711500
UN/NA & ERG Number: UN3249 (Medicine, solid, toxic, n.o.s.)/151
EC Number: 221-008-2
Regulatory Authority and Advisory Information
Hazard Alert: Poison, Drug.
Hazard symbols, risk, & safety statements: Hazard symbol: Xi; risk phrases: R36/37/38; safety phrases: S16; S26; S36/37/39 (see Appendix 4)
Description: Clopidol is a white to light brown powder. Molecular weight = 192.1; freezing/melting point ≥ 320°C. Insoluble in water.
Potential Exposure: Those engaged in formulation, application or manufacture of this veterinary antibiotic. Used as a pharmaceutical and as feed and food additive.
Incompatibilities: Noncombustible solid, but dust may explode in cloud form. Contact with strong oxidizers may cause a fire or explosion hazard.
Permissible Exposure Limits in Air
OSHA PEL: 15 milligram per cubic meter TWA, total dust; 5 milligram per cubic meter TWA, respirable fraction
NIOSH REL: 10 milligram per cubic meter, total dust; 5 milligram per cubic meter TWA, respirable fraction; 20 milligram per cubic meter, total dust STEL
ACGIH TLV[1]: 10 milligram per cubic meter; Not classified as a human carcinogen
No PAC available.
Several states have set guidelines for clopidol in ambient air[60] ranging from 100 μ/m^3 (North Dakota) to 160 μ/m^3 (Virginia) to 200 μ/m^3 (Connecticut) to 238 μ/m^3 (Nevada).
Determination in Air: Filter; none; Gravimetric; NIOSH IV, Particulates NOR: Method #0500, total dust, Method #0600 (respirable).
Harmful Effects and Symptoms
Short-Term Exposure: Clopidol may cause irritation of eyes, skin, nose, and throat. Clopidol has a low order of toxicity. Rats feed 15 mg/kg/day for 2 years showed no ill effects. LD_{50} (oral-rat) = 18 g/kg (slightly toxic).
Long-Term Exposure: Unknown at this time.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
Respirator Selection: Where there is potential exists for Exposures over *10 milligram per cubic meter*, use a NIOSH/MSHA (US) or EN149 (Europe)-approved respirator equipped with particulate (dust/fume/mist) filters. Particulate filters must be checked every day before work for physical damage, such as rips or tears, and replaced as needed.
Where there is potential for high exposures exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.
Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with Clopidol all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.
Shipping: UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.
Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.
Fire Extinguishing: This chemical is a noncombustible solid. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. Extinguish fire using and agent suitable for the type of surrounding fire; Clopidol itself does not burn. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed

containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dispose of contents and container to an approved waste disposal plant. All federal, state, and local environmental regulations must be observed. It is inappropriate and possibly dangerous to the environment to dispose of expired or waste drugs and pharmaceuticals by flushing them down the toilet or discarding them to the trash. Household quantities of expired or waste pharmaceuticals may be mixed with wet cat litter or coffee grounds, double-bagged in plastic, discard in trash. Larger quantities shall carefully take into consideration applicable DEA, EPA, and FDA regulations. If possible return the pharmaceutical to the manufacturer for proper disposal being careful to properly label and securely package the material. Alternatively, the waste pharmaceutical shall be labeled, securely packaged, and transported by a state licensed medical waste contractor to dispose by burial in a licensed hazardous or toxic waste landfill or incinerator.

EC Number: 216-935-4 [*Annex I Index No.:* 607-231-00-1]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA: Not likely to be a carcinogen to Humans.

Hazard Alert: Combustible, Suspected reprotoxic hazard, Environmental hazard.

California EPA AB2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

Hazardous to aquatic life or environment, with possible long-lasting effects[293]. Toxic to aquatic life with long-lasting effects. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xi, N; risk phrases: R41; R51/53; R63; safety phrases: S2; S26; S29; S30; S35; S39; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)]

Description: Odorless and colorless crystalline solid. Odorless. Available as a soluble concentrate that is usually mixed with water. Combustible. Molecular weight = 192.00; boiling point = (decomposes); freezing/melting point = 150−152°C; vapor pressure = 1×10^{-5} mmHg @ 25°C; flash point = >100°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0. High solubility in water; solubility = 1000 ppm. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Potential Exposure: Clopyralid is a pyralid herbicide used to control annual and perennial broadleaf weeds on rangeland, pastures, turf, and lawns, rights-of-way and a few agricultural products such as sugarbeets, oats, barley, mint, and wheat.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Solutions are strong acids; corrosive to aluminum, iron, and tin. Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur)[101].

Determination in Water: Octanol−water coefficient: $\text{Log}\, K_{ow} = -3$. Negative, Unlikely to bioaccumulate in marine organisms. Fish toxicity (threshold)[101]: Very low—20832.27357 ppb, MATC.

Harmful Effects and Symptoms

Short-Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin, and respiratory tract, with burning sensation, pain, redness, and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch, and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. Can cause permanent impairment of vision or irreversible damage. LD_{50} (oral, rat) $= >2500$ mg/kg. Low toxicity.

Long-Term Exposure: Workers exposed to chlorophenoxy compounds (in the manufacturing process) over a 5-to-10-year period at levels above 10 milligram per cubic meter complained of weakness, rapid fatigue, headache, and vertigo. Liver damage, low blood pressure, and slowed heartbeat were also found. Based on animal tests, may affects human reproduction. Human toxicity (long term)[101]: Very low—3500.00 ppb, Health advisory.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, and kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. Preliminary medical exam to detect chronic diseases of Central nervous system, liver, heart, kidneys, lung, and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin, and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage.

Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN3077 Environmentally Hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with saw dust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride, chlorine, and oxides of nitrogen and carbon. *On a small fire:* use dry chemical, CO_2, or water spray. On a large fire, use water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Coal Dust C:1280

Formula: $C_{3n}H_{4n}$; $(C_3H_4)_n$

Synonyms: Anthracite coal dust; Bituminous coal dust; Coal facings; Lignite coal dust; Sea coal

RTECS Number: GF8281000

UN/NA & ERG Number: UN1361/133

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Animal Inadequate Evidence; Human Inadequate Evidence, *not classifiable as carcinogenic to humans*, Group 3, 1997.

Hazard Alert: Possible risk of forming tumors.

Description: Coal dust is a combustible dark brown-black solid dispersed in the air. Properties vary depending on type of coal.

Potential Exposure: A potential danger to those involved in the mining, preparation, delivery, or use of powdered coal.

Incompatibilities: Keep dust away from strong oxidizers. The dust can act as a reducing agent. Slightly explosive when exposed to flame.

Permissible Exposure Limits in Air [SiO_2 = quartz]

OSHA PEL: 2.4 milligram per cubic meter TWA (containing less than 5% SiO_2), respirable fraction; 10 mg/m/(%% SiO_{2+2}) TWA (containing more than 5% SiO_2), respirable fraction

ACGIH TLV[1]: 2 milligram per cubic meter TWA (containing less than 5% SiO_2), respirable fraction; 0.1 milligram per cubic meter TWA (containing more than 5% SiO_2), respirable fraction; 0.9 milligram per cubic meter TWA Bituminous and 0.4 milligram per cubic meter TWA for Anthracite, not classifiable as a human carcinogen.

United Kingdom: LTEL 2 milligram per cubic meter (respirable), 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: 2 mg/m TWA (containing less than 5% SiO_2), respirable fraction

Determination in Air:

Coal dust may be determined gravimetrically: Filter; none; Gravimetric; NIOSH Analytical Method (IV) #0600, Particulates NOR (respirable). See also Method #7500. See also OSHA Analytical Method ID-142.

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Long-Term Exposure: The inhalation of coal dust may cause coal workers' pneumoconiosis (CWP), chronic bronchitis; decreased pulmonary function; emphysema. This can result in reduction in ventilatory capacity, pulmonary hypertension, and premature death.

Points of Attack: Respiratory system.

Medical Surveillance: Preplacement and annual physical examinations should be performed with emphasis on the respiratory system including chest X-rays.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear thick working gloves and safety glasses[24].

Respirator Selection: Use NIOSH/MSHA-approved dust respirator.

Storage: (1) Color code—Red Stripe: Flammability Hazard (4.2): Do not store in the same area as other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Store flammable solids (spontaneously combustible) up to maximum allowable quantity per control area in an approved flammable storage area. Do not store in a basement. (2) Color code—Yellow Stripe [*dust* (*strong reducing agent*)]: Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area separated from strong oxidants, strong bases; strong acids. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1361 Carbon, animal or vegetable origin, Hazard Class: 4.2; Labels: 4.2-Spontaneously combustible material.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-

up is complete. Remove all ignition sources. Remove to containers which are readily disposable to land reclamation or dumps. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste.

Fire Extinguishing: This chemical is a combustible solid. Coal dust is explosive when exposed to flame. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include oxides of carbon. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Use land reclamation or dumps[24].

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water. [Coal tar pitch, softening point >80°C, ground to grain size <1 cm.]; 2 [Coal tar pitch, softening point $>80°$C, molten or pieces (grain size >1 cm.)]

Description: The term "coal tar products," as used by NIOSH, includes coal tar and two of the fractionation products of coal tar, creosote and coal tar pitch, derived from the carbonization of bituminous coal. Coal tar, coal tar pitch, and creosote (coal tar creosote 8001-58-9) derived from bituminous coal often contain identifiable components which by themselves are carcinogenic, such as benzo(*a*) pyrene, benzanthracene, chrysene, and phenanthrene. Other chemicals from coal tar products, such as anthracene, carbazole, fluoranthene, and pyrene may also cause cancer, but these causal relationships have not been adequately documented. Also, the research chemical methylcholanthrene (CAS: 56-49-5), a powerful carcinogen, fits this category. Coal tar pitch is a black viscous liquid. Aromatic solvent odor. Boiling point = $>260°$C; specific gravity (H_2O:1) = 1.07−108; freezing/melting point = 250−180°C; flash point = 207°C (coal tar pitch); 74°C (creosote oil); autoignition temperature = $>510°$C. Insoluble in water. Coal tar creosote (8001-58-9, crosote) is an black oily, tar-like substance. Pungent odor, molecular weight = varies; boiling point = 191.7°C @ 760 mmHg; specific gravity (H_2O:1) = 1.05−109 @ 15°C; free zing/melting point = varioe; flash point = 73.9; autoignition temperature = 336.1°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 0. Insoluble in water.

Potential Exposure: The coke-oven plant is the principal source of coal tar. The hot gases and vapors produced during the conversion of coal to coke are collected by means of a scrubber, which condenses the effluent into ammonia, water, crude tar, and other by-products. Crude tar is separated from the remainder of the condensate for refining and may undergo further processing. Employees may be exposed to pitch and creosote in metal and foundry operations; when installing electrical equipment; in construction, railway, utility; and briquette manufacturing.

Incompatibilities: Incompatible with strong oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Phenols, such as creosote react as weak organic acids. Phenols and cresols are much weaker as acids than common carboxylic acids (phenol has pKa = 9.88). These materials are incompatible with strong reducing agents such as hydrides, nitrides, alkali metals, and sulfides. Flammable hydrogen gas is often generated, and the heat of the reaction may ignite the gas. Heat is also generated by the acid-base reaction between phenols and bases. Such heating may initiate polymerization of the organic compound. Phenols are sulfonated very readily (e.g., by concentrated sulfuric acid at room temperature). The reactions generate heat. Phenols are also nitrated very rapidly, even by dilute nitric acid[101].

Permissible Exposure Limits in Air

NIOSH IDLH = 80 milligram per cubic meter as coal tar pitch volatiles

OSHA PEL: 0.2 milligram per cubic meter TWA [1910.1002] (benzene-soluble fraction). OSHA defines "coal tar pitch volatiles" in 29 CFR 1910.1002 as the fused polycyclic hydrocarbons that volatilize from the distillation residues of coal, petroleum (excluding asphalt), wood, and other organic matter.

NIOSH REL: 0.1 milligram per cubic meter (cyclohexane-extractable fraction). NIOSH considers coal tar products (i.e., coal tar, coal tar pitch, or creosote) to be potential occupational carcinogens. See *NIOSH Pocket Guide*, Appendices A and C.

ACGIH TLV[1]: 0.2 milligram per cubic meter TWA (as benzene soluble aerosol); Confirmed Human Carcinogen; BEIp issued.

NIOSH IDLH = 80 milligram per cubic meter as coal tar pitch volatiles

65996-93-2, coal tar pitch volatiles; *8001-58-9, coal tar creosote*

PAC-1: 0.6 milligram per cubic meter
PAC-2: 120 milligram per cubic meter
PAC-3: 700 milligram per cubic meter
PAC Ver. 29[138]

8007-45-2, coal tar, aerosol

PAC-1: 2.8 milligram per cubic meter
PAC-2: 31 milligram per cubic meter
PAC-3: 190 milligram per cubic meter

DFG MAK: Category 1, human carcinogen

Denmark: TWA 0.2 milligram per cubic meter, 1999: France: VME 0.2 milligram per cubic meter, 1999: United Kingdom: LTEL 0.14 milligram per cubic meter, 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: Confirmed Human Carcinogen. Several states have set guidelines or standards for coal tar pitch volatiles in ambient air[60] ranging from 0 (North Carolina) to 0.0161 μ/m^3 (Kansas) to 0.48 μ/m^3 (Pennsylvania) to 2.0 μ/m^3 (Connecticut and Virginia) to 5.0 μ/m^3 (Nevada).

Determination in Air: Collection on a filter, extraction, column chromatography; spectrophotometric measurement. Benzene soluble may be determined by collection of particulates on a filter, ultrasonic extraction with benzene; evaporation and gravimetric determination. Use NIOSH Analytical Method #5506 polycyclic aromatic hydrocarbons by HPLC; NIOSH Analytical Method #5515, Polycyclic aromatic hydrocarbons by GC; OSHA Analytical Method ID-58.

Determination in Water: No Method established. Octanol−water coefficient: Log K_{ow} = about 6.0.

Routes of Entry: Inhalation, skin, and eye contact.

Harmful Effects and Symptoms

Based on a review of the toxicologic and epidemiologic evidence presented, it has been concluded that some materials contained in coal tar pitch, and therefore, in coal tar, can cause lung and skin cancer; and perhaps cancer at other sites. Based on a review of experimental toxicologic evidence, it is also concluded that creosote can cause skin and lung cancer. While the evidence on creosote is not so strong as that on pitch (in part because of difficulties in chemical characterization of such mixtures), the conclusion on the carcinogenic potential of creosote is supported by information on the presence of polycyclic aromatic hydrocarbons, and imputations and evidence of the carcinogenicity of such hydrocarbons. The overwhelming scientific evidence in the record supports the finding that coke-oven emissions are carcinogenic. This finding rests on epidemiological surveys as well as animal studies and chemical analyses of coke-oven emissions. Coke-oven workers have an increased risk of developing cancer of the lung and urinary tract. In addition, observations of animals and of human populations have shown that skin tumors can be induced by the products of coal combustion and distillation. Chemical analyses of coke-oven emissions reveal the presence of a large number of scientifically recognized carcinogens as well as several agents known to enhance the effect of chemical carcinogens, especially on the respiratory tract.

Points of Attack: Respiratory system; lungs, bladder, kidneys, skin.

Medical Surveillance: Medical surveillance shall be made available, as specified below, to all employees occupationally exposed to coal tar products.

Preplacement Medical Examinations: These examinations shall include: comprehensive initial medical and work histories, with special emphasis directed toward identifying preexisting disorders of the skin, respiratory tract, liver, and kidneys. A physical examination giving particular attention to the oral cavity, skin, and respiratory system. This shall include posteroanterior and lateral chest X-rays (35 × 42 cm). Pulmonary function tests, including forced vital capacity (FVC) and forced expiratory volume @ 1 second (FEV 1.0), and a sputum cytology examination shall be offered as part of the medical examination of exposed employees. Other tests, such as liver function and UA, should be performed as considered appropriate by the responsible physician. In addition, the mucous membranes of the oral cavity should be examined. A judgment of the employee's ability to use positive pressure respirators.

Periodic Examinations: These examinations shall be made available at least annually and shall include: Interim medical and work histories. A physical examination as outlined above.

Initial Medical Examinations: These examinations shall be made available to all workers as soon as practicable after the promulgation of a standard based on these recommendations.

Pertinent Medical Records: These records shall be maintained for at least 30 years after termination of employment. They shall be made available to medical representatives of the government, the employer or the employee.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Employers shall use engineering controls when needed to keep the concentration of airborne coal tar products at, or below, the specified limit. Employers shall provide protective clothing and equipment impervious to coal tar products to employees whenever liquid coal tar products may contact the skin or eyes. Emergency equipment shall be located at well-marked and clearly identified stations and shall be adequate to permit all personnel to escape from the area or to cope safely with the emergency on reentry. Protective equipment shall include: eye and face protection; protective clothing; and respiratory protection as spelled out in detail by NIOSH.

Respirator Selection: NIOSH: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: (1) Color code—Red: Flammability Hazard: store in a flammable (liquid or solid materials) storage area or approved cabinet away from sources if ignition. (2) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area separated from strong oxidants, strong bases; strong acids. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Entry into areas containing coal tar creosote is to be controlled by permit only.

Shipping: UN1136 Coal tar distillates, flammable, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Restrict persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Keep coal tar creosote out of a confined space, such as a sewer because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations.

Fire Extinguishing: *For combustible solids*. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include harmful and irritating gases. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. *For combustible liquids*. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Coal tar creosote is a combustible liquid. Use dry chemical, CO_2, water spray; or foam extinguishers.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed[22].

Hazardous to aquatic life or environment, with possible long-lasting effects[195]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: F, Xn: risk phrases: R11; R22 (oxide); R42/43; R50 (particle size ≤ 1 mm); R62; safety phrases: S21; S22; R24; R37; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water (particle size ≤ 1 mm); 1-Low hazard to water. (particle size ≥ 1 mm).

Description: Cobalt is a silver-gray to black, hard, brittle, magnetic metal. It is relatively rare; the important mineral sources are the arsenides, sulfides, and oxidized forms. It is generally obtained as a by-product of other metals, particularly copper. Molecular weight = 58.93 (cobalt); specific gravity (H_2O:1) = 8.86; boiling point = 2927°C; freezing/melting point = 1495°C. Hazard identification (based on NFPA-704 M Rating System): (dust) Health 2, flammability 3, reactivity 2. Cobalt is insoluble in water. Cobalt fume and dust have the composition $Co/CoO/Co_2O_2/Co_2O_4$. Cobaltic oxide: freezing/melting point = (decomposes) 895°C. Insoluble in water.

Cobalt(II) oxide: Molecular weight = 74.93 [cobalt(II) oxide]; specific gravity (H_2O:1) = 6.45; freezing/melting point = 1935°C; cobaltic oxide: Molecular weight = 240.79.

Potential Exposure: (cobalt): Possible risk of forming tumors, Suspected reprotoxic hazard. Nickel-aluminum-cobalt alloys are used for permanent magnets. Alloys with nickel, aluminum, copper, beryllium, chromium, and molybdenum are used in the electrical, automobile, and aircraft industries. Cobalt is added to tool steels to improve their cutting qualities and is used as a binder in the manufacture of tungsten carbide tools. Various cobalt compounds are used as pigments in enamels, glazes, and paints; as catalysts in afterburners; and in the glass, pottery, photographic, electroplating industries. Radioactive cobalt (^{60}Co) is used in the treatment of cancer. Cobalt has been added to beer to promote formation of foam but cobalt acts with alcohol to produce severe cardiac effects at concentrations as low as 1.2–1.5 mg/L of beer. Cobalt is part of the vitamin B_{12} molecule and as such is an essential nutrient. The requirement of humans for cobalt in the form of vitamin B_{12} is about 0.13 μg/day.

Incompatibilities: Cobalt metal dust/powder may spontaneously ignite on contact with air, when finely divided. Reacts with acids, strong oxidizers; ammonium nitrate causing fire and explosion hazard. Can promote decomposition of various organic substances. Cobaltic oxide reacts with reducing agents; and violently with hydrogen peroxide.

Permissible Exposure Limits in Air

NIOSH IDLH = 20 mg[Co]/m^3

OSHA PEL: 0.1 mg[Co]/m^3 TWA as metal dust and fume.

NIOSH REL: 0.05 mg[Co]/m^3 TWA as metal dust and fume.

ACGIH TLV[1]: 0.02 mg[Co]/m^3 TWA, animal carcinogen; BEI: 15 μg/L [Co] in urine at end-of-shift at end of workweek; 1 μg/L [Co] in blood at end-of-shift at end of workweek. Hard metals containing Tungsten carbide & Cobalt as Cobalt[Co]: 0.005 milligram per cubic meter.

PAC Ver. 29[138]

7440-48-4 (cobalt metal)

PAC-1: 0.18 milligram per cubic meter

PAC-2: 2 milligram per cubic meter

PAC-3: 20 milligram per cubic meter

DFG MAK: (*as inhalable fraction*) [skin] Danger of airway sensitization; Carcinogen Category 2 (includes cobalt-containing hard metals); Germ Cell Mutation Category 3A; TRK: 5 μg/L [Co] in whole blood; 60 μg/L [Co] in urine

Arab Republic of Egypt: TWA 0.1 milligram per cubic meter, 1993; Australia: TWA 0.05 milligram per cubic meter, 1993; Austria: carcinogen, 1999; Belgium: TWA 0.05 milligram per cubic meter, 1999; Denmark: TWA 0.05 milligram per cubic meter, 1999; Finland: TWA 0.05 milligram per cubic meter [skin] 1999; Hungary: TWA 0.1 milligram per cubic meter; STEL 0.2 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 0.02 mg[Co]/m^3; MAC-TGG 0.02 milligram per cubic meter, 2003; Norway: TWA 0.05 milligram per cubic meter, 1999; the Philippines: TWA 0.1 milligram per cubic meter, 1993; Poland: MAC (TWA) 0.05 milligram per cubic meter, MAC (STEL) 0.2 milligram per cubic meter, 1999; Russia: STEL 0.5 milligram per cubic meter, 1993; Sweden: NGV 0.05 milligram per cubic meter, 1999; Switzerland: MAK-W 0.1 milligram per cubic meter, carcinogen, 1999; United Kingdom: TWA 0.1 milligram per cubic meter, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH

TLV: confirmed animal carcinogen with unknown relevance to humans. Russia, for ambient air in residential areas: 0.001 milligram per cubic meter is the MAC on an average daily basis for cobalt metal. Several states have set guidelines or standards for cobalt in ambient air[60] ranging from 0.33 μ/m^3 (New York) to 0.8 μ/m^3 (Virginia) to 1.0 μ/m^3 (Florida and North Dakota) to 2.0 μ/m^3 (Connecticut and Nevada).

PAC Ver. 29[138]

1307-96-6 [cobalt(II) oxide]

PAC-1: 0.076 milligram per cubic meter
PAC-2: 4.2 milligram per cubic meter
PAC-3: 25 milligram per cubic meter

1308-06-1 (cobaltic oxide)

PAC-1: 0.082 milligram per cubic meter
PAC-2: 4.5 milligram per cubic meter
PAC-3: 27 milligram per cubic meter

Determination in Air: Cobalt metal, dust, and fume may be determined by filter collection, acid dissolution; digestion and measurement by AA spectrophotometry. See NIOSH Analytical Method (IV)s #NIOSH 7027, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G, and ID-213.

Permissible Concentration in Water: The EPA[32] has suggested a permissible ambient goal of 0.7 μg/L based on health effects. State Drinking Water Guidelines: Arizona 0.70 μg[Co]/L; Wisconsin 40 μg[Co]/L. Russia[43] set a MAC of 1 mg/L in water bodies used for domestic purposes. Limits in water bodies for fishery purposes have been set at 0.01 mg/L for fresh water and 0.05 mg/L for sea water.

Determination in Water: AA spectroscopy gives a detection limit of 0.05 mg/L in water. Neutron activation can detect cobalt in urine below 0.5 μg/L.

Routes of Entry: Inhalation of dust or fume, ingestion, skin or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Cobalt dust is mildly irritating to the eyes and to a lesser extent to the skin. It is an allergen and has caused allergic sensitivity type dermatitis in some industries where only minute quantities of cobalt are used. The eruptions appear in the flexure creases of the elbow, knee ankle, and neck. Cross sensitization occurs between cobalt and nickel; and to chromium when cobalt and chromium are combined. Inhalation of dust and fume may cause irritation of the lungs with coughing and/or shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Ingestion of cobalt or cobalt compounds is rare in industry. Vomiting, diarrhea, and a sensation of hotness may occur after ingestion; or after the inhalation of excessive amounts of cobalt dust.

Long-Term Exposure: Repeated or prolonged inhalation exposure may affect lungs and cause an asthma-like disease with cough and dyspnea. This situation may progress to interstitial pneumonia with marked fibrosis. Pneumoconiosis may develop which is believed to be reversible. Since cobalt dust is usually combined with other dusts, the role cobalt plays in causing the pneumoconiosis is not entirely clear. Cobalt may decrease fertility in males. Repeated or prolonged contact may cause skin sensitization. The substance may have effects on the heart, resulting in cardiomyopathy. Cobalt may affect the thyroid and kidneys. Cobalt is possibly carcinogenic and mutagenic to humans. Some isotopes of cobalt emit ionizing radiation; such exposure is associated with an increased risk of developing cancer.

Points of Attack: Respiratory system, skin.

Medical Surveillance: In preemployment examinations, special attention should be given to a history of skin diseases; allergic dermatitis; baseline allergic respiratory diseases; and smoking history. A baseline chest X-ray should be taken and chest X-ray for scarring should be done every 2−3 years following 5 or more years of exposure. Periodic examinations should be directed toward skin and respiratory symptoms and lung function. Evaluation for heart failure. Kidney and thyroid function tests. Evaluation by a qualified allergist. Consider chest X-ray following acute overexposure. NIOSH lists (cobalt): Whole Blood (chemical/metabolite) End-Of-Shift/end-of-shift at end-of-work-week/end-of-work-week, Blood Serum, Chest X-ray; pulmonary function tests: Forced Vital Capacity; Forced Expiratory Volume (1 second), urine (chemical/metabolite), urine (chemical/metabolite) End-Of-Shift/end-of-shift at end-of-work-week/end-of-work-week.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working

with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Where dust levels are excessive, dust respirators should be used by all workers. Protective clothing should be issued to all workers and changed on a daily basis. Showering after each shift is encouraged prior to change to street clothes. Gloves and barrier creams may be helpful in preventing dermatitis. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH/OSHA, for cobalt metal dust and fume: *0.25 milligram per cubic meter: if not present as a fume* Qm* (APF = 25) (any quarter-mask respirator). *0.5 milligram per cubic meter*: 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa* (APF = 10) (any supplied-air respirator). *1.25 milligram per cubic meter:* Sa:Cf (APF = 25)* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (APF = 25) (any powered, APR with a high-efficiency particulate filter). *2.5 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *20 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note**:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: (1) Color code—Red Stripe: Flammability Hazard (4.2): Do not store in the same area as other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Store flammable solids (spontaneously combustible) up to maximum allowable quantity per control area in an approved flammable storage area. Do not store in a basement. (2) Color code—Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Cobalt must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), acids and ammonium nitrate, since violent reactions occur. It should be stored in a cool place under an inert atmosphere. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3189 Metal powder, self-heating, n.o.s., Hazard Class: 4.2; Labels: 4.2-Spontaneously combustible material.

UN1325 Flammable solids, organic, n.o.s., Hazard Class: 4.1; Labels: 4.1-Flammable solid.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. If spill involves radioactive cobalt, evacuate area and delay cleanup until properly instructed by qualified radiation authorities. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to cleanup spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid, however powdered cobalt will ignite. Thermal decomposition products may include oxides of metal. Use dry chemical, such as sand, dolomite, and graphite powder for extinguishing powdered metal fires. *Do not use water*. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: For cobalt chloride: chemical reaction with water, caustic soda, and slaked lime, resulting in precipitation of the metal sludge, which may be landfilled. Cobalt metal may be recovered from scrap and cobalt compounds from spent catalysts as alternatives to disposal[22].

Hazardous to aquatic life or environment, with possible long-lasting effects[194]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, F, Xn, Xi, N; risk phrases: R11, R17; R22; R26; R40; R43; R48/20; R50/53; R62; safety phrases: S1; S21; S28; S29/35; S36/37/39; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cobalt carbonyl is a pyrophoric (spontaneously flammable in air), red-orange (when pure) to dark-brown crystalline solid. Molecular weight = 341.94; specific gravity (H_2O:1) = 1.87; boiling point = (decomposes) 52°C; freezing/melting point = (decomposes) 50.9°C; vapor pressure = 0.7 mmHg @ 25°C; 0.07 mmHg @ 15°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 3, reactivity 2 ₩. Insoluble in water.

Potential Exposure: This material is used as a catalyst for a number of reactions. It is also used in antiknock gasoline and for high-purity cobalt salts.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Decomposes on exposure to air or heat (@ ~52°C) producing toxic fumes of cobalt and oxides of carbon.

Permissible Exposure Limits in Air

NIOSH IDLH = 20 mg[Co]/m^3

OSHA PEL: None

NIOSH REL: 0.1 milligram per cubic meter TWA

ACGIH TLV[1]: 0.1 milligram per cubic meter TWA

PAC Ver. 29[138]

PAC-1: 0.3 milligram per cubic meter

PAC-2: 3.3 milligram per cubic meter

PAC-3: 20 milligram per cubic meter

DFG MAK: Not established; TRK: 5 μg/L [Co] in whole blood; 60 μg/L [Co] in urine; Carcinogen Category 2

Australia: TWA 0.01 milligram per cubic meter, 1993; Belgium: TWA 0.1 milligram per cubic meter, 1993; Denmark: TWA 0.1 mg[Co]/m^3, 1999; France: VME 0.1 milligram per cubic meter, 1999; Hungary: TWA 0.01 milligram per cubic meter; STEL 0.02 milligram per cubic meter, 1993; Japan: 0.05 mg[Co]/m^3, 2B carcinogen, 1999; United Kingdom: TWA 0.1 mg[Co]/m^3, 2000; the Netherlands: MAC-TGG 0.1 milligram per cubic meter, 2003; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 0.1 mg[Co]/m^3. Several states have set guidelines or standards for cobalt in ambient air[60] ranging from 1.0 μ/m^3 (North Dakota) to 1.6 μ/m^3 (Virginia) to 2.0 μ/m^3 (Connecticut and Nevada).

Determination in Air: OSHA ID-125G.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 0.70 μg[Co]/L; Wisconsin 40 μg[Co]/L. Russia[43] set a MAC in water for fishery purposes of 0.5 mg/L.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: May cause sensitization and allergic reaction by skin contact and inhalation. The carbonyls are direct irritants. Carbon monoxide causes breathlessness, headache, weakness; and fatigue, nausea and vomiting; dimness of vision; collapse and coma. Cobalt carbonyl is corrosive to the eyes, skin, and severely irritates the respiratory tract. Inhalation of the aerosols can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Cobalt carbonyls share the general high toxicity of carbonyls because of the direct irritant and systemic action of the compound coupled with the effects of carbon monoxide, which is released from their decomposition. The oral LD_{50} (oral, rat) = 754 mg/kg (slightly toxic).

Long-Term Exposure: May cause lung irritation and decreased pulmonary function, wheezing, dyspnea (breathing difficulty). Animal tests produce liver and kidney injury.

Points of Attack: Eyes, skin, respiratory system; blood, central nervous system.

Medical Surveillance. Cobalt carbonyls may be among the most toxic materials. This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Liver and kidney function tests. CBC.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is a potential for overexposure*: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: (1) Color code—Red Stripe: Flammability Hazard (4.2): Do not store in the same area as other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Store flammable solids (spontaneously combustible) up to maximum allowable quantity per control area in an approved flammable storage area. Do not store in a basement. (2) Color code—Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Decomposes on exposure to air or heat; stable in atmosphere of hydrogen and carbon monoxide. Store in airtight, unbreakable containers in a cool, well-ventilated area away from strong oxidizers and acids.

Shipping: UN3124 Toxic solids, self-heating, n.o.s., Hazard Class: 6.1; 6.1-Poisonous materials, 4.2-Spontaneously combustible material. Technical Name Required. UN3190 Self-heating solid, inorganic, Hazard Class: 4.2; Labels: 4.2-Spontaneously combustible material, Technical Name Required. UN1325 Flammable solid, organic, n.o.s. Hazard Class: 4.1; Labels: 4.1-Flammable solid.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. If appropriate, moisten spilled material to prevent dust. Collect powdered material in the most convenient and safe manner and deposit in airtight, sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to cleanup spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Noncombustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include oxides of metal and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Cobalt hydrocarbonyl is an unstable, highly flammable and toxic gas or liquid which decomposes rapidly at room temperature to toxic cobalt carbonyl. It has an offensive odor, molecular weight = 171.98; boiling point = 10°C; freezing/melting point = −33°C; flash point = flammable gas. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 4, reactivity 1. Very slightly soluble in water; solution is a strong acid.

Potential Exposure: A potential danger to those involved in manufacture and use of this material as a catalyst for organic reactions.

Incompatibilities: Unstable gas; decomposes rapidly in air at room temperature to toxic cobalt carbonyl and explosive hydrogen gas. A strong metal hydride reducing agent; violent reaction with oxidizers and acids. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Aqueous solution is highly acidic. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

NIOSH REL: 0.1 milligram per cubic meter TWA

ACGIH TLV[1]: 0.1 milligram per cubic meter TWA

PAC* Ver. 29[138]

PAC-1: 0.3 milligram per cubic meter

PAC-2: $\mathbf{0.9_A}$ milligram per cubic meter

PAC-3: $\mathbf{3_A}$ milligram per cubic meter

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

DFG MAK: 0.1 m g[Co]/m^3; TRK: 5 μg/L [Co] in whole blood; 60 μg/L [Co] in urine; Carcinogen Category 2

Australia: TWA 0.1 milligram per cubic meter, 1993; Belgium: TWA 0.1 milligram per cubic meter, 1993; Denmark: TWA 0.1 mg[Co]/m^3, 1999; France: VME 0.1 milligram per cubic meter, 1999; Japan: 0.05 mg[Co]/m^3, 2B carcinogen, 1999; Norway: TWA 0.1 mg[Co]/m^3, 1999; Russia: STEL 0.01 milligram per cubic meter [skin], 1993; the Netherlands: MAC-TGG 0.1 milligram per cubic meter, 2003; United Kingdom: TWA 0.1 mg[Co]/m^3, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 0.1 mg[Co]/m^3. Some states have set guidelines or standards for cobalt in ambient air[60] ranging from 1.0 μ/m^3 (North Dakota) to 1.6 μ/m^3 (Virginia) to 2.0 μ/m^3 (Connecticut and Nevada).

Determination in Air: Use OSHA: Method #ID-125 G.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 0.70 μg[Co]/L; Wisconsin 40 μg[Co]/L.

Routes of Entry: Inhalation, skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Irritates eyes, skin, and respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. The 30-minute LD_{50} (inh-rats) = 165 milligram per cubic meter. The clinical effects are similar to nickel carbonyl and iron pentacarbonyl, but it has about one-half the toxicity of nickel carbonyl. In animals: irritation respiratory system; dyspnea (breathing difficulty), cough.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: Cobalt carbonyls may be among the most toxic materials. This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Preemployment physical examinations should give particular attention to the respiratory tract and skin. Periodic examinations should include the respiratory tract and nasal sinuses, smoking history as well as general health. A baseline chest X-ray should be available and pulmonary function followed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Where the danger of splash or spill of liquids exists, impervious protective clothing should be used. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Check oxygen content prior to entering storage area. (1) Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. (2) Color code—Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in a cool, well-ventilated area. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN3281 Metal carbonyls, liquid, n.o.s., Hazard class: 6.1; Labels: 6.1 Technical Name Required, Potential Inhalation Hazard (Special Provision 5). Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner. UN2927 Toxic liquids, corrosive, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material, Technical Name Required.

Spill Handling:

Metal carbonyls, liquid, n.o.s.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 300/90
Then: Protect persons downwind (mi/km)
Day 0.9/1.5

Night 3.4/5.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 3000/900

Then: Protect persons downwind (mi/km)

Day 7.1 + /11+

Night 7.0 + /11+*

" + " means distance can be larger in certain atmospheric conditions.

If in a building, evacuate building and confine vapors by closing doors and shutting down HVAC systems. Restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit and to disperse the gas. Stop the flow of gas, if it can be done safely from a distance. If source is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place; and repair leak or allow cylinder to empty. Keep this chemical out of confined spaces, such as a sewer, because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable gas. Thermal decomposition products may include oxides of metal and carbon. Do not extinguish the fire unless the flow of gas can be stopped and any remaining gas is out of the line. Specially trained personnel may use fog lines to cool exposures and let the fire burn itself out. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure location. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier.

New Jersey Department of Health and Senior Services, *Hazardous Substances Fact Sheet:* Cobalt Hydrocarbonyl, #0522, Trenton, NJ (November 2002).

Cobalt Naphthenate C:1330

Formula: $C_{12}H_{18}CoO_4$; $(C_5H_9COO)_2Co$

Synonyms: Cobalt naphtha; Cobalt naphthenate powder; Cobaltous naphthenate; Naphtenate de cobalt (French); Naphthenate de cobalt (French); Naphthenic acid, cobalt salt

CAS Registry Number: 61789-51-3

HSDB Number: 1178 as naphthenic acids

RTECS Number: QK8925000

UN/NA & ERG Number: UN2001 (powder)/133; UN1993 (solution)/128

EC Number: 263-064-0

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Human Inadequate Evidence, animal Inadequate Evidence, possibly carcinogenic to humans, *possibly carcinogenic to humans*, Group 2B, 1991.

Hazard Alert: Flammable solid, Possible risk of forming tumors, Sensitization hazard (skin), Primary irritant (w/o allergic reaction), Environmental hazard.

United States DOT Regulated marine pollutant (49CFR172.101, Appendix B) as naphthenic acids

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) *Note:* Includes any unique chemical substance that contains cobalt as part of that chemical's infrastructure

EPCRA (Section 313): Includes any unique chemical substance that contains cobalt as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xn, Xi; risk phrases: R40; R10, R23/24/25; R36/38; R42/; R49; R50/53; R65; safety phrases: S23; S36/37/39; S41; S45; S53; S60; S61; S62 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Cobalt naphthenate is a flammable brown powder or bluish-red solid; freezing/melting point = 140°C; flash point = 49°C; autoignition temperature = 276°C. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 2, reactivity 0. Insoluble in water.

Potential Exposure: Cobalt naphthenate is used as a drying agent in paints, varnishes; inks, and for curing plastics.

Incompatibilities: Highly flammable; powder or dust can form an explosive mixture with air. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

cobalt and compounds
NIOSH IDLH = 20 mg[Co]/m^3
No PAC available.
DFG MAK: Carcinogen Category 2, as inhalable fraction; [skin] danger of sensitization of the skin and airways; Germ Cell Mutation Category 3A

Determination in Air: Cobalt metal, dust, and fume may be determined by filter collection, acid dissolution, digestion, and measurement by AA spectrophotometry. See NIOSH Analytical Method (IV) #7027. See also Method #7300, Elements, and OSHA Analytical Methods ID121 and ID125.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 0.70 μg[Co]/L; Wisconsin 40 μg[Co]/L.

Determination in Water: Naphthalenes and naphthenic acids are listed as United States DOT marine pollutants and may persist in the environment.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 0.70 μg[Co]/L; Wisconsin 40 μg[Co]/L.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Cobalt naphthenate can affect you when breathed in. Breathing the dust or fumes can cause lung allergy (asthma) to develop. Repeated exposures can cause lung scarring. High exposure can damage the heart and/or cause a large thyroid (goiter). Exposure can irritate the nose, throat, and lungs. Higher levels can cause a build-up of fluid (pulmonary edema). This can cause death. Repeated exposure can cause a loss of the sense of smell. Contact can cause a skin allergy to develop. LD$_{50}$ (oral-rat) = 3900 mg/kg (slightly toxic).

Long-Term Exposure: Repeated or prolonged contact may cause skin sensitization and allergy. Repeated exposure to cobalt naphthenate can cause lung irritation, bronchitis, lung scarring with shortness of breath; coughing. This chemical can cause kidney damage.

Points of Attack: Skin, lungs, kidneys.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. For those with frequent or potentially high exposure (half the TLV or greater) the following are recommended before beginning work and at regular times after that. Lung function tests. Chest X-ray (every 5 years) beginning 10 years after exposure. If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. GTT and serum lipid studies (to check for blood sugar and fat changes). CBC exam of the cardiovascular system. Kidney function tests. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH/OSHA, for cobalt metal dust and fume: *0.25 milligram per cubic meter: if not present as a fume* Qm* (APF = 25) (any quarter-mask respirator). *0.5 milligram per cubic meter*: 95XQ* (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa * (APF = 10) (any supplied-air respirator). *1.25 milligram per cubic meter:* Sa:Cf (APF = 25)* (any supplied-air respirator operated in a continuous-flow mode); or PaprHie* (APF = 25) (any powered, APR with a high-efficiency particulate filter). *2.5 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *20 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note**:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Red Stripe: Flammability Hazard: Do not store in the same area as other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Store flammable solids up to maximum allowable quantity per control area in an approved flammable storage area. Do not store in a basement. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers (such as chlorine, bromine, and fluorine). Sources of ignition, such as smoking and open flames are prohibited where cobalt naphthenate is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2001 Cobalt naphthenate powder, Hazard Class: 4.1; Labels: 4.1-Flammable solid. UN1993 Flammable liquids, n.o.s., Hazard Class: 3; Labels: 3-Flammable liquid, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cobalt Naphthenate is a combustible solid. Use dry chemical, sand, water spray; or alcohol foam extinguishers. Thermal decomposition products may include oxides of metal and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Regulatory Authority and Advisory Information

Carcinogenicty: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen

California Proposition 65 Chemical[102]: Cancer, 5/20/2005

Hazard Alert: Poison, Sensitization hazard (skin, resp.), Possible risk of forming tumors, Suspected reprotoxic hazard, Environmental hazard.

United States National Primary Drinking Water Regulations: SMCL = 250 mg[SO_4^{-2}]/L as Sulfate

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 0.1%.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xi; risk phrases: R40; R43; R48/23; R52/53; safety phrases: S2; S36/37/39; S41; S45; S61 (see Appendix 4); (*powder*): T, N, Xi; risk phrases: R22; R42/43; R49; R50; R51/53; R52/53; safety phrases: S22; S23; S29/35; S36/37; S41; S45; S53; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Red powder or rose pink crystalline solid. Odorless. Molecular weight = 155[138]; 281(heptahydrate)[136]; specific gravity (H_2O:1) = 3.71[138]; 1.95[136] @ 20°C; 2.03 @ 20°C (heptahydrate); freezing/melting point = 735°C; heat of Solution = 23 Btu/lb = 13 cal/g = 0.54×10^5/kg. Soluble in water and forms an acidic solution.

Potential Exposure: Many be used to catalyze organic reactions.
Incompatibilities: Aqueous solution reacts with bases, generating some heat. May react as either oxidizing agents or reducing agents.
Permissible Exposure Limits in Air:
NIOSH IDLH = 20 mg[Co]/m^3
OSHA PEL: 0.1 mg[Co]/m^3 TWA as metal dust and fume.
NIOSH REL: 0.05 mg[Co]/m^3 TWA as metal dust and fume.
ACGIH TLV[1]: 0.02 mg[Co]/m^3 TWA, animal carcinogen; BEI: 15 μg/L [Co] in urine at end-of-shift at end of workweek; 1 μg/L [Co] in blood at end-of-shift at end of workweek
PAC Ver. 29[138]
PAC-1: 0.16 milligram per cubic meter
PAC-2: 14 milligram per cubic meter
PAC-3: 84 milligram per cubic meter
10026-24-1, heptahydrate
PAC-1: 0.29 milligram per cubic meter
PAC-2: 19 milligram per cubic meter
PAC-3: 120 milligram per cubic meter
Determination in Air: Use OSHA: Method #ID-125G.
Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 0.70 μg[Co]/L; Wisconsin 40 μg[Co]/L.
Routes of Entry: Inhalation, ingestion.
Harmful Effects and Symptoms
Short-Term Exposure: Contact with eyes or skin causes irritation. Inhalation causes shortness of breath and coughing; permanent disability may occur. Ingestion causes pain and vomiting[136]. LD_{50} (oral-rat) = 425 mg/kg.
Long-Term Exposure: May be carcinogenic. May cause tumors and may affect the unborn fetus.
Points of Attack: Eye irritant-moderate; respiratory irritant-acute, severe, or moderate but not mild; skin-moderate; Heart cardiovascular system-acute effects; Central nervous system-acute effects; Respiratory toxin-acute effects other than severe or moderate irritation; Hematological effects-acute, unspecified; Gastrointestinal tract-acute effects; Narcotic; Kidney-acute effects[138].
Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated.
First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.
Personal Protective Methods:
Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA)
Storage: Color code—Blue: Health Hazard/Toxics/Poisons: Potential carcinogen. Store in a secure poison location.
Shipping: UN3288 Toxic solids, inorganic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.
Spill Handling: Stay upwind and uphill. Remove all ignition sources. All equipment used to handle this material must be grounded. If material or contaminated runoff from fire control enters waterways, notify downstream users of potentially contaminated water. Wear positive-pressure, SCBA. Wear chemical protective clothing which is specifically recommended by the manufacturer. Structural firefighter's protective clothing provides only limited protection. Small spill: Cover with *dry* earth, *dry* sand, or other noncombustible material followed with plastic sheet to minimize spreading or contact with water or rain. Use clean nonsparking tools to collect material and place material into loosely covered plastic containers for later disposal. Stop the release if it can be done safely from a distance. Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release. Use vapor suppressing foam to disperse vapors−contain runoff. Water spray may reduce vapor, but may not prevent ignition in enclosed spaces. Consider application of alcohol-resistant (AFFF) foam to large areas of spilled liquid to control vapors. Ventilate confined area if it can be done without placing personnel at risk.
Fire Extinguishing: Thermal decomposition products may include oxides of sulfur and cobalt metal. *Small fire:* Extinguish with *dry* chemical, CO_2, *dry* sand, or alcohol-resistant foam. May react with foams releasing corrosive/toxic gases. *Large fire:* Use water spray or alcohol-resistant foam if it is available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning

liquid. Keep exposures cool to protect against reignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. *Do not get water on spilled substance or inside containers*. If cooling streams are ineffective (*venting sound increases in volume and pitch, tank discolors, or shows signs of deforming*), withdraw immediately to a secure location. Always stay away from ends of tanks, especially when engulfed in flames. Always stay away from ends of tanks, especially when engulfed in flames. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Use a licensed professional waste disposal service to dispose of this material. All federal, state, and local environmental regulations must be observed.

HSDB Number: 3044

RTECS Number: GH0700000

UN/NA & ERG Number: UN1544 (alkaloids, n.o.s.)/151; UN3249 (Medicine, solid, toxic, n.o.s.)/151

EC Number: 200-598-5 [*Annex I Index No.:* 614-005-00-6]

Regulatory Authority and Advisory Information

California Proposition 65 Chemical[102]: Developmental/Reproductive toxin (male) 10/1/1992.

Hazard Alert: Poison, Biotoxin, Combustible, Reproductive toxin: possible risk of gene damage/impaired fertility; Suspected reprotoxic hazard, Human, Primary irritant (w/o allergic reaction), Drug (alkaloid).

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 10 lb (4.54 kg)

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R46; R28; R62; R63; safety phrases: S53; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Colchicine is a pale yellow powder. It has little or no odor. It darkens on contact with light. Molecular weight = 399.48; boiling point = 407°C; freezing/melting point = 142−157°C; vapor pressure = $1 \times 10{-}5$ mmHg @ 25°C; hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 1, reactivity 0. Slightly soluble in water.

Potential Exposure: Colchicine is a drug used to treat gouty arthritis, pseudogout, sarcoidal arthritis; and calcific tendonitis.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, mineral acids. Keep away from light.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.082 milligram per cubic meter

PAC-2: 0.9 milligram per cubic meter

PAC-3: 5.1 milligram per cubic meter

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Colchicine can irritate and burn the eyes, skin nose, and throat. Exposure can cause nausea, vomiting, diarrhea, loss of appetite; and abdominal pain may occur several hours after exposure. Inhalation can cause lung irritation with coughing and shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Colchicine can affect the heart causing arrhythmia. Shock occurs because of extensive vascular damage. Kidney damage resulting in bloody urine and diminished urine output may occur. It is classified as super toxic. The LD_{low} oral (dog, cat) is 0.125 mg/kg. Probable oral lethal dose in humans is less than 5 mg/kg i.e., less than 7 drops for a 70-kg (150 lb) person. Death results from respiratory arrest. The fatal dose varies considerably; as little as 7 mg of colchicine has proved fatal.

Long-Term Exposure: May cause genetic changes; liver and kidney damage. High exposure can cause headache, confusion, muscle weakness; coma and death.

Points of Attack: Heart, liver, kidneys, lungs.

Medical Surveillance: CBC. Liver and kidney function tests. EKG. Lung function tests. Consider chest X-ray following acute overexposure.

First Aid: This material is an alkaloid. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods:

General information: first responders should use a NIOSH-certified chemical, biological, radiological, nuclear (CBRN) SCBA with a level a protective suit when entering an area with an unknown contaminant or when entering an area where the concentration of the contaminant is unknown. Level a protection should be used until monitoring results confirm the contaminant and the concentration of the contaminant. *Note:* safe use of protective clothing and equipment requires specific skills developed through training and experience.

LEVEL A: (*RED ZONE*): Select when the greatest level of skin, respiratory, and eye protection is required. This is the maximum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than the AEGL-2. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A TECP suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, and a hard hat worn under the TECP suit are optional items.

LEVEL B: (RED ZONE): Select when the highest level of respiratory protection is necessary but a lesser level of skin protection is required. This is the minimum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than AEGL-2. It differs from Level A in that it incorporates a nonencapsulating, splash-protective, chemical-resistant splash suit that provides Level A protection against liquids but is not airtight. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL C: (YELLOW ZONE): Select when the contaminant and concentration of the contaminant are known and the respiratory protection criteria factors for using APRs (APR) or PAPRs are met. This level is appropriate when decontaminating patient/victims. A NIOSH-certified CBRN tight-fitting APR with a canister-type gas mask or CBRN PAPR for air levels greater than AEGL-2. A NIOSH-certified CBRN PAPR with a loose-fitting facepiece, hood, or helmet and a filter or a combination organic vapor, acid gas, and particulate cartridge/filter combination or a continuous flow respirator for air levels greater than AEGL-1. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Escape mask, face shield, coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL D: (GREEN ZONE): Select when the contaminant and concentration of the contaminant are known and the concentration is below the appropriate occupational exposure limit or less than AEGL-1 for the stated duration times. Limited to coveralls or other work clothes, boots, and gloves.

Notes: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, dry place or a refrigerator. Protect from Exposure to light, and keep away from mineral acids and oxidizers.

Shipping: UN1544 Alkaloids, solid, n.o.s. or Alkaloid salts, solid, n.o.s. poisonous, Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is

complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Extinguish fire using dry chemical, carbon dioxide; or water spray extinguishers. Thermal decomposition products may include oxides of nitrogen and carbon. Avoid breathing dusts and fumes from burning material. Keep upwind. Wear full protective clothing. Wear SCBA. Avoid bodily contact with the material. Wash away any material which may have contacted the body with copious amounts of water or soap and water. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Conjugated Estrogens C:1350

Formula: $C_{18}H_{19}NaO_5S$

Synonyms: Amnestrogen; Ces; Climestrone; Co-Estro; Conest; Conestron; Conjes; Conjugated estrogenic hormones; Equigyne (sodiume strone sulfate and sodium equilin sulfate, or synthetic estrogen piperazine estrone sulfate); Estratab; Estrifol; Estroate; Estrocon; Estromed; Estropan; Evex; Femacoid; Femest; Fem H; Femogen; Formatrix; Ganeake; Genisis; Glyestrin; Kestrin; Menest; Menogen; Menotab; Menotrol; Milprem; MsMed; Neo-Estrone; Novoconestron; Oestrilin; Oestro-Feminal; Oestropak; Morning; Ovest; Palopause; Par; Estro; Piperazine oestrone sulfate; PMB; Premarin; Presomen; Promarit; SK-Estrogens; Sodestrin-H; Sodium equilin sulfate; Tag-39; Transannon; Trocosone; Zeste

CAS Registry Number: 12126-59-9

HSDB Number: 3076 as Estrogenic substances, conjugated

RTECS Number: GL1224000

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171; UN3249 (Medicine, solid, toxic, n.o.s.)/151

EC Number: 235-199-5

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Human Sufficient Evidence; Animal Limited Evidence (Equigyne), *carcinogenic to humans*, Group 1, 1998; NTP 13th Report on Carcinogens, 2014: Known to be a human carcinogen, as estrogens, steroidial

California Proposition 65 Chemical[102]: Cancer 1/27/87; Developmental/Reproductive toxin 4/1/90.

Hazard Alert: Poison, Possible risk of forming tumors, Reproductive toxin: Suspected of causing genetic defects, Human Hormone.

Description: Conjugated estrogens generally occur as butter-colored powders. Molecular weight = 370.4. The sodium equilin sulfate component is unstable to light and air. Piperazine estrone sulfate occurs as a white to yellowish white crystalline powder that is slightly soluble in water. Piperazine estrone sulfate decomposes (melts) @ 245°C.

Potential Exposure: Conjugated estrogens are naturally occurring substances excreted in the urine of pregnant mares; piperazine estrone sulfate is not known to occur naturally. Conjugated estrogens are used to treat symptoms of the climacteric, vulvae dystrophies; female hypogonadism; and dysfunctional uterine bleeding. They also are used for treatment following: ovariectomy, for chemotherapy of mammary cancer and prostate carcinogema; and for prevention of postpartum breast engorgement. In addition, conjugated estrogens have been found in cosmetic preparations.

Incompatibilities: Estrogens are Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, acid chlorides, and acid anhydrides.

Permissible Exposure Limits in Air

No standards or PAC available.

Permissible Concentration in Water: No criteria set. Because conjugated estrogens are used as pharmaceuticals and in low quantities relative to other chemicals, they are not regulated by EPA. There may be a small pollution problem relative to hospital wastes.

Harmful Effects and Symptoms

Long-Term Exposure: There is sufficient evidence that conjugated estrogens are carcinogenic in humans. Liver and vascular tumors, endometrial cancer; ovarian cancer; breast cancer; vascular system; and testicular cancer are associated with the use of conjugated estrogens in humans. A large number of studies of cancer of the endometrium suggest that use of conjugated estrogens causes the disease.

Several studies reported on the relative risk of breast cancer from use of conjugated estrogens; the evidence is conflicting, both overall and within subgroups.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Commercially available conjugated estrogens USP tablets, synthetic conjugated estrogens A tablets, synthetic conjugated estrogens B tablets, and conjugated estrogens USP vaginal cream should be stored at controlled room temperature (20−25°C). Conjugated estrogens, USP powder for injection should be stored at a temperature of 2−8°C prior to reconstitution. Following reconstitution, solutions of the drug should be used immediately [AHFS].

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required. UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials. PGIII.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. Keep unauthorized personnel away. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Stay upwind. Keep out of low areas. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Cover with plastic sheet to prevent spreading. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen, sodium, sulfur, and carbon. Noncombustible, substance itself does not burn but may decompose upon heating to produce corrosive and/or toxic fumes. Containers may explode when heated. Runoff from fire control or dilution water may be corrosive and/or toxic and may cause pollution. Runoff may pollute waterways. If tank, rail car, or tank truck is involved in a fire, ISOLATE for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Small Fire: Use dry chemical, CO_2, or water spray. *Large Fire*: Water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving Tanks or Car/Trailer Loads:* Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. *Do not* get water inside containers.

Disposal Method Suggested: It is inappropriate and possibly dangerous to the environment to dispose of expired or waste drugs and pharmaceuticals by flushing them down the toilet or discarding them to the trash. Household quantities of expired or waste pharmaceuticals may be mixed with wet cat litter or coffee grounds, double-bagged in plastic, discard in trash. Larger quantities shall carefully take into consideration applicable DEA, EPA, and FDA regulations. If possible return the pharmaceutical to the manufacturer for proper disposal being careful to properly label and securely package the material. Alternatively, the waste pharmaceutical shall be labeled, securely packaged, and transported by a state licensed medical waste contractor to dispose by burial in a licensed hazardous or toxic waste landfill or incinerator.

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water]. (*copper oxide*)

Description: Copper is a reddish-brown metal which occurs free or in ores, such as malachite, cuprite, and chalcopyrite. Copper: Molecular weight = 63.55; specific gravity (H_2O:1) = 8.89; boiling point = 2562°C; freezing/melting point = 1084.62°C. It may form both mono- and divalent compounds. Ignition temperature of dust cloud = 900°C; minimum explosive concentration = unknown oz/ft^3[209]. Hazard identification (based on NFPA-704 M Rating System) *copper powder*: Health 1, flammability 3, reactivity 0. Copper is insoluble in water, but soluble in nitric acid and hot sulfuric acid. Relative explosion hazard of dust: Fire.

Cupric oxide (CuO): Molecular weight = 79.54; specific gravity (H_2O:1) = 6.4; freezing/melting point = 1326°C.

Copper fume is a finely divided black particulate dispersed in air. Copper dusts and mists have been assigned the formula $CuSO_4 \cdot 5H_2O/CuCl$ by NIOSH. Copper fume has been designated as $Cu/CuO/Cu_2O$ by NIOSH.

Potential Exposure: Exposure to fume may occur in copper and brass plants; and during the welding of copper alloys; Metallic copper is an excellent conductor of electricity and is widely used in the electrical industry in all gauges of wire for circuitry, coil, and armature windings; high conductivity tubes; commutator bars, etc. It is made into castings, sheets, rods, tubing, and wire and is used in water and gas piping; roofing materials; cooking utensils; chemical and pharmaceutical equipment and coinage. Copper forms many important alloys: Be−Cu alloy, brass, bronze; gunmetal, bell metal; German silver; aluminum bronze, silicon bronze; phosphor bronze; and manganese bronze. Copper compounds are used as insecticides, algicides, molluscicides, plant fungicides, mordants, pigments, catalysts; as a copper supplement for pastures; and in the manufacture of powdered bronze paint and percussion caps. They are also utilized in analytical reagents, in paints for ships' bottoms; in electroplating; and in the solvent for cellulose in rayon manufacture.

Incompatibilities: Copper dust, fume, and mists form shock-sensitive compounds with acetylene gas, acetylenic compounds, azides, and ethylene oxides. Incompatible with acids, chemically active metals, such as potassium; sodium, magnesium, zinc, zirconium, strong bases. Violent reaction, possibly explosive, if finely divided material come in contact with strong oxidizers.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust, mists and fume)

OSHA PEL: 1 mg[Cu]/m^3 (dust, mist) TWA; 0.1 milligram per cubic meter (fume) TWA

NIOSH: 1 mg[Cu]/m^3 (dust, mist) TWA; 0.1 milligram per cubic meter (fume) TWA

Several states have set guidelines or standards for copper in ambient air[60] ranging from 0.26−1.57 μ/m^3 (Montana) to 2.0 μ/m^3 (North Dakota) to 2.0−20.0 μ/m^3 (Connecticut) to 4.0−20.0 μ/m^3 (Florida) to 5.0 μ/m^3 (Nevada) to 16.0 μ/m^3 (Virginia) to 20.0 μ/m^3 (New York).

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G; NIOSH Analytical Methods (fume) #7029, #7300, #7301, #7303 and OSHA Analytical Methods ID-121, ID-125G, ID-206

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg[Cu]/L as a 24-hour average, and should not exceed 23 μg[Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg [Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg [Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA, or by colorimetry (using neocuproine), or by ICP or optical emission spectrometry. Dissolved copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation of dust or fume, ingestion, or skin or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Short-term exposure to copper causes gastrointestinal distress. Copper salts act as irritants to the intact skin causing itching, erythema, and dermatitis. In the eyes, copper salts may cause conjunctivitis and even ulceration and turbidity of the cornea. Metallic copper may cause keratinization of the hands and soles of the feet, but it is not commonly associated with industrial dermatitis. The fumes and dust cause irritation of the upper respiratory tract; metallic taste in the mouth; nausea, metal fume fever. Inhalation of dusts, fumes, and mists of copper salts may cause congestion of the nasal mucous membranes. If the salts reach the gastrointestinal tract; they act as irritants producing salivation, nausea, vomiting, gastric pain; hemorrhagic gastritis; and diarrhea. It is unlikely that poisoning by ingestion in industry would progress to a serious point as small amounts induce vomiting, emptying the stomach of copper salts. Chronic human intoxication occurs rarely and then only in individuals with Wilson's disease (hepatolenticular degeneration). This is a genetic condition caused by the pairing of abnormal autosomal recessive genes in which there is abnormally high absorption, retention, and storage of copper by the body. The disease is progressive and fatal if untreated.

Long-Term Exposure: Long-term exposure causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor if the amount of copper in their water exceeds the action level. Copper may decrease fertility in both males and females. Repeated or prolonged contact may cause skin sensitization and allergy; thickening of the skin, and greenish color to the skin, teeth, and hair. Repeated exposure can cause chronic irritation of the nose; and cause ulcers and hole in the septum dividing the inner nose. Repeated high exposure to copper can cause liver damage. There is evidence that workers in copper smelting plants have an increased risk of lung cancer, but this is thought to be due to arsenic trioxide and not copper.

Points of Attack: For copper dusts and mists: respiratory system, lungs, skin, liver, including risk with Wilson's disease; kidneys. For copper fume: respiratory system, skin, eyes, and risk with Wilson's disease.

Medical Surveillance: Serum and urine copper levels. Evaluation by a qualified allergist. Liver function tests.

Copper often contains arsenic as an impurity. Wilson's disease is a rare hereditary condition which interferes with the body's ability to get rid of copper. If you have this condition, consult your doctor about copper exposure. NIOSH lists the following tests: whole blood (chemical/metabolite), blood serum, biologic tissue/biopsy, urine (chemical/metabolite), urine (chemical/metabolite) 24 hours.

First Aid: If copper dust or powder gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If copper dusts or powder contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to Physician: In case of fume inhalation, treat pulmonary edema. Give prednisone or other corticosteroid orally to reduce tissue response to fume. Positive-pressure ventilation may be necessary. Treat metal fume fever with bed rest, analgesics, and antipyretics. The symptoms of metal fume fever may be delayed for 4–12 hours following exposure: it may last less than 36 hours.

Personal Protective Methods: For copper dusts, powder, or mists: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, head gear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* 95XQ (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Copper fume: Up to 1 milligram per cubic meter: Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or, Sa (APF = 10) (any supplied-air respirator). *Up to 2.5 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *Up to 5 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SaT:Cf (APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned en try into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Red Stripe (*copper powder*) flammability Hazard: Do not store in the same area as other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8–10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with copper all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from acetylene gas, oxidizers, and other incompatible materials listed above. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Copper powder: sources of ignition, such as smoking and open flames, are prohibited where copper powder is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store to avoid conditions which create fumes or fine dusts.

Shipping: UN3089 Metal powders, flammable, n.o.s., Hazard Class: 4.1; Labels: 4.1-Flammable solid. Copper, elemental is not specifically cited in DOT's Performance-Oriented Packaging Standards[19].

Spill Handling: Warn other workers of spill. Put on proper protective equipment and clothing. Sweep or vacuum up solids being careful not to raise dust levels. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of copper dust and powder as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Copper powder can be a combustible solid. Thermal decomposition products may include metal oxides. Other poisonous gases may be produced in fire; copper may contain arsenic. Use special mixtures of dry chemicals appropriate for extinguishing metal fires: powdered dolomite, sodium chloride (common salt) or graphite. *Do not use water*. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill[22]. Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill.

EC Number: 033-002-00-5

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Known to be a human carcinogen: Arsenic and inorganic arsenic compounds; IARC: Human Sufficient Evidence, 1980; Animal Limited Evidence, *carcinogenic to humans*, Group 1, 1987

California Proposition 65 Chemical[102]: Carcinogen (as arsenic) 2/27/1987

Hazard Alert: Poison, Suspected reprotoxic hazard, Environmental hazard, Agricultural chemical.

California EPA AB2588-Air Toxics "Hot Spots" Chemicals (CAL)
Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds
WHO ADI = 0.002 mg[As]/kg as inorganic arsenic
EPA ADI: 1.3 mg[Cu]/L. As copper.
RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010(60); 7210(200) Note: All species in the ground water that contain copper are included
Carcinogen User Register Chemical (CAL/OSHA)
AB 1803-Well Monitoring Chemical (CAL)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%
CAL Air Resources Board/AB 1807 Toxic Air Contaminants Specific chemicals (EPA/NESHAP)
Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as arsenic compounds
Clean Air Act: List of high risk pollutants (Section 63.74) as arsenic compounds
United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper; MCLG = 0 mg[As]/L; MCL = 0.010 mg[As]/L as Arsenic.
Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA); Section 313 Priority Chemicals; Toxic Pollutant (Section 401.15) as arsenic and compounds
RCRA Section 261 Hazardous Constituents, waste number D004 (arsenic compounds)
EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg)
United States DOT Regulated marine pollutant (49CFR172.101, Appendix B). As arsenates, liquid, n.o.s; arsenates, solid, n.o.s; arsenical pesticides liquid, toxic, flammable, n.o.s
Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%., as copper compounds; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.
WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: An odorless, yellow-green powder. Low vapor pressure.

Potential Exposure: Formerly used in agriculture as insecticide, rodenticide, and fungicide. Also used in pigments and animal medications. Not currently registered for use in the United States.

Permissible Exposure Limits in Air:
OSHA(2): 0.01 milligram per cubic meter
NIOSH(2): Ceiling 0.002 milligram per cubic meter/15 min; carcinogen
ACGIH(1): 0.01 milligram per cubic meter; carcinogen

Determination in Air: Collection on a filter and analysis by AA spectrometry. See NIOSH Methods #7900 and #73000, Elements[18]. See also OSHA Method ID 105[58].

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg[Cu]/L as a 24-hour average, and should not exceed 23 μg[Cu]/L at any time. Federal Drinking Water Guidelines: EPA 10 μg[As]/L; State Drinking Water Guidelines: Arizona 10 μg[As]/L; Connecticut 10 μg[As]/L. Runoff from spills or fire control may cause water pollution. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: See OSHA Analytical Method ID-105 for arsenic. The AA graphite furnace technique is often used for measurement of total arsenic in water. It also has been standardized by EPA. Total arsenic may be determined by digestion followed by silver diethyldithiocarbamate; an alternative is AA; another is ICP optical emission spectrometry. Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation, skin, eyes, and ingestion

Harmful Effects and Symptoms

Short-Term Exposure: *Inhalation:* Dust is readily absorbed from the lungs, but inhaled quantities are usually insufficient to cause acute systemic toxicity. Can cause cough with foamy sputum and rales. *Skin/Eye Contact:* Dust can cause localized skin irritation, but systemic absorption through the skin is negligible. Dermal contact is unlikely to cause systemic effects unless the dermal barrier is compromised. Eye exposure may produce burns and ulcerations. *Ingestion:* The most important route of acute exposure. Arsenicals are quickly absorbed and can be extremely hazardous. Significant tissue and organ damage and death may result. *Symptoms of exposure include*: Headache (lethargy, delirium, hallucinations, seizures, or coma can occur); dizziness; acute nausea and occasional vomiting; labored breathing; restlessness; cyanosis (pale or bluish lips, face, and fingernails); perspiration; difficult breathing; abdominal pain with diarrhea; trembling and feeling of "pins and needles" or electrical shock like pains in the lower extremities; convulsions; unconsciousness; possible pulmonary edema, a Medical emergency. Very acute poisoning: extreme headache; muscular paralysis, and liver and kidney dysfunction, loss of consciousness; death.

Long-Term Exposure: Arsenic can cause skin damage or problems with circulatory systems, and may have increased risk of cancer. Chronic exposure is characterized by malaise, peripheral sensorimotor neuropathy, anemia, jaundice, gastrointestinal complaints, and characteristic skin lesions including hyperkeratosis (small corn-like elevations) and hyperpigmentation. Hyperkeratosis usually appears on the palms or soles. Pigmentation changes and hyperkeratosis can take 3 to 7 years to appear. Chronic inhalation can also lead to conjunctivitis, irritation of the throat and respiratory tract, and perforation of the nasal septum. Chronic exposure can cause allergic contact dermatitis. Chronic exposure may be more serious for children because of their potential longer latency period. *Carcinogenicity:* The Department of Health and Human Services, IARC, United States Environmental Protection Agency, and NTP have classified arsenic as a human carcinogen based on sufficient evidence from human data. Arsenic trioxide causes skin and lung cancer, and may cause internal cancers such as liver, bladder, kidney, colon, and prostate cancers. Arsenic ions released from arsenic trioxide within the body can cross the placenta and affect the developing fetus; arsenic is also excreted in breast milk. Experimental animal studies support an association between high ingested arsenic dose and fetal toxicity. Long-term exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L.

Points of Attack: Muscles, liver, and kidney

Medical Surveillance: Test for urine arsenic. Levels should not be greater than 100 μg/g of creatinine in the urine. Examine the skin for abnormal growths. Liver and kidney function tests. In acutely ill patients, the agent most frequently recommended is dimercaprol, also known as BAL (British Anti-Lewisite). The standard dosage regimen is 3 to 5 mg/kg IM every 4–6 hours until the 24-hour urinary arsenic level falls below 50 μg/L, unless an orally administered chelating agent (e. g., DMSA, see below) is substituted. This regimen may be adjusted depending upon the severity of the exposure and the symptoms. Do not chelate asymptomatic patients without the guidance of a 24-hour urinary arsenic level. Contraindications to BAL include preexisting renal disease, pregnancy (except in life-threatening circumstances) and concurrent use of medicinal iron (BAL and iron together form a complex that is very toxic).

First Aid: Do not contaminate yourself. Positive-pressure, SCBA is recommended in response situations that involve exposure to potentially unsafe levels of arsenicals or combustion products which may include arsine and arsenic trioxide fumes. *Eyes:* Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eye lids. Get Medical aid immediately. *Skin:* Although it is poorly absorbed dermally, dermal contact should be avoided because arsenicals may irritate the skin. Wearing the appropriate PPE equipment and respirator for arsenicals. Immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious, alert, and able to swallow, aggressive decontamination with gastric lavage is recommended within 1 hour of ingestion of a life-threatening amount of poison. The effectiveness of activated charcoal in binding arsenic trioxide is questionable, but administration of a charcoal slurry is recommended pending further evaluation in cases of ingestion of unknown quantities (at 1 g/kg, usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. If victim is *UNCONSCIO United States OR HAVING CONVULSIONS*, do nothing except keep victim warm. *Inhalation:* Get medical aid. Wearing the appropriate PPE equipment and respirator for arsenicals, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN1586 copper arsenite, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. Keep unauthorized personnel away. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Stay upwind. Keep out of low areas. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Cover with plastic sheet to prevent spreading. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decompodition includes oxides of copper and arsenic.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%, as copper compounds; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

European/International Regulations (*dichloride*): Hazard symbol: T, C, N, Xi, Xn; risk phrases: R21/22; R23/24/25; R32; R35; R36/37/38; R38; R41; R50/53 (*dichloride*); R51/53 (*monochloride*); safety phrases: S25; S26; S28; S29/35; S36/37/39; S36; S37/39; S39; S44; S45; S57; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water. (*dichloride*); 2-Hazard to waters (*monochloride*).

Description: Copper chloride is a brownish-yellow powder. Molecular weight = 134.45 (II); specific gravity (H_2O:1) = 3.4 (II); boiling point = (decomposes below this point) 993°C (II); freezing/melting point = 598 C (II); 498°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Soluble in water; solution is acidic.

Potential Exposure: Copper chloride is used in petroleum, textiles, metallurgy, photography, agricultural products;

feed additives; and wood preservation. It is also used in light sensitive paper manufacturing; glass pigments; ceramics; and in making cyclonitrile.

Incompatibilities: Contact with strong acids forms monovalent copper salts and toxic hydrogen chloride gas. Forms shock-sensitive and explosive compounds with potassium, sodium, sodium hypobromite, nitromethane, acetylene. Keep away from moisture and alkali metals. Attacks metals in the presence of moisture. Reacts with moist air to form cupric chloride dihydrate. May attack some metals, paints, and coatings. May be able to ignite combustible materials.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust, mists and fume)

PAC Ver. 29[138]

7758-89-6 (I)

PAC-1: 4.7 milligram per cubic meter

PAC-2: 53 milligram per cubic meter

PAC-3: 320 milligram per cubic meter

7447-39-4 (II)

PAC-1: 6.3 milligram per cubic meter

PAC-2: 69 milligram per cubic meter

PAC-3: 420 milligram per cubic meter

Copper and its inorganic compounds

DFG MAK: 0.1 milligram per cubic meter measured as the inhalable fraction of the aerosol; Peak Limitation Category I(1); Pregnancy Risk Group C

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G, ID-206

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg[Cu]/L as a 24-hour average, and should not exceed 23 μg[Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg [Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg [Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61]. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. Irritates the eyes, skin, and respiratory tract. Skin or eye contact can cause corrosive burns and permanent damage. Irritates the stomach causing salivation, nausea, vomiting, stomach pain; and diarrhea.

Long-Term Exposure: Repeated exposure may cause skin thickening and allergy. May cause a greenish color to the skin and hair. May damage the liver and kidneys. Repeated Exposure can cause ulcers or a hole in the nasal septum with possible bleeding. May affect the blood. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L.

Points of Attack: Kidneys, liver, skin, blood.

Medical Surveillance: Serum and urine copper levels. Liver and kidney function tests. Evaluation by a qualified allergist. CBC. Wilson's disease is a rare hereditary condition which interferes with the body's ability to get rid of copper. If you have this condition, consult your doctor about copper exposure.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Specific engineering controls are required under OSHA 1910.1018, *Inorganic Arsenic*. See also NIOSH Criteria Document #75-149, *Inorganic Arsenic*.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa: Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above, moisture, and heat.

Shipping: UN2802 Copper chloride, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical does not burn. Thermal decomposition products may include hydrogen chloride and oxides of metal. Use any extinguisher suitable for surrounding fires. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R14/15; R26; R29; R37; R40; R41; R50/53; safety phrases: S1/2; S28; S23; S29/35; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cuprous cyanide is a white crystalline substance. Cupric cyanide, $Cu(CN)_2$ is a yellowish-green powder which decomposes on heating. Molecular weight = 89.56 (cuprous); 115.55 (cupric); specific gravity (H_2O:1) = 2.92; freezing/melting point = 474°C (in nitrogen, cuprous cyanide). Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 0 ₩. Insoluble in water; reaction may release hydrogen cyanide gas.

Potential Exposure: Copper cyanide is used in electroplating copper on iron; and as an insecticide and a catalyst.

Incompatibilities: Contact with heat, strong acids (HCl, H_2SO_4, HNO_3) forms deadly hydrogen cyanide gas. May release hydrogen cyanide on contact with moisture. Incompatible with strong oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, acetylene gas, and chemically active metals, such as potassium, sodium, magnesium, and zinc.

Permissible Exposure Limits in Air

As cyanides, CN

OSHA PEL: 5 mg[CN]/m^3 TWA

NIOSH REL: 4.7 ppm/5 mg[CN]/m^3 [10 minutes] Ceiling Concentration

ACGIH TLV[1]: 5 mg[CN]/m^3 [skin] Ceiling Concentration (1993−1994)

PAC Ver. 29[138]

544-92-3, copper (I) cyanide

PAC-1: 21 milligram per cubic meter

PAC-2: 29 milligram per cubic meter

PAC-3: 170 milligram per cubic meter

Copper and its inorganic compounds

NIOSH IDLH = 100 mg[Cu]/m^3 (dust, mists and fume)

DFG MAK: 0.1 milligram per cubic meter measured as the inhalable fraction of the aerosol; Peak Limitation Category II(1) [skin]; Pregnancy Risk Group C

The limit set by Russia[43] is 0.3 milligram per cubic meter as a MAC in work-place air and 0.009 milligram per cubic meter as a momentary value in ambient air of residential areas; the daily average MAC allowable in residential areas is 0.004 milligram per cubic meter.

Determination in Air: Use NIOSH Analytical Method #7904; # 6010, cyanides. For copper Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average and should not exceed 23 μg [Cu]/L at any time. *Copper:* Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg [Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg [Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61]. United States Army field drinking-water standards for cyanide: 2 mg/L assuming a water consumption of 15 L/day and 6 mg/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg/L; Short-term consumption; Raw water constituents (maximum) 20 mg/L.

Inorganic cyanide standards: Bulgaria 0.3 milligram per cubic meter; Czechoslovakia 3−15 milligram per cubic meter; Finland 7 milligram per cubic meter; Federal Republic of Germany 5 milligram per cubic meter; Hungary 0.3 milligram per cubic meter; Poland 0.3 milligram per cubic meter; Romania 0.3 milligram per cubic meter; Yugoslavia 5 milligram per cubic meter[77].

Determination in Water: Use NIOSH Analytical Method #7904; #6010, cyanides. Cyanide may be determined titrimetrically by EPA Methods 335.2 and 9010 which give total cyanide. Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Copper cyanide can affect you when breathed in. Eye contact can cause severe burns with loss of vision. Skin contact can cause irritation or burns. Breathing copper cyanide causes irritation of respiratory tract and may cause nose bleeds or sores in the nose.

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L.

Repeated exposure can cause copper to deposit in the liver and other body organs, causing damage, atrophy of the inner lining of the nose, with a watery discharge. Metallic taste may also occur. Repeated skin exposure can cause skin allergy and possibly a green discoloration of the skin and hair. May be able to affect the lungs.

Points of Attack: Skin, lungs, possibly other body organs.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that. Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful. Urine copper test.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH (***as cyanides***): *25 milligram per cubic meter*: Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any SCBA with full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA). ***Copper dusts and mists:*** *5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with copper cyanide all handlers should be trained on its proper handling and storage. Copper cyanide must be stored to avoid contact with chemically active metals (such as potassium, sodium, magnesium, and zinc), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from acetylene gas.

Shipping: UN1587 Copper cyanide, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Thermal decomposition products may include cyanide gas and nitrous oxides. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill. Copper-containing wastes can be concentrated to the point where copper can be electrolytically removed and reclaimed. If recovery is not feasible, the copper can be precipitated by alkali; the cyanide destroyed by alkaline oxidation yielding a sludge which can be sent to a chemical waste landfill[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Determination in Air: Copper dusts and mists are collected on a filter, worked up with acid, measured by AA. See

NIOSH Method #7029 for copper. For copper fume: filter collection, acid digestion, measurement by AA.

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed.

Long-Term Exposure: Long-term Exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. May cause skin sensitization.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 oz of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a drug or other inhalation therapy. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa: Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp: ASC BA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent dust cloud. Avoid inhalation of asbestos dust. *Small Dry Spill:* With clean shovel place material into clean, dry container and cover loosely; move containers from spill area. Small Spill: Take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Large Spill*: Dike far ahead of liquid spill for later disposal. Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent entry into waterways, sewers, basements, or confined areas.

Fire Extinguishing: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m (1/2 mi) in all directions. *On a Small fire:* use dry chemical, CO_2, water spray, or regular *foam. On a large fire:* use water spray, fog, or regular foam. Do not scatter spilled material with high pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill Copper-containing wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. Details of copper recovery from a variety of industrial wastes have been published. If recovery is not feasible, the copper can be precipitated by the use of caustics and the sludge deposited in a chemical waste landfill. Recommendable methods: Precipitation, solidification, landfill, discharge to sewer, & incineration. Peer-review: Precipitate copper with alkali, filter, solidify precipitate. (Do not use ammonia as alkali). Cation exchange will allow recovery of copper. Eluate from cation exchanger can be passed through anion exchanger to remove (or reduce) naphthenic acid content. Exhausted ion exchange resins can be landfilled. (Peer-review conclusions of an IRPTC expert consultation)[UN].

EC Number: 233-841-9

Regulatory Authority and Advisory Information

Carcinogenicity: IARC, Group 3 not classifiable as to its carcinogenicity in humans

Hazard Alert: Poison, May be flammable,[77] Sensitization hazard, Possible risk of forming tumors, Suspected of causing genetic defects, Agricultural chemical, Environmental hazard.

EPA ADI:1.3 mg[Cu]/L. As copper.

California EPA AB2588-Air Toxics “Hot Spots” Chemicals (CAL) as copper compounds

The “Director’s List” (CAL/OSHA) as copper compounds

Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds

United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper.

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010(60); 7210(200) Note: All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical’s infrastructure; Form R *de minimis* concentration reporting level: 1.0%

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xi; risk phrases: R36/37/38; R43; R50/53; safety phrases: S2; S26; S36; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Yellow-green crystalline solid or powder. Odorless. Molecular weight = 351.9; specific gravity (H_2O:1) = 1.69 @ 20°C; freezing/melting point = 239.8°C. Decomposition temperature = 270°C. Insoluble in water.

Potential Exposure: Fungicide and microbiocide.

Incompatibilities: May form highly unstable acetylides. Decomposes on burning producing toxic and corrosive fumes including copper and nitrogen oxides.

Permissible Exposure Limits in Air:

as inorganic copper

NIOSH IDLH = 100 mg[Cu]/m^3

OSHA PEL: 1 mg[Cu]/m^3 (dust, mist) TWA; 0.1 milligram per cubic meter (fume) TWA

NIOSH: 1 mg[Cu]/m^3 (dust, mist) TWA; 0.1 milligram per cubic meter (fume) TWA

ACGIH TLV[1]: 1 mg[Cu]/m^3 (dust, mist) TWA; 0.2 milligram per cubic meter (fume) TWA

Determination in Air: Copper dusts and mists are collected on a filter, worked up with acid, measured by AA. See NIOSH Method #7029 for copper. For copper fume: filter collection, acid digestion, measurement by AA.

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Determination in Water: Log K_{ow} = 2.46 Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short-Term Exposure: Organic copper compounds are more absorbable and exhibit greater systemic toxicity than inorganic compounds. Soluble copper salts are corrosive to mucous membranes and the cornea. Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided. Harmful if swallowed. Metallic taste, nausea, vomiting, and stomach pain. In more severe cases, there may be blood in vomit or black/tarry stools, jaundice, and enlarged liver. Blood cells rupture resulting in circulatory collapse and shock[72].

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. Repeated or prolonged inhalation exposure may cause asthma. May cause skin allergy and thickening of the skin; copper deposits can cause discoloration in the skin and hair, leaving a green color. Repeated exposure can cause shrinking of the lining of the inner nose with watery discharge, liver damage. Individuals with Wilson's disease absorb, retain, and store copper excessively. May cause mutations in humans. May damage the testes and decrease fertility in both males and females

Points of Attack: Skin, reproductive system, liver

Medical Surveillance: Serum and urine copper level. Liver and kidney tests. Examination by a qualified allergist. More than light alcohol consumption may exacerbate the liver damage caused by copper sulfate

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN3077 Environmentally Hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling:

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen, meta (copper), and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m (1/2 mi) in all directions. *On a small fire:* use dry chemical, CO_2, water spray, or regular *foam. On a large fire:* use water spray, fog, or regular foam. Do not scatter spilled material with high pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill Copper-containing wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. Details of copper recovery from a variety of industrial wastes have been published. B2588-Air Toxics “Hot Spots” Chemicals (CAL)

Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds

EPA ADI:1.3 mg[Cu]/L. As copper.

United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper.

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010 (60); 7210(200) Note: All species in the ground water that contain copper are included.

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical’s infrastructure Form R *de minimis* concentration reporting level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xi; risk phrases: R20/21/22; R36/37/38; R43; safety phrases: S29/35; S61; S41 (see Appendix 4)

Description: Blue liquid. Acidic odor; Lardy/fatty odor. Molecular weight = 349.95; specific gravity (H_2O:1) = ~1.0–1.06 @ 20°C; boiling point = ~100°C. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 0. Soluble in water.

Potential Exposure: A copper soap fungicide that controls many common diseases on vegetables, fruits and ornamentals, both indoors and outdoors. Treats mildew, including powdery mildew, fruit rots, blue mold, downy mildew, leaf spots, blights, white rust, apple scab, and anthracnose.

Incompatibilities: Esters are generally incompatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Ingestion, dermal contact, inhalation

Harmful Effects and Symptoms

Short-Term Exposure: Organic copper compounds are more absorbable and exhibit greater systemic toxicity than inorganic compounds. Soluble copper salts are corrosive to mucous membranes and the cornea. Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided. Harmful if swallowed. Metallic taste, nausea, vomiting, and stomach pain. In more severe cases, there may be blood in vomit or black/tarry stools, jaundice, and enlarged liver. Blood cells rupture resulting in circulatory collapse and shock[72].

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. Copper salts may cause sensitization in certain individuals.

Points of Attack: Eyes, kidneys, liver, skin.

Medical Surveillance: Evaluation by a qualified allergist. Medical observation and rest is recommended for 24 to 48 hours after breathing overexposure, as symptoms may be delayed. If signs of allergy are detected, the exposed person(s) should avoid all further contact with this chemical. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Management of poisonings by ingestion of copper-containing fungicides depends entirely on the chemical nature of the compound: the strongly ionized salts present the greatest hazard; the oxides, hydroxides, oxychloride, and oxysulfate are less likely to cause severe systemic poisoning. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. *Do not make an unconscious person vomit.* Give water or milk as an anticorrosive as soon as possible to dilute the toxicant and mitigate corrosive action on the mouth, esophagus, and gut. Charcoal has not been widely studied in metal poisonings as an effective adsorbant[72].

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[72]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Use NIOSH- or CEN (UK)-approved APRs for pesticides. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Wearing protective equipment, cleanup with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Thermal decomposition releases poisonous fumes including oxides of metal (copper) and carbon. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers.

If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill.

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171

EC Number: 215-572-9

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Sensitization hazard, Environmental hazard, Agricultural chemical.

EPA ADI:1.3 mg[Cu]/L. As copper.

United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper.

Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010(60); 7210(200) Note: All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical's infrastructure

Form R de minimis concentration reporting level: 1.0%

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: N, Xn; risk phrases: R22; R36/37/38; R51; safety phrases: S16; S26; S29/35; S45; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)]

Description: Bluish-green powder. Odorless. Molecular weight = 427.12. Insoluble in water.

Potential Exposure: Used to control fungi on beets, fruit crops, grapes, olive trees, potatoes, vegetables, tomatoes, ornamental plants, and many more. Used as a bird repellant.

Incompatibilities: When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes and deadly phosgene gas. May cause pitting of some metals.

Permissible Exposure Limits in Air:

No United States Standards or PAC available.

DFG MAK: 0.01 milligram per cubic meter, inhalable fraction TWA; Peak limitation Category II(8); Pregnancy Risk Group C.

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg

[Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be poisonous if swallowed. Contact poison control center. LD_{50} (oral, human) = 200 mg/kg.

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. Anyone having hereditary Wilson's disease should avoid contact with the material. These persons are born with an abnormally high level of copper in their system and exposure may increase levels of copper, causing overdose, liver problems which can be fatal. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L.

Points of Attack: Liver

Medical Surveillance: Tests for copper level and Wilson's disease.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated, and secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent dust cloud. Avoid inhalation of asbestos dust. *Small Dry Spill:* With clean shovel place material into clean, dry container and cover loosely; move containers from spill area. Small Spill: Take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Large Spill*: Dike far ahead of liquid spill for later disposal. Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent entry into waterways, sewers, basements, or confined areas.

Fire Extinguishing: Thermal decomposition products may include deadly phosgene gas, hydrogen chloride gas, and oxides of metal. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m (1/2 mi) in all directions. *On a small fire:* use dry chemical, CO_2, water spray, or regular *foam. On a large fire:* use water spray, fog, or regular foam. Do not scatter spilled material with high pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm.

Details of copper recovery from a variety of industrial wastes have been published. If recovery is not feasible, the copper can be precipitated by the use of caustics and the sludge de posited in a chemical waste landfill. Recommendable methods: Precipitation, solidification, landfill, discharge to sewer, & incineration. Peer-review: Precipitate copper with alkali, filter, solidify precipitate. (Do not use ammonia as alkali). Cation exchange will allow recovery of copper. Eluate from cation exchanger can be passed through anion exchanger to remove (or reduce) naphthenic acid content. Exhausted ion exchange resins can be landfilled. (Peer-review conclusions of an IRPTC expert consultation)[UN].

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Animal Inadequate Evidence; Human Inadequate Evidence, *not classifiable as carcinogenic to humans*, Group 3; EPA: Cannot be Determined; Not Classifiable as to human carcinogenicity.

Hazard Alert: Poison, Possible risk of forming tumors, Suspected of causing genetic defects, Suspected reprotoxic hazard; *pentahydrate*: Possible risk of forming tumors, Suspected of causing genetic defects.

United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper; SMCL = 250 mg[SO_4^{-2}]/L as Sulfate.

As copper compounds:

EPA ADI:1.3 mg[Cu]/L. As copper.

Clean Water Act: Toxic Pollutant (Section 401.15)

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010 (60); 7210 (200). *Note:* All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical’s infrastructure. This category does not include copper phthalocyanide compounds that are substituted with only hydrogen; and/or chlorine; and/or bromine. Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.

Hazard symbols, risk, & safety statements: Hazard symbol: N, Xi, Xn; risk phrases: R22; R36/37/38; R51/53; R62; safety phrases: S16; S22; S24/25; S26; S36; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Copper sulfate is a greenish-white crystalline solid; the pentahydrate is Blue powder or granules, or ultramarine crystalline solid. Molecular weight = 159.60; 249.70 (pentahydrate). Boiling point = 150°C (pentahydrate) with-5H_2O; freezing/melting point = (decomposes) >200°C; decomposes >110°C (pentahydrate) with-4H_2O; copper sulfate decomposes to CuO @ 650°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 0, reactivity 0. Highly soluble in water; forms a bright Blue solution.

Potential Exposure: Copper sulfate is used as intermediate and wood preservative; also used in production of copper compounds; to detect and to remove trace amounts of water from alcohols and organic compounds; as a fungicide and algicide; in veterinary medicine and others.

Incompatibilities: Aqueous solution is an acid. May form explosive materials on contact with acetylene and nitromethane. Incompatible with strong bases; hydroxylamine, magnesium; zirconium, sodium hypobromite, hydrazine.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust, mists and fume)

PAC Ver. 29[138]

7758-98-7

PAC-1: 7.5 milligram per cubic meter

PAC-2: 10 milligram per cubic meter

PAC-3: 59 milligram per cubic meter

7758-99-8, pentahydrate

PAC-1: 12 milligram per cubic meter

PAC-2: 32 milligram per cubic meter

PAC-3: 190 milligram per cubic meter

copper and its inorganic compounds

DFG MAK: 0.1 milligram per cubic meter measured as the inhalable fraction of the aerosol; Peak Limitation Category II(2); Pregnancy Risk Group C

Arab Republic of Egypt: TWA 0.1 mg[Cu]/m^3 (fume), 1993; Australia: TWA 0.2 mg[Cu]/m^3 (fume), 1993; Australia: TWA 1 mg[Cu]/m^3 (*dust*), 1993; Belgium: TWA 0.2 mg[Cu]/m^3; TWA 1 mg[Cu]/m^3 (*dust*), 1993; Finland: TWA 0.2 mg[Cu]/m^3; TWA 1 mg[Cu]/m^3 (*dust*), 1999; France: VME 0.2 mg[Cu]/m^3 (fume); VME 1 mg[Cu]/m^3; STEL 2 mg[Cu]/m^3 (*dust*), 1993; Hungary: TWA 0.2 mg [Cu]/m^3; STEL 0.4 mg[Cu]/m^3 (*dust*), 1993; India: TWA 0.2 mg[Cu]/m^3 (fume), 1993; the Philippines: TWA 1.0 mg [Cu]/m^3 (fume), 1993; Russia: STEL 0.5 milligram per cubic meter; STEL 0.5 ppm (1 mg[Cu]/m^3) (*dust*), 1993; Sweden: NGV 0.2 mg[Cu]/m^3 (resp. dust); NGV 1 mg[Cu]/m^3 (total dust), 1999; Switzerland: TWA 0.1 mg[Cu]/m^3; STEL 0.2 mg[Cu]/m^3 (fume); TWA 1 mg[Cu]/m^3; STEL 1 mg[Cu]/m^3, 1999; Thailand: TWA 0.1 mg[Cu]/m^3 (fume); TWA 1 mg[Cu]/m^3, 1993; United Kingdom: LTEL 0.2 mg [Cu]/m^3 (fume); LTEL 1 mg[Cu]/m^3, 1993. Russia[43] has set limits in the ambient air of residential areas of 0.009 milligram per cubic meter on a momentary basis and 0.004 milligram per cubic meter on a daily average basis. the Czech Republic[35]: MAC 0.1 milligram per cubic meter, daily average basis; MAC 0.3 milligram per cubic meter, 30-minute basis.

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg[Cu]/L as a 24-hour average, and should not exceed 23 μg[Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg [Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg [Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: *Inhalation:* May cause irritation to nose, throat, and lungs, causing coughing and wheezing. *Skin:* May cause irritation of skin, localized coloration, itching, and burns. *Eyes:* May cause severe irritation, inflammation, burns, excessive tissue fluid, and a cloudy cornea; possible permanent damage. *Ingestion:* Poisonous if swallowed. May cause burning and metallic taste in mouth; Blue skin coloration; intense inflammation of the stomach and intestines, abdominal pain; vomiting, diarrhea, blood in feces; headache, cold sweat; weak pulse; salivation, nausea, dehydration, low blood pressure; jaundice, and kidney failure. Death may result from a dose of a little as 1 teaspoon for a 150-lb person.

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. This chemical may cause mutations in humans. May damage the testes and decrease fertility in both males and females. May cause skin allergy and thickening of the skin; copper deposits can cause discoloration in the skin and hair, leaving a green color. Repeated exposure can cause shrinking of the lining of the inner nose with watery discharge; liver damage. Individuals with Wilson's disease absorb, retain, and store copper excessively.

Points of Attack: Skin, reproductive system; liver.

Medical Surveillance: Serum and urine copper level. Liver and kidney tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. More than light alcohol consumption may exacerbate the liver damage caused by copper sulfate.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to Physician: Empty stomach by lavage with 0.1% solution of potassium ferrocyanide or milk. Liver or kidney function tests may be indicated. May result in methaemoglobinemia.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Neoprene and polyvinyl chloride are among the recommended protective materials. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa: Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cacodylic acid you should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3288 Toxic solids, inorganic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include oxides of sulfur. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill Add soda ash to waste $CuSO_4$ solution; let stand 24 hours. Decant and neutralize solution before flushing to sewer. Landfill sludge[22].

Cotton Dust (Raw) C:1400

Formula: $C_{6n}H_{10n}O5n$; $(C_6H_{10}O_5)_n$
Synonyms: Cotton fiber (raw)
CAS Registry Number: None
RTECS Number: GN2275000
UN/NA & ERG Number: None assigned.
Regulatory Authority and Advisory Information
Hazard Alert: Combustible.
OSHA, 29CFR1910 Specifically Regulated Chemicals (See CFR 1910.1043).

Description: Cotton dust is defined as dust generated into the atmosphere as a result of the processing of cotton fibers combined with any naturally occurring materials, such as stems, leaves, bracts; and inorganic matter which may have accumulated on the cotton fibers during the growing or harvesting period. Any dust generated from processing of cotton through the weaving of fabric in textile mills; and dust generated in other operations or manufacturing processes using new or waste cotton fibers or cotton fiber by-products from textile mills is considered cotton dust. Hazard identification (based on NFPA-704 M Rating System): Health 0, flammability 1, reactivity 0.

Potential Exposure: The Occupational Safety and Health Administration has estimated that nearly a million workers are involved in work with cotton fibers and thus are potentially exposed to cotton dust in the work place.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Dust forms an explosive mixture with air.

Permissible Exposure Limits in Air
NIOSH IDLH = 100 milligram per cubic meter
No PAC available
OSHA PEL: [Z-1-A & 1910.1043*] 1 milligram per cubic meter TWA (waste processing during waste recycling [sorting, blending, cleaning, and willowing (and garnetting)]) 0.200 milligram per cubic meter TWA (textile yarn manufacturing, and cotton washing operations) 0.750 milligram per cubic meter TWA (textile slashing and weaving operations) 0.500 milligram per cubic meter TWA [all other operations (for textile mill waste house operations or for dust from "lower grade washed cotton" used during yarn manufacturing)]. All PELs for cotton dust are mean concentrations of lint-free, respirable cotton dust collected by the vertical elutriator or an equivalent method and averaged over an 8-hour period.
**Note:* The OSHA Standard in 29 CFR 1910.1043 does not apply to cotton harvesting, ginning, or the handling and processing of woven or knitted materials and washed cotton.
NIOSH REL: <0.200 milligram per cubic meter TWA (as lint-free cotton dust); Reduce exposures to cotton dust to the lowest feasible concentration to reduce the prevalence and severity of byssinosis.
ACGIH TLV[1]: 0.2 milligram per cubic meter TWA, 5 × PEL maximum for disposables, per OSHA cotton dust standard. If oil aero sol is present, use R or P95.
DFG MAK: 1.5 milligram per cubic meter (measured as the, inhalable fraction); Pregnancy Risk Group C
Finland: TWA 1 milligram per cubic meter, 1999; France: VME 0.2 milligram per cubic meter, fiber, 1999; India: TWA 0.2 milligram per cubic meter, 1993; the Philippines: TWA 1 milligram per cubic meter, 1993; Sweden: NGV 0.5 milligram per cubic meter, 1999; Switzerland: MAK-W 0.32 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 0.2 milligram per cubic meter, 2003; United Kingdom: LTEL 0.5 milligram per cubic meter, 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TL V: TWA 0.2 milligram per cubic meter (G).

Determination in Air: Vertical elutriator; none; Gravimetric; OSHA (1910.1043).

Routes of Entry: Inhalation of dust, ingestion, eye and skin contact.

Harmful Effects and Symptoms
Short-Term Exposure: Human pulmonary effects. Breathing raw cotton fiber can cause coughing, fever (resembling metal fume fever), chills; and may cause nausea and vomiting, when first exposed. Allergens or fungi in the cotton or dust can cause illness.

Long-Term Exposure: Repeated exposures can cause serious permanent lung damage ("brown lung" or byssinosis). The first symptoms are chest tightness and trouble breathing that occur a few hours after first starting work for the week. At first, the symptoms go away after a day or two, but with continued Exposure they can become constant.

Points of Attack: Cardiovascular system; respiratory system.

Medical Surveillance: NIOSH lists the following tests: pulmonary function tests; forced vital capacity; forced expiratory volume (1 second); forced expiratory volume (1 second)/forced vital capacity (ratio); the percentage that the measured values of the forced expiratory volume (1 second) and forced vital capacity differ from the predicted values, using the standard tables in 29CFR1910.1043, Appendix C. Chest X-ray; pulmonary function tests: forced vital capacity; forced expiratory volume (1 second); pulmonary function tests: pre- and postshift.

1. *Preplacement*: A comprehensive physical examination shall be made available to include as a minimum medical history, baseline forced vital capacity (FVC); and forced vital expiratory volume @ 1 second (FEV_1).

The history shall include administration of a questionnaire designed to elicit information regarding symptoms of chronic bronchitis, byssinosis, and dyspnea. If a positive personal history of respiratory allergy, chronic obstructive lung disease; or other diseases of the cardiopulmonary system are elicited; or where there is a positive history of smoking, the applicant shall be counseled on his increased risk from occupational exposure to cotton dust. At the time of this examination, the advisability of the workers using negative or positive pressure respirators shall be evaluated.

2. *Each newly employed person:* shall be retested for ventilatory capacity (FVC and FEV_1) within 6 weeks of employment. This retest shall be performed on the first day at work after at least 40 hours' absence from exposure to cotton dust and shall be performed before and after at least 6 hours of exposure on the same day.
3. *Each current employee exposed to cotton dust*: shall be offered a medical examination at least yearly that shall include administration of a questionnaire designed to elicit information regarding symptoms of chronic bronchitis, byssinosis, and dyspnea.
4. Each current employee exposed to cotton dust shall have measurement of forced vital capacity (FVC) and of forced expiratory volume @ 1 second (FEV_2). These tests of ventilatory function should be performed on the first day of work following at least 40 hours of absence from exposure to cotton dust, and shall be performed before and after at least 6 hours of exposure on the same day.
5. Ideally, the judgment of the employee's pulmonary function should be based on preplacement values (values taken before exposure to cotton dust). When preplacement values are not available, then reference to standard pulmonary function value tables may be necessary. Note that these tables may not reflect normal values for different ethnic groups. For example, the average healthy black male may have an approximately 15% lower FVC than a Caucasian male of the same body build. A physician shall consider, in cases of significantly decreased pulmonary function, the impact of further exposure to cotton dust and evaluate the relative merits of a transfer to areas of less exposure or protective measures. A suggested plan for the management of cotton workers was proposed as a result of a conference on cotton workers' health.
6. Medical records, including information on all required medical examinations, shall be maintained for persons employed in work involving exposure to cotton dust. Medical records with pertinent supporting documents shall be maintained at least 20 years after the individual's termination of employment. These records shall be available to the medical representatives of the Secretary of Health, Education, and Welfare; of the Secretary of Labor; of the employee or former employee; and of the employer.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Engineering control shall be used wherever feasible to maintain cotton dust concentrations below the prescribed limit. Administrative controls can also be used to reduce exposure. Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof goggles and face shield unless full facepiece respiratory protection is worn. Respirators shall also be provided and used for nonroutine operations (occasional brief exposures above the environmental limit and for emergencies) and shall be considered for use by employees who have symptoms even when exposed to concentrations below the established environmental limit. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: *up to 1 milligram per cubic meter:* Qm* (APF = 25) (any quarter-mask respirator). *Up to 2 milligram per cubic meter*: 95XQ (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *Up to 5 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *Up to 10 milligram per cubic meter:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SaT:Cf

(APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 100 milligram per cubic meter:* Sa:Pd, Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Cotton fiber must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat or flame.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect cotton dust in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cotton fiber and dust is flammable. Use water only. Do not use chemical or carbon dioxide extinguishers. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Cotton dust may be used as a cheap filling in quilt blankets. It contains a large organic fraction which can be digested anaerobically to produce manure plus biogas fuel[22].

Coumafuryl C:1410

Formula: $C_{17}H_{14}O_5$

Synonyms: 3-(α-Acetonylfurfuryl)-4-hydroxycoumarin; Cumafuryl (German); Foumarin; Fumarin; 3-(α-Furyl-β-acetylaethyl)-4-hydroxycumarin (German); 3-(1-Furyl-3-acetylethyl)-4-hydroxycoumarin; Krumkil; Ratafin; Rat-A-Way; Tomarin

CAS Registry Number: 117-52-2

EC Number: 204-195-5 [*Annex I Index No.:* 607-058-00-1]

HSDB Number: 7117

RTECS Number: GN4850000

UN/NA & ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154; UN3027 (Coumarin derivative pesticides, solid, toxic)/151

EC Number: 204-195-5 [607-058-00-1]

Regulatory Authority and Advisory Information

Superfund/EPCRA 302, Extremely Hazardous Substances: Dropped from listing in 1988.

Hazard symbols, risk, & safety statements: Hazard symbol: T; risk phrases: R/25; R48/25; R51/53; safety phrases: S22; S26; S37; S45; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)].

Description: Coumafuryl is a colorless, white, crystalline solid or powder. Molecular weight = 298.29; specific gravity (H_2O:1) = 1.36; freezing/melting point = 124°C; vapor pressure = 3×10^{-6} @ 25°C. Hazard identification (based on NFPA-704M Rating System): Health 3, flammability 0, reactivity 0. Highly soluble in water.

Potential Exposure: This material is an anticoagulant rodenticide. Therefore, those involved in its manufacture, formulation, and application are at risk.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. At room temperature this material can decompose rapidly to cobalt carbonyl and hydrogen gas; at 52°C cobalt carbonyl decomposes, producing toxic fumes of cobalt and oxides of carbon.

Permissible Exposure Limits in Air

No standards or PAC available.

Routes of Entry: Ingestion, skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Coumafuryl is very similar to warfarin, a hemorrhagic agent. Inhalation may cause symptoms described in long-term exposure. A single large ingested dose may cause hemorrhagic shock. The LD_{50} oral (mouse) is 14.7 mg/kg (highly toxic). This chemical can be absorbed through the skin, thereby increasing exposure or hemorrhagic effect. High exposure can cause death.

Long-Term Exposure: Chronic exposure may cause death by hemorrhagic shock. Absorption by the lungs or after a few days or few weeks of repeated ingestion, may cause inhibition of prothrombin synthesis, nose bleeds and bleeding gums, hematoma; small reddish spots like a rash; bruises of the elbows, knees and buttocks; blood in urine and stools; anemia, occasional paralysis due to a stroke.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Speed in removing material from skin is of extreme importance. Remove and isolate contaminated clothing and shoes at the site. Keep victim quiet and maintain normal body temperature. Effects may be delayed. Keep victim under observation.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN3027 Coumarin derivative pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. For *small spills*, absorb with sand or other noncombustible absorbent material and place into containers for later disposal. For *small dry spills*, with clean shovel place material into clean, dry container and cover; move containers from spill area. For *large spills*, dike far ahead of spill for later disposal. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. *Small fires:* dry chemical, carbon dioxide; water spray or foam. *Large fires:* water spray, fog, or foam. Move container from fire area if you can do so without risk. Wear positive pressure breathing apparatus and special protective clothing. Remove an isolate contaminated clothing at the site. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. Thermal decomposition products may include oxides of carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

United States Environmental Protection Agency, Chemical Hazard Information Profile: Coumafuryl, Washington, DC, Chemical Emergency Preparedness Program (October 31, 1985).

Coumaphos C:1420

Formula: $C_{14}H_{16}ClO_5PS$

Synonyms: Asuntol; Azunthol; Bay 21/199; Bayer 21/199; Baymix; Baymix 50; 3-Chloro-7-hydroxy-4-methyl-coumarin *O*,*O*-diethyl phosphorothioate; 3-Chloro-7-hydroxy-4-methyl-coumarin *O*,*O*-diethyl phosphorothionate; 3-Chloro-7-hydroxy-4-methyl-coumarin *O*-ester with *O*,*O*-diethyl phosphorothioate; *O*-3-Chloro-4-methyl-7-coumarinyl *O*,*O*-diethyl phosphorothioate; 3-Chloro-4-methyl-7-coumarinyl-diethyl phosphorothioate; 3-Chloro-4-methyl-7-hydroxy-coumarindiethyl thiophosphoric acid ester; 3-Chloro-4-methylumbelliferone *O*-ester with *O*,*O*-diethyl phosphorothioate; Co-Ral; Coumafos; Cumafos (Spanish); *O*,*O*-Diaethyl-*O*-(3-chlor-4-methyl-cumarin-7-yl)-monothiophosphat (German); *O*,*O*-Diethyl 3-chloro-4-methyl-7-umbelliferone thiophosphate; Diethyl 3-chloro-4-methylumbelliferyl thionophosphate; *O*,*O*-Diethyl *O*-(3-chloro-4-methyl-7-coumarinyl) phosphorothioate; *O*,*O*-Diethylo (3-chloro-4-methylcoumarinyl-7) thiophosphate; *O*,*O*-Diethyl *O*-(3-chloro-4-methyl-2-*oxo*-2*H*-benzopyran-7-yl) phosphorothioate; *O*,*O*-Diethyl *O*-(3-chloro-4-methylumbelliferyl) phosphorothioate; Diethylthiophosphoric acid ester of 3-chloro-4-methyl-7-hydroxycoumarin; Diolice; ENT 17,957; Meldane; Meldone; Muscatox; NCI-C08662; Negashunt; Phosphorothioic acid, *O*-(3-chloro-4-methyl-2-*oxo*-2*H*-1-benzopyran-7-yl) *O*,*O*-diethyl ester; Phosphorothioic acid, *O*,*O*-diethyl ester, *O*-ester with 3-chloro-7-hydroxy-4-methylcoumarin; Resitox; Suntol; Thiophosphate de *O*,*O*-diethyle etde *O*-(3-chloro-4-methyl-7-coumarinyle) (French); Umbethion

CAS Registry Number: 56-72-4

HSDB Number: 249

RTECS Number: GN6300000

UN/NA & ERG Number: UN2783 (organophosphorus pesticide, solid, n.o.s.)/152; UN3018 (organophosphorus pesticide, liquid, n.o.s.)/152

EC Number: 200-285-3 [*Annex I Index No.:* 015-038-00-3]

Regulatory Authority and Advisory Information

Carcinogenicity: NCI: Carcinogenesis Bioassay (feed); no evidence: mouse, rat.

Hazard Alert: Poison, Neurotoxin (cumulative), Combustible, Possible risk of forming tumors, Suspected of causing genetic defects, Suspected reprotoxic hazard, Environmental hazard. Listed for Tier 1 screening as an endocrine disruptor[88].

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (455/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 10 lb (4.54 kg)

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R21; R28; R33; R50/53; R62; R63; safety phrases: S1/2; S28; S36/37; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Coumaphos is a white to brownish crystalline solid with a slight sulfurous odor. Molecular weight = 362.78; freezing/melting point = 91°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 1, reactivity 0. Insoluble in water.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of this material which is used for control of a wide variety of livestock insects including cattle grubs, lice scabies, flies, and ticks; the common ectoparasites of sheep, goats, horse, swine, and poultry; as well as for screw worms in all these animals.

Incompatibilities: Organophosphates are susceptible to formation of highly toxic and flammable phosphine gas in the presence of strong reducing agents such as hydrideds and active metals. Partial oxidation by oxidizing agents may result in the release of toxic phosphorus oxides[101]. Keep away from piperonyl butoxide, oxidizers, strong bases, water, and heat.

Permissible Exposure Limits in Air

Odor threshold = 0.02 ppm.

ACGIH TLV: 0.05 milligram per cubic meter TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI issued (2005)

PAC Ver. 29[138]

PAC-1: 0.27 milligram per cubic meter

PAC-2: 3 milligram per cubic meter

PAC-3: 13 milligram per cubic meter

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; GC/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method (IV) Method #5600, Organophosphorus Pesticides.

Permissible Concentration in Water: Mexico has set a maximum permissible concentration in estuaries of 0.02 mg/L.

Determination in Water: No Method available. Octanol−water coefficient: Log $K_{ow} = >4$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish Tox: 16.96524000 ppb MATC (INTERMEDIATE).

Routes of Entry: Inhalation, ingestion, skin contact. This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Contact may cause burns to skin and eyes. Fatal skin absorption can occur even if there is no feeling of irritation after contact. Cholinesterase inhibitor. Exposure can cause rapid, fatal organophosphate poisoning: with headache, sweating, nausea and vomiting, diarrhea, salivation, abdominal cramps; difficult breathing; stiffness of legs; blurring of vision; followed by loss of muscle coordination; muscle twitching; convulsions, coma, and death. LD_{50} (oral-rat) = 13 mg/kg (highly toxic). The probable oral lethal dose is 50−500 mg/kg; or between 1 teaspoonful and 1 oz. For a 70-kg (150 lb) person. May be fatal if inhaled, swallowed, or absorbed through skin. The effects may be delayed.

Long-Term Exposure: High or repeated exposure may cause nerve damage causing weakness, poor coordination in the arms and legs. May cause personality changes; depression, memory loss; or irritability. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Human Tox: 1.75000 ppb Health advisory: (HIGH).

Points of Attack: Respiratory system; central nervous system; peripheral nervous system; plasma cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When cholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC. Consider chest X-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organic phosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water, followed by alcohol. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed. Keep victim under observation.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. In case of poisoning with this substance specific treatment is required; the appropriate means, including instructions, should be available.

Respirator Selection: Where there is potential exists for exposure to coumaphos, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN2783 Organo phosphorus pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material. UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m)	100/30
Then: Protect persons downwind (mi/km)	
Day	0.3/0.4
Night	0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m)	600/200
Then: Protect persons downwind (mi/km)	
Day	1.4/2.3
Night	2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 18,000.

Fire Extinguishing: This material may burn but does not ignite easily. Thermal decomposition products may include hydrogen chloride and oxides of phosphorous, sulfur and carbon. Extinguish with water, foam, carbon dioxide; or dry chemicals. This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Coumaphos can be decomposed by heating with concentrated alkali. Large amounts should be incinerated in a unit equipped with effluent gas scrubbing[22]. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform to EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Coumatetralyl C:1430

Formula: $C_{19}H_{16}O_3$

Synonyms: Bay 25634; Bay ENE 11183B; Bayer 25,634; 2*H*-1-Benzopyran-2-one, 4-Hydroxy-3-(1,2,3,4-tetrahydro-1-naphthalenyl)-; Coumarin, 4-hydroxy-3-(1,2,3,4-tetrahydro-1-naphthyl)-; Cumatetralyl (German); Endox; Endrocid; Endrocide; ENE 11183; 4-Hydroxy-3-(1,2,3,4-tetrahydro-1-napthalenyl)-2*H*-1-benzopyran-2-one; 4-Hydroxy-3-(1,2,3,4-tetrahydro-1-napthyl)cumarin; Racumin; Raucumin 57; Rodentin; 3-(α-Tetral)-4-oxycoumarin; 3-(α-Tetrayl)-4-hydroxycoumarin; 3-(D-Tetrayl)-4-hydroxycoumarin

CAS Registry Number: 5836-29-3

HSDB Number: 1725

RTECS Number: GN7630000

UN/NA & ERG Number: UN3027 (Coumarin derivative pesticides, solid, toxic)/151

EC Number: 227-424-0 [*Annex I Index No.:* 607-059-00-7]

Regulatory Authority and Advisory Information

Hazard Alert: Exposure can be lethal, Combustible, Animal poison

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 500 lb (227 kg).

Hazardous to aquatic life or environment, with possible long-lasting effects[194]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R27/28; R48/24/25; R52/53; safety phrases: S1/2; S28; S36/37; S45; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Coumatetralyl is a yellowish-white, crystalline solid. Molecular weight = 292.35. Boiling point = 290°C; freezing/melting point = 69−70°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 1, reactivity 0. Soluble in hot water.

Potential Exposure: Coumatetralyl is used as a rodenticide, functioning as an anticoagulant that does not induce bait-shyness.

Incompatibilities: Contact with oxidizers may cause fire and explosion hazard. Keep away from metals.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.0064 milligram per cubic meter

PAC-2: 0.071 milligram per cubic meter

PAC-3: 17 milligram per cubic meter

Permissible Concentration in Water: No criteria set. Fish Tox = 16.96524000 ppb MATC (INTERMEDIATE); STV (Sediment Toxicity Value): VERY LOW

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Inhalation may cause symptoms described in long-term exposure. A single large ingested dose may cause hemorrhagic shock. This chemical can be absorbed through the skin, thereby increasing exposure or hemorrhagic effect. High exposure can cause death. The LD_{50} oral (rat) is 16.5 mg/kg (highly toxic). Human Tox (ppb): 1.75000 (HIGH).

Long-Term Exposure: Prolonged or repeated exposure can cause serious organ damage. Chronic exposure may cause death by hemorrhagic shock. Absorption by the lungs, or after a few days or few weeks of repeated ingestion, may cause inhibition of prothrombin synthesis; nose bleeds and bleeding gums; hematoma, small reddish spots like a rash; bruises of the elbows, knees and buttocks; blood in urine and stools; anemia, occasional paralysis due to a stroke. Preexisting blood clotting disease or liver disease are aggravated by coumatetralyl exposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24−36 hours following overexposure, as effects may be delayed.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash or dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH. The following might be considered in and emergency: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers.

Shipping: UN3027 Coumarin derivative pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Wear positive pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Do not touch spilled material. Use water spray to reduce vapors. With clean shovel place material into clean, dry container and cover. Dike far ahead of *large spills* for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. *Small fires:* dry chemical, carbon dioxide; water spray or foam. *Large fires:* water spray, fog, or foam. Stay upwind, keep out of low areas. Wear positive pressure breathing apparatus and special protective clothing. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. Thermal decomposition products may include oxides of carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve in a solvent and burn in a furnace by spraying in the solution[22].

HSDB Number: 4107

RTECS Number: BZ6720000

UN/NA & ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154

EC Number: 204-419-0 [*Annex I Index No.:* 612-209-00-X]

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen; IARC: Animal Sufficient Evidence; Human No Adequate Data, *possibly carcinogenic to humans*, Group 2B, 1982; NCI: Carcinogenesis Bio assay (feed); clear evidence: mouse, rat.

California Proposition 65 Chemical[102]: Cancer 1/1/1988.

Hazard Alert: Poison, Combustible, Possible risk of forming tumors, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction).

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.

Canada, WHMIS, Ingredients Disclosure List concentration Reporting Level: 0.1%.

Hazard symbols, risk, & safety statements: Hazard symbol: T; risk phrases: R22; R45; R50/53; R62; safety phrases: S53; R45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: *p*-Cresidine is a white crystalline solid. Molecular weight = 137.20. Boiling point = 235°C; freezing/melting point = 52°C; flash point ≥ 112°C; autoignition temperature = 450°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0. Practically insoluble in water.

Potential Exposure: *p*-Cresidine is used as an intermediate in the production of various azodyes, printing inks, and pigments; including 11 dyes that are produced commercially in the United States. Human exposure to *p*-Cresidine occurs primarily through inhalation of vapors or skin absorption of the liquid. Exposure to *p*-cresidine is believed to be limited to workers in dye-production facilities. The Consumer Product Safety Commission staff believes it is possible that residual levels or trace impurities of *p*-cresidine may be present in some dyes based on this chemical, and it may be present in the final consumer product. The presence of *p*-cresidine, even as a trace contaminant, may be a cause for concern. However, data describing the actual levels of impurities in the final product and the potential for consumer exposure and uptake are currently lacking.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

No PAC available

DFG MAK: Carcinogen Category 2

Austria: carcinogen, 1999; Finland: carcinogen, 1993; France: carcinogen, 1993; Switzerland: carcinogen, 1999. Zero in ambient air set by North Dakota[60].

Determination in Water: Octanol−water coefficient: $\text{Log}\,K_{\text{ow}} = 1.7$. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short-Term Exposure: Symptoms of exposure include skin andeye irritation; nausea, vomiting, liver damage; cyanosis, methemoglobinemia, weakness, drowsiness, somnolence, and loss of consciousness. LD_{50} (oral-rat) = 1450 mg/kg (slightly toxic).

Long-Term Exposure: May cause cancer in humans. When administered in the diet, *p*-cresidine was carcinogenic to rats, causing increased incidences of carcinomas and papillomas of the urinary bladder in both sexes; increased incidences of olfactory neuroblastomas in both sexes; increased incidences of olfactory neuroblastomas in both sexes; and of liver tumors in males. *p*-Cresidine was also carcinogenic in mice, causing carcinomas of the urinary bladders in both sexes, and hepatocellular carcinomas in females. May cause anemia.

Points of Attack: Blood.

Medical Surveillance: Blood hemoglobin level. CBC.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, Avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Note to Physician: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH. The following might be considered in an emergency: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue (*potential carcinogen*): Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Store in a refrigerator under an inert atmosphere for prolonged storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%., all isomers; NPRI.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to waters (*o-, m, and p-isomers*)

Description: Cresol is a mixture of the three isomeric cresols, *o-, m-*, and *p*-cresol. Cresols are slightly soluble in water.

m-Isomer: Colorless or yellow liquid with characteristic odor. Molecular weight = 108.14; specific gravity (H_2O:1) = 1.030 to 1.038; boiling point = 202.7°C; freezing/melting point = 12.2°C; vapor pressure = 0.14 mmHg @ 25°C; flash point = 86°C (cc); autoignition point = 558°C. Explosive limits: LEL: 1.1% @ 149°C. Hazard identification (based on NFPA-704 M Rating System): (cresols) Health 3, flammability 2, reactivity 0. Solubility in water = 2%.

o-Isomer: Colorless or yellow liquid or crystals that turn dark on exposure to air and light, with characteristic phenolic odor. Molecular weight = 108.15; specific gravity (H_2O:1) = 1.05; boiling point = 191.1°C; freezing/melting point = 31.1°C; vapor pressure = 0.29 mmHg @ 25°C; flash point = 81°C (cc); autoignition point = 599°C. Explosive limits: LEL: 1.4% @ 149°C. Hazard identification (based on NFPA-704 M Rating System): (cresols) Health 3, flammability 2, reactivity 0. Solubility in water = 2%.

p-Isomer: Colorless to yellow crystals that turn dark on exposure to air and light, with characteristic odor. Molecular weight = 108.15; specific gravity (H_2O:1) = 1.04; boiling point = 201.8°C; freezing/melting point = 36°C; flash point = 86°C (cc); autoignition point = 558−560°C. Explosive limits: LEL: 1.1%; UEL: %. Hazard identification (based on NFPA-704 M Rating System): (cresols) Health 3, flammability 2, reactivity 0. Solubility in water = 2%.

Mixed isomers: Molecular weight = 108.15; boiling point = 202°C; freezing/melting point = 35°C; vapor pressure = 0.11 mmHg @ 25°C; flash point = 43−82°C; autoignition point = about 560°C. Explosive limits: LEL: 1.1%. Hazard identification (based on NFPA-704 M Rating System): (cresols) Health 3, flammability 2, reactivity 0. Solubility in water = 2%.

Potential Exposure: Cresol is used as a disinfectant and fumigant; as an ore flotation agent, and as an intermediate in the manufacture of chemicals, dyes, plastics, and antioxidants. A mixture of isomers is generally used; the concentrations of the components are determined by the source of the cresol.

Incompatibilities: Vapors may form explosive mixture with air. Incompatible with strong acids; oxidizers, alkalies, aliphatic amines; amides, chlorosulfonic acid; oleum. Decomposes on heating, producing strong acids and bases, causing fire and explosion hazard. Liquid attacks some plastics and rubber. Attacks many metals.

Permissible Exposure Limits in Air

NIOSH IDLH = 250 ppm all isomers (o-, m-, p-)

Conversion factor: 1 ppm = 4.43 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: 5 ppm/22 milligram per cubic meter TWA [skin]

NIOSH REL: 2.3 ppm/10 milligram per cubic meter TWA

ACGIH TLV[1]: 20 ppm TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen

PAC Ver. 29[138]

All isomers

PAC-1: 14 ppm

PAC-2: 25 ppm

PAC-3: 250 ppm

DFG MAK *(all isomers)*: [skin]; Germ Cell Mutation Category 3 A

Austria: MAK 5 ppm (22 milligram per cubic meter) [skin], 1999; Denmark: TWA 5 ppm (22 milligram per cubic meter) [skin], 1999; France: VME 5 ppm (22 milligram per cubic meter), 1999; Japan: 5 ppm (22 milligram per cubic meter), 1999; Norway: TWA 5 ppm (22 milligram per cubic meter), 1999; United Kingdom: TWA 5 ppm (22 milligram per cubic meter) [skin], 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 5 ppm [skin]. Russia set a MAC in work-place air of 0.5 milligram per cubic meter[35]. They have also set a MAC in ambient air in residential areas of 0.005 milligram per cubic meter both on a momentary and on a daily average basis. Several states have set guidelines or standards for cresols in ambient air[60] ranging from 12.0 μ/m^3 (Massachusetts) to 73.0 μ/m^3 (New York) to 110 μ/m^3 (Indiana) to 200 μ/m^3 (Connecticut) to 220 μ/m^3 (Florida, North Dakota, South Carolina) to 370 μ/m^3 (Virginia) to 524 μ/m^3 (Nevada) to 2200 μ/m^3 (North Carolina).

Determination in Air: XAD-7 (tube); Methanol; GC/Flame ionization detection; NIOSH Analytical Method (IV) #2546, Cresols and Phenol, or OSHA Analytical Method 32.

Permissible Concentration in Water: No criteria set, but EPA has suggested a permissible ambient concentration, based on health effects, of 304 μg/L. Russia[43] set a MAC in water used for domestic purposes of 0.004 μg/L of *m*- and *p*-isomers. A limit of 0.003 mg/L of *o*-isomer is set for water bodies used for fishery purposes. Mexico[35] set a MAC of 1.5 mg/L of cresols in the waters in estuaries.

Routes of Entry: Inhalation of percutaneous absorption of liquid or vapor, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: Corrosive to the eyes, skin, and respiratory tract. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Corrosive on ingestion. May affect the central nervous system. Exposure may result in death. The effects may be delayed. *Inhalation:* A level of 4 ppm was reported not to cause symptoms. Exposure to 48 ppm for 5−10 minutes may cause irritation to the nose, throat, and lungs, nausea, vomiting, and general muscle weakness. High blood pressure, tremors, and convulsions have been reported in people exposed to Cresol at unspecified levels. Due to irritating effects, the inhalation of appreciable amounts of cresol vapor in the work-place under normal conditions is unlikely. *Skin:* This is a major route of exposure and the one which causes most work-related cresol injuries. Contact with 20 mL of 90% cresol resulted in burns, swelling, internal bleeding, and kidney damage, and has caused death in children; 10% cresol left on the skin for 2 hours has caused inflammation, blistering and scarring; 6% for 5−6 hours has caused drying and peeling, inflammation, facial tremors and tearing. A 4% solution tested on human skin produced no sensitization reaction. *Ingestion:* 250 mL of 50% Cresol has caused pneumonia, irritation of the pancreas, kidney failure, and unconsciousness. Symptoms reported from swallowing an unspecified amount of cresol include an immediate burning of the tissues, sweating, headache, dizziness; muscle weakness; ringing in the ears and pale skin appearance. Death has occurred from as little as 1 g (about 1/4 teaspoon). Exposure may result in a burning pain in the mouth and throat; white necrotic lesions in the mouth, esophagus and stomach; abdominal pain; vomiting, diarrhea, paleness, sweating; weakness, headache, dizziness; ringing in ears; shallow respiration with "phenol" odor on the breath; scanty, dark-colored or "smoky" urine; and possible delirium followed by unconsciousness. Convulsions are rarely seen, except in children. Hypersensitivity develops in certain individuals. The chemical is rated as a very toxic compound with a probable oral lethal dose in humans of 50−500 mg/kg, or between 1 teaspoon and 1 oz for a 70-kg (150 lb) person.

Long-Term Exposure: Repeated or prolonged contact with skin may cause dermatitis. May cause lung damage. Repeated or prolonged exposure may affect the central nervous system; kidneys, and liver. *p-isomer:* Repeated or prolonged skin contact with the *p*-isomer may cause dermatitis.

Points of Attack: Central nervous system; respiratory system; liver, kidneys, skin, eyes.

Medical Surveillance: Cresols are suspected human carcinogens. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Consider the skin, eyes, respiratory system; liver, and kidney functions in placement or periodic examinations. Liver and kidney function tests. Evaluation by a qualified allergist. Consumption of alcohol may increase liver damage. NIOSH lists the following tests: Liver function tests; pulmonary function tests; urine (chemical/metabolite); urine (chemical/metabolite) Pre- and Postshift.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. *m-Cresol 108-39-4* **4 hours**: (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): Neoprene rubber gloves, suits, boots; Teflon gloves, suits, boots. *p-Cresol 106-44-5* **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): 4H and Silver Shield gloves. Also, Saranex has been recommended as a protective material for cresols. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH as cresol: *23 ppm:* Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100; Sa (APF = 10) (any supplied-air respirator). *57.5 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *115 ppm:* GmFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SaT:Cf (APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *250 ppm:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Color code—White: Corrosive or Contact Hazard: Store separately in a corrosion-resistant location. Prior to working with cresols all handlers should be trained on its proper handling and storage. Before entering confined space where cresols may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area. Away from strong acids or oxidizers. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2076 Cresols, liquid, Hazard class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material. UN3455 Cresols, solid, Hazard class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material.

Spill Handling: Avoid inhalation. Wear proper respiratory protection and eye protection. Wear protective clothing. Do not touch spilled material. Stop leak if you can do so without risk. Use water spray to reduce vapors. For *small spills*: absorb the material with sand or other noncombustible absorbent material and place into containers for later disposal. For *small dry spills*, shovel up and place into clean, dry containers and cover. For *large spills*, dike far ahead of spill for later disposal. If clothing becomes contaminated remove immediately and isolate at the site. If a leak or spill has not ignited, use water spray to disperse the vapors and to provide protection for personnel attempting to stop a leak. Water spray may be used to flush spills away from exposures. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cresols are combustible. Thermal decomposition products may include oxides of carbon. Stay upwind, keep out of low areas. Ventilate closed spaces before entering them. Use water to blanket the fire and dry chemical, foam, or carbon dioxide to extinguish the flames. Extinguish small fires with dry chemical, carbon dioxide; water spray; or foam. For large fires use water spray, fog, or foam. Move container from fire area if you can do so without risk. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Dike fire control water for later disposal; don't scatter the material. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Wastewaters may be subjected to biological treatment. Concentrations may be further reduced by ozone treatment. High concentration wastes may be destroyed in special waste incinerators[22].

Crimidine C:1460

Formula: $C_7H_{10}ClN_3$; $C_7H_{10}N_3Cl$

Synonyms: Castrix; 2-Chloro-4-methyl-6-dimethylamino-pyrimidine; Crimidin (German); Pyrimidine, 2-chloro-4-(dimethylamino)-6-methyl-; W491

CAS Registry Number: 535-89-7

HSDB Number: 2812

RTECS Number: UV8050000

UN/NA & ERG Number: UN2588 (Pesticides, solid, toxic, n.o.s.)/151

EC Number: 208-622-6 [*Annex I Index No.:* 613-004-00-8]

Regulatory Authority and Advisory Information

Hazard Alert: Exposure can be lethal, Combustible, Animal poison

Banned or Severely Restricted (in agriculture) (Germany) (UN)[13]

Substances and Quantity Potential Likely to Cause Major Accidents (ILO): 100 kg

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (4.54/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1 lb (0.454 kg).

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R28; R52; safety phrases: S1/2; S36/37; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [2-Hazard to water. (est.)]

Description: Crimidine is a brown, waxy solid. Molecular weight = 171.65; boiling point = about 145°C; freezing/melting point = 87°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 1, reactivity 0. Slightly soluble in water.

Potential Exposure: Crimidine is used as a rodenticide. Not registered for use in the United States as a pesticide.

Incompatibilities: Acids and acid fumes, strong bases.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.0063 milligram per cubic meter

PAC-2: 0.069 milligram per cubic meter

PAC-3: 0.41 milligram per cubic meter

Routes of Entry: Ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: Contact can cause eye and skin irritation and burns. Inhalation can irritate the nose and throat. Exposure may result in serious central nervous system damage with anxiety, restlessness, muscle stiffness, light sensitivity; noise sensitivity; touch sensitive; cold sweat; and leading to convulsions that may be fatal. If patient survives 5−6 hours there may not be serious problems. Extremely toxic; the LD_{50} oral (rat) is 1.25 mg/kg; probable oral lethal dose in humans is less than 5 mg/kg or less than 7 drops for a 70-kg (150 lb) person.

Long-Term Exposure: Chronic health effects are unknown at this time.

Points of Attack: Central nervous system.

Medical Surveillance: There is no special test for this chemical. However, if illness occurs or overexposure is suspected, medical attention is recommended.

First Aid: *Eye Contact:* Immediately remove any contact lenses and flush with large amounts of water for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. *Skin Contact:* Quickly remove contaminated clothing. Immediately wash area with large amounts of water. Seek medical attention immediately. *Inhalation:* Remove the person from exposure, trying to avoid rapid, jerky motions or noise. Begin (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. If seizures occur, begin seizure first aid measures. Call for immediate medical attention to visit the patient prior to transfer if possible. Any facility using this chemical should have 24 hour rapid access to medical personnel with training and equipment for emergency treatment. All area employees should be trained in first aid measures for castrix, including seizure management and CPR.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.11 milligram per cubic meter. Where there is potential exists for exposure to Castrix, use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with a pesticide cartridge. Increased protection is obtained from full facepiece APRs. If while wearing a filter, cartridge or canister respirator, you can smell, taste, or otherwise detect castrix, or in the case of a full facepiece respirator you experience eye irritation, leave the area immediately. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter, cartridge, or canister. If the seal is no longer good, you may need a new respirator.

Where there is potential for high exposures exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with castrix all handlers should be trained on its proper handling and storage. Castrix must be stored to avoid contact with strong acids (such as hydrochloric, sulfuric, and nitric) and acid fumes, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN2588 Pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Use organic vapor respiratory protection. Stay upwind; keep out of low areas. Wear self-contained (positive pressure if available) breathing apparatus and full protective clothing. Do not touch spilled material; stop leak if you can do so without risk. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills*: with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. If water pollution occurs, notify appropriate authorities. Ventilate area of spill or leak. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Thermal decomposition products may include hydrogen chloride fumes and oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165 recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water (*cis*- and *trans-isomers*).

Description: Crotonaldehyde is water-white (turns pale-yellow on contact with air) with an irritating, pungent, suffocating odor. Molecular weight = 70.09; 70.1 (*trans*-); specific gravity (H_2O:1) = 0.85 @ 20°C; boiling point = 102.2°C; freezing/melting point = (*trans*-) −73.8; (*cis*-) −69°C; vapor pressure = 30 mmHg @ 25°C; flash point = 13°C (oc); autoignition temperature = 232°C. explosive limits (*trans*-): LEL: 2.1%; UEL: 15.5%. NFPA 704 M Hazard identification (*trans*-): Health 4, flammability 3, reactivity 2. Highly soluble in water; solubility = 18%.

Potential Exposure: Crotonaldehyde is used as a warning agent in fuel gases and gas line leaks; as solvent; in chemical warfare; as an intermediate in the manufacture of *n*-butanol and crotonic and sorbic acids; in resin and rubber antioxidant manufacture; also used as a solvent in mineral oil purification; as an alcohol denaturant.

Incompatibilities: Vapors may form explosive mixture with air. A strong reducing agent. Readily converted by oxygen to peroxides and acids; heat or contact with alkalis and many other substances may cause polymerization. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, nonoxidizing mineral acids; ammonia, organic amines; aliphatic amines; aromatic amines; 1,3-butadiene, strong bases. Liquid attacks some plastics, rubber, and coatings.

Permissible Exposure Limits in Air

NIOSH IDLH = 50 ppm

Conversion factor: 1 ppm = 2.87 milligram per cubic meter @ 25°C & 1 atm

Odor threshold = 0.11 ppm.

OSHA PEL: 2 ppm/6 milligram per cubic meter TWA

NIOSH REL: 2 ppm/6 milligram per cubic meter TWA; See *NIOSH Pocket Guide*, Appendix C

ACGIH TLV[1]: 0.3 ppm/0.86 milligram per cubic meter, Ceiling Concentration [skin] confirmed animal carcinogen with unknown relevance to humans

Crotonaldehyde (cis- & *trans*-)

PAC* Ver. 29[138]

PAC-1: $\mathbf{0.19_A}$ ppm

PAC-2: $\mathbf{4.4_A}$ ppm

PAC-3: $\mathbf{14_A}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a sub script "**A**" and correspond to 60-minute values.

DFG MAK: [skin] Carcinogen Category 3B; Germ Cell Mutation Category 3B

Australia: TWA 2 ppm (6 milligram per cubic meter), 1993; Belgium: TWA 2 ppm (5.7 milligram per cubic meter), 1993; Denmark: TWA 2 ppm (6 milligram per cubic meter) [skin], 1999; Finland: TWA 2 ppm (6 milligram per cubic meter); STEL 6 ppm (17 milligram per cubic meter) [skin], 1999; France: VME 2 ppm (6 milligram per cubic meter), 1993; the Philippines: TWA 2 ppm (6 milligram per cubic meter), 1993; Poland: TWA 6 milligram per cubic meter; STEL 12 milligram per cubic meter, 1999; Switzerland: MAK-W 2 ppm (6 milligram per cubic meter) [skin], 1999; United Kingdom: LTEL 2 ppm (6 milligram per cubic meter); STEL 6 ppm (18 milligram per cubic meter), 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: ceiling 0.3 ppm [skin]. Several states have set guidelines or standards for Crotonaldehyde in ambient air[60] ranging from 60−180 μ/m^3 (North Dakota) to 100 μ/m^3 (Virginia) to 120 μ/m^3 (Connecticut) to 143 μ/m^3 (Nevada).

Determination in Air: Use NIOSH Analytical Method (IV) #3516 or OSHA Analytical Method 81.

Permissible Concentration in Water: No criteria set. Regulated by Clean Water Act.

Determination in Water: Octanol−water coefficient: Log K_{ow} = <0.7. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: A lacramator (causing tearing). Contact or vapor can cause severe and painful irritation and burn eyes (can cause corneal damage) and skin. The vapor can irritate the respiratory tract causing cough and shortness of breath. The substance may affect the lungs, resulting in impaired function, coughing, and shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Medical observation is indicated. Although slightly less toxic, crotonaldehyde is similar chemically and toxicologically to acrolein which is rated as extremely toxic. LD_{50} (oral-rat) = 206 mg/kg (moderately toxic). A 15-minute exposure @ 4.1 ppm is highly irritating to the nose and upper respiratory tract and causes tearing. Brief exposure @ 45 ppm proved very disagreeable, with prominent eye irritation. Toxic concentrations for human inhalation have been reported @ 12 milligram per cubic meter/10 minutes As with acrolein, vapor exposures cause gastrointestinal distress when ingested.

Long-Term Exposure: Crotonaldehyde causes mutations; such chemicals may have a cancer risk. There is limited evidence that this chemical causes cancer in animals, and may cause liver cancer. May cause skin allergy. Testing has not been completed to determine the carcinogenicity of low-molecular-weight aldehydes. However, the limited studies to date indicate that some aldehydes may have chemical reactivity and mutagenicity similar to potential occupational carcinogens, such as acetaldehyde and malonaldehyde. Therefore, NIOSH recommends that careful consideration should be given to reducing exposures to this aldehyde. Further information can be found in the *NIOSH Current Intelligence Bulletin 55: Carcinogenicity of Acetaldehyde and Malonaldehyde, and Mutagenicity of Related Low-Molecular-Weight Aldehydes* [DHHS (NIOSH), Publication No. 91-112].

Points of Attack: Respiratory system, eyes, skin.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Consider the skin, eyes, and respiratory system in placement or periodic examinations. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): butyl rubber gloves, suits, boots; Responder suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): Teflon gloves, suits, boots. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *20 ppm:* CcrFOv (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister); or Sa (APF = 10) (any supplied-air respirator). *50 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or CcrFOv (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister); or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece) *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. Prior to working with crotonaldehyde all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from heat, caustics, ammonia, amines, oxidizing material; mineral acids and 1,3-butadiene, since violent reactions occur. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: UN1143 Crotonaldehyde or Crotonaldehyde, stabilized, Hazard class: 6.1; Labels: 6.1-Poison Inhalation Hazard, 3-Flammable liquid, Inhalation Hazard Zone B.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5

Night 0.6/1.0
Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Keep unnecessary people away; isolate hazard area and deny entry. Stay upwind; keep out of low areas. Establish forced ventilation to keep levels below explosive limit. Wear positive-pressure breathing apparatus and special protective clothing. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged Exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. May be absorbed on vermiculite and burned in open incinerator or dissolved in solvent and sprayed into incinerator.

Crotonic Acid C:1480

Formula: $C_4H_6O_2$

Synonyms: α-Butenoic acid; 2-Butenoic acid; α-Crotonic acid; β-Methylacrylic acid; 3-Methylacrylic acid

CAS Registry Number: 3724-65-0

HSDB Number: 2814

UN/NA & ERG Number: UN2823/153

EC Number: 203-533-9

Regulatory Authority and Advisory Information

Hazard Alert: Serious or permanent injury hazard, Reducing agent, Combustible, Corrosive, Polymerization hazard (in fire), Primary irritant (w/o allergic reaction).

Hazard symbols, risk, & safety statements: Hazard symbol: T, C, F, Xi, Xn; risk phrases: R10; R21/22; R34; R35; R36/37/378; safety phrases: S26; S36/37/39; S45; (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Crotonic acid is a white or colorless, crystalline solid with a pungent odor. May be transported as a molten liquid. Molecular weight = 86.1; specific gravity (H_2O:1) = 1.02 @ 15°C; boiling point = 187–189°C; freezing/melting point = 72°C; vapor pressure = 0.19 mmHg @ 20°C; flash point = 88°C (oc); autoignition temperature = 396°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 2, reactivity 0. Soluble in water; solubility = 9% @ 25°C. This chemical is the commercially used *trans*-isomer. The *cis*-isomer is less stable and melts at 15°C.

Potential Exposure: Used to make plastics, resins, plasticizers, lacquers, and medicines; other chemicals as a chemical intermediate.

Incompatibilities: May form explosive mixture with air. A strong reducing agent. The aqueous solution is a weak acid. Violent reaction with oxidizers, combustibles, strong bases; peroxides. Moisture or strong sunlight (UV) may cause explosive polymerization. May accumulate static electrical charges, and may cause ignition of its vapors. Combustible when exposed to heat or flame. Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur).

Permissible Exposure Limits in Air
PAC Ver. 29[138]
PAC-1: 3 milligram per cubic meter
PAC-2: 33 milligram per cubic meter
PAC-3: 200 milligram per cubic meter

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Irritates the eyes, skin, and respiratory tract. Corrosive: contact with the skin or eyes can cause burns and permanent damage. Inhalation can cause coughing and shortness of breath. Higher exposures can cause pulmonary edema, a Medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. moderately toxic by ingestion, skin contact, and subcutaneous routes.

Long-Term Exposure: Irritates the lungs; may cause bronchitis with coughing, phlegm, and/or shortness of breath.

Points of Attack: Lungs.

Medical Surveillance. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. Consider chest X-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is a potential for overexposure*: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: (1) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. (2) Color code—Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. (3) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with crotonic acid, all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong bases; and reducing agents. Where possible, automatically pump liquid from drums or other storage containers to process containers

Shipping: UN2823 Crotonic acid, solid, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling: *Solid:* Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Liquid: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Thermal decomposition products may include oxides of carbon. May polymerize in heat of fire. Use dry chemical, carbon dioxide; alcohol or polymer foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Crufomate C:1490

Formula: $C_{12}H_{19}ClNO_3P$

Synonyms: 4-*t*-Butyl-2-chlorophenyl methyl methylphosphoramidate; 4-*tert*. Butyl 2-chlorophenyl methylphosphoramidate demethyle (French); *O*-(4-*tert*-Butyl-2-chlor-phenyl)-*O*-methyl-phosphorsaeure-*N*-methylamid (German); Dowco 132; ENT 25,602-X; *O*-Methyl *O*-2-chloro-4-*tert*-butylphenyl *n*-methylamidophosphate; Methylphosphoramidic acid, 4-*t*-butyl-2-chlorophenyl methyl ester; Montrel; Phenol,4-*t*-butyl-2-chloro-, ester with methyl methylphosphoramidate; Phosphoramidic acid, 4-*tert*-butyl-2-chlorophenylphosphor amidate; Phosphoramidic acid, methyl-,4-*tert*-butyl-2-chlorophenyl; Phosphoramidic acid, methyl-,2-chloro-4-(1,1-dimethylethyl)phenyl methyl ester; Ruelene; Ruelene Drench; Rulene

CAS Registry Number: 299-86-5

HSDB Number: 1547 as ruelene

RTECS Number: TB3850000

UN/NA & ERG Number: (PIH) UN2783 (organophosphorus pesticides, solid, toxic)/152; UN3018 (organophosphorus pesticide, liquid, toxic)/152

EC Number: 015-074-00-X

Regulatory Authority and Advisory Information

Hazard Alert: Poison inhalation hazard, Neurotoxin (cumulative), Suspected of causing genetic defects.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical, as organic phosphate, Substance ID: EDF-041

Hazard symbols, risk, & safety statements: Hazard symbol: N, Xn; risk phrases: R22; R33; R36/37/38; R50/53; R61; safety phrases: S16; S26; S41; S45; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Crufomate is a white crystalline solid; the commercial product is a yellow oil. Molecular weight = 291.71; boiling point = (decomposes); freezing/melting point = (decomposes) 63°C. Insoluble in water.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of this insecticide and anthelmintic for cattle.

Incompatibilities: Contact with oxidizers may cause the release of phosphorous oxides. Contact with strong reducing agents, such as hydrides, may cause the formation of flammable and toxic phosphine gas. Decomposes on heating, forming corrosive and toxic fumes of hydrogen chloride and nitrogen and phosphorous oxides. Incompatible with strongly alkaline and strongly acidic media. Unstable over long periods in aqueous preparations or above 60°C.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: 5 milligram per cubic meter TWA; 20 milligram per cubic meter STEL

ACGIH TLV[1]: 5 milligram per cubic meter TWA; not classifiable as a human carcinogen; BEI_A issued: Acetylcholinesterase inhibiting pesticides

No PAC available

Australia: TWA 5 milligram per cubic meter; STEL 20 milligram per cubic meter, 1993; Belgium: TWA 5 milligram per cubic meter; STEL 20 milligram per cubic meter, 1993; Denmark: TWA 5 milligram per cubic meter, 1999; France: VME 5 milligram per cubic meter, 1999; Russia: STEL 0.5 milligram per cubic meter [skin], 1993; Switzerland: MAK-W 5 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 5 milligram per cubic meter, 2003; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for crufomate in ambient air[60] ranging from 50−200 μ/m^3 (North Dakota) to 80 μ/m^3 (Virginia) to 100 μ/m^3 (Connecticut) to 119 μm^3 (Nevada).

Determination in Air: Filter; none; Gravimetric; NIOSH Analytical Method (IV) #0500, Particulates NOR, total dust. OSHA versatile sampler-2; Toluene/Acetone; GC/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method (IV) Method #5600, Organophosphorus Pesticides.

Routes of Entry: Skin absorption, inhalation of dust, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: A cholinesterase inhibitor. Crufomate irritates the eyes, skin, and respiratory tract. Crufomate can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from skin contact. It is a moderately toxic organophosphate chemical. Exposure can cause effects on the nervous system; rapid severe poisoning with headache, sweating, nausea and vomiting; diarrhea, loss of coordination; convulsions, respiratory failure; and death. The LD_{50} (oral-rat) = 460 mg/kg (slightly toxic). The health effects may be delayed.

Long-Term Exposure: Exposure may affect the developing fetus. Crufomate may damage the testes. High or repeated exposure may cause nerve damage and poor coordination in arms and legs. Repeated exposure may cause personality changes of depression, anxiety, or irritability.

Points of Attack: Respiratory system; central nervous system; peripheral nervous system; plasma cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When cholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC. Consider chest X-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organic phosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24−36 hours.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles when working with liquid or wear dust-proof goggles when working with powders or dusts unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is potential exists for exposures over 5 milligram per cubic meter*, use a NIOSH/MSHA or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a PAPR. *Where there is potential for high exposures exists*, use a NIOSH/MSHA or European Standard EN 149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA or European Standard EN149-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool well-ventilated area away from heat. Also, avoid contact with oxidizers (such as peroxides, permanganates, chlorates, perchlorates, and nitrates).

Shipping: UN2783 Organophosphorus pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling:

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. If crufomate is in dry form, extinguish fire using an agent suitable for the type of surrounding fire; crufomate itself does not burn. If an oily or liquid form is used, consider the flammability of the solvent in determining appropriate procedures. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire-fighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Crufomate decomposes above pH 7.0 in alkaline media. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Formula: C_9H_{12}; $C_6H_5CH(CH_3)_2$

Synonyms: Benzene isopropyl; Benzene, (1-methylethyl-)-; Cum; Cumeno (Spanish); Cumol; Isopropilbenceno (Spanish); Isopropylbenzene; Isopropylbenzène (French) Isopropylbenzol; Isopropyl-benzol (German); 1-Methylethyl benzene; 2-Phenylpropane

CAS Registry Number: 98-82-8

HSDB Number: 172

RTECS Number: GR8575000

UN/NA & ERG Number: UN1918/130

EC Number: 202-704-5 [Annex I Index No.: 601-024-00-X]

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen.

California Proposition 65 Chemical[102]: Cancer: 4/6/2010.

Hazard Alert: Highly flammable liquid, Narcotic hazard, Possible risk of forming tumors, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction), Possible electrostatic hazard, Environmental hazard.

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): U055

RCRA, 40CFR261, Appendix 8 Hazardous Constituents

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 5000 lb (2270 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI.

Hazardous to aquatic life or environment, with possible long-lasting effects[293]. Toxic to aquatic life with long la sting effects. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, F, N; risk phrases: R11; R33; R62; R63; safety phrases: S16; S21; S29/35; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cumene is a colorless liquid. Sharp, penetrating, aromatic odor, like gasoline. Molecular weight = 120.2; specific gravity (H_2O:1) = 0.86 @ 20°C; boiling point = 152.4°C; freezing/melting point = −96°C; vapor pressure = 7.5 mmHg @ 33°C; flash point = 36°C; autoignition temperature = 420°C. Explosive limits are: LEL: 0.9%; UEL: 6.5%. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 3, reactivity 1. Insoluble in water.

Potential Exposure: Cumene is used primarily in the manufacture acetone and phenol which are widely used as solvents for paints, laquers, and varnishes and to make plastics. Cumene is used in gasoline blending and as a high-octane gasoline component. It is also found as a component in tobacco smoke.

Incompatibilities: Vapor may form explosive mixture with air. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Air contact forms cumene hydroperoxide. Attacks rubber. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air

NIOSH IDLH = 900 ppm [LEL]

Odor threshold = 0.008−0.132 ppm

Conversion factor: 1 ppm = 4.92 milligram per cubic meter @ 25°C & 1 atm

OSHA PEL: 50 ppm/245 milligram per cubic meter TWA [skin]

NIOSH REL: 50 ppm/245 milligram per cubic meter TWA [skin]

ACGIH TLV[1]: 50 ppm/246 milligram per cubic meter TWA

PAC* Ver. 29[138]

PAC-1: $\mathbf{50}_{\mathbf{A}}$ ppm

PAC-2: $\mathbf{300}_{\mathbf{A}}$ ppm

PAC-3: $\mathbf{730}_{\mathbf{A}}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a sub script "**A**" and correspond to 60-minute values.

DFG MAK: 50 ppm/250 milligram per cubic meter [skin]; Peak Limitation Category II(4); Pregnancy Risk Group C

Australia: TWA 50 ppm (245 milligram per cubic meter) [skin], 1993; Austria: MAK 50 ppm (245 milligram per cubic meter) [skin], 1999; Belgium: TWA 50 ppm (246 milligram per cubic meter) [skin], 1993; Denmark: TWA 25 ppm (120 milligram per cubic meter) [skin], 1999; Finland: TWA 50 ppm (245 milligram per cubic meter); STEL 75 ppm (370 milligram per cubic meter) [skin], 1999; France: VME 50 ppm (245 milligram per cubic meter) [skin], 1999; Hungary: TWA 80 milligram per cubic meter; STEL 100 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 100 milligram per cubic meter [skin], 2003; Norway: TWA 25 ppm (125 milligram per cubic meter), 1999; the Philippines: TWA 50 ppm (245 milligram per cubic meter) [skin], 1993; Poland: MAC (TWA) 100 milligram per cubic meter, MAC (STEL) 350 milligram per cubic meter, 1999; Russia: STEL 50 milligram per cubic meter, 1993; Sweden: NGV 25 ppm (120 milligram per cubic meter), KTV 35 ppm (170 milligram per cubic meter) [skin], 1999; Switzerland: MAK-W 50 ppm (245 milligram per cubic meter) [skin], 1999; United Kingdom: TWA 25 ppm (125 milligram per cubic meter); STEL 75 ppm [skin], 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 50 ppm. Several states have set guidelines or standards for Cumene in ambient air[60] ranging from 2.45−3.65 milligram per cubic meter (North Dakota) to 4.0 milligram per cubic meter (Virginia) to 4.9 milligram per cubic meter (Connecticut) to 5.83 milligram per cubic meter (Nevada).

Determination in Air: Charcoal adsorption, workup with CS_2, analysis by GC. Use NIOSH Analytical Method #1501 for hydrocarbons, aromatic.

Determination in Water: No method listed. Octanol−water coefficient: Log $K_{ow} \geq 3.5$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, ingestion; skin and eye contact. Passes through the unbroken skin.

Harmful Effects and Symptoms

Short-Term Exposure: Narcotic action with long-lasting effects; depressant to central nervous system[136]. Irritates the eyes, skin, and respiratory tract. Skin contact may cause a burning sensation and/or rash. Higher levels can cause dizziness, lightheadedness, headaches, unconsciousness, narcosis, coma. Levels of 4000 ppm may cause unconsciousness. LD_{50} (oral-rat) = 1400 mg/kg.

Long-Term Exposure: Inhalation exposure to cumene caused lung tumors in male and female mice, and liver tumors in female mice[193]. Can cause drying and cracking of the skin. May cause lung, liver, and kidney damage. Although cumene has not been adequately tested to determine whether brain or nerve damage could occur with repeated exposure, many solvents and other petroleum-based chemicals have been shown to cause such damage.

Points of Attack: Eyes, skin, respiratory system; central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Interview for brain effects, including recent memory, mood, concentration, altered sleep patterns; and nervous system evaluation. NIOSH lists the following tests: whole blood (chemical/metabolite); Expired air; urine (chemical/metabolite): last 2 hours of 8-hour exposure; urine (chemical/metabolite).

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not* induce vomiting.

Personal Protective Methods: Wear appropriate clothing to prevent repeated or prolonged skin contact Tychem 1000 suits: **8 hours** (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$) Teflon gloves, suits, boots: **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$). Also, chlorinated polyethylene (CPE) may offer protection and is among the recommended protective materials. Wear eye protection to prevent any reasonable probability of eye contact. Employees should wash promptly when skin is wet or contaminated. Remove nonimpervious clothing promptly if contaminated or wet.

Respirator Selection: *500 ppm:* CcrOv (APF = 10) [any chemical cartridge respirator with organic vapor cartridge(s)]; or Sa (APF = 10) (any supplied-air respirator). *1000 ppm:*

Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or SCBAF (APF = 50) (any SCBA with a full facepiece) or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. May form peroxides in storage. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Cumene must be stored to avoid contact with oxidizers, such as permanganates, nitrites, peroxides, chlorates, and perchlorates, since violent reactions occur. Store in tightly closed containers in a cool well-ventilated area away from heat. Sources of ignition, such as smoking and open flames are prohibited where Cumene is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Sources of ignition, such as smoking and open flames are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gal or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical.

Shipping: UN1918 Cumene, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Regulatory Authority and Advisory Information

Hazard Alert: Flammable, Possible risk of forming tumors, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction).

OSH A: Considered Highly Hazardous

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): U096

RCRA, 40CFR261, Appendix 8 Hazardous Constituents

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; on DSL List; NPRI.

Hazard symbols, risk, & safety statements: Hazard symbol: O, F, T, N; risk phrases: R7; R10; R20/22; R23; R34; R48/20/22; R51/53; R61; R62; safety phrases: S1/2; S3/7; S14; S36/37/39; S45; S50; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Cumene hydroperoxide, an organic peroxide, is a colorless to pale yellow to green liquid. Mild odor. Molecular weight = 152.21; specific gravity (H_2O:1) = 1.05; boiling point = 153°C; freezing/melting point = −10°C. It explodes on heating; flash point = 79°C. Its explosive limits are: LEL: 0.9%; UEL: 6.5%. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 2, reactivity 4 (Oxidizer). Slightly soluble in water.

Potential Exposure: Cumene hydroperoxide is used as polymerization initiator, curing agent for unsaturated polyester resins and cross-linking agent; as an intermediate in the process for making phenol plus acetone from cumene.

Incompatibilities: The pure material is reported to explode on heating at elevated temperatures (various values given are 50°, 109,[75] 150°C[11]) or in strong sunlight. The substance is a strong oxidizer; reacts violently with combustible and reducing agents, causing fire and explosion hazard. Contact with metallic salts of cobalt, copper or lead alloys; mineral acids; bases; and amines may lead to violent decomposition. Vapor forms an explosive mixture with air. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.15 ppm

PAC-2: 1.6 ppm

PAC-3: 9.7 ppm

DFG MAK: Organic peroxide (Section Xa)

Routes of Entry: Inhalation, eyes, passing through the unbroken skin.

Harmful Effects and Symptoms

Short-Term Exposure: Cumene hydroperoxide is corrosive to the eyes, skin, and respiratory tract. Eye contact can cause burns and permanent damage. Corrosive on ingestion. Inhalation may include nosebleeds, sore throat; hoarseness, cough with phlegm; increased saliva; and shortness of breath. Higher exposures can cause a build-up of fluid in the lungs (pulmonary edema), a medical emergency, which can cause death. Other exposure symptoms may include headache, dizziness, poor coordination, and even unconsciousness. LD_{50} (oral-rat) = 382 mg/kg (moderately toxic).

Long-Term Exposure: Cumene hydroperoxide may cause mutations. Handle with extreme caution. May cause skin allergy. High or repeated overexposure may damage lungs, kidneys and liver.

Points of Attack: Lungs, skin, kidneys, liver.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. If symptoms develop or overexposure is suspected, the following also may be useful: consider chest X-ray after acute overexposure. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Tests for kidney and liver function. CBC.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable

probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposures to cumene hydroperoxide exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Yellow Stripe: Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow coded materials. Prior to working with cumene hydroperoxide all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Cumene hydroperoxide must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), strong acids (such as hydrochloric, sulfuric, and nitric) and organic materials; reducing agents; copper, copper or lead alloys, cobalt and mineral acids, since violent reactions occur. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3109 Organic peroxide type F, liquid, Hazard Class: 5.2; Labels: 5.2-Organic peroxide, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep cumene hydroperoxide out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is an unstable, flammable liquid. Thermal decomposition products may include phenol. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen; NCI: Carcinogenesis Bioassay (feed); clear evidence: rat; mouse.

California Proposition 65 Chemical[102]: Cancer 1/1/1988

Hazard Alert: Poison, Combustible, Possible risk of forming tumors, Suspected of causing genetic defects, Primary irritant (w/o allergic reaction).

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.

Canada, WHMIS, Ingredients Disclosure List concentration Reporting Level: 0.1%.

Hazard symbols, risk, & safety statements: Hazard symbol: T; risk phrases: R45; R26; R36/37; R50/53; R62; safety phrases: S25; S23; 24/25; S36/37/38; S40; S43 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cupferron is a creamy-white crystalline compound. Molecular weight = 155.19; freezing/melting point = 163°C. Explosive limits: LEL: 9000 ppm; UEL: unknown. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 1. Soluble in water.

Potential Exposure: Cupferron is used to separate tin from zinc, and copper and iron from other metals in the laboratory. Cupferron also finds application as a quantitative reagent for vanadates and titanium; and for the colorimetric determination of aluminum. The potential for exposure appears to be greatest for those engaged in analytical or research studies involving use of the chemical. Workers may also be exposed to the compound during manufacturing processes.

Incompatibilities: Forms unstable and possibly explosive compounds with thorium salts; titanium, zirconium.

Permissible Exposure Limits in Air

PAC Ver. 29[138]

PAC-1: 0.6 milligram per cubic meter

PAC-2: 6.6 milligram per cubic meter

PAC-3: 39 milligram per cubic meter

Routes of Entry: Human Exposure to cupferron occurs mainly through ingestion or inhalation of the dust from the dry salt. Skin absorption is a secondary route of exposure.

Harmful Effects and Symptoms

Long-Term Exposure: Cupferron, given in the diet, was carcinogenic to Fisher 344 rats, causing hemangiosarcomas, hepatocellular carcinomas; and squamous-cell carcinomas of the fore-stomach in males and females; as well as carcinomas of the auditory sebaceous gland in females. The chemical was also carcinogenic to B6C3F1 mice, causing hemangiosarcomas in males; and hepatocellular carcinomas, carcinomas of the auditory sebaceous gland, a combination of hemangiosarcom as and hemangiomas; and adenomas of the Harderian gland in females. LD_{50} = (oral-rat) 257 mg/kg (moderately toxic).

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure.

First Aid: Move victim to fresh air. Call 911 or emergency Medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full-facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cupferron all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Cupferron should be stored in a refrigerator or in a cool dry place and protected from exposure to moisture.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Thermal decomposition products may include ammonia and nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

HSDB Number: 915

RTECS Number: AG3480000

UN/NA & ERG Number: UN3077 (environmentally hazardous substances, solid, n.o.s.)/171

EC Number: 205-553-3

Regulatory Authority and Advisory Information

Hazard Alert: Combustible, Environmental hazard, Suspected reprotoxic hazard. Suspected reprotoxic hazard

United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper.

EPA ADI:1.3 mg[Cu]/L. As copper.

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/1992); Toxic Pollutant (Section 401.15). as copper and compounds

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010 (60); 7210 (200) Note: All species in the ground water that contain copper are included

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%. as copper compounds, n.o.s.; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: N, Xn; risk phrases: R22; R36/37/38; R50/53; R63; safety phrases: S16; S26; S29/35; S45; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Cupric acetate is a greenish Blue powder or small crystals. Molecular weight = 181.64; boiling point = 240°C (decomposes); freezing/melting point = 115°C. Explosive limits: LEL: 8000 ppm; UEL: unknown. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 0. Soluble in water.

Potential Exposure: Cupric acetate is used as a fungicide, as a catalyst for organic reactions; in textile dyeing and as a pigment for ceramics.

Incompatibilities: Forms explosive materials with acetylene gas, ammonia, caustic solutions; sodium hypobromite; notromethane. Keep away from chemically active metals; strong acids; nitrates. Decomposes above 240°C forming acetic acid fumes.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust & mist)
OSHA PEL: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA
NIOSH: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA
ACGIH TLV[1]: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.2 milligram per cubic meter (fume) TWA
PAC Ver. 29[138]
142-71-2, anhydrous
PAC-1: 8.6 milligram per cubic meter
PAC-2: 20 milligram per cubic meter
PAC-3: 120 milligram per cubic meter

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Inhaling cupric acetate dust and vapors can irritate the respiratory tract causing coughing and wheezing. High levels may cause fluid to build up in the lungs (pulmonary edema), This can cause death. Corrosive: contact can irritate and may burn the skin and eyes. LD$_{50}$ (oral-rat) = 595 mg/kg (slightly toxic).

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. Repeated exposure to this chemical can cause skin allergy, thickening of the skin, and/or a green discoloration of the skin and hair. Repeated Exposure can cause shrinking (atrophy) of the inner lining of the nose; and may cause sores in the nose. Can cause liver and kidney damage.

Points of Attack: Skin, lung, liver, and kidney damage.

Medical Surveillance: People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. If symptoms develop or overexposure is suspected, the following may be useful: consider chest X-ray after acute overexposure. Serum and urine tests for copper can measure recent exposure. Liver and kidney function tests. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa: Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp: ASC BA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Green: General storage may be used. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Cupric acetate must be stored to avoid contact with acetylene gas, chemically active metals (such as potassium, sodium, magnesium, and zinc), since violent reactions occur.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Thermal decomposition products may include acetic acid. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill.

Hazardous to aquatic life or environment, with possible long-lasting effects[192]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: O, C, Xi, N; risk phrases: R45; R8; R20/21/22; R34; R22; R36/38; safety phrases: S17; S20; S26; S29; S36/37/39; S45; S61 (see Appendix 4).

WGK[100] (Germ an Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Cupric nitrate is a Blue crystalline solid. Molecular weight = 187.56; specific gravity (H_2O:1) = 2.05; boiling point = 170°C (decomposes below this point); freezing/melting point = 255°C. Soluble in water. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 3 ₩ (Oxidizer). Soluble in water; solubility = 135 g/100 mL (trihydrate).

Potential Exposure: Cupric nitrate is used as an insecticide, in paint, varnish, enamel, and in wood preservatives. Metal compounds are often used in "hot" operations in the work-place. These may include, but are not limited to, welding, brazing, soldering, plating, cutting, and metallizing. At the high temperatures reached in these operations, metals often form metal fumes which have different health effects and exposure standards than the original metal compound and require specialized controls.

Incompatibilities: A strong oxidizer. Aqueous solution is acidic; incompatible with bases. Violent reaction with potassium hexacyanoferrate; ammonia and potassium amide mixtures; acetic anhydrides, cyanides, ethers. Forms explosive materials with nitromethanes, sodium hypobromite; acetylene; chemically active metals, such as potassium, sodium, etc. May ignite on contact with aluminum foil or tin. Risk of spontaneous combustion with combustibles (wood, cloth, etc.) organics, or reducing agents and readily oxidizable materials. Attacks metals in the presence of moisture.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust & mist)

OSHA PEL: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA

NIOSH: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA

ACGIH TLV[1]: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.2 milligram per cubic meter (fume) TWA

PAC Ver. 29[138]

PAC-1:8.9 milligram per cubic meter

PAC-2: 31 milligram per cubic meter

PAC-3: 190 milligram per cubic meter

copper and its inorganic compounds

DFG MAK: 0.1 milligram per cubic meter measured as the inhalable fraction of the aerosol; Peak Limitation Category II(2); Pregnancy Risk Group C

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Short-term exposure to copper causes gastrointestinal distress. Skin and eye contact can cause irritation and burns. Inhalation can irritate the nose and throat, causing coughing and wheezing. Cupric nitrate may produce fumes that can cause "metal fume fever." Ingestion cause salivation, nausea, vomiting, stomach pain. May cause blood effects if swallowed. High exposure can cause unconsciousness. LD_{50} (oral-rat) = 940 mg/kg (slightly toxic).

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. Repeated exposure can cause copper to deposit in various parts of the body. Large deposits can make the skin and hair a green color. Repeated exposure can cause shrinking of the inner lining of the nose, and may cause runny nose and sores. Excess deposits in the liver can cause liver damage. Metallic taste may also occur. Skin allergy with rash sometimes occurs. If allergy develops, even small future exposures can trigger rash. Repeated exposures can also cause thickening of the skin not caused by allergy.

Points of Attack: Skin, liver.

Medical Surveillance: People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that. Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Urine test for copper can measure recent exposure. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to Physician: In case of fume inhalation, treat for pulmonary edema. Give prednisone or other corticosteroid orally to reduce tissue response to fume. Positive-pressure ventilation may be necessary. Treat metal fume fever with bed rest, analgesics, and antipyretics. The symptoms of metal fume fever may be delayed for 4−12 hours following exposure: it may last less than 36 hours.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Check oxygen content prior to entering storage area. Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially organic materials, flammables and combustibles, and other incompatible materials. Oxidizers, including oxidizing gases, should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Cupric nitrate must be stored to avoid contact with combustible, organic, or other readily oxidizable materials; and chemically active metals (such as potassium, sodium, magnesium, and zinc), since violent reactions occur. Store in tightly closed containers in a cool well-ventilated area away from acetylene gas. Protect storage containers from physical damage. Store in a cool, well-ventilated area away from incompatible materials listed above. Store in a cool, well-ventilated area away from incompatible materials listed above. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage.

Shipping: UN1479 Oxidizing solid, n.o.s., Hazard Class: 5.1; Labels: 5.1-Oxidizer, Technical Name Required.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. Keep cupric nitrate out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Copper nitrate itself is noncombustible, but it will increase the intensity of fire and may ignite combustible materials. Decomposes below 170°C. Thermal decomposition products may include metal fumes and oxides of nitrogen and carbon. Flooding amounts of water may be used to minimize its oxidizing effect on other materials. Caution: when large quantities are involved, application of water may cause scattering of molten material. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill. Add slowly to water; stir in excess soda ash. Let stand, then neutralize. Decant solution and flush to sewer; landfill sludge.

Cupric Oxalate C:1550

Formula: $C_2H_2O_4 \cdot Cu$

Synonyms: Copper oxalate; Copper(II) oxalate; Ethanedioic acid, copper(2+) salt; Oxalic acid, copper(2+) salt

CAS Registry Number: 814-91-5; 55671-32-4 (hemihydrate)

HSD B Number: 265

UN/NA & ERG Number: UN2775/151

RTECS Number: RO2670000

EC Number: 212-411-4

Regulatory Authority and Advisory Information

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/1992); Section 307 Toxic Pollutants, 40CFR401.15 (effluent limitations); as copper and compounds

United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg[Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper.

EPA ADI:1.3 mg[Cu]/L. As copper.

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010 (60); 7210 (200) *Note:* All species in the ground water that contain copper are included

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%. as copper compounds, n.o.s.; NPRI; CEPA Priority Substance List, Ocean dumping prohibited

Hazard symbols, risk, & safety statements: Hazard symbol: T, N, Xn; risk phrases: R21/22; R27/28; safety phrases: S29/35; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cupric oxalate is a bluish-white, odorless powder. Molecular weight = 153.58. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 0, reactivity 1. Insoluble in water.

Potential Exposure: Used as a catalyst for organic reactions and in seed treatment as a repellent for birds and rodents.

Incompatibilities: Explosive materials are formed on contact with acetylene gas, ammonia, caustic solutions; sodium hypobromite, nitromethane. Slight heating can cause a weak explosion. Cupric oxalate dissolves in aqueous ammonia and reacts as an acid to neutralize other bases as well. Can serve as a reducing agent in reactions that generate carbon dioxide. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust & mist)

OSHA PEL: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA

NIOSH: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA

ACGIH TLV[1]: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.2 milligram per cubic meter (fume) TWA
PAC Ver. 29[138]
PAC-1: 7.3 milligram per cubic meter
PAC-2: 79 milligram per cubic meter
PAC-3: 480 milligram per cubic meter

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Determination in Water: Total copper may be determined by digestion followed by AA, or by colorimetry (using neocuproine) or by ICP optical emission spectrometry. Dissolved copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Powerful irritant. Contact with skin and/or eyes causes severe irritation, burns, and can cause permanent damage. Inhalation irritates the respiratory tract causing coughing and wheezing. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. If swallowed, cupric oxalate has a caustic effect on the mouth, esophagus, and stomach; causing salivation, nausea, vomiting, diarrhea, and may cause damage to the kidneys. Short-term exposure to copper causes gastrointestinal distress.

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L. Repeated exposure to this chemical may cause thickening of the skin; greenish color to the skin and hair; shrinking and perforation of the nasal septum with possible bleeding. May cause skin allergy and liver damage.

Points of Attack: Skin, liver.

Medical Surveillance: Liver function tests. Evaluation by a qualified allergist. Wilson's disease is a rare hereditary condition which interferes with the body's ability to get rid of copper. If you have this condition, consult your doctor about copper exposure. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg [Cu]/L.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Prior to working with cupric oxalate all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from acetylene gas, ammonia, caustic solutions, and nitromethane.

Shipping: UN2775, Copper based pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Thermal decomposition products may include oxides of metal and carbon. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Regulatory Authority and Advisory Information

Hazard Alert: powerful reducing agent, Environmental hazard.

Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010 (60); 7210 (200) Note: All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.

Description: Cupriethylenediamine is a purple liquid (may contain red or Blue sediment), with an ammoniacal odor. Also described as a fishy odor. Molecular weight = 506.91; boiling point = 100°C. Reacts with water.

Potential Exposure: Cupriethylenediamine is used to dissolve cellulose products to give a cuprammonium-type solution.

Incompatibilities: Violent reaction with water. A powerful reducing agent. Violent reaction with oxidizers, organic materials; and many other substances. Forms unstable peroxides under normal conditions of temperature and storage. Dissolves wood, cotton and other cellulosic material.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 mg[Cu]/m^3 (dust & mist)

OSHA PEL: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA

NIOSH: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.1 milligram per cubic meter (fume) TWA

ACGIH TLV[1]: 1 mg[Cu]/m^3 (dust & mist) TWA; 0.2 milligram per cubic meter (fume) TWA

Determination in Air: Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg[Cu]/L as a 24-hour average. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness)-1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg [Cu]/L as a 24-hour average, and should not exceed 23 μg [Cu]/L at any time. Federal Drinking Water Guidelines: Action Level = 1300 μg[Cu]/L; EPA = 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L; Kansas 1000 μg/L, and Minnesota 1300 μg/L[61].

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Cupriethylene diamine is a corrosive chemical that can cause severe irritation and burns of the skin and eyes on contact. Exposure to Cupriethylene diamine can irritate the throat and air passages. May cause asthma-like symptoms with wheezing, cough, and tightness in the chest.

Long-Term Exposure: Repeated exposure can cause thickening of the skin or a green color to form on the skin and hair. Repeated exposure can cause shrinking (atrophy) of the inner lining of the nose and may cause sores in the nose and watery discharge. Excessive buildup of copper can cause liver damage.

Points of Attack: Skin, lungs, liver.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended. Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Urine Copper test. Liver function tests.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of Exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that Medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 milligram per cubic meter*: Qm (APF = 25) (any quarter-mask respirator). *10 milligram per cubic meter:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 milligram per cubic meter:* Sa: Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, APR with a high-efficiency particulate filter). *50 milligram per cubic meter*: 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, APR with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: (1) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. (2) Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1761 Cupriethylene diamine solution, Hazard class: 8; Labels: 8-Corrosive material, 6.1-Poisonous materials.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cupriethylene diamine may burn, but does not readily ignite. Use dry chemical, carbon dioxide; or foam extinguishers. Thermal decomposition products may include nitrous oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N; risk phrases: R20/21/22; R32; R50/53; safety phrases: S13; S60; S41; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: White to yellowish powder. Practically insoluble in water. Molecular weight = 121.64. Specific gravity (H_2O:1) = 2.84 @ 20°C. Low solubility in water.

Potential Exposure: Used as a microbiocide and algaecide in antifouling paints. Used as a laboratory chemical and for making other chemicals. Some formulations may be designated Restricted Use Pesticide (RUP).

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air:

The NIOSH[2] IDLH level = 25 milligram per cubic meter.

NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

Determination in Air: Use NIOSH Analytical Method #7904; # 6010, cyanides. Use NIOSH Analytical Methods (dusts and mist) #7029, #7300, #7301, #7303, #9102 and OSHA Analytical Methods ID-121, ID-125G.

Permissible Concentration in Water: United States National Primary Drinking Water Regulations: MCLG = 1.3 mg[Cu]/L; MCL = TT action Level: 1.3 mg [Cu]/L. Copper is regulated by a Treatment Technique (TT) that requires systems to control the corrosiveness of their water. If more than 10% of tap water samples exceed the action level, water systems must take additional steps; SMCL = 1 mg[Cu]/L as Copper. Federal Drinking Water Standards: EPA 1300 μg[Cu]/L; Federal Drinking Water Guidelines: EPA 1000 μg[Cu]/L; State Drinking Water Guidelines: Arizona 1300 μg[Cu]/L. Safe Drinking Water Act (47FR 9352): MCL, 0.01 mg/L; MCLG, 0.01 mg/L. Because nitriles do not release cyanide ions, they are generally less toxic.

Determination in Water: Total copper may be determined by digestion followed by AA or by colorimetry (using neocuproine) or by ICP Optical Emission Spectrometry. Dissolved Copper may be determined by 0.45 μ filtration followed by the preceding methods.

Routes of Entry: Inhalation, skin absorption, ingestion

Harmful Effects and Symptoms

Short-Term Exposure: Highly toxic, may be fatal if inhaled, swallowed or absorbed through skin. Avoid any skin contact or eye. Effects of contact or inhalation may be delayed. Short-term exposure to copper causes gastrointestinal distress.

Long-Term Exposure: Long-term exposure to copper causes liver and/or kidney damage.

Points of Attack: Liver, kidneys, gastrointestinal system.

Medical Surveillance: Anyone having hereditary Wilson's disease should avoid contact with the material. These persons are born with an abnormally high level of copper in their system and exposure may increase levels of copper, causing overdose, liver problems which can be fatal. People with Wilson's Disease should consult their personal doctor to determine if the amount of copper in their water exceeds 1.3 mg[Cu]/L.

Personal Protective Methods: Wear positive pressure SCBA. Wear chemical protective clothing that is specifically recommended by the manufacturer. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method* if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149. NIOSH (*as cyanides*): *25 milligram per cubic meter*: Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any SCBA with full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd, Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Shipping: UN3439 Nitriles, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: Nitriles spill

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United

States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).
First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2
Large spills (From a large package or from many small packages)
First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8
Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of copper, sulfur, and cyanides. Noncombustible, substance itself does not burn but may decompose upon heating to produce corrosive and/or toxic fumes. Containers may explode when heated. Runoff from fire control or dilution water may be corrosive and/or toxic and may cause pollution. Runoff may pollute waterways. If tank, rail car, or tank truck is involved in a fire, ISOLATE for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Small Fire: Use dry chemical, CO_2, or water spray. *Large Fire*: Water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving Tanks or Car/Trailer Loads:* Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. *Do not* get water inside containers.

Disposal Method Suggested: Copper-containing soluble wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. If recovery is not feasible, the copper can be precipitated through the use of caustics and the sludge deposited in a chemical waste landfill. Copper-containing wastes can be concentrated to the point where copper can be electrolytically removed and reclaimed. If recovery is not feasible, the copper can be precipitated by alkali; the cyanide destroyed by alkaline oxidation yielding a sludge which can be sent to a chemical waste landfill[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Regulatory Authority and Advisory Information

Hazard Alert: Exposure can be lethal, Combustible, Polymerization hazard, Corrosive, Suspected of causing genetic defects, Environmental hazard, Drug. Listed for Tier 1 screening as an endocrine disruptor[88].

United States Environmental Protection Agency, FIFRA, 1998 Status of Pesticides: Active registration

Hazardous to aquatic life or environment, with possible long-lasting effects[194]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, C, N; risk phrases: R19; R21; R25; R34; R36/38; R51/53; R62; safety phrases: S1/2; S3; S22; S36/37; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

As cyanide compounds:

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: 40CFR423, Appendix A, Priority Pollutants as cyanide, total

EPCRA (Section 313): X+CN-where X = H+ or any other group where a formal dissociation may occur. For example, KCN or $Ca(CN)_2$. Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as cyanide mixtures, cyanide solutions

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazardous to aquatic life or environment, with possible long-lasting effects[194]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R27/28; R50/53; R62; safety phrases: S13; S28; S29/35; S45; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Cyanamide is a combustible crystalline solid, but it is usually found as a 25% liquid solution. Molecular weight = 42.05; specific gravity (H_2O:1) = 1.28; boiling point = decomposes @ 260°C; freezing/melting point = 45°C; flash point = 141°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 1, reactivity 3. Highly soluble in water; solubility = 78% @ 15°C.

Potential Exposure: Cyanamide may be melted to give a dimer, dicyandiamide or cyanoguanidine. At higher temperatures it gives the trimer, melamine; a raw material for melamine-form aldehyde resins.

Incompatibilities: Cyanamide may polymerize at temperatures above 122°C, or on evaporation of aqueous solutions. Reacts with acids, strong oxidants, strong reducing agents such as hydrides and water, causing explosion and toxic hazard. Attacks various metals. Decomposes when heated above 49°C, on contact with acids, bases, 1,2-phenylene diamine salts; and moisture; producing toxic fumes including nitrogen oxides and cyanides. Nitriles may polymerize in the presence of metals and some metal compounds. They are incompatible with acids; mixing nitriles with strong oxidizing acids can lead to extremely violent reactions. Nitriles are generally incompatible with other oxidizing agents such as peroxides and epoxides. The combination of bases and nitriles can produce hydrogen cyanide. Nitriles are hydrolyzed in both aqueous acid and base to give carboxylic acids (or salts of carboxylic acids). These reactions generate heat. Peroxides convert nitriles to amides. Nitriles can react vigorously with reducing agents. Acetonitrile and propionitrile are soluble in water, but nitriles higher than propionitrile have low aqueous solubility. They are also insoluble in aqueous acids[101].

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: 2 milligram per cubic meter TWA; NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

ACGIH TLV[1]: 2 milligram per cubic meter TWA

PAC Ver. 29[138]

PAC-1: 6 milligram per cubic meter

PAC-2: 66 milligram per cubic meter

PAC-3: 400 milligram per cubic meter

DFG MAK: 1 milligram per cubic meter, inhalable fraction TWA; Peak Limitation Category II(2) [skin] Danger of skin sensitization; Pregnancy Risk Group C

Australia: TWA 2 milligram per cubic meter, 1993; Austria: MAK 2 milligram per cubic meter [skin], 1999; Belgium: TWA 2 milligram per cubic meter, 1993; Denmark: TWA 2 milligram per cubic meter, 1999; Finland: TWA 2 milligram per cubic meter; STEL 4 milligram per cubic meter [skin], 1999; France: VME 2 milligram per cubic meter, 1999; Norway: TWA 2 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 2 milligram per cubic meter, 2003; Russia: STEL 0.5 milligram per cubic meter [skin], 1993; Switzerland: MAK-W 2 milligram per cubic meter, 1999; United Kingdom: TWA 2 milligram per cubic meter, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 2 milligram per cubic meter. Russia[43] has limits for ambient air in residential areas of 0.01 milligram per cubic meter on an average daily basis. Several states have set guidelines or standards for Cyanamide in ambient air[60] ranging from 6.7 μ/m^3 (New York) to 20.0 μ/m^3 (Florida and North Dakota) to 35 μ/m^3 (Virginia) to 40 μ/m^3 (Connecticut) to 50 μ/m^3 (South Carolina).

Determination in Air: Filter; none; Gravimetric; NIOSH Analytical Method (IV) #0500, Particulates NOR, total dust. See NIOSH Criteria Document 212 *Nitriles*.

Permissible Concentration in Water: Because nitriles do not release cyanide ions, they are generally less toxic.

Routes of Entry: Inhalation, ingestion; skin absorption

Harmful Effects and Symptoms

Short-Term Exposure: Cyanamide is caustic and severely irritates the eyes, skin, and respiratory tract; and may affect the liver. Ingestion or inhalation may cause transitory intense redness of the face, headache, vertigo, increased respiration; tachycardia and hypotensions. The adverse effects of cyanamide are potentiated by the ingestion of alcohol (beer, wine, or liquor) within 1–2 days before or after exposure. Cyanamide is a highly reactive chemical and is a dangerous explosion hazard.

Long-Term Exposure: Repeated or prolonged contact may cause skin sensitization and allergy. Exposure may cause liver and nervous system damage. See NIOSH Criteria Document 212 *Nitriles*.

Points of Attack: Liver, skin.

Medical Surveillance: If overexposure occurs or if illness is suspected, the following are recommended: liver function tests. Exam of the nervous system. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH Criteria Document 212 *Nitriles*.

Respirator Selection: Where there is potential exists for exposures over 2 milligram per cubic meter, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—Yellow: Reactive Hazard; Store in a location separate from other materials, especially flammables and combustibles. Oxidizers should be isolated from acids, metals, organic materials, and ammonium nitrate. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool well-ventilated area away from acids or acid fumes. Cyanamide can be stored in glass containers if it is stabilized with phosphoric, acetic, sulfuric, or boric acid; it attacks iron and steel, copper and brass. Sources of ignition, such as smoking and open flames are prohibited where cyanamide is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever cyanamide is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN3276 Nitriles, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required, Potential Inhalation Hazard (Special Provision 5).

Spill Handling: Nitriles spill

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. Keep cyanamide out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase

with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)
First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)
First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Fire Extinguishing: Cyanamide may burn, but does not readily ignite. Poisonous gas is produced in fire, including nitrogen oxides and cyanides. Use dry chemical or CO_2 extinguishers. Containers may explode in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Add excess alkaline calcium hypochlorite with agitation. Flush to sewer after 24 hours. Cyanamide can also be destroyed in an incinerator equipped with afterburner and scrubber.

Canada, Drinking Water Quality, IMAC = 0.01 mg/L.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn, N; risk phrases: R22; R50/53; R62; R63; safety phrases: S2; S37; S41; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Cyanazine is an off-white to tan crystalline solid. Molecular weight = 240.73; freezing/melting point = 167−169°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 1, reactivity 0. Soluble in water. Physical properties may be altered by carrier solvents used in commercial formulations.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of this herbicide used for preemergence or postemergence weed control in field corn.

Incompatibilities: Cyanazine decomposes in heat producing very toxic fumes and gases of hydrogen cyanide, hydrogen chloride; ethyl chloride; ammonia; acetone; and ethylene. Nitriles may polymerize in the presence of metals and some metal compounds. They are incompatible with acids; mixing nitriles with strong oxidizing acids can lead to extremely violent reactions. Nitriles are generally incompatible with other oxidizing agents such as peroxides and epoxides. The combination of bases and nitriles can produce hydrogen cyanide. Nitriles are hydrolyzed in both aqueous acid and base to give carboxylic acids (or salts of carboxylic acids). These reactions generate heat. Peroxides convert nitriles to amides. Nitriles can react vigorously with reducing agents. Acetonitrile and propionitrile are Soluble in water, but nitriles higher than propionitrile have low aqueous solubility. They are also insoluble in aqueous acids[101]. Attacks metals in the presence of heat and moisture.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[CN]/m^3

NIOSH REL: (nitriles) 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

No standards or PAC available.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 μg[CN]/L; State Drinking Water Standards: California 150 μg[CN]/L; State Drinking Water Guidelines: Arizona 220 μg[CN]/L; Maine. 140 μg [CN]/L; Minnesota 100 μg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg[CN]/L; Short-term consumption; Raw water constituents (maximum) 20 mg[CN]/L.

Determination in Water: High-performance liquid chromatography is applicable to the determination of cyanazine in water according to EPA.

Routes of Entry: Inhalation, ingestion, absorption through the unbroken skin.

Harmful Effects and Symptoms

Short-Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Exposure can irritate the nose, throat, and bronchial tubes. Contact can irritate the skin or eyes. Overexposure can cause weakness, nausea and difficulty breathing. LD$_{50}$ (oral-rat) = 149 mg/kg (moderately toxic). Toxicological properties may be altered by carrier solvents used in commercial formulations.

Long-Term Exposure: Long-term effects are unknown. Related chemicals in the triazin chemical groups can cause liver damage; reduce thyroid function and/or cause skin allergy. May cause reproductive toxicity in humans. See NIOSH Criteria Document 212 *Nitriles*.

Medical Surveillance: Liver function tests. Thyroid function tests. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH Criteria Document 212 *Nitriles*.

Respirator Selection: Engineering control must be effective to ensure that exposure to cyanazine does not occur. Where there is potential exists for exposures to cyanazine use a NIOSH/MSHA (US) or EN149 (Europe)-approved full facepiece respirator with a pesticide cartridge. Increased protection is obtained from full facepiece APRs.

Where there is potential for high exposures exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air-respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cyanazine all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from heat. Where possible, automatically pump liquid from drums or other storage containers to process containers.

Shipping: UN2763 Triazine pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3439 Nitriles, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling:

Nitriles spill

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cyanazine may burn, but does not readily ignite. Use dry chemical, CO_2, water spray; or foam extinguishers. Thermal decomposition products may include hydrogen cyanide, hydrogen chloride; ethyl chloride; ammonia, acetone, and ethylene. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Regulatory Authority and Advisory Information

Carcinogenicity: EPA (cyanide, free): Not Classifiable as to human carcinogenicity.

Hazard Alert: Poison, Exposure can be lethal, Water reactive, Environmental hazard.

Banned or Severely Restricted (in agriculture) (Germany) (in Consumer Products) (US)[13]

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R2627/28; R50/53; safety phrases: S13; S28; S29/35; S45; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Cyanide compounds:

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

United States National Primary Drinking Water Regulations: MCLG = 0.2 mg$[CN^-]$/L; MCL = 0.2 mg $[CN^-]$/L as cyanide.

Clean Water Act: 40CFR423, Appendix A, Priority Pollutants as cyanide, total

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): P030 as cyanides Soluble salts and complexes, n.o.s.

RCRA, 40CFR261, Appendix 8 Hazardous Constituents. as cyanides, soluble salts, and complexes, n.o.s.

EPCRA (Section 313): X + CN-where X = H + or any other group where a formal dissociation may occur. For example, KCN or Ca(CN)2. Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as cyanide mixtures, cyanide solutions or cyanides, inorganic, n.o.s.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI; CEPA Priority Substance List, Ocean dumping prohibited

Cyanides, soluble salts and compounds:

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

United States National Primary Drinking Water Regulations: MCLG = 0.2 mg$[CN^-]$/L; MCL = 0.2 mg $[CN^-]$/L as cyanide.

Clean Water Act: 40CFR423, Appendix A, Priority Pollutants as cyanide, total; Toxic Pollutant (Section 401.15)

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 9010 (40)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, append ix B) as cyanides, inorganic, n.o.s.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water. Highly water *polluting (potassium cyanide and calcium cyanide*)

Description: KCN and NaCN are white crystalline solids with a faint almond odor. Sodium cyanide also has a slight odor of hydrocyanic acid when damp. *KCN:* boiling point = 1625°C; freezing/melting point = 634°C. *NaCN:* boiling point = 1496°C; freezing/melting point = 564°C. NFPA 704 M Hazard identification (KCN and NaCN): Health 3, flammability 0 [(4) gas], reactivity 1[(2) gas]₩. Soluble in water; slow decomposition releases highly toxic and flammable hydrogen cyanide gas.

Potential Exposure: *Sodium and potassium cyanides* are used primarily in the extraction of ores, electroplating, metal treatment, and various manufacturing processes. *Iodine cyanide:* Used generally for destroying all lower forms of life; in taxidermy to preserve insects, etc.

Incompatibilities: Soluble in water; slow decomposition releases highly toxic and flammable hydrogen cyanide gas. The aqueous solution of potassium and sodium cyanide are highly corrosive, and strong bases. KCN and NaCN react violently with acids, releasing highly flammable hydrogen cyanide. Potassium and sodium cyanide are incompatible with strong oxidizers (such as acids, acid salts; chlorates, nitrates), organic anhydrides; isocyanates, alkylene oxides; epichlorohydrin, aldehydes, alcohols, glycols, phenols, cresols, caprolactum. Attacks aluminum, copper, zinc in the presence of moisture. KCN and NaCN absorb moisture from the air forming a corrosive syrup.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[CN]/m^3

57-12-5 (cyanide ion)

PAC Ver. 29[138]

PAC-1: 6 mg[CN]/m^3

PAC-2: 8.3 mg[CN]/m^3

PAC-3: 50 mg[CN]/m^3

DFG MAK: 2 mg[CN]/m^3, inhalable fraction TWA; Peak Limitation Category II(1) [skin]; Pregnancy Risk Group: C

Australia: TWA 5 milligram per cubic meter [skin], 1993; Austria: MAK 5 mg[CN]/m^3 [skin], 1999; Denmark: TWA

5 milligram per cubic meter [skin], 1999; France: VME 5 mg[C N]/m^3 [skin], 1999; Poland: TWA 0.3 mg[CN]/m^3, ceiling 10 mg[CN]/m^3, 1999; Switzerland: MAK-W 5 milligram per cubic meter, KZG-W 10 milligram per cubic meter [skin], 1999; United Kingdom: TWA 5 mg[CN]/m^3 [skin], 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: Ceiling Concentration 5 milligram per cubic meter [skin]. Russia[43] has set MAC values for ambient air in residential areas of 0.009 milligram per cubic meter on a momentary basis and 0.004 milligram per cubic meter on an average daily basis. Several states have set guidelines or standards for cyanides in ambient air[60] ranging from 16.7 μ/m^3 (New York) to 50.0 μ/m^3 (Florida and North Dakota) to 80.0 μ/m^3 (Virginia) to 100 μ/m^3 (Connecticut and South Dakota) to 125 μ/m^3 (South Carolina) to 119.0 μ/m^3 (Nevada).

151-50-8 (potassium cyanide)

PAC-1: $\mathbf{5.3}_\mathbf{A}$ milligram per cubic meter

PAC-2: $\mathbf{19}_\mathbf{A}$ milligram per cubic meter

PAC-3: $\mathbf{40}_\mathbf{A}$ milligram per cubic meter

592-01-8 (calcium cyanide)

PAC-1: $\mathbf{3.8}_\mathbf{A}$ milligram per cubic meter

PAC-2: $\mathbf{13}_\mathbf{A}$ milligram per cubic meter

PAC-3: $\mathbf{28}_\mathbf{A}$ milligram per cubic meter

*AEGLs (Acute Emergency Guideline Levels) are marked with a sub script "**A**" and correspond to 60-minute values.

As cyanides

OSHA PEL: 5 mg[CN]/m^3 TWA

NIOSH REL: 4.7 ppm/5 mg[CN]/m^3 [10 minutes] Ceiling Concentration

ACGIH TLV[1]: 5 mg[CN]/m^3 [skin] Ceiling Concentration (1993−1994)

Determination in Air: Use NIOSH Analytical Method (IV) #7904, Cyanides. See also Method #6010, Hydrogen Cyanide[18].

Permissible Concentration in Water: Safe Drinking Water Act (47FR 9352): MCL, 0.2 mg/L; MCLG, 0.2 mg/L. Federal Drinking Water Guidelines: EPA 200 μg[CN]/L; State Drinking Water Standards: California 150 μg[CN]/L; State Drinking Water Guidelines: Arizona 220 μg[CN]/L; Maine. 140 μg[CN]/L; Minnesota 100 μg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. The United States Environmental Protection Agency[49]. has determined a no-observed-adverse-effect-level (NOAEL) of 10.8 mg/kg/day which yields a lifetime Health advisory: of 154 μg/L. States which have set guidelines for cyanides in drinking water[61] include Arizona @ 160 μg/L and Kansas @ 220 μg/L.

Determination in Water: Distillation followed by silver nitrate titration or colorimetric analysis using pyridine pyrazolone (or barbituric acid).

Routes of Entry: Potassium cyanide can be absorbed through the skin; inhalation, ingestion.

Harmful Effects and Symptoms

Short-Term Exposure: Potassium and sodium cyanide are corrosive to the eyes, skin, and the respiratory tract. Contact can cause eye and skin burns; may cause permanent damage to the eyes. Corrosive if swallowed. These substances may affect the central nervous system. Symptoms include headaches, confusion, nausea, pounding heart, weakness, unconsciousness, and death.

Long-Term Exposure: Repeated or prolonged contact with potassium or sodium cyanide may cause thyroid gland enlargement. May cause nosebleed and sores in the nose; changes in blood cell count. May cause central nervous system damage with headache, dizziness, confusion, nausea, vomiting, pounding heart; weakness in the arms and legs; unconsciousness and death. May affect liver and kidney function.

Points of Attack: Liver, kidneys, skin, cardiovascular system; central nervous system; thyroid.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Urine thiocyanate levels. Blood cyanide levels. CBC. Evaluation of thyroid function. Liver function tests. Kidney function tests. Central nervous system tests. EKG.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device*. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy. *Note:* Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and MUST be rapidly available. Kit ingredients should be replaced every 1−2 years to ensure freshness. Persons trained in the use of this kit; oxygen use, and CPR must be quickly available. *Note to Physician:* Consider the administration of Ketocya nor (cobalt edetate) in dose of 300−600 mg i.v. initially. If recovery does not occur quickly (in 1−2 minutes) give a second dose of 300 mg, followed by i.v. glucose 5%. Alternatively, administer sodium nitrite (3%) in an i.v. dose of 10 mL over 3 minutes.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable

probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *up to 25 milligram per cubic meter:* Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any SCBA with full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cyanides all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Protect against physical damage. Store in cool dry place. Separate from other storage and protect from acids and oxidizing materials.

Shipping: UN1588 Cyanides, inorganic, solid, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN1935

Cyanides solutions, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Avoid contact with solids, dusts, or solutions. Wear chemical protective suit with SCBA. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. Do not allow this chemical to enter the environment. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include highly toxic and flammable hydrogen cyanide gas and oxides of nitrogen. Reacts with water releasing highly toxic and flammable hydrogen cyanide gas. NO hydrous agents. NO water. NO carbon dioxide. Use dry chemical and foam on surrounding fires. Vapors are heavier than air and may collect in low areas. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform to EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Add strong alkaline hypochlorite and react for 24 hours. Then flush to sewer with large volumes of water[22].

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)
United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as cyanides, inorganic, n.o.s.
United States DOT 49CFR172.101, Inhalation Hazardous Chemical
Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI; CEPA Priority Substance List, Ocean dumping prohibited.
Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.
Hazard symbols, risk, & safety statements: Hazard symbol: F+, T+, N; risk phrases: R5; R12; R21; R23; R36/37/38; R50/53; safety phrases: S1/2; S9; S16; S23; S33; S38; S41; S45; S60; S61 (see Appendix 4).
WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]
Description: Cyanogen is a colorless, flammable, compressed liquefied gas at room temperature. At deadly levels only, it has a pungent, almond-like odor. Molecular weight = 52.04; boiling point = −21°C; Relative density (gas) = 1.82; freezing/melting point = −28°C; vapor pressure = 5.1 atm @ 25°C; relative vapor density (air = 1) = 1.82. Explosive limits: LEL: 6.6%; UEL: 32.0%. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 4, reactivity 2 ₩. Soluble in water; solubility = 1%.
**Note:* The irritant properties of cyanogen have been tested using both human male and female subjects, 21−65 years of age. The distinctive bitter almond smell of cyanogen could not be detected at concentrations of 50, 100, and 250 ppm. When exposed to 8 ppm for 6 minutes or 16 ppm for 6−8 minutes, immediate eye and nose irritation occurred.
Potential Exposure: Cyanogen is currently used as an intermediate in organic syntheses; at one time, it was used in poison gas warfare.
Incompatibilities: Chemically unstable in rising temperatures. May form explosive mixture with air. Explosive reaction with strong oxidizers (e.g., dichlorine oxide, fluorine). Forms toxic gases on contact with acids, including hydrogen cyanide. Slowly hydrolyzed in water to form hydrogen cyanide, oxalic acid, and ammonia.
Permissible Exposure Limits in Air
Conversion factor: 1 ppm = 2.13 milligram per cubic meter @ 25°C & 1 atm
OSHA PEL: None
NIOSH REL: 10 ppm/20 milligram per cubic meter TWA; *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.
ACGIH TLV[1]: 5 ppm/10.6 milligram per cubic meter STEL, Ceiling Concentration.
PAC* Ver. 29[138]
PAC-1: **2.0**$_{\mathbf{A}}$ ppm
PAC-2: **8.3**$_{\mathbf{A}}$ ppm
PAC-3: **25**$_{\mathbf{A}}$ ppm
*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript “**A**” and correspond to 60-minute values.
DFG MAK: 5 ppm/11 milligram per cubic meter TWA; Peak Limitation Category II(2) [skin]; Pregnancy Group D
Arab Republic of Egypt: TWA 10 ppm (20 milligram per cubic meter), 1993; Australia: TWA 10 ppm (20 milligram per cubic meter), 1993; Austria: MAK 10 ppm (22 milligram per cubic meter) [skin], 1999; Belgium: TWA

10 ppm (21 milligram per cubic meter), 1993; Denmark: TWA 10 ppm (20 milligram per cubic meter), 1999; Finland: STEL 10 ppm (22 milligram per cubic meter) [skin], 1999; France: VME 2 ppm (4 milligram per cubic meter), VLE 10 ppm (20 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 20 milligram per cubic meter, 2003; Norway: TWA 10 ppm (22 milligram per cubic meter), 1999; Switzerland: MAK-W 10 ppm (22 milligram per cubic meter), KZG-W 50 ppm (110 milligram per cubic meter) [skin], 1999; United Kingdom: TWA 10 ppm (22 milligram per cubic meter), 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 10 ppm. Several states have set guidelines or standards for Cyanogen in ambient air[60] ranging from 66.7 μ/m^3 (New York) to 200 μ/m^3 (Florida and North Dakota) to 350 μ/m^3 (Virginia) to 400 μ/m^3 (Connecticut) to 476 μ/m^3 (Nevada) to 500 μ/m^3 (South Carolina).

Determination in Air: Use NIOSH Analytical Method #7904; #6010, cyanides.

Permissible Concentration in Water: Because nitriles do not release cyanide ions, they are generally less toxic.

Routes of Entry: Inhalation, passing through the skin; and eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Can be fatal if inhaled. A lacrimator (causing tearing). This chemical can be absorbed through the skin, thereby increasing exposure. Irritates eyes, nose, upper respiratory system. Skin contact with the liquid caused frostbite. Vision loss can occur following a high exposure. Cyanogen hydrolyzes to yield one molecule of hydrogen cyanide and one of cyanate; based on this, the toxic effects of $(CN)_2$ are thought to be comparable to HCN. The cyanide ion when released in the body causes a form of asphyxia by inhibiting many enzymes-especially those concerned with cellular respiration. Although the blood is saturated with oxygen, the tissues are not able to use it. Symptoms appear within a few seconds or minutes of ingesting or breathing vapors. Symptoms include cherry red lips, tachypnea, hypernea, bradycardia, headache, vertigo (an illusion of movement), convulsions, dizziness. The victims experience constriction of the chest, giddiness, confusion, headache, hypernea, palpitation, unconsciousness, convulsions; feeble and rapid respiration; and an extremely weak pulse. Death occurs within a few minutes after a large dose. LD_{50} (rat, inhalation) ≤ 400 ppm.

Long-Term Exposure: Enlargement of the thyroid gland. There is some Evidence that long-term exposure can cause damage to the nervous system. Victims experience loss of appetite; weight loss. See NIOSH Criteria Document 212 *Nitriles*.

Points of Attack: Eyes, respiratory system; central nervous system; cardiovascular system.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended: serum and urine thiocyanate levels. If symptoms develop or overexposure is suspected, the following may be useful: exam of the thyroid.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is advised for 24 to 48 hours. If frostbite has occurred, seek medical attention immediately; do NOT rub the affected areas or flush them with water. In order to prevent further tissue damage, do NOT attempt to remove frozen clothing from frostbitten areas. If frostbite has NOT occurred, immediately and thoroughly wash contaminated skin with soap and water.

If cyanide poisoning is suspected: Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1−2 years to ensure freshness. Persons trained in the use of this kit; oxygen use, and CPR must be quickly available.

Personal Protective Methods: Lower exposure can cause irritation of the eyes, nose, and throat. If these symptoms are noticed, immediately leave the work area. Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. *Clothing:* Avoid skin contact with cyanogen. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. *Eye Protection:* Wear air-tight gas-proof goggles, unless full facepiece respiratory protection is worn. See NIOSH Criteria Document 212 *Nitriles*.

Respirator Selection: Where there is potential exists for exposures *over 10* ppm; Use a NIOSH/MSHA or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA or European Standard EN149-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. This gas is highly toxic. Even slight exposure to these gasses can cause death. Store outdoors in a secure, restricted area that containing warning signs. This area must be roofed and shaded with the cylinders stored off the ground and separated from all other products assigned to other hazard categories and radiant heat sources on nonwooden floors. If indoors, store in a well-ventilated areas in temperatures not to exceed 50°C.(2) Color code—Red Stripe: Flammability Hazard: Store separately from all other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with cyanogen all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool well-ventilated area away from heat and light. Cyanogen must be stored to avoid contact with fluorine and oxygen, water or steam, acid or acid fumes, since violent reactions occur. Sources of ignition, such as smoking and open flames are prohibited where cyanogen is handled, used, or stored. Outside storage or storage in an area of noncombustible construction, is preferable. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Where cyanogen is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN1026 Cyanogen, Hazard Class: 2.3; Labels: 2.3-Poisonous gas, 2.1-Flammable gas, Inhalation Hazard Zone B. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling:

Cyanogen

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.3/0.5

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 1.0/1.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Stop the flow of gas if it can be done safely. If source of leak is a cylinder and the leak cannot be stopped in place, remove leaking cylinder to a safe place in the open air; repair leak or allow cylinder to empty. Keep cyanogen out of confined space, such as a sewer because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. It may be necessary to contain and dispose of cyanogen as a hazardous waste. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a highly flammable gas; it burns with a purple-tinged flame. Thermal decomposition products may include hydrogen cyanide. This gas is under pressure; containers may rupture and explode when heated. Stop the flow of gas if it can be done safely. *Do not use water.* Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier. Incineration; oxides, or nitrogen are removed from the effluent gas by scrubbers and/or thermal devices.

Hazard Alert: Poison inhalation hazard, Exposure may be lethal, Corrosive, Dangerous water reaction, United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): U246

RCRA, 40CFR261, Appendix 8 Hazardous Constituents

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 1000 lb (454 kg)

MARINE POLLUTANT (49CFR, Subchapter 172.10)

United States DOT 49CF R172.101, Inhalation Hazardous Chemical, dangerously water reactive, Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%; NPRI; CEPA Priority Substance List, Canada, Ocean dumping prohibited.

Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, C, N; risk phrases: R26/27/28; R29; R31; R34; R35; R36/37; R50/53; safety phrases: S7/9; S29/35; S28; S30; S36/37/39; S41; S45; S53; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cyanogen bromide is a colorless or white, volatile, crystalline solid with a penetrating odor. Molecular weight = 105.93; boiling point = 61−62°C; freezing/melting point = 52°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 1 ₩. Soluble in water; slow, dangerous reaction, releasing poisonous gas, hydrogen bromide.

Potential Exposure: Used as an activating reagent for insoluble supports for affinity absorption. In danger are those manufacturing this compound or using it in organic synthesis or as a fumigant; in textile treatment; in gold cyaniding. It may have been used as a military poison gas.

Incompatibilities: May be unstable unless dry and pure; impure cyanogen bromide decomposes rapidly and tends to explode. Cyanogen bromide decomposes violently on heating or on contact with water, acids, or acid vapors; producing highly toxic and flammable hydrogen cyanide and corrosive hydrogen bromide. Avoid physical damage, contact with acids or water, and store away from a location where water may be needed for fire control[101]. Violent reaction with ammonia, amines.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[CN]/m^3

PAC Ver. 29[138]

PAC-1: 24 milligram per cubic meter

PAC-2: 44 milligram per cubic meter

PAC-3: 200 milligram per cubic meter

*as cyanides, **inorganic***

OSHA PEL: 5 mg[CN]/m^3/4.7 ppm TWA

NIOSH REL: 5 mg[CN]/m^3/4.7 ppm/10 minutes, Ceiling Concentration

ACGIH TLV[1]: 5 mg[CN]/m^3 [skin] Ceiling Concentration

DFG MAK: 2 mg[CN]/m^3, inhalable fraction TWA; Peak Limitation Category II(1) [skin]; Pregnancy Risk Group: C.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 µg[CN]/L; State Drinking Water Standards: California 150 µg[CN]/L; State Drinking Water Guidelines: Arizona 220 µg[CN]/L; Maine. 140 µg[CN]/L; Minnesota 100 µg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg [CN]/L; Short-term consumption; Raw water constituents (maximum) 20 mg[CN]/L.

Routes of Entry: Inhalation, ingestion, skin absorption.

Harmful Effects and Symptoms

Short-Term Exposure: Cyanogen bromide's toxic action resembles that of hydrocyanic acid. Cyanogen bromide is corrosive to the eyes, skin, and respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Exposure may result in death. Super toxic; probable oral lethal dose in humans in less than 5 mg/kg or a taste (less than 7 drops) for a 70-kg (150 lb) person. Vapors are highly irritant and very poisonous. High concentrations produce excessive respiration (causing increased uptake of cyanide), then labored breathing, paralysis, unconsciousness, convulsions and respiratory arrest.

Headache, dizziness, nausea, and vomiting may occur with lesser concentrations.

Patients may experience confusion, anxiety, and an initial rise in blood pressure with a decreased heartbeat followed by an increased heartbeat; cyanosis is not a consistent finding, in fact, the patient may be reddish. An odor of bitter almonds on the patient's breath may be present. Individuals with chronic diseases of the kidneys; respiratory tract; skin, or thyroid are at greater risk of developing toxic cyanide effects.

Long-Term Exposure: Repeated or prolonged exposure to cyanogen bromide may cause thyroid gland enlargement. Chronic exposure may cause fatigue and weakness.

Points of Attack: Eyes, respiratory system; thyroid gland.

Medical Surveillance: Thyroid gland examination.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. Do not perform direct mouth to mouth resuscitation; use bag/mask apparatus. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Use amyl nitrate capsules if symptoms of cyanide poisoning develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1−2 years to ensure freshness. Persons trained in the use of this kit; oxygen use, and CPR must be quickly available.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is a potential for overexposure*: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Avoid p7hysical damage, contact with acids or water, and store away from a location where water may be needed for fire control[101]. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—White stripe: Contact Hazard; Store separately; not compatible with materials in solid white category. If dried over sodium, pure material may be stored in a desiccator for several months. Impure material decomposes and may explode. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from moisture, acids, ammonia, amines; and incompatible materials listed above.

Shipping: UN1889 Cyanogen bromide, Hazard class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material. A DOT regulated marine pollutant.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Protective clothing including impervious hand protection should be worn. Wear positive pressure breathing apparatus. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. *Small spills*: take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to cleanup spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen cyanide, hydrogen bromide, and oxides of nitrogen and carbon. This gas is under pressure; containers may rupture and explode when heated. Firefighting gear (including SCBA) does not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. If conditions permit, do not extinguish. Cool exposures using unattended monitors. (FEMA). If fire must be extinguished, use agent suitable for type of surrounding fire. Material itself does not burn or burns with difficulty. *Do not use water* on material itself. If large quantities of combustibles are involved, use water in flooding quantities as spray and fog.

Use water spray to absorb vapors. Keep material out of water sources and sewers. Use water spray to knock down vapors. Vapors are heavier than air and will collect in low areas. Wear full protective clothing. Avoid direct water contact as it will cause cyanogen bromide to decompose, releasing toxic gases. Avoid breathing vapors; keep upwind; wear SCBA. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: May be added to strong alkaline solution of calcium hypochlorite, let stand for 24 hours and flush to sewer. May also be dissolved in flammable solvent and sprayed into an incinerator equipped with afterburner and scrubber.

Hazard symbols, risk, & safety statements: Hazard symbol: T+, C; risk phrases: R5; R15; R19; R21; R26; R27/28; R29; R34; R39/23/24/25; R50/53; safety phrases: S1; S9; S13; S28; S33; S38; S41; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cyanogen chloride is a colorless gas or liquid (below 55°F/13°C) with a pungent, irritating odor. Shipped as a liquefied gas. A solid below—6°C. Molecular weight = 61.47; boiling point = 13.7°C; freezing/melting point = −6°C; vapor pressure = 1010 mmHg @ 20°C; relative vapor density (air = 1) = 2.16; flash point = 51°C. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity 3₩. Soluble in water; solubility = 7%. Cyanogen chloride (CK) reacts slowly with water or water vapor to form toxic hydrogen cyanide and hydrogen chloride.

Potential Exposure: Cyanaogen chloride is used as a fumigant, metal cleaner; in ore refining; production of synthetic rubber and in chemical synthesis. CK is used as a military poison gas (blood agent). It forms cyanide in the body.

Incompatibilities: CK is incompatible with; or, may react with most basic and acidic solvents. CK reacts slowly with water or water vapor forming toxic hydrogen cyanide and hydrogen chloride. Cyanogen chloride may polymerize violently if contaminated with chlorine. CK is unstable; it may be stabilized (i.e., inhibited) to prevent polymerization. In crude form CK trimerizes violently if catalyzed by traces of hydrogen chloride or ammonium chloride. Contact with alcohols, acids, acid salts; amines, strong alkalis; olefins, and strong oxidizers may cause fire and explosion. Heat causes decomposition producing toxic and corrosive fumes of hydrogen cyanide, hydrochloric acid, nitrogen oxides. Reacts slowly with water or water vapor, forming hydrogen chloride. Attacks copper, brass, and bronze in the presence of moisture.

Permissible Exposure Limits in Air

Emergency Response Planning Guidelines (DOE)

ER PG-1:inappropriate

ERPG-2: 0.4 ppm

ERPG-3: 4 ppm

DFG MAK: No numerical value established. Data may be available.

Australia: TWA 0.3 ppm (0.6 milligram per cubic meter), 1993; Belgium: STEL 0.3 ppm (0.75 milligram per cubic meter), 1993; Denmark: TWA 0.1 ppm (0.3 milligram per cubic meter), 1999; Finland: STEL 0.1 ppm (0.3 milligram per cubic meter) [skin] 1999; France: VLE 0.3 ppm (0.6 milligram per cubic meter), 1999; Norway: TWA 0.25 ppm (0.6 milligram per cubic meter), 1999; the Netherlands: MAC 0.6 milligram per cubic meter, 2003; Switzerland: MAK-W 0.3 ppm (0.8 milligram per cubic meter), 1999; United Kingdom: STEL 0.3 ppm (0.77 milligram per cubic meter), 2000: Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: Ceiling Concentration 0.3 ppm. Israel: STEL 0.3 ppm (0.6 milligram per cubic meter). Some states have set guidelines and standards for cyanogen chloride in ambient air[60] ranging from 5.0 μ/m^3 (Virginia) to 6.0 μ/m^3 (North Dakota) to 14.0 μ/m^3 (Nevada).

Determination in Air: No method available.

Routes of Entry: Inhalation, skin absorption (liquid); ingestion (liquid); skin and/or eye contact (liquid).

Harmful Effects and Symptoms

Short-Term Exposure: Cyanogen chloride is converted to cyanide in the body. A lacrimator. Cyanogen chloride severely irritates the eyes, skin, and respiratory tract. Inhalation can cause weakness, headache, giddiness, dizziness, confusion, nausea, vomiting; irregular heartbeat; and pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. Skin contact with the liquid may cause frostbite and irritation. The toxicity of cyanogen chloride resides very largely on its pharmacokinetic property of yielding readily to hydrocyanic acid in vivo. Inhaling small amounts of cyanogen chloride causes dizziness, weakness, congestion of the lungs; hoarseness, conjunctivitis, loss of appetite; weight loss; and mental deterioration. These effects are similar to those found from inhalation of cyanide. Ingestion or inhalation of a lethal dose of cyanogen chloride ($LD_{50} = 13$ mg/kg). Cyanide or other cyanogenic compounds causes dizziness; rapid respiration; vomiting, flushing, headache, drowsiness, drop in blood pressure; rapid pulse; unconsciousness, convulsions; with death occurring within 4 hours.

Points of Attack: Eyes, skin, respiratory system; central nervous system; cardiovascular system.

Medical Surveillance. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. EKG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy. If frostbite has occurred, seek medical attention immediately; do NOT rub the affected areas or flush them with water. In order to prevent further tissue damage, do NOT attempt to remove frozen clothing from frostbitten areas. If frostbite has NOT occurred, immediately and thoroughly wash contaminated skin with soap and water. *If cyanide poisoning is suspected*: Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1−2 years to ensure freshness. Persons trained in the use of this kit; oxygen use, and CPR must be quickly available.

Decontamination: CK is a gas at normal temperature; the liquid will quickly evaporate. When it mixes with water it forms hydrochloric acid. Since the more concentrated the acid, the more dangerous it is; consequently, the acid must be diluted as much as possible. Decontamination must be started quickly before it has time to do much damage. Extra minutes before decontamination can make a big difference. Although CK is a gas the victim can't spread the agent to others. But, if the victim is wet, or the victim's clothes are wet, hydrochloric acid may be spread to others outside the hot and warm zones. So, wash a victim thoroughly so that he can't spread the acid to others. If you don't have the equipment and training, don't enter the hot zone to rescue and decontaminate victims. If the victim can't move, decontaminate without touching and without entering the hot zone. Use clean water from any source; if possible, use a hose (spray or fog to prevent injury to the victim) or other system so that you won't have to touch the victim; don't even wait for soap or for the victim to remove clothing, begin washing immediately. Immediately flush the eyes with water for at least 15 minutes. Wash−strip−wash−evacuate upwind and uphill: The approach is to immediately wash with water, then have the victim (not the first responder) remove all the victim's clothing, then wash again (with soap if available). Subsequently move away from the hot zone in an upwind and uphill direction. *Don't use household or other bleach products* to decontaminate the victim. Wash the victim with warm water and soap. After decontamination, treat the acid burns as you would with burns from a fire. Decontaminate with water or with soap and water. Be sure you've decontaminated the victims as much as you can before they leave the area. If you get any of the acid on yourself, decontaminate immediately. Even if you think you are not contaminated, be sure to thoroughly shower and change clothes as soon as you can following the incident.

Person al Protective Methods:

General information: First responders should use a NIOSH-certified chemical, biological, radiological, nuclear (CBRN) SCBA with a level a protective suit when entering an area with an unknown contaminant or when entering an area where the concentration of the contaminant is unknown. Level a protection should be used until monitoring results confirm the contaminant and the concentration of the contaminant. *Note:* safe use of protective clothing and equipment requires specific skills developed through training and experience.

LEVEL A: (*RED ZONE*): Select when the greatest level of skin, respiratory, and eye protection is required. This is the maximum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than the AEG L-2. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A TECP suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, and a hard hat worn under the TECP suit are optional items.

LEVEL B: (RED ZONE): Select when the highest level of respiratory protection is necessary but a lesser level of skin protection is required. This is the minimum protection for workers in danger of exposure to unknown chemical hazards or levels above the IDLH or greater than AEGL-2. It differs from Level A in that it incorporates a nonencapsulating, splash-protective, chemical-resistant splash suit that provides Level A protection against liquids but is not airtight. A NIOSH-certified CBRN full-facepiece SCBA operated in a pressure-demand mode or a pressure-demand supplied air hose respirator with an auxiliary escape bottle. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL C: (YELLOW ZONE): Select when the contaminant and concentration of the contaminant are known and the respiratory protection criteria factors for using APRs or PAPRs are met. This level is appropriate when decontaminating patient/victims. A NIOSH-certified CBRN tight-fitting APR with a canister-type gas mask or CBRN PAPR for air levels greater than AEGL-2. A NIOSH-certified CBRN PAPR with a loose-fitting facepiece, hood, or helmet and a filter or a combination organic vapor, acid gas, and particulate cartridge/filter combination or a continuous flow respirator for air levels greater than AEG L-1. A hooded chemical-resistant suit that provides protection against CBRN agents. Chemical-resistant gloves (outer). Chemical-resistant gloves (inner). Chemical-resistant boots with a steel toe and shank. Escape mask, face shield, coveralls, long underwear, a hard hat worn under the chemical-resistant suit, and chemical-resistant disposable boot-covers worn over the chemical-resistant suit are optional items.

LEVEL D: (GREEN ZONE): Select when the contaminant and concentration of the contaminant are known and the concentration is below the appropriate occupational exposure limit or less than AEG L-1 for the stated du ration times. Limited to coveralls or other work clothes, boots, and gloves.

Notes: Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid. NIOSH recommends: **4 hours** (At least 4 but <8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): Teflon gloves, suits, boots. Safety equipment suppliers/

manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *When used as a weapon, use SCBA Respirator Certified By NIOSH For CBRN Environments. Where there is a potential for overexposure*: SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. Poison gas. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. This gas is highly toxic. Even slight exposure to these gasses can cause death. Store outdoors in a secure, restricted area that containing warning signs. This area must be roofed and shaded with the cylinders stored off the ground and separated from all other products assigned to other hazard categories and radiant heat sources on nonwooden floors. If indoors, store in a well-ventilated areas in temperatures not to exceed 50°C. (2) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location; keep acids away from bases and red, yellow, and blue-coded chemicals. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area Provide ventilation along the floor as the vapors are heavier than air. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN1589 Cyanogen chloride, stabilized, Hazard Class: 2.3; Labels: 2.3-Poisonous gas, 8-Corrosive material Inhalation Hazard Zone A. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner. Military driver shall be given full and complete information regarding shipment and conditions in case of emergency. AR 50-6 deals specifically with the shipment of chemical agents. Shipments of agent will be escorted in accordance with AR 740-32.

Spill Handling:

UN 2810 Toxic liquids, organic, n.o.s.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.7/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 1000/300
Then: Protect persons downwind (mi/km)
Day 1.1/1.8
Night 2.8/4.5

CK, when used as a weapon

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 500/60
Then: Protect persons downwind (mi/km)
Day 0.6/0.9
Night 2.4/3.8

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 2500/800
Then: Protect persons downwind (mi/km)
Day 3.6/5.8
Night 7.0 + /11.0 + *

* + means distance can be larger in certain atmospheric conditions.

cyanogen chloride, stabilized

First: Isolate in all directions (ft/m) 300/100
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.9/1.5

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 1250/400
Then: Protect persons downwind (mi/km)
Day 2.0/3.2
Night 4.3/6.8

If in a building, evacuate building and confine vapors by closing doors and shutting down HV AC systems. Restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit and to disperse the gas. Wear chemical protective suit with SCBA to combat spills. Stay upwind and use water spray to "knock down" vapor; contain runoff. Stop the flow of gas, if it can be done safely from a distance. If source is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place; and repair leak or allow cylinder to empty. Keep this chemical out of confined spaces, such as a sewer, because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include phosgene, hydrogen cyanide, hydrogen chloride, and oxides of nitrogen and carbon. Containers may explode when heated or if they are contaminated with water. Containers may rocket. Firefighting gear (including SCBA) does not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Let it burn! Cyanogen chloride will not burn, but getting close to put out a fire surrounding a broken CK container is very dangerous. Use an unattended fire monitor to "knock down" the cyanogen chloride gas, and remain aware that the water that falls to the ground becomes acidic, and may be concentrated and dangerous. Stay away from it! *Containers:* Cyanogen chloride can't burn, but the container can explode if heated by the surrounding fire, so you should evacuate immediately. If a container of cyanogen chloride is near a fire, use water hoses (use an unmanned fire monitor if possible to reduce the danger to you) to cool the container so it won't explode. Since the container can explode even if you are trying to keep it cool, evacuate the area. firefighting risks: The cyanogen chloride gas and the hydrochloric acid (HCl) formed when the gas mixes with firefighting water are both dangerous, so one could easily get injured or killed fighting a fire. That's why, it's best to let the surrounding fire burn out. However, if there is some reason that you have to put out the fire, do it from a secure, explosion-proof location; use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Use the firefighting method that's best for what's burning. But first think it through—do you really have to fight this fire? Heat causes decomposition, producing toxic and corrosive fumes of hydrogen cyanide, hydrogen chloride, nitrogen oxides. Cyanogen chloride is a gas that moves downwind and downhill; it's diluted by the wind. It is heavier than air which means that it sticks together longer than if it were lighter than air. Stay upwind from a spill. It will dissolve in water, so spraying water into the cloud from an unmanned fire monitor will help react it with water as well as mix it with the air and get rid of it. But remember the water will be full of HCl. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier. React with strong calcium hypochlorite solution for 24 hours, then flush to sewer with large volumes of water.

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cyanogen iodide is a combustible, white crystalline solid. Very pungent odor. Molecular weight = 152.92; specific gravity (H_2O:1) = 1.84; freezing/melting point = 146.5°C; vapor pressure = 1 mmHg @ 25.2°C. Explosive limits: LEL: 6000 ppm; UEL: unknown. Hazard identification (based on NFPA-704 M Rating System): Health 4, flammability 0, reactivity ₩. Soluble in water; slow reaction releasing deadly hydrogen cyanide gas.

Potential Exposure: A psudohalogen compound used as a preservative in taxidermy. Generally used for destroying all lower forms of life.

Incompatibilities: Reacts slowly with water releasing hydrogen cyanide. Incompatible with phosphorus (molten); reacts with incandescence to produce phosphorus iodide[NFPA, cameo]. Contact with alcohols, acids, ammonia, carbon dioxide or alkaline material and bases produces toxic gases including hydrogen cyanide. Incompatible with nitriles.

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[CN]/m^3

as iodides

ACGIH TLV[1]: 0.01 ppm/0.1 milligram per cubic meter, inhalable fraction and vapor, TWA

as cyanides

OSHA PEL: 5 mg[CN]/m^3/4.7 ppm TWA

NIOSH REL: 5 mg[CN]/m^3/4.7 ppm/10 minutes, Ceiling Concentration

ACGIH TLV[1]: 5 mg[CN]/m^3 [skin] Ceiling Concentration

PAC Ver. 29[138]

PAC-1: 35 milligram per cubic meter

PAC-2: 180 milligram per cubic meter

PAC-3: 290 milligram per cubic meter

DFG MAK: 2 mg[CN]/m^3, inhalable fraction TWA; Peak Limitation Category II(1) [skin]; Pregnancy Risk Group: C

Skin contact may contribute significantly in overall exposure.

Determination in Air: Use NIOSH Analytical Method #7904; #6010, cyanides.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 μg[CN]/L; State Drinking Water Standards: California 150 μg[CN]/L; State Drinking Water Guidelines: Arizona 220 μg[CN]/L; Maine. 140 μg[CN]/L; Minnesota 100 μg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg[CN]/L; Short-term consumption; Raw water constituents (maximum) 20 mg[CN]/L.

Routes of Entry: Ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: Highly irritating to eyes and skin; may cause burns. Converted to cyanide in the body. Causes convulsions, paralysis, and death from respiratory failure. Poisonous, may be fatal if swallowed or absorbed through skin. Health effects are similar to cyanides and iodides. Upon ingestion, a bitter, acrid, burning taste is sometimes noted. Other symptoms are anxiety, confusion, dizziness, giddiness, rapid and difficult breathing; palpitations, tightness in chest; unconsciousness; violent convulsions and death.

Long-Term Exposure: Long-term contact with iodides can cause weakness, anemia, loss of appetite; loss of weight; and general depression.

Points of Attack: Blood.

Medical Surveillance: EKG, blood cyanide level.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; keep victim under observation. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1−2 years to ensure freshness. Persons trained in the use of this kit; oxygen use, and CPR must be quickly available.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: W*here there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cyanogen iodide all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Refrigerate at (approx.) 4°C. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2928 Toxic solids, corrosive, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material, Technical Name Required. UN3290 Toxic solid, corrosive, inorganic, n.o.s., Hazard class: 6.1; Labels: 6.1-Poisonous materials, 8-Corrosive material. UN1588 Cyanides, inorganic, solid, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: If outside, cover material to protect from wind, rain, or spray. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen ioside, hydrogen cyanide, and oxides of nitrogen and carbon. Firefighting gear (including SCBA) does not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. This chemical is a combustible solid. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. Keep unnecessary people away; isolate hazard area and deny entry. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Wear positive pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Thermal decomposition products may include cyanide gas, iodide gas, and nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

United States DOT 49CFR172.101, Inhalation Hazardous Chemical, as organic phosphate, Substance ID: EDF-041

NPRI; CEPA Priority Substance List, Ocean dumping prohibited.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N; risk phrases: R21/22; R33; R50/53; safety phrases: S2; S36/37; S41; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to waters (est.)]

Description: Cyanophos is a yellow to reddish-yellow or amber liquid. Molecular weight = 243.23; boiling point = 119°C (decomposes); freezing/melting point = 14.8°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 0, reactivity 0. Slightly soluble in water.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, and application of this insecticide which is used against rice stem borers and house flies. It is not registered as a pesticide in the United States.

Incompatibilities: Alkaline materials and exposure to light can cause rapid decomposition. Contact with oxidizers may cause the release of phosphorous oxides. Contact with strong reducing agents, such as hydrides, may cause the formation of flammable and toxic phosphine gas.

Permissible Exposure Limits in Air

NIOSH REL: (nitriles) 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

PAC Ver. 29[138]

PAC-1: 2.3 milligram per cubic meter

PAC-2: 25 milligram per cubic meter

PAC-3: 130 milligram per cubic meter

Determination in Air: Filter/Bubbler; Potassium hydroxide; Ion-specific electrode; NIOSH Analytical Method (IV) #7904, Cyanides. OSHA versatile sampler-2; Toluene/Acetone; GC/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method (IV) Method #5600, Organophosphorus Pesticides. See also NIOSH Criteria Document 212 *Nitriles*.

Routes of Entry: Inhalation, ingestion, skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: Cyanophos is an organophosphorus insecticide. It is a cholinesterase inhibitor. Death may occur after a large oral dose; with smaller accidental doses, onset of illness may be delayed. The LD_{50} oral (rat) is 25 mg/kg (highly toxic). Symptoms of organophosphorus pesticide poisoning include: headache, giddiness, nervousness, blurred vision; weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include: sweating, pinpoint pupils; tearing; salivation and other excessive respiratory tract secretion; vomiting, cyanosis, papilledema; uncontrollable muscle twitches followed by muscular weakness, convulsions; coma; loss of sphincter control.

Long-Term Exposure: Cholinesterase inhibitor; possible cumulative effect. Cyanophos may damage the nervous system; resulting in convulsions, respiratory failure. May cause liver damage. See NIOSH Criteria Document 212 *Nitriles*.

Points of Attack: Respiratory system; central nervous system; peripheral nervous system; plasma cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When Cholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC. Consider chest X-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organic phosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Speed in removing material from skin is of extreme importance. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; keep victim under observation.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH also Criteria Document 212 *Nitriles*.

Respirator Selection: W*here there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Cyanophos is stable to storage for

2 years or more under normal conditions. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3278 Organophosphorus compound, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Hazard Technical Name Required, Potential Inhalation Hazard (Special Provision 5). UN3018 Organophosphorus pesticides, liquid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling:

Organophosphorus spill, liquid

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.4
Night 0.8/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 600/200
Then: Protect persons downwind (mi/km)
Day 1.4/2.3
Night 2.8/4.5

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Do not touch spilled material. Do not breathe vapors. Stay upwind; keep out of low areas. Remove all ignition sources. Ventilate area of spill or leak. This material is a combustible liquid. For a spill or leak of a combustible liquid, shut off ignition sources; no flares, smoking, or flames in hazard area. Stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. This material may burn, but does not ignite readily. For small fires, use dry chemical, carbon dioxide; water spray; or foam. For large fires, use water spray, fog, or foam. Stay upwind; keep out of low areas. Move container from fire area if you can do it without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. Wear positive pressure breathing apparatus and special protective clothing. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165 recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

United States Environmental Protection Agency, Chemical Hazard Information Profile: Cyanophos, Washington, DC, Chemical Emergency Preparedness Program (November 30, 1987).

New Jersey Department of Health and Senior Services, *Hazardous Substances Fact Sheet:* Cyanophos, #2304, Trenton, NJ (March 2004).

Cyanopyridines C:1650

Formula: $C_6H_4N_2$; $C_5H_4N\text{-}CN$

Synonyms: *2-cyano-isomer:* Picolinic acid nitrile; 2-Pyridinecarbo nitrile

3-cyano-isomer: 3-Azabenzonitrile; 3-Cyanopyridine; Nicotinic acid nitrile; Nicotinonitrile; 3-Pyridinecarbonitrile; 3-Pyridinenitrile; 3-Pyridylcarbonitrile

4-cyano-isomer: 4-Azabenzonitrile; Isonicotino nitrile; 4-Pyridine carbonitrile

CAS Registry Number: 100-70-9 (2-cyano-); 100-54-9 (3-cyano-); 100-48-1 (4-cyano-)

HSDB Number: 5338 (2-cyano-); 5335 (3-cyano-)

RTECS Number: QT3030000 (3-cyano-)

UN/NA & ERG Number: UN3276 (nitriles, toxic, n.o.s.)/151

EC Number: 202-880-3 (2-cyano-); 202-863-0 (3-cyano-); 202-865-2 (4-cyano-)

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Highly flammable, Possible polymerization hazard (nitriles), Environmental hazard.

As cyanide compounds:

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: 40CFR423, Appendix A, Priority Pollutants as cyanide, total

United States Environmental Protection Agency Hazardous Waste Number (RCRA No.): P030 as cyanides soluble salts and complexes, n.o.s.

RCRA, 40CFR261, Appendix 8 Hazardous Constituents. as cyanides, soluble salts and complexes, n.o.s.

EPCRA (Section 313): X + CN-where X = H + or any other group where a formal dissociation may occur. For example, KCN or Ca(CN)2. Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, append ix B) as cyanide mixtures, cyanide solutions or cyanides, inorganic, n.o.s.

Hazard symbols, risk, & safety statements: Hazard symbol: F, Xn; risk phrases: R11; R19; R20/21/22; R36/37/38; safety phrases: S24/25; S26; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: The cyanopyridines are as follows: *2-cyano-:* A white to tan liquid or solid. Almond odor. Boiling point = −213°C; freezing/melting point = 27°C; flash point = 89°C. *3-cyano-*: a colorless liquid or gray crystalline solid. Molecular weight = 104.12; boiling point = 83 to 84°C; freezing/melting point = 47−49°C. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 3, reactivity 0. Soluble in water. *4-cyano-*: a beige solid. freezing/melting point = 75.8°C.

Potential Exposure: The cyanopyridines are used in the synthesis of organic compounds and as corrosion inhibitors for aluminum.

Incompatibilities: Oxidizing agents, such as perchlorates, peroxides, and permanganates. Nitriles may polymerize in the presence of metals and some metal compounds. They are incompatible with acids; mixing nitriles with strong oxidizing acids can lead to extremely violent reactions. Nitriles are generally incompatible with other oxidizing agents such as peroxides and epoxides. The combination of bases and nitriles can produce hydrogen cyanide. Nitriles are hydrolyzed in both aqueous acid and base to give carboxylic acids (or salts of carboxylic acids). These reactions generate heat. Peroxides convert nitriles to amides. Nitriles can react vigorously with reducing agents. Acetonitrile and propionitrile are soluble in water, but nitriles higher than propionitrile have low aqueous solubility. They are also insoluble in aqueous acids[101].

Permissible Exposure Limits in Air

NIOSH IDLH = 25 mg[CN]/m^3

NIOSH REL: (nitriles) 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 μg[CN]/L; State Drinking Water Standards: California 150 μg[CN]/L; State Drinking Water Guidelines: Arizona 220 μg[CN]/L; Maine. 140 μg[CN]/L; Minnesota 100 μg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg[CN]/L; Short-term consumption; Raw water constituents (maximum) 20 mg[CN]/L.

Harmful Effects and Symptoms

Short-Term Exposure: *Inhalation:* May cause irritation to the nose and throat. *Skin:* May cause irritation. *Eyes:* May cause irritation. Animal data suggests eye damage can result from contact. *Ingestion:* Possible central nervous system damage due to cyanide content.

Long-Term Exposure: No information found. The LD_{50} oral-rat for 3-cyanopiridines is 1105 mg/kg (slightly toxic).

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. See NIOSH Criteria Document 212 *Nitriles.*

Respirator Selection: Wear a chemical cartridge respirator with organic vapor or organic vapor/acid gas cartridges, if necessary.

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from heat or flame and separate from oxidizing materials.

Shipping: UN3276 Nitriles, liquid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required, Potential Inhalation Hazard (Special Provision 5).

Spill Handling:

Nitriles spill

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Wash area of spill with soap and water. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Cyclanilide C:1663

Formula: $C_{11}H_9Cl_2NO_3$

Synonyms: Cyclopropanecarboxylic acid, 1-[((2,4-dichlorophenyl)amino)carbonyl]-; Cyclopropanecarboxamide, 1-carboxy-, *N*-(2,4-dichlorophenyl)-; 1-(2,4-Dichlorophenylaminocarbonyl) cyclopropanecarboxylic acid; EXP 31039B; Finish; RPA 90946

CAS Registry Number: 113136-77-9

HSDB Number: 7018

RTECS Number: Not found.

UN/NA & ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154

EC Number: 419-150-7 [*Annex I Index No.:* 616-110-00-2]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA: Not likely a carcinogen to humans.

Hazard Alert: Poison, Environmental hazard.

Marine pollutant, IMDG

Hazardous to aquatic life or environment, with possible long-lasting effects[293]. Toxic to aquatic life with long-lasting effects. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn, N; risk phrases: R22; R51/R53; safety phrases: S2; S29/35; S36/37/39; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: A white or pale yellow, crystalline or powdery solid. No characteristic odor. Molecular weight = 274.10; specific gravity (H_2O:1) = 1.65; boiling point = -510°C; specific gravity (H_2O:1) = 1.47; freezing/melting point = 195.5°C; 190°C; vapor pressure = 84×10^{-2} @25°C; flash point = ~260°C. Low solubility in water; solubility = .0.05 g/L.

Potential Exposure: Cyclanilide, amalonanilate plant growth regulator and fungicide is used as a cotton harvest aid

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Keep away from reducing agents, oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water, and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, sulfides (releasing heat, toxic, and possibly flammable gases), thiosulfates, and dithionites (releasing hydrogen sulfate and oxides of sulfur).

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: Hazardous to the aquatic environment. Do not allow release to the environment unless proper permits are obtained from the federal government.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = > 3$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 315 mg/kg[72].

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a drug or other inhalation therapy. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[72]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Cyanophos is stable to storage for 2 years or more under normal conditions. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. First, remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use water spray, dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165 recommendations for the disposal of pesticides and pesticide containers. noncombustible containers should be crushed and buried under more than 40 cm of soil[30]. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Regulatory Authority and Advisory Information

California Proposition 65 Chemical[102]: Developmental/Reproductive toxin, 3/19/1999.

Hazard Alert: Suspected reprotoxic hazard, Agricultural chemical.

Potential Ground water Pollutant [California FAC Section 13145(d)/12811, active]

RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn, N; risk phrases: R22; R51/53; R62; R63; safety phrases: S29/35; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Cycolate is an oily, clear, or amber to yellow liquid. Aromatic odor; molecular weight = 215.36; specific gravity (H_2O:1) = 1.0 @ 20°C; boiling point = 145−146°C @ 10 mmHg; freezing/melting point = 12°C; vapor pressure = 1.6×10^{-3} mmHg @ 20°C. Flash point = 100°C; 139 C (oc); moderately soluble in water; solubility = 75−100 mg/L.

Potential Exposure: Cycolate is a thiocarbamate herbicide used to control broad leaf weeds, annual and perennial grasses and nutgrass in spinach, beets, and sugar beets.

Incompatibilities: Cycolate reacts violently with powerful oxidizers such as calcium hypochlorite. Thiocarbamate esters are combustible. Poisonous gases are generated by the thermal decomposition of thiocarbamate compounds, including carbon disulfide, oxides of sulfur, oxides of nitrogen, hydrogen sulfide, ammonia, and methylamine. Thio and dithiocarbamates slowly decompose in aqueous solution to form carbon disulfide and methylamine or other amines. Such decompositions are accelerated by acids. Flammable gases are generated by the combination of thiocarbamates with aldehydes, nitrides, and hydrides. Thiocarbamates are incompatible with acids, peroxides, and acid halides.

Determination in Water: Octanol−water coefficient: Log K_{ow} = > 3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Very low—658.46663 ppb, MATC.

Routes of Entry: Poisoning can occur by inhalation, ingestion, and absorption through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough syrups. Low toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heartbeat. Severe exposure may result in death. LD_{50} (oral, rat) = 1700 mg/kg; LD_{50} (dermal, rat) ≥ 2500 mg/kg.

Long-Term Exposure: Human toxicity (long term)[101]: Intermediate—35.00 ppb, Health advisory.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of Central nervous system, liver, heart, kidneys, lung, and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin, and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a drug or other inhalation therapy. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider CBC and chest X-ray following acute overexposure. Examination of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated.

First Aid: Eyes: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 oz of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a drug or other inhalation therapy. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any MSHA/NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter) or SCBAE (any appropriate escape-type, SCBA). All respirators selected must be approved by NIOSH under the provisions of 42 CFR84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH website.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Cyanophos is stable to storage for 2 years or more under normal conditions. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3082 Environmentally Hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 400.

Fire Extinguishing: A combustible liquid. Thermal decomposition products may include oxides of sulfur, nitrogen, and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA

1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Cycasin C:1660

Formula: $C_8H_{16}N_2O_8$

Synonyms: β-D-Glucopyranoside (methyl-ONN-azoxy) methyl-; Side methylazoxymethanol β-D-glucoside

CAS Registry Number: 14901-08-7

HSDB Number: 5096

RTECS Number: LZ5982000

UN/NA & ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154

Regulatory Authority and Advisory Information

Carcinogenicity: IARC: Animal Sufficient Evidence; Human Inadequate Evidence, *possibly carcinogenic to humans*, Group 2B, 1976[9]

California Proposition 65 Chemical[102]: Cancer 1/1/1988.

Hazard Alert: Poison, Combustible, Neurotoxin, Possible risk of forming tumors, Suspected of causing genetic defects Suspected reprotoxic hazard.

Hazardous Waste (EPA-RCRA) Hazardous Constituent Waste (EPA)

Hazard symbols, risk, & safety statements: Hazard symbol: T; risk phrases: R40; R62; R63; safety phrases: S13; S22; S36/37/39; S41; S45; S53 (see Appendix 4)

Description: Cycasin is a crystalline solid with long needles. Molecular weight = 252.08; freezing/melting point = (decomposes) 154°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 0.

Incompatibilities: Material hydrolyzed under alkaline conditions[IARC, 193].

Potential Exposure: Cycasin occurs naturally, in the seeds, roots, and leaves of cycad plants which are found in the tropical and subtropical regions of the world. Nuts from the cycads are used to make chips, flour, and starch. Cycasin is not produced or used commercially. The major potential Exposure is the ingestion of the foods containing cycasin. It is estimated that about 50−55% of the inhabitants of Guam are potentially exposed (50,000−60,000 persons) to cycasin. Wastewater from the preparation of the cycad nuts contain large amounts of cycasin and represents a potential secondary exposure source.

Permissible Exposure Limits in Air

No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

North Dakota[60] has set a guideline for cycasin in ambient air of zero.

Harmful Effects and Symptoms

Cycasin is carcinogenic in five animal species, inducing tumors in various organs. Following oral exposure, it is carcinogenic in the rat, hamster, guinea pig, and fish. By this route, the data in the mouse is of borderline significance and the negative experiment in chickens only lasted 68 weeks. It is active in single-dose experiments and following prenatal exposure. The carcinogenicity of its metabolite, methylazoxymethanol, has been demonstrated in the rat and the hamster, and that of a closely related synthetic substance, methylazoxymethanol acetate. In the rat. LD_{50} (oral-rat) = 270 mg/kg (moderately toxic).

Short-Term Exposure: Poisonous; a neurotoxin. May cause eye damage.

Long-Term Exposure: A possible human carcinogen. Laboratory tests on animals suggest this chemical is a teratogen; mutation data has been reported. May cause liver and brain damage.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, Avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with cycasin all handlers should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Disposal of unused product must be undertaken by qualified personnel who are knowledgeable in all applicable regulations and follow all pertinent safety precautions including the use of appropriate protective equipment. For proper handling and disposal, always comply with federal, state, and local regulations. At the time of review, criteria for land treatment or burial (sanitary landfill) disposal practices are subject to significant revision. Prior to implementing land disposal of waste residue (including waste sludge), consult with environmental regulatory agencies for guidance on acceptable disposal practices[72].

Cycloheptene C:1670

Formula: C_7H_{12}

***Synonyms*:** cis-Cycloheptene; Suberane; Suberylene

CAS Registry Number: 628-92-2

RTECS Number: GU4615000

UN/NA & ERG Number: UN2242/128 (P)

EC Number: 211-060-4

Regulatory Authority and Advisory Information

Hazard Alert: Highly flammable liquid. Polymerization hazard, Inhalation hazard (possible narcotic effect); Electrostatic hazard.

Hazard symbols, risk, & safety statements: Hazard symbol: F; risk phrases: R11; R18; R19; R21; safety phrases: S16; S29; S33; S45 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cyclo heptene is a flammable, colorless, oily liquid. Molecular weight = 96.2; boiling point = 115°C; flash point = −7°C (also listed @ 23°C). Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 3, reactivity 0. Insoluble in water.

Potential Exposure: Cycloheptene may be used in organic synthesis or for making other chemicals.

Incompatibilities: Vapors may form explosive mixture with air. Cycloheptene may react exothermically with reducing agents to release hydrogen gas. In the presence of various catalysts (such as acids) or initiators, may undergo exothermic addition polymerization reactions[101]. Incompatible with strong oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

No standards or PAC available.

Routes of Entry: Inhalation, passing through the skin.

Harmful Effects and Symptoms

Short-Term Exposure: Cycloheptene can affect you when breathed in and by passing through your skin. Exposure can cause you to feel dizzy, lightheaded and to pass out. Inhalation may have a narcotic effect[101]. Contact can irritate the skin.

Long-Term Exposure: May cause drying and cracking of the skin.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a dermatologist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: *Clothing:* Avoid skin contact with cycloheptene. Wear solvent-resistant gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day and put on before work. *Eye Protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn.

Respirator Selection: Where there is potential exists for exposures to cycloheptene, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Cycloheptene must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. store in tightly closed containers in a cool, well-ventilated area. Sources of ignition, such as smoking and open flames, are prohibited where cycloheptene is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gal or more of cycloheptene should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of cycloheptene. Wherever cycloheptene is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN2242 Cycloheptene, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep cycloheptene out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for

firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: Cyclohexane is a colorless liquid with a mild, sweet odor. Molecular weight = 84.16; specific gravity (H_2O:1) = 0.774; boiling point = 81°C; freezing/melting point = 6.6°C; vapor pressure = 75 mmHg @ 19.3°C; flash point = −20°C (cc); autoignition temperature = 260°C. The explosive limits are: LEL: 1.3%; UEL: 8.4%. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 3, reactivity 0. Insoluble in water.

Potential Exposure: Cyclohexane is used as a chemical intermediate; as a solvent for fats, oils, waxes, resins, certain synthetic rubbers; and as an extractant of essential oils in the perfume industry.

Incompatibilities: May form explosive mixture with air. Contact with oxidizers, nitrogen dioxide, and oxygen can cause fire and explosion hazard. Can explode in heat when mixed with dinitrogen tetraoxide liquid.

Permissible Exposure Limits in Air

NIOSH IDLH = 1300 ppm [LEL]

Conversion factor: 1 ppm = 3.44 milligram per cubic meter @ 25°C & 1 atm

Odor threshold = 0.16 ppm.

OSHA PEL: 300 ppm/1050 milligram per cubic meter TWA

NIOSH REL: 300 ppm/1050 milligram per cubic meter TWA

ACGIH TLV[1]: 300 ppm/344 milligram per cubic meter TWA

PAC Ver. 29[138]

PAC-1: 300 ppm

PAC-2: 1700 ppm

PAC-3: 10,000 ppm

DFG MAK: 200 ppm/700 milligram per cubic meter TWA; Peak Limitation Category II(4); Pregnancy Risk Group D

Australia: TWA 300 ppm (1050 milligram per cubic meter), 1993; Austria: MAK 300 ppm (1050 milligram per cubic meter), 1999; Belgium: TWA 300 ppm (1030 milligram per cubic meter), 1993; Denmark: TWA 200 ppm (690 milligram per cubic meter), 1999; Finland: TWA 300 ppm (1050 milligram per cubic meter); STEL 375 ppm (1315 milligram per cubic meter), 1999; France: VME 300 ppm (1050 milligram per cubic meter), VLE 375 ppm (1300 milligram per cubic meter), 1999; Hungary: TWA 500 milligram per cubic meter; STEL 1000 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 875 milligram per cubic meter, 2003; Norway: TWA 150 ppm (525 milligram per cubic meter), 1999; Poland: MAC (TWA) 300 milligram per cubic meter, MAC (STEL) 1000 milligram per cubic meter, 1999; Russia: TWA 150 ppm; STEL 80 milligram per cubic meter, 1993; Sweden: NGV 300 ppm (1000 milligram per cubic meter), KTV 370 ppm (1300 milligram per cubic meter), 1999; Switzerland: MAK-W 300 ppm (1050 milligram per cubic meter), KZG-W 600 ppm (2100 milligram per cubic meter), 1999; Turkey: TWA 300 ppm (1050 milligram per cubic meter), 1993; United Kingdom: TWA 100 ppm (350 milligram per cubic meter); STEL 300 ppm, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 100 ppm. Several states have set guidelines or standards for cyclohexane in ambient air[60] ranging from 1.4 milligram per cubic meter (Massachusetts) to 10.5−13.0 milligram per cubic meter (North Dakota) to 17.0 milligram per cubic meter (Virginia) to 21.0 milligram per cubic meter (Connecticut, Florida and New York) to 25.0 milligram per cubic meter (Nevada).

Determination in Air: Use NIOSH Analytical Method #1500 for Hydrocarbons, BP 36-126°C; OSHA Analytical Method 7.

Permissible Concentration in Water: Russia[43] set a MAC of 0.1 mg/L in water bodies used for domestic purposes and 0.01 mg/L in water bodies used for fishery purposes.

Determination in Water: No Method listed. Octanol−water coefficient: Log $K_{\text{ow}} = > 3.4$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: High concentrations (300 ppm): irritates eyes, nose, and respiratory tract. Inhalation of high concentration (300 ppm) may cause irritation of the eyes, nose, and throat. Higher concentrations may act as a narcotic resulting in dizziness, nausea, vomiting, or loss of consciousness. Levels of 1800 ppm can cause death. Vapor or liquid may cause skin irritation. This chemical destroys the skin's natural oils. If allowed to remain in contact with skin, may cause cracking, drying, chapping, smarting, and reddening. Ingestion of the liquid may cause aspiration into the lungs and chemical pneumonia. Animal studies suggest a lethal dose between 1 oz and 1 pt for an adult. Exposure to high levels can cause nausea, dizziness, lightheadedness, and drowsiness. Unconsciousness and death may occur at levels far above the occupational exposure limit. Alcohol synergistically increases the toxic effects of cyclohexane.

Long-Term Exposure: Prolonged or repeated exposure may cause skin drying, rash, and dermatitis. May cause damage to the liver, kidneys, brain, heart, and circulatory system.

Points of Attack: Eyes, respiratory system; central nervous system; skin.

Medical Surveillance: Consider possible irritant effects to the skin and respiratory tract in any preplacement or periodic examination, as well as any renal or liver complications. NIOSH lists the following tests: whole blood (chemical/metabolite); whole blood (chemical/metabolite); during exposure, expired air, expired air: during exposure; urine (chemical/metabolite); urine (chemical/metabolite) End-of-shift; urine (chemical/metabolite) Last 4 Hours of 8-Hour Exposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Do not induce vomiting.

Personal Protective Methods: Wear appropriate clothing to prevent repeated or prolonged skin contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): nitrile rubber gloves, suits, boots; Viton gloves, suits; 4H and Silver Shield gloves; Barricade-coated suits; Responder suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): polyvinyl alcohol gloves; Teflon gloves, suits, boots. Wear eye protection to prevent any reasonable probability of eye contact. Employees should wash promptly when skin is wet or contaminated. Remove clothing immediately if wet or contaminated to avoid flammability hazard.

Respirator Selection: *1000 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge (s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance causes eye irritation or damage; eye protection needed; shield, hydrocarbon-insoluble rubber, or plastic apron.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with cyclohexane all handlers should be trained on its proper handling and storage. Before entering confine d space where cyclohexane may be present, check to make sure that an explosive concentration does not exist. Cyclohexane must be stored to avoid contact with oxidizers (such as perchlorates, peroxides, permanganates, chlorates, and nitrates), since violent reactions occur. Store in tightly closed containers in a cool well-ventilated area away from heat. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever cyclohexane is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN1145 Cyclohexane, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a highly flammable liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Regulatory Authority and Advisory Information

California Proposition 65 Chemical[102]: developmental, male, *delisted 1/25/2002.*

Hazard Alert: Flammable, Suspected reprotoxic hazard, Suspected of causing genetic defects, Hormone, Primary irritant (w/o allergic reaction).

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: F, Xn; risk phrases: R10; R20/22-R37/38; R61; safety phrases: S2; S24/25. WGK (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cyclohexanol is a sticky solid (above 25°C/77°F) or colorless, viscous liquid. Faint camphor odor. Molecular weight = 100.16; specific gravity (H_2O:1) = 0.95 @ 25°C; boiling point = 161°C; freezing/melting point = 24°C; vapor pressure = 1 mmHg @ 21°C; flash point = 68°C; autoignition temperature = 300°C. The explosive limits are: LEL: 2.4%; UEL: 12%. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 2, reactivity 0. Slight solubility in water; solubility = 4% @ 20°C.

Potential Exposure: Cyclohexanol is used in making placticizers, dry cleaning, dyebath; and textile finishing formulations; as a solvent for ethyl cellulose and other resins; it is used in soap manufacture; it is used as a raw material for adipic acid manufacture; as a nylon intermediate.

Incompatibilities: Forms explosive mixture in air. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Attacks some plastics.

Permissible Exposure Limits in Air

NIOSH IDLH = 400 ppm

Conversion factor: 1 ppm = 4.10 milligram per cubic meter @ 25°C & 1 atm

Odor threshold = 0.07 ppm

OSHA PEL: 50 ppm/200 milligram per cubic meter TWA

NIOSH REL: 50 ppm/200 milligram per cubic meter TWA [skin]

ACGIH TLV[1]: 50 ppm/206 milligram per cubic meter TWA [skin]
PAC Ver. 29[138]
PAC-1: 150 ppm
PAC-2: 580 ppm
PAC-3: 3500 ppm [≥10% LEL, lower explosive limit but <50% LEL]
DFG MAK: 50 ppm/210 milligram per cubic meter [skin]; Peak Limitation Category I(1) Pregnancy Risk Group: D
Australia: TWA 50 ppm (200 milligram per cubic meter) [skin], 1993; Austria: MAK 50 ppm (200 milligram per cubic meter), 1999; Belgium: TWA 50 ppm (206 milligram per cubic meter) [skin], 1993; Denmark: TWA 50 ppm (200 milligram per cubic meter), 1999; Finland: TWA 50 ppm (200 milligram per cubic meter); STEL 75 ppm (300 milligram per cubic meter), 1999; France: VME 50 ppm (200 milligram per cubic meter), VLE 75 ppm (300 milligram per cubic meter), 1999; Hungary: TWA 20 milligram per cubic meter; STEL 40 milligram per cubic meter [skin], 1993; the Netherlands: MAC-TGG 1 milligram per cubic meter, 2003; Norway: TWA 25 ppm (100 milligram per cubic meter), 1999; the Philippines: TWA 50 ppm (200 milligram per cubic meter), 1993; Poland: MAC (TW A) 20 milligram per cubic meter; STEL 60 milligram per cubic meter, 1999; Russia: TWA 25 ppm, 1993; Sweden: NGV 50 ppm (200 milligram per cubic meter), KTV 75 ppm (300 milligram per cubic meter), 1999; Switzerland: MAK-W 50 ppm (200 milligram per cubic meter), KZG-W 100 ppm (400 milligram per cubic meter), 1999; United Kingdom: TWA 50 ppm (208 milligram per cubic meter), 2000; United Kingdom: LTEL 50 ppm (200 milligram per cubic meter), 1993; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 50 ppm [skin]. Several states have set guidelines or standards for cyclohexanol in ambient air[60] ranging from 0.476 milligram per cubic meter (Kansas) to 2.0 milligram per cubic meter (North Dakota) to 3.3 milligram per cubic meter (Virginia) to 4.0 milligram per cubic meter (Connecticut) to 4.76 milligram per cubic meter (Nevada).

Determination in Air: See NIOSH Analytical Method (IV) #1402, Method #1405, and OSHA Analytical Method 7.

Permissible Concentration in Water: Russia[43] set a MAC in water bodies used for domestic purposes of 0.05 mg/L.

Determination in Water: No method listed. Octanol−water coefficient: Log $K_{ow} = 1.2$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption; ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Cyclohexanol irritates the eyes, skin, and respiratory tract. May affect the central nervous system. In high concentrations it can cause headache, nausea, vomiting, dizziness, and unconsciousness.

Long-Term Exposure: Removes the natural oils from the skin causing drying, cracking, and dermatitis. Prolonged or high exposures can cause liver, kidney, and lung damage.

Points of Attack: Eyes, skin respiratory system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Lung function tests, liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): butyl rubber gloves, suits, boots; nitrile rubber gloves, suits, boots; polyvinyl alcohol gloves; Teflon gloves, suits, boots; Viton gloves, suits; **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Neoprene rubber gloves, suits, boots; polyvinyl chloride gloves, suits, boots; 4H and Silver Shield gloves Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Up to 400 ppm:* CcrOv (APF = 10) [any chemical cartridge respirator with organic vapor cartridge(s)];* or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)];* or GmFOv (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister); or Sa (APF = 10) (any supplied-air respirator);* or SCBAF (APF = 50) (any SCBA with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA). *Substance reported to cause eye irritation or damage; eye protection required.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with cyclohexanol all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Cyclohexanol must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN1986 Alcohols, toxic, flammable, n.o.s., Hazard Class: 3; Labels: 3-Flammable liquid, 6.1-Poison Inhalation Hazard, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid or solid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged Exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cyclohexanone is a water-white to slightly yellow liquid with a peppermint-like or acetone-like odor. The Odor Threshold is 0.12−0.24 ppm in air. Molecular weight = 98.14; specific gravity (H_2O:1) = 0.95 @ 20°C; boiling point = 155.43°C; freezing/melting point = −32.1°C; flash point = 44°C; autoignition temperature = 420°C. The explosive limits are: LEL: 1.1% @ 100°C; UEL: 9.4%. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 3, reactivity 0 Soluble in water.

Potential Exposure: It is used in metal degreasing and as a solvent for lacquers, resins; and insecticides. It is an intermediate in adipic acid manufacture. Also used as an emulsifier.

Incompatibilities: May form explosive mixture with air. Contact with oxidizing agents or nitric acid may cause a violent reaction. Do not use brass, copper, bronze, or lead fittings. Attacks many coatings and plastic materials.

Permissible Exposure Limits in Air

NIOSH IDLH = 700 ppm

Several states have set guidelines or standards for cyclohexanone in ambient air[60] ranging from 1.0−4.0 milligram per cubic meter (North Dakota) to 1.6 milligram per cubic meter (Virginia) to 2.0 milligram per cubic meter (Connecticut) to 2.38 milligram per cubic meter (Nevada).

Determination in Air: Use NIOSH Analytical Method #1300 (Ketones), Method #2555, and OSHA Analytical Method 1. Also, NIOSH Analytical Method #2549, Volatile organic compounds.

Permissible Concentration in Water: Russia[43] set a MAC in water bodies used for domestic purposes of 0.2 mg/L.

Routes of Entry: Inhalation, skin absorption; ingestion; skin and/or eye contact

Harmful Effects and Symptoms

Short-Term Exposure: Cyclohexanone irritates the eyes, skin, and respiratory tract. Contact can burn the eyes. LD_{50} (oral-rat) = 1535 mg/kg (slightly toxic). Cyclohexanone may affect the central nervous system. Exposure of high concentrations can cause dizziness, lightheadedness, and unconsciousness.

Long-Term Exposure: Repeated or prolonged contact with skin may cause drying, cracking, and dermatitis. The following chronic (long-term) health effects can occur at some time after exposure to cyclohexanone and can last for months or years: cyclohexanone may damage the developing fetus. Long-term exposure may cause liver and kidney damage. Long-term exposure may cause clouding of the eye lenses (cataracts).

Points of Attack: Eyes, skin, respiratory system; central nervous system; liver, kidneys.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater, or significant skin contact) the following are recommended before beginning work and at regular times after that: Liver function tests. If symptoms develop or overexposure is suspected, the following may also be useful: kidney function tests. Exam of the eyes. Interview for brain effects including recent memory, mood, concentration, headaches, malaise, and altered sleep patterns. Consider cerebellar, autonomic, and peripheral nervous system evaluation. Positive and borderline victims should be referred for neuropsychological testing.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Prevent skin contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): butyl rubber gloves, suits, boots; 4H and Silver Shield gloves; **4 hours** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): polyvinyl alcohol gloves. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Remove clothing immediately if set or contaminated to avoid flammability hazard.

Respirator Selection: *625 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]. *700 ppm:* CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or PaprTOv (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s)]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance causes eye irritation or damage; eye protection needed.

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with Cyclohexanone all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Cyclohexanone must be stored to avoid contact with oxidizers (such as perchlorates, peroxides, chlorates, nitrates, and permangates), since violent reactions occur. Store in tightly closed containers in a cool well-ventilated area away from heat, sparks, and flames. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN1915 Cyclohexanone, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged Exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to

fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Highly flammable, Polymerization hazard, Environmental hazard.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazardous to aquatic life or environment, with possible long-lasting effects[291,292]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: F+, T, N; risk phrases: R11; R19; R22; safety phrases: S21; S29/35; S61; (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cyclohexene is a colorless liquid (cyclic alkene) with a sweetish odor. Molecular weight = 82.15; specific gravity (H_2O:1) = 0.81; boiling point = 82.7°C; freezing/melting point = −104°C; vapor pressure = 67 mmHg @ 20°C; flash point = −6°C; autoignition temperature = 310°C. Explosive limits in air: LEL: 1.2%; UEL: −4.8% @ 100°C. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 3, reactivity 0. Insoluble in water.

Potential Exposure: May be used as an intermediate in making other chemicals (e.g., adipic acid, maleic acid, hexahydro benzoic acid), oil extraction and as a catalyst solvent.

Incompatibilities: Vapor may form explosive mixture with air. The substance can form explosive peroxides. The substance may polymerize under certain conditions. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.

Permissible Exposure Limits in Air

NIOSH IDLH = 2000 ppm

OSHA PEL: 300 ppm/1015 milligram per cubic meter TWA

NIOSH REL: 300 ppm/1015 milligram per cubic meter TWA

ACGIH TLV[1]: 300 ppm/1010 milligram per cubic meter TWA

PAC Ver. 29[138]

PAC-1: 900 ppm

PAC-2: 1700 ppm

PAC-3: 10.000 ppm

Australia: TWA 300 ppm (1015 milligram per cubic meter), 1993; Austria: MAK 300 ppm (1015 milligram per cubic meter), 1999; Belgium: TWA 300 ppm (1010 milligram per cubic meter), 1993; Denmark: TWA 300 ppm (1015 milligram per cubic meter), 1999; Finland: TWA 300 ppm (1015 milligram per cubic meter) [skin] 375 ppm (1270 milligram per cubic meter), 1999; France: VME 300 ppm (1015 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 1015 milligram per cubic meter, 2003; the Philippines: TWA 300 ppm (1015 milligram per cubic meter), 1993; Poland: MAC (TWA) 300 milligram per cubic meter, MAC [skin] 900 milligram per cubic meter, 1999; Russia [skin] 50 milligram per cubic meter, 1993; Switzerland: MAK-W 300 ppm (1015 milligram per cubic meter), KZG-W 600 ppm (2030 milligram per cubic meter), 1999; Turkey: TWA 300 ppm (1050 milligram per cubic meter), 1993; United Kingdom: TWA 300 ppm (1020 milligram per cubic meter), 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: 300 ppm TWA. Several states have set guidelines or standards for Cyclohexene in ambient air[60] ranging from 10.15 milligram per cubic meter (North Dakota) to 17.0 milligram per cubic meter (Virginia) to 20.3 milligram per cubic meter (Connecticut) to 24.2 milligram per cubic meter (Nevada).

Determination in Air: Charcoal adsorption followed by workup with CS_2, and analysis by GC. Use NIOSH Analytical Method #1500 for Hydrocarbons, BP 36-126°C; OSHA Analytical Method 7.

Permissible Concentration in Water: Russia[43] set a MAC in water bodies used for domestic purposes of 0.02 mg/L.

Routes of Entry: Inhalation, ingestion; skin and/or eye contact

Harmful Effects and Symptoms

Short-Term Exposure: Cyclohexene irritates the eyes, skin, and respiratory tract. This chemical can be absorbed through the skin, thereby increasing exposure. Swallowing the liquid may cause droplets to enter the lung and cause chemical pneumonia. Overexposure can cause dizziness, lightheadedness, loss of muscle coordination. Higher exposures can cause tremors, collapse, and death. A closely related chemical, cyclopropane, can cause irregular heartbeat, although it is not known if this chemical causes the same effect. High exposure can cause liver and brain damage.

Long-Term Exposure: Repeated or high concentrations can cause dry skin and rash, liver and brain damage.

Points of Attack: Eyes, skin, respiratory system; central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver function tests. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Do NOT induce vomiting.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash. Remove clothing immediately if wet or contaminated to avoid flammability hazard.

Respirator Selection: *Up to 2000 ppm*: Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. May form peroxides in storage. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers (such as chlorine, bromine, and fluorine). Sources of ignition, such as smoking and open flames, are prohibited where cyclohexene is handled, used, or stored. Metal containers involving the transfer of 5 gal or more of cyclohexene should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of cyclohexene. Wherever cyclohexene is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN2256 Cyclohexene, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep cyclohexene out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include oxides of

carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.
Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* Cyclohexene, Trenton, NJ (February 2001).

Cyclohexenyl Trichlorosilane C:1720

Formula: $C_9H_9Cl_3Si$; $C_6H_9SiCl_3$
Synonyms: Cyclohexene, 4-(trichlorosilyl)-; Trichloro-3-cyclohexenylsilane; 4-(Trichlorosilyl) cyclohexene
CAS Registry Number: 10137-69-6
HSDB Number: 7795
RTECS Number: VV2800000
UN/NA & ERG Number: UN1762/156
EC Number: 233-377-7
Regulatory Authority and Advisory Information
Hazard Alert: Flammable, Corrosive, Violent reaction with water; Air reactive.
Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.
Hazard symbols, risk, & safety statements: Hazard symbol: T+, Xn; risk phrases: R14; R34; R36/37/38; R34; R40; R45; R51; safety phrases: S22; S26; S36/37/39; S45; S53; S41 (see Appendix 4)
Description: Cyclohexenyl trichlorosilane is a colorless fuming liquid. Odor like hydrogen chloride. Molecular weight = 215.59; specific gravity = 1.23 @ 20°C; boiling point = > 150°C @ 750 mmHg; melting point = < 25 C[136]; flash point = > 66°C[136]; 99°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 0~~W~~. Reacts with water, rapidly releasing corrosive hydrogen chloride gas.
Potential Exposure: This material is used to make silicone polymers.
Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Chlorosilanes react vigorously with bases and both organic and inorganic acids generating toxic and/or flammable gases. Chlorosilanes react with water, moist air, or steam releasing heat and toxic, corrosive fumes of hydrogen chloride. The reaction may also release flammable hydrogen fumes. Attacks metals in the presence of moisture. Some chlorosilanes are pyrophoric; self-ignite in air. Contact with ammonia can cause a self-igniting compound.
Permissible Exposure Limits in Air
PAC Ver. 29[138]
based on 15 other trichlorosilanes with identical PACs (for reference only)
PAC-1: **0.60**$_{\mathbf{A}}$ ppm
PAC-2: **7.3**$_{\mathbf{A}}$ ppm
PAC-3: **33**$_{\mathbf{A}}$ ppm
*AEGLs (Acute Emergency Guideline Levels) are marked with a sub script "A" and correspond to 60-minute values.
Determination in Air: No OEL established.
Permissible Concentration in Water: No criteria set ~~W~~ (water reactive).
Routes of Entry: Inhalation.
Harmful Effects and Symptoms
Short-Term Exposure: Cyclohexenyl Trichlorosilane can affect you when breathed in. Exposure can irritate the lungs, causing coughing and/or shortness of breath. Higher exposures can cause a build-up of fluid (pulmonary edema), a medical emergency. This can cause death. Cyclohexenyl Trichlorosilane is a corrosive chemical and contact can cause severe skin and eye burns. Exposure can irritate the eyes, nose, and throat. LD_{50} (oral-rat) = 2830 mg/kg (slightly toxic).
Long-Term Exposure: Repeated Exposure may cause bronchitis with phlegm and shortness of breath.
Points of Attack: Lungs.
Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. If symptoms

develop or overexposure is suspected, the following may be useful: consider chest X-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear plash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure to Cyclohexenyl Trichlorosilane exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—White: Corrosive or contact Hazard; Store separately in a corrosion resistant location. Prior to working with Cyclohexenyl Trichlorosilane all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, steam and moisture because toxic and corrosive chloride gases, including hydrogen chloride can be produced. Sources of ignition, such as smoking and open flames, are prohibited where cyclohexenyl trichlorosilane is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN1762 Cyclohexenyl trichlorosilane, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling:

Cyclohexenyl trichlorosilane when spilled in water

Initial isolation and protective action distances as Chlorosilanes, corrosive, n.o.s.

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.9/1.5

Stay upwind and uphill. Isolate the area of release or fire and deny entry. Remove all ignition sources. Stop the release if it can be done safely from a distance. All equipment used to handle this material must be grounded. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. *Small spill*: Cover with *dry* earth, *dry* sand, or other noncombustible material followed with plastic sheet to minimize spreading or contact with water or rain. Use clean nonsparking tools to collect material and place material into loosely covered plastic containers for later disposal. Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release. Use vapor suppressing foam to disperse vapors−contain runoff. Water spray may reduce vapor, but may not prevent ignition in enclosed spaces. Ventilate confined area if it can be done without placing personnel at risk. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include phosgene, hydrogen chloride, and oxides of metal and carbon. *FOR CHLOROSILANES DO NOT USE WATER. USE AFFF ALCOHOL-RESISTANT, MEDIUM EXPANSION FOAM. Small fire*: use *dry* chemical, CO_2, *dry* sand, or alcohol-resistant *foam*. May react with foams releasing corrosive/toxic gases. *Large fire*: use water spray or alcohol-resistant foam if it is available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning liquid. Combustible material: may burn but does not ignite readily. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapors may travel to source of ignition and flashback. Containers may explode when heated or if contaminated with water. Keep exposures cool long after fire is out to protect against reignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. *Do not get water on spilled substance or inside containers*. If cooling streams are ineffective (*venting sound increases in volume and pitch, tank discolors, or shows signs of deforming*), withdraw immediately to a secure location. Always stay away from ends of tanks, especially when engulfed in flames. If material or contaminated runoff from fire control enters waterways, notify downstream users of potentially contaminated water. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

EC Number: 269-855-7 [*Annex I Index No.:*607-254-00-7]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA, Not likely a human carcinogen

Hazard Alert: Poison, Combustible, Highly toxic, Possible polymerization hazard (nitriles), Possible endocrine disruptor.

Clean water act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum

Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R26/28; R50/53; safety phrases: S1/2; S28; S36/37/39; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: In pure form this chemical may be colorless crystalline solid or powder. Commercial is a yellowish paste or viscous, yellowish-brown oil. Aromatic odor. Molecular weight = 434.29; specific gravity (H_2O:1) = 1.28; boiling point = 210°C (decomposes); freezing/melting point = 59°C; 79°C; vapor pressure = 1.6×10^{-8} mmHg @ 20°C; 3×10^{-4} mmHg @ 25°C. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 1, reactivity 0. Low solubility in water.

Potential Exposure: Cyfluthrin is a synthetic pyrethroid, nonsystemic insecticide used to control a variety of chewing and sucking insects on cotton, hops, cereals, corn, peanuts, fruit, potatoes, and other crops and vegetables. It is also used to control structural pests such as termites. Cyfluthrin can be found in both Restricted Use Pesticides (RUP) and General Use Pesticides (GUP) category. It is also a nitrile.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Nitriles may polymerize in the presence of metals and some metal compounds. They are incompatible with acids; mixing nitriles with strong oxidizing acids can lead to extremely violent reactions. Nitriles are generally incompatible with other oxidizing agents such as peroxides and epoxides. The combination of bases and nitriles can produce hydrogen cyanide. Nitriles are hydrolyzed in both aqueous acid and base to give carboxylic acids (or salts of carboxylic acids). These reactions generate heat. Peroxides convert nitriles to amides. Nitriles can react vigorously with reducing agents. Acetonitrile and propionitrile are soluble in water, but nitriles higher than propionitrile have low aqueous solubility. They are also insoluble in aqueous acids[101].

Permissible Exposure Limits in Air:

ACGIH TLV[1]: (all pyrethrins) 5 milligram per cubic meter TWA

NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet.

See NIOSH IV, Method #5008,[18] pyrethrum. See also NIOSH Criteria Document 212 *Nitriles*.

Determination in Water: Octanol−water coefficient: Log K_{ow} = > 5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Extra high—0.01330 ppb, MATC.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >400 mg/kg; LD_{50} (dermal, rat) = 5 g/kg.

Long-Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May be an endorine disruptor. See NIOSH Criteria Document 212 *Nitriles*. Human toxicity (long term)[101]: Very low—175.00 ppb, Health advisory.

Points of Attack: Endocrine system, bones.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain Medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest X-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 milligram per cubic meter:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 milligram per cubic meter:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any SCBA with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water[72].

Shipping: UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required. UN3349 (pyrethroid pesticide, solid, toxic)/151 Pyrethroid pesticide, solid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material UN3439 Nitriles, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen and carbon and HF and hydrogen chloride gases. *On a small fire:* use dry chemical, CO_2, or water spray. On a large fire, use water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

California Proposition 65 Chemical[102]: Cancer; Developmental/Reproductive toxin 1/1/1989.

Hazard Alert: Reproductive toxin: possible risk of gene damage/impaired fertility; Suspected reprotoxic hazard, Primary irritant (w/o allergic reaction), Poisonous, fatal if swallowed.

Banned or Severely Restricted (in agriculture) (Malaysia) (UN)[13]

Superfund/EPCRA 40CFR302.4, Appendix A and Section IV. D.3.b, RQ: 100 lb (45.4 kg)

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

European/International Regulations *(66-81-9)*: Hazard symbol: T+, N; risk phrases: R61; R28; R50/53; R62; R63; R68; safety phrases: S41; S45; S53; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water. (CAS 66-81-9)

Description: Cycloheximide is a colorless crystalline substance. Molecular weight = 281.39; boiling point = (decomposes) 492°C; freezing/melting point = 115−121°C; vapor pressure = 6×10^{-3} mPa @ 25°C; flash point = 250°C. Highly soluble in water.

Potential Exposure: A potential danger to those involved in the manufacture, formulation, or application of this fungicide and pesticide. Used as an antibiotic, plant growth regulator, and protein synthesis inhibitor. Used on oranges for processing and to inhibit growth of many pathogenic plant fungi. Also used as a repellent for rodents and other animal pests; and in cancer therapy.

Incompatibilities: Incompatible with oxidizers, acid anhydrides; strong bases.

Permissible Exposure Limits in Air

66-81-9

PAC Ver. 29[138]

PAC-1: 0.18 milligram per cubic meter

PAC-2: 2 milligram per cubic meter

PAC-3: 12 milligram per cubic meter

Determination in Water: No method listed. Octanol−water coefficient: Log $K_{ow} = < 0.6$. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation.

Harmful Effects and Symptoms

Short-Term Exposure: Contact can cause eye and skin irritation. Exposure can cause excessive salivation; nausea, vomiting, diarrhea, and elevated Blood urea nitrogen (BUN). High exposures can also cause imbalance, tremors, seizures, and coma. Extremely toxic (LD_{50} value for rats is only 3.7 mg/kg). The probable oral lethal dose in humans is 5−50 mg/kg, or 7 drops to 1 teaspoonful for a 150-lb person. Signs of skin irritation may appear as much as 6−24 hours after exposure.

Long-Term Exposure: May cause mutations and damage the developing fetus. May cause liver and kidney damage.

Points of Attack: Reproductive system. Liver and kidneys.

Medical Surveillance: Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours following skin contact.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Where there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizing agents; acid hydrides, and strong bases.

Spill Handling: Avoid breathing dusts. Keep upwind. Wear SCBA. Material is rapidly inactivated at room temperature by dilute alkali. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Thermal decomposition products may include oxides of nitrogen and carbon. Wear SCBA and full protective clothing. Use dry chemical, carbon dioxide; water spray; alcohol foam or polymer foam extinguishers. Thermal decomposition products may include oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: High-temperature incinerator with flue gas scrubbing equipment.

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cyclohexylamine is a colorless to yellow liquid (amines, primary aromatic). It has an unpleasant fishy odor. Molecular weight = 99.17; specific gravity (H_2O:1) = 0.82 @ 20°C; boiling point = 134.4°C; freezing/melting point = −17.8°C; vapor pressure = 11 mmHg @ 20°C; 7.7 mmHg @ 22°C; flash point = 31°C; autoignition temperature = 293°C. Explosive limits: LEL: 1.2%, 12,000 ppm[138]; UEL: 9.4%. Hazard identification (based on NFPA-704 M Rating System): Health 3, flammability 3, reactivity 0. Soluble in water.

Potential Exposure: CHA is used in making dyes, chemicals, dry cleaning chemicals; insecticides, plasticizers, rubber chemicals; and as a chemical intermediate in the production of cyclamate sweeteners. Used in water treatment and as a boiler feedwater additive. It is also used in rubber production to retard degradation.

Incompatibilities: May form explosive mixture with air. Cyclohexylamine is a strong base: it reacts violently with acid. Contact with strong oxidizers may cause fire and explosion hazard. Incompatible with organic anhydrides; isocyanates, vinyl acetate; acrylates, substituted allyls; alkylene oxides; epichlorohydrin, ketones, aldehydes, alcohols, glycols, phenols, cresols, caprolactum solution; lead. Corrosive to copper alloys, zinc, or galvanized steel.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: 10 ppm/40 milligram per cubic meter TWA

ACGIH TLV[1]: 10 ppm/41 milligram per cubic meter TWA; not classifiable as a human carcinogen

PAC* Ver. 29[138]

PAC-1: **1.8**$_{\mathbf{A}}$ ppm

PAC-2: **8.6**$_{\mathbf{A}}$ ppm

PAC-3: **30**$_{\mathbf{A}}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.

DFG MAK: 2 ppm/8.2 milligram per cubic meter TWA; Peak Limitation Category I(2); Pregnancy Group C

Australia: TWA 10 ppm (40 milligram per cubic meter), 1993; Austria: MAK 10 ppm (40 milligram per cubic meter), 1999; Belgium: TWA 10 ppm (41 milligram per cubic meter), 1993; Denmark: TWA 10 ppm (40 milligram per cubic meter) [skin], 1999; Finland: STEL 10 ppm (40 milligram per cubic meter) [skin], 1999; France: VME 10 ppm (40 milligram per cubic meter) [skin], 1999; Hungary: TWA 1 milligram per cubic meter; STEL 2 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 5 milligram per cubic meter [skin], 2003; Poland: TWA 40 milligram per cubic meter; STEL 80 milligram per cubic meter, 1999; Russia: STEL 1 milligram per cubic meter, 1993; Sweden: TWA 5 ppm (20 milligram per cubic meter); STEL 10 ppm (40 milligram per cubic meter), 1999; Switzerland: MAK-W 10 ppm (40 milligram per cubic meter), KZG-W 20 ppm (80 milligram per cubic meter) [skin], 1999; United Kingdom: TWA 10 ppm (41 milligram per cubic meter) [skin] 2000; Argentina, Bulgaria, Columbia, Israel; Jordan, South Korea, Mexico; New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for cyclohexylamine in ambient air[60] ranging from 95.238 μ/m^3 (Kansas) to 400 μ/m^3 (North Dakota) to 650 μ/m^3 (Virginia) to 800 μ/m^3 (Connecticut) to 952 μ/m^3 (Nevada).

Determination in Air: Use NIOSH Analytical Method (IV) #2010, amines, aliphatic, and OSHA Analytical Method PV-2016.

Permissible Concentration in Water: No criteria set but EPA[32] has suggested a permissible concentration based on health effects of 550 μg/L.

Routes of Entry: Inhalation, ingestion, skin absorption, eye and skin contact.

Harmful Effects and Symptoms

Short-Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Cyclohexylamine is caustic to the skin, eyes, and respiratory tract. Its systemic effects in humans include nausea, vomiting, anxiety, restlessness, drowsiness, lightheadedness, anxiety, apprehension, slurred speech; papillary dilation; severe skin irritation. Cyclohexylamine may also be a skin sensitizer. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort.

This material is classified as moderately toxic, LD_{50} (oral-rat) = 156 mg/kg-probable oral lethal dose is 50 to 500 mg/kg or between 1 teaspoon and 1 oz for a 70-kg (150 lb) persons. It is considered a nerve poison; and is a weak methemoglobin-forming substance.

Long-Term Exposure: Cyclohexylamine causes mutations (genetic changes). Such chemicals may have a cancer risk. Many scientists believe there is no safe level of exposure to a cancer-causing agent. It may damage the developing fetus. It may also damage the testes (male reproductive gland) and reduce the fertility of females. *Other Long-Term Effects:* Exposure may increase blood pressure. Repeated or severe exposures may damage vision and possible kidneys and liver. Cyclohexylamine may cause a skin allergy. Very low future exposures can cause itching and a skin rash. The FDA banned the use of cyclamates as artificial sweeteners in 1969 because of their metabolic conversion to cyclohexylamine, which was thought to be carcino genic in rats. There is now no evidence that CHA is a carcinogen, however.

Points of Attack: Eyes, skin, respiratory system; central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended: blood pressure check. If symptoms develop or overexposure is suspected, the following may be useful: eye and vision exam. Kidney and liver function tests. Skin testing with dilute cyclohexylamine may help diagnose allergy, if done by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Note to Physician: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. **8 hours** (more than 8 hours of resistance to breakthrough >0.1 μg/cm^2/min): Responder suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical.

Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential exists for exposures *over 10* ppm; Use a NIOSH/MSHA or European Standard EN149-approved full facepiece respirator with an organic vapor cartridge/canister. Increased protection is obtained from full facepiece PAPRs. *Where there is potential for high exposures exists*, use a NIOSH/MSHA or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA or European Standard EN149-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. (2) Color code—Red: Flammability Hazard: store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with cyclohexylamine all handlers should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Protect containers from physical damage. Outdoor or detached storage is recommended. Cyclohexylamine must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat. Sources of ignition, such as smoking and open flames are prohibited where cyclohexylamine is handled, used, or stored. The vapor can form explosive mixtures in the air. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN2357 Cyclohexylamine, Hazard class: 8; Labels: 8-Corrosive material, 3-Flammable liquid.

Spill Handling: Stay upwind; keep out of low areas. Wear self-contained (positive pressure if available) breathing apparatus and full protective clothing. Establish forced ventilation to keep levels below explosive limit. Shut off ignition sources; no flares, smoking, or flames in hazard area. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. *Small spills*: take up with vermiculite, dry sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills*: dike far ahead of spill for later disposal. Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration; incinerator equipped with a scrubber or thermal unit to reduce nitrogen oxides emissions.

Hazard Alert: Poison inhalation hazard, Flammable liquid, Suspected reprotoxic hazard, Environmental hazard.
United States DOT 49CFR172.101, Inhalation Hazardous Chemical
Canada, WHMIS, Ingredients Disclosure List concentration Reporting Level: 0.1%.
Hazardous to aquatic life or environment, with possible long-lasting effects[291]. Do not allow release to the environment unless proper permits are obtained from the federal government.
Hazard symbols, risk, & safety statements: Hazard symbol: T+, F, N, Xi; risk phrases: R10; R21/22/26; R34; R36/37/38; R42; R51; R61; safety phrases: S16; S23; S26; S28; S29/35; S36/37; S39; S41; S45; S57; S61 (see Appendix 4).
WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.
Description: Cyclohexyl isocyanate is a clear, flammable liquid. It has a sharp, pungent odor. Molecular weight = 125.19; specific gravity (H_2O:1) = 0.98; boiling point = 168°C; flash point = 48°C (cc). Explosive limits: LEL: 20,000 ppm; UEL: unknown. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 0. Soluble in water (reaction).
Potential Exposure: The material is used in the synthesis of agricultural chemicals.
Incompatibilities: Cyclohexyl isocyanate polymerize due to heating above 93°C/200°F and under the influence of various chemicals including organometallic compounds. Cyclohexyl isocyanate decomposes in fire, forming toxic hydrogen cyanide and nitrogen oxides fumes. May form explosive mixture with air. Isocyanates are highly flammable and reactive with many compounds, even with themselves. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Reaction with moist air, water or alcohols may form amines and insoluble polyureas and react exothermically, releasing toxic, corrosive, or flammable gases, including carbon dioxide; and, at the same time, may generate a violent release of heat increasing the concentration of fumes in the air. Incompatible with amines, aldehydes, alkali metals, ammonia, carboxylic acids, caprolactum, alkaline materials, glycols, ketones, mercaptans, hydrides, organotin catalysts, phenols, strong acids, strong bases, strong reducing agents such as hydrides, urethanes, ureas. Elevated temperatures or contact with acids, bases, tertiary amines, and acylchlorides may cause explosive polymerization. Attacks some plastics, rubber, and coatings. Contact with metals may evolve flammable hydrogen gas.
Permissible Exposure Limits in Air
PAC* Ver. 29[138]
PAC-1: 0.0031 ppm
PAC-2: $\mathbf{0.34_A}$ ppm
PAC-3: $\mathbf{0.10_A}$ ppm
*AEGLs (Acute Emergency Guideline Levels) are marked with a subscript "**A**" and correspond to 60-minute values.
Routes of Entry: Inhalation, ingestion.
Harmful Effects and Symptoms
Short-Term Exposure: A lacrimator (causes tearing). Exposure can severely irritate and may burn the skin, eyes, nose, throat, and lungs. Very high levels may lead to a build-up of fluid in the lungs (pulmonary edema), a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort.
Long-Term Exposure: Repeated or prolonged contact may cause skin sensitization. Repeated or prolonged inhalation exposure may cause lung damage and/or asthma. A suspected carcinogen.
Points of Attack: Lungs, skin.
Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If symptoms develop or overexposure is suspected, chest X-ray should be considered. If symptoms develop or overexposure is suspected, the following may be useful: consider chest X-ray after acute overexposure.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. butyl rubber gloves have been recommended by the manufacturer as protection against this substance. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure to cyclohexyl isocyanate exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Poison inhalation chemical (PIH); check oxygen content prior to entering storage area. (1) Color code—Blue: Health Hazard/Poison: Store in a secure poison location. (2) Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with cyclohexyl isocyanate all handlers should be trained on its proper handling and storage. Cyclohexyl isocyanate must be stored to avoid contact with moisture and temperatures above 93°C, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from water, strong bases; alcohol, metal compounds or surface active materials. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN2488 Cyclohexyl isocyanate, Hazard class: 6.1; Labels: 6.1-Poison Inhalation Hazard, 3-Flammable liquid, Inhalation Hazard Zone B.

Spill Handling:

Cyclohexyl isocyanate

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 200/60
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.5/0.8

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cyclohexyl isocyanate may burn, but does not readily ignite. Containers may explode in fire. Thermal decomposition products may include hydrogen cyanide and oxides of nitrogen and carbon. Use dry chemical, CO_2, water spray; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* Cyclohexyl isocyanate, Trenton, NJ (March 2000).

Cyclohexyl Trichlorosilane C:1760

Formula: $C_6H_{11}Cl_3Si$; $C_6H_{11}SiCl_3$
Synonyms: Silane, trichlorohexyl-; Trichlorocyclohexylsilane; 1-(Trichlorosilyl)cyclohexane
CAS Registry Number: 98-12-4
HSDB Number: 7784
RTECS Number: VV2890000
UN/NA & ERG Number: UN1763/156
EC Number: 202-639-2
Regulatory Authority and Advisory Information

Department of Homeland Security Screening Threshold Quantity (pounds): Sabotage/Contamination Hazard: A placarded amount (commercial grade).

Hazard Alert: Flammable, Corrosive, water and air reactive.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: F, C; risk phrases: R10; R14; R34; safety phrases: S1; S26; S28; S36/37/39; S41; S45; (see Appendix 4). R10

Description: Cyclohexyl trichlorosilane is a colorless to pale yellow liquid. Molecular weight = 217.6; boiling point = 208°C; flash point = 91°C. Hazard identification (based on NFPA-704 M Rating System): Health 2, flammability 2, reactivity 1~~W~~. Insoluble in water; reactive, rapidly releasing corrosive hydrogen chloride gas.

Potential Exposure: The material is used to make silicone polymers.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides. Chlorosilanes react vigorously with bases and both organic and inorganic acids generating toxic and/or flammable gases. Chlorosilanes react with water, moist air, or steam to produce heat and toxic, corrosive fumes of hydrogen chloride. They may also produce flammable gaseous hydrogen. Attacks metals in the presence of moisture.

Permissible Exposure Limits in Air

No standards or PACs available for this specific material. See below:

PAC Ver. 29[138]

based on 15 other trichlorosilanes with identical PACs (for reference only)

PAC-1: $\mathbf{0.6}_{\mathbf{A}}$ ppm
PAC-2: $\mathbf{7.3}_{\mathbf{A}}$ ppm
PAC-3: $\mathbf{33}_{\mathbf{A}}$ ppm

*AEGLs (Acute Emergency Guideline Levels) are marked with a sub script "**A**" and correspond to 60-minute values.

Routes of Entry: Inhalation

Harmful Effects and Symptoms

Short-Term Exposure: Cyclohexyl trichlorosilane can affect you when breathed in. Exposure can irritate the eyes, nose, throat, and lungs, causing coughing, wheezing, and/or shortness of breath. Cyclohexyl trichlorosilane is a corrosive chemical and can cause severe skin and eye burns leading to permanent eye damage. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The symptoms of pulmonary edema are aggravated by physical effort. LD_{50} (oral-rat) = 2830 mg/kg (slightly toxic).

Long-Term Exposure: Repeated exposure may cause bronchitis to develop.

Points of Attack: Lungs.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a qualified medical professional might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. If Symptoms develop or overexposure is suspected, chest X-ray should be considered. If symptoms develop or overexposure is suspected, the following may be useful: consider chest X-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek Medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure to Cyclohexyl trichlorosilane exists, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color code—White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, steam and moisture; and away from combustible materials, such as wood, oil and paper; and incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN1763 Cyclohexyltrichlorosilane, Hazard class: 8; Labels: 8-Corrosive material.

Spill Handling:

Cyclohexyltrichlorosilane when spilled in water

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.3/0.5
Night 0.9/1.5

Stay upwind and uphill. Isolate the area of release or fire and deny entry. Remove all ignition sources. Stop the release if it can be done safely from a distance. All equipment used to handle this material must be grounded. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. *Small spill*: Cover with *dry* earth, *dry* sand, or other noncombustible material followed with plastic sheet to minimize spreading or contact with water or rain. Use clean nonsparking tools to collect material and place material into loosely covered plastic containers for later disposal. Prevent material and runoff from entering sewers and waterways if it can be done safely well ahead of the release. Use vapor suppressing foam to disperse vapors−contain runoff. Water spray may reduce vapor, but may not prevent ignition in enclosed spaces. Ventilate confined area if it can be done without placing personnel at risk. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Thermal decomposition products may include hydrogen chloride and oxides of carbon. *Do not use water or hydrous agents. FOR CHLOROSILANES DO NOT USE WATER. USE AFFF ALCOHOL-RESISTANT, MEDIUM EXPANSION FOAM. Small fire*: use *dry chemical*, CO_2, *dry* sand, or alcohol-resistant foam. May react with foams releasing corrosive/toxic gases. *Large fire*: use water spray or alcohol-resistant foam if it is available in sufficient amounts. Under favorable conditions, experienced crews can use coordinated fog streams to sweep the flames off the surface of the burning liquid. Combustible material: may burn but does not ignite readily. Most vapors are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements, tanks). Vapors may travel to source of ignition and flashback. Containers may explode when heated or if contaminated with water. Keep exposures cool long after fire is out to protect against reignition. Do not direct straight streams into the liquid. Cool exposed containers with large quantities of water from unattended equipment or remove intact containers if it can be done safely. *Do not get water on spilled substance or inside containers*. If cooling streams are ineffective (*venting sound increases in volume and pitch, tank discolors, or shows signs of deforming*), withdraw immediately to a secure location. Always stay away from ends of tanks, especially when engulfed in flames. If material or contaminated runoff from fire control enters waterways, notify downstream users of potentially contaminated water. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

EC Number: 204-500-1

Regulatory Authority and Advisory Information

Department of Homeland Security Screening Threshold Quantity (pounds): *Release hazard* 5000 (commercial grade); *Theft hazard* 400 (commercial grade) *(Hexolite, RDX; RDX & HMX mixture, 121-82-4; HMX, 2691-41-0)*.

Carcinogenicity: EPA: Possible Human Carcinogen (based on animal studies). No human data.

Hazard Alert: Suspected of causing genetic defects, Explosive (when dry).

Hazard symbols, risk, & safety statements: Hazard symbol: E, T; risk phrases: R40; R1; R2; R20/22; R62; safety phrases: S1; S39; S41; S45; S47 (see Appendix 4)

Description: Hexahydro-1,3,5-trinitro-*S*-triazine is a white crystalline compound. Molecular weight = 222.15; specific gravity (H_2O:1) = 1.82; boiling point = > 260°C; freezing/melting point = 202−204°C; vapor pressure = 4×10^{-4} mmHg @ 20°C; exothermic decomposition = 100°C; hazard identification (based on NFPA-704 M Rating System): Health 2, flammability* (explosive), reactivity (see incompatibilities)*. Insoluble in water.

Potential Exposure: A potential danger to those involved in the manufacture of this material and its handling in munitions and solid-propellant manufacture. It is also used as a rat poison; a powerful military explosive; a base charge for detonators; and in plastic explosives.

Incompatibilities: Heat, physical damage, shock, and detonators. Detonates on contact with mercury fulminate. Keep away from other explosives, combustibles, oxidizers (such as chlorates, nitrates, perchlorates, permanganates, peroxides; bromine, chlorine, and fluorine); reducing agents; and aqueous alkaline solutions.

Permissible Exposure Limits in Air

OSHA PEL: None

NIOSH REL: 1.5 milligram per cubic meter TWA; 3 milligram per cubic meter STEL [skin]

ACGIH TLV[1]: 0.5 milligram per cubic meter TWA [skin]; not classifiable as a human carcinogen

PAC Ver. 29[138]

121-82-4 (RDX)

PAC-1: 3 milligram per cubic meter

PAC-2: 26 milligram per cubic meter

PAC-3: 160 milligram per cubic meter

2691-41-0 (HMX)

PAC-1: 19 milligram per cubic meter

PAC-2: 210 milligram per cubic meter

PAC-3: 1300 milligram per cubic meter

Australia: TWA 1.5 milligram per cubic meter; STEL 3 milligram per cubic meter [skin], 1993; Belgium: TWA 1.5 milligram per cubic meter; STEL 3 milligram per cubic meter [skin], 1993; Denmark: TWA 1.5 milligram per cubic meter [skin], 1999; Finland: TWA 1.5 milligram per cubic meter; STEL 4.5 milligram per cubic meter [skin], 1999; France: VME 1.5 milligram per cubic meter [skin], 1999; Hungary: TWA 1 milligram per cubic meter; STEL 2 milligram per cubic meter, 1993; Norway: TWA 1.5 milligram per cubic meter, 1999; the Philippines: TWA 0.4 milligram per cubic meter [skin], 1993; Poland: MAC (TWA) 1 milligram per cubic meter, MAC (ST EL) 3 milligram per cubic meter, 1999; Russia: STEL 1 milligram per cubic meter, 1993; Switzerland: MAK-W 1.5 milligram per cubic meter [skin], 1999; United Kingdom: TWA 1.5 milligram per cubic meter; STEL 3 milligram per cubic meter [skin], 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for cyclonite in ambient air[60] ranging from 15 μ/m^3 (North Dakota) to 25 μ/m^3 (Virginia) to 30 μ/m^3 (Connecticut) to 36 μ/m^3 (Nevada). This chemical can be absorbed through the skin, thereby increasing exposure.

Determination in Air: Use NIOSH Analytical Method (IV) #0500, Particulates NOR, total dust.

Routes of Entry: Inhalation, skin absorption; ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Irritates the eyes, skin, and respiratory tract. Skin contact causes a burning sensation and rash. Other symptoms include headache, nausea, vomiting, loss of appetite; weakness, confusion, dizziness. LD_{50} (oral-rat) = 100 mg/kg (moderately toxic).

Long-Term Exposure: Repeated Exposure can cause irritability, sleeplessness, seizures, anorexia, kidney damage. Exposure to high levels can damage the nervous system.

Points of Attack: Eyes, skin, central nervous system.

Medical Surveillance: Examination of the nervous system. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Neoprene gloves and plastic clothing are recommended. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Use chemical cartridge respirator. Where *there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Explosive. Color code—Red Stripe: Flammability Hazard: Store separately from all other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Detached storage in a secure area is recommended. Store in tightly closed containers in a cool well-ventilated area away from other explosives, combustibles or strong oxidizers (such as chlorine, bromine, and fluorine). Also keep cyclonite away from shock and heat sources. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN0483 Cyclotrimethylenetrinitramine, desensitized or Cyclonite, desensitized or Hexogen, desensitized or RDX, desensitized, Hazard Class: 1D; Labels: 1D-Explosive (with a mass explosion hazard); D-Substances or articles which may mass detonate (with blast and/or fragment hazard) when exposed to fire. UN0072 Cyclotrimethylenetrinitramine, wetted or Cyclonite, wetted or Hexogen, wetted or RDX, wetted with not <15% water by mass, Hazard Class: 1D; Labels: 1D-Explosive (with a mass explosion hazard); D-Substances or articles which may mass detonate (with blast and/or fragment hazard) when exposed to fire.

Spill Handling:

Explosives: Divisions 1.1; 1.2. 1.3 or 1.5

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small Spill: 0.33 mi/1800 ft/500 m
Large Spill: 0.5 mi/2500 ft/800 m
Fire/Rail car: 1 mi/5200 ft/1600 m

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Cover spill with soda ash, mixed and sprayed with water. Place into bucket of water and allow to stand for 2 hours. Do not operate radio transmitters or electronic detonator in spill area. Ventilate area of spill or leak after clean-up is complete. Keep Cyclonite out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cyclonite is a highly dangerous explosion hazard, especially at high temperatures. In case of a fire, immediately evacuate area. An evacuation distance of 1 mi is recommended Thermal decomposition products may include oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Pour over soda ash, neutralize and flush to sewer with water. Also HMX may be recovered from solid propellant waste.

New Jersey Department of Health and Senior Services and Senior Services, *Hazardous Substances Fact Sheet:* Cyclonite, Trenton, NJ (January 1999).

Cyclopentadiene C:1780

Formula: C_5H_6

Synonyms: 1,3-Cyclopentadiene; Pentole; Pyropentylene; R-Pentene

CAS Registry Number: 542-92-7

HSDB Number: 2514

RTECS Number: GY1000000

UN/NA & ERG Number: UN1993 (flammable liquids, n.o.s.)/128

EC Number: 208-835-4

Regulatory Authority and Advisory Information

Hazard Alert: Highly flammable liquid, Explosive (with oxygen or ozone), Possible polymerization hazard.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazard symbols, risk, & safety statements: Hazard symbol: F; risk phrases: R11; R19; safety phrases: S (see Appendix 4)

Description: Cyclopentadiene is a flammable, colorless liquid with a sweet odor, like turpentine. Molecular weight = 66.10; specific gravity (H_2O:1) = 0.8; boiling point = 42.0°C; freezing/melting point = −85°C; vapor pressure = 400 mmHg @ 20°C; flash point = 25°C (oc); autoignition temperature = 640°C. Insoluble in water.

Potential Exposure: Cyclopentadiene is used as an intermediate in the manufacture of resins, insecticides, fungicides, and other chemicals.

Incompatibilities: Vapors may form explosive mixture with air. Converted (dimerized) to higher-boiling dicyclopentadiene upon standing in air and @ 32°F/0°C; this conversion may be violent and exothermic; this reaction is accelerated by peroxides or trichloroacetic acid. Reacts violently with potassium hydroxide. Violent reaction with strong oxidizers; strong acids; dinitrogen tetroxide; magnesium. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides, alkaline earth metals, nitrogen oxides. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air

NIOSH IDLH = 750 ppm

OSHA PEL: 75 ppm/200 milligram per cubic meter TWA

NIOSH REL: 75 ppm/200 milligram per cubic meter TWA

ACGIH TLV[1]: 75 ppm/203 milligram per cubic meter TWA

No standards or PAC available.

DFG MAK: (IIb) substances, for which (still) no MAK-values can be established.

Australia: TWA 75 ppm (200 milligram per cubic meter), 1993; Austria: MAK 75 ppm (200 milligram per cubic meter), 1999; Belgium: TWA 75 ppm (203 milligram per cubic meter), 1993; Denmark: TWA 75 ppm (200 milligram per cubic meter), 1999; Finland: TWA 75 ppm (200 milligram per cubic meter); STEL 115 ppm (310 milligram per cubic meter), 1999; France: VME 75 ppm (200 milligram per cubic meter), 1999; Hungary: TWA 20 milligram per cubic meter; STEL 40 milligram per cubic meter, 1993; the Netherlands: MAC-TGG 200 milligram per cubic meter, 2003; Norway: TWA 40 ppm (110 milligram per cubic meter), 1999; the Philippines: TWA 75 ppm (200 milligram per cubic meter), 1993; Poland: TWA 200 milligram per cubic meter, 1999; Russia: STEL 5 milligram per cubic meter, 1993; Switzerland: MAK-W 75 ppm (200 milligram per cubic meter), 1999; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: 75 ppm TWA. Several states have set guidelines or standards for cyclopentadiene in ambient air[60] ranging from 2.0−4.0 milligram per cubic meter (North Dakota) to 3.3 milligram per cubic meter (Virginia) to 4.0 milligram per cubic meter (Connecticut) to 4.76 milligram per cubic meter (Nevada).

Determination in Air: Use NIOSH Analytical Method (IV) #2523.

Routes of Entry: Inhalation, ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Exposure can irritate the eyes, skin, and respiratory tract. Skin contact causes a burning sensation and rash.

Long-Term Exposure: Exposure may damage the liver and kidneys. Exposure can cause a skin allergy to develop. If allergy develops, even low exposures may cause symptoms.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: liver and kidney function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Do NOT induce vomiting.

Personal Protective Methods: Wear appropriate clothing to prevent repeated or prolonged skin contact. Wear eye protection to prevent any reasonable probability of eye contact. Employees should wash promptly when skin is wet or contaminated. Remove clothing immediately if wet or contaminated to avoid flammability hazard.

Respirator Selection: *Up to 750 ppm:* CcrOv (APF = 10) [any chemical cartridge respirator with organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or PaprOv (APF = 25) [any powered, APR with organic vapor cartridge(s)]; or Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any SCBA with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Should be stored at −20 − 0°C. May form peroxides in storage. Prior to working with cyclopentadiene all handlers should be trained on its proper handling and storage. Cyclopentadiene must be stored to avoid contact with strong oxidizing agents because violent reactions occur. Cyclopentadiene must be stored at temperatures below 0°C or it may undergo an explosive chemical reaction. Sources of ignition, such as smoking and open flames are prohibited where cyclopentadiene is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN1993 Flammable liquids, n.o.s., Hazard Class: 3; Labels: 3-Flammable liquid, Technical Name Required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Regulatory Authority and Advisory Information

Hazard Alert: Highly flammable, Electrostatic hazard, Environmental hazard.

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%.

Hazardous to aquatic life or environment, with possible long-lasting effects[194]. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: F, N; risk phrases: R11; R52/53; safety phrases: S2; S16; S21; S29/35; S33; S41; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Cyclopentane is a colorless liquid. Molecular weight = 70.13; specific gravity (H_2O:1) = 0.75 @ 20°C; boiling point = 49°C; freezing/melting point = −93.6°C; vapor pressure = 400 mmHg @ 31°C; 317.8 mmHg @ 25°C; relative vapor density (air = 1) = 2.42: Flash point = −37.2°C; autoignition temperature = 361°C. Explosive limits in air: LEL: 1.1%, 10,000 ppm[138]; UEL: 8.7%. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 3, reactivity 0. Insoluble in water.

Potential Exposure: Cyclopentane is used as a solvent.

Incompatibilities: May form explosive mixture with air. May accumulate static electrical charges, and may cause ignition of its vapors. Contact with strong oxidizers may cause fire and explosion.

Permissible Exposure Limits in Air

Conversion factor: 1 ppm = 2.87 milligram per cubic meter @ 25°C & 1 atm

OSH A PEL: None

NIOSH REL: 600 ppm/1720 milligram per cubic meter TWA

ACGIH TLV[1]: 600 ppm/1720 milligram per cubic meter TWA

PAC Ver. 29[138]

PAC-1: 1800 ppm

PAC-2: 3800 ppm [= >10% LEL, lower explosive limit but <50% LEL]

PAC-3: 23,000 ppm [= >10% LEL, lower explosive limit but <50% LEL]

Australia: TWA 600 ppm (1720 milligram per cubic meter), 1993; Belgium: TWA 600 ppm (1720 milligram per cubic meter), 1993; Denmark: TWA 300 ppm (850 milligram per cubic meter), 1999; France: VME 600 ppm (1720 milligram per cubic meter), 1999; Norway: TWA 300 ppm (850 milligram per cubic meter), 1999; Switzerland: MAK-W 600 ppm (1720 milligram per cubic meter), 1999; the Netherlands: MAC-TGG 1720 milligram per cubic meter, 2003; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: TWA 600 ppm. Several states have set guidelines or standards for cyclopentane in ambient air[60] ranging from 17.0 milligram per cubic meter (Connecticut) to 17.2−25.8 milligram per cubic meter (North Dakota) to 29.0 milligram per cubic meter (Virginia) to 41.0 (Nevada).

Determination in Air: No method available.

Permissible Concentration in Water: Vermont[61] has set a guideline for cyclopentane in drinking water of 30.7 mg/L.

Determination in water: No method available. Octanol−water coefficient: Log K_{ow} = >3. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, ingestion; skin and/or eye contact This chemical can be absorbed through the skin, thereby increasing exposure.

Harmful Effects and Symptoms

Short-Term Exposure: Vapors are irritating to eyes, nose, and throat. If inhaled, will cause dizziness, nausea, vomiting, difficult breathing, or loss of consciousness. Ingestion irritates the stomach. Contact with the liquid is irritating to eyes and skin. This chemical can be absorbed through the skin, thereby increasing exposure. This compound is moderately toxic by ingestion and inhalation. Ingestion causes irritation of the stomach, and aspiration produces severe lung irritation and rapidly developing pulmonary edema. Contact with liquid irritates eyes and skin. Cyclopentane is a nervous system depressant. Alcohol consumption synergistically increases the toxic effects of this compound.

Long-Term Exposure: Cyclopentane can cause drying and cracking of the skin.

Points of Attack: Eyes, nose, throat, respiratory system; stomach and nervous system.

Medical Surveillance: Consider possible irritant effects to the skin and respiratory tract in preplacement and periodic examinations as well as any renal or liver complications.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Do not induce vomiting, guard against aspiration. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear solvent-resistant gloves and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquid full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where *there is a potential for overexposure:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode).

Storage: Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with cyclopentane all handlers should be trained on its proper handling and storage. Before entering confined space where cyclopentane may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool well-ventilated area away from strong oxidizers (such as chlorine, bromine, and fluorine). Use only nonsparking tools and equipment, especially when opening and closing containers of cyclopentane. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN1146 Cyclopentane, Hazard Class: 3; Labels: 3-Flammable liquid.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand; earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Thermal decomposition products may include oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Water may be ineffective because of low flash point. Do not extinguish fire unless flow of chemical can be stopped. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to

cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

EC Number: Not found

Regulatory Authority and Advisory Information

Report any release of WMD to National Response Center 1-800-424-8802

Department of Homeland Security Screening Threshold Quantity: *Theft Hazard* CUM 100 g (*1445-76-7)*

Hazard Alert: Poison, Dangerous cumulative neurotoxin, Water reactive.

While not a mandated "Federally listed" waste, GF is more toxic than most RCRA listed chemicals. However, GF is a "listed" hazardous waste in some states where it may have been stockpiled by the military.

Description: Cyclosarin (GF) is a liquid nerve agent/organophosphate containing fluoride. GF is a colorless liquid. The odor is variously described as nondescript, sweet, fruit-like. Odor threshold is about 12 milligram per cubic meter. Molecular weight = 180.2 g/mol; specific gravity (H_2O:1) = 1.133 g/mL @ 20°C; boiling point = 239°C; freezing point = −30°C; liquid density = 1.1327 @20°C; vapor density (air = 1) = 6.2; vapor pressure = 0.44 mmHg @ 25°C; volatility = 581 milligram per cubic meter @ 25°C; flash point = 94°C. ~~W~~ Practically insoluble in water; solubility = 0.37% @ 20°C. Hydrolyzed by water.

1445-76-7 (Chlorosarin): Molecular weight = 156.55 o-Isopropyl methylphosphonochloridate.

History of the agent: Cyclo-sarin (GF) is believed to have been synthesized about the time of World War II by the Germans. Following the war, in the early 1950s, both the United States and Great Britain undertook a systematic study of potential nerve agents including GF. Some sources in the United States suggest that interest in GF was stimulated by work undertaken in an "iron curtain country". However, for various reasons related to its lower toxicity and relatively high cost, it was never manufactured. Iraq is believed to have produced large quantities of cyclosarin for use as a chemical weapon. Iraq fielded artillery projectiles filled with cyclo-sarin (GF) and sarin (GB). Animal tests did not find that GF−GB mixtures to have any special effects as the toxicity range was approximately intermediate between the two agents.

Potential Exposure: A quick-acting and lethal cholinesterase inhibitor and casualty agent. Females appear to be more susceptible to nerve agent effects. Small percentages of general population have genetic traits that may increase susceptibility.

Incompatibilities: Fairly stable. Cyclo-sarin (GF) is hydrolyzed by water; rapidly hydrolyzed in the presence of heat and alkalies; by dilute solution of aqueous sodium hydroxide. Contact with alkaline conditions produce isopropyl alcohol and polymer substances. Contact with acid conditions produce HF; alkaline conditions produce isopropyl alcohol and polymers. Reasonably stable when stored in steel at normal temperatures; slightly corrosive to steel when heated.

Persistence of Chemical Agent: Cyclo-sarin has intermediate persistence [as persistent as Tabun (Agent GA)]. GF evaporates about 20 times more slowly than water. Heavily splashed liquid persists 1 or 2 days under average weather conditions[AFM 3−9]. Approximately 20 times more persistent than sarin (GB)[AFM 3−9]. Following (for reference and calculation) are persistence rates for sarin (GB): Summer: 10 min to 24 hours; Winter: 2 hours to 3 days.

Permissible Exposure Limits in Air:

IDL H: 0.05 milligram per cubic meter[United States Army]

Conversion factor: 1 ppm = 7.4 milligram per cubic meter °C = 0.56 × (°F-32)

STEL: 5.0×10^{-5} milligram per cubic meter

Worker Population Limit (WPL) = 3.0×10^{-5} milligram per cubic meter (8-hour TWA)

General Population Limit (GPL) = 1.0×10^{-6} milligram per cubic meter (24-hour TWA lifetime chronic value)

Determination in Air: Air sampling is a good indicator of other pathways (e.g., off-gassing from soil) and is useful in risk analysis since it has health-based exposure limits. Onsite and downwind sampling should be conducted within 6 in. above potentially contaminated surfaces/soil to assess any off-gassing hazard as well as at breathing zone level (e.g., 5 ft) to assess potential public health inhalation exposures. Appropriate solid phase sorbent medium (e.g., tubes, PUF samplers) and SUMMA canisters can be used for sample collection and subsequent laboratory analysis.

Permissible Concentration in Water: unknown.

Determination in Water: G-agents are unlikely to persist in water. If analysis is performed, standard EPA volatile water sampling methods should be used. Contact pollution control authorities and advise shutting water intakes. Although G-agent contamination of large water sources is unlikely, there are military screening levels to determine if smaller, contained water supplies (e.g., tank truck) have been contaminated. Acceptable levels for troops drinking 5−15 L/day of a contaminated supply for 7 days are 4 to12 μg/L. This level is a reasonable value to use for the general population since their consumption rate is considerably less[91].

Determination in Soil: Industrial Exposure Scenario = 5.2 to 8.2 mg/kg; Residential Exposure Scenario = 0.22 to 0.31 mg/kg[91].

Routes of Entry: Enters the body primarily through the respiratory tract, but is highly toxic through the skin and digestive tract. *Inhalation* (a primary exposure route; inhalation of very small concentrations can produce effects.), *skin* [especially toxic from contact with liquid agent; usually mode rate to severe localized effects and systemic effects such as sweating. Effects can also result from absorption of vapors through skin]. *Eyes* [the most sensitive target organs of nerve agent exposure: miosis (reduction in pupil size) will typically be the first sign of exposure]. *Ingestion* (overall systemic effects)[91].

Harmful Effects and Symptoms

Cyclo-sarin (Agent GF) is a quick-acting chemical warfare nerve agent/nerve gas. Both the liquid and the vapor can kill you. Small amounts can injure in seconds, and can quickly lead to death. *Note:* Sarin is 26 times more deadly than cyanide gas and 20 times more deadly than Potassium cyanide. A single drop, if vaporized, can kill every person in an enclosed room![136]

Short-Term Exposure:

A strong cholinesterase inhibitor. Eye/skin toxicity: Very high; Rate of action: Very rapid. Physiological action: Cessation of breath−death may follow. Detoxification rate: Low. LD_{50} (subcutaneous-rat) = 0.225 mg/kg. Median lethal dose (mg-min/m^3): 2500 by skin (vapor) or 350 (liquid); 35 inhaled. Median incapacitating dose: 25 inhaled. LD_{50} (subcutaneous, mice) reported from 16 μg/kg to 400 μg/kg (compared to Sarin: LD_{50} (mice) = 200 μg/kg). (*Note*: Sarin: *A single drop on the skin can cause death. Death may occur within 15 minutes after fatal dose is absorbed*). See also Sarin (Agent GB) at S:0130.

Long-Term Exposure: May cause neuropsychiatric effects (as long as a year or more following acute manifestation) and possible EEG changes. Both are documented as acute manifestations of nerve agent poisoning; mild neuropsychiatric changes occur after even low-dose nerve agent exposure. The duration of the neuropsychiatric effects after nerve agent exposure is less well documented, but available information suggests that these effects persist for several weeks or possibly several months. Studies of EEG changes following organophosphate nerve agent exposure found differences between the exposed and control populations but suggested no relationship between their findings and alterations in brain function[81].

Points of Attack: Skin, eyes, lungs.

Medical Surveillance: Annual physical and respiratory function exams and a baseline cholinesterase[91].

Decontamination: *Important*: The rapid physical removal of a chemical agent is essential. If one does not have the equipment and/or training, don't enter the hot or the warm zone to rescue and/or decontaminate victims. Medical personnel should wear the proper PPE. If the victim can't move, decontaminate without touching and without entering the hot or the warm zone. Nerve gasses stay in clothing; *do not* touch with bare skin—if possible, seal contaminated clothes and personal belongings in a sealed double bag. Use clean water from any source; if possible, use a hose (spray or fog to prevent injury to the victim) or other system to avoid touching the victim. Don't wait for soap or for the victim to remove clothing, begin washing immediately. Do not delay decontamination to obtain warm water; time is of the essence; use cold water instead. Immediately flush the eyes with water for at least 15 minutes. If time is available, decontaminate outer personal protection equipment (PPE) with a dilute household bleach solution**. Use warm soapy water instead of dilute bleach for decon of bare skin. Use caution to avoid hypothermia in children and the elderly. *Patients exposed to liquid:* All visible droplets should be blotted (not wiped) away using an absorbent material (e.g., paper towels, facial tissues, etc.); if available, towelettes moistened with a neutralizing solution should be used. Absorbent powders may also be used for removal of droplets (in the absence of standard absorbents, field expedients such as flour may be useful). GF should be decontaminated by washing in available clean water at least 3 times. Skin decontamination may be unnecessary if the exposure was to GF vapor only. Use liquid soap (dispose of container after use and replace), large amounts of water, and mild to moderate friction with a single-use sponge or washcloth in the first and second washes. Scrubbing of exposed skin with a brush is discouraged; skin damage may occur and may increase absorption. The third wash should be to rinse with large amounts of warm or hot water. Wash off the diluted bleach solution after 15 minutes. Hair should be thoroughly cleaned using soap and water, with care being taken to prevent wash water from getting into the victim's eyes, open wounds, or mouth. Remember that the water used to decontaminate victims is dangerous. Be sure to decontaminated the victims as much as possible before releasing them from the decon area to prevent them from spreading the nerve gas. Rinse the eyes, mucous membranes; or open wounds with sterile saline or water and then move away from the hot zone in an upwind and uphill direction. *Patients exposed to nerve agent by vapor (only)*: should be decontaminated by removing all clothing in a clean-air environment and shampooing or rinsing the hair to prevent vapor-off gassing; take care to prevent wash water from getting into the victim's eyes, open wounds, or mouth.

Surface decontamination (nonporous surfaces, vehicles, etc.): Use hypochlorite bleach slurries, or dilute alkalis. *Confined spaces*: Use steam and ammonia.

**Note*: The following can be used in addition to household bleach: (1) solids, powders, and solutions containing various types of bleach [sodium hypochlorite [NaOCl] or calcium hypochlorite [$Ca(OCl)_2$]]; (2) "DS2 solution" (2% NaOH; 70% diethylene triamine; 28% ethylene glycol monomethyl ether); (3) towelettes moistened with sodium hydroxide (NaOH) dissolved in water, phenol, ethanol, and ammonia.

***Note:* Use 5% solution of common bleach (sodium hypochlorite) or calcium hypochlorite solution (48 oz per 5 gal of water) to decontaminate scissors used in clothing removal, clothes, and other items.

First Aid: The immediate treatment for nerve agent intoxication is intravenous injection of 2 mg atropine sulfate (intramuscular injection should be considered if the patient is hypoxic and ventilation cannot be initiated, as there is a risk of ventricular fibrillation). This should be followed by additional injections of atropine at 10−15 minute intervals, continuing until bradycardia has been reversed (e.g., until the heart rate is at 90 beat/minute or less). If breathing has stopped, a mechanical respirator should be used to ventilate the patient. *Do not attempt mouth-to-mouth resuscitation*. If possible, oxygen or oxygen-enriched air should be used for ventilation. If possible, monitor cardiac activity.

Notes for physician and medical personnel: Oximes (pralidoxime salts, obidoxime) may be of use in restoring acetylcholinesterase activity. Obidoxime may be used to treat GF intoxication; however, it may cause liver damage. Animal studies indicate that the oxime Hi-6 may be significantly superior to other oximes in the treatment of GF intoxication, but it is not widely available. Therefore pralidoxime salts should be used, with a slow intravenous infusion of 500 mg. to 1 g. being given initially. Diazepam may be administered to control convulsions. It also has value in controlling the victim's fear. An initial dose of 5 mg may be followed by additional doses at 15-minute intervals up to a total of 15 mg[92].

Other effective antidote: National Response Team (NRT) lists atropine and (if more severe) 2-PAM Chloride injections; atropine eye drops[91].

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. *Outer suit*: Tychem F, Butylrubber, LV, Responder, TK, Tyvek-F, or Reflector decontamination suits. *Gloves*: Butyl rubber gloves, M-3 and M-4 Norton, or Chemical Protective Set. See: http://www2.dupont.com/Personal_Protection/en_US/assets/downloads/tychem/permguide82004.pdf. Although resistant to liquid chemical agents, impermeable protective clothing may be penetrated after a few hours of exposure to heavy concentration of agent. Consequently, liquid contamination on the clothing must be neutralized or removed as soon as possible. Contact lenses should NOT be worn when working with this chemical. Medical personnel treating casualties should avoid direct (skin-to-skin) contact; protective gear including breathing protection should be worn when treating casualties prior to decontamination. *Latex gloves are not adequate protection*. Casualties should be decontaminated as rapidly as possible (see the section on decontamination). Remove casualties from exposure as rapidly as possible. *Casualties must not be moved into clean treatment areas where unmasked/ungloved personnel are working until decontamination is complete*. During decontamination operations there should also be PPE/respiratory measures to minimize potential exposures to associated chlorine vapors.

Respirator Selection: *When the types of inhalation hazards and their concentrations are unknown or anticipated to be high*, hazard evaluation responders must use NIOSH- or European Standard EN149-approved chemical, biological, radiological, and nuclear (CBRN) SCBA respirators. The CBRN APR full-face respirator provides a lower level of protection than the SCBA and its use is generally allowed once conditions are understood and exposures are determined to be at lower levels. Once the level of danger is established and where there is potential for exposure to the chemical exists, use a NIOSH/MSHA or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA or European Standard EN149-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode. The M40 Series (which replaced the M17A1 protective mask) mask provides respiratory protection against all known military toxic chemical agents, but it cannot be used in an oxygen deficient environment and is *not approved for civilian use*. It does not afford protection against industrial toxics, such as ammonia and carbon monoxide.

Storage: Color code—Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location. Reasonably stable in steel at normal temperatures. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers. Where possible, automatically transfer material from drums or other storage containers to process containers. Sources of ignition, such as smoking and open flames are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: UN2810 Toxic liquids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling:

UN2810 Toxic liquids, organic, n.o.s.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/30
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.7/1.2

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 1000/300
Then: Protect persons downwind (mi/km)
Day 1.1/1.8
Night 2.8/4.5

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the United States Environmental Protection Agency Environmental Response Team at (908) 548-8730 (24-hour response line).

GF, when used as a weapon

Small spills (From a small package or a small leak from a large package)

First: Isolate in all directions (ft/m) 100/60
Then: Protect persons downwind (mi/km)
Day 0.2/0.3
Night 0.2/0.3

Large spills (From a large package or from many small packages)

First: Isolate in all directions (ft/m) 500/300
Then: Protect persons downwind (mi/km)
Day 0.5/0.8
Night 0.6/1.0

Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Ventilate area of spill or leak. Spills must be contained by covering with vermiculite, diatomaceous earth; clay, fine sand; sponges, and paper or cloth towels. This containment is followed by treatment with copious amounts of aqueous sodium hydroxide solution (a minimum 10% wt.). Scoop up all material and place in a fully removable head drum with a high density polyethylene liner. The decontamination solution must be treated with excess bleach to destroy the CN formed during hydrolysis. Cover the contents with additional bleach before affixing the drum head. After sealing the head, the exterior of the drum shall be decontaminated and then labeled in accordance with IAW, EPA, and DOT regulations. All leaking containers shall be over-packed with vermiculite placed between the interior and exterior containers. Decontaminate and label per IAW, EPA, and DOT regulations. Dispose of the material per IAW waste disposal methods provided below. Conduct general area monitoring with an approved monitor to confirm that the atmospheric concentrations do not exceed the airborne Exposure limit. If 10% wt. sodium hydroxide is not available then the following decontaminants may be used instead and are listed in order of preference: Decontaminating Solution No. 2 [DS2: (2% NaOH, 70% diethylenetriamine, 28% ethylene glycol monomethyl ether)], sodium carbonate and Supertropical Bleach Slurry (STB). Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire: If tank, rail car, or tank truck is involved in fire, isolate for at least 800 m (½ mi) in all directions; also, consider initial evacuation for 800 m (½ mi) in all directions.

Fire Extinguishing: Thermal decomposition products may include fluorides and oxides of phosphorus and carbon. When heated, vapors may form explosive mixture with air, presenting an explosion hazard indoors, outdoors, and in sewers. Containers may explode when heated. Water, fog, foam, CO_2; Avoid using extinguishing methods that will cause splashing or spreading of the GA. Thermal decomposition products may include hydrogen cyanide, oxides of nitrogen, oxides of phosphorus; carbon monoxide; and hydogen cyanide may be produced in fire. Respiratory protection is required. Positive pressure, full facepiece, NIOSH-approved SCBA will be worn where there is danger of oxygen deficiency and when directed by the fire chief or chemical accident/incident (CAI) operations officer. The M9 or M17 series mask may be worn in lieu of SCBA when there is no danger of oxygen deficiency. In cases where firefighters are responding to a chemical accident/incident for rescue/reconnaissance purposes they will wear appropriate levels of protective clothing. Complete protection required; have decontaminants available (bleach, alkali) and atropine. Bleaching powder (chlorinated line) destroys tabun but gives rise to cyanogen chloride. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Principles and methods for destruction of chemical weapons: "Destruction of chemical weapons" means a process by which chemicals are converted in an essentially irreversible way to a form unsuitable for production of chemical weapons, and which in an irreversible manner renders munitions and other devices unusable as such. Each nation shall determine how it shall destroy chemical weapons, except that the following processes may not be used: dumping in any body of water, land burial or open-pit burning. It shall destroy chemical weapons only at specifically designated and appropriately designed and equipped facilities. Each nation shall ensure that its chemical weapons destruction facilities are constructed and operated in a manner to ensure the destruction of the chemical weapons; and that the destruction process can be verified under the provisions of this Convention. (Organization for the Prohibition of Chemical Weapons; Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and Their Destruction). Grossly liquid-contaminated materials should be decontaminated and containerized and labeled in accordance with DOT and EPA requirements as a hazwaste. Wastewater solution from decon should be analyzed to ensure no residual agent is present. The National Response Plan, ESF-3 designates United States Army Corps of Engineers (USACE) as the primary agency to manage contaminated debris. USACE and the Department of Defence (DOD) typically use safety procedures prior to transport that include "head space" (off gas) monitoring around containers prior to shipment to ensure no leakage/off-gassing. Typically waste will be transported in accordance with state requirements to a designated disposal facility, such as a RCRA-permitted hazardous waste facility (typically an incinerator). Wastewater solution from the decontamination process will be analyzed to ensure no residual agent is present. It is likely that the solution will not contain residual agents and therefore not need to be classified as a hazardous waste but sampling must be used to verify. Chlorinated wastewater may need to be treated/neutralized prior to disposal[91]. United States munitions stockpiles of G-agent are/have undergone destruction/disposal in the states of Utah, Oregon, Arkansas, Alabama, and Kentucky. State/local plans to address potential releases from United States Army properties are in place at these sites.

National Response Team, *Quick Reference Guides (QRGs) for Chemical Warfare Agents: Cyclosarin*, Various Agencies, Key References Cited/Several sources were used in developing the QRGs. Because most references are considered (31); "secondary" sources, comparisons among multiple sources helped to verify information. When conflicting information was found between listed references, a determination was made as to what was more correct and up-to-date, based on (31); publication date and level of peer-review (2009).

Cyclopropane C:1800

Formula: C_3H_6
Synonyms: Ciclopropano (Spanish); Cyclopropane, liquefied; RC-270; Trimethylene
CAS Registry Number: 75-19-4
HSDB Number: 812
RTECS Number: GZ0690000
UN/NA & ERG Number: UN1027/115
EC Number: 200-847-8 [*Annex I Index No.:* 601-016-00-6]
Regulatory Authority and Advisory Information
Department of Homeland Security Screening Threshold Quantity (pounds): *Release Hazard* 10,000 ($1.00% concentration).
Hazard Alert: Extremely flammable gas, Frostbite/Cryogenic burn hazard, Asphyxiation hazard, Contains gas under pressure; may explode if heated, Possible narcotic hazard.
Clean Air Act: Accidental Release Prevention/Flammable Substances (Section 112 [r], Table 3), TQ = 10,000 lb (4540 kg).
Hazard symbols, risk, & safety statements: Hazard symbol: F+; risk phrases: R5; R12; R21; safety phrases: S2; S9; S16; S33; S38 (see Appendix 4).
Description: Cyclopropane is a gas. Molecular weight = 42.09; specific gravity (H_2O:1) = 1.88; boiling point = −33.5°C; freezing/melting point = −126.6°C; flash point = flammable gas. Flammable limits: LEL: 2.4%; UEL: 10.4%; autoignition temperature = 498°C. Hazard identification (based on NFPA-704 M Rating System): Health 1, flammability 4, reactivity 0.
Potential Exposure: Cyclopropane is used as an anesthetic and used to make other chemicals.
Incompatibilities: May form explosive mixture with air. Heat, flame, or contact with oxidizers can cause fire and explosion hazard. May accumulate static electrical charges, and may cause ignition of its vapors. Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, epoxides.
Permissible Exposure Limits in Air
PAC Ver. 29[138]
PAC-1: 85 ppm
PAC-2: 930 ppm
PAC-3: 5600 ppm
Determination in Air: Charcoal adsorption followed by workup with CS_2, and analysis by GC. Use NIOSH Analytical Method #1500 for hydrocarbons.
Harmful Effects and Symptoms
Short-Term Exposure: Cyclopropane can affect you when breathed in. Cyclopropane is used as a surgical anesthetic. High levels can cause you to feel dizzy, lightheaded, and to pass out. Very high levels can cause coma and death. Liquid can cause frostbite. May affect the nervous system; and cause heart-rate disorders.
Medical Surveillance: EKG, examination of the nervous system.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a Medical facility. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.
Personal Protective Methods: *Clothing:* Avoid skin contact with Cyclopropane. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Where exposure to cold equipment, vapors, or liquid may occur, employees should be provided with special clothing designed to prevent the freezing of body tissue. *Eye Protection:* Wear gas-proof goggles, unless full facepiece respiratory protection is worn. Wear splash-proof chemical goggles when working with liquid, unless full facepiece respiratory protection is worn.
Respirator Selection: Where there is potential exists for exposure to cyclopropane, use a NIOSH/MSHA (US) or EN149 (Europe)-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA (US) or EN149 (Europe)-approved SCBA with a full facepiece operated in pressure-demand or other positive-pressure mode.
Storage: Check oxygen content prior to entering storage area. Flammable gas. Color code—Red Stripe: Flammability Hazard: Store separately from all other flammable materials; oxidizers and oxidizing gases should have a boundary separation of 8−10 m or a 1-hour fire wall from flammable or reactive materials. Color code—Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with cyclopropane all handlers should be trained on its proper handling and storage. Before entering confined space where this gas may be present, check to make sure that an explosive concentration does not exist. Cyclopropane must be stored to avoid contact with oxidizers (such as perchlorates, peroxides, permanganates, chlorates, and nitrates) and oxygen, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat or

flame. Outside or detached storage is recommended. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Compressed gas cylinders should be affixed to a wall. Procedures for the handling, use, and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: UN1027 Cyclopropane, Hazard Class: 2.1; Labels: 2.1-Flammable gas. Cylinders must be transported in a secure upright position, in a well-ventilated truck. Protect cylinder and labels from physical damage. The owner of the compressed gas cylinder is the only entity allowed by federal law (49CFR) to transport and refill them. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from the danger area of spill or leak until cleanup is complete. Remove all ignition sources. Establish forced ventilation to keep levels below explosive limit and to disperse the gas. Stop the flow of gas if it can be done safely. If source of leak is a cylinder and the leak cannot be stopped in place, remove leaking cylinder to a safe place in the open air, and repair leak or allow cylinder to empty. Keep this chemical out of confined space, such as a sewer because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cyclopropane is a flammable gas. Thermal decomposition products may include oxides of carbon. Do not extinguish the fire unless the flow of gas can be stopped and any remaining gas is out of the line. Specially trained personnel may use fog lines to cool exposures and let the fire burn itself out. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure location. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Return refillable compressed gas cylinders to supplier.

HSDB Number: 6881 (59865-13-3)

RTECS Number: GZ4120000

UN/NA & ERG Number: UN3249 (Medicine, solid, toxic, n.o.s.)/151

Regulatory Authority and Advisory Information

Carcinogenicty: NTP 13th Report on Carcinogens, 2014: Known to be a human carcinogen

California Proposition 65 Chemical[102]: Cancer, January 1, 1992

Hazard Alert: Poison, Possible risk of forming tumors, Suspected of causing genetic defects, Suspected reprotoxic hazard.

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn; risk phrases: R45; R20/21/22; R22; R36; R40; R50; R60; R62; R63; safety phrases: S16; S22; S24/25; S26; S36/37/39; S45; S53; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: White crystalline solid or powder. Molecular weight = 1202.6; specific gravity (H_2O:1) = 1.02 @ 20°C; boiling point = 1294°C; freezing/melting point = ~150°C. Slightly soluble in water.

Potential Exposure: Cyclosporin A is a fungal metabolite; an amide immunosuppressant drug used in various surgeries.

Incompatibilities: Amides/imides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic amides/imides with strong reducing agents such as hydrideds and active metals. Amides are very weak bases (weaker than water). Imides are less basic yet and in fact react with strong bases to form salts. That is, they can react as acids. Mixing amides with dehydrating agents such as such as phosphorus pentoxide or thionyl chloride generates the corresponding nitrile. The combustion of these compounds generates mixed oxides of nitrogen (NOx).

Permissible Exposure Limits in Air: No standards or PAC available. This substance may still be harmful or dangerous; follow safe work and usage practices.

Routes of Entry:

Harmful Effects and Symptoms

Short-Term Exposure: Symptoms of Exposure to this compound include hepatotoxicity, nephrotoxicity, hyperkalemia, hyperuricemia, convulsions, renal dysfunction, tremor, hirsutism, hypertension, gum hyperplasia, cramps, acne, headache, diarrhea, nausea, vomiting, abdominal discomfort, paresthesia, flushing, leukopenia, lymphoma, sinusitis, and gynecomastia. In 2% or less of persons exposed, it has caused allergic reactions, anemia, anorexia, confusion, conjunctivitis, edema, fever, brittle fingernails, gastritis, hearing loss, hiccups, hyperglycemia, muscle pain, peptic ulcer, thrombocytopenia, and tinnitus. Rare reactions include anxiety, chest pain, constipation, depression, hair breaking hematuria, joint pain, lethargy, mouth sores, myocardial infarction, night sweats, pancreatitis, pruritus, swallowing difficulty, tingling, upper gastrointestinal bleeding, visual disturbance, weakness, and weight loss. It has caused kidney and liver damage. An increased susceptibility to infection may occur. Other symptoms include gastrointestinal disturbance, rashes, and angioedema[101]. LD_{50} (oral-rat) = 1.5 g/kg.

Long-Term Exposure: May cause Cancer, tumors, mutagenic and reproductive effects.

Points of Attack: reproductive system.

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical, and toxicity properties, the exposure level, length of exposure, and the route of exposure. Pregnant women should avoid contact. Employees should be notified by a physician that this chemical may affect there productive system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genitourinary tract, sperm count, motility, and morphology. If required, other tests, such as serum testosterone, serum FSH, and serum LH may be indicated.

First Aid: *Skin Contact*[52]: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye Contact:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20−30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing, or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Personal Protective Methods: *Skin Contact*[52]: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye Contact:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20−30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing, or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Respirator Selection: *At any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any NIOSH/MSHA-or European Standard EN149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, SCBA)

Storage: Color code—Blue: Health Hazard/Toxics/Poisons: A known carcinogen; refrigerate (∼ −20°C) and store in a secure poison location.
Shipping: UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.
Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.
Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.
Disposal Method Suggested: It is inappropriate and possibly dangerous to the environment to dispose of expired or waste drugs and pharmaceuticals by flushing them down the toilet or discarding them to the trash. Household quantities of expired or waste pharmaceuticals may be mixed with wet cat litter or coffee grounds, double-bagged in plastic, discard in trash. Larger quantities shall carefully take into consideration applicable DEA, EPA, and FDA regulations. If possible return the pharmaceutical to the manufacturer for proper disposal being careful to properly label and securely package the material. Alternatively, the waste pharmaceutical shall be labeled, securely packaged, and transported by a state licensed medical waste contractor to dispose by burial in a licensed hazardous or toxic waste landfill or incinerator.

lambda-Cyhalothrin C:1808

Formula: $C_{23}H_{19}ClF_3NO_3$
Synonyms: (*R* + *S*)-α-Cyano-3-phenoxybenzyl(1*S* + 1*R*)-*cis*-3-(*Z*-2-Chloro-3,3,3-trifluoroprop-1-enyl)-2,2-dimethylcyclopropanecarboxylate; (*RS*)-α-Cyano-3-phenoxybenzyl *(Z)*-(1*RS*,3*RS*)-(2-chloro-3,3,3-trifluoropropenyl)-2,2-dimethylcyclopropanecarboxylate; Cyclopropanecarboxylic acid, 3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethyl-, cyano (3-phenoxyphenyl)methyl ester, [1α*(S**)*,3α*(Z)*]-(+)-; λ-Cyhalothrin; Cyhalothrin-K; Charge; Commodore; Demand; Demand cs; Double barrel; Excaliber; Grenade; Hallmark; Icon; Impasse; Karate; Matador; Ninja; Pp-321; Rate; Saber; Samurai; Scimitar; Sentinel; Warrior
CAS Registry Number: 91465-08-6
HSDB Number: 6791 as cyhalothrin
RTE CS Number: GZ1227780
UN/NA & ERG Number: UN3349 (Pyrethroid pesticide, solid toxic)/151; UN3077 (environmentally hazardous substances, solid, n.o.s.)/171; UN3082 (environmentally hazardous substances, liquid, n.o.s.)/171
EC Number: 415-130-7 [*Annex I Index No.:* 607-252-006]
Regulatory Authority and Advisory Information
Hazard Alert: Possible endocrine disruptor.
Clean water act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
Hazard symbols, risk, & safety statements: Hazard symbol: T+, N; risk phrases: R21; R25; R26; R50/53; safety phrases: S1/2; S28; S36/37/39; S38; S41; S45; S60; S61 (see Appendix 4).
WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.
Description: Colorless to beige powder; or viscous yellowish-brown liquid. Mild odor. Liquid formulations containing organic solvents may be flammable. Molecular weight = 449.85; specific gravity (H_2O:1) = 1.25 @25°C; boiling point = (decomposes); freezing/melting point = 50°C; vapor pressure = (est.) 1.1×10^{-6} mmHg @ 20°C; flash point = 75°C. Slight solubility in water; solubility = <1 ppm. Hydrolyzed by water (slowly @ pH = 7−9, rapidly @ pH = >9). Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.
Potential Exposure: Pyrethroid insecticide and acaridide used to control a variety of pests in many crops. Also used in structural pest situations. A United States Environmental Protection Agency Restricted Use Pesticide (RUP). Only cyhalothrin is banned for use in EU; *not* the *lamda*-isomer (CAS 68085-85-8).
Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Hydrolyzed by water (slowly @ pH = 7−9, rapidly @ pH = > 9).
Permissible Exposure Limits in Air:
ACGIH TLV[1]: (all pyrethrins) 5 milligram per cubic meter TWA
Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008,[18] pyrethrum.

Permissible Concentration in Water: *Fluoride ion:* Federal Drinking Water Standards: EPA 4000 μg[F]/L; Federal Drinking Water Guidelines: EPA 2000 μg[F]/L; State Drinking Water Standards: California 2000 μg[F]/L; Delaware 2000 μg[Fl]/L; Pennsylvania 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[F]/L; Maine 1680 μg[F]/L. Safe Drinking Water Act: MCL = 4 mg[F]/L; MCLG = 4 mg[F]/L; SMCL = 2 mg/F/L, as Fluoride.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = > 6$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Extra high—0.04384 ppb, MATC.

Routes of Entry: Inhalation, ingestion, dermal or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: High toxicity. Contact with eyes or skin may cause irritation or injury. Ingestion is harmful. Inhalation should be avoided. *Inhalation:* Convulsions, cough, trouble breathing, sore throat. *Skin:* Pain and redness. *Eyes:* Pain and redness. *Ingestion:* Abdominal pain and coughing. LD_{50} (oral, rat) = 50−166 mg/kg; LD_{50} (dermal, rat) = > 500 mg/kg.

Long-Term Exposure: May cause respiratory disease, asthma, skin sensitization, skin allergy, dermatitis.

Points of Attack: Lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest X-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9]. Evaluation by aqualified allergist, including Exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 milligram per cubic meter:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter]. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *125 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 milligram per cubic meter:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any SCBA with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: Shipping: UN3349 Pyrethroid pesticide, solid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material. UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include HF, hydrogen chloride and oxides of carbon. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Regulatory Authority and Advisory Information

California Proposition 65 Chemical[102]: Cancer; Developmental/Reproductive toxin 1/1/1989.

Hazard Alert: Poison, Organometallic, Strong reducing agent, Reproductive toxin: possible risk of gene damage/impaired fertility; Suspected reprotoxic hazard, Primary irritant (w/o allergic reaction), Environmental hazard.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), listed as "severe pollutant."

Canada, WHMIS, Ingredients Disclosure List Concentration Reporting Level: 1.0%. as tin compounds; Canada, CEPA Prohibited Export Substance List.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N; risk phrases: R20/21/22; R50/53; R62; R63; safety phrases: S2; R13; S41; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Cyhexatin is a colorless to white, nearly odorless, crystalline powder. Molecular weight = 385.16; boiling point = 227°C (decomposes); freezing/melting point = 195−198°C. Practically insoluble in water.

Potential Exposure: Used as an agricultural chemical and pesticide. A potential danger to those involved in the manufacture, formulation, and application of this acaricide (miticide).

Incompatibilities: Incompatible with strong oxidizers. May react exothermically as base in the Incompatible with strong oxidizers. May react exothermically as base in the Incompatible with strong oxidizers. Reacts exothermically as base in the presence of strong acids, forming salts. Keep away from ultraviolet radiation which may cause conversion to dicyclohexyltin oxide and further to cyclohexylstannoic acid[136].

Permissible Exposure Limits in Air

NIOSH IDLH 80 milligram per cubic meter [25 mg[Sn]/m^3] as Sn

OSHA PEL: 0.1 mg[Sn]/m^3/0.32 milligram per cubic meter TWA

NIOSH REL: 5 milligram per cubic meter TWA

ACGIH TLV[1]: 5 milligram per cubic meter TWA; not classifiable as a human carcinogen

PAC not available

DFG MAK: 0.1 milligram per cubic meter (as Sn)[skin] (measured as the, inhalable fraction); Pregnancy Risk Group D

Australia: TWA 0.1 mg[Sn]/m^3 [skin], 1993; Austria: MAK 0.1 mg[Sn]/m^3 [skin], 1999; Australia: TWA 5 milligram per cubic meter, 1993; Belgium: TWA 5 milligram per cubic meter, 1993; Denmark: TWA 0.1 mg[Sn]/m^3 [skin], 1999; Denmark: TWA 5 milligram per cubic meter, 1999; France: VME 5 milligram per cubic meter, 1999; the Netherlands: MAC-TGG 5 milligram per cubic meter, 2003; Hungary: STEL 0.1 mg[Sn]/m^3 [skin], 1993; Norway: TWA 0.1 mg[Sn]/m^3, 1999; the Philippines: TWA 0.1 mg[Sn]/m^3, 1993; Russia: STEL 0.02 milligram per cubic meter [skin], 1993; Switzerland: MAK-W 0.1 mg [Sn]/m^3, KZG-W 0.2 mg[Sn]/m^3 [skin], 1999; Thailand: TWA 0.1 mg[Sn]/m^3, 1993; United Kingdom: TWA 5 milligram per cubic meter; STEL 10 milligram per cubic meter, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Several states have set guidelines or standards for cyhexatin in ambient air[60] ranging from 50 μ/m^3 (North Dakota) to 80 μ/m^3 (Virginia) to 100 μ/m^3 (Connecticut) to 119 μ/m^3 (Nevada).

Determination in Air: Filter/XAD-2 (tube); CH$_3$COOH/CH$_3$CN; High-pressure liquid chromatography/graphite furnace AA spectrometry; NIOSH Analytical Method (IV) #5504, Organotin.

Permissible Concentration in Water: State Drinking Water Guidelines: Minnesota 4000 μg[Sn]/L. Fish Tox (ppb): 0.083480 MATC; EXTRA HIGH; FISH STV (Sediment Toxicity Value): INTERMEDIATE.

Routes of Entry: Inhalation, skin absorption; ingestion; skin and/or eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: Irritates eyes, skin, and respiratory system. Symptoms of exposure include headache, vertigo (an illusion of movement); sore throat; cough; abdominal pain; vomiting; skin burns; pruritus. Cyhexatin is moderate in acute oral toxicity to animals. This is in contrast to alkyl tin compounds with smaller (methyl and ethyl) radicals which are highly toxic. A diet including 6 mg/kg of body weight of cyhexatin for 2 years showed no effect in rats. LD$_{50}$ (oral-rat) = 180 mg/kg (moderately toxic).

Long-Term Exposure: This chemical has been shown to cause liver and kidney damage in animals. Human Toxicity: 5.250 ppb; HIGH

Points of Attack: Eyes, skin, respiratory system; liver, kidneys.

Medical Surveillance: NIOSH lists the following tests: CBC (RBC Hemolysis), electrocardiogram, especially on workers over 40 years, glaucoma, liver function tests; urine (chemical/metabolite). For organotins, preplacement and periodic examinations should include the skin, eyes, blood, central nervous system; liver and kidney function.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Up to 3.2 milligram per cubic meter:* Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *Up to 8 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *Up to 16 milligram per cubic meter:*

CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SaT:Cf (APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode); or SCBAF (APF = 50) (any SCBA with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 80 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA).

Storage: Color code—Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical, personnel should be trained on its proper handling and storage. Store in tightly closed containers in a cool, dark, well-ventilated area away from oxidizers.

Shipping: UN2786 Organotin pesticides, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material. UN2811 Toxic solids, organic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials, Technical Name Required.

Spill Handling: UN2811: Isolation Distance, Spill: 25 m/75 ft (NJ). Isolation Distance, Fire: 800 m/0.5 mi[70]. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Thermal decomposition products may include oxides of metals and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Hazard Alert: Sensitization hazard, Environmental hazard, Agricultural chemical.

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

United States National Primary Drinking Water Regulations: MCLG = 0.2 mg[CN^-]/L; MCL = 0.2 mg [CN^-]/L as Cyanide.

Clean water act: Section 307 Priority Pollutants as cyanide, total; Toxic Pollutant (Section 401.15)

RCRA Universal Treatment Standards: Wastewater (mg/L), 1.2 (total); 0.86 (a menable); Nonwastewater (mg/kg), 590 (total); 30 (amenable)

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 9010(40)

EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
United States DOT Regulated marine pollutant (49 CFR 172.101, Appendix B) as cyanides, mixtures or solutions.
Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N, Xi; risk phrases: R22; R43; R50/R53; safety phrases: S2; S29/35; S36/37; S60; S61 (see Appendix 4)

Description: A white to peach (pale pink) crystalline solid. Molecular weight = 198.20; specific gravity (H_2O:1) = 1.31 @ 25°C; melting point = 159−160°C; vapor pressure = 12×10^{-8} mmHg @ 25°C. Low solubility in water; solubility increases with temperature.

Potential Exposure: Cymoxanil is a cyanoacetamide oxime fungicide applied as a seed treatment to cut potato seed pieces or as a foliar to control late blight.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Light sensitive.

Permissible Concentration in Water: Safe Drinking Water Act (47FR 9352): MCL, 0.2 mg/L; MCLG, 0.2 mg/L. Federal Drinking Water Guidelines: EPA 200 μg[CN]/L; State Drinking Water Standards: California 150 μg[CN]/L; State Drinking Water Guidelines: Arizona 220 μg[CN]/L; Maine. 140 μg[CN]/L; Minnesota 100 μg[CN]/L. United States Army field drinking-water standards for cyanide: 2 mg[CN]/L assuming a water consumption of 15 L/day and 6 mg[CN]/L assuming a water consumption of 5 L/day. United States Army field drinking-water standards for cyanide, long-term consumption 0.5 mg[CN]/L; Short-term consumption; Raw water constituents (maximum) 20 mg [CN]/L.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = <1.0$. Unlikely to bioaccumulate in marine organisms. Fish toxicity (threshold)[101]: High—1.53362 ppb, MATC.

Harmful Effects and Symptoms

Short-Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >1 g/kg; LD_{50} (dermal, rat) = >3 g/kg.

Long-Term Exposure: May cause skin sensitization. Human toxicity (long term)[101]: Low—91.00 ppb, Health advisory

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek Medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a Hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 m/150 ft for liquids and at least 25 m/75 ft for solids. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m (1/2 mi) in all directions. *On a Small fire:* use dry chemical, CO_2, water spray, or regular *foam. On a large fire:* use water spray, fog, or regular foam. Do not scatter spilled material with high pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Burn in incinerator specifically designed for pesticide disposal or dispose as a Hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (pyrethroid pesticide, solid, toxic)/151

RTECS Number: GZ1250000

EC Number: 257-842-7 [*Annex I Index No.:* 607-422-00-X]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA Group C, possible human carcinogen.

Hazard Alert: Poison, Possible endocrine disruptor, Suspected of causing genetic defects, Suspected reprotoxic hazard

Clean water act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins

Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R25; R37; R48/22; R50/53; safety phrases: S1/2; S36/37/39; S41; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Thick, yellow-brown liquid or semisolid mass (technical product). Molecular weight = 416.30; specific gravity (H_2O:1) = 1.25 @ 20°C; freezing/melting point = 41.2°C; 70°C; vapor pressure = 5.1×10^{-8} mmHg @ 70°C; 1.7×10^{-9} mmHg @ 20°C[83]. Very sparingly soluble in water; solubility = 0.041 ppm @ room temp; about 0.01 ppm @ 20°C.

Potential Exposure: Pyrethroid insecticide used to control pests on cotton, fruit, and vegetable crops. Also used in commercial and residential settings, ships, laboratories, and food-processing plants. A United States Environmental Protection Agency Restricted Use Pesticide (RUP).

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air:

ACGIH TLV[1]: (all pyrethrins) 5 milligram per cubic meter TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008,[18] pyrethrum.

Determination in Water: Octanol−water coefficient: Log K_{ow} => 5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008,[18] pyrethrum. Octanol−water coefficient: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Extra high—0.21494 ppb, MATC.

Harmful Effects and Symptoms

Short-Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) = 57,500 μg/kg; LD_{50} (dermal, rat) = <2 g/kg.

Long-Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing, and/or shortness of breath) or hay fever symptoms (sneezing, runny, or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty, and abnormal chest X-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters, and intense itching. A severe generalized allergy can occur with weakness and collapse. Human toxicity (long term)[101]: High—7.00 ppb, Health advisory.

Points of Attack: Respiratory system, skin, central nervous system

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long-term health effects and advice for medical monitoring. Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest X-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9]. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 milligram per cubic meter:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 milligram per cubic meter:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any SCBA with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3349 Pyrethroid pesticide, solid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material. UN3352 Pyrethroid pesticide, liquid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include hydrogen chloride and oxides of nitrogen and carbon. *On a small fire:* use dry chemical, CO_2, or water spray. On a large fire, use water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40 CFR 165, follow recommendations for the disposal of pesticides and pesticide containers.

Regulatory Authority and Advisory Information

Hazard Alert: Poison, Endocring Disruptor, Suspected reprotoxic hazard, Environmental hazard.

United States DOT Regulated United States DOT Regulated marine pollutant (49CFR172.101, Appendix B), severe pollutant

Hazard symbols, risk, & safety statements: Hazard symbol: T, N; risk phrases: R25; R37; R48/22; R50/53; safety phrases: S1/2; S36/37/39; S45; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Colorless crystalline solid or viscous yellowish-brown semisolid mass. Mild aromatic odor. Molecular weight = 416.30; specific gravity (H_2O:1) = 1.36

@ 20°C; boiling point = 200°C @ 0.07 mmHg; freezing/melting point = 80.5°C; vapor pressure = 170 mmHg @ 20°C. Very low solubility in water; solubility = 0.2 ppm @ 20°C.

Potential Exposure: Pyrethroid Insecticide used for the control of a wide range of chewing and sucking insects (particularly *lepidotera, coleoptera*, and *hemiptera*) in fruit (including citrus), vegetables, vines, cereals, maize, beet, oilseed rape, potatoes, cotton, rice, soya beans, forestry, and other crops. Control of cockroaches, mosquitoes, flies, and other insect pests in public health; and flies in animal houses. Also used as an animal ectoparasiticide. *zeta*-Cypermethrin only is a United States Environmental Protection Agency Restricted Use Pesticide (RUP).

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008,[18] pyrethrum. Octanol−water coefficient: Log $K_{ow} = >6$. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Determination in Water: Octanol−water coefficient: Log $K_{ow} = 7$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Harmful Effects and Symptoms

Short-Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) $= < 100$ mg/kg; LD_{50} (dermal, rat) $= < 2$ g/kg.

Long-Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing, and/or shortness of breath) or hay fever symptoms (sneezing, runny, or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty, and abnormal chest X-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash, redness, blisters, and itching, even with lower exposures. A severe generalized allergy can occur with weakness and collapse. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Respiratory system, bones, skin, central nervous system

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest X-ray if lung symptoms are present. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3349 Pyrethroid pesticide, solid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material. UN3352 Pyrethroid pesticide, liquid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include formaldehyde, acrolein, hydrogen cyanide, hydrogen chloride, and HF. *On a small fire:* use dry chemical, CO_2, or water spray. On a large fire: use water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* Isolate for 800 m/0.5 mi in all directions; also, consider initial evacuation for 800 m/0.5 mi in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Burn in incinerator specifically designed for pesticide disposal or dispose as a Hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

Cyphenothrin C:1840

Formula: $C_{24}H_{25}NO_3$

Synonyms: S-2703; S-2703 Forte; α-Cyano-3-phenoxybenzyl 2,2-dimethyl-3-(2-methylpropenyl)cyclopropanecarboxylate; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, cyano(3-phenoxyphenyl)methyl ester; (RS)-α-Cyano-3-phenoxybenzyl (1R)-*cis, trans*-crysanthemate; Cyphenothrin (35% *cis*-; 65% *trans*-); Gokilaht; Multicide

CAS Registry Number: 39515-40-7

RTECS Number: GZ1453500

UN/NA & ERG Number: UN3349 (pyrethroid pesticide, solid, toxic)/151; UN3352/151; UN3082 (environmentally hazardous substances, liquid, n.o.s.)/171

EC Number: 254-484-5

Regulatory Authority and Advisory Information

AB 1803-Well Monitoring Chemical (CAL) as pyrethrins

Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum

Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins

EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins

Hazardous to aquatic life or environment, with possible long-lasting effects[192].

Hazard symbols, Risk Do not allow release to the environment unless proper permits are obtained from the federal government & safety statements: Hazard symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S41; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Thick, yellow liquid. Molecular weight = 375.46; boiling point = 154°C; freezing/melting point = 25°C; vapor pressure = 3.13×10^{-6} mmHg; flash point = 130°C. Low solubility in water.

Potential Exposure: Pyrethroid insecticide. Those involved in the manufacture and application of this agricultural chemical.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders, or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate

Permissible Exposure Limits in Air:

ACGIH TLV[1]: (all pyrethrins) 5 milligram per cubic meter TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008,[18] pyrethrum.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008,[18] pyrethrum. Octanol−water coefficient: Log $K_{ow} = 7$. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Harmful Effects and Symptoms

Short-Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, at) = 320 mg/kg.

Long-Term Exposure: High or repeated Exposure can cause lung allergy (with cough, wheezing, and/or shortness of breath) or hay fever symptoms (sneezing, runny, or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty, and abnormal chest X-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters, and intense itching. A severe generalized allergy can occur with weakness and collapse

Points of Attack: Respiratory system, skin, central nervous system

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest X-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Any employee developing the above-listed conditions should be referred for further medical examination[77]. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get Medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem suit fabrics, barrier laminate, or Viton; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[72]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS. Firefighters should wear NIOSH-approved SCBA and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 milligram per cubic meter:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 milligram per cubic meter:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 milligram per cubic meter:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvH, i.e., (APF = 50) [any powered, APR with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any SCBA with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 milligram per cubic meter:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, SCBA). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: UN3349 Pyrethroid pesticide, solid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous material. UN3352 Pyrethroid pesticide, liquid toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand; earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Prolonged exposure of the containers to fire or heat may result in the violent rupturing and rocketing of the containers; parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Noncombustible containers should be crushed and buried under more than 40 cm of soil[30].

References

(31); (204)(100).

Cyproconazole C:1850

Formula: $C_{15}H_{18}ClN_3O$

Synonyms: Alto; Alto Elite; Atemi; Atemi-50-SL;EVIPOL; α-(4-Chlorophenyl)-α-(1-cyclopropylethyl)-1*H*-1,2,4-triazole-1-ethanol; (2*RS*, 3*RS*)-2-(4-Chlorophenyl)-3-cyclopropyl-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol; Flint; Noah gold; SAN-619 F; Sentinel; SN 108266; 1*H*-1,2,4-Triazole-1-ethanol, α-(4-chlorophenyl)-α-(1-cyclopropylethyl)-

CAS Registry Number: 94361-06-5

HSDB Number: 7706

UN/NA & ERG Number: UN3082 (environmentally hazardous substances, liquid, n.o.s.)/171

EC Number: [*Annex I Index No.:* 650-032-00-X]

Regulatory Authority and Advisory Information

Carcinogenicity: EPA Group 2b, probable carcinogen

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N; risk phrases: R22; R50/53; R63; safety phrases: S2; S36/37; S60; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Colorless, crystalline solid. Odorless. Molecular weight = 291.78; specific gravity (H_2O:1) = 1.26; boiling point = decomposes @ 295−300°C; freezing/melting point = 104−106.5°C; vapor pressure = 2.5×10^{-7} mmHg @ 20°C. Moderately soluble in water.

Potential Exposure: Triazole fungicide used to control fungus on cereals, coffee beans; anthracnose and other diseases on turfgrass; used against rust and leaf spot disease.

Incompatibilities: The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88].

Determination in Water: Octanol−water coefficient: Log K_{ow} = 2.9−3.1. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood. Fish toxicity (threshold)[101]: Very low—3210.91612 ppb, MATC.

Routes of Entry: Ingestion, dermal contact

Harmful Effects and Symptoms

Short-Term Exposure: Contact may irritate skin and cause eye irritation and possible severe injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. Poisonous if swallowed. LD_{50} (oral, rat) = (male) 1020 mg/kg; (female) 1330 mg/kg[14].

Medical Surveillance: Contact physician if poisoning is suspected or if redness, itching, burning of the skin or eyes develop

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear positive pressure SCBA. Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont Tychem Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e., organic vapor/acid gas/H EPA (specific for organic vapors, HCl, acid gas, SO_2, and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color code—Blue: Health Hazard/Poison. Store in a secure poison location. Refrigerate. Prior to working with this chemical all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 m/75 ft. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand, or other noncombustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: See the "Incompatibilities" section. Use dry chemical, carbon dioxide; or Halon extinguishers. Thermal decomposition products may include toxic oxides of nitrogen and hydrogen chloride gas. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and nonrecyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Regulatory Authority and Advisory Information

Carcinogenicity: EPA: Not likely a human carcinogen

Hazard Alert: Poison, Sensitization hazard, Environmental hazard.

Hazard symbols, risk, & safety statements: Hazard symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2, S24; S29/35; S37, S46; S60; S61; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: White crystalline solid or beige powder. Molecular weight = 225.30; freezing/melting point = 70−75°C; vapor pressure = 5.0×10^{-4} mmHg. Low solubility in water; solubility = 12 mg/L @20°C.

Potential Exposure: Cyprodinil is an anilino pyrimidine fungicide applied to the foliage of almonds, grapes, stone fruit crops, and pome fruit crops to control plant diseases. Target fungi for cyprodinil include scab and brown rot blossom

Determination in Water: Octanol−water coefficient: Log K_{ow} = ~4.0. Values of more than 3.0 are likely to bioaccumulate in marine organisms. Fish toxicity (threshold)[101]: Low—160.91666 ppb, MATC.

Harmful Effects and Symptoms

Short-Term Exposure: Skin, eye, and respiratory tract irritant. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved APRs for pesticides. May be harmful if swallowed.

Long-Term Exposure: Human toxicity (long term)[101]: High −1.15894 ppb, CHCL (Chronic Human Carcinogen Level)

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont Tychem suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: UN3082 Environmentally hazardous substances, liquid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required. UN3077 Environmentally hazardous substances, solid, n.o.s., Hazard class: 9; Labels: 9-Miscellaneous hazardous material, Technical Name Required.

Spill Handling: Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements, or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand, or other noncombustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Thermal decomposition products may include oxides of nitrogen and carbon. On a small fire: use dry chemical, carbon dioxide, or water spray. On a large fire: use water spray, fog, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank for massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 10.0 mg/L

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.72; Nonwastewater (mg/kg), 10

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8150 (10)

United States National Primary Drinking Water Regulations: MCLG: 0.07 mg/L; MCL = 0.07 mg/L

CERCLA/SARA 313: Form R *de minimis* concentration reporting level: 1.0%.

United States DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Canada, Drinking Water Quality, 0.1 mg/L IMAC

Mexico, Drinking Water Criteria, 0.1 mg/L.

Hazardous to aquatic life or environment, with possible long lasting effects[194]. Harmful to aquatic life with long lasting effects. Do not allow release to the environment unless proper permits are obtained from the federal government.

Hazard symbols, risk, & safety statements: Hazard symbol: Xn, N, Xi; risk phrases: R22; R37; R41; R43; R51; R62; R63; safety phrases: S2; S24; S25; S26; S29/35; S36/37/39; S41; S46; S61 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 2-Hazard to water.

Description: 2,4-Dichlorophenoxyacetic acid is a white to yellow crystalline powder with a slight phenolic odor. Molecular weight = 221.04; specific gravity (H_2O:1) = 1.57;

Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens.
DOI: http://dx.doi.org/10.1016/B978-0-323-38968-6.00004-1

boiling point = decomposes below BP @ 158°C; freezing/melting point = 138°C; vapor pressure = 53 Pa @ 160°C; 8×10^{-6} mmHg[72]; 0.4 mmHg @ 160°C[77]. Slightly soluble in water; solubility = 0.05%. Decomposes rapidly in water. The taste and Odor Threshold in water is 3.13 mg/L.

Potential Exposure: 2,4-Dichlorophenoxyacetic acid, was introduced as a plant growth-regulator in 1942. It is registered in the United States as a herbicide for control of broadleaf plants and as a plant growth-regulator. Thus, workers engaged in manufacture, formulation or application are affected, as may be citizens in areas of application. The Vietnam war era defoliant, Agent Orange, was a mixture of 2,4-D and 2,4,5-T.

Incompatibilities: A weak acid, incompatible with bases. Decomposes in sunlight or heat, forming hydrogen chloride and phosgene. Contact with strong oxidizers may cause fire and explosions.

Permissible Exposure Limits in Air

NIOSH IDLH = 100 milligram per cubic meter
OSHA PEL: 10 milligram per cubic meter TWA
NIOSH REL: 10 milligram per cubic meter TWA
ACGIH TLV[1]: 10 milligram per cubic meter TWA; not classifiable as a human carcinogen
Protective Action Criteria (PAC) Ver. 29[138]
PAC-1: 30 milligram per cubic meter
PAC-2: 94 milligram per cubic meter
PAC-3: 500 milligram per cubic meter

2,4-D, including salts and esters

DFG MAK: 1 milligram per cubic meter, inhalable fraction TWA; Peak limitation Category II(8) [skin]; Pregnancy Risk Group C

Australia: TWA 10 milligram per cubic meter, 1993; Austria: MAK 10 milligram per cubic meter, 1999; Belgium: TWA 10 milligram per cubic meter, 1993; Denmark: TWA 5 milligram per cubic meter, 1999; Finland: TWA 10 milligram per cubic meter; STEL 20 milligram per cubic meter, [skin], 1993; France: VME 10 milligram per cubic meter, 1999; Hungary: TWA 1 milligram per cubic meter; STEL 2 milligram per cubic meter, [skin], 1993; the Netherlands: MAC-TGG 10 milligram per cubic meter, 2003; the Philippines: TWA 10 milligram per cubic meter, 1993; Poland: MAC (TWA) 7 milligram per cubic meter, MAC (STEL) 20 milligram per cubic meter, 1999; Switzerland: MAK-W 10 milligram per cubic meter, KZG-W 50 milligram per cubic meter, 1999; Thailand: TWA 10 milligram per cubic meter, 1993; Turkey: TWA 10 milligram per cubic meter, 1993; United Kingdom: TWA 10 milligram per cubic meter; STEL 20 milligram per cubic meter, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, and Vietnam: ACGIH TLV: not classifiable as a human carcinogen. Russia[43] set a MAC in ambient air in residential areas of 0.02 milligram per cubic meter on a momentary basis and 0.01 milligram per cubic meter on a daily average basis for the sodium salt of 2,4-D. Several states have set guidelines or standards for 2,4-D in ambient air[60] ranging from 100 μ/m^3 (North Dakota) to 105 μ/m^3 (Pennsylvania) to 160 μ/m^3 (Virginia) to 200 μ/m^3 (Connecticut) to 238 μ/m^3 (Nevada).

Determination in Air: Collection on a glass fiber filter and analysis by HPLC with UV detection. Use NIOSH Analytical Method #5001[18].

Permissible Concentration in Water: Safe Drinking Water Act (47FR 9352): MCL, 0.1 mg/L; MCGL, 0.07 mg/L, as 2,4-D. The U.S.[35] has set a MPC in bottled water intended for human consumption of 0.1 mg/L. Aquatic toxicity: 350 ppm/24 hours/bass, bluegill/50% kill/fresh water; 1.0−5.0 ppm/96 hours/oyster/39% shell growth disease/salt water. Waterfowl toxicity: LD_{50} = 2025.0 mg/kg.

Determination in Water: Fish Tox = 4247.00420 ppb MATC (VERY LOW). Octanol-water coefficient: Log K_{ow} = 2.81. Values above 3.0 are likely to bioaccumulate in aquatic organisms and possibly in the food chain, especially seafood.

Routes of Entry: Inhalation, skin absorption, ingestion, and skin and eye contact.

Harmful Effects and Symptoms

Short-Term Exposure: *Inhalation:* May cause irritation of the mouth, nose and throat, headache, nausea, vomiting, and diarrhea at levels above 10 milligram per cubic meter. Nerve damage, which may be delayed, may include swelling of legs and feet; muscle twitch and stupor. Severe exposures may result in death. *Skin:* Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. *Eyes:* Irritation may occur. *Ingestion:* The oral dose required to produce symptoms is about 1/12 ounce (1/2 teaspoon). Increasing amounts may result in increasingly severe symptoms as listed above. Death has resulted from as little as 1/5 ounce. Survival for more than 48 hours is usually followed by complete recovery, although symptoms may last for several months.

Long-Term Exposure: 2,4-D can cause kidney, liver, and adrenal gland/or problems. Workers exposed to 2,4-D in the manufacturing process over a 5 to 10 year period at levels above 10 milligram per cubic meter complained of weakness, rapid fatigue; headache and vertigo. Liver damage, low blood pressure, and slowed heartbeat were also found. Based on animal tests, 2,4-D may affect human reproduction. Human Tox = 70.00000 ppb MCL (Low).

Points of Attack: Skin, central nervous system (CNS), and liver, kidneys.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: liver and kidney function tests. Exam of the nervous system. NIOSH lists the following tests: blood plasma; urine (chemical/metabolite); urine (chemical/metabolite) 24 hour collection.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the

skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. 8 hours (more than 8 hours of resistance to breakthrough $>0.1\ \mu g/cm^2/min$): natural rubber gloves, Neoprene rubber gloves, suits, and boots; nitrile rubber gloves, suits, and boots; polyvinyl alcohol gloves. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, and headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: 100 milligram per cubic meter: Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front-or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter); or Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any self-contained breathing apparatus (SCBA) with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in a pressure-demand or other positive-pressure mode). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front-or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type SCBA).

Storage: Color code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with 2,4-D, all handlers should be trained on its proper handling and storage. Store in tightly closed containers in a dark, cool, well-ventilated area. Keep away from oxidizers, heat, and sunlight. A regulated, marked area should be established where this chemical is stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3345 Phenoxyacetic acid derivative pesticide, solid, toxic, Hazard Class: 6.1; Labels: 6.1-Poisonous materials. A DOT regulated marine pollutant.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: 2,4-Dichlorophenoxyacetic acid esters may burn, but do not readily ignite. Thermal decomposition products may include phosgene hydrogen chloride and oxides of carbon. Use dry chemical, CO_2, water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration of phenoxys is effective in 1 second @ 982°C, using a straight combustion process or @ 482°C using catalytic combustion. Over 99% decomposition was reported when small amounts of 2,4-D were burned in a polyethylene bag. See "References"[22] for additional detail. In accordance with 40CFR165, follow (31); recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following (100) Package (2) label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Regulatory Authority and Advisory Information

Carcinogenicity: NTP 13th Report on Carcinogens, 2014: Reasonably anticipated to be a human carcinogen;IARC: Human Limited Evidence; animal Sufficient Evidence, *possibly carcinogenic to humans*, Group 2B, 1987; NCI: Carcinogenesis Studies (ipr); clear evidence: mouse, rat

California Proposition 65 Chemical[102]: Cancer 1/1/1988; Developmental/Reproductive toxin 1/29/1999

Hazard Alert: Poison, Possible neurotoxin, Possible sensitization hazard, Reproductive toxin,

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xi, Xn; risk phrases: R20/21/22; R36/37/38; R39; R40; R45; R46; R50; R63; safety phrases: S16; S26; S36/37/39; S41; S45; S53 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): No value found. [3-Severe hazard to water. (est.)]

Description: Dacarbazine is a white to ivory-colored crystalline solid. Molecular weight = 182.22; freezing/melting point = 250°C−255°C. Low solubility in water; solubility = 0.01 mm/mg @25°C.

Potential Exposure: Dacarbazine is used in cancer chemotherapy. Dacarbazine is used as an antineoplastic agent in the treatment of certain skin cancers, and is occasionally used in the therapy of other neoplastic diseases which have become resistant to alternative treatment.

Health professionals who handle this drug (for example, pharmacists, nurses, and physicians) may possibly be exposed during drug preparation, administration, or cleanup; however, the risks can be avoided through use of appropriate containment equipment and work practices[10]. People receiving dacarbazine in treatment are also exposed.

Incompatibilities: Incompatible with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions. Keep away from alkaline materials, strong bases, strong acids, oxoacids, and epoxides. Explosive decomposition reported @ 250°C−255°C.

Permissible Exposure Limits in Air

No standards or PAC available.

Harmful Effects and Symptoms

Symptoms of exposure to this compound may include nausea, vomiting, bone marrow suppression, leukopenia, thrombocytopenia, hepatotoxicity, hepatic vein thrombosis and hepatocellular necrosis. Other symptoms may include hemopoietic depression, anemia, anaphylaxis, anorexia, diarrhea, facial paresthesias, death, and rarely, erythematous and urticarial rashes, and photosensitivity reactions. It may cause cardiovascular collapse, burning of the throat, abdominal pain, oliguria, anuria, delirium, fall of blood pressure, convulsions, muscular weakness with respiratory failure and collapse. Large doses may cause gastrointestinal (GI) bleeding. Exposure may also result in alopecia, facial flushing, and a flu-like syndrome of fever, myalgias and malaise. It can cause chills, dermatological reactions and neurotoxicity[101].

Long-Term Exposure: There is sufficient evidence that dacarbazine is carcinogenic in experimental animals. Rats given dacarbazine orally or intraperitoneally developed tumors of the breast, thymus, spleen, and brain in a minimum of 18 weeks after initial exposure. Intraperitoneal administration of dacarbazine to mice produced tumors in the lung, blood-producing tissue; and uterus.

First Aid: *Skin Contact*[52]: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye Contact:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20−30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, and headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA or European Standard EN 149-approved SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, SCBA operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type SCBA).

Storage: Color code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with dacarbazine all handlers should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place and protect from light. A regulated, marked area should be established where this chemical is stored in compliance with OSHA Standard 1910.1045.

Shipping: UN3249 Medicine, solid, toxic, n.o.s., Hazard Class: 6.1; Labels: 6.1-Poisonous materials.

Spill Handling: Evacuate persons not wearing protective equipment from the danger area of spill or leak until clean-up is complete. Remove all ignition sources. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean-up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide, water spray, or alcohol foam extinguishers. Thermal decomposition products may include oxides of nitrogen and carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for firefighting are SCBAs that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is inappropriate and possibly dangerous to the environment to dispose of expired or waste drugs and pharmaceuticals by flushing them down the toilet or discarding them to the trash. Household quantities of expired or waste pharmaceuticals may be mixed with wet cat litter or coffee grounds, double-bagged in plastic, discard in trash. Larger quantities shall carefully take into consideration applicable DEA, EPA, and FDA regulations. If possible return the pharmaceutical to the manufacturer for proper disposal being careful to properly label and securely package the material. Alternatively, the waste pharmaceutical shall be labeled, securely packaged and transported by a state licensed medical waste contractor to dispose by burial in a licensed hazardous or toxic waste landfill or incinerator.

Daminozide D:0120

Formula: $C_6H_{12}N_2O_3$; $(CH_3)_2NNHCOCH_2CH_2COOH$

Synonyms: Alar; Alar-85; Aminozide; B-9; B995; Bernsteinsaeure-2,2-dimethylhydrazid (German); B-Nine; Butanedioic acid mono(2,2-dimethylhydrazide); Dimas; *N*-Dimethyl amino-β-carbamyl propionic acid; *N*-(Dimethylamino)succinamic acid; *n*-Dimethylaminosuccinamidsaeure (German); DMASA; DMSA; Kylar; NCI-C03827; SADH; Succinic acid 2,2-dimethylhydrazide; Succinic-1,1-dimethyl hydrazide

CAS Registry Number: 1596-84-5

HSDB Number: 1769

RTECS Number: WM9625000

UN/NA & ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154

EC Number: 216-485-9 [*Annex I Index No.:* 607-171-00-6]

Regulatory Authority and Advisory Information

Carcinogenicity: NCI: Carcinogenesis Studies (feed); clear evidence: mouse, rat[9].

California Proposition 65 Chemical[102]: Cancer 1/1/1990; methylhydrazine and its salts 7/1/1992.

Hazard Alert: Poison, Combustible, Agricultural chemical (restricted use pesticide (RUP).

Hazard symbols, risk, & safety statements: Hazard symbol: T, Xn; risk phrases: R45; R40; safety phrases: S2; S36/37; S41 (see Appendix 4).

WGK[100] (German Aquatic Hazard Class): 1-Low hazard to water.

Description: Daminozide is a colorless crystalline solid. Molecular weight = 160.22; freezing/melting point = 157°C−164°C; vapor pressure = 1×10^{-8} mmHg @ 20°C.

Potential Exposure: Daminozide is a herbicide/plant growth regulator used on certain fruit (especially apples) to improve the balance between growth and fruit production and to improve fruit quality and synchronize maturity. A RUP. United States sales were suspended in 1989 due to health considerations.

Incompatibilities: Daminozide may be heat sensitive. Incompatible with strong oxidizing agents, strong acids, and bases. Also incompatible with wetting agents, alkaline materials, oils and copper-containing compounds. May corrode metals (NTP, 1992). May generate toxic gases with acids, aldehydes, amides, carbamates, cyanides, inorganic fluorides, halogenated organics, isocyanates, ketones, metals, nitrides, peroxides, phenols, epoxides, acyl halides, and reducing agents. May generate flammable gases with alkali metals. Explosive reactions can occur with strong oxidizing agents, metal salts, peroxides, and sulfides[101]. Compounds of the carboxyl group react with all bases, both inorganic and organic (i.e., amines) releasing substantial heat, water and a salt that may be harmful. Incompatible with arsenic compounds (releases hydrogen cyanide gas), diazo compounds, dithiocarbamates, isocyanates, mercaptans, nitrides, and sulfides (releasing heat, toxic and possibly flammable gases), thiosulfates and dithionites (releasing hydrogen sulfate and oxides of sulfur).

Permissible Exposure Limits in Air

No standards or PAC available.

Permissible Concentration in Water: No criteria set.

Determination in Water: Log $K_{\text{ow}} = -1$. Unlikely to bioaccumulate in marine organisms. Fish Tox = 31007.43129000 pbb MATC, Very Low.

Routes of Entry: Inhalation, ingestion, and absorbed through skin

Harmful Effects and Symptoms

Short-Term Exposure: Symptoms of exposure to daminozide may include convulsions, coma, liver and kidney damage and irritation to the GI tract and respiratory tract. Daminozide is harmful if swallowed, inhaled or absorbed through the skin. It may cause irritation to the GI tract and respiratory tract[101].

Long-Term Exposure: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical and toxicity properties, the exposure level, length of exposure, and the route of exposure. However, daminozide metabolizes to diamethylhydrazine which is a proven carcinogen in animal tests. It has a low dermal irritation potential and it is neither teratogenic nor mutagenic[35]. The acute oral LD_{50} for rats is 8400 mg/kg (insignificantly toxic). It is not an acute toxicant to fish or wildlife. Human Tox = 40.22989 ppb CHCL (Chronic Human Carcinogen Level) (INTERMEDIATE.)

Medical Surveillance: This chemical is a suspected human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical and toxicity properties, the exposure level, length of exposure, and the route of exposure.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. *Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.* Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion, or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a drug or other inhalation therapy.

Personal Protective Methods: Wear protective eye protection, gloves, and clothing to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, and headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
